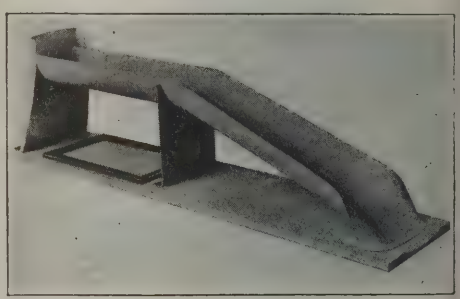
The most compact and lowest priced constant potential one day battery charging outfit on the market, it is claimed, is now being put out by Hobart Brothers, of Troy, Ohio. Rated at a capacity of 1 to 6 batteries, 50-60 ampere output, it makes a good installation for the small shop that never before featured battery work, or wants to make the maximum profits on a small battery business. More than 10,000 shops today are furnishing one-day charging service, so with the announcement of this smaller sized, lower priced outfit, one-day battery charging becomes available to many of the shops who before thought that it was too expensive.

The outfit is furnished complete with bus bars, battery bench, connecting cables for the charging of new batteries radio and sulphated batteries, and is priced at $25 cash and ten monthly payments of $17 each which the makers claim will be more than paid out of the increased earnings.



Hobart One-Day Battery Charging Outfit for small shop

Klein Kwick Lifts

(Cut shown below)

Klein Kwick Lifts as the name suggests are devices for elevating cars while they are being worked upon in the shop. They come in pairs and do away with jacks, wood blocks, etc. The mechanic can place tools, bolts and similar parts in special base pans. The lifts are made of pressed steel riveted and welded. A wood base is used for mounting them and this base prevents slipping when a car is being driven upon them. They weigh 40 lbs. each and can handle 6 in. balloon tires. The price is $17 per pair. They are made by The Klein Structural Steel Co., Bellevue, Ohio.

Add to Sales Staff

M. A. Weidmayer, formerly Black & Decker's branch manager at the Detroit office is now associated with The United States Electrical Tool Co., in charge of the Philadelphia office. C. H. Scaffe, formerly connected with the St. Louis office of Black & Decker, is now associated with The United States Electrical Tool Company as special representative operating from the general office at Cincinnati, Ohio.

EDITORIAL

How Can You Tell?

IN the Clearing House Section of this issue is a letter from a dealer who has been defrauded by a salesman selling him three bottles of acid for $37.50, said acid being capable theoretically of nickel plating various articles. The stuff is a fake and the salesman a faker.

The crook may or may not be apprehended, but the protection from such deceptive tactics lies not in this direction. The product for which such wonderful things were claimed was not a well known or advertised product. This should have made the buyer suspicious.

Legitimate concerns are anxious to get really reliable articles to sell. They distribute them through known channels and advertise in the best mediums. The protection of automotive dealers lies in awakening to this fact for the charlatan can not get a reputable publication to accept his copy, his only chance is the unscrupulous salesman.

Better and quicker methods of nickel plating may be developed from time to time. The same applies to battery charging and other technical processes. But when these developments come, they will be described in the automotive publications as well as being advertised.

Watch Your Collections

THE story of more than one business failure is written in the words "accounts uncollectable." How often at the post-mortem do we hear the words, "If we could only have collected outstanding accounts we would have been all right."

This is not an indictment of the method of doing business on credit. Credit is necessary to modern business, and wise credit is really an economy in our commercial structure. But far too often the credit system is abused and the abuse is not always the fault of the customers to whom credit is extended.

A necessary auxiliary to any credit system is an efficient collection system. There are two kinds of credit buyers. One is the person of full financial responsibility who prefers to settle all accounts by check once a month rather than be bothered with many small cash or check payments as purchases are made from time to time. The other is the person who is not able at the time to pay for what he wants but hopes that by the first of the month, or sometime, he will be able to pay.

A large department store clearly distinguishes between these two types of credit seekers in the neat signs displayed in various parts of the store and reading somewhat like this:

> "Persons who are able to pay for what they want and who make more money than they spend are invited to open charge accounts with this store."

In those few words is the lesson of this editorial. The good merchant probably will find it advisable to carry charge accounts, but he should use fine discrimination in determining those to whom credit shall be extended. Those who make more money than they spend are good credit risks provided the creditor enforces payment on the date due. Even those who are most able to pay are not likely to do so unless a statement is promptly and properly rendered, and in some cases it is necessary that urgent representations be made to enforce payment. Extension of credit beyond the due date only weakens the case of the collection department. The older a bill is the more reluctant the debtor is to pay it, no matter how well able to do so.

The fault of the merchant who carries charge accounts often lies in dilatory methods he uses in collection. Every time he hesitates to ask for prompt payment of accounts due he is endangering his business. The merchant should keep in mind that credit is extended with the intention that payment shall be made at a definite time in the future. There should be no hesitation in letting the debtor know when that time comes and in insisting upon prompt payment. In fact, when "uncollectable accounts" drive a business into bankruptcy it is more often due to the failure of the merchant to demand and insist upon prompt payment of bills rather than to poor judgment in the extension of credit.

Past due accounts on the books are of no value until turned into cash.

That Farmer Factor

AGAIN let us go back to the business outlook as seen by economists early in the summer. In their general observations was a popular line running something like this:

"We may look for a healthy last half year providing the farmer fares reasonably well."

Autumn is approaching and the hour finds the farmer in a good position. Recent rains over the corn belt have materially improved corn prospects. Grain prices promise to be good. Wheat price prospects look so good to farmers there is a tendency among them to hold their supplies for yet higher quotations.

In view of this holding tendency the release of much wheat money into general business channels may be somewhat delayed, but it will be turned loose sooner or later and in larger volume if the holders figure the situation correctly.

At any rate there is no reason now not to look forward confidently to a good last half year. The farmer, who was pointed to as the keystone of the situation, is "sitting pretty." And there are indications that he is beginning to spend the proceeds of this year's harvest. This year's prosperity is substantially made. The final hurdle has been cleared and we are going down the stretch.

Production Starts on Downward Swing

Sales Continue to Be Ahead Of Same Period Last Year

Output in Many Factories Still at Peak on Account of Orders Held Over From Summer

DETROIT, Sept. 1.—Despite the full capacity or nearly full capacity output of many of the automobile plants in the Greater Detroit area, the production trend during the latter parts of August was downward. This is in the face of recently announced increase production by at least one company in this district.

This trend, according to an executive of one of the larger companies, and one that has been having phenomenal sales, means simply that the sales have been harder to get. The increased production does not, in his opinion, reflect the same continued rate of sales that has been prevalent for the past three months but an attempt to catch up with the unfilled orders.

If figures of sales and of production along with the titling of new cars can be taken as a criterion, then the automotive industry is selling only slightly more cars than for the same time last year. Michigan, generally regarded as a good criterion of the surrounding territory, does not show any appreciable increase over the same period for 1924.

This statement will be disputed by manufacturers who are contending that their sales are better now than for some time. But their contention is not supported by figures which are the best criterion of conditions.

This much is certain: that while production of certain makes might have been increased and while more persons are driving automobiles at this time than last year, yet the fact that sales are not so numerous means that production will go downward from now until next spring. Some companies have yet to announce their new models and this may have some bearing on the subject—but as a whole the production curve will point down.

There has been little change in the used car market, a strong demand still being noted for cars that sell between $600 and $850. Dealers throughout the country reporting in to the factory say that the stock of used cars on hand are extremely small at this time.

Most of the truck companies, it would seem, are waiting to see the result of the General Motors Corporation and the Yellow Cab merger in their field. Once the new GMC trucks make their appearance the conditions in this field should return to normal. Ford trucks still monopolize the sales, over two-thirds of the total number of new trucks titled in Michigan during July being Fords.

Production for August will be lower than July. This is based on reports that the Ford Highland Park plant and the different Ford plants throughout the country have not been going at full speed, due to the new models about to be brought out. The increase or the decrease in August production can be attributed to this situation.

Moon Announces Changes In Series A Model Prices

ST. LOUIS, Aug. 29.—Moon Motor Car Company has announced price changes effective September 1 which call for reduction on all Moon Series A models exceept the Roadster, of from $50 to $200. The price of the roadster remains the same, $1395 as does the price of the chassis, $995.

The new prices are:

Model	New Price	Old Price	Reduction
Touring	$1195	$1295	$100
Coach de Luxe	1395	1495	100
Roadster (New Design)	1395	1395	.....
4-Door St'd Sedan	1545	1595	50
Cabriolet Roadster	1595	1695	100
De Luxe Brougham	1495	1695	200
De Luxe Sedan	1695	1785	90

Wills Sainte Claire Adds Five New "Vogue" Models

MARYSVILLE, Mich., Aug. 29.—Wills Sainte Claire, Inc., has announced the additon of a series of De Luxe models to its W-6, six cylinder line. The new "Vogue" models are similar in body design to the De Luxe models on the eight cylinder chassis. Prices range from $2,735 for the roadster to $3,600 for the Limousine.

Equipment furnished as standard includes a full set of five disk wheels, snubbers, automatic windshield wiper, rear vision mirror, dash gasoline gage, cigar lighter, clock, cowl ventilator and ignition spare tire and gearset locks on all models. In addition the closed models are supplied with a sun visor, vanity and smoking sets and door locks. A trunk rack is also furnished on the five passenger sedan.

Following are the prices of the new models:

Four Passenger Roadster	$2735
Five Passenger 4-Door Brougham	3400
Five Passenger 4-Door Sedan	3400
Seven Passenger Sedan	3500
Seven Passenger Limousine	3600

WILLYS DEALERS MEET

SAN ANTONIO, Tex., Aug. 29.—Some forty Willys-Overland dealers in Southwest Texas attended a sales meeting here this week. R. M. Reland of Toledo, was the chief speaker for the occasion. Plans for intensified selling campaigns and for closer co-operation among dealers in different towns were laid at the conference.

Accessory Business Shows Big Increase in Southwest

More Money and New Lines Cause Greater Automobile Sales Volume as Well

DALLAS, Tex., Aug. 29.—The accessory, parts and equipment business in the Southwest during August was 40 per cent better than for the same month last year and 20 per cent better than for the preceding month, according to four of the largest houses handling those lines.

The business in all Texas, with exception of some 35 counties stricken by drouths, and in Oklahoma, Louisiana, Arkansas, Arizona and New Mexico has been more than the dealers anticipated and the prospects for bumper trade during the fall and winter are excellent, the big houses reported.

The revival of the trade seemed to include all lines jobbers reported. Retailers were inclined to carry heavier stocks and in many cases were wiring in orders. The jobbers were strengthening sales forces with a view of doing the heaviest business in their history.

Fairly good grain crops at high prices, good cotton crops at better figures than last year, fair vegetable, fruit, berry, tomato and melon crops at stiff prices, coupled with the fact that some money has been left over from last year, are reasons assigned for increased trade at this season.

Manufacturing agents reported business brisk and the outlook fine.

Car distributors have noticed an increase in business during August when compared to last month and one year ago. More money, new lines, lower prices and intensified selling methods are given as reasons for increased trade. The fact that distributors are placing more cars means the retailers are disposing of them faster in all sections of the territory.

MILLS TEACHES MANAGEMENT

DETROIT, Aug. 31.—J. E. Mills, service manager of the Detroit branch of the Packard Motor Car Co., is conducting a new course in the Michigan State Automobile School at Detroit, which emphasizes the business side of automotive service shop or garage management. This course is intended to help make good business men out of students and dealers who at the same time are fitting themselves technically for this work. The course given by Mr. Mills includes the following subjects: location of a garage, layout of building and shop, equipment, budget, shop management, simple bookkeeping, banking and financing, meeting and handling customers, general business methods, advertising, new car sales and used car sales.

"Miniature" Car Sensation Predicted by Continental

Detroit Manufacturers Expected to Introduce Small Automobile Shortly After New Year

DETROIT, Aug. 29.—Motor cars on the foreign model, with wheelbases shorter than the Ford and capable of giving more than 40 miles a gallon of gasoline, will be introduced to America by Detroit manufacturers soon after the New Year, it is predicted by Continental Motors Corp. This report coincides with well-substantiated rumors to the effect that American manufacturers are nearly ready to announce models for sale abroad that will compete directly with the light European makes.

The Continental company has imported a standard "Austin" model, made in England, and contemplates designing engines which will go into smaller cars for this country. The Austin has been found best re-designing for use here, it is pointed out. Such cars it is declared, will find their use here chiefly for city or interurban driving over smooth paved roads. They will be two and four passenger jobs.

These new cars, says the Continental announcement, will be exact miniatures of the standard American makes, as the English body lines will be changed to conform to American models. As yet there is no intimation as to the price range.

Mack Introduces Shorter Bus for Southern States

NEW YORK, Aug. 29.—Variation in laws regulating buses in the Southern States has necessitated the production of a new bus, which, although similar in other respects to the standard Mack parlor car, is narrower by six inches, says a statement just issued by the Bus Department of Mack Trucks, Inc.

The stumbling block to a nationally standard bus body is a restriction in certain of the states to an outside width of not more than 84 inches. Four of the 12 Southern States do not have any size restricting laws; Virginia and West Virginia allow a width of 96 inches; the District of Columbia, South Carolina and Marylnad put the limit at 90 inches; North Carolina's law limits width to 86 inches and those of Florida and Louisana width to 84 inches. The outside cap of the underslung gas tank must be not more than 42 inches from center of chassis.

In order to conform to these laws of the last two mentioned states, the Mack parlor car buses destined for this territory have been cut down from 90 to 84 inches. This reduction brought about the loss of one entire row of seats, reducing the passenger capacity to 21 instead of 25 persons, otherwise the parlor car remains unchanged. The E. J. Thompson Co., of Pittsburgh, is building the bodies on these buses, known as "Dixie Specials."

Ford's Paper Will Take Ads

WASHINGTON, Aug. 29. — A change in the policy of Henry Ford's publication, the Dearborn Independent, was announced here this week at the Washington branch of the Ford Motor Company. Advertising will be accepted beginning with the October 3, 1925, issue of the magazine.

The Dearborn Independent has not carried a line of paid advertising since it has been the property of Mr. Ford and the change in policy reflects a growing feeling on the part of the public to expect as a buying guide a certain amount of advertising in magazines of its choice.

The Dearborn Independent, then a small country weekly newspaper, was acquired by Mr. Ford in 1918. All paid advertising was dropped and the paper changed to a sixteen-page magazine. In May of this year, with the installation of new presses, the magazine was increased to 32 pages of standard size. The Dearborn Independent, since becoming a Ford property, has become one of the most widely discussed publications in the world. It is distributed to over 600,000 paid subscribers.

AC CHANGES DESIGNATION

FLINT, Mich., Aug. 29.—Along with the announcement of an improved design and assembly method, the AC Spark Plug Company of Flint, makes it known that henceforth AC plugs will have a single letter for the identification of each type, so that the car owner will have only a single letter to remember and look for upon the box. The new designations run through the alphabet from A to W, each letter identifying a plug which may be standard equipment on a number of cars.

SALES MANAGERS NAMED

CINCINNATI, Aug. 29.—Three appointments of division sales managers of the United States Motor Truck Company, have been announced by E. T. Herbig, general sales manager. L. A. Poundstone, formerly with the Service Motor Truck and Autocar Companies, has been named eastern division sales manager for western New York, western Pennsylvania and a part of West Virginia. Bert E. Handel, formerly with the Gary Company, has been appointed division sales manager for Illinois and Indiana. Mr. Herbig also announced the appointment of C. H. Gierhart, formerly with the Gramm-Bernstein Company, as division sales manager for a part of West Virginia, southern Ohio and eastern Kentucky territories.

Columbus August Business Shows Great Improvement

Sales Better Than June or July, Believed a Result of Excellent Industrial Condition

COLUMBUS, O., Aug. 29.—A decided improvement has taken place in the automobile industry in Columbus during the past month. Sales in August were ahead of July with most distributors and agencies and a majority believe that September will hold up well.

Sales in the month of August were slightly better than in June and July. This is accounted for to a certain extent because of the coming out of a number of new models. But on the whole the main reason is the better general industrial feeling. Farmers are now coming into the market better as they are harvesting good crops and are receiving good prices for their products. The best business is done in cars ranging from $800 to $2,200 although sales of higher priced cars are showing up fairly well.

The used car market is still slow but some headway was made during the past month in disposing of some of the surplus. Prices of used cars have been reduced and that has resulted in heavier sales.

The money situation is excellent as loans can be made easily. This applies to distributors who have accumulated some cars during the past month for fall distribution. Accessory dealers have shared in the better business and wholesalers especially report a larger volume in August than in either June or July.

Antonsen Takes Distribution Of Fisher Truck in Chicago

CHICAGO, Aug. 29.—The A. E. Antonsen Motor Sales, 1134 West Sixty-third Street, has installed a truck department for the exclusive handling of the Fisher Fast Freight. The company also is distributor of Case and Gardner passenger cars.

Raymond H. Frame, a member of the sales staff for the last three years who has made an exhaustive study of the new features of the Fisher truck, has been made sales manager for the truck department. Wilbert R. Tennant has been made assistant to President Antonsen.

Edwin H. Johnson, formerly with the service department of the Grand Auto Garage of Minneapolis, has accepted full charge of the service department.

WICE MADE SALES MANAGER

ST. LOUIS, Aug. 29.—Guy W. Oliver, president of the Oliver-Cadillac Co., new St. Louis Cadillac distributor has announced the appointment of Ray Wice as sales manager of the company. Wice has been in the automobile business for the past ten years having previously been with the Hudson distributor in Cleveland, Ohio and with the Hudson distributor in St. Louis. He has been selling Cadillacs here for the past five years.

Merger of Yellow Cab With General Motors Is Ratified

Operation of Two Concerns as Yellow Truck & Coach Mfg. Co. Effective Sept. 2

NEW YORK, Sept. 2.—Final ratification of the merger of the Yellow Cab Manufacturing Co. and the truck division of General Motors Corp. took place when Yellow Cab directors authorized issuance of 800,000 shares of common stock in exchange for 160,000 shares of General Motors Truck Corp. stock. Operation of the two concerns under the name of the Yellow Truck & Coach Manufacturing Co. became effective yesterday.

For the first half year Yellow Cab Manufacturing Co. reported net profit $1,206,716, equivalent after preferred dividends to $1.97 per share earned on 600,000 shares $10 par Class B stock, compared with $2.96 in the first half of 1924.

June quarter net profits were $589,657, equal after preferred dividends to 97 cents a share earned on Class B against $1.32 during the same quarter last year.

For the four months ended April 30 General Motors Truck Division reported net loss $415,100 after charges. Total net sales were $4,458,798, net operating profit $159,057, miscellaneous income $14,851, total income $173,908, depreciation $112,778, total deductions $476,230.

Strom Bearing Co. Bought By Marlin-Rockwell Corp.

CHICAGO, Aug. 31.—Reports that the Marlin-Rockwell Corp. had purchased the plant, property and good will of the Strom Ball Bearing Manufacturing Co. have been confirmed. The business of the latter company will be conducted exactly as heretofore, under the direction of the same personnel and department heads. There will be no change in policy, and the same lines of bearings under the Strom trade name will be continued.

At a special meeting of the Marlin-Rockwell Corp., stockholders approved an increase in the common stock from 222,850 to 300,000 shares. The New York Curb has ruled that rights might be dealt in on a "when issued" basis on and after August 20 and that they must be settled Sept. 8.

Directors of the company have offered common stockholders of record of August 28 the right to subscribe to new stock at $15 a share in the ratio of 15 per cent of their holdings. Subscriptions must be payable in full on or before Sept. 14.

SHOW MANAGERS MEET

ATLANTIC CITY, Aug. 29.—Members of the National Association of Automobile Show and Association Managers held their annual before-shows meeting at Atlantic City this month with President Robert E. Lee, of St. Louis, presiding. Both in point of attendance and in the practical, constructive nature of the program, the meeting was the most successful the show managers have ever held. John E. Raine, of the Baltimore dealers association, was elected a director at this meeting to fill a vacancy on the board. Herbert Buckman, of the Cleveland dealers association, is vice president of the association and A. V. Comings, editor of Automobile Trade Journal, is secretary.

U. S. Denies Rent to Employe's Wife

WASHINGTON, Aug. 29.—A Government employe using a Government-owned automobile, cannot put it in the garage at home, which is in his wife's name, and expect the Government to pay rent to his wife for the use of the garage.

Ray C. Bish, an assistant marketing specialist of the Department of Agriculture tried it in Cleveland, but he couldn't get away with the plan, owing to the vigilance of the General Accounting Office.

A voucher for $7 to be paid to Mary Frances Bish for rent of the garage in question was caught up by the forces of Controller General McCarl.

"This office has consistently held," said a decision refusing payment, "that reimbursement from public funds for the hiring of automobiles and renting of garages from members of their families or from other employes is not authorized."

NEW RADIO STUDIO

CHICAGO, Aug. 29.—The Stewart-Warner Speedometer Corp. is building in Chicago its own radio broadcasting studio, one of the most modern and up-to-date in the country. Furnishings of the new plant include grand piano, a pipe-organ, harp and full assortment of orchestral instruments. The corporation plans to radiocast from this studio a twelve-hour program each week, from a 226-meter wave length. The call letters are to be WBBM. The station is rated in Class B, with 1,500 watt capacity.

CADILLAC SALES HIGH

DETROIT, Aug. 29.—Sales of the new Cadillac during the first week since its introduction are 40 per cent higher than during the first week after the introduction of V-63 models in 1923, and were considerably larger than any preceding week in the history of the company. Orders for future delivery obtained during the week were 36 per cent higher than any previous week. Ample justification for the effort and capital involved in creating the new Cadillac line is seen in these figures by Lawrence P. Fisher, president and general manager of the company.

Details Arranged for Parts Association Show at Chicago

Convention Will Open Nov. 5 and Exhibit Will Be in Conjunction at Hotel Sherman

DETROIT, Mich., Aug. 31.—Detailed arrangements for the convention and exhibition to be conducted by the National Standard Parts Association at the Hotel Sherman in Chicago next November were completed at a recent meeting of the show committee at N. S. P. A. headquarters here.

The convention will be held Nov. 5, 6 and 7 in the Louis XIV room of the Sherman and registration will open Wednesday, Nov. 4 at 5 p. m. There will be an open session Thursday afternoon, the first business session Friday morning, a divisional meeting Friday afternoon and a second business session Saturday morning.

Speakers of national reputation will talk to the delegates who attend the banquet which will be held in the same room on Saturday, Nov. 7 at 7 p. m. Attendance at the first session will be open to delegates, alternates and guests. The remaining sessions will be open to delegates and alternates only.

The exhibition of products will be held in the new exhibition hall of the Hotel Sherman on Nov. 5, 6, 7 and 8. Manufacturer members of the association, nonmember manufacturers by special invitation and trade publications will be eligible to exhibit. The exhibition will be open from 9 a. m. to 10 p. m. Thursday and Friday, from 9 to 6 p. m. Saturday and from 12 noon until 5 p. m. Sunday. Floor diagrams, contracts and application blanks were mailed out Aug. 24 and 25. Floor space is more than 8,000 square feet and the facilities splendid for an exposition of this type.

Marquette Buys Business Of Wood-Imes Mfg. Co.

ST. PAUL, Minn., Sept. 1.—The Marquette Manufacturing Company has purchased for cash the business, assets, patents, trade marks and good will of the Wood-Imes Manufacturing Company, manufacturers of a complete line of garage equipment.

None of the Wood-Imes organization will be connected with the Marquette company in any way. The Wood-Imes line will be made a part of the Marquette line, sold by Marquette salesmen. The purchase does not change or affect the officers and management of the Marquette company.

Both plants will continue to operate, the Marquette line to be made at the St. Paul plant and the garage equipment to be manufactured at the Minneapolis plant. The executive offices will be in St. Paul and all correspondence relating to either line will be handled through the Marquette Manufacturing company of St. Paul.

Dealers of Southeast See Promise in Price Cuts

Brisk Business Expected After Sept. 1 in Most of Farm Territory

CHARLOTTE, N. C., Aug. 29.—The wave of price reductions which swept over the automobile manufacturing industry early in August has served to arouse the dealers in the Southeast to a new enthusiasm at a time when conditions were tending to cause some discouragement. This is indicated by observations made by a correspondent of MOTOR AGE in the course of a tour including numerous important cities and small towns of North Carolina, South Carolina and Georgia.

Of the three states mentioned, conditions in North Carolina are generally much more favorable, so far as the automotive trade is concerned. Sections of South Carolina and Georgia are facing the probability of severe losses by the farmers, as a result of an almost unprecedented drought, and this unfavorable condition in which the agricultural industry of those sections has been placed is expected to influence sharp curtailment in the buying of automobiles this fall.

In some cities in those hard hit areas, bankers and business men generally are rather gloomy in their predictions relative to the business activity of the fall and winter months.

Good Business Expected

The Coastal Plain of South Carolina and Georgia, in a general way, reasonably can expect brisk business after the middle of September. The tobacco and cotton crops of those regions escaped the drought and large yields are anticipated. Excellent prices are being obtained for the tobacco crops of those states, and harvesting now is well advanced. In North Georgia and Piedmont South Carolina, many of the farmers are facing distressing conditions after two months or more of unbroken drought.

North Carolina's only important source of business disturbance is the textile industry, which employs many thousands of operatives and for which no sign of early relief from the long-standing unfavorable economic condition is seen. The Piedmont section of South Carolina, an important cotton milling section, likewise is affected unfavorably. Elsewhere than in the Piedmont section of this state, conditions as a whole are generally favorable. The peach crop was of unprecedented proportions. The tremendous annual tobacco yield of this state will closely approach the record this year, and prices at the opening of the selling season are regarded as satisfactory and approximately the same as last year, with a definite tendency to increase. All industry, other than the very important textile industry, in this state appears to be on a sound financial basis.

In the face of these mixed conditions, however, the sale of new automobiles continues generally at a pace regarded as brisk for the season. While prospects faced by the automobile distributors and dealers are not good in some sections, for reasons explained above, the sales-managers appear to be giving much less time to pessimistic comment and are preparing for intensive sales efforts to be undertaken early in September. The realization is general throughout these three states that "this is a fall for hard work." Over in Florida, however, the orgy of dealing in real estate is continuing and gaining in volume, with evidences of unprecedented prosperity everywhere, and in Alabama the outlook is relatively encouraging, as this state slowly makes advances back toward the position it occupied when the boll weevil almost disrupted its agricultural industry several years ago.

Service Big Aid

Never before in the history of the Southeast has the importance of automobile service been so frequently emphasized as it has in the course of this summer. An unprecedented number of automobile tourists has traveled through these states, over roads which represented almost all degrees of goodness and badness.

Service department managers of numerous automobile dealers frequently expressed the opinion that the rapidly increasing interest in touring will have the effect of exerting a tremendous influence favorable to the lines of motor cars which are well represented by dealer service stations on the more important routes.

General Motors to Buy British Austin Company

NEW YORK, Sept. 1.—Directors of Austin Motors, Ltd., British automobile manufacturers, have accepted, subject to the approval of their stockholders, a proposition for the sale of a controlling interest in that corporation to the General Motors Corp., Alfred P. Sloan, Jr., president of the latter, has announced.

Memphis Olds Branch Is Host to Southern Dealers

MEMPHIS, Aug. 29.—Dealers covering the Memphis section under the Memphis branch of the Olds Motor Works were guests of the branch recently and put in a day replete with interest, business and pleasure. The new line of Oldsmobile cars was seen and price features explained. The evening was topped with a banquet at Hotel Claridge.

H. H. Hoffman of the sales department of the factory in Lansing made a talk praising the Memphis branch and its manager, George L. Evans. Mr. Evans acted as toast master.

Responses were made by Charles Graham, Meridian, Mass., S. M. Pratt and J. T. Henry, El Dorado, Ark., W. C. Brackett, Jackson, Miss. and Captain Maloney, of Little Rock, all dealers.

C. C. Dietrich, assistant manager of the Memphis branch of the General Motors Corporation, explained the system followed by his company and called attention to the esteem in which the Olds organization is held. He alluded to the reduction in financing rate. J. G. Jamison, formerly factory representative of Memphis but now of Nashville, also spoke.

Dealers present in addition to the speakers included: A. S. Green, West Point, Miss.; F. G. McCrary, Parkin, Ark.; Mr. Tucker, Warren, Ark.; C. M. Turner, J. V. Carr and M. E. Turner, Jonesboro, Ark; Mr. Herrin and W. D. Ritchie, Shreveport, La.; Marvin Woods and Mr. Collins, Martin, La.; Ray Strawn, Doyle Bell, Pine Bluff, Ark.; Mr. Moore, Arkadelphia, Ark.; B. F. Gray and Judge Brogdon, of Blytheville, Ark.; Joe Coleman, Hope, Ark.; G. H. Threvathan, Gleason, Tenn.

GLOBE BUYS 2 CONCERNS

HAMILTON, Ont., Aug. 29.—Globe Manufacturing Company has taken over two bankrupt concerns, the Beaver Truck Company of this city, and the Monarch Tractor Co., Brantford, Ont. The combined inventory of the plants approximates half a million dollars. Work in both plants will be continued, but on different lines. In the Beaver plant a new truck, known as the Globe truck model 43 will be assembled. All parts will be purchased and no manufacturing will be done. In the Brantford plant, where tractors have been made, automobile radiators will be manufactured. The company has Canadian rights for two types of radiators, one of them now being used in one of the largest automobile plants in the United States.

DURANT OUTPUT STEADY

LANSING, Mich., Aug. 29.—Production schedule at the Durant Motor Plant is giving no indication of a slow-down during the next few weeks, officials said today. Passenger cars are being sent out at a daily production rate of 225 to 250 and the company reports that this schedule has been maintained almost since it was established last spring. Orders continue to come in as fast as the cars are shipped, denoting consumption demand above the average for this time of the year.

Northern California Sales Show Gain Over Year Ago

Dealers Increase Forces to Care for Greater Volume Coming Late in August

SAN FRANCISCO, Aug. 29.—Sales of passenger cars through central and northern California for August, 1925, showed an increase of approximately 24 per cent over those of the same month last year, while truck sales showed some increase, the exact percentage of which had not been determined at the end of the month.

Reductions in prices of new cars were largely responsible for the increased sales, the greater part of the increase being after August 15. These price reductions greatly lowered sales resistance by inducing the prospect to buy a new car rather than a used or rebuilt one. First payments on a number of new cars, particularly those selling below $1,500, have been reduced materially, and the California banks are showing a more friendly attitude toward automobile paper than they did a year ago. A fruit crop, short in some varieties, is bringing high prices into the state, and re-organization of two of the largest co-operative fruit-marketing agencies so as to obtain quicker cash returns for the farmer, also contributed in cutting down sales-resistance.

Dealers in general throughout central and northern California increased their sales forces in August and enlarged advertising space, particularly in the newspapers in towns of 2,000 inhabitants or less. Sales in these towns and in the country increased by a larger percentage over those of August, 1924, in the same territory, than did sales in the communities of larger size.

Truck sales were stimulated materially by the movement of fruit crops, and by extensive sales of small farms and orchards northward and eastward from San Francisco bay. Sales of trucks in the cities were about on a par with those of a month ago. As has been intimated above, sales of used cars slowed down considerably, due to reductions in the prices of new cars up to $1,500.

JAMES GOODALL DIES

PITTSBURGH, Aug. 29.—James Goodall of the Goodall-Walton Company of Waynesburg, Buick distributors in that territory, was killed in an automobile accident August 13. Mr. Goodall has been connected with the automobile industry for a number of years, having been with the Goodyear Tire & Rubber Company before becoming the Buick distributor at Waynesburg.

MEMPHIS HAS DIANA BRANCH

MEMPHIS, Aug. 29.—Official announcement is made of the establishment of the Diana Motor Company, a factory branch for Diana and Moon motor cars, to serve the Memphis territory. The company is located at 754-60 Union avenue with L. A. Phillips in charge. He comes from St. Louis, home city of the company which manufactures the two cars. The development of this car in surrounding territory as well as retail and service features in Memphis will be the aim of the new branch.

OAKLAND BRANCH MOVES

INDIANAPOLIS, Aug. 29.—The Oakland Motor Company, which has maintained a wholesale and retail branch here for more than a year with headquarters in the Steinhart Building, has announced an important change in the affairs of the branch. E. J. Barlow, branch manager, will establish branch wholesale headquarters in the Merchants Bank office building, and has announced the appointment of Miller & Robinson as direct Indianapolis dealers and distributor for nine adjacent counties. The Miller & Robinson Company will occupy the offices, service and show rooms where the Oakland has been located for several years. Four associate dealers of the city will work with the new distributing company in handing the retail affairs of the county.

CALIFORNIA TITLES LEAD

SAN FRANCISCO, Aug. 29.—California now leads the world in motor vehicle registration in proportion to population, according to Will H. Marsh, chief of the state division of motor vehicles. There is a machine for every 2.9 persons in California, Marsh reports. Total registration at the middle of August is 1,350,517, and will reach 1,500,000 before the end of the year. This is far in excess of the 1924 registration, and, with 4,000,000 inhabitants, or somewhat more, the per capita registration is not hard to find. California is now second in total registration, exceeded only by New York. If every Californian went for a ride on the same day, there would be room for three persons in every car, and, figuring the average passenger capacity at four, there still would be car-space to carry the total population of Nevada, Oregon, Idaho and Arizona—approximately 1,500,000 persons.

HATCH IS PROMOTED

SEATTLE, Aug. 29.—Mason O. Hatch, manager of the Spokane Branch of the Eldridge Buick Co., for several years, has been promoted to a sales executive position covering the entire Eldridge organization, with headquarters in the home office at Seattle. He has been succeeded as manager of the Spokane branch by M. O. Anderson, a long time employee of the company in Spokane.

MOON EXPANDS PLANT

STS. LOUIS, Aug. 29.—Moon Motor Car Co. has occupied the plant at Douglass street and Terminal Railroad tracks formerly used by the Broderick and Bascom Rope Company, to increase its shipping facilities. The new plant is occupied by the manufacturing and shipping divisions of the company. A shipping dock 400 ft. long enables the company to load 100 cars additional daily.

Schedules Call for Unusual Tire Production in Akron

If Output Is Up to Plans It Will Exceed That of Post-war Boom Six Years Ago

AKRON, O., Aug. 29.—Tire production tickets in effect at the Akron rubber plants call for greater daily production than was noted in the post war boom period six years ago. Goodyear Tire & Rubber Co. is turning out 36,000 tires and 46,000 inner tubes a day, besides more than a million rubber heels and soles, and large quantities of mechanical rubber goods. This compares with 35,000 tires and 42,000 tubes being manufactured a day three months ago, and 28,000 tires and 36,000 tubes a year ago.

Approximately 32,000 tires and 40,000 tubes are being manufactured at the Firestone Tire & Rubber Co. plant. Production is only slightly higher than it was three months ago, but it is about 30 per cent greater than last year. The Firestone Steel Products plant, where automobile rims are manufactured, is doing a larger business than ever before.

B. F. Goodrich Co. is maintaining a tire production of about 28,000 tires a day, and 35,000 inner tubes. Production a year ago was around 22,000 tires a day. Rubber boot and shoe operations are increasing rapidly, in preparation for winter business.

Miller Rubber Co. is manufacturing about 10,000 tires a day, General Tire & Rubber Co. better than 5,000, Mason Tire & Rubber Co. about 8,000, Seiberling Rubber Co. 4,000, India and Mohawk about 1,500 each.

Indications are that third quarter operations will almost equal, if not surpass, in some instances, the prosperous second quarter.

A survey of the situation among the larger companies reveals that their factories are operating at practically peak production, with three shifts of workers on a twenty-four hour basis. Vacations of employes were curtailed this summer, so there would be no interruption of factory schedules.

MACK TO BUILD IN SPRING

MILWAUKEE, Aug. 29.—Next spring will see construction work started on the new $150,000 sales and service building now being planned by the Mack-International Motor Truck Corporation organization for its Milwaukee branch. The new building will be located at North avenue and Newhall street. The Milwaukee branch construction activity reflects a general condition throughout the country according to Rodney Hallam, manager of the local branch, who pointed to the new Chicago branch and plans for a proposed million dollar branch at Los Angeles as further prooofs of Mack-International building activity. Business at the Milwaukee branch is 100 per cent greater than in August 1924 and prospects for further increases this fall are excellent.

August Sales in Chicago About on Par With June

New Models and Price Reductions Cause Stimulus—Every Firm Sees 1925 Record

CHICAGO, August 29.—August automobile sales in Chicago are about on a par with June. A few distributors report the volume slightly below June but these, for the most part, are the distributors of cars which are not sold under the yearly model system.

All distributors and dealers whose companies brought forth, or are now announcing the new 1926 models, are doing a much better business than in any other month this summer. One distributor of a popular-priced automobile declares that August will show a 240 per cent increase over June, which was the big month with the majority of dealers.

There is no doubt that the price reductions and the new models have greatly stimulated business. Every firm is optimistic and certain that 1925 will set a new volume record in the automotive industry. All report that their sales to the first of September have been much greater than during the entire year of 1924.

Used cars are selling very well in Chicago. The market is described as fair by only one distributor in the Chicago district. The others range from good to excellent.

Time payments are being well met, and many companies notice a tendency on the part of many buyers to pay cash, rather than spread their investment over a term of months.

New Organization Takes Over Gillette Rubber Co.

MILWAUKEE, Aug. 29.—Complete settlement of the affairs of the Gillette Rubber Co. of Eau Claire, Wis., and the taking over of the concern by a new organization has been announced. Officers of the new company are F. C. Hermann, president; W. R. Hutchins, vice president; R. B. Gillette, vice president; and I. B. Gilruth, secretary. The officers and S. G. Moon, William Kootz and John Rossi comprise the board of directors.

Negotiations for purchase of the old company began in April, 1924, but were not completed until August when the new company took over the plant from F. C. Hermann, who was appointed receiver at the time when the company became involved financially.

MOTO-METERS IN AUSTRALIA

NEW YORK, Aug. 29.—The Moto-Meter Company, Inc., of Long Island City, has granted a license to Nolan-Smith, Ltd., of Australia, to manufacture Moto-Meters in Australia under the patents owned by the American company. This development in the facilities for making and distributing this widely used automotive device is the result of the greatly increased sales of Moto-Meters in the Australian selling territory during the past few years.

Flat Rate Service Is Latest

ZANESVILLE, O., Aug. 29.—A new system of sales and service representation for automobile manufacturers has been inaugurated by the Automotive Brokerage Co. of America, with headquarters here, of which Edward B. Roemer is the head. Through this company it is proposed to establish direct representation in cities of 50,000 population and over for manfacturers and provide a continuity of sales and service representation regardless of changes in dealerships. Service on the cars represented will be given under a trademarked system known as Token Service. This will be operated on a flat rate basis. The Roemer & Co. Division of the Automotive Brokerage Co. has been organized at Zanesville to operate the first unit of the new system.

DORIAN WITH MUSIC MASTER

PHILADELPHIA, Aug. 29.—Frank Dorian, formerly in charge of the Pittsburgh office of the Music Master Corporation, manufacturers of radio and supplies, has been appointed assistant to President Walter L. Eckhardt. Mr. Dorian joined the corporation early in 1923, after spending more than 30 years in the talking machine industry. He came in contact with President Eckhardt while associated with the Columbia Phonograph Company.

LOW-PRICED AIRPLANE

DENVER, Aug. 29.—A light airplane priced at $2,475 on Denver field is being offered by the Alexander Aircraft Co. of Denver. This airplane is equipped with an OX-5 Curtiss engine. It is rated at 90 h. p. with a maximum speed of 90 m. p. h. and a landing speed of 31 m. p. h.

MACMARTIN LEAVES BOSCH

SPRINGFIELD, Mass., Aug. 29.—J. A. MacMartin has resigned from the post of secretary of the American Bosch Magneto Corp., and R. W. Washburn, formerly of Ernst & Ernst, certified public accountants, of Boston, with title of assistant secretary has been appointed to take over his duties. Reports of an extensive shakeup in the executive organization are denied by Morris Metcalf, treasurer.

MICHIGAN TITLES RAISE

DETROIT, Aug. 29.—The number of new cars titled in Michigan during the month of July totaled 20,046,873 more than for July of a year ago. Wayne county, with the largest number, titled 7,817 as compared to 5,889 for July 1924. The total up to August 1 was 122,124. Of the passenger cars titled, approximately 14,001 were cars listed at prices ranging from $1,000 downward; 2,821 at prices ranging from $1,000 to $1,500 and 3,184 at prices ranging from $1,500 upwards.

Los Angeles to Hold Radio Congress Just Before Show

Exposition to Be Held in Ambassador Auditorium Beginning Sept. 5

LOS ANGELES, Aug. 29.—Radio dealers from all parts of the Southwest have been invited to attend a special pre-view and general "radio congress" to be held in Los Angeles just prior to the opening September 5 of the Third Annual National Radio Exposition, which this year will be conducted under the auspices of The Radio Trades Associations of Southern California. The exposition will be held at the Ambassador Auditorium, situated on the Ambassador Hotel Grounds. The auditorium has a larger single floor area than any exposition building in Los Angeles.

Waldo T. Tupper, managing director of the show, declares that nearly 250 firms are expected to have exhibits at the exposition.

While the show is in progress meetings will be held every day in the Ambassador Hotel theater on various subjects associated with the development and the use of radio.

Carl A. Stone, president of Carl A. Stone Company, manufacturers' agents, Los Angeles, is chairman of the arrangement committee. Others who are in charge of the exposition include A. G. Farquharson, secretary of the Radio Trades Association of Southern California; J. W. Hartley, of the Braun Corporation, chairman of the finance committee; J. W. Boothe, general manager music and radio departments, Barker Bros., chairman of the publicity committee; Harry S. Mason, vice president and general manager of the Electric Equipment Corporation; C. H. Mansfield, manager radio department, Fitzgerald Music Company; Les Taufenback, general manager, Western Radio, Inc., of California; W. D. Scott, Pacific Coast sales manager, Herbert H. Frost, Inc.; Lombard J. Smith, of Lombard J. Smith Company; G. F. Hall, manager radio department, Platt Music Company.

NEW AUBURN DEALERS

AUBURN, Ind., Aug. 29.—New dealers who have recently been added to the Auburn organization follow:

Welday & Corns, Frankfort, Ind.; Senefeld Sales, Marion, Ind.; Warsaw Motor Sales, Warsaw, Ky.; O. D. Smart, Madison, Wis.; Searight, Winslow & Ewing, West Bridgewater, Pa.; Duco Frankfort Co., Frankfort, Ky.; Elmer G. Gunther, Perkinsville, N. Y.; Leigh F. Pestel, West Bloomfield, N. Y.; The Mellen-D'Ewart Co., Cleveland, O.; Glassmere-Auburn Co., Glassmere, Pa.; Smith Bros., Wilkinsburg, Pa.; State College Motor Co., State College, Pa.; Marshall-Sweitzer Motor Co., Dover, O.; Auburn Sales Co., Meriden, Conn.; John Bosch, Jr., Rockville Center, L. I., N. Y.; A. E. Bortner, Seattle, Wash.; S. Peterson, Sparks, Nev.; C. J. Schleentz & Son, Long Beach, N. J.; Brown Auto Co., Kansas City, Mo.; Fisher Motors, Watertown, N. Y.; Wilbur C. Stewart, Stone Garage, Greencastle, Ind.; Akins Motor Car Co., Covington, Ky.; Daniel J. Shea, Newport, Ky.

New Car Sales Are Beyond Expectations in St. Louis

Used Automobile Stocks Also Down —Delivery Is Principal Problem Before Dealers

ST. LOUIS, Aug. 29.—With virtually all of the new 1926 models announced by the various manufacturers, sales of automobiles have jumped ahead during the past month beyond the expectations of most dealers. All of the new models introduced were given enthusiastic receptions both as to the numbers of people who visited show rooms to see what the new cars looked like and by buyers. Many prospects had been waiting for the new cars and when they came out they were bought quickly.

Strange as it may seem, too, used car stocks have been kept down even through the rush of the sales of new cars. Dealers have been buying used cars right and they have been able to find ready sales for them.

The chief problem now seems to be getting enough cars to fill the orders which have been taken. Some dealers are not seeking orders aggressively just now for they have to spend all their time trying to pacify customers who have new ones coming.

Accessory sales have increased right along with the new car sales and even to a greater extent for the lower prices of automobiles have permitted a greater amount of money to be available for the purchase of accessories.

Dealers feel that the fall business will be good not only in the city but in the rural communities which are expected to come into the market strongly because of the good condition of crops.

FORD REACHES 12,000,000

DETROIT, Aug. 29.—Ford Motor No. 12,000,000 has been built. It was turned out recently at the River Rouge plant of the company and is now on display at the Detroit branch. No. 12,000,000 was built slightly more than a year after No. 10,000,000 was put on the road. Since the motor department was transferred from the Highland Park plant to River Rouge, upwards of 1,500,000 have been produced at the latter place.

QUEBEC REGISTRATIONS UP

QUEBEC, August 29.—There are 105,000 more vehicles in Quebec province, an increase of more than 30,000 over last year, notwithstanding the fact that the season has still to run several months. In the city of Montreal, statistics being compiled are expected to show that there are nearly 40,000 motor cars in operation, and in Quebec City, about 4,000. In both cases this is a substantial increase over last year.

OVERLAND DEALERS MEET

PHILADELPHIA, Aug. 29.—George D. McCutcheon, manager of the Philadelphia branch of the Willys-Overland Co., addressed a conference of 125 dealers at their annual meeting at the Hotel Pennsylvania. They came from eastern Pennsylvania, New Jersey, Delaware and Maryland. McCutcheon gave an optimistic talk, saying that the business outlook for the remaining months of the present year and the prospects for next year are bright. Others who spoke were John McDowell, Jr., N. F. Baxter, L. A. Lynch, A. B. Creeger and R. R. Lokey

BOSTON GASOLINE DOWN

BOSTON, August 22.—Gasoline has started to take a drop in Boston the last few days. The price had been around 25 and 26 cents in some places and 24 in others but now it has shown a drop to 20 cents where people have books and 22 on the average at many stations. There is talk that there is a price war on such as Springfield, Lawrence and other cities experienced and that it will drop to 18 cents or lower. Not all the companies have come down, however. Whether this was due to the recent statement issued by the Commission on Public Necessities that gasoline prices in Massachusetts were unjustifiable is problematical.

Pierce-Arrow Shipments Are At Highest Point in History

BUFFALO, Aug. 29.—Passenger car shipments from the Pierce-Arrow Motor Car Company's factory at Buffalo during June and July, 1925, in comparison with those made during the same months last year, represent the greatest increase in passenger car business in the history of the company, according to President Myron E. Forbes.

The increase in passenger car business for June, 1925, represented a gain of 622 per cent over June, 1924, while Pierce-Arrow business for July, 1924, showed a rise of 420 per cent over the same month of last year.

"One reason for the phenomenal increase in passenger car business is the new Series 80 Custom-Built Coach announced recently. Orders for the coach are taxing the capacity of our factory and it has proven one of the most popular models ever marketed by this company," said Mr. Forbes.

"Orders for trucks and busses produced by the Pierce-Arrow Motor Car Company continue strong. Our truck business is especially healthy and everything points to a splendid business throughout the remainder of the year. As an indication of the steady flow of Pierce-Arrow bus business, our bus orders to date exceed those for the entire period of 1924."

CANADA TIRES RAISE AGAIN

TORONTO, Aug. 29.—Advanced rubber prices are again to the fore, this making the fourth increase within the last two months on automobile tires and tubes. All sizes are affected this time and the increase approximates 15 per cent. Quantities of cut-rate tires and seconds in the market are acting as a resistant to further raises to higher levels. Many of the dealers have considerable stocks on hand, purchased at lower prices than are now being quoted.

Business Is Holding Up Well In Salt Lake City Territory

New Models Stimulate Demand But Cause Some Confusion in Used Car Market

SALT LAKE CITY, Aug. 29.—The automobile business in this section appears to be in a healthy condition at this time. Those agencies handling cars on which the prices have been decreased report that for a week or two business slowed up. They explained that this was because the public wanted to see whether or not the automobile market was seriously breaking, and whether all the manufacturers were intending to make a decrease.

On the other hand, the new models stimulated the demand for cars. On the whole business is holding up well. Those handling certain makes of small and medium priced cars are doing excellent business at this time.

In July 1,244 new passenger cars were sold in Utah, 489 of which were delivered in Salt Lake County, the big center of population in the state. For the same month 135 trucks were reported, 44 of which were sold in this county. Of the total number of passenger cars sold 623, or roughly half, consisted of machines put out by two popular-priced manufacturers, one of them selling 444 cars of this number.

The used car market is declared by several dealers to be "soft". One of them said that it is due to the policy of conducting special "clean-up" used car sales. He maintained that as no one is likely to be able to conduct his business without handling used cars it is better to treat them as one treats his new car business, and not attempt a clean-up at a sacrifice. The new models have, of course, thrown more used cars on the market.

The closed car is still gaining on the open car. One dealer said he thought 10 per cent of their total sales were in open cars.

FRENCH PRODUCTION UP

PARIS, Aug. 20.—(By Mail)—An increase of about 20 per cent in French automobile production this year, compared with 1924, may be expected if the average is maintained during the next five months. Although there are no official figures, last year's French production was estimated at 170,000,000 cars. April, May and June were particularly good months for both home and export business, while the output during July, although lower than that of June, has been equal to last year. There are very few firms not having increased production, those particularly having made progress being Renault, Donnet-Zedal, Peugeot, Mathis, Talbot, Delage and Hotchkiss. The greatest volume of business has been done in small cars of 10 horsepower (European rating) or 91

Milwaukee Sees Second Half Gain Over Business of First

Rural Districts Coming to Front as Result of Unusually Good Crops

MILWAUKEE, Aug. 29.—Confidence that car sales for the next four months of 1925 will bring the total for the second half of the year up to a point as high as 20 per cent in advance of sales for the first six months of the year is expressed by leading distributors of this city. First reactions to the exceptionally good crop conditions are reflected in a great forward stride in car sales in the rural districts.

At the same time the metropolitan areas are maintaining their lead over sales for the corresponding period last year, despite the fact that some of the lower priced cars are not doing their share in advancing this sales volume. Considerable comment has been caused in the local market by the failure of several of the lower priced cars to make good this season.

Right at this time, Ford sales are below those for the same period in 1924 although somewhat of a comeback has been registered in that July sales records for the state indicate a gain for this car over the June sales. When it is considered however, that Ford sales for July were something more than 500 below those for July, 1924, the task of other cars to maintain a 2,000 lead for July over July of last year becomes apparent.

Hudson and Essex continue setting a dizzy pace for other car distributors to follow. General Motors products have overcome their temporary lassitude. Packard showed a very nice gain. Nash continues to set new records in the home state. Other nice sales were reported by Studebaker, Kissell, Dodge, Overland, Willys-Knight, and Ajax.

The credit and collection situation in Wisconsin is most excellent. A large majority of cars are being sold on time payments but these payments are being met promptly, distributors point out, holding that correspondence with dealers shows very little complaint concerning collections or credit.

GOODYEAR, LTD., UNTROUBLED

TORONTO, Aug. 29.—Goodyear Tire and Rubber Company of Canada, Ltd., is taking care of the higher cost of rubber through its costing system. This differs from the plan of the parent company at Akron, which has created a $3,000,000 special raw material reserve. Though rubber has been above $1 a pound for some time, Goodyear of Canada has been using rubber that costs just about half this, due to the foresight of the management in making heavy purchases. Goodyear will not use as costly as 55-cent rubber in its product this year. Of late there has been a decided drop in the price of rubber, but this is not to be taken as indicating that the speculation is over.

Toledo Sees King's Aged Daimler

TOLEDO, Aug. 29.—Hundreds of Toledoans have visited the salesrooms of Willys-Overland, Inc., here to view the 14-year-old Daimler Knight car which formerly belonged to King George V of England and which was recently brought to this country by Charles Knight, inventor of the sleeve-valve motor.

Visitors marvelled at the quiet running motor in the royal car, despite its age.

Willys - Overland dealers in other cities will probably get a chance to show the car.

Seaman Body Plant Working Overtime on Nash Orders

MILWAUKEE, Aug. 29.—The plant of the Seaman Body Corporation in Milwaukee is working overtime in order to keep up with expanding business, Harold H. Seaman, president, has announced. Work is being pushed on a large new building which has become necessary in order to meet the demands for automobile bodies for Nash and Ajax cars.

Approximately 4,000 men are now employed at the Seaman plant and an additional 500 or 1,000 men will be added to the payroll as soon as the new building is completed, which will be within the next month or two.

The Seaman plant is turning out 450 automobile bodies a day at the present time. This number will be increased to about 600 a day when new facilities have been completed, Mr. Seaman said. The Nash concern, he pointed out, is far behind in filling orders and the plant will have to be kept going at high speed for the remainder of the year to keep up with business being put on the books.

TEW IS ASSISTANT MANAGER

AKRON, O., Aug. 29.—J. D. Tew, superintendent of production at the B. F. Goodrich Co. plant here, has been promoted to the position of assistant works manager. Following the resignation of H. K. Raymond from the position of vice president and works manager, President B. G. Work took over the duties of works manager. Mr. Tew is now his assistant in this capacity. Mr. Tew has been connected with the company for 19 years, having served for many years in the capacity of factory manager. He is a graduate of Harvard University.

HARTFORD PLANS SHOW

HARTFORD, Conn., Aug. 29.—As usual there will be an automobile show at the annual state fair which opens Labor day at Charter Oak Park, Hartford. The exhibits will be housed in individual tents along one of the main thoroughfares. A big display of trucks, passenger cars and tractors is promised. Arrangements have been made for tractor demonstrations.

Used Car and Replacement Business Best in Florida

Industrial Condition Very Good and Excellent Sales Expected Throughout South

TAMPA, Fla., Aug. 29.—The most pronounced feature of the automobile world in the southern states during August was the almost feverish building activity of many dealers and distributors. This would seem to indicate that these men anticipate a record business this winter. Car selling establishments in several cities noted have become more pretentious and include a larger floor area. New Orleans, Jacksonville, Tampa and Miami, and other cities will have several new, imposing buildings when the fall buying begins in earnest.

Buyers have been somewhat hesitant, waiting for the new models to appear, and since many of the new lines have been displayed there has been a tendency noted on the part of buyers to hold back and wait to see how the new products are going to perform. Southern people usually vacation more in the summer than in the winter when they are kept at home especially in the tourist centers of Florida, and they seem to prefer to use the old car than to buy a new one to frolic about in. The used car business had moved along fairly well, and the majority of dealers are not overstocked with used cars.

Florida has had nearly as many visitors from outside during August as she usually has during the winter season. Real estate values are steadily increasing. There is much building in all lines. Industrial conditions seem satisfactory. Both common and skilled labor is well paid, especially in Florida. Truck and fruit crops have been unusually successful. Cotton reports point to a satisfactory yield.

Business in replacement parts and other automotive equipment has been unusually good during August, many people fitting out old cars for vacation trips. Tires moved with a rush on account of anticipated advances, many people also had to have them for vacation trips.

Credit conditions were reported in fair shape. Buyers of cars specified terms in the majority of cases.

WISCONSIN RADIO SHOW

MILWAUKEE, Aug. 29.—The third annual radio exposition will be held in Milwaukee November 11 to 16 this year, in conjunction with the first annual convention of radio dealers in Wisconsin, and plans already prepared indicate that the exposition will be the largest of those held to date. Nearly 100 booths in the main arena have been taken by manufacturers and wholesalers of radio equipment and the allied industries. Wisconsin radio dealers promoted Radio Week, August 23-29 in order to stimulate interest in radio during the summer slump, and incidentally to arouse interest in the forthcoming exposition and dealers meeting.

Along Automobile Row

MINNEAPOLIS.—B. P. Gentry has been promoted from the sales department to superintendent of service of the Gray Motor Co. The company sells Studebakers.

WINNIPEG.—Marking the events of Empire Motors, Ltd., as a new organization in the retail automotive business of this city, a public reception was held in the salesrooms when Overland and Willys-Knight owners were particularly welcomed.

DES MOINES.—In line with a new policy of the Ford Motor Co. the Herring Motor Company becomes exclusive Ford dealer in Des Moines. Aside from the Herring Motor Co. only the Jensen Motor Co. suburban dealer, will handle Fords. The change in policy resulted in the cancellation of the contract of the O'Dea Motor Co.

GARDNER, Mass.—Cass Garage, Inc., of Athol has opened a new building for Buick sales and service at 22-24 East Broadway.

INDIANAPOLIS.—The Charles E. Stutz Sales Company has been made Peerless distributor for Indiana. The organization is also a Hudson-Essex city dealer and will continue this line in a retail way.

DALLAS, Tex.—The Pringle-Postal Motor Company has taken over the Durant-Star lines in the Dallas district. Sales and service stations of the new company are located at 2419 Commerce Street.

CINCINNATI, O.—Robert Lanzing recently resigned as sales manager of the Nash Cincinnati Motors Company and is making plans to go to Florida to engage in the automobile business. His successor has not yet been announced.

PHILADELPHIA.—P. J. Fischer, formerly transportation engineer of the Yellow Cab Manufacturing Co., has been made president and general manager of the Yellow-Drive-It-Yourself System with main offices located at 4142 Chestnut Street, Philadelphia. Fischer has organized successful drive-it-yourself systems and cab companies in a number of leading cities.

FINDLAY, O.—The Hall Buick is the name of a new retail concern chartered with a $10,000 capital to do a retail auto and accessory business here.

CLINTON, Ia.—The B. & C. Chevrolet Co. has succeeded the Smith Motor Sales Co. here. F. W. Benedict of Waterloo, until rcently connected with Chevrolet Motor Co. as factory representative having acquired an interest in the firm. L. F. Creglow, former sales manager for the Smith Motor, will be general manager of the new firm, which will continue the Chevrolet agency and service.

WOODSTOCK, Ont.—Elliott Bros. have discontinued Ford sales and will devote their efforts solely to Dodge Brothers and McLaughlin Buick cars. They will continue servicing Ford cars with special Ford equipment.

CLEVELAND, O.—The Swan Carburetor Company announces the appointment of R. S. Beane as district manager for the Southeastern states. Mr. Beane will be located at 241½ Marietta Street, Atlanta, Ga.

DETROIT.—G. A. Richard, president of the Richard-Oakland Company, Oakland distributors for Detroit, has appointed the Coates Motor Sales, Inc., 5740 Grand River as an associate Oakland dealer.

CHICAGO.—D. E. Bull has been added to the staff of the Apperson Motor Car Company, as wholesale representative at the local branch.

MONTREAL.—Legare-Nash Motors are introducing to the public through the medium of newspaper copy the Ajax motor car manufactured by the Ajax Motors Company, Racine, Wis.

BURLINGTON, Ia.—The Barton Overland Company, C. H. Barton, Roscoe, Ia., president, has opened a salesroom and Overland and Willys-Knight agency at 317 North Sixth Street.

AUSTIN, Tex.—The Midtex Motor Co. has taken on the Chrysler and Maxwell lines for Austin.

YOUNGSTOWN, O.—The Henderson-Roller Cadillac Co. has been chartered with an authorized capital of $50,000 to deal in automobiles and accessories.

SPRINGFIELD, Mass.—T. W. Spracklin has taken over Hall's Garage, renamed it The Oaks Garage, and added a line of Hood tires and automobile accessories.

DETROIT.—The Jay R. Cooley Co. has been appointed Chrysler dealer for Northwestern Detroit, according to an announcement made by John F. Evans, general sales manager of the John H. Thompson Company, Chrysler distributors for Detroit.

MINNEAPOLIS.—The Twin City Motor Car Co., distributing Essex and Hudson cars, has opened a sales and service branch at 3025 Hennepin Avenue in charge of H. M. Ferguson. It is a 24 hour station and a test of the new method of sales.

DAVENPORT, Ia.—Harry Mann, well known automotive dealer in eastern Iowa, head of the Ford agency, Harry Mann, Inc., 325 East Second street, has disposed of his interests to E. W. Procknow, who has been associated with the Ford agencies here several years.

TOLEDO.—John Lansdale, for a number of years with the Paige-Ohio Co., has joined the sales staff of the Grand Motor Sales & Service Co., a Nash agency, in Toledo.

MILWAUKEE.—The Monroe Auto Co. of Monroe, Wis., attracted several hundred people of that city and vicinity to the formal opening of its new $30,000 home. The company deals in Willys-Knight, Overland and Packard cars and is said to be the largest Overland and Willys-Knight dealer in southwestern Wisconsin. Everett Keel is sole owner of the business.

CHICAGO.—Its sixth branch in metropolitan Chicago has been opened by the Hudson-Essex Motor Company of Illinois at 7141 Wentworth avenue. J. Karl Henderson, formerly connected with the sales department of the main branch, will manage the new sales and service store.

DES MOINES.—The Fairfield Motor Sales Co., Fairfield, Iowa, is the name of a concern recently organized to sell Chrysler. R. E. Green and R. J. Johnson are the proprietors.

MOLINE, Ill.—The Dean Motor company this month announced its concentration on the Velie Motors Corporation agency and Clarence Dean, vice-president, says the company expects to capitalize upon the spontaneous demand in the home factory area of the Velie car.

DETROIT.—Utter and Son, Overland, Willys-Knight and Oldsmobile dealers for East Lansing, Michigan, are building a new service building which is expected to be ready for occupancy September 15.

CHICAGO.—J. R. Roberts, of the Roberts Motor Sales, 6050 Cottage Grove avenue, dealers in Willys-Knights and Overlands, has purchased the Irving Motor Sales, 117 East Garfield boulevard. Both stores now are showing Willys-Knights and Overlands.

CHICAGO.—E. M. Lubeck has been appointed district manager, with headquarters here, for the Oakland Motor Car Company of Pontiac. Mr. Lubeck formerly was with the West Side Buick branch and resigned as general sales manager of the Apperson Motor Car Company to accept the new position.

ST. LOUIS.—R. L. Butler won first prize for medal score in the golf sales contest conducted by the factory branch of the Willys-Overland Company here recently. Car sales counted for the score.

MINNEAPOLIS.—The Morey Chevrolet Co., has opened a sales building at 65 West Broadway. Arthur Johnson is sales manager. C. J. Morey is vice president and in active charge.

LOS ANGELES.—The American Rubber and Tire Company of Akron recently entered the coast field with its products for the first time. A warehouse has been established in Los Angeles and dealers are now being appointed by Jack Ward, who is in local charge of sales.

DALLAS, Tex.—George Goodwin of the Goodwin Automotive company, has announced he has taken on the De Jon Electrical Equipment lines for the Dallas territory. His territory calls for Dallas and many of the surrounding counties.

MINNEAPOLIS.—Herman Auerbach, who has been an associate dealer in Rickenbacker cars in Minneapolis, has been given distribution of this car in the city and 32 counties. He will open a display room in the center of the motor district.

MILWAUKEE.—F. W. Janssen formerly of the automotive electrical department of the Acker Electric Co. of Sheboygan, Wis., has purchased the Firestone Sales and Service Co. in that city. Mr. Janssen has been in the auto and accessory business in Sheboygan since 1907, having formerly owned and managed the Janssen Motor Co.

MEMPHIS.—The sales and show rooms adjoining the building of the Burt-Overland Co. and formerly occupied by the Murphy-Rollin Co. have been taken over by the former. The arrangement will permit the merchandising of used cars by the Burt-Overland Co. under one roof along with the new car department.

CHICAGO.—Frank A. Henderson has been appointed general sales manager of Community Motors, Inc., distributors of Oakland automobiles. Mr. Henderson previously was general sales manager of the Goodyear Rubber Co. of Akron and also district manager of the Willys-Overland company at San Francisco.

COLUMBUS, O.—George Lingo, who has been actively engaged in the automobile business in Columbus for a half dozen years has been made general manager of the Columbus Flint Company factory branch which is located at 182 East Long Street.

DETROIT.—Don Prentiss has been named manager of the sales promotion department of the Olds Motor Works by D. S. Eddins, general sales manager. Mr. Prentiss succeeds T. J. O'Brien who is on a six months leave of absence.

CHICAGO.—Stanley Bowles has been appointed sales manager of the A-C Manufacturing Company, manufacturer of rear wheel brakes for Ford cars and trucks, it is announced by the company. Before joining the A-C concern, Mr. Bowles was sales manager of the Bilger Motor Co., one of the largest Ford sales agencies of St. Louis.

SIOUX CITY, Ia.—Lee J. Bell, 10 years an automobile salesman in this city, has organized the Bell Auto company, 2046 Fourth Street, in the building formerly occupied by the Ray H. Darling Company, and will operate a used car agency. Mr. Bell for the last two and a half years has been with the Nebraska Buick Company.

GALESBURG, Ill.—R. H. Morgan & Sons, established here nine years with R. M. Morgan, a local veteran of 19 years' experience, as its head has taken the Nash and Ajax agency for this territory.

MILWAUKEE.—B. W. Reagles, well known for many years in automotive circles in Milwaukee and Wisconsin has been appointed sales manager for the West Point Garage & Sales Co. of 219 Twenty-seventh Street, Milwaukee, Overland-Willys-Knight dealers.

WESTFIELD, Mass.—J. K. Minkus has been appointed Studebaker dealer here and will shortly open a new sales and service building. The business will be conducted under the name of Westfield Motor Sales.

AURORA, Ill.—Charles Leek has purchased the Otto Theiss interest in the Aurora Buick Company and will continue the business under that name. The salesroom is to be remodeled and enlarged.

With the Associations

Hoosiers Re-elect Steinhart

INDIANAPOLIS, Aug. 29. — E. W. Steinhart for many years prominent as an Indianapolis distributor has been re-elected president of the Hoosier State Auto Association at the annual election this week. Other officers re-elected were Martin H. Luecke, Ft. Wayne; first vice president and legal counselor, and C. W. Lantz of Bedford, third vice president. New officers are Dr. E. R. Baldridge, Terre Haute, second vice president, and James L. Gavin, Indianapolis, treasurer. M. E. Noblett was re-elected secretary-manager.

President Steinhart issued a statement calling attention to the fact that Indiana is falling behind in the construction of good paved roads, in spite of the fact that Indiana motorists pay a three cent gasoline tax, and fairly high motor vehicle license fees. The association feels that a mistake was made when real estate and property was freed from any obligation in the way of state road taxes, and when other funds that formerly went to the state highway financing were shunted into other uses.

The injustice of the cities which now receive part of the gasoline taxes using these funds to replace repair money instead of being added to public funds to hasten the day of good roads and streets was also hit by Mr. Steinhart.

Chicago Outing Held

CHICAGO, Aug. 29. — The Chicago Automobile Trade Association held its summer outing Thursday at Grand Beach, Mich. The trip was made by special train from Chicago and the day was spent at golf, horse shoe pitching, swimming and other sports. A banquet was held at the hotel in the evening. The night was spent at Grand Beach and the return to Chicago was made after breakfast Friday morning on the special train, reaching the city in time for the day's business. This is the second time the outing of the Chicago dealers has taken this form.

Tire Dealers Close Nights

ST. LOUIS, Aug. 29.—Members of the Associated Tire Dealers of St. Louis will begin closing their establishments, nights, Sundays and holidays on September 1. Placards were distributed to the members which are to be displayed in prominent places in their building announcing the plan.

Several tire firms which put the closing plan into operation before the association adopted it reported that their customers commended the idea.

At the same meeting, A. P. Woehrle, president of the association, appointed tire dealers in several localities to hold neighborhood meetings to enlist non-members for the association.

N. B. M. A. to Convene

NEW YORK, Aug. 29.—The National Battery Manufacturers Association will hold a convention here at the Roosevelt Hotel, September 18 and 19, during the week of the Radio Show at the Grand Central Palace and the Second Annual Radio World's Fair at the 258th Field Artillery Armory. Subjects on the program for discussion include, The Lead Situation; Misbranding; Cooperation with the Service Station; Standard Ratings for Batteries; Statistics; Credit Bureau; Latest Inventions and Improvements; Trade Customs.

Harkins Heads Coast Body

SAN FRANCISCO, Aug. 29.—L. W. Harkins, of Tacoma, Wash., was elected president of the Washington Automotive Trade Association at the recent annual convention at Everett, Wash., according to advices received by the San Francisco Automotive Trade Association. W. T. Burke, of Seattle, and Lee Olney, of Montesano, were chosen vice presidents, and E. E. Harkins, of Seattle, secretary-manager. The convention named the following executive board: A. S. Eldridge, Seattle; C. E. Armantrout, Everett; Howard Steere, Tacoma; M. O. Hatch, Tacoma; L. E. Titus, Olympia; Harry Winde, Everett; Guy Reigel, Spokane; Art Hoge, Seattle; M. Kulp, Spokane, and J. Nagelvoort, Seattle.

The convention adopted resolutions recommending the repeal of the excise tax on automobiles and accessories, and recommending the adoption of the motor code. The association also resolved that it be incorporated. Speakers included Hance Cleland, of Olympia, Wash.; Mrs. Harry J. Miller, delegate from Snohomish county, Wash., and Carl Palmen, of Los Angeles, Cal. The 1926 convention will be held in Spokane. Attendance at the Everett convention was better than 70 per cent of the membership.

Join Fight on Excises

CHARLOTTE, N. C., Aug. 29.—The movement, which bids fair to become nationwide, for repeal of the excise taxes imposed on the automotive manufacturing industry, won the support of the Charlotte Automotive Merchants' Association, when that body formally declared its favor for enactment of repeal legislation by the next Congress.

The members of the association were urged by J. P. Harris, president of the local association, to vigorously urge United States Senators Simmons and Overman, of this state, and the other members of the North Carolina delegation in Congress, to assist in the effort which will be made next December to relieve the automotive manufacturing industry and the motoring public of this taxation.

Texas Jobbers Meet

SAN ANTONIO, Tex., Aug. 29.—The last quarterly meeting of the Texas Automotive Jobbers Association for the year was held here last week with a full membership in attendance. New laws and proposed legislation were among the questions discussed at the conference. Credit sales and collection, returning goods and increasing membership were also discusesd. The next meeting of the association—the annual meeting—will be held in Houston in October. At that time officers will be elected and reports of the activities of the organization for the year heard. C. A. McCauley of Waco presided at the meeting here. He is president of the association.

Iowa N. A. D. A. to Meet

DES MOINES, Ia., Aug. 29.—The Iowa Automotive Merchants' Association has announced that the Iowa conference of the National Automobile Dealers' Association will be held at the Hotel Fort Des Moines on September 9. Every automobile dealer in the state is invited to be present. Advance indications point to a large attendance.

California Association Moves

SAN FRANCISCO, Aug. 29.—The California State Automobile Association branch at San Jose has moved into its new building at 1034 The Alameda in that city. A. G. Brooker is manager of the branch and the staff has been increased from three to ten persons.

Tax Revision to Be Studied

CHARLOTTE, N. C., Aug. 29.—Consideration of a policy looking to a reduction by the North Carolina government of taxes on automobile establishments and revision of the system on which automobile owners are taxed will constitute probably the most important discussion at the annual summer convention of the North Carolina Automotive Trade Association, at Wrightsville Beach, near Wilmington, September 7-8, according to officers and members here of this organization.

Harry Clendenin, of Greensboro, is president of the association.

Howard J. Wisehaupt of Philadelphia, will deliver an address on "Dealers' Ailments." Mr. Wisehaupt at present is conducting an automobile salesmen's school at Raleigh, N. C. Lee A. Folger, of Charlotte, former president and one of the most influential members of the association, will lead the round-table discussion of sales promotion.

This association has tentatively developed a comprehensive program relating to legislation, important planks of which declare for taxation of automobiles on a basis of weight, instead of horsepower, revision of that schedule of taxes, and for compulsory insurance of all automobiles.

Coming Motor Events

Automobile Shows

Dallas, Tex.—Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis.—Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal.—Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Follmer, Milton, Pa.; Noel's Service Station, Minersville, Pa.; Capitano-Nash Motor Co., Pittston, Pa.; Eagle Garage, Pottsville, Pa.; State College Motor Co., State College, Pa.; Geo. W. Brewer, Tamaqua, Pa.; John Hurney, Throop, Pa.; United Motor Car Co., Williamsport, Pa.

CANADA GAS RECEIPTS

QUEBEC, August 29.—The gasoline tax instituted by the Provincial Government in 1925 will give the Province of Quebec this year a revenue of approximately $750,000. Last year the province collected about $520,000.

McKINNON INDUSTRIES SOLD

ST. CATHERINES, Ont., Aug. 29.—One of the largest strictly cash transactions which has taken place in industrial circles in Canada during recent years was completed recently when Gideon Grant, of the firm of Johnston, Grant, Dods and Grant, Toronto, acting for himself and N. R. Sinclair of New York, acquired all of the assets of McKinnon Industries, Ltd., St. Catharines, Ont., and the McKinnon Dash Company, Buffalo, N. Y. The cash consideration is understood to be in the neighborhood of $2,000,000. Mr. Grant stated positively that the sale does not involve any change whatever in the company's management. Under a voting trust arrangement, B. W. Burtsell will continue in full charge of the company's management.

GETS STUTZ CUP

PHILADELPHIA, Aug. 29.—The S. R. Blocksom Motor Co., Philadelphia, has been awarded the Stutz President's Cup for having the best record of sales development for June, which was the largest for any one month in the company's history. The cup is being displayed at the showrooms.

Chrysler Denies Essential Change in Insurance Plan

Company Awaits Decisions in Various States Before Carrying Case to Highest Courts

NEW YORK, Aug. 29.—There has been no essential changes or modification of the Chrysler insurance and finance plan, despite the impression prevalent among insurance men, it is stated by Chrysler officials.

The impression arose from reports of legal developments affecting the plan in Alabama, where the ruling was made that the Palmetto Fire Insurance Co., Chrysler underwriters, was operating contrary to the state law. The company thereupon agreed to take out a license to do business in Alabama. At the same time, however, the assistant attorney general, J. Fred Johnson, Jr., made another ruling that supported the fundamental contention of the Chrysler interests—that the dealer by reason of negotiating a sale of a car with insurance included cannot be deemed an insurance agent.

Several states have declared the plan entirely illegal, and others are awaiting the outcome of court actions started in seven or eight capitals. Of these, the Wisconsin suit is regarded as the most important, as it will probably be the first to be carried to the higher courts. Chrysler counsel in this case, as in New York and others, have obtained a temporary order restraining the insurance commissioner from interfering with the business of the Chrysler Sales Corp. On August 24 the Chrysler company was allowed fifteen days in which to file a brief on the granting of an interlocutory injunction, and the insurance commissioner ten days additional to file a reply.

The Chrysler company is determined to carry the case to the United States Supreme Court, if necessary.

Toronto Man Made General Manager of Flint Motors

FLINT, Mich., Aug. 29.—At a meeting of the directors of the Flint Motor Company, R. H. Mulch of Toronto was elected vice president and general manager and C. O. Miniger of Toledo was elected chairman of the executive committee. Mr. Mulch is vice president and general manager of Durant Motors of Canada, formerly general manager of the Chevrolet Motor Company of California.

Mr. Miniger is well known in the industry as the founder and president of the Auto Lite Company of Toledo and the U. S. Light and Heat Company of Niagara Falls. He is also a director of the Willys-Overland Company.

During the last four months the Flint Motor Company plant has been completely re-arranged and three popular priced models developed under the direction of W. R. Willett. Sixty thousand Flint cars will be built during the calendar year of 1926. Mr. Willett has been appointed assistant to W. C. Durant, president of Durant Motors, Inc., with headquarters in New York City.

SQUEEKS and RATTLES

HEAVY DUTY

"Tell me again, George! What kind of a car are you going to buy me?"
"A two ton truck, dearest."
—Smith's Weekly

HOW TO JUDGE AN AUTOMOBILE

Ask the salesman.
Twist the right front door handle.
Look at the instruments on the dash.
Kick the left rear tire.
Bend down and look at the floor beneath the car.
Poke a finger into the upholstery.
Place right foot on front bumper and push gently.
Light a cigar.
Ignore your wife's suggestions.
Step back ten feet, close the left eye, and get the ensemble effect.
Ask the salesman again.
—Judge.

"I have heard," said Professor Short,
"That Babylon fell.
And Ninevah was destroyed;
And—
Some one in the class:
"Tyre was punctured."
—Notre Dame Juggler.

What a Shock

"My boss fired me because I took his car out last night."
"How did he know you took it out?"
"I ran over him!"
—Al Jolson in "Big Boy".

"An' phwat's become ov Moike Flanagan?"
"Poor chap! He mistook a taxi-horn for the midday whistle, an' stopped work crossing the Strand!" *—Gaiety.*

An acrobat knocked down by a motor in Holborn last week executed a somersault and escaped. This is the sort of thing that sours our taxi drivers.
—Passing Show.

At one stage of last year's Arctic Expedition the members could hear jazz music broadcast from London. Then they pushed on farther north.
—Humorist.

POLITENESS DE LUXE

He: "Do you think a lot of me?"
She: "Yes, I've loved you since the night you got up and gave me your seat in the Patrol Wagon." *—Smith's Weekly*

NEW STUTZ DEALERS

CHICAGO, Aug. 29.—Announcement has been made by F. D. Cerf, president of the Stutz Chicago Factory Branch, Inc., of the closing of Stutz dealer franchises with the Oak Park Sales & Service, Inc., of Oak Park, and the Schuenemann Motors, 2489 Milwaukee Avenue, Chicago. The former company is owned by Charles Raggio and A. T. Snow, the latter being vice president and general manager and actively in charge of the business. The Schuenemann Company is owned by father and son, both of whom have been actively engaged in the automobile business for a number of years.

SURETY CO. HAS SHOWROOM

HARTFORD, Conn., Aug. 29. — The Hartford Accident & Indemnity Co. has opened a salesroom at 39-41 Allyn street as an outlet for reclaimed cars. This is the first instance of an insurance company opening a salesroom for the sale of recovered and reclaimed cars.

Reo Reduces Prices on Speed Wagons and Passenger Cars

LANSING, Sept. 1.—Prices on Reo passenger cars and speed wagons, one and a quarter tons capacity, have been revised, the new prices ranging from $50 to $150 lower.

All models in the passenger line, as it is now manufactured together with the speed wagon with either the four or six cylinder engine are affected.

The new prices are: Series G. Sedan $1,565; Series G Coupe, $1,495; Reo Sport Roadster $1,665; Series G Deluxe Sedan $1745; Speed Wagon with four cylinder engine, one and a quarter ton capacity, $1,035 and Speed Wagon same capacity, but with the six cylinder engine $1,185.

During the last five months, Reo according to company officials, has broken all records in its 21 years to both production and sales. Recently the Series G sedan, coupe and sport roadster have been the biggest sellers. The speed wagon has also enjoyed an unusual demand so that the company now accounts for more than 125,000 speed wagons in active service.

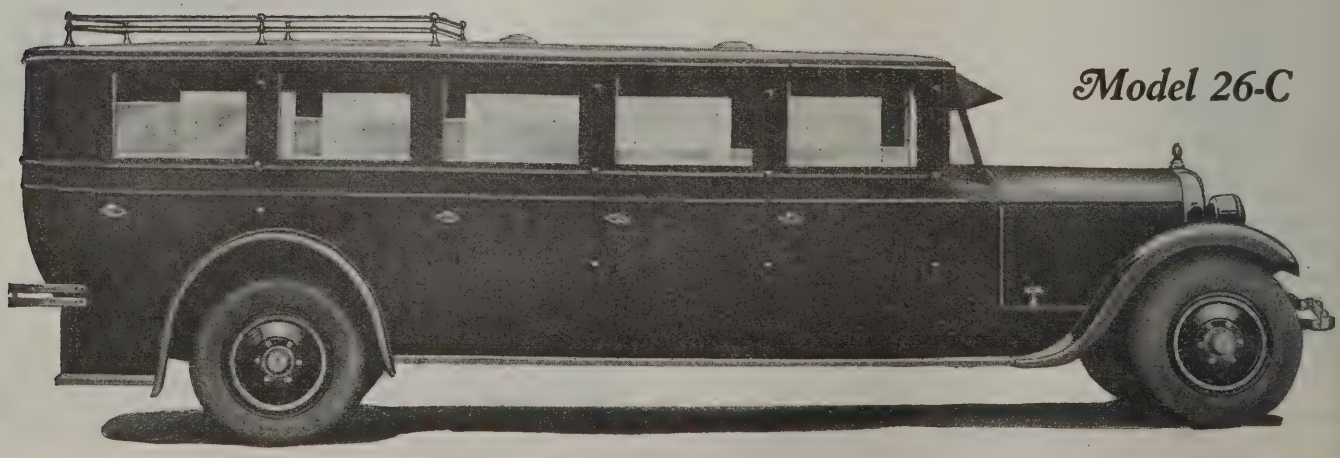
Miller BUILT BELLEFONTAINE, OHIO.

Model M

On City Streets, — and on the Highways

MILLER-BUILT buses mounted on the new Studebaker bus chassis are giving wonderfully satisfactory and profitable performance in both city and inter-city service.

Model M, Metropolitan Pay-Enter Type Bus, shown above, is ideal equipment for city service, where stops are frequent. The driver controls his bus, collects fares and oversees the entrance and exit of all passengers without leaving his seat. It seats twenty-one passengers comfortably, with ample room for a large number of standees.



Model 26C, shown below, is one of the most popular designs for heavy interurban service.

Although rated as a nineteen passenger job, this bus will easily accommodate as many as twenty-two passengers.

The Miller-built line of buses on the new Studebaker chassis includes a model for every kind of bus service. Ask your Studebaker dealer, or write us direct, for complete specifications, prices, etc.

The A. J. MILLER CO.

BELLEFONTAINE, OHIO

Model 26-C

Vol. XLVIII | Chicago, September 10, 1925 | No. 11

Summary and Index of Important Events in

This Week's Automotive News

Detailed Stories from* MOTOR AGE *Staff Writers and Special Correspondents Appear in News Section Beginning on Page 32

AUTOMOTIVE business remains at high level with August production and sales setting new record. September expected as good as last month. Page 32.

Merger of Fageol and Hall-Scott with J. G. Brill and American Car & Foundry nears completion. Page 32.

Fords pay $16,493,160 income tax, nearly fourth of amount for first Michigan district. Page 34.

Chrysler Corp. buys Detroit plant of American Motor Body Co. Page 34.

Plans begin to take shape for 1926 National Automobile Shows in New York and Chicago on January 9 and 30 respectively. Page 35.

Ustick heads new company to distribute Rickenbacker cars in St. Louis territory. Merger combines two former distributors. Page 35.

New car sales reach peak in August in Southern California territory. Public shows excellent response to new models. Page 37.

Dallas, Tex., dealers plan to exhibit at State Fair of Texas October 10 to 25. Page 37.

U. S. revenue collections from automotive industry show big increase in July. Page 38.

President Sloan of General Motors Corp. urges level line of production in factories. Says dealers must carry heavier stocks at times to protect rush periods. Page 43.

August production expected to total 11 per cent greater than July, according to N. A. C. C. figures. Page 38.

New car sales show sharp increase in San Francisco territory. Used automobiles find less favor. Page 33.

Homer McKee takes place of E. S. Gorrell as vice president of Marmon, Gorrell going to Stutz as vice president. Page 33.

Franklin reduces prices $15 to $225 on all models. Page 33.

Beecroft sees heavy sales volume throughout last half of 1925. Page 33.

Used car sales during first six months of 1925 are 17 per cent greater than during same period of 1924, N. A. D. A. figures reveal. Page 39.

Iowa dealers report August business shows good increase over same month last year. Page 39.

Gasoline tax receipts in Ohio are far ahead of expectations of law's proponents. More than $3,500,000 collected in less than three months. Page 38.

Chevrolet Motor Company arranges co-operative plan to aid dealers with advertising in local media. Page 37.

Tire dealers in Carolinas expect excellent business this fall and winter. Movement to consumer is brisk. Page 36.

Louisville dealers predict good fall sales volume. August sales better than last year although slightly below July. Page 36.

Stocks of automobiles are light in Dallas, Tex., trade territory, with delivery the big problem in some lines. Page 36.

Time Is Ripe for Dealers to Sell Owners on Desirability of Retaining Their Old Cars and Buying New Ones to Double Their Transportation Facilities

By SAM SHELTON

THE first thought of the automobile dealer, when the retail price of his wares is reduced by public announcement of the maker, is how to make up for the reduction of profit per unit of sale which is automatically reduced when the volume of sales in dollars goes down.

There is, in fact, opened up to the retail trade by the present situation an opportunity that it has never had before to so great an extent. It is simply this: the chance to augment profits and at the same time hit a body blow at the vexatious used car problem by converting more and more families to the two-car idea.

The two-car idea is easily comprehended by the head of any family and still more easily comprehended by the wife and daughter or son. One car cannot be two places at once. When father is driving it on business mother and the girls and boys must stay home or walk, or ride the street cars, or take a taxi or bus, or ruffle their good natures by some other substitute for modern personal transportation.

Social evolution has brought us to the stage of the two-car family and now, involuntarily, economic pressure has created a condition that makes possible the realization of the two-car family in town and country. In the early days of the industry most of the car owners were men of wealth and naturally they had reached the age where they had families of grown-up sons and daughters. Frequently they maintained two or more cars for the convenience of various members of the family. If they had only one car there usually was a chauffeur to see that it was available to take the different members of the family where they wanted to go.

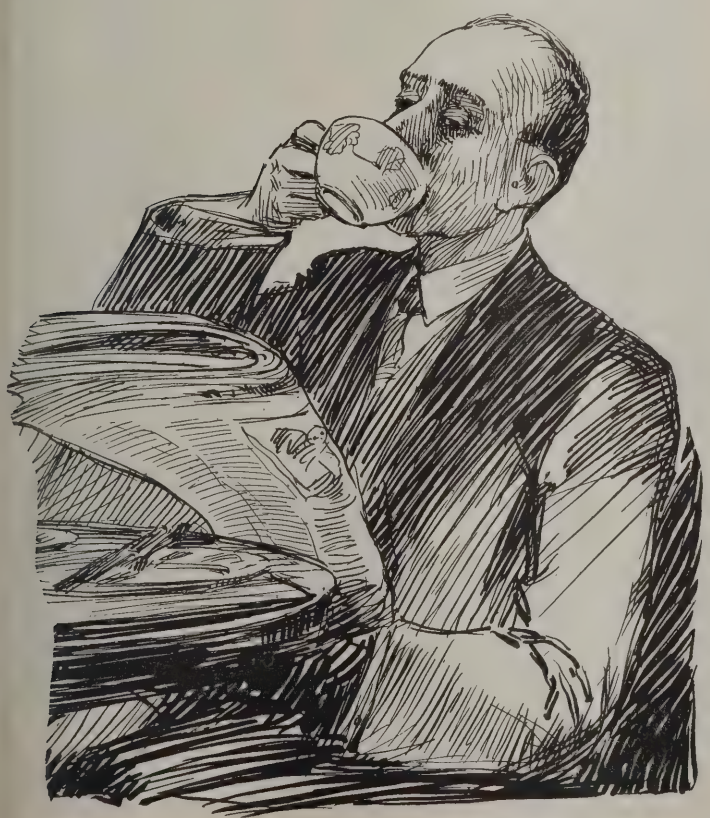
Today the majority of cars are owned by men in the great middle class, and their families are in all stages of development. Families that got along very well with one

Waiting for the two-car salesman—Father has just announced that he will use the car today on business

car a few years ago are now feeling the need of two. Women are taking to driving more and more and boys and girls as they grow up are just naturally trained to look upon the motor car as the logical means of transportation. Almost every day in the life of the modern American family there arises a situation wherein the possession of two or more automobiles would have made everybody happier and probably would have proved a real economy for the family.

Here are the two great factors that have created the two-car opportunity:

1. Prices of new cars of real value are at the lowest point in history.



2. Used car allowances are lower than ever before.

Here is the way it works:

The man in the market for a new car gets an appraisal or valuation on his old car so low that for the time being it jars him loose from all thought of a new car. And yet he wants a new car. Probably his old one is an open model and the wife and children are clamoring for a comfortable enclosed car before the cold weather sets in. And the head of the family wouldn't mind having comfortable transportation for the winter months. And yet he may feel a decided reluctance in giving up the open car. Probably he enjoys long trips in it in the summer time. He may have weighed the advantages and disadvantages a long time before finally deciding that he would get a new car if he could make the "right kind of trade."

At present prices the "right kind of trades" from the standpoint of both owner and dealer simply can't be made. In self protection the dealer is compelled to keep allowances for used cars, especially open ones, very low. The price the dealer is able to offer for the old car often is very much less than what that car is actually worth to the owner.

The dealer or salesman who is awake to this situation takes advantage of it by approaching the prospective customer with the thought of how cheaply he can own two cars. Let us suppose the dealer has been able to offer

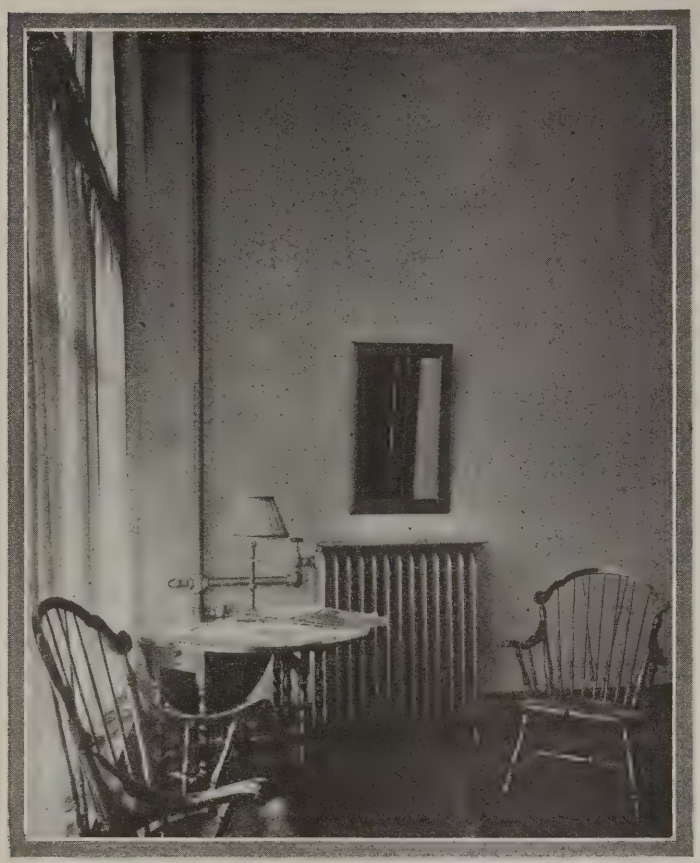
$300 for a 1923 touring car. The customer is interested in a new car that costs about $1500. By sacrificing his old car he can get the new one for an outlay of $1200, but from then on he has only one car. For only $300 more or a total outlay of $1500 he can have the satisfaction of owning two cars and the extra car will have cost him only $300, or looking at it another way, the average cost of the two cars is only $750 each.

Within the last two months almost every car of popular acceptance has been reduced in price. Values that were already phenomenal are still greater. But the automobile dealer is confronted with the necessity of selling more cars to do the same volume of business that he could have done before with fewer cars. It means greater sales effort, more energy applied to the sales of accessories, tires, supplies, service and miscellaneous items. But at the same time he is expected by the factory and the distributor to sell more cars. *If he will consistently follow up the opportunities offered of making clean sales of a second car to owners now possessing fairly good used cars he will open up a profitable field.*

The dealer who is in contact with a fairly large number of car owners, of the make he sells or a competitive make, has a made to order prospect list that he can work at low cost and with a high degree of selectiveness. The chances are he knows the financial condition of these families very well. He knows which ones have paid cash for their cars or have met their time payment notes promptly. He knows which ones are able to pay cash for supplies and repairs, and don't find it necessary to lay their cars up for lack of operating funds.

Hand Picked Prospect List

These families constitute a hand-picked list of prospects upon which to start the two-car campaign. If they are in comfortable circumstances financially they will listen attentively to the two-car argument. They have always wanted two cars, but they have never stopped to think how cheaply they could own them. If the old car was bought on the time payment plan and paid for without any great inconvenience, the owner is in a receptive mood to consider another deal of that kind. It may be, however, that he has prospered and may want to pay cash for the new car. He will be interested in learning what he can save by paying cash.



In many communities the cost of owning an extra car is not great. In the country and smaller cities where individual homes predominate there is usually shelter already available. At any rate the cost of a two-car garage is very little more than that of a single car garage. The garage cost is a more important item in the larger cities, but even so it is not prohibitive except in a few instances. In most cases it probably will be found that the family can work out a scheme by which the extra operating cost of the second car will be paid out of the allowances or separate incomes of mother or the children. Thus the burden on the head of the house will not be increased.

The capable automobile dealer or salesman will be able to think of any number of logical arguments to use in convincing the car owner of the desirability of retaining his old car.

For instance, if the owner keeps his old car and buys a new one he will have the old vehicle available for fishing trips, tours or outings that would subject it to rougher treatment than he would want to give a new closed car.

With two cars in the family he can use one for business and leave the other for the wife to use in taking the

Slicking up the showroom or salesroom does not always mean the expenditure of much money. Often a corner can be treated as above to add comfort and attractiveness. Keep the decorations and fixtures simple, as this always is more dignified

Put New Atmosphere in the Salesroom

"Slick Up" Makes the Place More Inviting so It Won't Be Just Another "Garage". A Fresh Coat of Paint, Rearrangement of Furniture and Seasonal Display Will Work Wonders to Attract New Trade and Hold the Old

By B. M. IKERT

RECENTLY we observed a very fine specimen of a new home attractively finished with flower boxes, willow-green shutters, a beautiful white colonial door with solid bronze latch and knocker. It was beautiful, magnificent. But one thing spoiled the whole make-up. A flimsy 10 cent tin mail box painted jet black was stuck on the door frame. Just spoiled everything.

It reminded us of some of the showrooms of dealers wherein handsome cars often are deprived of an otherwise excellent setting just because someone was careless and forgot to place a drip pan under the engine, or part of a crate was left on the floor.

Some recent surveys of dealer establishments show clearly the need for a general cleaning up and putting the houses in order for company, so to speak. It has been a busy summer and many things have been left undone under the pressure of attending to the daily wants of customers and demands of tourists. Like the busy housewife who "just couldn't get her work done today" many dealers find they are in about the same fix. But it's time to slick up now, and while we are about it let's make ours a real place.

SLICK UP NOW FOR

Why have people refer to your place of business as just another "garage"? Why allow them to think that being in the automobile business means dirt, grease, oil and a lot of rotten looking signs with mispelled words and dots over the capital I's?

One cannot look over a lot of dealer establishments, both big and little, but what many things suggest themselves, which if carried out will give to the showrooms, and the establishment in general, a different and more pleasant atmosphere. The bigger places of business, with their pretentious showrooms and porters to keep them groomed have not much to get out of order, because the owners of such businesses set aside a certain amount each year for maintenance of the property.

Small Town Dealer's Problem

But the small town dealer who cannot afford a porter or two to do nothing but keep his place of business in order must adopt other methods and even lend a hand himself. Slicking up does not necessarily mean spending money for a lot of fancy stuff which instead of adding to the attractiveness of the showroom merely clutters it up.

Your showroom is after all the key room to your business. It is the living room of your house; the lobby of your hotel. Being placed in the most prominent part of your establishment it is right that it should be treated accordingly. It is the mingling place of customers, both old and new and by the atmosphere accorded them there they will largely judge the rest of the departments of your business. A neat, clean and dressy showroom suggest good mechanical work in the shop. A dirty and cluttered showroom, slovenly methods in the shop.

Just where to start a slick-up campaign as regards the showroom is difficult to say, but we dare say if the dealer took a pad of paper and pencil and jotted down the things he knows ought to be done, he would find plenty. Some of the things which follow perhaps sound superfluous, but our investigations would indicate it is the doing of the more obvious things that stands between a good and bad looking showroom.

Customers for one thing like to see a change. What if a furniture store never changed the order of things in the display windows? By dressing up the windows differently from time to time there is produced an incentive for people to buy. When you rearrange the contents of your showroom and doll it up a bit here and there it gives the impression that you have a fresh stock of merchandise. But, if it looks the same year in and out, people soon get the idea you have a lot of left over stuff on your shelves which time eventually will move rather than any direct sales appeal.

So, let's see what rearrangement we can make. Instead of making the showroom floor a storage space for cars, why not give it a different and more busy atmosphere by moving the bookkeeper and stenographer and perhaps the billing clerk into the center of the room and fence them off properly with a neat railing of some sort? Banks find it profitable to place a series of desks right in the center of their establishments where it is easy for patrons to do business. In the case of the dealer's showroom there still would be room to display a few cars well. Such an arrangement often gives the feeling of a busy place, not found, always, when the floor contains nothing but cars and the office force is tucked away where nobody ever sees or can find them. If you do rearrange your showroom

WINTER BUSINESS

as suggested, be sure to place a neat little "Information" sign on the desk nearest the customer who enters.

And, by the way, the subject of signs is something not to be overlooked in checking up. Signs are something which catch the eye very quickly and if there must be signs let's make them attractive. The time worn posters advertising last year's county fair and faded pink lettering of what was once a bright red sign painted on cheesecloth telling of a price reduction on a certain model ought to come down. It is a mistake to attempt making signs that should go to a sign painter. After all, the less signs you can get along with, the better your showroom, shop or any other department will appear.

Excepting for some spectacular temporary purpose, let the signs be as small as possible. The market affords many neat styles of signs or frames for signs and if you adopt a certain style stick to it all the way through. Thus, if you choose glass covered signs with a mahogany frame, don't get some frames of oak or jet black. Things should be harmonious. The customer may not know why the place looks inviting, but nevertheless, he feels it and it is attention to small details like this that makes it possible.

Wash the windows. Dirty windows are by far the most flagrant violators. Take down the cobwebs and if you want to give the place a different look, add some awnings. Not just the plain white kind. White is an unsympathetic color. Pick out some with stripes of green and gold, green and cream, etc. But if you do this and also want to carry out some new decorations on the inside, be sure to pick colors which do not clash.

Sometimes a gallon or two of paint, some varnish, and a stack of wall board will work wonders in giving the showroom a better atmosphere. We have seen where the interior in a plain every-day cross roads garage was made beautiful by painting the walls with "barrelled sunlight", the wainscoating a gray and the floor covered with battleship linoleum. Once a place is decorated like that it is not much of a job to keep it clean. When there is nothing but dirt and grease around there is no incentive to keep the place clean.

About one of the first things a person does when looking for a place to eat is to give it the "once over" from the outside before venturing in. If the windows are clean and the place otherwise looks attractive we sort of take for granted the service inside is all right.

Same thing with a well kept automotive store. But the looks must not all be on the outside. The interior, visible through the windows must appeal to the customer. If he sees a lot of parts scattereed around on top of the showcase and badly kept shelves he is likely to be led to another and more attractive place.

During the rush of summer business stock bins and accessory shelves are likely to get mussed up considerably. Some of the smaller establishments often build their own parts shelves and bins and unless a good job of it is done it detracts greatly from the appearance. The metal bins and racks which the market affords certainly look vastly neater and make it possible at all times to keep the parts stock in good shape.

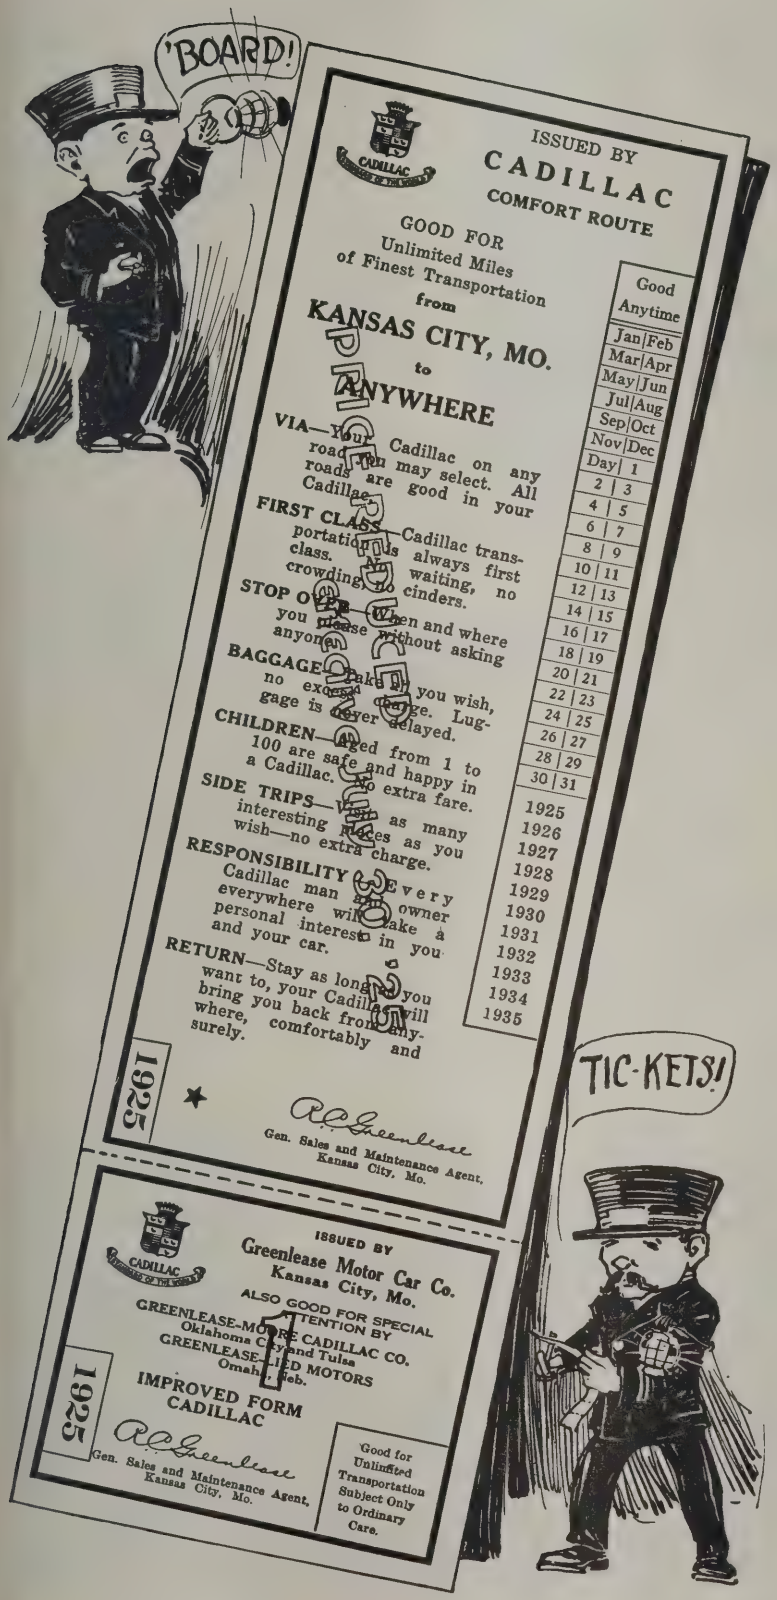
If you do happen to have wood shelves and partitions for your stock room, see that they are of uniform thickness. That is, have all the horizontal shelves say, 1 in. thick and the vertical partitions ½ or ⅝ in. Don't have some ¾ in., some ¼ and still others of heavy cardboard. Plainly speaking, they look rotten.

Remove all the stuff which has a tendency to make your place a hangout for persons other than your customers. We all have seen the tonneau from an old car set in front of a dealer's place for the stick-whittling variety of folks. Far better for a place like that to remove the seat and put in its place, perhaps, a neat bulletin board attached to which is a road map, a flower box—anything, so long as it gives a better atmosphere to the place.

In sprucing up the showroom don't overlook the possibilities of getting new effects at night. That's the time when people look at display windows and if yours is dark and uninviting, it gives the impression you are not alive and business is not so good.

If you have never done so, you might try something like this. One dealer did it and got fine results. He placed one model of the car he was handling in one corner of his showroom and rigged up a spot light and battery in the opposite corner, so that when the spotlight was in operation it shone directly on the radiator of the car. No other lights were on at the time and naturally when viewed from the street the effect was clever. Usually his showroom was lighted conventionally at night, but to give it a little dif-

(*Continued on page 20*)



Here is shown a seasonal display in which the dealer has injected the autumn spirit into his showroom, which by the way is merely a corner in a "garage". Any small town dealer can do the same thing to change the looks of his place of business and attract buyers

Unlimited Mileage "Ticket" Helps Sell Cadillacs

Mileage ticket issued by Greenlease Motor Car Co., for advertising purposes. A complete list of Cadillac distributors in the United States is printed on the reverse side for the convenience of the tourists

Coupon Slip Resembling Railway Transportation, Issued by Kansas City Distributor, Attracts Interest and Emphasizes Travel Advantages of the Automobile

THE idea of unlimited mileage of comfortable transportation given by the modern automobile has been capitalized for advertising purposes by the Greenlease Motor Car Co. of Kansas City, Mo., distributor of the Cadillac in the Kansas City territory. This is accomplished by means of a printed slip resembling in general appearance a coupon ticket issued by a railroad. The appearance and text of the "ticket" are such as to assure its being read.

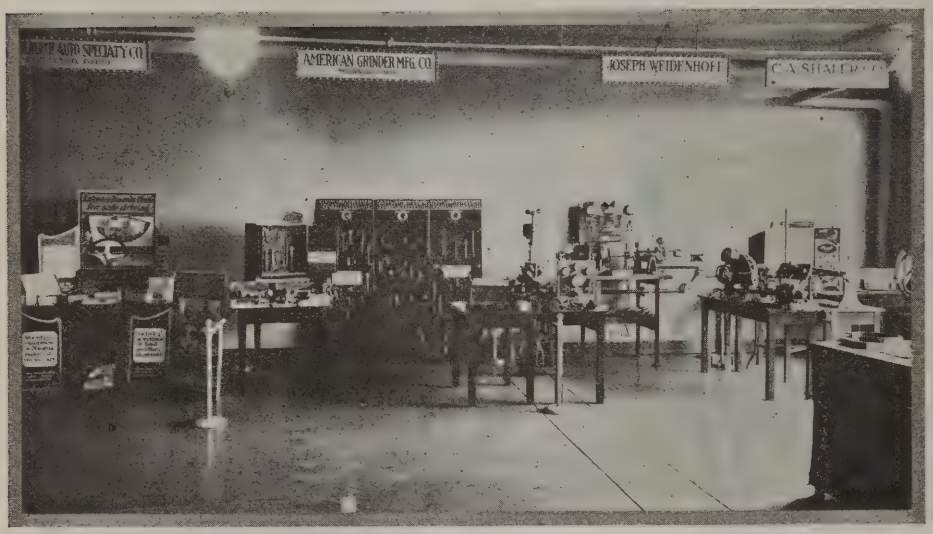
The ticket is issued by the Cadillac Comfort Route, and is Good for Unlimited Miles of Finest Transpartion from Kansas City to Anywhere. The route you take is VIA-Your Cadillac on any road you may select. All roads are good in your Cadillac.

The transportation is guaranteed FIRST CLASS —Cadillac transportation is always first class. No waiting, No crowding, No cinders.

You are at liberty to STOP OVER—When and where you please without asking anybody; and there is no excess charge for your BAGGAGE, so you can take all you wish. Luggage is never delayed.

There is no extra fare for CHILDREN, and they are always safe and comfortable at any age from 1 to 100.

Neither is there any extra charge for SIDE TRIPS—Visit as many interesting places as you wish. And along the route every Cadillac man will take a personal interest in you and your car —men who are perfectly RESPONSIBLE.



Stay as long as you wish, for when you RETURN, your Cadillac will bring you back comfortable and surely.

The ticket is signed by R. C. Greenlease, Gen. Sales and Maintenance Agent, Kansas City, Mo.

To the ticket proper, is attached a coupon, which is good for special attention by Greenlease-Moore Cadillac Co., Oklahoma and Tulsa, Okla., and Greenlease-Lied Motors, Omaha, Neb. Across the face of the ticket is printed in red ink: "PRICE REDUCED effective July 30, 1925."

On the reverse side of the ticket is printed a list of the Cadillac distributors in the United States, and a list of the Cadillac dealers in the Kansas City territory, and assurance is given that in case one needs help from a Cadillac service man, he will always be within reach by driving an hour or so.

42 Exhibits Now in Automotive Equipment Mart

A corner in the permanent exhibit of the Automotive Equipment Mart at Chicago.

Permanent Display Sponsored by Automotive Manufacturers' Association Provides Central Show Place and Market

THIS year for the first time a centrally located permanent exhibit of automotive merchandise which comes under the designations of accessories, supplies and garage equipment is being maintained in Chicago. And already, in less than three months of operation, the promoters of this enterprise are enthusiastic about its possibilities for bringing together the manufacturers and the wholesale distributors of automotive products.

When the Automotive Equipment Mart, as this exhibit is called, was opened by the Automotive Manufacturers' Association in June at 1315 Michigan avenue, Chicago, the event was recorded in MOTOR AGE as a happening of unusual news interest in the automotive world. Now it is possible to tell of some of the services performed by this institution in bringing together the producers and the sellers of automotive merchandise.

Thus far 42 manufacturers have taken space in the mart and installed attractive sales booths. Most of them have sufficient space to display samples of practically their entire line of products. The general offices of the Automotive Manufacturers' Association are on the same floor and Mr. W. E. Green, secretary of the association, is personally in charge of the exhibit. In this capacity Mr. Green receives visitors, shows them through the exhibit and arranges conferences for them with representatives of the manufacturers in whom they are interested. Nearly all of the visitors thus far have been wholesalers, but it is intended that arrangements shall be made for retailers to visit the mart as guests of the wholesalers with whom they do business.

The exhibit has an abundance of daylight, but this is supplemented with a very complete installation of powerful electric lights so that every booth is perfectly lighted. There is an electric power outlet convenient to each booth and adequate fuses and equipment have been installed so that electrical devices, lights, power driven tools and the like may be demonstrated in the booth.

Visitors who are interested in making purchases or in having demonstrations made are put in touch with the manufacturers by Mr. Green, who urges that a representative capable of closing sales come to the mart to meet the visitors. In this way it is possible for a buyer who has only a limited amount of time to see the products of a large number of manufacturers and talk business with their sales representative in a very short time.

In its early stages the mart has proved especially helpful to wholesale automotive distributors from other countries who have come to the United States to purchase merchandise. Among the visitors who recently have signed the register at the mart were Alexander Mair of Alexander Mair & Co., Ltd., Melbourne, Australia; A. D. Finlay of Finlay Motors Pty., Ltd., Melbourne; E. J. Hazell of Westcott, Hazell & Co., Sydney, Australia, and S. F. Anderson of Anderson & Hansen, Ltd., Napier, New Zealand.

Mr. Green spent a great deal of time with these and other visitors. One of these foreign buyers held conferences with about a dozen manufacturers' representatives in the two days that he had available to spend in Chicago and he placed some substantial orders.

Mr. Hazell, after reaching Seattle on his way home, wrote to Mr. Green; "I first want to thank you kindly for the way in which you treated me at Chicago. As chairman of the Association of five leading accessory jobbers of Australia I will convey to them and to the trade in general the method which you have adopted in connection with bringing about a display of accessories of leading manufacturers at a centralized depot. I can assure you that it saved me quite a lot of time and I am sorry that my stay in Chicago was cut so short. Had it not been for the method of displaying these particular lines in the show rooms it would not have been possible for me to

A sales conference held at the Automotive Equipment Mart by the Apex Electric Mfg. Co. Left to right: Bob Williams, T. S. Nichols, A. C. Johnson, sales manager; Miss Kissinger, Otto Frankfort, advertising manager; Frank Sheerin, H. P. Caldwell, R. C. Cassady, H. E. Smith.

Views of exhibits in Automotive Equipment Mart. The manufacturers whose booths are shown are identified by the neatly lettered signs above each exhibit.

place the business that I did through this connection."

Although it is considered desirable by Mr. Green for direct representatives of the manufacturers to deal with prospective buyers, he is nevertheless prepared to take orders for manufacturers who because of short notice or distance from Chicago are not always able to send their own sales representative. In one case recently a buyer who had visited the mart and noted the various types of merchandise in which he was interested later mailed an order to Mr. Green for certain articles that he was able to identify by brand but whose manufacturer he did not recall. In this case the order was relayed by Mr. Green's office to the exhibitor concerned.

Mr. Anderson of New Zealand, who was one of the recent visitors to the mart, was highly pleased with the convenience of a centralized display, according to his letter to Mr. Green. "I want to tell you how helpful I found the Automotive Equipment Mart and yourself and staff," he wrote, "in my endeavor to secure new lines of automotive equipment for jobbing in my own country. When I arrived in this country I was confronted with the difficulty of finding the various manufacturers of these lines and examining their merchandise. The mart solved my problem to a great extent by making it possible for me to examine the many lines and to interview representatives of your members exhibiting there. The time and expense saved by my availing myself of your facilities was indeed pleasing to me. It permitted me to transact much more business than I could have otherwise."

But it is not alone in the display of merchandise that the Automotive Equipment Mart is serving the industry. Large, light rooms are provided where the exhibitors may hold conferences with their sales staffs or meet with various groups of their customers. At the same time the accessibility of the exhibits affords the opportunity for a careful and leisurely study of the particular exhibitor's own line of merchandise as compared with other lines. One of the first exhibitors to take advantage of the conference facilities of the mart was the Apex Electric Mfg. Co. In one of the rooms this company recently held a sales conference which was attended by A. C. Johnson, sales manager; Otto Frankfort, advertising manager, and the following salesmen: Bob Williams, T. S. Nichols, Frank Sheerin, H. P. Caldwell, R. C. Gassady and H. E. Smith.

Every effort is made to keep the booths of the exhibitors neat and attractive. The whole floor is kept perfectly clean. The exhibitors are encouraged to follow an orderly style in the arrangement of their products.

The exhibits include almost every type of merchandise sold or used in the automotive establishment. There are bumpers, shock absorbers, timers, solder, batteries, battery equipment, electrical testing equipment, vulcanizers, lamps of all kinds, windshield wipers, wrenches, rim and tire carriers, piston rings, pistons, piston pins, electric drills, water pumps, radio, step plates and great variety of other products, including numerous types of package goods.

The permanent exhibitors now represented are:

Allklean Mfg. Co., Long Island City, N. Y.

American Automatic Devices Co., Chicago.

Blackhawk Mfg. Co., Milwaukee.

Anderson Co., Gary, Ind.

Apco Mfg. Co., Providence, R. I.

Apex Electric Mfg. Co., Chicago.

Atlas Specialty Mfg. Co., Chicago.

The Battery Equipment & Supply Co., Chicago.

Brown & Caine, Chicago.

Chicago Solder Co., Chicago.

Continental Sales Corp., Columbus, Ind.

Eclipse Timer Mfg. Co., Milwaukee.

E. Edelmann & Co., Chicago.

The Folberth Auto Specialty Co., Cleveland.

The Fulton Co., Milwaukee.

Gemco Mfg. Co., Milwaukee.

Gill Mfg. Co., Chicago.

F. C. Hersee Co., Brighton, Mass.

Hill Pump Valve Co., Chicago.

The Hinson Mfg. Co., Waterloo, Ia.

The International Stamping Co., Chicago.

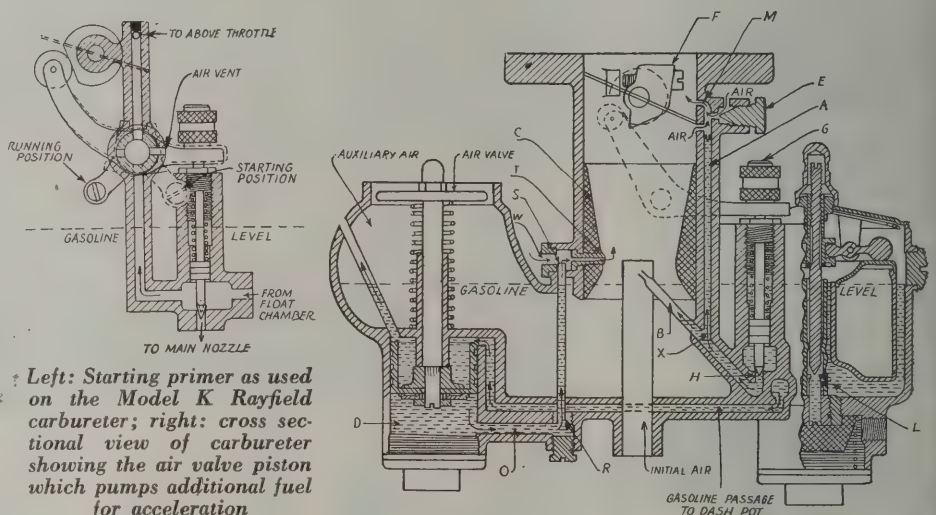
Kales Stamping Co., Detroit.

(*Continued on page* 39)

Rayfield Model K Carbureter Combines Air Valve and Plain Tube Features

THE Beneke Manufacturing Company, Chicago, is now in production on what is known as the model K carbureter, designed to meet the requirements of a high class job keeping in mind low cost and simplicity of construction. The fundamental parts used in the construction of this carbureter are relatively the same as all standard makes in general use today and by certain combinations of old principles a new design has been created. In reality a carbureter was developed incorporating the advantages of the air valve and plain tube type.

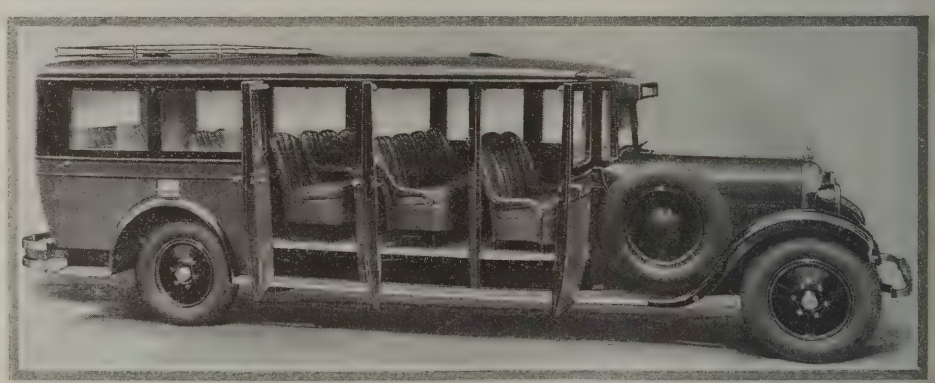
In the accompanying cross-section view which incidentally shows only the important parts and is not a true reproduction of the actual carbureter, it will be noted that there is an idling by-pass A directly off the main jet B. The venturi C functions practically the same as in the plain tube carbureter in combination with an air valve which actuates a pump for acceleration. The air valve also functions slightly as a compensator between the low and intermediate speeds.



From the layout of the carbureter it will be seen that the part which furnishes the proper proportion of fuel and air for fixed or steady throttle openings is entirely independent of the accelerating mechanism. The dash pot D does not materially function as a resistance for the air valve, but operates a pump which in turn injects an extra amount of fuel into the main air stream during the period of acceleration and does not deliver any fuel when the air valve is in rest at any position. In working out a specification to meet the requirements of different engines, it will no doubt be found necessary to alter the value of the several items constituting a specification such as venturi diameter, air valve diameter, spring tension, cam lift, main gasoline nozzle size and injection nozzle size. The carbureters when leaving the factory are fitted with a specification termed standard, and all changes will be noted in terms reading direct, that is, the venturi will be made in 1/32 of an inch variation. The same rule applies to the air valve diameter and the cams will be stamped in thousandths of an inch lift. Nozzles will be given in drill sizes and springs marked, 2, 4, 6 and 9 points light or heavy.

The cam is fixed on the throttle shaft and the relative position to the throttle valve need never be changed. This does not mean, however, that the cam cannot be changed to one of more or less lift according to requirements of the engine.

By reference to the illustration a hole M and one directly below it will be noted. The action of these two holes is quite simple. The top hole is the idle jet proper and the bottom hole acts as an auxiliary nozzle. When the throttle is opened slightly, more fuel is drawn through the idle passage during the period when the main jet is coming into action. The drop in pressure in the main air passage or at the tip of the main nozzle gradually draws the fuel up in the main gasoline passage and starts to deliver into the air stream at the point where the idling jet is delivering its maximum flow.



The dash pot piston is fitted to the check valve which allows for a quick return of the air valve to its normal position, but when pushed downward by the action of the air on the valve it becomes a pump, pushing gasoline through the passage O to the nozzle R whence it is finally drawn into the air stream inside the carbureter body. The delivery nozzle T is very small in proportion to the air vent W, therefore no gasoline is drawn out of the delivery tube excepting when it is elevated by the pumping action.

The principle of construction of a starting primer is made clear by the smaller cross view. The scheme is materially the same as used in previous Rayfield carbureters, that is, a single control operates both the primer for starting and the needle valve for warming up. When the control is pulled all the way out it opens the valve which allows gasoline to by-pass directly from the float chamber, but when pushed partly in closes the valve and the remainder of the travel is used to control the main needle valve so that more fuel is allowed to flow by the needle for warming up purposes.

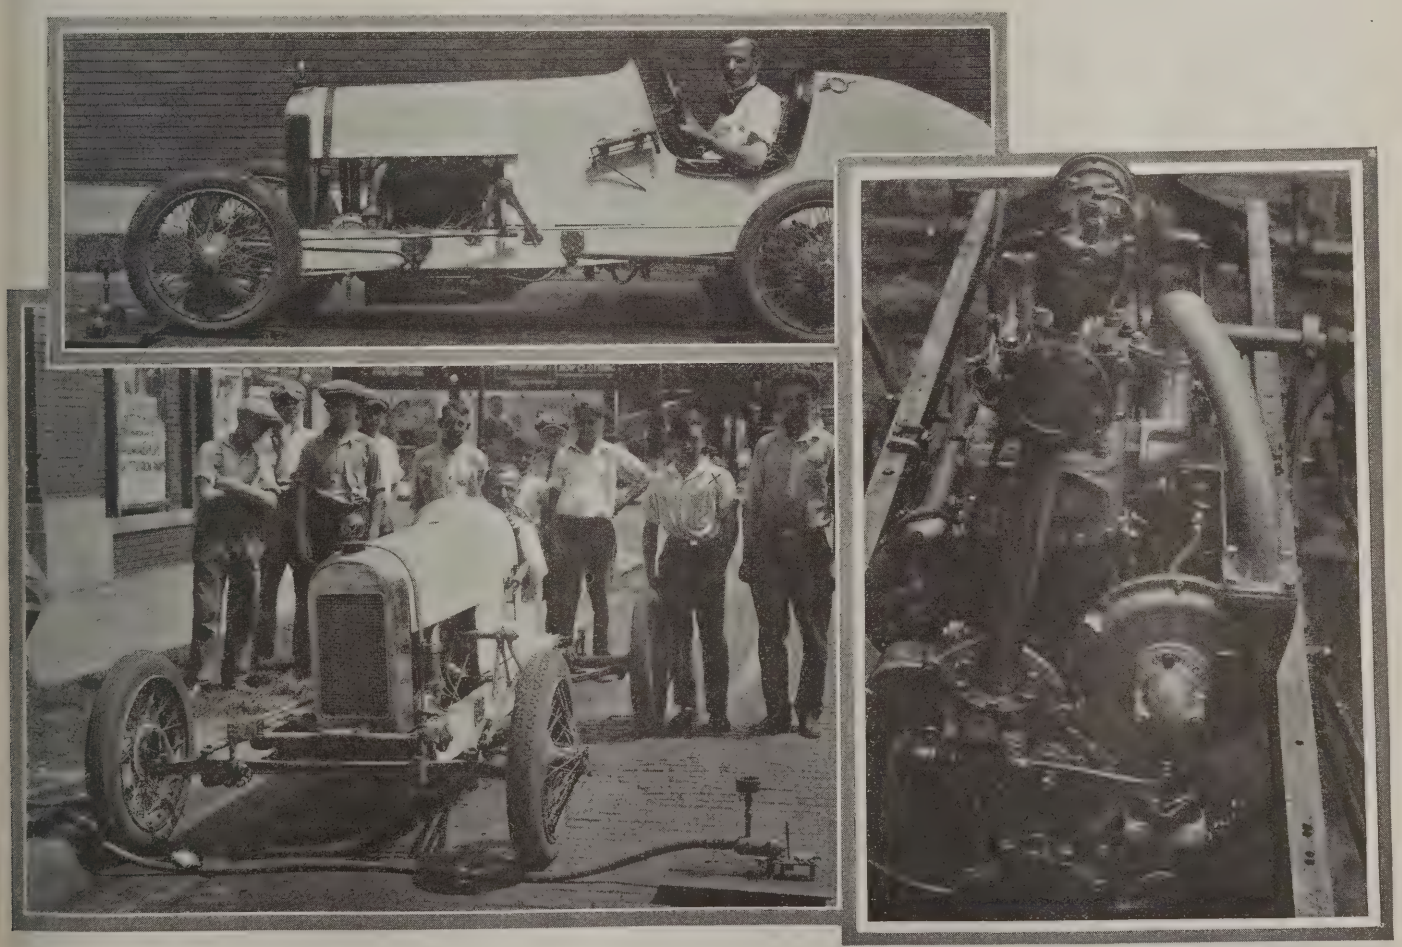
Left: Starting primer as used on the Model K Rayfield carbureter; right: cross sectional view of carbureter showing the air valve piston which pumps additional fuel for acceleration

Studebaker Bus Is Roomy

Eighteen-passenger bus, mounted on the 184-inch Studebaker bus chassis, which has the Big Six unit power plant and 7.3 balloon tires, mounted on steel disk wheels. Seat cushions and backs are upholstered in genuine leather, and due to the ingenious design of the seats, each passenger has what is practically an individual chair. The body has six dome lights, three roof ventilators and two others above the windshield, beneath the destination sign. It has a roomy luggage compartment ahead of the rear row of seats and an extra luggage rack on the top

Supercharger Now Fitted to Laurel Motors Corporation Race Cars

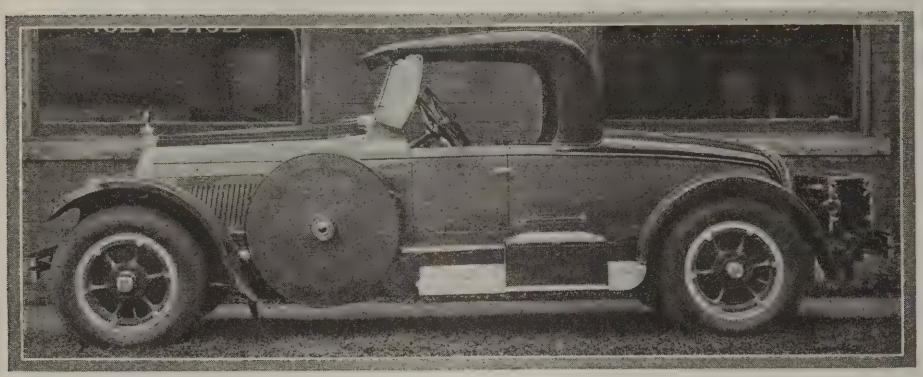
SEVERAL new features of construction have been brought out in the racing equipment for Fords made by the Laurel Motors Corp., Anderson, Ind.



The outstanding development is the supercharging mechanism which the company has applied to its racing engine and the general method of installation is made clear by reference to the illustrations. The supercharger is driven from a ring gear on the flywheel and the pinion is carried in a ball bearing located where the starting motor ordinarily attaches. In the front view is shown a flexible shaft, but this has been changed to a straight line shaft drive with a ratio on the flywheel ring gear of 6 to 1. Thus, when the engine is turning 4,000 revolutions per minute the supercharger revolves 24,000. The makers state that there is a rapid building up of pressure in the intake manifold and that the acceleration of the car is materially bettered.

The impeller of the supercharger, owing to the high speeds at which it rotates has been carefully worked out and is mounted on ball bearings running in a pocket of oil. A felt washer is inserted between the impeller and the ball bearing recesses to insulate the impeller from losing the mixture ratio. The installation as shown is said to be very simple and the supercharger, carbureter and manifolds can be removed in 15 minutes.

The engine shown separately is the latest type overhead camshaft job and is known as the eight valve head. Ball bearings are used throughout and a vertical shaft is placed at the front of the engine to take the drive from the crankshaft. The cylinder head and overhead camshaft can be removed from the block without getting the engine out of time and the cylinder head can be removed in 5 minutes allowing inspection of the pistons and cylinders. The camshaft is a hollow type with oil spray coming out of each cam on the plunger. The oil pressure to the main bearings and the overflow from the pump is carried to the overhead camshaft and can be regulated by a valve on top. After it circulates through the hollow crankshaft it drains back into the crankcase.



In the patents applied for the supercharger the latter is designed to be operated by two different methods, one by driving it from the ring gear on the flywheel and the other by a spiral gear carried on the crankshaft at the forward end. One of the photographs shows the latter type of drive.

From his previous racing experience, Mr. Robert M. Roof, chief engineer of the Laurel Motors Corporation, has brought out a hydraulic timing device shown in position in front of the wheels herewith. In this device the watch is operated by pressure created on the hose when the front wheels cross it. As the car passes over the hose a small plunger is operated in a barrel which in turn stops the watch. While the contestant is going around the track making his qualification lap the lever is pushed back and when the contestant passes over the hose again the watch is automatically stopped. This device was recently used with success at the Hoosier Motor Speedway.

Above are shown views of the latest products of the Laurel Motors Corp., Anderson, Ind. The car has an overhead camshaft engine built up from a Ford block and is fitted with a supercharger which revolves 24,000 r. p. m. at an engine speed of 4,000 r. p. m. The hydraulic timing device is shown in front of the wheels. The watch of this device is operated by pressure created on the hose by the front wheels. The designer and builder of the car and supercharger, Robert M. Roof is shown at the wheel

Revere Has Dual Steering System

The model 25 Revere which is fitted with a steering mechanism providing a reduction of 7 to 1 and 14 to 1. Normally the upper wheel is used for driving

A rather novel feature in the way of a dual steering system to take care of balloon tire equipment is incorporated in the latest model Revere, known as the model 25. In the belief that steering gears on cars fitted with balloon tires have too low a gear ratio to enable the car to be operated with safety at fairly high speeds, the Revere Motors Company, Logansport, Ind., has fitted a steering gear to the model 25 which allows of two entirely independent gear ratios.

One steering wheel is placed above the other, the upper operating the steering mechanism at a reduction of 7 to 1 and the lower at 14 to 1. The lower wheel is geared from the direct steering gear. The construction is said to check the rebound jolts. With this equipment, the company states the car can be handled very easily at slow speed, in parking and also at high speeds.

The model 25 Revere is fitted with a new type of roadster body and top of clever design. Aside from the new steering gear the chassis is substantially the same as Revere has been making for some time. The bodies are largely custom-built and wheel equipment also is optional.

Lower Prices Mean More Two-Car Families

(*Continued from page* 11)

children to school, marketing, shopping, social calls or the thousand and one other uses for motor transportation that arise every day.

If one car is open and the other closed it will be possible to adapt the vehicle to the weather conditions. On the beautiful days of Indian Summer there is nothing like an open car, but winter is just around the corner. The closed car is wonderful for inclement weather, but it cannot possibly provide the airiness of the open car. You may open all the windows of your bed room, but that will not make a sleeping porch of it.

Let the other members of the family contribute from their allowances or separate incomes toward the support of the second car. They will be glad to do it when they realize the freedom it gives them.

Get full time value out of motoring. Even the best of cars have to be laid up at times for maintenance service. A second car in the family will prove a joy at such times.

Good roads are reducing the cost of motoring. Long tours are made over paved highways today at a fraction of the cost a few years ago. Tires last longer, gasoline goes farther, wear and tear on the vehicle is slight. Repair costs are being reduced by improved methods and flat rate systems. It can very truly be said that two cars can be maintained now for what one would have cost a few years ago.

The time is ripe for the energetic pushing of the two-car idea. Social development, prices, economic conditions —all are working together to make the modern family want more than one vehicle of transportation. The automotive trade must seize the opportunity. Dealers and salesmen will find a much more fertile field among the two-car prospects than among a large proportion of the non-owners and shrewd traders.

Put New Atmosphere in the Salesroom

(*Continued from page* 13)

ferent atmosphere for a time he tried the stunt mentioned. Many other things of a similar nature are possible.

Simplicity is after all, the most desirable factor in making a place look neat. You don't have to spend much money to put new life into the showroom. From our observations in the smaller communities especially we believe a can of lye, Dutch Cleanser, some paint, plenty of rags, two or three pieces of furniture and a strong desire to remove all trash that does not belong on the premises is about all that is needed.

Keep your showroom as such. Don't let a mechanic wander into it with part of a differential to use the floor as an assembly bench. The shop may get cold in winter and so the showroom is used very often for many purposes for which it is not intended. Small as your place may be keep it departmentized. Don't have a few parts here and some more there. Remember it is like the living room of your house. The kitchen utensils do not belong in it and you do not want the ice man to walk through it on his way to the ice box. In just the same way keep your showroom isolated from the shop and when the expressman brings a crate of wheels, see that his path is not by way of the "best room" in your house.

RADIO SHOW SEASON OPENS

Many Automotive Dealers Interested in Displays of Latest Receiving Sets and Accessories

Two Shows at New York

OF a score or more radio shows to be held in various parts of the country between now and the first of the year, no less than eight are scheduled for the present month, while the number set for next week easily qualifies the dates Sept. 12 to 19 as "National Radio Week."

Three of this year's shows were officially endorsed by the Radio Manufacturers' Assn., and were thereby given the status of national expositions. One of these, the Third Annual Pacific Radio Exposition, closed Aug. 28 and the other two will be the Second Annual Radio World's Fair in the 258th Field Artillery Armory in New York, Sept. 14 to 19, and the National Radio Exposition, American Exposition Palace, Chicago, Sept. 28 to Oct. 3. Next week's calendar, however, will be the most crowded of the season.

In point of floor space and the elaborate program planned, the biggest show next week should be the Second Annual Radio World's Fair at the 258th Field Artillery Armory, claimed by the show management to be the largest hall in the world. Approximately 150 nationally known radio manufacturers will exhibit their wares at this exposition and an unusually ambitious broadcasting program is being arranged.

Simultaneously with this show will be a convention of the Radio Manufacturers' Assn., at which a number of vital problems will be threshed out, among them the row with the Society of Authors and Composers; and a "Radio Industries" banquet, a separate project to which a national aspect will be imparted by another elaborate broadcasting scheme. It is planned to blanket the nation with radio waves through the hook-up of a number of the larger stations from coast to coast. President Coolidge and Secretary of Commerce Hoover are said to have accepted invitations to address the nation on this occasion.

During this same week the Fourth Annual National Radio Exposition will be held at the Grand Central Palace, New York, opening Sept. 12.

An impressive program has been arranged for this show also. Its promoters have announced that an exchange of programs with London, Paris and Berlin, through a system of high power transmission, will be one feature. Another will be a complete manufacturing section, in which all of the production machinery and manufacturing processes employed in the construction of radio sets will be on display.

Other shows this coming week include the Pittsburgh Radio Show at Motor Square Garden, Sept. 14 to 19 and the Winnipeg, Canada, Radio Show, at the Royal Alexandra Hotel, from Sept. 14 to 19.

> WE started to handle radio early last fall, but did not really enter the game until the middle of December and sold over $2,000 worth of radio and equipment during December, January and February. We feel radio is a coming field for the small town garage man, as it gives him a line that he can push during the slack months of the automobile business.—Car Dealer, Cheyenne Wells, Colo.

During the remainder of the month shows will be held in Omaha, Chicago and Calgary, Canada.

Before the end of the year shows will have been held in Philadelphia, Minneapolis, Washington, D. C., Boston, two in Chicago, Montreal, Brooklyn, Cincinnati, Toronto, Detroit, Milwaukee and Cleveland.

Radio in Accessory Department

DURING the annual radio shows in San Francisco and during the Open Road week, the Chester N. Weaver Company have a radio in operation in their accessory department and two or three counters filled with radio sets. The set in operation is usually placed in an automobile which is outfitted as a camp car and arranged in the accessory department.

This greatly helps the sale of radio sets, as many people are interested on seeing this exhibit who would not otherwise. An indoor aerial has been installed in the accessory department near the ceiling which is provided with all wires and connections and is ready at all times to be connected to a radio set.

Some Comments on Radio

WE think that the radio business will be good this year, as we have a number of prospects now. We operate under a separate name in the radio business and have one man who does nothing else but sell and install radios. This man is a partner in the business. —Dealer, Reedsville, Wis.

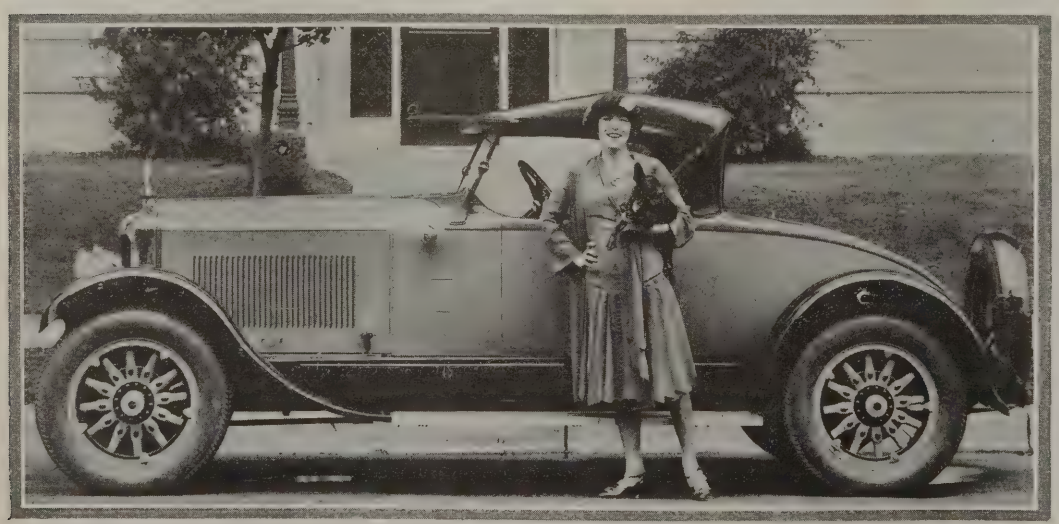
WE find radio makes us about as much money as any other accessory in our line and helps out considerably during the dull winter months.—Car Dealer, Richmond, Ind.

WE are of the opinion a complete automotive service station is a proper place for a radio dealer. We expect a good radio business this next season. The reason our radio business was not profitable last year was that radio was not known here and it required too much time to make a sale. We feel by this time the people here are better acquainted with radio and its possibilities and sales will be much easier. —Accessory Dealer and Garage, Magazine, Ark.

I THINK radio is practical for a garage to sell, service and install, especially in a locality where the winter months cut the automotive business down to practically a standstill as it does here. I took on a small line of radio last January just to see how it would work in with the garage business and I find that with a small outlay of money one can do a very nice business in the winter months when the other line is idle. I expect to triple what business I did last season this coming winter.

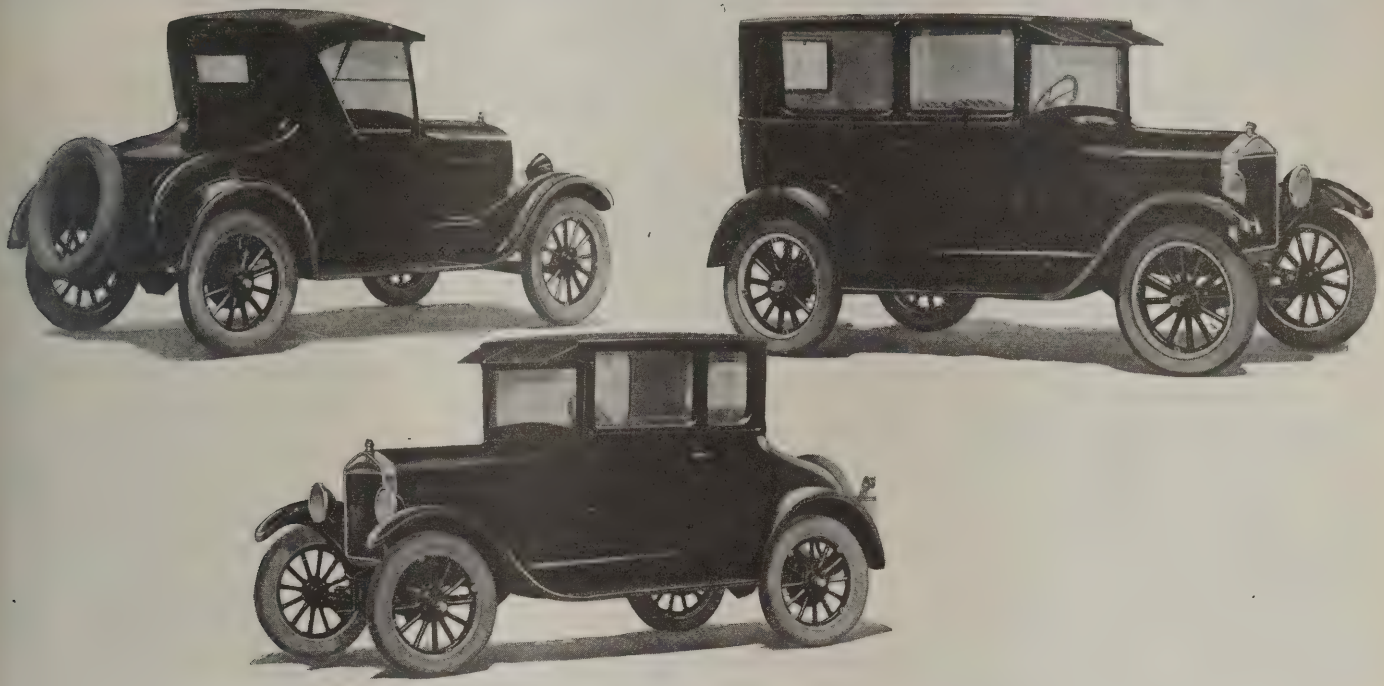
WE think that radio fills in at the time of year when the automobile business is slack and it therefore helps to keep down the overhead.—Ford Dealer, North Dakota.

THE automobile dealer as a radio merchant has a good opportunity. Changes and improvements will make it necessary for him to be very careful and hold stocks as low as possible. I believe there is a future for the radio as a separate department in the automobile merchant's business.—Dodge Brothers Dealer, Duncan, Okla.



MOTOR AGE'S PICTURE PAGES

RADIO CONTROLS DRIVERLESS CAR. Radio equipped 1926 Chandler touring car being run through busy Broadway traffic in New York City without a driver. It was controlled by equipment in the car following it. The car was driven at a speed of between five and ten miles an hour. Francis P. Houdina, inventor of the radio control system, stood on the running board but did not at any time touch the steering wheel, brakes or gear-shift.



PREPARE FOR EPOCHAL FLIGHT. The picture shows one of the giant navy planes being prepared for the flight to the Hawaiian islands which started last week. It was taken as it was being moved from the hangar to the outdoor location prior to putting on the mammoth wings. The plane is officially known as a PN-9 ship.

READY TO GO. Yvonne D'Arle, prima-donna of the Municipal Opera Co., St. Louis, and the Diana Light Straight Eight. The Diana statuette on the radiator cap is now standard on all cars of this make.

OF AUTOMOTIVE INTEREST

NEW FORD MODELS. Roadster and closed cars recently announced by the Ford Motor Co. Details of changes were published in the September 3 issue of MOTOR AGE.

SHOWING OFF. Three motorcycle police of Chicago practising stunts for the annual police field meet held Aug. 29-30. The proceeds each year go to the benevolent fund to care for dependents of policemen killed in the line of duty.

GENERAL'S SON WORKS AS MECHANIC. Warren Pershing is spending his vacation in Paris as a mechanic in an automobile sales agency. He is shown getting a few tips from another mechanic.

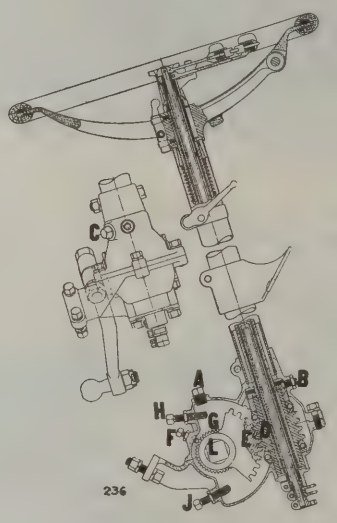
Cadillac Steering and Packard Lubrication

Q.—Please give me by special as soon as you can a cutaway view of the steering gear and adjustment on the same of a 1914—4-cylinder Cadillac. — Hutchinson-Aldridge Motor Co., Logan, W. Va.

Internal mechanism of the Cadillac 1914 steering gear is illustrated at Fig. 236. Two adjustments are provided. The first is to take up end play in the steering staff. When this occurs loosen the jam nut B and the set screw C and remove the plug D. Then with a screw driver or something suitable turn up the adjusting collar which can be seen through the hole from which plug was removed. Then lock the collar with the set screw and jam nut and replace plug. The other adjustment provides for taking up wear on the worm and the sector.



The sector has its bearing in a pair of eccentric steel bushings and should wear occur it is taken up by turning the bushings so that they throw the sector closer toward the worm. To do this proceed as follows: First remove the two set screws F which are on each side of the sector, but only one is shown in the illustration. Through the holes from which the set screws were taken two notched adjusting eccentric bushings may be seen.

Next with a wrench turn the hex heads on the bearing bushing forward moving the sector toward the worm just one notch of the bushing or more if necessary but one will usually be sufficient. In any event be very sure to turn both sides exactly alike, otherwise the gear will be thrown out of alignment. Then replace the set screws. H and J are stop screws which limit the range of movement of the steering gear and front wheels.

Q.—Also cutaway view of oiling system and adjustment on twin six Packard engine, 1922 model.

Since your letterhead gives the impression that you are a Packard dealer we have not troubled to make cut from our illustration which is taken from the Packard instruction book as the instruction books for the model 325 and 335 are probably available to you, we will briefly cover the path of the oil and the adjustment incorporated in the system. The path of the oil after it has gone from the crankcase reservoir is to the pump strainer contained in the pump housing from which place it goes to the oil pump and then to the main oil distributing manifold which is supported from the lower halves of the crankshaft lower bearing caps. From this manifold the oil is supplied to all main crankshaft bearings through holes in the bearing cap. Independent oil passages in the crankshaft leading from the main bearings carry the oil to the connecting rod lower end bearings. At the crankshaft front bearing there is a take off which sends lubricant to all camshaft bearings which are lubricated by oil which is forced through the hollow camshaft under pressure from the oil lead from the front main bearings.

The generator shaft and ignition distributer shaft bearings are lubricated by means of oil leads from the camshaft front bearing. The front end chain receives oil from the end of the drilled gen-

Steering gear of 1914 Cadillac

erator shaft. It can thus be seen that oil enters from the pump to the rear main bearing, travels to the front main bearing and from there to the camshaft front bearing at which point a lead is taken off to lubricate the chain and ignition distributor shaft. The main line from the front main bearing carries the oil through the camshaft to its rear end from which it goes to the oil pressure gauge on the dash.

You are aware of the fact that the crankcase is supplied with baffle plates in the bottom to prevent surging and that the model referred to has oil baffle plates fastened to the crankcase over the connecting rods, to prevent over oiling of the pistons.

METERING PIN TOO BIG

Q.—I would like to have a little information on a Rayfield carbureter. Some time ago I installed a Rayfield carbureter model M on an 86-6 Overland, year 1917. I am having a little trouble in adjusting it. When the high speed adjustment is to the right as far as it will go it works the best, but is still getting too much gas. I would like to know what size jets to use in this particular carbureter?—John M. Baker, 524 Bates St., Logansport, Ind.

Judging from the symptoms the carburetor has a metering pin that is too big. The manufacturer's recommendation for the Overland model mentioned are as follows: Carbureter Model M3V with a No. 4 metering pin, No. 34 air valve ring and No. 50 low speed nozzle.

Converting Dodge Brothers Engine to Racer

Q.—We have a 1916 Dodge Brothers engine and would like to make a racer out of it. We plan on using 16 overhead valves and 2 ½-inch Miller carbureter, racing camshaft, balanced crankshaft and aluminum pistons. Steel connecting rods will be used and we will put 3 to 1 gear ratio in the rear axle, using 33 by 4 tires. How fast or how many miles per hour will it do on a straightaway? Also where can we get a good racing body for it? —S. L. Skotz, care G. Gilbertson, Camp Crook, S. Dak.

It is impossible for us to accurately estimate the speed you will get from the car after making the changes mentioned. If it is to be used on mile or half mile tracks we would suggest a ratio much higher than the 3 to 1. Something in the neighborhood of 3¾ to 4¼ to 1 will be required in order to have enough power to take the car into and out of the turns at the necessary speed. The amount of speed that can be secured on the straightaway will depend upon how many r.p.m. the engine will turn at the time it is pulling the car, design of the body and many other factors which cannot be accurately calculated beforehand.

We do not know of anyone manufacturing race bodies for a Dodge Brothers car and we would suggest that you get in touch with the nearest tinner or with some custom body builder who can give you an estimate as to the probable cost of the special body.

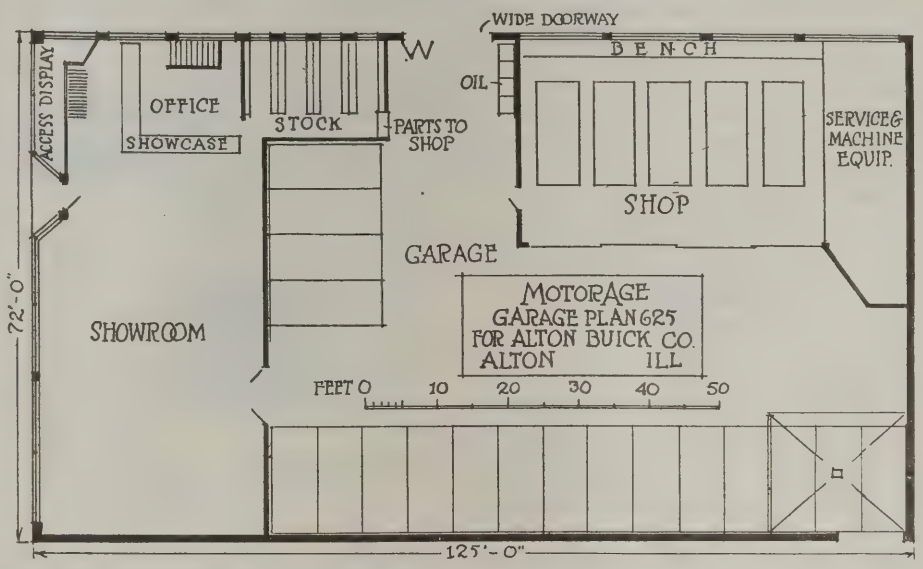
MERCER VALVE TIMING

Q.—I would like to know the correct valve timing for a 22-72 model Mercer built in 1916. Also at what point should the spark occur for best general performance. Would top center at full retard be all right?—G. C. Munroe, 450 W. Main street, Compton, Calif.

Your idea as to the ignition timing is correct. However, if there is any doubt as to whether you have the engine on top center or not, it is better to have the piston a little past center, that is started down a small amount (1/64 to 1/32 inch) rather than take a chance that the engine will kick back when the starting switch is operated. The intake valve should be timed so that it opens 5 degrees after top dead center and closes 55 degrees after bottom dead center. The exhaust valve should open 70 degrees before bottom dead center and close 15 degrees after top dead center.

Planning Your New Building

By TOM WILDER



The READERS' CLEARING HOUSE

Alley Shop Entrance Better Than Center Front Entrance

Q.—We are contemplating making a change in our building which we hold under lease, also we are adding a little more space. Attached we have drawn up roughly the plan of our building as it now is, also one as we have contemplated. At present, you will note from the drawing, the only entrance to our building is a large door directly in the center at the front. This splits the front end so we do not have sufficient display space for new cars, and at the same time is very unsightly.

We are particularly interested in learning your opinion regarding our proposal to put an entrance door to our storage room on the alley to the west of the building. You will note under the new plan we will take over additional space in the rear of our building measuring 32 by 54 feet. This is a part of the building we occupy which we have not heretofore occupied. You will note also the addition of this space will give us an entrance from the east through a narrow passage way to the rear of the building adjoining us on the east.

What do you think of the door on the alley to the side? Also can you improve on the plans as contemplated otherwise? Alton Buick Co., Alton, Ill.

Building Widths Between 70 ft. and 80 ft. are Sometimes Difficult to Plan and Even Here There Might Seem to be Some Waste Aisle Space

The only question that arises in regard to your alley and using it as an entrance to your garage, would be its suitability as regard cleanliness and freedom from truck traffic. If it is paved and kept clean it is just as good as any other street.

We have not used the arrangement you suggest for the back part of the building for the reason that we wish to get more light into the shop by taking advantage of the windows on the alley side and also by placing the shop here where cars will not be parked in front of it the way they would the other way. Our arrangement also makes it possible to use the door way to the private alley as you could not use it if this doorway opened into the shop without considerable waste of space. We do not know the construction of your building and possibly this arrangement would not work out, but we believe that it would be worth while to make changes in the construction, unless they require too much expense. The new location for the wash rack is of course, not quite as desirable as the old one, but it is our opinion that the old one used more than its share of the desirable space. As a matter of fact we do not think that the rear enrance would be of much use and believe that windows installed here instead of a doorway would be better.

Perhaps we have not given you sufficient office space, but this is easily remedied as the showroom is amply large to permit additions to the office space and you know better than we how much you need.

The arrangement of sliding doors at the back of the shop, shuts the shop off from the rest of the garage very effectually, so that it is not only private, but makes it easier to heat in the winter. Sliding door equipment can be had that is fairly tight.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

LIEN LAW IN IOWA

Q. Being a reader of Motor Age I have read several lien laws of different states but have not found any for the state of Iowa as yet. We have a Paige car which we have held sixty days for the repair bill on same. Owner refuses to take car off our hands. Can we sell this car in a certain length of time? If so, how long? Or what else can we do to get our money out of the job? Hawkeye Auto Co., Roland, Iowa.

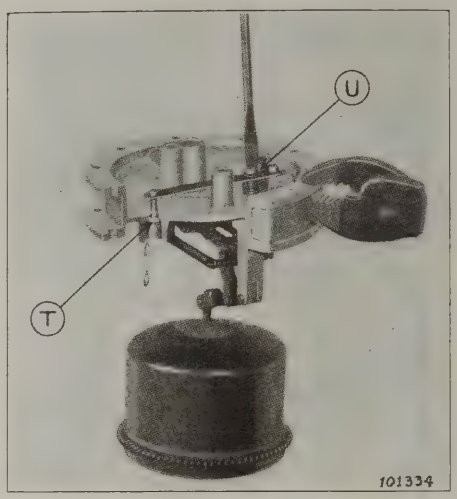
A. In re: garagekeeper's repair lien in Iowa.

Section 10343, Chapter 456 of the Iowa Code of 1924 gives every person, "who renders any service or furnishes any material in the making, repairing, improving or enhancing the value of any inanimate personal property (automobiles, etc.) with the consent or assent of the owner, a lien upon the property affected for the agreed or reasonable compensation for the service rendered and material used. But possession must be retained over the property, the same as in the common law lien. Relinquishing possession of property to the owner or his agent releases the lien on the property. He is entitled to hold this car under the lien until compensation is paid. This lien has no priority over other liens already recorded, but is subsequent to other prior liens. So far this lien in Iowa is the same as the right at common law still prevailing in some states. But the statute does aid in that it gives the garagekeeper and repairman a right to sell the repaired property. Those garagekeepers in states who only have a common law lien are not empowered to sell repaired property to collect their charges. Now the Act in Iowa gives the repairman a right to sell the property. But to do so he must either bring suit in a court of equity or follow the same procedure given a common carrier to sell goods for charges. This is found in Chapter 454 of the Iowa Code of 1924. In brief, it requires personal notice of the sale to be given the owner; either actual notice or written notice by registered mail being sufficient. This notice must be served 10 days before the sale.

NEW TOURIST BOOK

A book on touring and camping, telling where to go and what to take, has been compiled by Bob Becker and Frank Brimmer for the Stewart-Warner Speedometer Corporation, Chicago, Ill. It is distributed free to the public through dealers handling Stewart-Warner accessories. In addition to the helpful data on camping and touring equipment, it contains a two-page map of the United States showing the organized highways.

The READERS' CLEARING HOUSE — Defeating Old Man Wear and Tear



Repairing Oiling Filter On Rickenbacker

Q. Tell us how to repair the oiling filter on a Rickenbacker. Johnston Bros. Coshocton, Ohio.

A. The function of the filter or rectifier, as it is commonly called, is to draw oil and gasoline from the cylinder walls, return the oil to the crankcase and vaporize the gasoline so that it may be returned through the intake manifold to the combustion chambers. The rectifier operates in a manner similar to that of a vacuum tank. One possibility of trouble is in a leaky float which would fail to operate the valves and would permit oil to be drawn through the intake manifold into the combustion chambers. For this reason heavy smoke coming from the exhaust indicates trouble in the oil rectifier, which necessitates taking it apart to check up on the float and valve mechanism. We are showing an illustration which indicates a method of testing the thermostat. The thermostatic valve is adjusted to open at a pre-determined temperature, so as to allow the oil withdrawn from the side of the piston to pass directly into the lower chamber of the rectifier, without being forced into the upper part of the rectifier, where it would be overheated by the exhaust gases.

Thermostatic Valve Adjustment

Inasmuch as the mixture in the pipe connections and in the upper chamber is heated under vacuum, requiring a lower temperature for volatilization of the gasoline, it has been found that 150 degrees Fahrenheit is the temperature at which the thermostatic valve should normally be adjusted to open. To adjust this valve, the upper and lower chambers of the rectifier should be removed and the center casting with the thermostatic valve in place, should be submerged in a kettle or pan of cold water and heated to a temperature of 150 degrees Fahrenheit. The screw "U" should then be adjusted so that the hot water will cause the strip of thermostatic metal to bend, and thereby force downward the valve "T" sufficiently to permit water to drip through the valve opening. Upon completion of the adjustment, the rectifier should be reassembled and all connections and gaskets made tight. Upon the cylinders, pistons and rectifier becoming thoroughly heated, so that the aeration process is working at high temperature, the mixture will generally be heated, upon entering the rectifier, sufficiently to cause the thermostatic valve to open without the mixture being further heated by the exhaust gases.

The thermostat adjustment is tested in water at 150 degrees Fahrenheit

Knocks With Cutout Open

Q—A month ago I overhauled the motor in a Studebaker Light Six about 1921 or 1922 model. I tightened the mains, the rods, ground the valves, tightened the timing chain, honed the cylinders, and installed Kant-Skore pistons. In tightening the mains I found the two center mains were looser than the two end mains, outside of that I found the motor in exceptionally good shape, as the owner says it has run 35,000 or 40,000 miles. At about 150 miles it developed a slight click like a loose pin, but only with the cutout open. At 500 miles it still has that click or tap, plainest at about 25 miles per hour at light load, but can be heard at all times. Now if I close the cutout it is absolutely impossible to make it knock at any load or speed. Have checked exhaust pipe and cutout for any possible looseness but can find none.—Pedersen's Garage, Cozad, Neb.

A. You mention installing Kant-Skore pistons. We wonder if these have bronze bushings for the piston pin or whether the pins fit in aluminum bosses. If the latter condition exists, you may have trouble due to piston pins as these must be fitted more tightly under these circumstances on account of the expansion of the aluminum. With the piston hot from having been tested in boiling water the pin should be a tight push fit with the hand. With the piston cold it will be much tighter.

Another possibility is that you have piston ring click, which is relieved by loosely fittting the upper piston ring or by filing a few notches in the upper surface of the upper ring.

These suggestions are not made on account of the tests you describe and we cannot think of any condition which makes a knock audible with the cutout open when it is inaudible with the cutout closed. As an experiment you might try removing the muffler and leaving the cutout closed to see whether you get the knock or not.

Removing Main Bearing From Overland Six

Q. Kindly give information on fitti 6 cylinder Overland with main bearing Geo. Podlosek, 214 S. Ninth St., Readi Pa.

A. On the 6 cylinder Overland th main bearing cap is removable in th ordinary manner. The two halves of th main bearing, however, are split vert cally and are prevented from rotatin when the cap is in place. After the ca is removed, the crankshaft may be turne one quarter turn and one half of th main bearing may then be removed. It then turned again and the other ha of the main bearing will rotate with so that it also may be removed fro below. Reversing the procedure makes possible to install the new bearing. Thes main bearings are made with such accu racy that no machine work is considere necessary.

MAIN BEARING CAP REFUSES T COME OFF

Q.—We are having trouble tightening th main bearings on a Willys-Overland 19 model, equipped with six cylinder Cont nental engine. So far we have been u able to remove the lower half of the fro main bearing. We have tried to pull off with a gear puller and various kin of chisels. It will come down about in. but no amount of coaxing will brin it farther. Tennessee Subscriber.

We are sending you by separate lett page 28 of the December 18, 1924, issue MOTOR AGE, in the center of which was a illustration showing the bearing co struction of the Jordan car which als used Continental engine. In this co struction there is a wick packing whic must be pulled out by using a croch needle or similar device and it is als necessary to loosen the front gear cov and push it forward about ⅛ or $\frac{3}{16}$ in. i order that dowel in this cover wi not interfere with removal of the low half of the front main bearing.

MAKING THE GAS GAGE TELL TH TRUTH

Q.—Explain the working of the gas line gage on a Marmon 34 and how make the dial indicate accurately th number of gallons in the tank. Hammon & Kramer, Hagerstown, Maryland.

On Marmon 34 cars from 1918 to 192 inclusive the hand of the gasoline gag is operated by means of a magnet whic is controlled due to the operation of float in the gasoline tank. If the tan slips or pulls away from the dash s that there would be too much air spac between the magnet and the hand of th gage, then the gage would not indicat or would not indicate properly. Anothe possibility is trouble in the gears i the tank mechanism or trouble whic would be caused by a leaky float. A good mechanic should be able to investi gate and find out the nature of troubl which would make one of these gage read inaccurately.

Clearing Up Electrical Trouble

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Ailments That Make the Ammeter Nervous

Q.—What causes the ammeter hand on a Ford car to jump back and forth when the generator is charging? Does it mean that new brushes are needed? Is there anything else that would cause this besides the brushes?

If the engine is missing on one cylinder or due to too rich a mixture is running unevenly there will be a tendency for the ammeter hand to jerk back and forth. This is due to the jerky motion of the engine, which slows up the generator and then causes it to go faster. With these changes in generator speed there is a change in generator voltage which causes the cutout to close and open the points. In other cases a defective cutout may close and open its points at medium speeds, as for example 15 or 18 miles per hour.

You can detect this, however, by either removing the cover of the cutout and holding the points together or else by connecting the wire which normally goes from the instrument board to the cutout directly on the generator terminal. This would, of course, cause the battery to discharge through the generator while you are making the connection, but as soon as the engine starts the generator charges the battery. If the vibrating of the hand is no longer experienced then you would know that the trouble was due to the cutout. If the cutout is not to blame then it might be due to brushes making a poor contact with the armature or might be due to a partial ground in the armature. Any sort of intermittent trouble as for example a brush holder grounding occasionally with the vibration of the engine would tend to produce the same results.

Getting Water Pressure For Radiator Testing

Q.—Is it possible to use a Ford gas tank filled with water to give a 10 pound pressure? If this cannot be done what would you suggest in the way of fixing up an outfit to obtain this pressure to test out Ford radiator tubes for water leaks? We have no water works here. How high do we have to put the tank if it could be worked. In doing this we intend to take the cores out of the radiator.—Tennessee Radiator Shop.

The test that you apparently contemplate is to put water inside of the radiator core under pressure and then watch to see where it comes out. The 10 pounds pressure would be too much in our estimation and we doubt if the ordinary gasoline tanks would stand this much pressure.

Ten pounds per square inch means that a square foot of tank surface would have to withstand a pressure of 1440 pounds. The average radiator after being used for awhile will also hardly stand this much pressure, three or four pounds being sufficient. You could get this much pressure by having a tank about eight or ten feet high and have a hose come down from the tank and connect it to the radiator. Every foot that you raise the tank will give you a pressure of .435 pounds, so that with the tank 10 feet high you would have a pressure of 4.35 pounds.

Another way of testing radiator cores is to use air pressure, assuming you have a pump and tank for the purpose of inflating tires. In this case the core is connected to the air line and then put under water in a large tank, the test being similar to that used on inner tubes when hunting for a puncture. In a test of this sort it is necessary to have a valve together with a low pressure gage connected between the valve and the radiator. The valve is opened for an instant and then closed and the air pressure gage is watched to see that the pressure does not go over three or four pounds. We are sending you by separate letter copy of a story which appeared in the Winter Service Issue of MOTOR AGE under date of November 6th and we will also give the name of a concern which can supply you with items needed in radiator repair work.

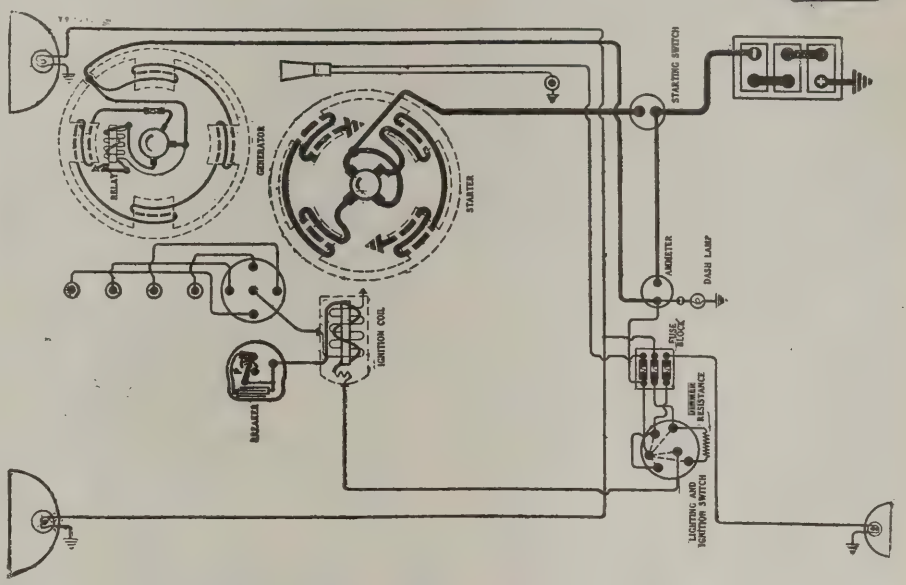


Fig. 101062—Internal and external Hupmobile circuits, 1921 to 1925

CIRCUITS FOR THE LAST FOUR YEARS

Q.—Send me wiring diagram of Hupmobile for the last four years and also internal diagrams of starting motor and generator.—R. H. Oswald, 5943 W. Iowa St., Chicago, Ill.

We are showing at the top of this page one diagram which gives the circuit for the last four years as no appreciable change has been made.

Ground Return for Lighting Plant

Q.—Can I use a copper tube with an insulated wire inside, underground for a distance of 50 feet from the house to a 32-volt lighting plant? Would there be any electrolytic action between the copper tubing and the ground? I expect to use ½-in. copper tube and largest size insulated wire possible. I would like to know if it is impractical to bury the wires as above described, having one insulated and using the copper tubing for a return circuit. About what size wire and tubing of equal current carrying capacity would be necessary in your estimation for power appliances using up to 500 watts?—Paul Smidesang, Wylie, Minn.

The scheme is all right, except that in making a grounded system of it you will have a short circuit if you get an accidental ground. For example, if you are using a drop light in the house and a wire in the drop light touches the shell of the socket and you get the socket up against a water pipe, you would have short circuit. We believe it would be just as cheap to use ordinary iron pipe or conduit such as is used in wiring up houses and run two wires through the pipe.

Weather proof wire should be used either No. 8 or No. 6. With 500 watts being transmitted at 32 volts you will have a loss of about one volt and a loss of about 15 watts with the No. 8 wire, whereas with the No. 6 wire the loss will be about .6 volts and 10 watts. The copper tubing method will work if everything is all right and the total cross section of the copper tubing should be about as much as the cross section of the wire used. We do not see any advantage, however, in grounding the system.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

What About the Small Job?

NO doubt one of the most difficult things with the service man, dealer, repairman or anyone else selling maintenance on a flat rate basis is how to charge for the small job.

Incidentally the small jobs are the most frequently performed and in many cases there are no flat rate schedules covering them.

What are you going to do, for example, when a customer comes in for a 10 minute job on a door which does not close properly? Or, when a customer says he has lost a couple of small screws out of the windshield frame and a mechanic spends 5 minutes finding new ones and 5 more installing them?

Sometimes a screen in the fuel line gets clogged or an oil cup is knocked off and a dozen and one similar small jobs come in the course of a day.

There is ever present the desire to do many of these jobs without charge to the customer and in some instances the service station is justified in so doing. It is, after all, largely a matter of local conditions. Surely when an old customer comes in for a new grease cup which takes not over 5 minutes to install, the dealer or shop does right in making no charge for the installation.

There are some who say there should be a minimum charge for all such operations which require less than ½ hr. to perform. Some dealers, for example have a minimum charge of 50 cents for such operations.

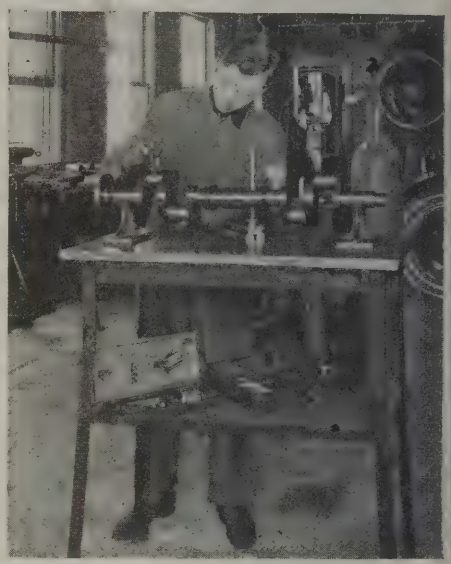
But in the smaller places of business we doubt very much if such practice will ever be successful. In most cases the customer waits for his car and it just doesn't seem right to charge him a half dollar for doing a little job requiring but a few minutes.

Perhaps a happy medium is the answer. Why not do the small jobs for nothing, but when they run over 15 minutes charge the half dollar?

Better Cars—Less Service Operations

As time goes on the number of flat rate operations for the various makes of cars will probably be reduced considerably.

This is so because the makers of cars constantly are bettering their product. Better bearing layouts, better fuel handling systems producing more complete combustion, oil filtration devices, automatic chassis oiling systems and numerous other things will insure the car's mechanism "staying put" over larger periods, thus eliminating many of the now common service operations.



Charges Based on Hourly Rate

The charges in Motor Age's Flat Rate Manual were figured at an hourly rate of $1.50. In most instances the prices which represent the labor charge only were thus derived. Should a different hourly rate seem avisable it is possible to convert the prices to conform to any desired hour rate by proceeding as follows:

To sell at $1 per hour multiply the price listed on the chart by .67. To sell at $1.25 an hour, multiply the price by .87 and to sell at $2 per hour, multiply by 1.33.

Although Motor Age's Flat Rate Manual does not cover every make of car it can be applied very accurately to 90 per cent of the passenger cars now in production. The reason for this is that the cars listed include practically every type of construction being used today. The chart can be used to sell repairs on cars not listed and this can be done as follows:

Find out which car listed most closely resembles the car in question. When doing this the particular unit to be worked upon must be had in mind. Then select from the cars listed one that is in about the same price class, find the amount given and if the car is more than four years old add 20 per cent to the figure to take care of any additional labor that might be involved due solely to the age of the car. If the car is less than two years old use the same price; if over two and less than 3, add 10 per cent of the price as listed in the manual.

THINGS THAT HELP FLAT RATE

When a complete engine overhaul is necessary it is of paramount importance to have facilities for checking the units. Here is shown a large surface plate, V blocks, a dial gage and micrometer for accurately testing a crankshaft as to alignment and wear

MOTOR AGE'S FLAT RATE FORUM

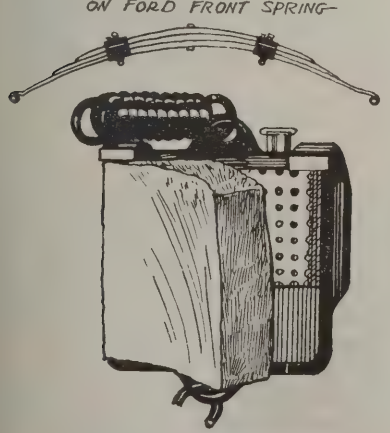
No. 30

FLAT RATES FOR

DODGE BROTHERS TRANSMISSION OPERATIONS

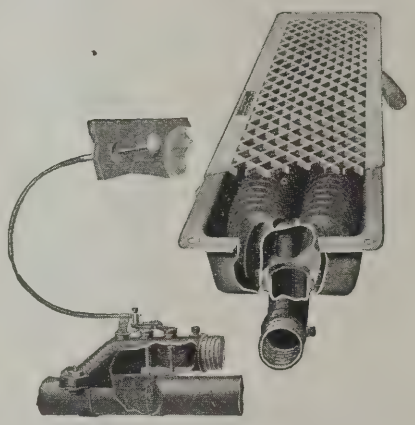
Manufacturer's Official Designation		Time
	(Continued from Sept. 3 issue)	
3215	Remove and install one transmission high speed shift fork	3 hrs.
3216	Remove and install transmission case cover and straighten one shifter fork	3 hrs.
3217	Remove and install one transmission shift bar yoke	3 hrs.
3218	Remove and install one transmission shift bar	3 hrs.
3219	Remove and install one speedometer gear and support assembly	1¾ hrs.
3220	Remove and install one high speed sliding gear	5 hrs.
3221	Remove and install one low and reverse sliding gear	5 hrs.
3222	Remove and install one second speed sliding gear	5 hrs.
3223	Remove and install one high speed internal gear	5 hrs.
3224	Remove and install one countershaft drive gear	8 hrs.
3225	Remove and install one countershaft second speed gear	8 hrs.
3326	Remove and install one countershaft low and reverse gear	8 hrs.
3227	Remove and install one reverse idler gear	3 hrs.
3228	Remove and install one transmission shaft	6 hrs.
3229	Remove and install transmission case cover, put pin in internal gear	3 hrs.
3230	Remove and install one transmission countershaft	8 hrs.
3231	Remove and install one reverse idler gear shaft	3 hrs.
3232	Remove and install one transmission shaft rear bearing	6 hrs.
3233	Remove and install reverse idler gear bushing	3 hrs.
3234	Remove and install countershaft low and reverse gear bushing	8 hrs.

THE MARKET'S NEW OFFERINGS



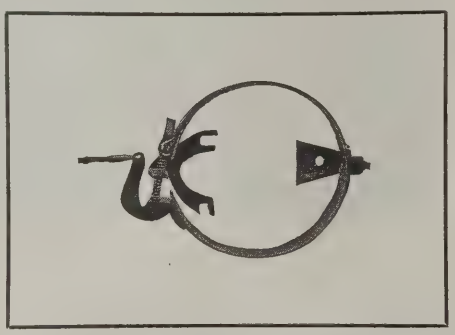
Accessories—Equipment—Supplies

Royal Brake for Ford Trucks

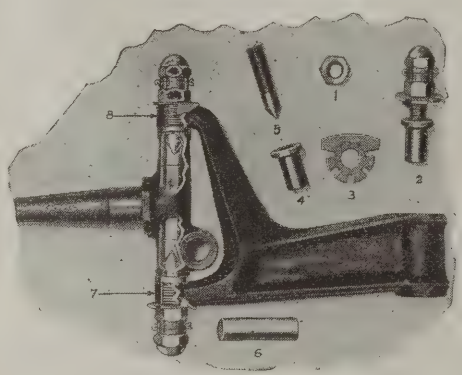


AN appliance known as the Improved Royal Brakes for Ford One Ton Trucks is a product of the Raybestos Company, of Bridgeport, Conn. It is designed for operation by the foot pedal now controlling the transmission brake band. Installation is possible without alterations in the truck chassis or drilling holes and the brake operates on the outside of the drum to which the internal brake is applied at present. It is claimed that the use of this brake insures ability to lock wheels when necessary and eliminates the chatter of glazed, oil-soaked transmission bands. It also reduces the working pressure on the brake lining to a pressure consistent with the accepted practice on rear wheel external brakes operating under normal conditions. Elimination of strains transmitted through the differential in making emergency stops is another advantage stressed by the makers. The brakes are equipped with Raybestos brake lining 1¾ x 3/16 in. all parts being of durable materials and coated to prevent rust. List price, $17 per pair, not installed; $22 per pair, installed.

Brad-Cup Spring Lubricator



A SPRING lubricator known as the Brad-Cup is a product of C. Goodwin Bradley, Inc., 432 N. Franklin Street, Syracuse, N. Y. It is designed to attach to the spring and lubricate evenly all leaves, a felt pad which distributes the oil keeping the different leaves constantly lubricated with a thin film of oil. The Brad-Cup may be attached to the spring with a pair of pliers or a buttonhook. It has a reservoir for the lubricant. It is said the device will not loosen, rattle or shake off: Prices, Single Side Brad-Cup, 50 cents, set of eight $4; Double Side Brad-Cup, 85 cents, set of eight, $6.80. Cars having ½ ellipticsprings front and rear require 8 Brad-Cups, two to each spring. Cars such as Cadillac with platform springs on rear require 10; Fords and Overlands require four, two front and two rear.



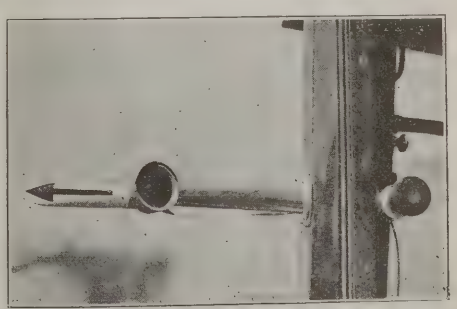
Brad-Cup spring lubricator

Gladiator floor type heater

Royal brake for Ford trucks

Adjustable spindle bolts

Adjustable Spindle Bolts



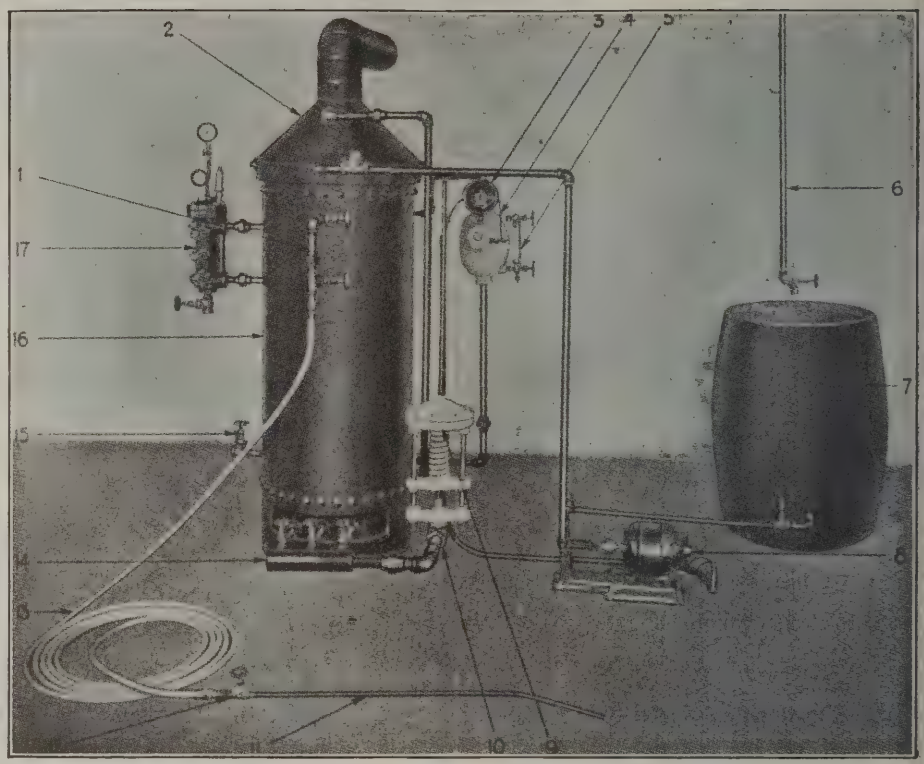
A number of advantages are claimed for the Adjustable Spindle Bolts being produced by the North Piston Ring Company, Toledo, Ohio. The North device, fitting into the steering knuckle, takes the place of the standard bolt equipment. It is declared that this equipment will prevent front wheel shimmy, make steering easier, add to the life of wheel bearings, make for safer driving, lengthen tire life and serve other useful purposes. The North adjustable bolts are quickly installed, not requiring reaming or close fitting and they can be used without oil. Price per set for Fords and Chevrolets $7.50.

New Gladiator Heaters

EXHAUST heaters in both grille type combination heel board and foot rail type as well as manifold heaters for Chevrolet and Ford cars are included in a new line of heaters recently announced by the Gladiator Manufacturing Company, Auburn, Ind. Sales are handled by the Zinke Co., Chicago. A special model of floor board or grille type heater for Fords and other small cars has been designed by this company. One of the features of the company's new exhaust heaters is a universal valve, fitting all cars and which is controlled from the dash in a way to obtain perfect regulation of the heat supply, according to the announcement. Quick heat with safety from fire is claimed for the contrivance. It has a hinged cover and clean-out door. There is a wide range of sizes and prices. The manifold heaters, new in design, are of one piece cast iron construction and take the place of the ordinary manifold entirely. It is claimed the heater gives forth no odor or noise while it is fireproof and does not overheat the engine. Heat is controlled by a floor shutter. The company offers complete line of these products.

Tuthill's Ideal Direction Signal

TAKING the place of signaling cars behind with movements of an extended arm a new signal device has been evolved and placed on the market by H. G. Tuthill, 2466 Hidalgo Ave., Los Angeles. The company describes it as "the signal which can be seen from any direction". As with use of the arm for signaling the Tuthill device indicates stopping with "down", left turn with the indicator in a horizontal position and right turn with the indicator inclined upward. It operates simply within the car even when windows are closed and an automatic lock holds it in position until the driver changes it. It can be illuminated at night by a contact switch, lighting up while moving to position. The Tuthill signals are made to fit any car or truck. Retail price $9.50.



Tuthill direction signal

GETTING MORE OUT of the SHOP

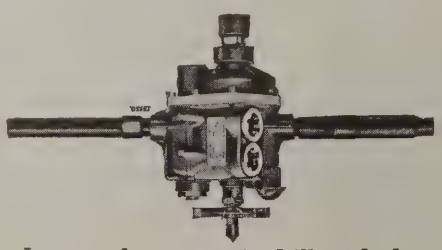
Super-Steam Plant

The advantages of steam for cleaning purposes in the automotive repair shop or paint shop have long been recognized and to that end Waterman & Greer, 1420 S. Michigan boulevard, Chicago, have brought out an apparatus known as the super-steam plant. They are built in one size only which has been found to work in most places to better advantage than a smaller or a larger unit. The plant uses either gas or oil for fuel and is automatic in its action, the operator having only the hose to look after as every other feature takes care of itself. A typical set-up is shown in the accompanying illustration in which 1 is the steam and solution outlet, 2 the pre-heating dome, 3 automatic electric switch, 4 water level control chamber, 5 water level sight glass, 6 city water supply, 7 water or solution supply, 8 automatic generator feed pump, 9 fuel control regulator, 10 double seated fuel valve, 11 spray nozzle, 12 operating valve, 13 special copper loned hose, 14 special fuel burner, 15 blow-off valve, 16 large capacity generator, 17 alarm column.

Super-Steam plant for washing cars and paint removal purposes

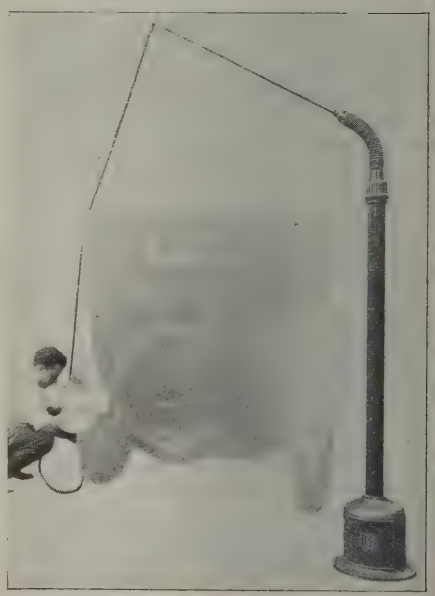
New Long Stroke Pneumatic Drill

A new design of four cylinder pneumatic drills has been brought out by the Ingersoll-Rand Company, 11 Broadway, New York City. A complete line of this type is now available, in both reversible and non-reversible sizes. One feature alone—the speed governor—will, in approximately a year's time pay the entire cost of all the drill in the amount of air saved, it is stated. Furthermore, every wearing part is renewable at small expense. The following are some of the important features set forth by the company:



Speed governor, which limits the speed of a drill after it has passed the point of maximum horse power and so prevents racing and extra consumption of air. In addition, it avoids the wear and tear on the drill of high free speeds, excessive friction heat and consequent lubrication troubles.

Cylinder liners—of special steel fitted into the steel casing and easily removable and renewable. A worn cylinder may be easily renewed at small cost. The cylinder case proper never wears out. With this construction, in addition, it is practically impossible to dent a cylinder and cause sticking of a piston. A space between the cylinder liner and cylinder case walls prevents this.



The cylinder liners are held in place by cylinder heads which screw into the liner and shoulder against the case. The threads are in the liner and not in the case, so that stripped threads would necessitate only a new cylinder liner.

Crank pins are fitted with a sleeve held stationary on the crank pin, so that all the wear takes place on the sleeve instead of the crank pin. In other words, the wearing of the crank pin is impossible and it is only necessary to renew the worn crank pin sleeve. Lubrication of the crank pins is from the inside as well as from the outside. With this new method a combination of the venting of the case with holes drilled through the crank, as in automobile engines, assures proper lubrication of the crank pin bearings.

The main valve is of large diameter with long bearing surfaces. It is air balanced so as to avoid wear on its bushing. It is gear timed so that no intricate valve mechanisms, toggles, levers or cranks are needed. Gearing is of helical type giving stronger construction and smoother operation than straight spur teeth. The crank pinion is renewable independently of the crank, so that a damaged pinion does not mean the replacement of a complete crank shaft. Connecting rods are of one-piece drop forgings and the crank shaft construction permits the use of solid end connecting rods and renewable crank pin sleeves. It is accurately counterbalanced to insure smooth operation. The complete crank shaft with pistons and connecting rods can be assembled outside of the case and then inserted in place.

Long stroke pneumatic drill made by Ingersoll-Rand

H. B. Air Tower

(Cut Shown Above)

Hobart Brothers Co., Troy, Ohio, have placed on the market a new air tower, known as the HB. The air tower can be used with any type of air compressor and is designed to keep a clean dry hose at all times rather than the usual wet, muddy curb connections.

It is enameled in a combination of standard Hobart battleship gray and brilliant yellow. It is compact and sturdy. The price is $39.50.

EDITORIAL

Getting Paid for Shop Equipment

ONE of the chief arguments in many of the smaller garages and service stations against the installation of more labor-saving equipment is that in their particular communities they cannot charge high enough rates to pay for the equipment. Where the flat rate system is adopted this problem solves itself, the reduced cost of performing operations resulting in a constant profit.

But because of location and competition there still are many shops that feel they cannot adopt flat rate, nor raise their hourly labor charge above $1. No one will deny the inadequacy of $1 an hour to pay for the time of an operator and the use of an expensive power-driven tool.

How one small-town garage proprietor has solved this problem is interesting. His rate for labor is $1 an hour, but he knows that good machine equipment helps him to do better work. Therefore he sells the idea to his customers. He shows them his equipment, tells them how expensive it is and how much it costs to operate it, and explains how it improves the quality of work turned out.

Then he explains that although his labor charge is only $1 an hour it is necessary for him to receive additional compensation for the use of machine equipment which reduces the time required for various operations and assures a more uniformly satisfactory job, thus actually saving the customer money.

In this way he sells his customers on the idea of paying a flat rate fee, in addition to the hour rate for labor, for the use of equipment. The rate for the cylinder grinding machine on complete engine regrind is $10. The valve refacing machine is paid for at the rate of 15 cents a valve. Other power tools are charged for accordingly, and in this way this shop finds it very profitable to be well equipped.

How many families in your community are waiting for the two-car salesman to do his stuff?

Tragedies of the Air

LAST week's aerial disasters strikingly demonstrated the fact that not yet has our motor transportation industry been transferred from crowded streets and highways to the multitudinous lanes of the air. A great naval airship was crushed like paper in a storm with sad loss of life and a powerful airplane, also representing the navy, flew over the vast expanses of the Pacific into oblivion, taking also its toll of human life. These two catastrophes coming so close together and so spectacularly, could not help but have an adverse effect on the development of aviation.

But it is worth pointing out that the most successful demonstration of commercial aviation yet revealed in this or any other country—the air mail—goes on undisturbed. Every day, rain or shine, the winged vehicles of the postoffice, speed the business intercourse of New York, Cleveland, Chicago, Omaha, San Francisco, and hundreds of intermediate cities and towns.

The air mail is piling up thousands of miles of profitable flying with an accident ratio so low that it is practically insignificant. The great engines, much like those of an automobile, whirr over the land in daylight and darkness and what is written in Chicago this afternoon is read in New York tomorrow morning. We shall have use for our streets and highways a long time yet and we must keep on building and widening them, but the paths of the air will be put to greater and greater use despite an occasional discouraging accident.

Spare the broom and spoil the sale.

Better Trade Days

AT THE National Automobile Shows held last January it was demonstrated under adverse conditions that the automotive trade appreciates some days exclusively its own to visit and study the car, accessory and equipment exhibits free from the turmoil and crowding that accompanies public attendance. The trade days last year were Friday and Saturday preceding the public opening of the shows on Saturday night.

To take advantage of the trade days meant that dealers from any distance had to spend the week end and Sunday away from home and business. And yet the attendance of dealers, distributors and manufacturers was enough that the show management was highly pleased.

It was thought, however, that even more representatives of the trade should have attended and now the management is trying to set the trade days at a more convenient time. At the shows this year, at both New York and Chicago, the hours from 10 a. m. to 1 p. m. on Monday and Tuesday of show week will be reserved exclusively for trade attendance. These two days are ideal for show attendance and are admirably suited for the convenience of the great majority of dealers who expect to attend either of the shows. It is to be hoped, therefore, that the retail trade will make a special effort to record a large and profitable attendance on these two days at New York and Chicago.

The laborer is worthy of his hire; so is a good machine tool.

Automotive Business at Firm Level

August Sales and Output Set New Record for Month

Plenty of Credit Available Throughout Country for Financing Time Transactions

NEW YORK, Sept. 9.—Automotive business is holding at a firm level. August production and sales, even if they did not quite come up to the most optimistic predictions made when the new models and price cuts were being announced, nevertheless set a record for that month, and there is a possibility that the September totals will be even better. An intensive selling campaign by manufacturers and dealers is meeting with response from the public, which apparently has both the means and the desire to invest further in transportation.

Plenty of credit is available in most sections of the country for the financing of sales on the time payment plan and in the west, particularly, this is leading to a further extension of the period allowed for settlement of the unpaid balance. Easy payment terms are perhaps a greater aid to sales than price reductions. A stimulus of another sort, and sounder economically, is being applied by the manufacturers in the form of reduced financing and insurance rates in deferred payment transactions.

As is normal for this season, the production of closed cars is gaining at the expense of open models. But the seasonal trend is accentuated by the price reductions of the last six weeks, which have mainly affected closed cars, thus further reducing the price differential between the two classes. From a competitive standpoint, the reductions have had little effect, since most of the large-volume producers have maintained their relative standing as to prices.

Accessory and equipment makers are sharing in the general activity, with, of course, the body builders, and the manufacturers of sheet steel and body hardware somewhat ahead of those whose products are used in quantities that do not vary with the body type under production. Tire manufacturers despite the higher prices made effective this summer, are producing at the highest rate for the season that they have ever attained.

The used car market was dealt something of a blow by the price reductions, and some losses and a certain degress of stock increase has been the result, but this appears to be a temporary situation that will correct itself if the dealers maintain sound merchandising methods.

GRAHAM CUTS $100

DETROIT, Sept. 5.—Graham Brothers, truck manufacturers, have announced a reduction of $100 in the price of their one-ton truck, effective September 9. A reduction of $80 in this model was announced about four months ago.

CLEVELAND ADDS MODEL

CLEVELAND, Sept. 5.—The Cleveland Automobile Company has announced the addition of a de luxe 5-passenger touring car to its 6-cylinder "31" line. This model which lists at $1025, is equipped with front and rear bumpers, hand windshield wiper, trunk and trunk rack, windshield wings, cowl ventilator, rear view mirror, heat indicator, cowl lights and ignition lock. The body is finished in a two-tone green Duco, and leather upholstery is used.

Americans Place Fourth and Fifth in Monza Grand Prix

MILAN, Italy, Sept. 6—(By Cable)—Americans came in fourth and fifth in the Grand Motor Car Prix of Italy held in the Royal Park at Monza today. Tommy Milton, with a Duesenberg, and Peter De Paolo with an Alfa-Romeo, were the drivers who placed. A third American driver, Peter Kreis, also with a Duesenberg, suffered an accident when occupying first place. His car turned turtle on a curve. He was uninjured.

The individual winner was an Italian, Brilliperi, with an Alfa-Romeo, who covered the 800 kilometers (497 miles) in 5 hours, 14 minutes, 33 seconds. Two other Italians, Campari and Constantini, also with Alfa-Romeos came in second and third respectively. The race wins for the Alfa-Romeo car under the new rules the title of world's champion.

De Paolo never got better than second place. His exhaust pipe dropped off and he was further delayed by a loose choke tube in his carburetor. The Duesenbergs had no engine trouble and in practice showed the highest speed of any of the cars but owing to transmission trouble could not prove their worth in the race.

The technical conclusion is that America secures better engine results with simplified construction but owing to lack of road races is lacking in clutch and transmission practice.

FLINT REDUCES PRICES

FLINT, Mich., Sept. 5.—Reduction in prices on the four Flint models have been announced by the Flint Motor Company. The new prices include a $100 reduction on the B40 touring car, a $185 reduction on the B40 sedan, a $185 reduction on the B40 brougham, and a reduction of $250 on the model 555 brougham.

BUYS ELDREDGE COMPANY

SPRINGFIELD, Mass., Sept. 5.—The Eldredge Electric Mfg. Co., manufacturers of ammeters, voltmeters, spark plug testers for the Ford, and radio transformers, has been purchased by R. W. Ellingham, who for 10 years was works manager of the Hendee Mfg. Co. (now Indian Motocycle Co.). Established lines will be continued, with emphasis on automotive and radio products, by a new company called the Eldredge Electrical Mfg. Co., Inc.

Merger of Hall-Scott and Fageol Nears Completion

Representatives of American Car and Brill Company Working Out Details of Big Deal

OAKLAND, Cal., Sept. 5.—Representatives of the American Car and Foundry Co. and of the J. G. Brill Co., headed by S. M. Curwen, have completed the purchase of the Hall-Scott Motors, Inc. of Berkeley, manufacturers of the Fageol bus motor and the Hall-Scott Liberty motor, and also have completed negotiations with the board of directors of the Fageol Motors Co., of Oakland, for the purchase of the Fageol plant and interests.

Sale of the Fageol company must be confirmed by a two-thirds vots of the stockholders and by the results of an appraisal of the Fageol properties now being made by a San Francisco auditing company.

American Car and Brill have agreed to pay the Fageol company, in case the sale is confirmed, the present appraised value of the properties plus net current assets, and to give Fageol $500,000 for good will. This will make the Fageol common stock worth between $5 and $5.50 per share.

A new corporation is planned including both Fageol and Hall-Scott, with plant assets of about $6,000,000, with capitalization of $10,000,000 in preferred and 150,000 shares of no par value common stock. Preferred stock will be taken almost entirely by the American Car and Brill interests.

Although no financial statement has been issued, it has been reliably reported that Hall-Scott Motors received $450,000 for plant and business and $500,000 for good. will. Neither Fageol nor Hall-Scott companies will lose their identities in the new corporation and both plants will be enlarged and continue operations in their present locations.

WESTCOTT SOLD AGAIN

SPRINGFIELD, O., Sept. 8.—A deal has been closed by which Jack Andrews, who represents Chicago men, has purchased the good will, patents, dies, tools and cars on hand and material from the Westcott Motor Car Co. through Richard M. Rodgers, who recently acquired this property from Receiver J. M. Rehe. The purchase price has not been made public. It is understood that the company may be reorganized and that the manufacture of Westcott cars may be continued in Springfield or in another city. For the present a service department will be maintained in Springfield under the name of The Westcott Company.

New Car Sales Increase Sharply in San Francisco

Used Automobiles Find Less Favor After Price Cuts on Popular 1926 Models

SAN FRANCISCO, Sept. 5.—General reductions in the prices of a majority of the makes of new cars, particularly those priced at $1,500 and under, were responsible for an upward turn of the sales curve in the automotive industry in the San Francisco district during the last week of August, and the first week of September. Sales of used-cars, both rebuilt and "as-is", dropped materially, though these sales, with very small down payments and instalments spread over long periods, had been the greatest factor in sales-resistance of new cars during July and the first part of August.

In addition to this, many of the dealers, notably Chevrolet, Star, Ford and Oldsmobile, have begun extensive campaigns, both by advertising and by personal calls, for the sale of new cars on installments. In this campaign, the credit of the prospect in other lines of business is taken as a standard in fixing the down payment on the car. While this makes the payment scale irregular, nevertheless it has enabled hundreds of men of small but good credit to own cars who otherwise might have been compelled to buy used automobiles.

This campaign also has resulted in sales of a number of one and one-and-a-half ton trucks to small merchants, particularly in the smaller towns of the state. Many such trucks also have been sold to fruit-growers, owning or leasing small orchards, who heretofore have been dependent on public trucks to haul their crops to market. Banks have "loosened up" considerably on automobile paper in this section of California, largely because a number of the dealers in the lower-priced cars have formed the system of discounting this paper in banks in the communities in which the buyers of the cars and trucks live. These dealers say that they find the well-informed local banker their best aid in selecting prospects as to their credit and their ability and willingness to pay.

Though September usually is a dull month in automotive merchandising, indications are that this month, this year, will be better than usual.

Homer McKee Is Appointed Vice President of Marmon

INDIANAPOLIS, Sept. 5.—G. M. Williams, president of the Nordyke & Marmon Company, manufacturers of Marmon motor cars, today announced the appointment of Homer McKee as vice president of the company to succeed E. S. Gorrell, who has resigned to accept an important position elsewhere.

H. H. Brooks, who has previously been sales manager, has been appointed general director of sales. President Williams, who came to Marmon eighteen months ago and who is responsible for the introduction of the new Marmon motor car, said:

"Mr. McKee is recognized as one of the most seasoned and aggressive merchandisers in the United States and his acquaintance in the automobile trade extends over a period of many years."

Mr. McKee will retain the presidency and active management of the McKee Company, Inc., of Indianapolis.

Gorrell Is Elected Vice President of Stutz Co.

INDIANAPOLIS, Sept. 8. — Eugene V. R. Thayer, chairman of the board of directors of the Stutz Motor Car Company of America, Inc., announced from the New York executive offices, today the election of Edgar S. Gorrell as vice president of the company. Mr. Gorrell, who had resigned as vice president of Nordyke & Marmon Company the previous week, will be elected as one of the directors of the Stutz organization at an early meeting of the board.

Fredrick E. Moskovics, president of the Stutz company issued the following statement from the Indianapolis factory in connection with Mr. Gorrell's election:

"The election of Edgar S. Gorrell as vice president of the Stutz Motor Car Company of America, Inc., comes as another forward step in the development of this institution. I have known Mr. Gorrell for years and his affiliation with this company is the result of his knowledge of our plans for development and his thorough confidence in the future of Stutz.

"Mr. Gorrell's career in business marks him as one of the leading men in the automotive industry and, following his remarkable army record, assures me he is exactly the type of men we need as a Stutz executive."

Franklin Reduces Prices on All Models $15 to $225

SYRACUSE, N. Y., Sept. 5.—H. H. Franklin Automobile Co. has made the following price reductions:

	New Price	Old Price	Reduction
Sport Roadster	$2,750	$2,800	$ 50
Touring	2,635	2,650	15
Sedan	3,090	3,200	110
Sport Sedan	3,225	3,350	125
Limousine	3,275	3,500	225

Chrysler Corp. Declares $2.00 Quarterly Dividend

NEW YORK, Sept. 5.—The Chrysler Corp. has declared the regular quarterly dividend of $2 a share on the preferred stock for the third quarter of the year, payable October 26 to holders of record of October 10.

The following statement was issued in connection with the dividend declaration:

"Shipments for August are running 50 per cent ahead of those for July and will total over 18,000 cars for the month. Orders on hand represent 60 days' business at the current rate of production."

Beecroft Sees Heavy Sales Volume Through Last Half

Trade Authority Tells Advertisers Last Year's Production Will Be Exceeded

NEW YORK, Sept. 5.—A cheerful view of prospects in the automotive industry for the remainder of 1925 was taken by David Beecroft, business manager of Motor World Wholesale, in a talk today before the Advertising Club of New York.

"It is highly probable that the unusually heavy sales of July and August will continue during the major portion of the second half of the year, by virtue of the increased value and lower prices of the 1926 models," Mr. Beecroft said. "It can be definitely stated that unless some unusual conditions arise, the second half of 1925 will exceed by a very substantial margin the business done during the second half of 1924. The 4,000,000 production mark set in 1923 may be approached, and it is certain that last year's total will be exceeded."

Mr. Beecroft sees the year to date distinguished in two ways. First, because several leading manufacturers have made a continuous and effective effort to regulate car production and retail sales for the purpose of not over-stocking the distributors and dealers, as well as keeping inventories in a fluid state.

"The year has been quite unusual in another way," Mr. Beecroft continued "The motor car manufacturers have so timed their announcements of 1926 models with price reductions as not to flatten out the sales during June, when old models were closed out. The effect was to stimulate business in July and August so that new records for retail sales and productions were made for these months, July production this year being 68 per cent over the corresponding month a year ago."

Ford Orders Being Taken at Rate of 10,000 Every Day

DETROIT, Sept. 5.—Since the announcement of the changes in the roadster, touring, tudor, fordor and coupe models by the Ford Motor Company, orders have been coming in at the rate of slightly more than 10,000 a day, it was said at the factory today.

There are now on the company's books more than 100,000 orders with additional orders coming in faster than ever before in the history of the company.

While no effort has been made to segregate the orders as to cars, they are about evenly divided. There is a strong trend towards the coupe and the roadster.

Reports available at the Ford Motor Company of Canada, Ltd., are much the same. Orders there have been coming in at the same rate and will tax the company to the utmost to catch up with those already taken.

Chrysler Corp. Buys Detroit American Motor Body Plant

Company Believes 700,000 Additional Feet of Floor Space Will Insure Future Production

NEW YORK, Sept. 5.—Purchase of the Detroit property and plant of the American Motor Body Co. by the Chrysler Corporation is announced by Walter P. Chrysler, president.

"Because of the present inability of the Chrysler Corporation with its various plants to keep anywhere near the demand for Chrysler sixes and fours, the Chrysler Corporation has purchased the Detroit plant of the American Motor Body Co. which will give the Chrysler Corporation 700,000 square feet of additional space," said Mr. Chrysler.

"The first and second floors of the new plant will be used for general manufacturing purposes and the other floors will be used for building open cars, including Chrysler four-cylinder touring cars and six-cylinder and six-cylinder phaetons and roadsters.

"During the last year the Chrysler Corporation experienced body shortages on several occasions with a consequent unavoidable slowing up of production. With the new plant, which is regarded as one of the finest body plants in America and directly across the street from the Jefferson Avenue plant of the Chrysler Corporation, we are assured of an adequate supply of quality bodies. The purchase of this plant is simply assurance for the future. It will make certain our ability to meet the demands for the Chrysler cars."

The Chrysler Corporation has arranged to take over contracts for bodies made for other motor car companies. The amount of the purchase price was not announced.

Packard Co. Pays Preferred Stockholders $7,282,440

DETROIT, Sept. 5.—The Packard Motor Car Company has announced the distribution of $7,282,440 to its preferred stockholders to retire at $1.10 a share the entire issue of preferred stock of the company.

With retirement of this stock, the company announced it has no outstanding securities except common stock and no obligations other than current liabilities on the company's books. After paying off the preferred stock, it was announced, the company has on hand approximately $14,500,000 in cash and marketable securities and all future earnings will be available for payment of common stock dividends.

During the last four years the Packard company announces that it has repaid $11.000.000 in bank obligations and has paid off and retired $15,500,000 of outstanding preferred stock.

STROMBERG EARNINGS

CHICAGO, Sept. 5.—Stromberg Carburetor Co. for the quarter ended June 30, 1925, reports net profits of $225,063, after all expenses and deductions. This was equal to $2.81 a share earned on the 80,000 shares of capital stock outstanding. In the same quarter last year net profits were $166,403, equal to $2.21 a share on the 75,000 shares of capital stock outstanding at that time. Net profits for the first six months of 1925 amounted to $385,368, after all deductions, equal to $4.81 a share on the capital stock against net profits of $370,708 equal to $4.93 a share in the same period last year. Directors declared the regular quarterly dividend of $1.50 a share on the capital stock, payable Oct. 1 to shareholders of record Sept. 10.

"Balloon Bumper" Co. Pays 15 Per Cent on Common

CHICAGO, Sept. 5.—Dividends of 8 per cent on the preferred stock and 15 per cent on the common have been announced by the Automobile Equipment Manufacturing Corporation, makers of "Balloon Bumpers." The dividends affect stockholders of record July 1.

The corporation recently celebrated the end of its first year in business as a manufacturer. It was incorporated, however, only on May 18, this year. The firm is capitalized at $80,000, of which $40,000 has been paid in cash. There are 6,000 shares of common outstanding and about 100 shares of preferred.

The plant is making about 100 shipments daily at present, but has recently been enlarged to allow of an output of more than 500 sets of Balloon bumpers daily. The officers of the company are: F. D. Cerf, president of the Stutz Chicago Factory Branch, Inc., president; G. M. Cerf, vice-president, and J. W. Suporter, secretary and general manager.

BOYLE REPRESENTS INDIA

AKRON, Sept. 5.—The India Tire & Rubber Co. has appointed J. R. Boyle as direct factory representative, with headquarters at Erie, Pa. Boyle has spent many years in that territory as the representative of the Goodrich Tire & Rubber Co.

Charles S. Wells, Widely Known Photographer, Dies

SUMMIT, N. J., Sept. 5.—Charles S. Wells, of the firm of Spooner & Wells, automobile photographers, New York, was killed Aug. 31 in an accident near his home at Summit, N. J. He was out or preparing to go out in his car with his partner, F. Edward Spooner, when the car took fire on an upgrade. He was widely known in the industry, as in connection with his photographic business he attended most of the automobile contests, races, shows, etc., particularly during the earlier years of the industry. At one time he held the long distance cycle championship of the United States. He was 60 years of age at the time of his death.

Fords Pay Almost Fourth Of District Income Taxes

General Motors Follows in Second Place for Detroit—Dodge Brothers Next

DETROIT, Sept. 5.—The Ford Motor Company, Henry Ford and Edsel B. Ford paid almost one-fourth of the income tax collected by the first district of Michigan on 1924 earnings, it became known today when the books of Fred L. Woodworth, internal revenue collector, were thrown open to the public.

The income for the district was $90,624,855.90. The Ford Motor Company paid $16,493,160.91, Henry Ford paid $2,608,808.85 and Edsel B. Ford $2,158,055.99. Both paid higher taxes in 1923, with the company paying approximately $2,000,000 more on its 1924 earnings. The drop in the amounts each of the Fords paid is explained in the decreased rate on the income tax for 1924 over 1923.

Next comes the General Motors Corporation. The exact figures are not known, but are believed to be in the neighborhood of $5,000,000. The exact figures will be announced in the annual statement to be issued by that company.

The Fisher Brothers, Charles T., Fred J. and Lawrence paid a total of more than $1,000,000. Mrs. Anna Thompson Dodge, widow of Horace E. Dodge, paid $993,028.48. Mrs. Mathilda R. Wilson, widow of John F. Dodge, paid $110,392.27.

Others well known in the automotive world and the amounts paid follow:

Dodge Brothers, Inc.	**$2,450,843.67**
Alvan McCauley	**53,531.06**
Walter Briggs	**146,449.79**
Howard E. Coffin	**45,809.48**
Roy Chapin	**63,206.38**
James R. Murray	**9,332.08**
Chas. T. Fisher	**369,306.93**
Fred J. Fisher	**382,476.44**
Lawrence Fisher	**250,803.39**
Fisher Body Corporation	**2,240,000.00**
Hudson Motor Car Company	**1,120,587.00**
Packard Motor Car Company	**751,862.41**
Briggs Manufacturing Company	**1,590,060.77**

Moon Offers Plant for Sale and Seeks Larger Quarters

ST. LOUIS, Sept. 5.—Moon Motor Car Co. has advertised its main plant for sale with the stipulation that the concern be allowed six months in which to vacate after selling.

The company seeks a larger plant, where it can consolidate its departments and expand.

The company will not make any definite plans as to its future location until its present plant has been disposed of. It is not known whether the concern will remain in St. Louis or move to some other city. According to an official, this depends solely on the inducements offered.

Both the Diana and Moon plants are running at full capacity, while arrangements for increased production are being made.

Plans for 1926 National Show Progressing Rapidly

New York Exhibit Jan. 9 in Grand Central Palace—Chicago Exposition Jan. 30

NEW YORK, Sept. 5.—Steady and active progress is being made in the plans for the 1926 National Automobile Shows in this city and Chicago, and there is no reason to doubt that both these old-time fixtures will again prove the leaders among the industrial displays of the coming year. Both exhibitions will last for a week, as usual, the one in this city opening on January 9 and that in Chicago January 30.

Of interest as concerning the New York renewal is the fact that it will again be held in Grand Central Palace, Lexington Avenue, 46th and 47th Streets, after an absence of two years, during which it was held in the Kingsbridge Road Armory in the Bronx. While the location in the Bronx offered the unique advantage of permitting the entire industry to show its products on one floor—possible in no oher building in the world—there was always the possibility that heavy storms might disrupt traffic or at least make motor car attendance impossible.

The Grand Central Palace, on the contrary, is in the center of the metropolis, and close to all the principal hotels, an advantage that greatly outweighs the necessity of using four floors. Another feature of importance in the return of the automobile industry to the big show building on Lexington Avenue lies in the alterations that are under way, the doubling of the number of exits and entrances and placing in service additional elevators for the accommodation of the big crowds that the National Show always attracts.

The two trade days which were a feature of the last renewal of the National Automobile Show will be repeated next year, but under a different arrangement that is expected to suit the convenience of local and visiting factors in the trade and industry. Instead of setting aside Friday and Saturday ahead of the regular opening for the accommodation of the trade, parts of Monday and Tuesday during the actual period of the display will be reserved for buying and selling. The hours reserved on these days will be from 10 a. m. to 1 p. m., the public being excluded during that time. For visitors to the city intent on placing orders for their season's trade this will preclude the necessity of coming here 48 hours in advance.

Complete details regarding the trade days have not yet been worked out, and will be announced in detail by Manager S. A. Miles at a later date. The days and the hours reserved, however, are authoritative, and intending visitors will be able to make their plans on that basis. Credentials will again be free for those who visit the show during the trade periods.

The distribution of blank applications for car space both in the New York and Chicago shows has begun by the show department of the National Automobile Chamber of Commerce. The same procedure will be followed by the Motor and Accessory Manufacturers Association for the accessory sections of the two exhibitions.

Ford to Leave Problem of Old Models up to Dealers

DETROIT, Sept. 5.—While nothing official can be had, it is generally known that Ford dealers throughout the country who were caught with old models on their hands, will have to solve individually the problem of disposing of the old models. Some method in offering them to the public may be suggested in the near future by Ford officials but nothing of that nature is being contemplated at the present time.

At the factory it is said that not many of the old models were left on the dealers' hands.

Production of the new models is rapidly nearing capacity. Those being turned out now are being turned over to the dealers for show purposes. Up to the present none of the 33 Ford dealers in Detroit or the surrounding territory have displayed any of the new models. By the last of the week enough cars will have been turned out so that they will be shown to the motoring public in all parts of the country.

Charlie Myers Wins Pike's Peak Climb With Chandler

PIKE'S PEAK SUMMIT, Colo., Sept. 7.—Charlie Myers burned up the Pike's Peak alley of altitude Labor Day with a Chandler, winning the seventh annual world's championship hill climb and smashing all former records. He drove the 12½ miles in 17 minutes, 48 2/5 seconds. The former record was 18 minutes, 15 seconds. Glen Schultz in a Stutz was second in 18 minutes, 52 4/5 seconds. J. V. Plenderlith in a Lexington, was third in 20 minutes, 3 2/5 seconds.

Myers will receive $1,000 of the $2,000 cash prize money and the permanent $10,000 Penrose silver trophy which he may keep in his possession by placing a bond, until some other driver breaks the record he established this year.

Schultz will receive $350 of the cash and Plenderlith, $150. The record of last year was made by Otto Loesch in a Lexington.

There were ten starters and the track was hard and fast. A larger crowd than last year witnessed the race. Rain that fell Sunday night did not injure the track. Weather conditions were almost perfect.

Ustick Heads Rickenbacker Distribution in St. Louis

Merger Combines Two Firms—Captain "Eddie" Present at Opening of New Concern

ST. LOUIS, Sept. 5.—Rickenbacker St. Louis Co., has been appointed Rickenbacker distributor in St. Louis, succeeding the Diesing Motor Sales Co. E. T. Ustick, Jr., formerly of the Ustick Motor Car Co., a Rickenbacker dealer, is head of the new company. The Ustick Motor Car Co., will be merged with the Rickenbacker St. Louis Co. and will occupy the building at 2218 Locust street formerly occupied by the Diesing Co.

Other officers of the company in addition to E. T. Ustick, Jr., are E. T. Ustick, Sr., vice president and E. M. Walsh treasurer.

George L. Griese, office and credit manager of the Diesing Company will be retained in that capacity as will W. C. Baker, service manager.

Carl E. Methudy, well known in automobile circles, will join the sales force of the Ustick Company and it has been announced that four more salesmen will be added to the force.

Capt. Rickenbacker who was in St. Louis to help launch the new company stated that he was completing a 35-day tour of the country in company with Walter F. Zimmer, president of Zimmer-Keller, Inc., Detroit, the advertising agency for the Rickenbacker Company.

Announcement of the change in the distributorship was made at a dinner to Rickenbacker dealers at Hotel Claridge at which Rickenbacker, Zimmer, Ustick, James A. Westbury, St. Louis district manager of the Manufacturers' Trust Co., were the speakers. Details of the meeting which was attended by Rickenbacker dealers in eastern Missouri and southern Illinois, were handled by F. N. Morgan, factory representative of the Rickenbacker Co. in St. Louis territory.

INDIA NAMES BARNHOLT

AKRON, Sept. 5.—L. L. Barnholt has been appointed New York branch manager by the India Tire & Rubber Company of Akron. Barnholt has served in the New York territory for several years as assistant branch manager. He is well known throughout the New York district and is thoroughly familiar with conditions in that territory.

SEGELHORST PROMOTED

ST. LOUIS, Sept. 5.—A. A. Segelhorst has been elected vice president and treasurer of the Renaud Motor Car Co., Inc., Kissell distributor in St. Louis, located at 3116 Locust street. Segelhorst has been connected with service work on Kissell cars for 13 years both at the factory at Hartford, Wis., and in St. Louis. James A. Renaud is president of Renaud Motor Car Co., Inc., and Edward R. Ellrich is secretary.

Carolina Tire Dealers See Good Business for Winter

Movement to Consumer Remains Brisk Although Demand is Slightly Less Than Usual

CHARLOTTE, N. C., Sept. 5.—Good business is the prospect for this winter for the automobile tire dealers of the two Carolinas and the branches here of the large tire manufacturers, according to information obtained from branch managers.

Though there is a perceptible slackening of demand, largely because of conditions in the textile industry and the exhaustion of the farmers' supplies of cash just prior to the harvesting season, the movement of tires into consumers' hands continues brisk. Some of the branch managers reported depleted stocks as a result of this steady influx of orders.

A sharp reduction in the number of tire sizes within a short time is anticipated by several branch managers. It was reported that many dealers in the Carolinas are showing a disposition to buy cautiously, with the view of avoiding overloading their shelves. No reduction in tire prices is anticipated before the New Year and in some quarters some expectancy exists that further small increases may be announced within a few weeks.

All the tire manufacturers' branches in this territory are making unusually vigorous sales efforts. This policy is regarded as being largely responsible for the continuing steady flow of tires into dealers' and consumers' hands at a time when the agricultural industry's influence on business is unfavorable in large sections. Dealers and branch managers are co-operating to avoid overloading the former and dealer stocks in this territory are reported rather low at this time.

Dealers Expect Good Fall Sales Volume in Louisville

LOUISVILLE, Sept. 5.—Price reductions have failed to prove the sales stimulus expected, although dealers look for increased sales later due to the lower prices. Sales for August are slightly below July but are about 10 per cent better than the same month last year. The general outlook for fall business is optimistic. Registrations for the first half of 1925 for the state are greater than the entire year of 1924. Some dealers are still experiencing difficulty in making deliveries on certain models.

More and more, dealers are refusing to increase sales through exorbitant allowances for used cars and, while this restricts new car sales to some extent, beneficial results are apparent in smaller used car stocks on hand. Medium and higher priced used cars are moving well but some difficulty is being experienced in disposing of the low priced used cars, although, on the whole, the situation is better than last year.

CALIFORNIA PLANS SHOW

SACRAMENTO, Cal., Sept. 5.—Distributors of automobiles throughout the state of California have taken 50,000 square feet of exhibition space at the annual California State Fair, which opens at Sacramento, September 5, and continues through September 13. It has been necesssary to provide additional housing for the automotive exhibits at the fair, according to Charles W. Paine, secretary-manager of the show. This year's automobile display will be the largest ever attempted at a state fair on the Pacific coast, largely the result of the considerable business done last year directly due to automobile exhibits made at the 1924 state fair. Lines of passenger cars, trucks and tractors will be presented by 25 distributors, representing 35 different makes of cars at the September fair. From lists of exhibits now in the hands of Secretary Paine, it appears that closed cars will predominate among the passenger car exhibits.

Ford to Resume Capacity Production at Charlotte

CHARLOTTE, N. C., Sept. 5.—The Ford Motor Company's assembly plant here, which has been closed since August 1, will resume full-time operations about September 1, it was definitely stated by officials of the company today. This plant employs between 1,000 and 1,100 skilled mechanics when working at capacity.

The date when full-time operations will be resumed depends on receipt of quantity shipments of materials for the new model Ford cars, which are expected to be more favorably received in this territory than any former model produced by this company.

The advent of the few models finds the dealers in this territory with practically empty show-rooms and prepared for perhaps the most intensive selling campaign ever made in behalf of Ford Motor Company products.

NEW STUDEBAKER DEALERS

CHARLOTTE, N. C., Sept. 5.—Important progress in the reorganization of this territory by the sales department of the Charlotte branch of the Studebaker Corporation was indicated in the announcement that factory representatives had closed contracts directly with a number of dealers, some of which formerly dealt with the Rust Motor Company, of Charlotte, until recently distributor of the Studebaker line in this section.

Direct contracts were made, the announcement said, with the Douglass Motor Company, of Winston-Salem, N. C.; T. & H. Motor Company, of Greensboro, N. C.; Dan River Motor Company, of Danville, Va.; Davis Motor Company, of Asheboro, N. C.; Gastonia Motor Company, of Gastonia, N. C.; Standard Garage and Sales Company, of Hickory, N. C.; Tate's Garage, of Rutherfordton, N. C.; Auto Supply and Repair Company, of Concord, N. C.; Greene Motor Company, of Rock Hill, S. C.; Parker & Harris, of Abermarle, N. C., and Doggett Brothers, of Shelby, N. C.

Car Stocks Are Light in Dallas Trade Industry

Delivery on Some Lines is Problem —Used Automobile Stocks Heavy

DALLAS, Tex., Sept. 5.—Despite continued inceased output at the factories and reported seasonable declines in sales of new automobiles in most sections of the country, no increased stocks of new automobiles are to be found in Dallas trade territory, or in most parts of Texas. Distributors and dealers, almost to a man, report their stocks lighter than a year ago and declare they are having trouble getting deliveries on certain lines.

Buick, Studebaker, Nash and Chevrolet dealers have been borrowing from each other to make deliveries while distributors have been hounding the factories for certain lines. The Nash distributor and dealers are way behind with deliveries on Special Sixes. Buick dealers can't get new models fast enough to supply the demands. Chevrolet distributors and dealers are short on closed cars and are begging for them. Overland dealers can't get enough Standard Sedan Sixes or Straight Six Tourings.

Hupmobile stocks are light, especially in the Fours. Hudson, Essex and Chrysler dealers are not overstocked but they have not been selling as rapidly as other dealers, due to change in franchise ownerships and dealers in trade territory.

Moon, Jewett, Flint and Cleveland lines carry pretty good stocks. Cadillac, Paige and Pierce dealers and distributors are not heavily stocked. They have been enjoying a banner year and expect continued bumper business.

A canvass of the new car situation showed the sales in August were better than for June and July and some twenty per cent better than for same month a year ago. Used car stocks are pretty heavy and are increasing, because practically every new car sale involves a trade in and 70 per cent of the used car deals involve another. Used car stocks are becoming a serious problem with some dealers right now.

FLORIDA LICENSES UP

PENSACOLA, Fla., Sept. 5.—That 1925 will undoubtedly prove by far the biggest automobile year in the history of Florida is indicated by statistics announced the early part of August by the state automobile license department, showing a total of 284,914 license tags issued in Florida the first seven months of the year. This total is more than 70,000 in excess of the entire total for the year 1924, which was the previous largest year in the history of the state. It is now practically certain, in fact, that pleasure car and motor truck sales in Florida this year will exceed 1924 by at least 40 to 45 per cent, and possibly as high as 50 to 60 per cent.

New Car Sales Reach Peak in California During August

Public Shows Excellent Response to New Models—Used Stocks Move Well

LOS ANGELES, Sept. 5.—With the new models of nearly a dozen different makes of cars all presented during the early part of the month, accompanied by the most vigorous advertising and merchandising campaigns known in this market for many years, sales throughout Southern California reached the peak of the year during August, and they are believed tot have considerably exceeded August sales of a year ago. The continued development of the metropolitan dealer plan in the greater Los Angeles area by several distributors has served to greatly intensify the bid for business in this section, and it is generall accepted in automotive merchandising circles that this year is seeing the most trenchant competition in the history of this district.

Distributors report the public has shown excellent response to the new models. At the same time those distributors handling cars which do not feature yearly changes declare their sales have not suffered during the avalanche of new models. The only weak spot in the sales situation in Southern California, as compared with last year, is in certain quarters of the low-priced field.

Used car stocks continue to move well, with many dealers reporting new high records in volume of used merchandise during August.

Along with the new era of competition in this market, the twenty-four month time payment plan has definitely arrived in Southern California. It was introduced by one large distributor and other distributors have followed suit. Even the dealers who believe the new low down payments and the excessive monthly payment periods will result in a decidedly unhealthy situation over a period of time have gone in for the two-year payment plan in order to meet competition. There are now comparatively few dealers in Los Angeles who will not accept the two-year payment plan if the prospect insists on it, although many of them do not openly feature an appeal longer than eighteen months.

Dallas Dealers to Exhibit at Texas Fair Oct. 10-25

DALLAS, Tex., Sept. 5.—Preparations for the annual automobile show of the Dallas dealers and distributors have about been completed. The show will be held October 10 to 25 inclusive in the specially constructed building at the State Fair of Texas.

In addition to forty regular dealers and distributors who will show the new designs in passenger cars, busses, etc., a considerable number of manufacturers will display their wares at the coming show.

The committee in charge of the show this year consists of C. R. Nachtreib, G. B. Gillespie, Ray Shelton, H. E. Spencer and J. H. Shelton. J. H. Connell, executive secretary for the Dallas Automobile Dealers Association, said the show this year will eclipse anything ever undertaken by the Dallas dealers and distributors.

Horse Market Goes Out for Cars

WATERLOO, Ia., Sept. 5.—The most famous horse market in the central west is being demolished this week to make way for a filling station to serve Dobbin's successors—the automobiles. Harry Fee, operator of the new station, obtained this site at Sycamore and East Sixth street, where thousands of the proudest of horse flesh in eastern Iowa stamped before prospective owners or stood hitched as buyers bartered, for his latest addition.

ENTERS RADIO FIELD

OAKLAND, Cal., Sept. 5.—The Western Auto Supply Company announces its entry into the radio field with a five-tube tuned radio-frequency set to be known as the "Western Air Patrol." The outfit is sold complete, with cabinet, batteries, tubes, aerial and all equipment. Heretofore the Western Auto Supply has sold its goods only for cash, but a payment plan, with a fifteen-day approval clause is offered on these radio outfits.

DEALERS RESTRICT SERVICE

OAKLAND, Cal., Sept. 5.—Hamlin & Wichman, Hudson-Essex dealers in this city, made an unusual ruling and one new to California, when they announced late in August that hereafter they would give the free guaranteed service of the Hudson-Essex factories only to owners of cars purchased from them. All other Hudson-Essex owners will have to pay for all service rendered by Hamlin & Wichman, who maintain a large repair shop exclusively for these two makes of cars.

MICHIGAN RECEIPTS UP

LANSING, Sept. 5.—Upwards of $1,000,000 was collected from the state gasoline tax during July, Charles J. DeLand, secretary of state, has announced. The gross receipts were $1,001,656, with refunds of $53,987, making the net returns $947,677. Since the gas tax went into effect six months ago $4,378,150 has been collected. During that time the refunds have amounted to $242,677. This is about half of the yearly revenue which state officials estimate would accrue from this source.

Chevrolet Co-operates With Dealers in Local Advertising

New Plan Will Give More Space to Agency Owner at Lower Cost

DETROIT, Sept. 5.—A cooperative advertising campaign in connection with its dealer organization is announced by the Chevrolet Motor Company. Under the new plan, the company in reality becomes the advertising department of each of its dealers and provides them with an advertising campaign through which it is possible to key local and national advertising making it possible to broadcast a single message in both local and national publications at the same time.

Briefly the plan is as follows: for each car shipped the dealer the company charges him a small amount which is put into the Chevrolet dealers' advertising fund. To this fund, the company adds a substantial amount all of which goes for advertising in the dealer's territory.

Before any advertising is placed or the copy is prepared, the needs of the dealer are analyzed and his choice in the selection of the different media taken into consideration. The dealers are kept in constant touch with the advertising plan and are given advance proofs of all newspaper advertisements.

The problems analyzed and the media selected, the company prepares the advertising campaign, buys the newspaper space, sends out the ads, prepares and purchases the art work and handles all the minor details.

The plan does not apply to the national advertising carried by the company in the various magazines which is paid for by the company. The dealer can if he chooses do additional advertising with the help of the company.

DAY TAKES TOLEDO FLINT

TOLEDO, Sept. 5.—Willis F. Day has taken over the Toledo Flint Motor Co., 1719 Adams street, a direct factory branch established here a few months ago by J. H. Zwee. Day has been a Flint dealer here ever since the car was brought out by the Durant organization. W. C. Bahnsen, formerly with Buick and Chrysler sales staffs, has now become associated with the Toledo Flint organization, it is announced.

SAFETY FILM READY

ST. LOUIS, Sept. 5.—A movie film entitled "Food for Thought", designated to educate motorists and pedestrians to obey traffic laws and promote highway safety by the proper use of streets and highways has been completed by the Automobile Club of Missouri and will be shown in first run motion picture houses in St. Louis soon. The Gardner Motor Co., provided the automobiles used in the picture.

Ohio Gasoline Tax Receipts Far Ahead of Expectations

Road Maintenance to Get $2,288,000 of $3,555,873 Collected in Three Months

COLUMBUS, O., Sept. 5.—The amount of money collected by state officials with the 2-cent gasoline tax in Ohio for the first three months of its existence far surpassed the hopes of the proponents of the bill when the fight was made for the passage of the tax in the Ohio legislature. A report covering April, May and June, with the latter month incomplete, shows that a total of $3,555,873.58 was colleced, of which amount $2,288,000 will be distributed to the cities and counties of the state for road maintenance.

According to the law 25 per cent of the total is to go to the counties, which makes $6,500 for each of the 88 counties of the state. Columbus will receive $46,756, which is the proportionate amount for the 59,944 cars accredited to the city.

A compilation of the amount received shows that each owner has paid $2.80 in gasoline taxes in the three months and Columbus owners paid $167,843 in taxes. Ohio owners paid as stated above $3,555,673.58. Each owner used on the average 140 gallons and Columbus owners used 8,392,160 gallons while all owners in the state used 177,793,679 gallons.

At the rate of 15 miles per gallon, which is figured as a close average, each owner traveled 2,100 miles in the period, while Columbus owners traveled 1,880,235,300 miles and state owners traveled 2,666,905,185 miles.

Money spent for gasoline at 22½ cents per gallon average $31.50 for each owner while Columbus owners spent $1,880,235 and state owners paid $40,003,577 for gasoline.

Dealers Work Harder for Their Business in Boston

BOSTON, Sept. 5.—Motor car sales slacked off somewhat in August. It did not slow down business to the same extent which marked this same month in other years, but it was noticeable enough, speaking generally, to cause distributors to work harder to put over sales. In a few cases the dealers are behind in their orders, but these are not very many.

Part of this is due to announcing new models of popular lines and not having enough coming through. There are others who got rid of everything so that the new cars would not be handicapped by comparisons with 1924 models on which a depreciation would be heavy and so are booking orders satisfactorily. Outside Boston the dealers are not doing so well as some had expected.

A check up on the used car situation as revealed by the figures compiled by officials shows that the percentage of used cars taken in trade this year is larger and the percentage of sales smaller than last year, or in other words the demand for used cars apparent in the early spring and summer months each year was no different when the warm weather arrived than formerly.

Also the registrations show that July this year had 32,671 cars listed against 29,107 a year ago, while the total to date for the year was 584,234 against 580,489 for 1924 for the same period. There were 3,088 trucks registered in July this year and 2,645 a year ago that same month, while the total to August 1 this year made 90,840 when to that date in 1924 the total was 91,826.

MANITOBA TITLES 44,000

WINNIPEG, Man., Sept. 5.—Approximately 50,000 motor vehicles will carry Manitoba license plates this year. More than 44,000 licenses have already been issued, according to the license department. To date 40,000 licenses have been issued to passenger cars and 3,500 for trucks. It is estimated that there are 5,000 motor trucks in Manitoba, so about 1,500 more licenses have yet to be applied for in this group.

U. S. Revenue Collections Show Big July Increase

WASHINGTON, Sept. 5.—Internal Revenue Bureau collections from the automotive industry for July last amounted to $14,837,609.19 or an increase of $3,364,189.56 over collections during July, 1924, which were $11,473,419.63, it was announced here this week.

The total July, 1925, collections, it is further announced, including income tax, were $125,866,689.58 or an increase of $15,051,804.43 over July, 1924, collections, which were $110,814,885.15.

The segregated taxes of the automotive industry for July, 1925, give automobile trucks and automobile wagons $659,666.70 as compared with $902,219.74 in July, 1924; other automobiles and motorcycles, $12,332,971.60 in July, 1925, as compared with $7,605,505.18 for July, 1924, and automobile parts and accessories for July, 1925, $1,844,970.89 as compared with $2,965,694.71 for July, 1924.

CHEVROLET DEALERS MEET

ATLANTA, Ga., Sept. 5.—Chevrolet salesmen and dealers representing the Chevrolet Motor Co. in the Southeast held a conference at the Ansley Hotel in Atlanta the latter part of August under the direction of the southern branch of the Chevrolet company in Atlanta. Merchandising and advertising plans for the coming few months were discussed, and conditions as they affect the automobile business in the southeastern territory. The outlook for fall and early winter is particularly good in nearly every part of the district this year because of the excellent condition of the agricultural industry in the South, and a heavy volume of automotive sales is looked for as a result.

August Production Expected 11 Per Cent Ahead of July

Preliminary Estimate Places Output 74 Per Cent Greater Than Year Ago

NEW YORK, Sept. 5.—Preliminary estimates of August production of cars and trucks, made yesterday at a meeting of the board of directors of the National Automobile Chamber of Commerce, indicate that the totals for the chamber members will run about 11 per cent over the July figures and 74 per cent over August of a year ago. When Ford production is included, however, the total may be slightly below the July mark this year. The meeting was held at Blind Brook Country Club, Portchester, N. Y., and was followed by a dinner given by A. J. Brosseau, president of Mack Trucks, Inc.

The trade outlook was reported good, with stocks in dealers' hands lower than normal for the season and with exports constantly increasing. John N. Willys reported on the foreign situation and it was decided to broaden the activities of the chamber's foreign trade committee.

The appointment of a committee was authorized with a view to considering plans for better schools for mechanics, with curricula to be drawn up by the N. A. C. C.

A preliminary meeting of the insurance committee was held, and a survey program laid out. Another meeting will be held in about 30 days, when, it is expected, the necessary data will have been collected. On the committee are A. R. Erskine, Roy D. Chapin, R. E. Olds, Windsor T. White, William E. Metzger, Clifford B. Longley and Arthur T. Waterfall.

MISSOURI LICENSES UP

JEFFERSON CITY, Mo., Sept. 5.—License fee collections from Missouri motorists for the first six months period of the current fiscal year Feb. 1-Aug. 1 total $6,742,083, as compared to a full year's collection in the previous year of $4,525,914.90, the current half year's excess over 1924 being $2,216,168.90. The money goes into the good roads fund and the license fee receipts indicate a 50 per cent increase in the number of cars. The detailed summary for the year shows: automobiles, 493,199; trucks, 50,921; dealers, 2,034; chauffeurs' licenses, 19,547; operators, 3,570; motorcycles, 1,668; trailers, 977. St. Louis, with 122,068 cars last year, showed 118,625 August 1 and Kansas City, 66,465 last year, had 62,730 August 1. Only 19 counties in the state have less than 1,000 licenses and two of these are under 500.

SANTRY IS SALES MANAGER

CINCINNATI, Sept. 5.—Frank J. Santry, former president of the Cincinnati Auto Dealers Association, has taken over the work of Robert Lanzing, sales manager of the Nash-Cincinnati Motors Company, who resigned recently to go to Florida. A successor to Mr. Lanzing has not yet been designated.

Used Car Sales 17 Per Cent Better Than First of 1924

Dealers Tell N. A. D. A. Stocks Are 40 Per Cent Lower July 1 Than Last Year

ST. LOUIS, Sept. 5.—Used car sales for the first six months of 1925 were about 17 per cent in excess of used car sales during the first six months of 1924, according to estimates by N. A. D. A. This estimate is believed by N. A. D. A. headquarters to account for the fact that dealers had used car stocks on hand July 1, 1925, of 40 per cent below the stocks at the same time last year.

Closer understanding between car dealers and the public is believed responsible for the greater sales and reduced stocks. In placing before the public the facts concerning the automobile business, automobile dealers have appealed to the element of fair play in the American people.

Owners of automobiles are beginning to understand that in using an automobile they are wearing out the value which must be sacrificed when a new car is bought. Also it is becoming plainer to owners that if they dispose of their old cars only on the basis of what they can get for it, regardless of what new car they obtain, they are likely to buy a potential "orphan automobile," or to pay a higher list price for the new car than is justified by its quality.

Automobile dealers are considering closely the salability of a used car when making trade in allowances. Thousands of automobile owners are going to find out during the remainder of 1925 and throughout next year that the car they chose a year ago, on the basis of the old car allowance, has no market demand and is not wanted in dealer stocks at any price.

Wardman and Justice Form New Company in Washington

WASHINGTON, Sept. 5.—Consolidation of the Wardman Motor Car Company and the Justice Motor Company, the two Overland and Willys-Knight distributors here under the name of the Wardman Justice Motors Inc., was announced this week. This is the largest consolidation of motor car firms that has ever taken place in Washington and one of the biggest that has happened at any time in the eastern section of the United States.

The two establishments, that of the Wardman Motor Co. at 1111 Vermont avenue and the Justice Motor Co., at 1516 Fourteenth street, will both be maintained and operated as salesrooms. For the present there will be no changes in the staff of 150 employes on the pay roll of the two companies.

Harry Wardman, well known in real estate and financial circles, is president of the consolidated company. Frank N. Justice, founder and president of the Justice Motor Co., and who has been connected with the sale of motor cars in this city for the past fifteen years is one of the two vice presidents of the new concern. E. H. Gilcrest, who has been general manager of the Wardman Motor Co. since its organization last summer is also a vice president of the new company. Hubbert R. Quinter, long connected with Harry Wardman, is secretary of the new company and J. D. Hobbs of the Wardman organization is treasurer.

A. A. A. Members to Aid Tourists

WASHINGTON, D. C., Sept. 5.—Henceforth automobiles bearing the emblem of the American Automobile Association will serve to designate a car owner from whom motor tourists may obtain information regarding local traffic, road conditions and other matters in which the motor traveler is vitally interested.

An announcement from the national headquarters of the association today declared that this is one feature of a plan developed by the national motoring body to restore the camaraderie of the road which the tremendous increase in automobile registration had all but extinguished.

Thos. P. Henry, president of the A. A. A., explained that this form of car owner cooperation represents a voluntary offer on the part of many thousands of experienced A. A. A. members to function as "branch offices" for the local affiliated clubs. Although the service is primarily intended for members of the association, all motorists will benefit, Mr. Henry said.

AJAX APPEARS ON COAST

LOS ANGELES, Sept. 5.—The Ajax car has attracted wide attention in Los Angeles since it was placed on display for the first time a few weeks ago. Robert S. Breyer, vice president and general manager of the Troy Motor Sales Company, Nash and Ajax distributors, reports that actual count showed more than 23,000 visited the salesrooms and inspected the Ajax during the first eight days of its initial showing.

SEE LOWER GAS PRICE

WASHINGTON, Sept. 5.—Sixteen-cent gasoline for District motorists is predicted by officials of the Penn Oil Company. Three cuts in prices during the past two weeks already have brought the cost down to 18 cents, and the 16 cents prediction, if it materializes, will bring the price down equivalent to the 1924 low level. Overproduction in the western fields has resulted in the local price reduction. Local stocks are primarily supplied by the fields of Pennsylvania and the overproduction in the West has resulted in competition from that source.

Iowa Dealers Report Nice Increase Over Last August

Inability to Get Deliveries on Closed Models Is Problem in Des Moines

DES MOINES, Ia., Sept. 5.—Inability of car manufacturers to make deliveries has caused some Iowa distributors and dealers worry. New models have greatly stimulated the business, most houses reporting nice increases over August of last year. One distributor reports that he has more than 50 unfilled orders on hand. Shortages are especially sharp in closed types, the demand for open cars representing but a small part of the trade.

Although the spurt in business partly is due to the introduction of new models, an excellent business is expected during the remainder of the year. Crop prospects are excellent, a factor which has bettered rural business. Dealers have fewer used cars on hand than for several years. Used cars are selling fairly well, but the reduction in stocks is due, for the most part, to more conservative trading.

General line jobbers are showing increases averaging about 15 per cent better than last year. The tone of the supply business is good. Replacement parts, oil and general supplies are the best selling lines. Accessory business is still lagging. Although not many retailers are reporting radio sales, dealers are stocking in anticipation of good business within the next thirty days.

Advancing prices of tires provoked a stimulus to this phase of the business which has been followed by a slight reaction.

List of Exhibitors in Equipment Mart

(*Continued from page* 17)

Kirk-Barber Co., Chicago.
Mann & Briggs Mfg. Co., Chicago.
Marquette Mfg. Co., St. Paul.
Milwaukee Circulating Pump & Mfg. Co., Milwaukee.
National Aluminum Co., Racine, Wis.
New Era Spring & Specialty Co., Grand Rapids, Mich.
The Niehoff Corp., Chicago.
Joseph Pollak Tool & Stamping Co., Boston.
Scranton Glass Instrument Co., Scranton, Pa.
C. A. Shaler Co., Waupun, Wis.
Stone Mfg. Co., Chicago.
Storm Mfg. Co., Minneapolis.
Thompson-Neaylon Mfg. Co., Chicago.
Thorn Machine Tool Corp., Syracuse, N. Y.
Triple-A-Specialty Co., Chicago.
Van Cleef Bros., Chicago.
Vesta Battery Corp., Chicago.
Warner-Patterson Co., Chicago.
Joseph Weidenhoff, Chicago.
Whitaker Battery Supply Co., Kansas City.

Along Automobile Row

SAN FRANCISCO.—Girola Brothers, of Oakland, distributors of the International truck, announce the taking on of the Moon and Diana cars, as retail dealers. The firm has enlarged and improved its showrooms, and added shop facilities to care for repairs on the two passenger cars.

CEDAR RAPIDS, Ia.—H. G. Bloom, for five years with the Chicago Buick, has come here as Buick agent and will take over the H. D. Miller Company, the business to be known as the Bloom Auto Sales.

BLYTHEVILLE, Ark.—Tom A. Little, local Chrysler agent, has taken the agency for the Oldsmobile. In addition to the models of pleasure cars handled by him, he will handle International trucks and a general line of farm implements and wagons.

DETROIT.—W. B. Brodt, formerly sales engineer with the Budd Wheel Company, is now associated with the American Autoparts Company as sales engineer. Mr. Brodt was at one time chief engineer of the latter company.

NEW WESTMINSTER, B. C.—The City Line Garage and Machine Works has been started here by H. B. and J. H. Wood. They will handle all repairs and stock accessories. It is the only Alemite lubricating station between the International Boundary and Vancouver.

CINCINNATI.—Harry T. Gardner, manager of the Cincinnati Automobile Dealers Association, has gone north and east on his vacation. While in the factory sections he will inspect the 1926 models in preparation for the 1926 automobile show in Music Hall.

DETROIT.—Joseph A. Orbits is the latest Ford dealer in Detroit. He was a former employee of the Ford Motor Company working in the engineering department of the company and also with the W. B. Deyo Co., local Ford dealers, sales force.

VANCOUVER, B. C.—David Blanck, manager B. C. Auto and Truck Wreckers, Ltd., announces plans for ten branch stores in operation by the end of the year. The company has been in the automobile parts business in Vancouver since 1924 and is at present employing twenty men.

CHICOPEE, Mass.—Miller Bros have been named as dealers for the Studebaker in this city.

MILWAUKEE.— R. C. Freitag, formerly assistant general sales manager for the Eveready Hosiery Company, Milwaukee, has been made advertising and sales promotion manager of the Kissel Motor Car Company, Hartford, Wisconsin.

SEATTLE.—Green Porter Nash Corp. has opened at 500 East Pike St. and a downtown location at Fourth Ave. at Columbia and University Branch at 4343 Tenth Ave., N. E.

SIOUX CITY, Ia.—Ray H. Darling, has contracted to handle Oakland in Sioux City territory.

QUINCY, Ill.—C. N. "Tip" Waner, long identified with the automobile business here, has taken over the Oakland agency for this territory and will be established in the Hilgenbrink Garage.

CINCINNATI.—Articles of incorporation were filed this week by the Stevens Buick Company of Springfield, Ohio, capital $20,000.

DETROIT.—The Cawood Sales company of Port Huron has taken over the Willys-Overland franchise and will sell Overland and Willys-Knight cars in the Port Huron territory, John Cawood is vice-president and general manager. Otto Sickles has charge of sales with Roy Walker head of the service department.

LOUISVILLE.—The George Cole Motor Company, Ford and Lincoln dealers in Louisville and Nashville, has purchased property at Clay and Broadway with a frontage of 123½ feet on which its new two-story building, to cost approximately $150,000 will be started as soon as buildings on the site can be razed.

DES MOINES.—Earl Andrews, formerly of the Andrews Chevrolet Co., Des Moines, Iowa, has opened a Chevrolet agency at Nevada, Iowa.

TORONTO.—C. W. Lewthwaite, who has been connected with Tire, Chains and Accessories, Ltd., for some time has gone into business on his own account and has established himself at 97 Jarvis Street, Toronto under the name of C. W. Lewthwaite & Co. Mr. Lewthwaite will specialize on several well known lines of automobile accessories.

BOSTON.—William B. Sawyer, for the last five years manager of the Boston Oakland Company, has been appointed eastern district manager for the New England district by Sales Manager Matheson. He will make his headquarters at Boston. Previous to joining the Oakland he had been identified with the Willys-Overland Company both at the factory and in the New England territory.

SIOUX CITY, Ia.—LeRoy Lavitz, connected with the Ryal Miller Chevrolet company three years as assistant manager has been made sales manager. He has been in the Sioux City field 12 years, coming here with Mr. Miller from Mitchell, S. Dak. Mr. Lavitz's promotion followed the appointment of Duane S. Kidder as manager of the company.

AKRON.—Papers have been filed with the secretary of state, chartering the Thornton Chevrolet Co., with an authorized capital of $25,000 to buy, seal and deal in automobiles.

ROCHESTER, N. Y.—Edward A. Horn, formerly with the Paige Sales Company, has joined the sales force of C. L. Whiting, Buick distributor.

SEATTLE.—Harry L. Jensen and L. B. Hannah have formed a partnership at East Forty-Fifth Street, and will handle sales and service on the Chrysler line.

CHARLOTTE, N. C.—Organization of C. W. Upchurch and Company, which will engage in the automobile business in Charlotte as dealer in Studebaker motor cars, was announced at the factory branch here of the Studebaker Corporation.

SAN FRANCISCO.—Bert Goodfield, one of the veterans of the automotive industry in California, has been appointed manager of the O'Neill Motor Company, local Star dealers. Goodfield comes from Los Angeles, where he has been for some time assistant sales manager of the Durant Company's branch.

OAKLAND, Cal.—The Forman Motor Company has been organized to handle sales of Oldsmobile and Peerless cars in Oakland. Show and salesrooms are at 2835 Broadway. The company is headed by G. H. Forman, for many years connected with J. W. Leavitt & Co., pioneer San Francisco dealers. Other members of the new firm are C. E. Root and L. E. Nicholson, salesmen and, A. H. Bolling, manager of the service department.

MOOSE JAW, Sask.—In order to provide for more space the Superior Motor Company, Ltd., has removed to 119 River St. West. Among the features of their new location are free parking space, air and water, lubrication rack, etc. They handle Durant and Star cars in Moose Jaw.

CLEVELAND.—Economy Cut Rate Auto Supplies, Inc., is the name of a new concern, recently chartered with a $10,000 capital to deal in auto supplies and accessories.

FORT DODGE, Ia.—The Bryant Motor Company, has contracted to handle the Oakland line in Ft. Dodge. A. A. Bryant, manager, has been associated with the Rehder-Cadillac Co. for the past three years.

DAVENPORT, Ia.—Twenty-five dealers and salesmen of the southeastern Iowa district of the Willys-Overland Co. attended a sales conference in the Lytle-Overland Co. office here as guests of that company. H. J. Lytle outlined an intensive campaign for the fall season.

SAN FRANCISCO.—The California Auto Sales Company, of Oakland, has been appointed dealers for the Star car, operating in conjunction with Field & Lee, distributors of Stars in Oakland.

HARTFORD, Conn.—W. F. Cloudman, Jr., for many years associated with the sale of Ford cars and trucks in the Hartford territory has joined the sales department of the Motor Sales Co., 258 Main street.

ST. LOUIS.—Lewis Knapp, who has been with the Lewis Automobile Co., Chandler distributors, for 12 years as a salesman, has gone with the Berry Motor Co., Packard distributor in St. Louis.

SPRINGFIELD, Ill.—Roy L. Bragg and William J. Menghini have organized the East Side Hudson-Essex company and opened a garage and sales agency at 808-12 East Monroe st. Bragg has been engaged in the automotive business at Shelbyville, Ill., for a number of years, while his partner was a salesman for many years with the Jennings Auto Sales Company of Springfield.

CALGARY, Alta.—Fred Partridge has resigned from McLaughlin Motor Company sales staff after nine years service and has taken charge of the Flint car sales for Premier Motors of this city.

BERKELEY, Cal.—C. W. Leppla has been appointed Nash and Ajax dealer for Berkeley.

BARBERTON, O.—The Ralph Myers Chevrolet Co., has been chartered with an authorized capital of $25,000 to buy, sell and deal in new and used autos and accessories.

DETROIT.—Chalmers G. Hall has been appointed as assistant director of sales development of the Oakland Motor Car Company, according to a recent announcement by Wm. Chamberlin, director of sales development.

CHICAGO.—Bill Fry's Stewart-Warner Products service station has moved from 1827 Grand Avenue to 2600 Grand Avenue, where he will continue a retail Stewart-Warner accessories and radio.

SALT LAKE CITY.—The Richardson-Bower Co., Dodge distributors and dealers, has purchased real estate for a modern fireproof building as the company's new home. The entire tract will be covered which will provide a structure with about 97,200 square feet of ground space. The new building will be used for both storage and distribution purposes.

MARYVILLE, Mo.—The Hudson-Carlson Motor Co., with headquarters at the Kramer Garage, has been formed here by Edgar Carlson. He has the agency for the Hudson and Essex automobiles.

MOUNT MORRIS, N. Y.—The firm of Mann Brothers, Buick dealers, has been organized into a corporation known as Mann Brothers, Inc., with a paid in capital stock of $55,000. The officers of the new company are Maurice H. Mann, president; Carl B. Mann, vice president and Bert R. Mann, secretary and treasurer.

MOLINE.—C. C. Clair has been appointed manager of the Moline branch of the Horst and Streiter company, Ford agents here. Mr. Clair has been manager of the Muscatine branch. He succeeds C. C. Morse who resigned two months ago to go into the real estate business in Florida. A. C. Graham who has been acting manager here will continue as sales manager.

BURLINGTON, Ia.—The Triangle Auto Supply company, operating in Iowa City, Oskaloosa, Washington and Fairfield, Iowa, will open its fifth branch at 215 Washington street, in the building formerly occupied by the A. & E. Motor company. C. L. Deming, formerly of the Oskaloosa branch, will be the local manager, H. F. Moffett, a member of the firm, arranging the establishment of the Burlingtno store announced.

With the Associations

Plan to Have Lien Law

ST. LOUIS, Sept. 5.—A plan for a mechanics' lien law in Missouri to apply to automobiles, similar to the law which now covers work done on buildings was launched at a recent meeting of all divisions of the Associated Automobile Service companies of St. Louis.

The Service companies want a lien law which gives a claim for work done on automobiles precedence over the mortgage claims against the automobile on the same terms as a claim for work done on a building takes precedence over the mortgages on the real estate of which the building is a part. The theory on which this precedence is based is that the work done adds a value to the property which did not exist previously, for which the worker who added the value is entitled to prior compensation.

It is planned by the association to form a state-wide organization of automobile repair firms in Missouri, the St. Louis organization to carry on the work for the formation of such a body. The bill for the lien law is to be introduced at the next session of the Missouri General Assembly and it is expected that state wide interest in the bill will aid in its passage.

Peoria Resumes Meetings

PEORIA, Ill., Sept. 5.—The Peoria Automotive association resumed its fall and winter series of weekly luncheons this week, devoting the opening meeting to a discussion of the national campaign to reduce auto taxes. The local group will join whole-heartedly in the project. Rollin Travis discussed the seasonal outlook in relation to general business conditions and the association also acted on further arrangements for the National Automobile Association sales congress here September 10.

Plan to Fight New Law

SAN FRANCISCO, Sept. 5.—Automotive trade associations of California have just received copies of an interesting ruling by the state attorney general of Oregon, in which that official holds that any service car, whether it be the equipment of a garage or a sales company, is a common carrier for hire, and as such is to be regulated by the Oregon Public Service Commission. Dealers and garages maintaining service cars are required, under the law controlling "for hire" vehicles, to obtain a common carrier license and to keep such cars covered with liability insurance. The common-carrier license costs $10; the state license a minimum of $40; certificate of title, $3; and driver's license $2—all told a minimum expenditure of $55 for fees alone on every service car operated in Oregon. The state automotive trade association is preparing to fight the law.

Will Fight Freight Rates

CHARLOTTE, N. C., Sept. 5.—The fight for lower freight rates on gasoline shipments into North Carolina, launched at Raleigh by a committee of bulk dealers, members of the Carolina Automotive Service Association, will be adequately financed and will be taken before the Interstate Commerce Commission as quickly as the case can be prepared, according to W. S. Creighton, of Charlotte, one of the South's best known traffic experts, who will personally conduct the North Carolina association's effort.

The Oklahoma refiners, through their spokesmen, have agreed to join with the North Carolina organization in this effort to obtain more equitable freight rates on the product from the midcontinent fields to the Southeastern states, according to Mr. Creighton.

The alleged discriminatory freight rates are being roundly denounced by the North Carolina dealers, who declare that gasoline can be shipped from Fort Worth, Texas, to New York for only twice as much as it can be shipped from Wilmington, N. C., a port, to Greensboro, N. C., an inland city.

Alabama Bonds Opposed

BIRMINGHAM, Ala., Sept. 5.—Members of the Alabama Automotive Trades Association, in a meeting held in Montgomery, went on record as being opposed to the $75,000,000 road bond issue which was suggested by Senator John A. Rogers, chairman of the state highway commission. At the same time, however, the automobile men expressed themselves as being in favor of a much smaller bond issue.

It was the opinion of the executive committee that the proposed large issue of road bonds would too heavily increase the tax burden of the people of the state and that a smaller issue than the one for $75,000,000 would be sufficient for the present needs of Alabama in regard to road building and repairs.

The committee at its meeting decided on a program to be presented to the state automotive trades association at its January meeting and intended to be proposed by that committee to the state highway commission.

Rental Men Organize

DES MOINES, Ia., Sept. 5.—Representatives of "drive-it-yourself" auto livery systems from Iowa and Nebraska, met in Des Moines to organize the Iowa-Nebraska section of the American Drivurself Association. H. F. Tyrell, manager of the Hertz system of the Yellow Cab Co. of Omaha, was chosen as chairman of the section. The next meeting of the section will probably be held in Des Moines during the first part of October.

Akron Elects Savidge

AKRON, Sept. 5.—Directors of the Akron Automobile Dealers' Association have elected S. L. Savidge, of the Summit Chevrolet Co., as president of the association. He succeeds W. F. Jones.

F. E. Richardson, of the Richardson-Wellock Co., was elected vice president; Lucius D. Lyman, of the Overland-Akron Mart Co., secretary, and F. E. McClure, of the McClure Motor Co., treasurer.

The new officials plan to start a campaign to enlarge membership in the association, and make for greater cooperation among local dealers. A closed car show will be held this winter.

Iowa Tradesmen Meet

WATERLOO, Ia., Sept. 5. — Board members of the Iowa Automotive Merchants association were entertained last week by the Black Hawk County Motor Trades bureau at the quarterly session of the board, attended by 15 members, including W. E. Wissler, Des Moines, president and A. J. Knapp, Des Moines, secretary and manager. Mr. Knapp, who was attending his last meeting as an Iowa officer, prior to his resignation September 1 to go to Florida, was presented with two special golf clubs and had opportunity to use them on the Sunnyside links that afternoon as the board members were entertained at that club. The executive committee was empowered to select Mr. Knapp's successor and no choice has been announced.

Study Oregon Law

SAN FRANCISCO, Sept. 5.—The legal department of the San Francisco Motor Car Dealers' Association, and of the San Francisco Automotive Trade Association is studying the new Oregon law providing for the issuance of certificates of title to automobile owners as a pre-requisite to their obtaining a license in that state. The local associations probably will present a similar law to the next session of the California state legislature. Under the Oregon law—whole adoption cost the voters of that state $55,000—it is possible to determine immediately, and without inconvenience, the real ownership of any automobile bearing an Oregon license. It is claimed that dishonest sales or transfers of automobiles in that state are now impossible, since the law requires that the secretary of state issue a certificate of title only on the sworn statement of the actual owner of the car. In no instance may the state grant a license for the operation of an automobile or truck, without legal assurance of ownership being filed. The law makes it unlawful for a car-owner to apply for a license in any other name than his own, nor can he claim ownership unless his equity in the car is in fee simple.

Coming Motor Events

Automobile Shows

Dallas, Tex.—Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis.—Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal.—Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Oklahoma City, Okla.—Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Shreveport, La.—Oct. 24-Nov. 3
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York—Nov. 15-21
Twenty-first Annual Automobile Salon.

White River Junction, Vt.—Sept. 15-18
Nineteenth Annual Twin State Fair. Passenger cars, trucks and accessories. F. L. Davis, manager.

Pan-American Road Congress.

London, England—Oct. 8-17
Olympia Passenger Car Show.

London, England—Oct. 29-Nov. 7
Annual Truck Show.

Ford's Mexican Plant Now Turning Out Assembled Cars

DETROIT, Sept. 5.—The Ford Motor Company of Mexico has been organized in Mexico City and is now turning out assembled Ford cars and trucks for distribution in that territory. In all its essential details, the Mexican plant is similar to Ford plants in other foreign countries and the United States. Production has begun and while facilities at present only permit assembly of chassis, additional equipment is now being installed. This includes enameling ovens and also facilities for building bodies.

The Ford Motor Company plant is Mexico's first automobile factory and its operation is regarded as much a show place of the city as an industrial enterprise by the citizens and Mexican government officials. The plant is housed in a two-story building of 48,000 square feet of floor space which has been remodeled to conform with Ford standards of production. General offices of the company are located in the building.

The company now has 18 foreign plants and associated companies. Others, in addition to Mexico City, established this year are at Pernambuco, Brazil, and Yokohama, Japan.

CHEVROLET OFFICIALS ADVANCED

FLINT, Sept. 5.—Three executives, high in the ranks of the Chevrolet Motor Company have been promoted to better positions in Europe with the General Motors Export Corporation, according to an announcement made by Edwin R. Palmer, comptroller of the company. The three: C. C. McBratney, T. C. Egan and H. W. Vane will form the financial directorate for the General Motors plants abroad. Previous to his new appointment, Mr. McBratney had been assistant to Mr. Palmer while Mr. Egan had supervision of the payrolls and similar accounting. Mr. Vane has been in charge of general accounting work of the company.

STAR DEALERS MEET

PORTLAND, Ore., Sept. 5.—Star and Durant dealers throughout Oregon assembled in Portland during the past week for a conference with E. T. Tuller, general sales manager of the Durant Motor company of California, and James Houlihan, the factory's advertising counsel. Plans were discussed for the coming quarter and methods explained regarding the "model branches" in California. June and July were the largest months in the history of the factory. Sectional meetings were held in the state of Washington last week.

NEW LOCOMOBILE DEALERS

BRIDGEPORT, Conn., Sept. 5.—The Locomobile Company of America, Inc., announces the appointment of the following companies as direct dealers to handle the new Junior Eight car, deliveries of which are now being made by the factory at the rate of 25 daily:

The Locomobile Company of Altoona, Altoona, Pa.; Locomobile Sales of Hartford, Hartford, Conn.; Locomobile Sales Company of Keene, Keene, N. H.; The Locomobile Company of Raleigh, Inc., Raleigh, N. C.; Locomobile Sales, Ltd., Vaucouver, B. C.; Economy Motor Sales Corporation, Harrisburg, Pa.; Atlantic Locomobile Company, Atlantic, N. J.

GRAF CHIEF ENGINEER

CINCINNATI, Sept. 5.—Andrew Graf formerly assistant chief engineer of the United States Motor Truck Company of Cincinnati, has been appointed chief engineer according to an announcement made public today. Mr. Graf succeeds E. C. Shumard who has been with the company many years.

BIG VELIE DRIVEAWAY

MOLINE, Sept. 5.—One of the biggest driveaways ever staged by Velie took place here last week when 77 cars left the plant for points in nearby territory. The consignment consisted of the first new broughams to be put on the market.

Sloan Urges Level Line of Production Be Maintained

Distributors and Dealers Must Carry Heavier Stocks Some Times to Protect Rush Periods

NEW YORK, Sept. 5.—Alfred P. Sloan, Jr., president of the General Motors Corp., in a recent message to dealers, takes up the problem which confronts every automobile manufacturer, that of the regulation of the flow of cars to the consuming public.

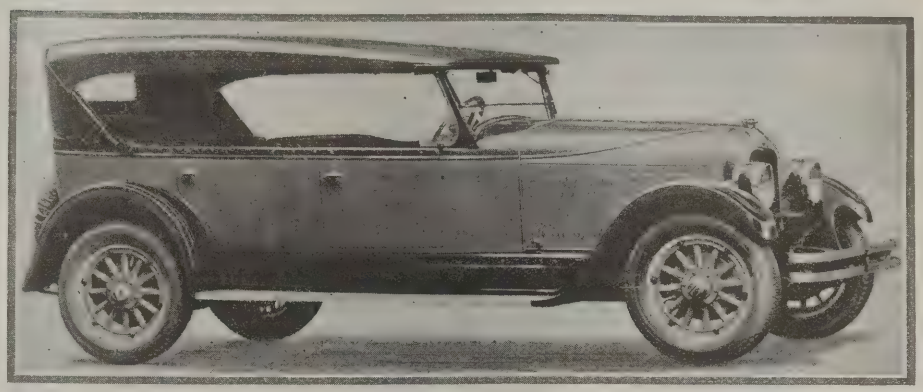
Figures showing the percentages of the year's deliveries made by General Motors to consumers by months, are as follows:

January	4.86	July	7.11
February	5.15	August	4.25
March	11.75	September	6.96
April	14.70	October	7.60
May	13.50	November	6.94
June	11.68	December	5.50

From this table it is seen that a much greater number of cars must be available for retail distribution at certain times of the year than at other, Mr. Sloan points out. Yet it is impractical to vary production schedules to as great an extent as would be necessary to keep in line with seasonal variations.

The nearer a factory can approach a level line of production, Mr. Sloan believes, the more economic the general result will be. This means not only a better product, but a lower cost, with a resulting lower list price. Production schedules, therefore, should be laid down always bearing this in mind, and should be promptly adjusted whenever the trend of retail sales indicates the necessity for such adjustment, in order that the stock to be carried by the distributors and dealers shall not be either greater or less than the economic necessities of the situation require.

From this outline of General Motors policies, it is seen that distributors, dealers and the factory's own branches must carry stock at certain seasons if it is going to be possible to meet the seasonal peak of retail demand, Mr. Sloan concludes.



GOODYEAR TO BUILD

AKRON, O., Sept. 5.—Goodyear Tire & Rubber Co. has joined the ranks of Akron rubber companies which have under way or contemplate the erection of new buildings to take care of increased business. Officials of the company announce that construction of a new factory building, five stories high, will be started soon in the rear of Plant 1, on Kelly avenue. The estimated cost is $750,000, and the building will contain 198,580 square feet of floor space, constructed of reinforced concrete, with brick facing.

NEW HAMPSHIRE GAS TAX

CONCORD, N. H., Sept. 5.—That a gasoline tax is profitable is proven by New Hampshire where the figures for the last two fiscal years show the state had received $1,065,023.49. Of this amount $262,027.22 was paid into the state treasury during the first six months of this year.

Auburn Announces New Touring Models

New Auburn touring car now available on both the six and eight cylinder chassis. List price of the six and eight are $1395 and $1995 respectively

The Auburn Automobile Company is now in production on touring car models on both the six and eight-cylinder chassis. These new cars accommodate three passengers in both front and rear seats.

On the eight-cylinder chassis the touring car is upholstered in hand buffed, dual-tone, Brown Spanish leather and the folding top is covered with double texture dark tan Rolls Royce top material.

The six-cylinder touring car is also upholstered in Brown Spanish leather but a black folding top is standard.

Both models have windshield wings built integral with the windshield and so constructed as to swing with the doors when curtains are installed. This permits attachment of curtains to rear edge of windshield wing, giving clear vision.

All instruments are in one panel under glass on the instrument board and include heat indicator, gasoline gage and speedometer. Equipment includes four wheel brakes, balloon tires, transmission lock, rear vision mirror and automatic windshield wiper. The lighting switch is located on the steering wheel for convenient operation.

The emergency brake is controlled by pull type lever under the instrument board, removing this lever from the front compartment.

Wood wheels are standard equipment with Smith expanded steel wheels optional at slight extra cost. The list price of the six cylinder touring is $1395 and of the eight $1995.

SQUEEKS and RATTLES

Clever, Indeed!

Sam (watching the construction of a new gasoline station): Boy, I sez, white folks is shure intelligent.

Sam's Friend: How come you 'rive at sech a reduction, Sam?

Sam: Dawgone, they knows jest what lots to dig fer to get gasoline.

—Washington Dirge.

The Paris police department has issued a one hundred and ninety-two-page book on traffic regulations. After a Parisian has memorized the traffic rules and figured his income taxes, he must be about done for.

—Buffalo Express.

The Getaway

The village improvident was observed dickering with an automobile salesman for an expensive motor.

"What do you mean," asked a candid friend, "by buying a big, fast car when you can't even pay your bills?"

"That," admitted the improvident, "is the main reason I am buying a big, fast car."

—American Legion Weekly.

Yes and No

Free State Patrol—Have ye yer permit on ye for dhriven the cyar?

Motorist—I have that. Are ye wantin' to see ut?

Free State Patrol—What for would I be wantin' to see ut if ye have ut? It's if ye had ut not that I'd want to look at ut.

—Punch.

Requiem

Little flasks of silver,
Midnight rides by twos,
Put the railroad crossings
In the daily news.

—Life.

"I just bought a Rembrandt."

Patriotic American—Well, American cars are good enough for me!

—Judge.

Woman's intuition isn't so impressive when she is deciding which way to turn in traffic.

—Rochester Times-Union.

Mrs. 'Arris (seeing sky-writing for first time)—Lawk, Mrs. 'Iggins, wot be that?

Mrs. 'Iggins—That'll be some o' that there wireless caught fire, I'll be bound.

—The Tatler.

These Boys Are Making Real Money

Put this FOSTORIA FENDER CHART to work for you at once

This wall chart, which shows the proper Fostoria Fender for any job, plus your own good sense and selling ability is all the outfit you need to get into the new and profitable business of "re-fendering."

Complete stocks of FOSTORIA FENDERS, as listed on the chart, are carried by Fostoria Distributors who supply you at once on order. There's a Fostoria Distributor near you.

Sit down right now and fill in the coupon below. It will bring this chart to you and start you in a profitable business.

FOSTORIA FENDERS
THE STANDARD REPLACEMENT FENDER

Replace with FOSTORIA FENDERS

MAKING money is an old and popular business. Replacing bent, broken and smashed fenders by the Fostoria system is an easy, quick, sure way to make money.

No more hammering out of twists and dents which is hard work with a doubtful result.

Replacing with a new Fostoria, identically like the factory fender is the modern, profitable way. Get into this business at once. It's easy. Mail the coupon NOW.

In Next Week's Issue—Roads Are Needed for More Two-Car Families

Nearly Half of Cars on Road Need Brake Service

By CLARENCE PHILLIPS

SINCE 1923 there has been under way a most worthy movement the purpose of which is to reduce the number of motor vehicle accidents that result from deficient braking. The campaign is spoken of as the "National Brake Inspection Movement," having been launched by the National Safety Council and having among its indorsers progressive automotive trade organizations in quite a number of cities.

Although a great many automotive trade organizations have evidenced interest in the brake inspection campaign it is a regrettable fact that a still larger number apparently have failed to sense its importance.

One reason for this likely is a reflection of the general feeling that "campaigns" and "drives" of one kind or another have been much overdone since the exigencies of a world war got this country into a "campaigning" and "driving" habit. People have grown so used to hearing of movements to endow homes for blind cats or educate against the spread of dandruff that it often takes more than the ordinary thunder of the ordinary "drive" to get their serious attention.

There are two classes of "campaigns" as the word is understood in the sense of this article.

In one class are those which have no merit and which we would be better off without—and in the other are really good undertakings which the public should give full support.

The brake inspection movement falls into this last-described group.

And—why should the automotive trade support it? There are four very good reasons:

1—Because the automotive trade wants traffic accidents held to a minimum. It deplores personal misfortune of any sort.

2—Because the automotive trade wants to sell the public as thoroughly as possible on the thought that motor vehicle transportation is SAFE transportation.

3—Because the automotive trade has the good name of its chief product to defend.

4—Because—if for no other reason—the brake inspection movement brings business to the trade's own doors.

In a broad sense we will say that all four of the reasons just set forth are *business* reasons, although the fourth is the only one appearing as such in its phraseology.

It always is broad business for a group of merchants to support any movement that promises greater public confidence in the article which the group offers for sale.

An opportunity to help increase public confidence in the motor vehicle by lowering the now heavy traffic accident toll is what the automotive trade is offered in this invitation to get behind the brake inspection movement.

And as the public's confidence strengthens in that same measure will automobile driving increase. Only so long as an owner is driving his car is he continuing his consumption of the industry's products.

Percentages of Defective Brakes as Found In 18 Cities During Inspection Campaigns

Pueblo, Colo.	50
Springfield, Ill.	40
Elgin, Ill.	40
Richmond, Va.	22
Average	42

When the car is laid up in the family garage consumption stops.

It is consequently desirable that the prospect not only buys an automobile but that he drives it much. The more he drives it the better for the automotive business. What we all want are conditions that will make for maximum use of the motor vehicle.

When Cars Are Left At Home

To think that the public's confidence in automobile driving has risen to the highest possible point would be laboring under a delusion. True, it has risen to a good altitude but it will ascend higher and higher as the streets and highways are freed from the risk of accidents. Many of the more timid motorists prefer to leave their cars at home rather than take them out on the streets when traffic is especially heavy. Many, somewhat more bold but precautious, drive considerably less than they would were the hazards of driving in heavy traffic brought to a minimum.

When we discuss traffic safety we naturally turn our minds much to the question of brakes and there is no doubt but elimination of the braking hazard would mean a large reduction in the annual number of fatalities resulting from accidents in which the motor vehicle plays a part.

Our engineers have made remarkable progress in the perfection of dependable brakes. Great strides have been made in the past few years. But the industry's brake genius has not succeeded in accomplishing the feat of producing an *abuse-proof, inattention-proof or a non-deteriorating control arrangement.*

Like any other mechanical evolvement automobile brakes require frequent checking and occasional shop attention. The shop mechanic is more appreciative of this fact than the average automobile owner and in the interest of general traffic safety it is important to bring the owner to a full realization of the actual risk he runs by not having his brakes examined periodically by experts who are capable of pointing out any defects and making or recommending necessary corrections.

Regular Inspections, Besides Promoting Safety, Reveal Huge Market for Sale of Relining Material, Installations and Adjustments by Which the Automotive Dealer Can Increase His Business

The sign tells what this picture is. The scene was photographed during Richmond's brake inspection campaign

"Brake inspection weeks" have accomplished much in an educational way already and the national movement has produced results so satisfying that the campaign seems to have established itself as a fixture of the general effort to bring about a minimization of motor vehicle accidents and greater traffic safety. Whether or not the local trade association gets actively behind the brake inspection movement the project will continue to gather force and add to its growing list of boosters. Results of its influence are found in the increasing number of laws requiring brake inspection, the increasing number of "permanent" local organizations that will supervise "inspection weeks" one or more times each year and in the universal commendation of the movement by traffic authorities. The idea has even spread to Europe. Close to 300 cities and towns in the United States and abroad have taken it up.

This cut shows two sides of steering wheel tag that has been supplied by the Asbestos Brake Lining Association for use in inspection campaigns

It must be faced that safety in driving an automobile will have much to do with the future expansions of automotive sales. Even when the field for sales is broadened through relief of traffic congestion and a reduction of accidents on this account—we still will have brakes to deal with. All accidents resulting from deficient brakes are by no means met in congested streets. Poorly functioning brakes constitute a hazard at all times. The surest safeguard is to treat the braking system as something which demands frequent going over and frequent mechanical attention. Our motoring public must be aroused to this necessity.

From a Business Standpoint

Therefore, it is clear that from a broad business standpoint, aside from the primary humanitarian consideration, any support given the brake inspection movement by the automotive trade will yield positive returns in proportion to the campaign's success.

Looking at the proposition from this angle, of course, is to consider the future. However, the trade organization which gets behind a brake inspection campaign in its community need not wait for the future to return profitable business for efforts expended.

These brake inspections, themselves, logically bring considerable quick business to the automotive repair shop. It is to them that the owners must look for any necessary adjustments or corrections. It is through new contacts with owners who seek brake attention that the shop, also selling accessories, tires or other items of automotive

merchandise, finds opportunity to make profitable disposal of its wares.

It is admitted that a safety movement deserves support fundamentally because it is a safety movement, but the issue of safety is so interwoven with the business of merchandising automotive products that the commercial aspect is inescapably conspicuous.

Safety begins with what the motorist can buy from the engineer and the mechanic.

Safety is part of the automotive shop's stock in trade, just as providing medical attention is the doctor's and providing food is the grocer's.

When the brake inspection campaign was launched it sounded a call for the automotive trade to rise to an emergency in supplying the public with the different elements of safety in which it specializes. Without the assistance of the repair shop it would be impossible to carry such a movement to a high point of success—or get anywhere at all. Those in charge of the free inspections only point out defects and make recommendations. It follows that the actual work of brake correction must be accomplished by those who are equipped with the expert knowledge and mechanical appliances to do it.

So the automotive trade finds itself in the position of profiting through a good cause and through a movement, primarily humanitarian, which will yield its returns in safety for the motoring public in proportions commensurate with the service furnished by the trade.

Reports from localities where "brake inspections" have been held invariably have been followed by not only a big demand for brake corrections and repairs, but by increased volumes of general maintenance business. Not only that, but brake inspections have developed buyers for new automobiles.

Following a brake inspection campaign in Kansas City this summer George W. Arnold, president of the Kansas City Automotive Trades Association, issued the following statement to association members:

"BUSINESS PICKS UP AS A RESULT OF BETTER BRAKES WEEK

"My own shop shows an increase of over $50 per day over last month of which the most is brake work. I know absolutely of at least a dozen cars of my customers that were sold relined jobs as a direct result of the Brake Tests; also of a number of other jobs that were driven in for brake service. Our average relines per day now are from three to five where last month the average was about one a day. I have sold other work also as a resu of the contest."

One of the interesting and somewhat typical brake i spection campaigns of the present year was held in Ric mond, Va., under the auspices of the Richmond Safet Council. Automobile dealers and mechanics from the shops assisted in the examinations, checking the cond tions of brakes with respect to efficiency and giving th car owner a report on the finding. No adjustments of an kind were made at the inspection station.

It was found in the Richmond campaign that 33 pe cent of the cars examined had excellent brakes, 45 pe cent adequate brakes and 22 per cent seriously defectiv brakes.

That sounds like a dangerously high percentage an something which should cause the car owner to think abou his brakes, but the Richmond percentage of inefficien brakes was considerably lower than the percentag usually reported at the close of these campaigns.

75 Per Cent in Toledo

The campaign in Toledo, Ohio, revealed that 75 per cen of the cars examined had inefficient brakes, Syracuse re ported 60 per cent, a number of cities reported as high a 50 per cent while others reported from 40 to 50 per cen An outstanding case was that of Bridgeport, Conn., turn ing in a card of only 10 per cent. Bridgeport was a rar exception to the rule.

The round average for 18 specimen cities where brak inspections were held can be put at 42 per cent. In othe words, of the cars examined in these 18 cities 42 per cen were found to have inefficient brakes. The report that 7 per cent of 697,000 automobile accidents in this countr were due to inefficient brakes is not hard to believe whe one considers the conditions developed by these brak inspection campaigns. Greater attention to brakes n doubt will reduce traffic accidents. Encouragement o periodical inspections of brakes is an effective way t focus the motorists' attention upon this vital element o his personal safety.

Suggestions that could be incorporated into a brak inspection campaign will be furnished to the trade by th Asbestos Brake Lining Association which maintains head quarters at 17 West 42nd Street, New York. The ma terials offered are for general help. The association als will furnish, free of cost, such campaign devices as colore window posters, brake inspection certificates, gumme slogan stickers and safety tags to be affixed to the steerin wheels of automobiles.

Portable Oil Stand Boosts Sales

An enterprising garageman near San Francisco has built a portable lubricating oil stand (as an advertisement only, as no oil is sold from it), which he wheels out in front of his garage so that motorists stopping for gasoline will easily see the lubricating oil stand and therefore be reminded that this garage also sells lubricating oil. The owner states that this device has paid for itself many times over in increased business in lubricating oil. No oil is sold from the oil stand, although it contains oil tanks and valves.

Rental Battery Losses Reduced By Cooperative Action

LOSSES from unreturned rental batteries have long been a profit-eating problem with battery dealers throughout the country, but in many cities definite progress has been made of late in materially minimizing this evil. Notable among the successful plans to check these losses is that used in Los Angeles by the battery division of the Los Angeles Automobile Trade Association.

Some months ago James E. Granger, executive secretary of the association, made an exhaustive survey of the battery retail business in Southern California, and unearthed the startling information that of the 500,000 automobiles in operation in Los Angeles county, 80,000 were using rental batteries. Of this 80,000, 40,000 rental batteries had been out over thirty days. And of the 40,000, about 30,000 car owners had left batteries with dealers which were virtually worthless, and were deliberately defrauding the dealer.

"Here was a situation where there were 20,000 sales of new batteries that could and would be made if the rental batteries which had been withheld from the dealers were brought in to their rightful owners," Mr. Granger said. "Aside from the volume of potential business represented in this situation, there was the loss suffered by the dealers. We recognized that there had to be an organized plan of action if we were to get results, and we set out to develop a plan that would arouse the interest of the individual dealers."

A battery collection department was created by the association, and all battery dealers were advised that this department would regain possession of their rental batteries for a straight fee of $3.50 a month. In order to take advantage of the services of this department, however, it was necessary that the dealer should—

LEASE AGREEMENT

1. This lease made the above date, between the above named company, LESSOR, its heirs or assigns, and the party whose signature is written hereunder, legal possessor of the vehicle above described, LESSEE, his heirs or assigns, witnesseth

2. That the above named lessor has leased to the lessee, the above described battery, of the agreed value as set forth above, for the term of 5 days from above date at a daily rental of 35c, payment to be made promptly at the expiration of said period. Lessee agrees to pay said rent as above specified and to promptly return to Lessor the battery above described at the expiration of the said period in good condition, and, in the event said battery is not returned at the end of said period, Lessee agrees to pay Lessor the sum of 25c for each and every additional day said battery shall be out of the possession of said Lessor

3. In the event Lessee fails to return said battery in good condition, and pay said rentals as hereinbefore provided, Lessor may, at its option, (1) bring suit for the recovery of said battery, and rentals due, (2) bring suit for the agreed value of said battery and rentals due; (3) bring suit for rentals due and all costs incidental to such suit, and Lessee agrees to pay, in addition to the amounts due under either of the above options, the sum of $3.50 attorney's fees in the event suit is brought. Lessor is hereby authorized to take possession of said battery wherever same may be found without legal process or previous notice or demand on Lessee and Lessee hereby waives all claim for damage or trespass in the re-taking thereof.

Time is the essence of this agreement, and in the event lessor deems it necessary to re-possess said battery with or without suit the lessee agrees to pay lessor an additional sum of $10.00 as additional rental for the use of said battery. Payments to be made at place of business of lessor in the city of Los Angeles.

A lease form, combined with job order ticket, which binds the user of a rental battery to either return it promptly or pay for the battery and all rental charges. This form was designed to stand the test of the courts

First, use a lease agreement printed by the Southern California Automotive Dealers Association; Second, brand his batteries with the brand of the association; Third, paint his batteries with the standard color (orange); Fourth, he positively must get his violated contracts into the office of the department within a period of 30 days from the date issued; Fifth, the registration number of the car in which the battery was placed, the name of the legal owner, the signature of the party getting the battery, the distinguishing marks upon the battery and its value must appear on the contract.

In order to make it easy for the dealers to turn in the contracts within the 3-day period, a representative of the battery collection department calls on every subscriber

BATTERY BRANDING IRON LEASE
of the
Los Angeles Automobile Trade Association

This Lease made and entered into by and between the Los Angeles Automobile Trade Association, as party of the first part, hereinafter called the Lessor, and..... as party of the second part, hereinafter called the Lessee,

WITNESSETH: That for and in consideration of the sum of Two ($2.00) Dollars, receipt of which is hereby acknowledged, the Lessor does rent and lease to the Lessee, one battery branding iron known and designated by the following letters and number, to-wit:.....

the Lessee further agrees that this lease can be terminated by the said Lessor, should its membership be terminated by the said Association, or should the said Lessee resign its membership in the Los Angeles Automobile Trade Association, or should the said Lessee for any reason whatsoever fail to keep said branding iron in good condition and pay the rent and lease as herein provided. In consideration of which the said Lessee agrees that upon demand made in writing from the aforesaid Lessor, and the said Association, should the Lessee further agrees that upon it become necessary for the said Lessor to employ attorneys at law to deliver the above described branding iron, the said Lessee will deliver the above pay any and all costs including attorneys' fees, waiving all trespass rights, should mentioned and above described branding iron. The Lessee further agrees to proceed legally in the recovery of the afore-

A Clean Shop for Profitable Winter Business

Take a look at this tool board and note the neat arrangement. Then go out in your shop and see if your equipment is handled the same way. It will cost but a few dollars for lumber and paint to rig up a board like this enterprising shop has done

No Matter How Large or Small the Establishment, Better and More Work Can Be Done When Orderliness Is the Keynote. Benches Can Be Rearranged, Walls and Ceilings Painted, Tool Boards Built and So On. Here Are Six Things Which Will Put New Life Into Any Shop

By B. M. IKERT

THE other day I was in a shop where a new workbench had been installed and the fellow who built it had done a very good job. We were talking about the bench when a mechanic came in and looking at the bench remarked, "Well, no matter how big you build them, they're never big enough to hold all the stuff that a fellow collects."

That remark comes pretty close to describing what one sees in many automotive shops. And they are not all shops where repair work is done on the mechanical units of a motor vehicle. Some top and trim shops are offenders as well as battery service stations, and so on.

"Holding all the stuff that a fellow collects" is expressive of the condition found in so many shops and there is a decided need for a "slicking-up." No matter how large or small the shop we venture to say there is something such a shop can do right now to put a better atmosphere in the place and make it possible to turn out better and more work.

Rather than to go into a mass of generalities about making shops more efficient we are going to point out six things the shop can do to better conditions. Some shops may find they can do all six, while others perhaps already have done some of them but still can add to their previous efforts.

Here are the six things we suggest in a slicking up of the shop:

1. *Paint.*—We put this first because before anyone can apply paint and make a decent job of it, he must clean house. That means we are going to clean out the mess of junk under the workbenches, on the ceiling, walls and everywhere else the stuff has collected. The cobwebs are going along with it as well as the empty oil barrels and crates. A lye solution will cut the grease and oil from the floors and walls and then comes the paint.

Try this, if you want a neat looking shop. Paint the walls for a height of about 5 or 6 ft. a slate gray and from there on up to the ceiling (as well as the ceiling) a white color, using perhaps a preparation especially intended for that purpose, and then paint a 4-in. black stripe around the walls where the gray and white meet.

Paint the doors and window casings with the same gray and wherever the mechanics are likely to touch the wood work of the shop, around door knobs, etc., paint a small portion of it black.

Slick Up Now for Winter Business

Stick to the gray, white and black color combination in your shop and if you add tool cabinets, racks, etc., paint them the same way. There is no reason why we cannot have color harmony in the shop as well as the showroom. Mechanics are bound to do better work under such conditions.

2. *The Bench.*—First of all make a rule that the bench shall not be a catch all for tools, discarded parts, mechanics' lunch boxes, grease pails and a hundred other things.

Then remove all the broken and discarded parts from underneath the bench. It is always a temptation to sweep a lot of rubbish under the bench and before the latter can be made to appear well and more efficient for all around work everything not needed should be thrown out.

Since so many parts of an engine or car are placed on a bench it is but natural that grease and oil will be absorbed by the wood top and for that reason it is an excellent plan to cover the bench top with metal, preferably zinc. A metal covered bench is easy to keep clean and makes a much better surface upon which to work. If you build a bench do not make it too large, because if you do it is sure to be used as a storage space for which it is not intended.

How a St. Louis Dealer Does It

3. *Tool Rack.*—We have already said that the bench is no place for the tools to lie upon when not in use and to that end every shop should have a neat tool rack. We illustrate here a tool board on which all the tools necessary for the repair of a Chevrolet are hung. One St. Louis dealer has laid out his shop efficiently and cut his labor cost to a minimum by virtue of this tool board.

The board has been erected at one end of the tool room and on it are painted the outlines of the tools which are hung in their proper places. A check system is used and when a mechanic uses a tool, he must check it out, and check it in when he returns it. A glance at the board instantly denotes the absence of one or more of the tools.

In building of such a rack or board it can be painted a gray color with the outline of the tool in white or black if the gray is not too dark. This arrangement applies of course; only to the shop tools and does not include the tools owned by the mechanics. For the latter it is a good plan to equip the bench with tool drawers or the mechanics may have tool kits for them. But whatever you do keep the tools off the bench.

4. *Oil and Grease Containers.*—What gives most people the idea that a garage or automotive shop is at best a messy proposition is because almost invariably they see nothing but oil cans and grease buckets around. In the slicking-up of the shop lets build wood containers in order to hide these necessary fittings of the shop.

One way of doing this is to build a wood structure in about the shape of a piano box with a lid that lifts up and doors that swing out. Such a structure will accommodate oil drums, grease buckets and oil receptacles or measures of all capacities. Be sure to give it a coat of paint and if desired the words "Oils and Greases" or "Lubricants" can be neatly painted on the outside of the lid. It is surprising how much neater a shop looks when these things are all kept together as they should be.

5. *Drip Pans.*—There is one thing that is absolutely impossible to prevent in a shop, and that is the dripping of the oil from the cars which come in for repair. While we cannot help the oil getting on to the floor we can prevent its remaining there and for this there is probably nothing better than suitable drip pans.

We recall one excellently laid out shop which amongst other things has a hardwood floor in it rather than the usual cement floor. The owner's idea of this is to make it more comfortable for the men to work upon, and to keep the floor clean at all times a drip pan is placed under every car the moment it comes in for maintenance work.

Drip pans, of course, can be bought, but it is not much of a trick to make them. Galvanized iron of rather heavy gage is best for this purpose and if at all possible it is better to have a local tinsmith make them as he has the necessary brakes and apparatus for rolling the edges. As a general thing a drip pan should be about 18 in. wide by 5 ft. long. This will make it possible to make them out of a 24-in. width of sheet metal since enough metal must be allowed for turning up the edges and rolling them to eliminate raw edges.

6. *Reconditioning Equipment.*—In order to do the best work the equipment and tools of a shop must be in the best possible shape at all times. A drill will not drill an accurate hole nor will a reamer ream properly when the blades are nicked or dull. Most shops will find it to their advantage to put the equipment in shape during periods when work is comparatively slack.

The shop may have a lathe and while the bearings of a lathe last for a very long time, very often the lathe has been bought second-hand and it is a good thing to check it up as to its bearing condition. A lathe is of little use if the work turned out by it is sloppy and while the shop may not have the facilities for putting the lathe in shape, itself, the matter can be taken up with the manufacturer of the lathe, as it may be better to send certain parts of it to him for reconditioning. The same applies to other equipment such as drill presses, boring machines, etc.

Sharpen and Recondition Tools

We have already spoken of building a tool board for the shop tools, but much can also be done in the way of sharpening and reconditioning the smaller hand tools which are frequently used and which often become mixed up with other tools or fixtures having no common relation. Thus, drills and taps are often mixed up with reamers and small files and it becomes a difficult matter to find the one often wanted.

A good plan is to go through the entire equipment and pick out all the small drills, reamers, taps, punches and so forth and separate them into proper groups. Then the board can be drilled with a series of holes to correspond to the various sizes of the drill, for example and the latter placed in them. The size or number of the drill of course, should be placed alongside the hole for ready reference. Usually if taps and reamers are bought in an assorted lot a case of some kind is furnished for keeping them in proper order. But where the tools are bought separately some sort of a receptacle should be made and in this there is a chance for each shop to use its ingenuity. For example taps and dies can be kept in a shallow box, fitted with grooves and openings to fit the various tools and is infinitely much better than to jumble them all into a drawer in the bench.

It must be remembered that tools such as reamers, drills, chisels, files and so forth are cutting tools and it is necessary to protect the edges to keep them in order. We know, for example, that a carpenter generally lays his plane over on its side when not in use and he does this to protect the edge of the cutter. We don't always look upon reamers and files as cutting tools and consequently they

(*Continued on page* 20)

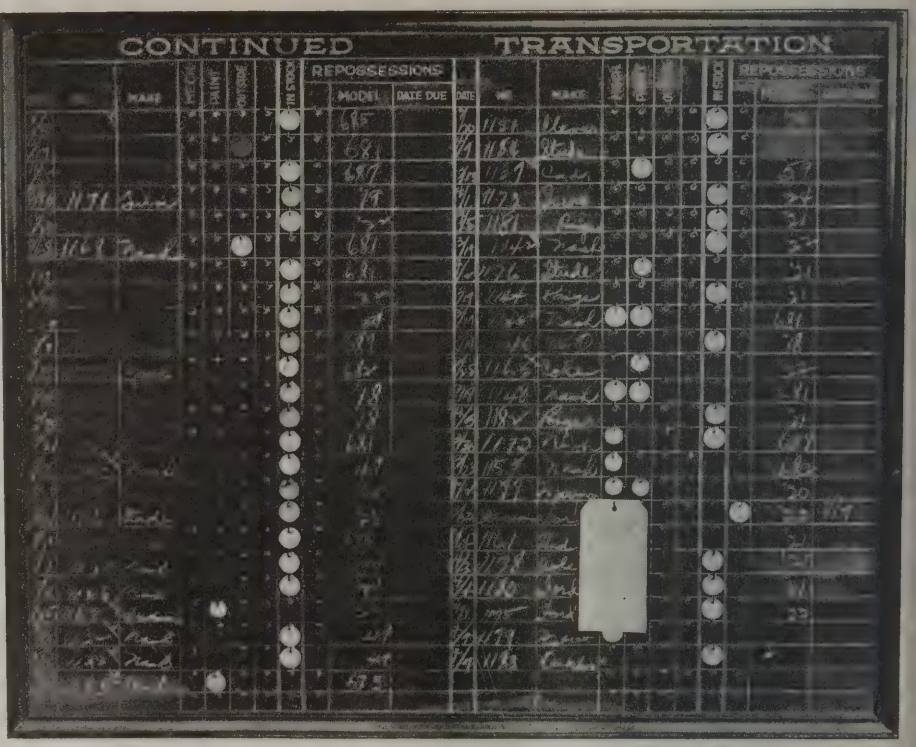
This Used Car Chart Helps Sell Them

THE Southwest Nash Motor Company of Oklahoma City has devised and placed in operation a system for handling used cars which, they claim, has proved very profitable and efficient.

There is no better way to describe the operation of this Used Car Board than to quote Earl S. Voorhis, president of the Southwest Nash Motor Company, who is the author of the system:

"I, like many other fellows, had tried to work out a solution of the so-called used car problem, and had watched, for two or three years, the unsuccessful attempts at a solution by co-operative methods.

"Then I began to watch, in our own place, to see just where used car losses were sustained and I quickly found the used car was treated as an orphan by every department.



"The most noticeable thing I found and which I believe could be true of any dealer's business was the lack of co-operation among the different departments with regard to the handling of used cars. Therefore, I tried to work out some plan by which we could have a central clearing house where all the different heads could meet and co-operate in the proper handling of our used cars.

"Now, then, the board: You will note there are two divisions exactly alike, containing room for 25 cars each. The first column represents the date the used car was purchased by us. The second column gives the number of the used car, as carried on our records. The third column gives the name of the car. The fourth column, commencing with the hooks, belongs to the mechanical department. The fifth column to the paint department.

"The sixth column represents any work being done on the outside of our establishment. The seventh column is left blank for an emergency. The eighth column represents cars that are in stock either ready for sale or being worked on in the used car department. The ninth column is used by our accounting department to indicate repossessions being made. The tenth column gives the model or year of the various cars in our stock. The eleventh column represents the date on which any repossessions will be completed.

"We use two sizes of card board discs; one just the size of a nickel; the other just the size of a dime. The large discs are used by the manager of the used car department to picture on the board just what he desires done to each car in his stock. There are three colors used by him: white, yellow and red.

"The white disc in the 'in stock' column indicates this car is all ready for sale. A yellow disc in the 'in stock' column indicates the car is not ready but he is able to handle it in his own department. The yellow disc when used in 'mechanical,' 'paint' or 'outside' column indicates the kind of work he desires done but that he is in no hurry for. The red disc placed in any of the three above mentioned columns indicates the kind of work he desires done and also that he wishes the cars rushed out quickly.

Unique chart devised by Southwest Nash Motor Co. to keep track of number and condition of all used cars on hand

"After he has pictured his needs on the board, the heads of the other departments, by use of the small discs, indicate what they are doing or will be able to do in their departments. They use three colors, viz., white, green and blue. A white disc hung over one of the yellow or red discs indicates that they are actually working on this car. A green disc hung over either the large red or yellow disc indicates the car is in their department but is not being worked on. A blue disc hung over either the yellow or red disc indicates that they know nothing about this particular car. Therefore, the object of the board is to, as quickly as possible, get rid of all red discs and as quickly as possible, give proper explanation to the departments which will remove the blue discs.

Secures Departmental Interest

"There is a lot of psychology in this thing and it has been the means of, for the first time, securing not only co-operation but the interest of the different departments. The men all know this board is in my office and they are making every effort to keep the red and blue discs off the board.

"Also, this board is checked daily by our accounting department to know their daily report is correct and that they have not lost track of any car. The board is also invaluable to the accounting department in being able to watch cars in process of repossession.

"We even went a step farther than this to secure the interest of the sales department and have used three colors in handling the listing of the used cars on the board. These colors are white, yellow and red. Any car that has been in our stock more than ninety days appears on the board in red chalk. Any car that has been in our stock more than sixty days and less than ninety appears in yellow chalk. All cars that were taken in the previous month and current month appear in white chalk. Therefore, it is the definite aim of the used car sales force to, as quickly as possible, erase all of the red cars from the board.

"The keeping of the board is handled by our cashier and as used cars are billed out they are erased from the board. As they are purchased they are entered on the board wherever space provides. When a car is purchased and entered on the board a blue tag is immediately hung on the hook and the manager of the used car department takes this and hangs it on the car, placing his own discs where he desires work done.

"I recently asked our used car manager just what the used car board was meaning to him and his answer was whereas in the past he had wasted a great deal of time getting over the building to see what his stock looked like that he could spend just a few minutes at any time of the day glancing at this board and get a picture that it would take him hours to secure in any other way.

"Last but not least, this board is worth several hundred dollars to any executive in the way of satisfaction in just being able at a glance to picture his used car situation."

Two-Car Idea Means Selling Additional Transportation

Trading One Vehicle for Another Does Not Add to Motoring Facilities of the Public—Two-Car Garages Constitute 75 Per Cent of a Big Builder's Business

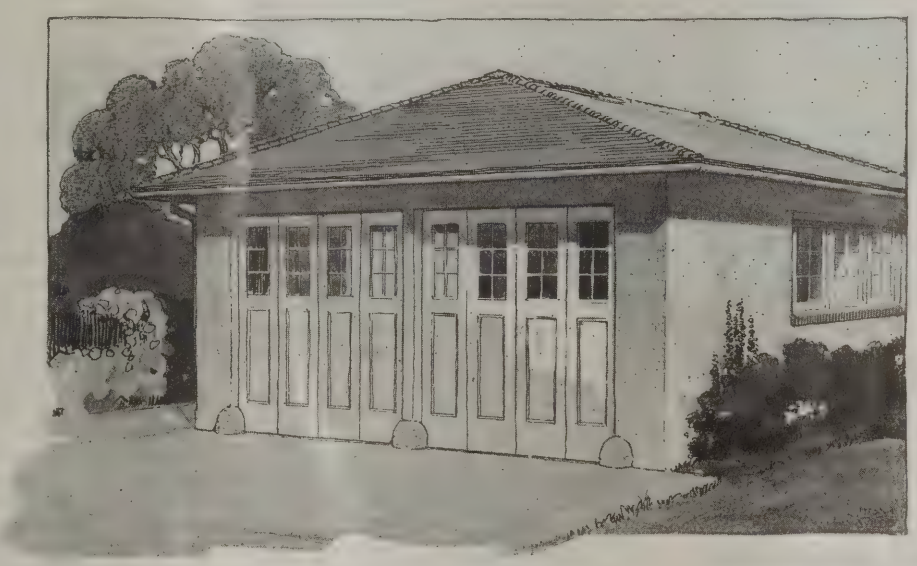
By SAM SHELTON

THE dealer who sells a new car and at the same time takes an old one in trade is not adding to the customer's transportation facilities. He may be giving the customer better, more efficient and more comfortable transportation, but the chances are the old car could carry just as many persons and go as far in a day as the new one.

The net result is:

The owner still has only one car.

His transportation facilities are not increased.



He has traded off for a song a vehicle whose reserve mileage is worth much more than the car's market value.

The dealer has sold one car by buying another.

He still has to sell a used car—maybe several—before he can liquidate his profit.

He has failed to sell additional transportation.

The time has come for the automotive trade to banish the assumption that one car is all any family needs. As a matter of fact there is hardly a family in the country that does not need two or more cars and a great many of them can easily afford additional transportation.

Sign of the Two-Car Family

The trade has gone along assuming that when a car owner buys a new car he has to get rid of his old one. Owners themselves have been encouraged in this idea by dealers who gave exorbitant allowances for the old vehicles. But now times are changing and the old car has ceased to be worth two for one as a medium of exchange to be applied as part payment on a new car. The car owner today is counting up the reserve mileage in his old car and figuring what it would be worth to him.

We need now some live, energetic two-car salesmen to go out and sell ADDITIONAL TRANSPORTATION instead of this business of just trading one vehicle for another. What would happen to the clothing and shoe industry if the retailers figured a man was fully equipped if he owned one suit and one pair of shoes? Suppose the clothing trade approached the customer with the idea that one suit and one pair of shoes are enough.

The public is waiting to be sold the two-car idea. Only an insignificant portion of the retail trade is working at the job. Those dealers who start now will profit.

It would not be wise to try to sell the owner an additional car of the exact type and model now possessed by him. The dealer or salesman should first ascertain what sort of car he has and then should survey the family's requirements. It will then be easy to suggest the type of ADDITIONAL transportation needed by this particular customer. For instance we probably will find that among the two-car families the preference will be for combinations of which the following are typical:

A utility car and a fine car.

An open car and an enclosed car.

A business car and a family car.

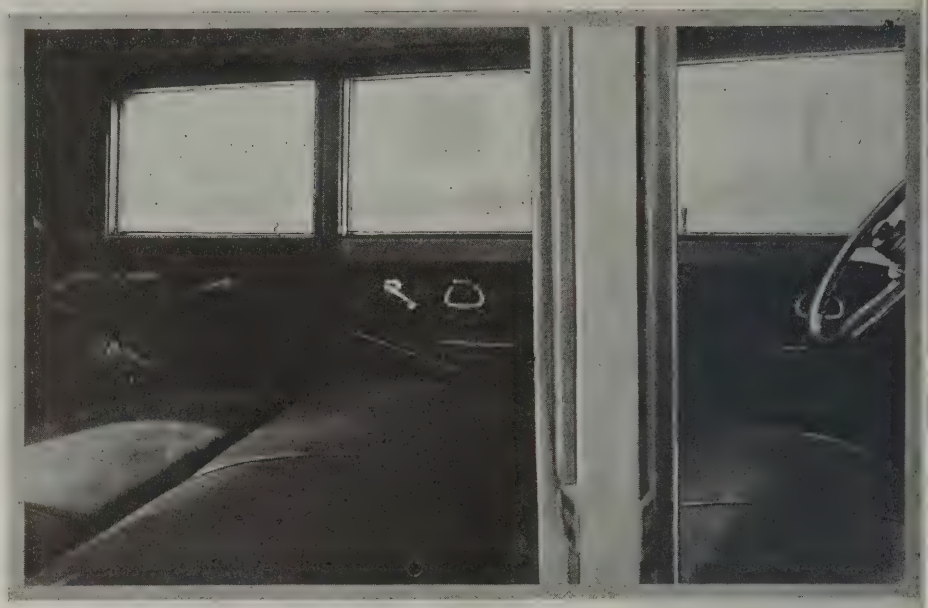
A 2-passenger car and a 5-passenger car.

A town car and a car for country touring.

A car for the old folks and one for the youngsters.

A six and an eight, or a four and and eight, or a four and a six.

In the smaller cities, towns, country and suburbs of large cities, where one or two family houses predominate it is almost invariably the custom to build a home garage. The cost is not great and the encouraging thing is that the cost of a two-car garage is only a little more than that of a one-car garage. One large construction company operating in Chicago and suburbs puts up a 12 by 20 one-car garage for $230 and a 20 by 20 two-car garage for $300. Thus for an outlay of only $70 additional, shelter is provided for an additional car. It is interesting to note that between 75 and 80 per cent of the garages erected by this company are of the two-car type.



Another Chicago concern selling portable or sectional garages and operating over a wide territory does 45 per cent of its business in two-car garages. But in this case the additional cost for the two-car garage is more than in the other case. The cost of a two-car garage of the portable or sectional type averages about $100 more than that of the one-car garage.

Two-car garages are being built. It is up to the retail trade to fill them with ADDITIONAL transportation.

Auburn Sedan for Overnight Touring

FOR some time there seems to have been a growing demand on the part of the motoring public for a closed car offering the comforts of sleeping accommodations with a minimum effort in converting the car into a sleeping coach.

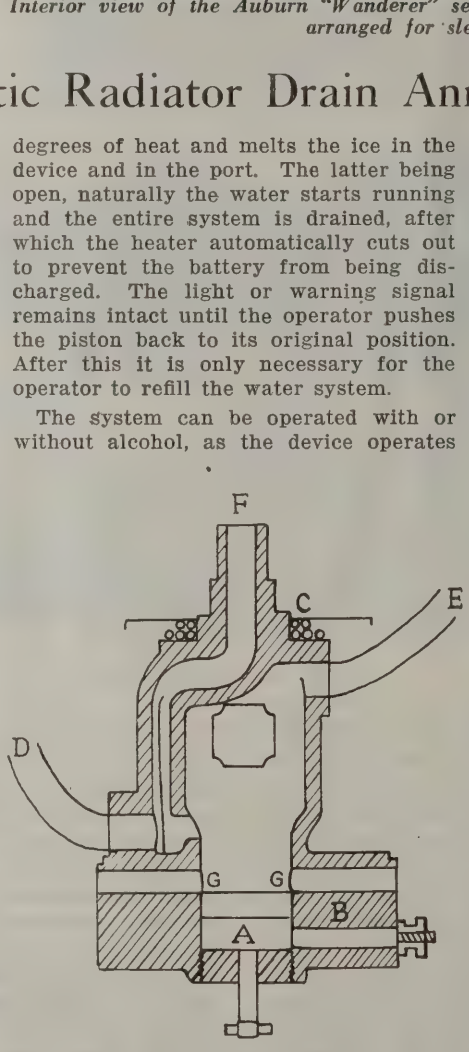
The Auburn Company, which has had its "Wanderer" model sedan out for some time, claims to have had considerable success thus far. The illustration shows how the car is converted. Two concealed catches are placed on the back of the front seat which drops into place along the floor when the catches are released. The rest of the seat cushions are re-arranged accordingly. This model is available in both the 6 and 8-cylinder chassis and lines of the new model correspond with those of the standard sedan.

Interior view of the Auburn "Wanderer" sedan showing how the seat cushions can be arranged for sleeping purposes.

ALTENBERG JOINS HOOF

CHICAGO, Sept. 12.—A. Altenberg, formerly chief engineer of Falls Motor Corporation, Sheboygan Falls, Wis., is now chief engineer for John C. Hoof & Company, 157 W. Illinois Street, Chicago.

Automatic Radiator Drain Announced



A RATHER novel device for automatically draining the cooling system of a motor vehicle to prevent freezing has been brought out by J. F. Kelley, 3154 Lake Park avenue, Chicago, Illinois. The device does not necessarily have to be confined to motor vehicles alone, since it can be adopted anywhere where water is used as a cooling medium and where it is desired to prevent its freezing.

In operation use is made of the expansive force of ice to automatically close an electric circuit going to a small heating coil, the heat of which melts the ice in the lower portion of the system and thereby automatically drains the latter. To better understand this, it is necessary to refer to the cross section in the illustration.

The apparatus, which is approximately 4 in. long, attaches to the radiator drain boss. A copper tube connects it to the top of the radiator and a second tube to the base of the engine at the water intake, thereby insuring circulation through the automatic valve to prevent its freezing while the car is in motion. When the engine stops it comes into action should the radiator start to freeze. The ice forms in the device causing a piston within the chamber to move downward until it passes the port which connects directly with the radiator through a passage in the device. At the same time the piston comes in contact with an electric connection attached to the battery of the car and lights a lamp on the dash or operates any other type of alarm mechanism. This is done to warn car owner of the freezing danger.

At the same time, however, an electric heating coil is cut in which generates 500 degrees of heat and melts the ice in the device and in the port. The latter being open, naturally the water starts running and the entire system is drained, after which the heater automatically cuts out to prevent the battery from being discharged. The light or warning signal remains intact until the operator pushes the piston back to its original position. After this it is only necessary for the operator to refill the water system.

The system can be operated with or without alcohol, as the device operates 1 deg. above the freezing point of water or anti-freeze solutions. This is about 30 minutes before damage can be done to the radiator or engine water jackets.

Cross sectional view of the Kelley Automatic Radiator Drain. A, piston, B, electric contact, C, heater coil, D, hot water intake, E, hot water outlet, F, Water from radiator and G, emptying port

Dash Type Gasoline Gage Now on Lincoln

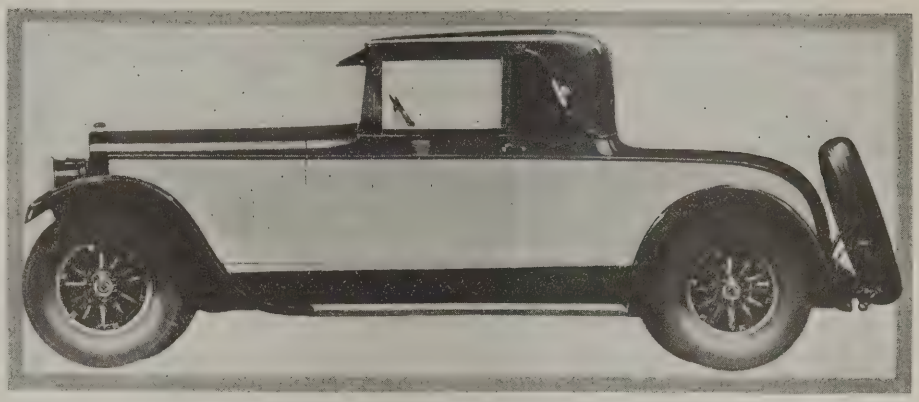
Cars now being shipped from the factory of the Lincoln Motor Company are fitted with a dash type gasoline gage as standard equipment. This mechanical device is reliable and accurate and when properly installed and adjusted requires no attention, it is said.

The complete instrument consists of two major units, the tank unit and the dash unit. These two units are connected by a wire which passes through the indicator cable which in turn is protected by a metallic housing. In operation, as the gasoline level in the tank is lowered, the cork float falls and through a lever and cam arrangement pulls the wire through the cable against the tension of the spring in the indicator unit and thus revolves the dash dial in an opposite direction.

OVERLAND MODEL FOR EXPORT

TOLEDO, Sept. 12.—The Willys-Overland Co. is producing a Model 93 six-cylinder Overland with touring body for export shipment. The first cars have not yet been put on sale abroad, but they have already been in production for several weeks. The body is a two-tone finish, with leather upholstery and, in other respects, is the same as other six models. The Standard and de luxe types are both going into export. It was said that this new touring body would not affect the domestic market.

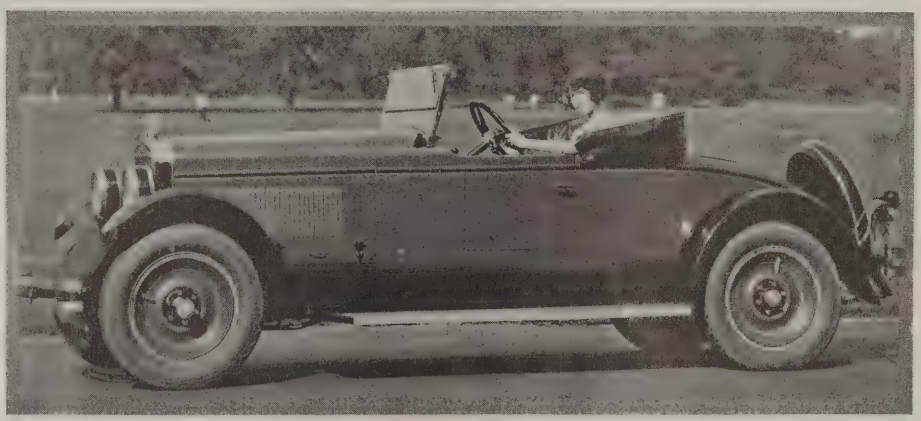
Rickenbacker Adds Coupe Roadster



KNOWN as the Coupe-Roadster, a car combining a cosy three-seater coupe and a sporty 5-passenger roadster in one, the Rickenbacker Motor Company, is mounting this latest style of body on both its six and eight-cylinder chassis, the price complete on the former chassis being $1695 and on the latter $2095.

Finished in a two-tone color scheme of dust grey and desert brown, the body has low graceful lines and is upholstered in a velvet velour. The de-luxe models on the eight-cylinder chassis which are the same as the others except for additional equipment are finished with mohair instead of velour for the interior.

The range of usefulness for the new coupe-roadster model is almost unlimited, while its general appearance will reflect a sense of personal possession, since it is a car for personal use rather than for the family.



For those who like to get out of doors there is ample space in the cleverly concealed rumble seats in the rear deck to accommodate two passengers in addition to plenty of room for storing golf clubs and other luggage. For the woman or the professional man the car is in keeping with dignity and at the same time presents a distinctive appearance.

Equipment is the same as on other Rickenbacker closed cars and includes the following: "VV" windshield, automatic windshield cleaner, rear view mirror, coincidental lock and stop light. Deluxe models in addition have combination silver vanity case.

New Rickenbacker coupe roadster which combines a three-seater coupe and five-passenger roadster in one car

Gardner Adds Foursome Roadster on Eight-in-Line Chassis

Gardner Eight-in-Line Foursome Roadster which sells for $1995 f. o. b. factory

A new foursome roadster mounted on the Gardner eight-in-line chassis has just been added to its line of sixes and eights by the Gardner Motor Co., Inc., St. Louis. The roadster has a two-tone finish, nickeled radiator, large nickeled trimmed lamps, cowl lamps, and five Disteel wheels. The steering wheel can be adjusted to fit the individual driver. The top can be let down or completely removed if desired.

Both the main seat and the rumble seat are upholstered in machine buffed Spanish leather in a color to harmonize with the body finish. Just back of the main seat is a handy compartment for tools, golf balls and other paraphernalia needed on short trips. This new Gardner model lists at $1995, f. o. b. factory.

Explain Tire Situation and Make Sales

That the public might be aware of the reasons why tire prices are advancing, and why further tire price advances seem certain, a group of ten wholesale and retail tire distributors at Knoxville, Tenn., conducted a concerted co-operative advertising campaign. They used full page newspaper space to thoroughly explain the rubber and tire situation to the public. They wanted the automobile owner to understand just why tire dealers have been finding it necessary to advance prices, in order that the dealer, himself, may not have to shoulder the blame, as so often happens when prices go upward.

"BUY TIRES NOW," these dealers advised the public, and then they went on to explain that America faced a serious rubber shortage, and gave reasons to account for it.

"Many of the smaller rubber manufacturing companies have already suspended operations because of the shortage of raw rubber," these dealers explained to buyers in this series of ads. "Conditions are becoming acute with the very largest factories. Officials of these concerns declare that additional increases are certain to come. Standardization of sizes must be resorted to by manufacturers in order to conserve the visible amount of raw rubber. Tires and tubes in stock are becoming more valuable every day. No one is able to tell just where the price levels will stop. The rubber industry of America is at the mercy of the constrictions of the Stevenson Act. England controls the source of raw rubber—we must pay their price."

Distributors taking part in the campaign declared it accomplished genuinely worthwhile sales results because they dealt frankly with the public.

SOME TRACTOR HISTORY

A new catalog in which is given much of the interesting history of the tractor industry has been published by Hart-Parr Co., Charles City, Ia. This booklet relates how Hart-Parr tractor No. 1 was built in 1901 by C. W. Hart and C. H. Parr. This tractor, then called a gasoline traction engine, was sold in 1902 to an Iowa farmer who operated it for 17 years. In 1904 the Hart-Parr company conducted experiments which led them in 1905 to design all their engines to burn kerosene instead of gasoline. In 1907 the name "tractor" was first applied to this type of motor equipment by the Hart-Parr makers.

A Clean Shop for Profitable Winter Business

(Continued from page 15)

are jumbled together with a lot of precussion tools such as hammers and their cutting edges dulled.

Equipment which belongs to the shop such as wheel pullers, jacks, bending bars, vises and other things should be painted a uniform color in order that they may be readily distinguished as shop tools. No shop expects its mechanics to furnish other than a few hand tools and yet the mechanics must at times use equipment which strictly speaking belongs to the shop. One shop, for example, paints all its equipment a grayish blue color while another uses red. The color is immaterial just so long as there is sufficient contrast to instantly label the tool.

Some shops even go further than this. If, for example, they handle service work on say the Chevrolet, Buick and GM trucks, they will paint the Chevrolet tools yellow, Buick blue, and GM green. This means the work in the shop is greatly speeded up as the mechanics can instantly get the right tool for the right job.

There are a great many other things which can be done in a shop to give it a better appearance and add to its efficiency, and while some of them have no direct bearing on the work that is being done, they do cause a mechanic to take more pride in his work which after all means better satisfaction all around.

If, when a mechanic glances up from his work he sees a clean ceiling, neatly arranged furniture, fender and seat covers on cars being worked upon he unconsciously feels he is working for an organization striving to do good work.

For example, most every shop has one or more fire extinguishers on hand and very often these are just hung up by a nail driven into a post or wall. There is nothing particularly attractive about such an arrangement but it can be made attractive. A small shelf for example can be placed on a post for the extingusher and if the white, gray and black color scheme mentioned in the early part of this article is adhered to an added touch of color is given by painting a bright red round spot on each side of the post to indicate that that post holds the fire extinguisher.

Most dealers pride themselves on the looks of their showroom and while it is absolutely essential to have a good looking showroom, it is just as essential that the shop be attractive and so in the slick-up campaign let's not overlook the back door of the establishment.

Rental Battery Losses Reduced by Cooporation

(Continued from page 13)

to the service at least once in every fifteen days. His call is preceded at least three days by a mailed notice. The advance notice is given so the dealer will have prepared all contracts which he wishes to turn in.

Mr. Granger declares it is highly important, in any plan designed to recover rental batteries, that a legal lease agreement be signed by the customer. The form used in Los Angeles combines the lease agreement and job card on the one sheet. The description of the car in which the rental battery is placed, as given on the form, includes the following information:

License number, engine number, make of car, type, year built, legal owner and address, make of customer's battery, marks, number of customer's battery, number and marks of rental battery, also the value of the rental battery. In this latter connection, Mr. Granger declares that the value must be written in on the contract if it is to have standing in court.

When an account has been turned over to the battery collection department of the trade association, a letter is sent to the customer requesting the immediate return of the rental battery in question. If there is no response to this letter a "Notice to Appear" form which has all the phraseology and appearance of a court order is then mailed. This form reads as follows:

John Jones,
125 E Street,
Los Angeles, Cal.

Notice is here given to appear at 1363 South Figueroa street, on or before ....., 1925, in answer to our Case No. ....., pending against you.

"In 99 cases out of every 100 this 'legal' form brings the customer in," Mr. Granger said. "Their call in many cases is preceded by a telephone inquiry asking the details of the case. We refuse to give any information over the phone, and advise the inquirer that he must present himself in person. Once we get the customers at the office of the association, we either get the battery back, with full rental charges, or we get the equivalent in money.

"In the course of a few months we have brought about a substantial reduction in the losses from rental batteries"

Street Signs Aid Tourists

Solution of the problem of placing street name signs where motorists as well as pedestrians might see them conveniently is declared by the U. S. Mailevator company, 26 Dock street, Yonkers, N. Y., to be found in what is called the "Inner-Curb" system. The signs manufactured and distributed by this company are inserted in the curb directly in line with the automobile driver's line of vision. The motorist is thereby relieved of the necessity of hunting for a sign which often is found ten or twelve feet above the street level. At night the light from his headlights will fall on the curb as he is rounding a corner. It is pointed out that this system effects considerable saving by not having to procure stanchions and provide for their erection.

Mailevator street sign system

Many New Devices Exhibited at National Radio Show

Industry's Growth Shown

THE growth of the radio industry in the last year was amply demonstrated in the increased number of exhibits and the materially enlarged lines of the individual exhibitors who participated in the Fourth Annual National Radio Exposition which opened last Saturday at the Grand Central Palace, New York City.

So numerous and elaborate were the displays that the two huge floors of Grand Central Palace which were adequate for last year's show were found to be insufficient and it was necessary to throw open the third floor. Exhibitors include virtually all of the leading manufacturers of radio receiving sets, parts and accessories, together with many of the prominent radio magazines, newspapers and trade journals. Several of the larger New York broadcasting stations have installed remote control stations and will broadcast special programs and speeches of celebrities during the show which remains open until the evening of Sept. 19.

Large crowds were attracted to the show not alone by the numerous exhibits of apparatus, much of which was revealed to the public for the first time, but also by the spectacular entertainment which was arranged. Among the special features scheduled for the week was an exchange of radio programs with broadcasting stations in England, France and Germany; the appearance of national screen and stage celebrities whose speeches were to be broadcast and a demonstration of radio transmission of pictures. The latter will consist of radio-transmitted pictures of prominent officials, sent from Washington, D. C., which will be accompanied by simultaneous loud speaker reproduction of their voices.

Among the firms represented at the show are Radio Corp. of America, Atwater Kent Mfg. Co., National Carbon Co., Dubilier Condenser and Radio Corp., Bakelite Corp., Freed Eisemann Radio Corp., DeForrest Radio Co., E. I. du Pont De Nemours Co., Electric Storage Battery Co., Stewart Warner Speedometer Co., Splitdorf Electric Co., Thermiodyne Radio Co., Philadelphia Storage Battery Co., O. Brandes Inc., Brunswick-Balke-Collander Co., Chas. E. Freshman Co., Pathe Phonograph & Radio Corp., Sonora Phonograph Co., C. D. Tuska Co., Aluminum Co. of America, Manhattan Electrical Supply Co., American Bosch Magneto Co., Signal Electric Mfg. Co.

Radio World's Fair Opens

THE Second Annual Radio World's Fair, the official show of the Radio Manufacturers' Assn., opened Monday in the 258th Field Artillery Armory, New Work City, when Governor Alfred E. Smith presented a silver cup to Miss Rena Jane Frew of Beaver, Pa., who has been chosen as "Miss Radio" for 1925-26.

The formal opening revealed to the public many new and improved radio receiving sets and accessories exhibited by the more than 200 radio manufacturers who participated in the exposition.

In addition to the large number of exhibits, the public was attracted to the show by special broadcasting feats, in which most of the New York stations took part through remote control stations installed in the armory and through a chain of stations linked together throughout the country.

The World's Fair will close Saturday night, Sept. 19.

I THINK the sales field for the automotive merchant where radio is concerned is alluring. In this part of the world the automotive merchant is about the only one in a position to render service on radio apparatus, as there are practically no merchants catering entirely to electrical business. Car Dealer, Valdez, Alaska.

Indiana Sales Meeting

INDIANA distributors of the Atwater-Kent Manufacturing Co. were in a radio sales convention at Indianapolis last week. Virtually every county in Indiana is said to have been represented by dealers and the convention held afternoon and evening sessions in the Lincoln Hotel where a special display and exhibition of the radio sets was a feature.

Toledo Show in November

THE second annual radio show at Toledo, O., will be held at the Lucas County Armory on Nov. 2 to 7 and will be managed by Hugo V. Buelow, veteran automobile show manager.

The Toledo Radio Trades association, which includes in its membership most of the manufacturers, dealers and distributors of radio equipment, as well as many automotive equipment houses, will furnish a committee to co-operate with Mr. Buelow in staging the show.

Mr. Buelow was in charge of the first radio show at Toledo last year.

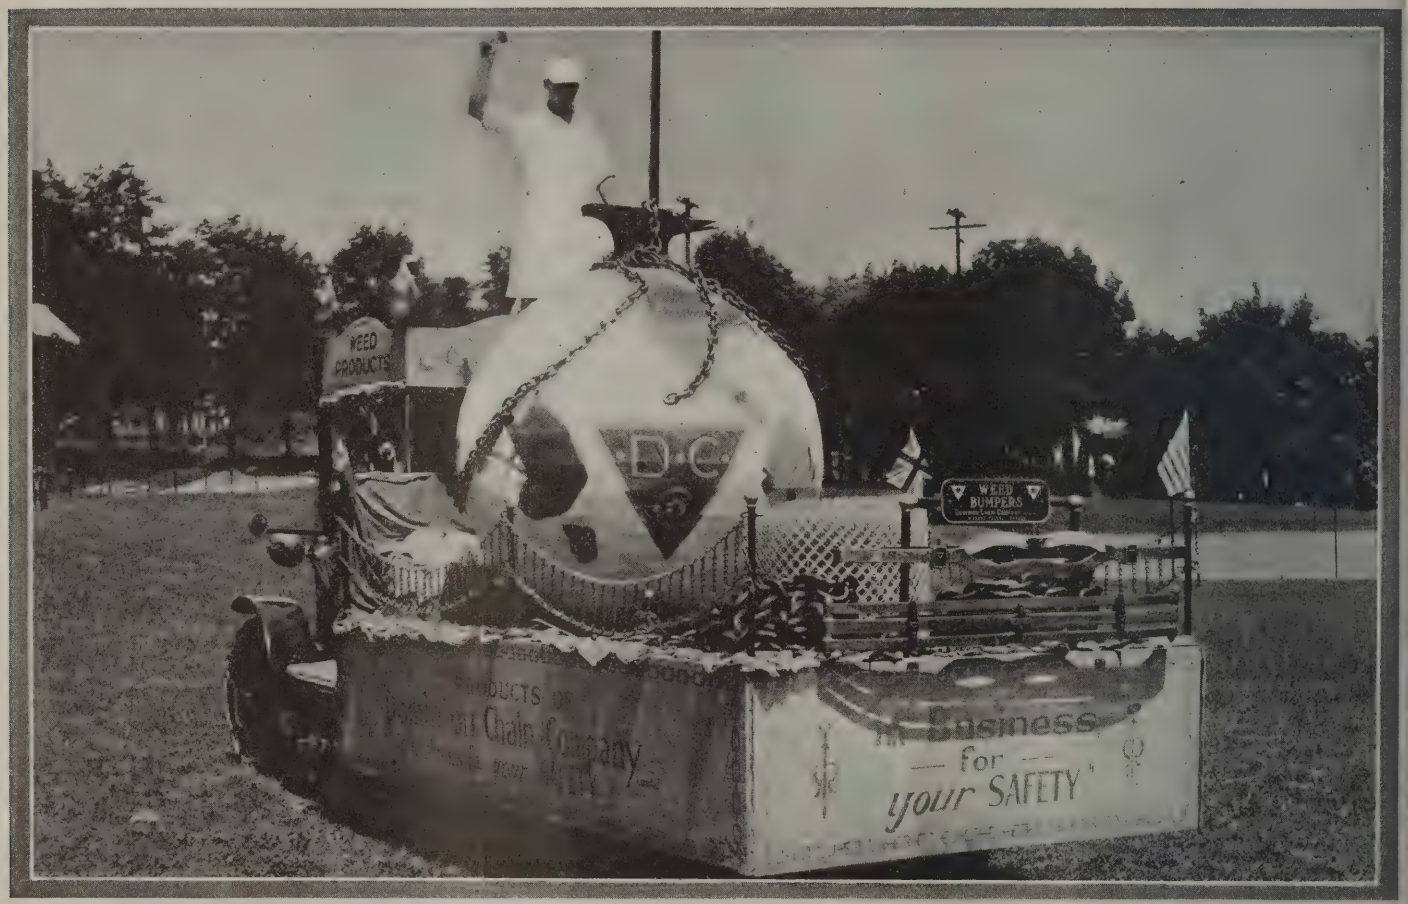
The armory will provide 30,000 square feet of show space without pillars. Decorations and show equipment will be entirely new.

One feature of the show which Mr. Buelow has already arranged is a portable broadcasting station to send out the programs and announcements.

Console Types Lead

ADVANCE showings of the new fall models in radio receivers reveal an increase in the quantity and quality of console types, the absence of any revolutionary changes in internal construction, increased popularity of tuned radio frequency—although the adherents of the neutrodyne principle are as strong as ever—and in many instances a considerable increase in the number of models comprising a particular line.

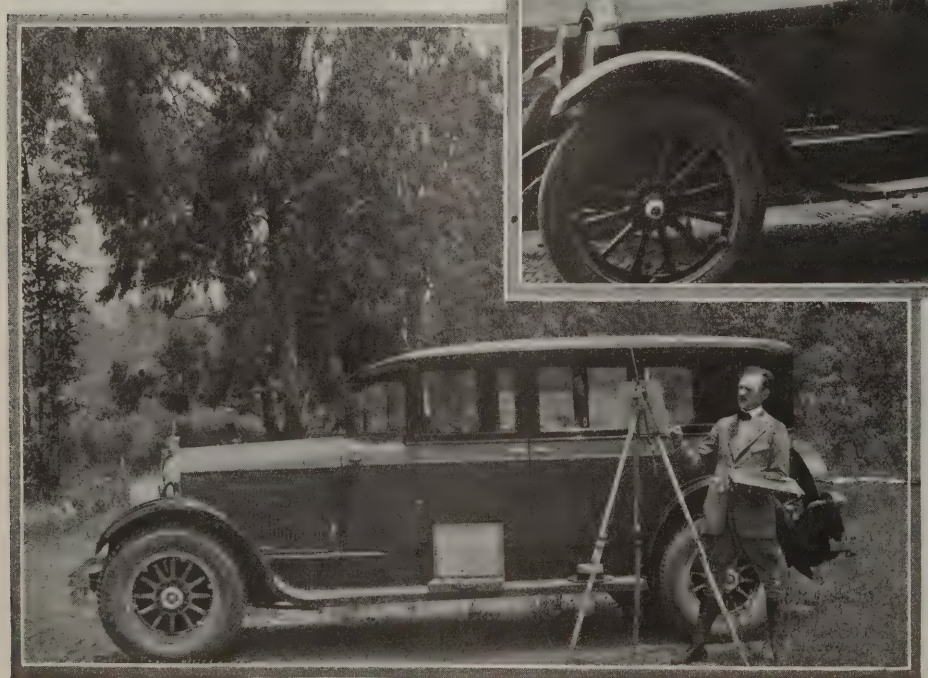
Virtually every manufacturer has included in his line this year at least one console, of more or less elaborate design, while some lines are dominated by this type. Prices of these upright models range all the way from the figure asked for plain cabinet models of the better grade last season—around $150—up to $2,000.



Most of the consoles have built-in loud speakers and are provided with compartments for both "A" and "B" batteries and in many cases there is room for the charger. All sorts of motifs are shown, from imitations of an "old Spanish treasure chest," as one manufacturer designates his product, to the "highboy" and the "davenport" end table design, a long, low model whose controlling dials are slightly more than knee-high.

The statement that there are no revolutionary changes in basic circuits is used advisedly, for in spite of such radical developments as the McCullough A. C. vacuum tube, there is evident on the part of most of the manufacturers who dominated the field last season, and the more prominent of this year's entries, to wait until the merits of such devices have been further demonstrated. The McCullough A. C. tube operates directly from the house lighting mains and requires no "A" battery. Mr. Arthur Lynch, editor of "Radio Broadcast," Doubleday-Page publication, after making a survey of the opinions of more than 600 tube and set manufacturers, concludes that the advent of the A. C. tube, while a desirable development, will not render prevailing types of receivers obsolete this season, at least, and probably will never entirely replace the latter.

Cincinnati Radio Show



CINCINNATI, Sept. 12.—Features of unusual interest to radio fans and to the jobbing trade in radio will be embraced in the second annual radio show to be held at Cincinnati Music Hall October 19-25. Efforts are to be made to create the greatest display of radio apparatus ever shown, certainly the finest exhibition of radio ever given in the middle west states. Tentative plans for the big show were discussed recently at the meeting of the Radio section of the Cincinnati Electric Club, under whose auspices the show will be given this year,

MOTOR AGE'S PICTURE PAGES

SAFETY IN CHAINS. Float featuring Weed chains and bumpers entered by the Dominion Chain Co. in the Civic Holiday parade during Old Home Week in Niagara Falls, Canada, July 13-18.

A MULTIPLICITY OF USES. At the left is H. B. Waggoner, Pasadena, Cal., artist who uses his Marmon in going to and from the places he paints. At the right we have the celebrated Harry Lauder and Mrs. Lauder, snapped in Bombay, India. His automotive steed shown in the picture is an Oldsmobile.

OF AUTOMOTIVE INTEREST

A VISUAL REMINDER. In Ohio they plant a white cross to mark the spot of a fatal automobile accident, as a message of caution to passing motorists. This is to be done on all state highways by proclamation of the governor.

EFFICIENT HEADLIGHT TESTING STATION. The car is enclosed in curtains to secure perfect darkness. It is owned by the Howard Automobile Co., San Francisco, and is pronounced by state officials to be the most perfect testing station in California.

BUSINESS MUST BE GOOD. A large number of the first new Velie broughams were driven away from the factory recently and paraded through Moline, Rock Island and Davenport.

Questions and Answers on Dealers' Problems

BUILDING - ELECTRICAL - FLAT RATES
SHOP - LEGAL - PAINT & TRIM - ACCOUNTING

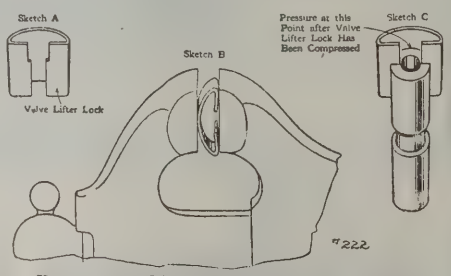
Steering Gear and Tappets

Q—After putting in new eccentric bushings in Dodge Brothers steering gears they will make a dry or grating sound when turning the car short while standing still or moving slowly. I don't understand the cause as all the moving parts seem to have a free fit and have plenty of lubricant.—C. T. From Seattle.

We are inclined to believe that your trouble is due to unsuitable lubricant in the steering gear housing. As the pressures are very high on these parts it is necessary to have a lubricant that will stand up and with this in mind we would recommend that you use Dodge Brothers recommended lubricant or some special steering gear lubricant made by the large grease and oil companies.

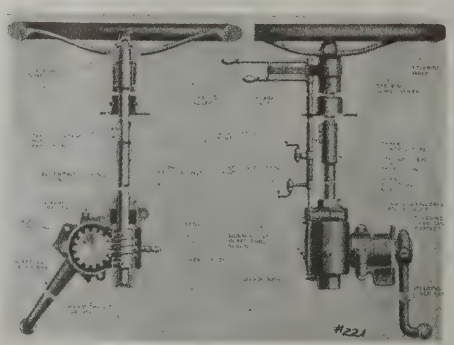
Referring to Fig. 221 it is possible that you may have omitted the small washer that goes behind the worm wheel and in front of the flange at the end of the eccentric bushing. This thin washer is necessary in order to maintain the proper disposition of the worm wheel with regard to the worm back and forth. It is fairly possible that the worm wheel shaft thrust screw shown in the right hand side of Fig. 221 is too tightly adjusted causing the worm and wheel to bind at certain positions.

Check Size of Teeth



We would suggest that you fill the housing with a good lubricant and then try it and turn slowly until the point is reached where the noise occurs. Stop turning, remove the cover from the housing and note the position of the worm in regard to the worm wheel. It may be possible that there is difference in the size of the teeth due to wear on one or the other, of the pieces mentioned. In this case it may be corrected by turning the worm wheel ½ to ¼ revolution and in extreme cases it may be necessary to renew the worm wheel or the worm. Also make sure that the bushing at the lower end of the worm is a good fit on the steering gear vertical shaft.

Q—What is the best method of stopping that annoying tappet slap found in 1922 and earlier Chevrolets? The rocker arm clearance is not excessive, the trouble seems to be in the cage-like part at lower end of tappet rod.



If after adjusting the valves to the proper clearance the lifters are noisy, examine the end of the lifter that comes in contact with the camshaft and see whether there is a groove worn in it. If so it should be replaced. The valve lifter lock, Fig. 222, may be loose on the valve lifter. If so squeeze the lock together in a vise so ends of valve lifter lock point inward as in sketch B. The backs of valve lifter lock will then press firmly against the valve lifter when installed, sketch C. If it is found that this does not eliminate the noise inspect the rocker arm to see whether or not the surface that rests on the push rod or valve stem is worn. If so grind the rocker arm in an oval shape at this point.

Q—When going around a right hand turn or driving on the left side of a crowned road the differential growls, does this mean that the master gear is allowed to move toward the pinion or away from it? If so which side of the differential housing should have shims to prevent side movement?

This would indicate that the ring gear moves to the right toward the pinion and that shims should be installed on the right hand side of the housing.

Reshaping Chevrolet valve lifter locks

Dodge Brothers steering gear

Q—Does the installation of silent timing gears work out satisfactorily on Chevrolets and if so which is the proper arrangement to use?

We have no information regarding this question and would suggest that you get the opinion of the Chevrolet dealer in your neighborhood and also from several Chevrolet owners. The Chevrolet engine is not fundamentally different from the average automobile engine and it is more than likely that well made gears that fit right will give satisfactory results.

Clutch Sticks in High Gear

Q. We have a Ford underslung speedster which sticks in high gear. Every adjustment is properly set and it has the correct number of plates in the transmission. It has been overhauled twice by authorized Ford dealers and mechanics and the transmission has all new parts. It is impossible to crank it without raising both rear wheels. If I get the engine started it runs perfectly until I let it stand about 30 minutes and then it is just as hard to start as ever. Charles M. Marvin, Elk Garage, 410 Pearl avenue, Joplin, Mo.

Ford speedsters are often made of Ford cars which have run for many miles, and while you say that all parts have been replaced, it is possible that you have overlooked one or two. When a clutch is operated for a long time the clutch plates tend to cut notches in the transmission brake drum assembly, part No. 3311 and in the transmission clutch drum part No. 3332. This means that the clutch plates do not slide readily and tend to cause the condition you describe. Another possibility is that at some time or other the car has been in a wreck and the crankcase has been distorted so that the transmission is cramped.

You state that it is necessary to jack up both rear wheels. This should not be necessary even if the emergency brake lever is left in the down position and the clutch is engaged, for the differential when operating properly will let one rear wheel turn if it is jacked up while the other remains stationary. If it is really necessary to jack up both rear wheels it shows trouble in the rear axle as well as in the clutch.

ADJUSTING THE PINION SHAFT BEARINGS

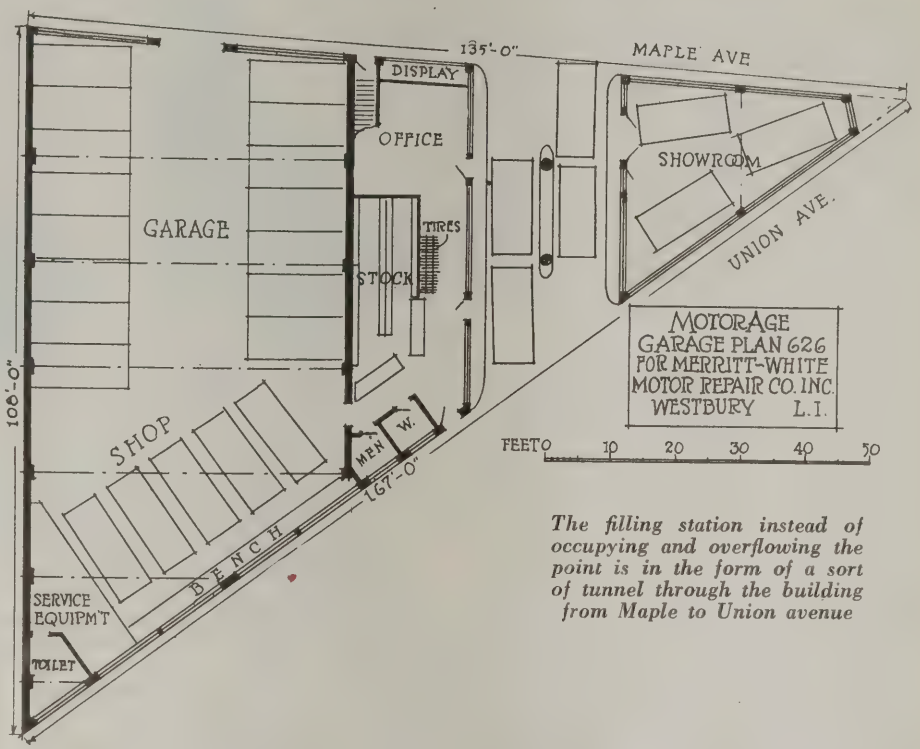
Q.—We have a four-cylinder series five Gardner car, 1923 model that has considerable end play in the pinion shaft at the rear axle. What is the proper way to proceed to take up this end play. Charles Tuckfield, North Branch, N. Y.

At the rear of the rear universal joint is a companion flange which carries the drive to the rear axle. Immediately behind this flange is a large nut approximately 1½ in. across which takes care of the adjustment of the pinion shaft bearing. To tighten the bearings it is necessary to loosen the lock ring and turn this nut so that it moves toward the axle. This will tighten both bearings. It is necessary to do this carefully and to tell by the feel when the adjustment is correct. It is then necessary to replace the lock ring. After the bearings have been adjusted it might be necessary to adjust the pinion shaft carrier so as to properly mesh the pinion. This is done by removing the cover plate from the propeller shaft housing, loosen the clamp bolt and turning the adjusting sleeve until proper mesh is otbained.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE



An Unusually Good Layout for a Flatiron Shaped Lot

Q.—Enclosed find plan of land on which we wish to put up a garage, showroom and general machine repair shop with rooms (5) over showroom and front drive. Same to be of brick or tile. If you can furnish sketch of best possible layout, will appreciate. Marett-White Motor Repair Co. Inc., Westbury, L. I., N. Y.

We cannot guarantee the "best possible layout" but we admit we always do the best we can and some of our customers think we are pretty good.

The difficulty in laying out a building on a flat iron shaped lot of this sort is in making use of the irregular corners that must be contended with here and there. It is always hard to make use of the point of such a lot, even for a filling station, since when the pumps are placed where they should be the cars will project out into the right-of-way and consequently it is necessary to place the pump back far enough so that there is ample room on either side. We have tried a new stunt here of making use of the tip of the lot for showroom purposes and believe that it would be quite a novel idea and one to which considerable attention would be attracted, which of course, is the primary intention in a showroom.

Of course, it is a disadvantage to have the office separated from the showroom and be obliged to cross the filling station to get from one to the other, but we believe there was never a garage designed which was absolutely perfect in every respect and considering the amount of wonderful display window space you have, this is not a serious item. Your upstairs rooms may be built over the office and accessory store and filling station, or if you desire they may be extended clear to the front of the lot, including the space over the showroom. The garage and shop section, we believe should be only one story with a trussed roof and provided with skylight since it has windows only at the ends.

The filling station instead of occupying and overflowing the point is in the form of a sort of tunnel through the building from Maple to Union avenue

WRITE SECRETARY OF STATE

Q. I understand that there is a new law in Ohio whereby a garageman can attach a car for any parts that are used on it, where heretofore it could only be attached for labor. Can you tell me anything about it or tell me where I can find out without paying a large attorney fee? Okeana Motor Sales, Okeana, Ohio.

A. An inquiry to the Secretary of State for Ohio for the new Ohio laws brings the reply that they are not published. You may secure the latest session acts from your Secretary of State as soon as they are out. Often the county clerk or recorder or the justice of the peace get advance copies of the newest laws on liens such as you are interested in, for they have to record such liens or otherwise deal with them.

Ammeter Carries no Starting Current

Q.—I would like to know whether the current used by the starting motor on a Ford or any other car goes through the ammeter. Why does the ammeter show 6-amperes discharge on some Ford cars even when the ignition and light switch are turned off when you step on the starter button? I have heard that the starting motor requires from 300 to 400 amperes to start and about 200 to 250 to keep on running. Is this correct?—John E. Feulner, High Lake, Box 23, West Chicago, Ill.

No cars today have the electrical system so laid out as to carry the starting current through the ammeter. At one time Hupmobile cars and also Franklin used what is known as the non-stalling system. In this system a machine was used which operated both as a motor and a generator and required a 12-volt battery. Instead of an ammeter an indicator was used on the dash and when the ignition switch was turned on current from the battery would flow through the indicator to the motor generator which operated to crank the engine.

The same machine then operated as a generator and would return current to the battery. The indicator was made with a very heavy strap connection in it which would carry the heavy current. However, the average ammeter is not capable of carrying the starter current. There is, however, one special type ammeter on the market which can be used for this purpose and is designed as a replacement unit for these older cars. On the Ford car, for example, there is no reason for the ammeter to indicate a 6 ampere discharge and if it does it would indicate either that there is a leakage of current in some of the circuits or that the ammeter has at one time or other carried a very heavy current which has thrown the needle off center.

If you will look at a Ford chassis you will see that the heavy cables carry current from the battery to the starter switch and then to the starting motor, where the current returns through the ground or frame of the car. You can accordingly see that the starting current does not go up to the instrument board. The starting current may be from 300 to 500 amperes when the switch is first operated but usually drops down lower than the figure you mention being in the neighborhood of 125 or 150 amperes while cranking the engine.

No Finance Company in This Credit Plan

What is said to be a revolutionary action in promoting motor car sales has been started by N. F. Veasey, president of the Gilbert-Chevrolet Co., 2131 Gilbert Avenue, Cincinnati, in a new time-payment sales plan. It eliminates the financing company and puts automobile credit transactions on the same basis as is maintained between dealer and customer in ordinary lines of business.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

8-Cylinder Engine Overheats

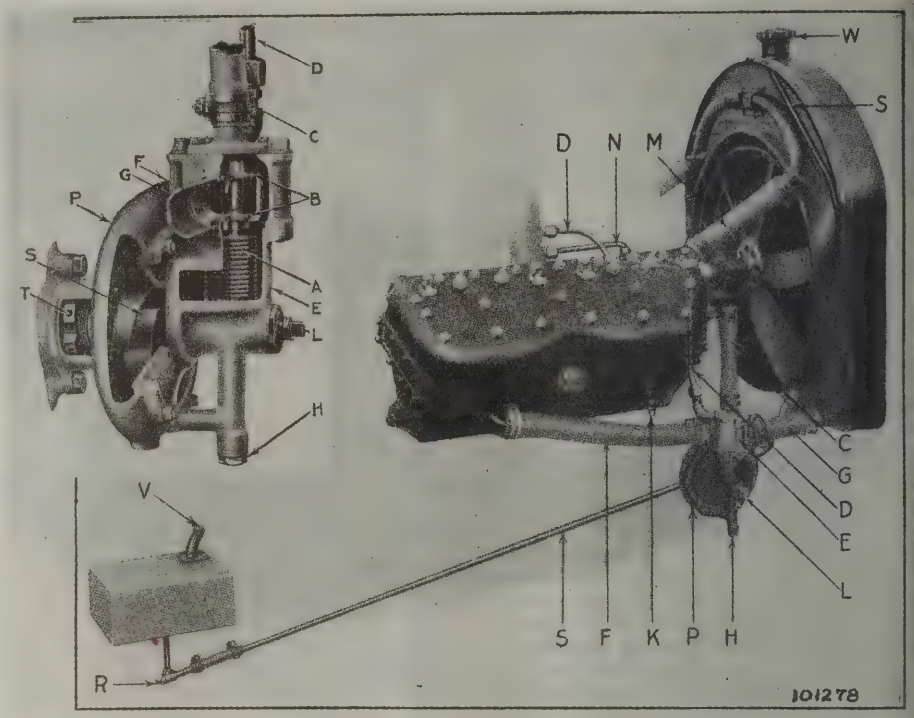
Q.—Would greatly appreciate your advice regarding the cause of overheating of a 53 Cadillac. The former owner at some time used what appears to be crude oil in the cooling system. This left a thick coating of grease on the cylinder walls and in the radiator. This however, has been removed by steaming out with high pressure steam and the cylinder walls sprayed with high air pressure and gasoline. The carbon has been removed, carbureter cleaned and all joints checked for air leaks, new radiator hose has been installed, pumps taken apart, cleaned and inspected. The pumps are apparently operating all right as seen by the action of the water through the filler cap.

Valve and ignition timing has been checked and found to be correct. The correct grade of oil is used and pump pressure is right. Engine hits evenly on both idle and speed, has plenty of power, does not use excessive amount of gasoline and brakes do not drag. Fan belt has proper tension, in fact the car throughout is in excellent condition with the exception of the heating trouble. It overheats in a run of about two miles at a fairly high rate of speed. After running this distance there seem to be pockets in the cylinder block which form steam which works through the radiator making a gurgling noise. Also, the cylinder blocks are hotter than the upper part of the radiator.

When the engine boils the lower radiator hose does not seem to be overly hot. The radiator and water system are free from all obstruction. Could the thermostat cause such a condition as I have described? I notice with the water pump shafts turned with the indicator pointing up, rendering the thermostst inoperative, that the vertical length of the "T" shaped hose gets much warmer than the upper part of the radiator when the engine is first started.

With the pump shaft indicators turned down there is no swirling action of the water in the radiator with engine running. Is this correct? If the thermostats were not functioning properly would they have a tendency to raise the level of the water in the radiator with engine running at good speed? I am under the impression that the overheating trouble is caused by the thermostats even though they appear to be right. This car operated all right last September on a trip and has not been used since. Also supply timing information on this motor. Kansas Service Station.

Thermostats May Be at Fault



We also suspect the thermostats. To check these you could remove the pumps together with thermostats and pour boiling water on the Silphon device which operates the valves. This device is in the nature of an accordion which contains a liquid which vaporizes when the water gets hot and produces a pressure which expands the device and operates the valves. If there is a leak it will prevent the Silphon from operating. The valve should raise from its seat at least one-quarter inch.

You refer to the question of water swirling in the radiator when the pump is operating and the indicator is down. This would not happen with the engine cold but should happen with the engine hot the same as if the thermostats were held out of action.

You state that the radiator is not clogged up. To test this you should have the radiator off the car and run a heavy stream of water in the upper part of the radiator and see if a full stream comes out the bottom. The same test should be made with a cylinder block, as it is possible that the cleaning method that you used with steam and gasoline has not resulted in removing all the obstructions. It may have loosened it in certain places and allowed it to clog up at other places. This may account for the pocketing action you describe. If a full stream of water will flow through the cylinder block it indicates clear passages although of course it would be still possible for obstruction to exist in certain places, causing local heating.

One suggestion, we have to offer is that you remove the thermostatic mechanism entirely, if this is feasible, or if not that you eliminate the pump and use a hose connection of some sort so that the system operates as a thermo-syphon cooling system. Another test you might make on the radiator would be to dump all of the water out and then pour in boiling water. Hold one hand on the front of the radiator and see if the heat is felt instantaneously. If it takes an appreciable time for the heat to get through it would show that the water passages are coated and do not transmit the heat efficiently. The same test could be made on a car known to be operating all right to get a comparison. The illustration given shows the pump and thermostat detail as well as the path through which water flows in the cooling system. When the engine is cooled, water from the pump flows through hose connection "F" and up to the cylinder block and back through hose connection "C". Water also flows from the cylinder block through pipe "N" to the water jacket around the intake manifold and flows back to the thermostat through pipe "D."

We are sending you by separate letter photostatic copy of two pages of the Cadillac instruction book, giving the information you need on the setting of the valves.

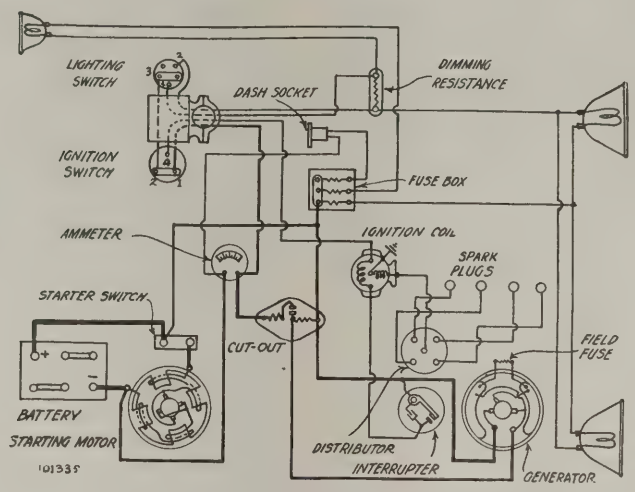
Details of pump and thermostat in cooling system of Model 53 Cadillac

Aircraft Engine Power at Altitude

The Bureau of Standards tests being made at Washington confirm the belief that engine power of airplanes is cut in half between sea level and 20,000 feet. In a pamphlet just issued on "Aviation Engine Performance," it states:

"The well-known weakening of a mountain climber at high levels is a picture of what happens to an airplane motor in high flight. The Bureau tests confirm the belief that engine power is cut in half between sea level and 20,000 feet. Why and how much the power varies with changes in temperatures and pressures are questions vital to aviators and designers of airplane engines. Modern flying demands of every drop of gas its utmost in order to increase speed or cruising radius or mileage per gallon."

Clearing Up Electrical Troubles



EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Time Saved by Careful Testing

Q. We had a Reo bus, serial No. 65703 in the shop last week on which the following work was done: reground cylinders, ground valves, cleaned and adjusted carbureter and timer but when engine was started it kept continually missing. We then disconnecteed vacuum tank and installed carbureter which we knew was O. K., rechecked valve and ignition timing and tappet clearance. The spark was O. K. as it would jump a 3/16 in. gap. We also installed a new set of plugs but the same action took place. Finally on a hunch I changed two wires coming from dash to timer and this eliminated the trouble. Can you let me have a wiring diagram of this car so that I can find the reason for this action?

A. We are publishing a wiring diagram of the 1921 Reo Speedwagon, model F, which is the one you need. You will notice that this is a two wire system and that the base of the cutout is not grounded. The trouble you experienced is apparently due to two accidental grounds in this system, one of which is intermittent. In reversing the wires in the interrupter or timer you apparently got both grounds on the same wire so that they caused no trouble. There seems to be the possibility of a ground in the heavy black wire shown running from the cutout past the timer to the generator or it might be even possible that one of the generator brushes is grounded accidentally. It is also possible that it is a ground in the wire from coil to interrupter. To make either of these grounds give trouble it would seem that there is also a ground in the interrupter itself or in the condenser which is mounted in the interrupter. If you had checked the spark for missing, you might have avoided some of the mechanical work.

Wiring of 1921 Reo Speedwagon

Q. Would like to have wiring diagram of an early 1925 8 cylinder Peerless sedan.

A. This diagram is shown in accordance with your request.

Q. Would like to have sectional view of engine and carbureter on the same Peerless car.—F. L. Tighe, Baltimore, Md.

A. We do not seem to have a sectional view of the engine available nor do we have a sectional view of the carbureter. We assume, however, that you need the carbureter adjustments, and we are mailing you a photostat which gives this information.

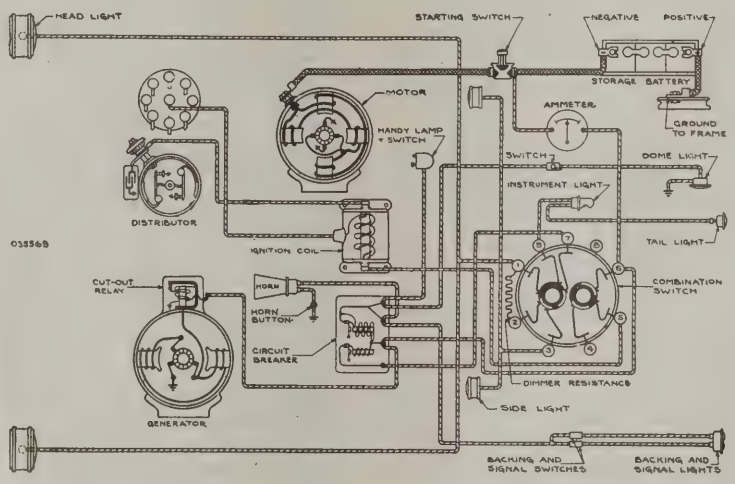


Figure 16. Circuit Diagram

Wiring of 1925 8-cylinder Peerless

CHARGING BATTERIES WITH SIMMS HUFF MOTOR GENERATOR

Q.—The best regardless of price, that's what I found it in two years. Your Reader's Clearing House is sure a treat to me, and now here is a problem for you. If it can be solved all right and if not all right. I have the following: A ¼-h.p. single phase motor directly driving an old type Simms Buff generator off of an old Maxwell. I use this for charging batteries. When all the resistance is cut out of the field it shoots about 25 amperes, but my voltage goes very nearly to nine. Can anything be done to hold the voltage to 7½ and still secure the 25 amperes? It drops amperes very low if the voltage is controlled at 7½.—William A. Lorenz, Golden West Garage, Cor. Florida avenue and San Jacinto street, Hemet, Calif.

You do not say whether you are measuring the voltage at the motor generator or at the battery. The difference will be due to the resistance of the wiring and the amount of current flowing, the resistance multiplied by the current giving the drop in volts. If you are checking up the voltage at the battery then there is nothing you can do about it and the trouble is due to the fact that the batteries you are charging are sulphated. This means that you should hold the voltage down to about 7½ until the low charging current has broken up the sulphate. You should also watch the temperature at the battery to see that it does not exceed 100 degrees or 110 degrees Fahrenheit. If, however, your battery voltage is 7.5 and the generator voltage goes up to 9 it shows that the wires are not big enough or else that the connections are not clean.

REPLACING BABBITT AT FORD REAR MAIN BEARING

We have noticed in MOTOR AGE several ways of taking up the end play in a Ford crankshaft. We do this by adding a little babbitt metal to the ends of the back main bearing cap with the lead burning torch and then scrape it down until the cap will just fit in.—D. C. Slick, Granite City, Ill.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Let All Your Employes Know the Prices For Maintenance Work

ABOUT eight years ago, when flat rate was talked about a good deal and a few concerns were brave enough to adopt the system in their shops, a dealer situated in the Rocky Mountains district used a rather clever means to promote the selling of service and maintenance at a fixed price.

He furnished everyone in his organization, even the watchman who took care of the place at night, a small book containing all the flat rate operations he had worked out for the particular car he handled and also the prices thereof. He did this so everyone in the organization "talked the same language," as he put it.

Before he adopted the flat rate system, a customer would ask a salesman how much he thought it would cost to take up a bearing, let us say. The salesman naturally made a guess at it. Then the customer probably asked the shop foreman and got another guess. A mechanic gave him still another figure and he finally concluded he could make a guess himself. Everyone "talked a different language."

So, in order to make sure that every car owner would get exactly the same figure when asked about the price of a certain operation, this dealer gave everyone employed by him a small flat rate book. This book they religiously carried around with them and whether you asked the stenographer, parts man, mechanic or general manager, you got the same figure for any job asked about.

We believe this idea could be more generally applied today. Then a mechanic would not have to say, "You better ask the boss about the price of the job." Let's all know the price.

Specialized Tool Equipment

Willimantic, Conn.

To the Editor of MOTOR AGE:

I am taking the liberty of asking you for some information. I am thinking of opening a specialty shop, to do carbon cleaning, valve grinding and brake lining on a flat rate basis on all makes of cars and would like to know what is the most modern tool equipment I can install for this class of work. I have a full line of speed wrenches.

Thanking you for past favors, I beg to remain.—Louis G. Zechiel.

In addition to the speed wrenches you will need other equipment.

Starting with the carbon removal job, we assume you are going to use a decarbonizing outfit and for this you will need a carbon burning torch, regulator, gauge, hose, connections, etc., costing about $15. There are several concerns making such outfits and we are sending to you a list of them under separate cover.

For grinding and reseating valves you ought to buy one of the small machines commonly known as a valve grinding machine. These usually are electrically driven with two motors, one to revolve the valve and the other the grinding wheel. They are great time savers and do a good job.

Also get a set of valve seat reamers for reconditioning the valve seats in the block. Reamers also should be provided for truing up the valve stem guides when valves with oversize stems are fitted. As long as you are going in strong for valve grinding jobs we suggest a valve grinder, that is, one of the electrically driven machines resembling an electric drill. With such a machine you can grind in a set of valves in much less time than is possible by the old screw driver method.

THINGS THAT HELP FLAT RATE

It used to be quite a job to reline the brakes of a car, but in the last few years machines for doing the work have been brought out and not only cut down the time required for the job, but do a better job of it. Here is shown a mechanic punching out the old rivets holding the lining to the band

Have on hand a number of valve lifters, because you will need them to get the valves out quickly and also to replace them quickly. If your shop is fitted with compressed air, an attachment for blowing out the cylinders and other parts of the engine comes in handy.

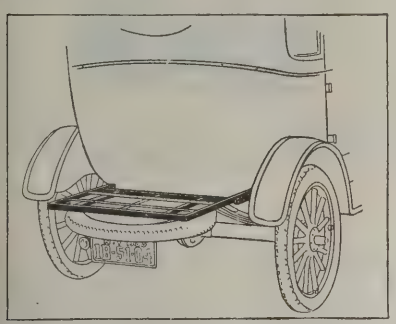
For the brake work make sure you have a variety of wheel pullers on hand. Then, as long as you have to take off the old lining and replace it with new we advise you to get one of the brake lining machines which the market now affords in several different makes. They are invaluable and do a much better job than is possible by hand and do it more quickly. They punch out the rivets of the old lining, punch the holes for the new lining, counter-sink them and set the rivets holding the new lining in place.

You also might get several sizes of brake drums to fit the more popular makes of cars and cut a portion of the drum away so you can make the proper adjustment of internal brakes. The dummy drum is slipped in place instead of the wheel of the car and by this procedure you readily can see much time is saved and you are insured a good job.

MOTOR AGE'S FLAT RATE FORUM

No. 31

FLAT RATES FOR BUICK STEERING GEAR OPERATIONS

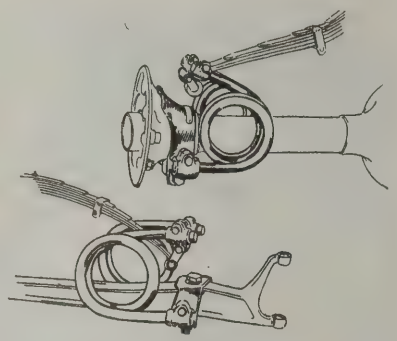


Manufacturer's Official Designation		Charge
1	Adjust—Adjust to remove play	$ .90
2	Bushing—Install new. Remove hand controls and steering wheel. Remove mast jacket, install new bushing and reassemble	3.35
3	Half Nuts—Install new. Remove steering gear assembly. Remove hand controls, steering wheel, mast jacket, adjusting nuts and housing. Install new half nuts and reassemble	5.30
3-A	Half Nuts—Install new. (Steering gear out of car)	2.40
4	Pitman Arm—Straighten. Remove, straighten, reassemble and equalize throw of wheels	3.10
6	Wheel—Install new. Remove hand controls, install new steering wheel	1.70
7	Wheel—Tighten. Tighten wheel on post. 1924-25 models	1.80
	Earlier models	.30
8	Steering—Free Up. Remove king bolts, clean, polish, oil and replace; free up and oil tie rod bolts, drag link and steering gear	3.90

THE MARKET'S NEW OFFERINGS

Accessories -- Equipment — Supplies

Reed Shock Absorbers

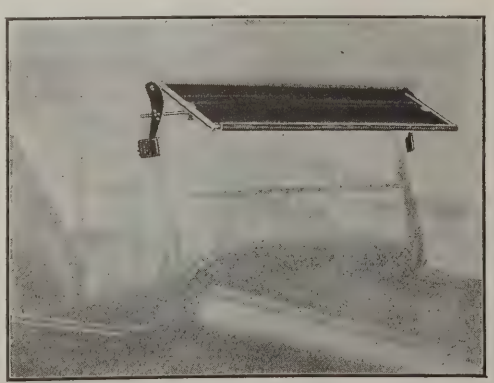


THE Reed shock absorbers for Fords is of the coil spring type and has no valves, strap or other devices requiring adjustment or maintenance. The makers state that due to the construction of the device it absorbs minor road shocks as well as those causing rebounds, thus relieving the main springs of the car of this work. In installing them the shackle and perch are removed from one side of axles and the shock absorber is attached to the main spring before putting the radius rod in place. This applies to the front end of the car. The rear sets can be installed without removing the wheels when it is possible to cut off the perches with a cutting torch. The outer end of the rear spring should be jacked up as high as possible for the installation. Since the main springs of the car are placed between the coil springs in such a way that the normal action of the main springs is not interferred with, the car handles well even at comparatively high rates of speed. The price of the Reed shock absorber is $20 per set and installation must be made by a shop or service station having facilities for cutting off the rear spring perches. It is made by the Reed Shock Absorbers Corporation, 2613 S. Michigan Ave., Chicago.

Buffalo Luggage Carrier designed for Ford Cars

Luggage Carrier for Fords

A LUGGAGE carrier for Ford cars guaranteed to handle a burden of 250 pounds and which can be folded up when not in use is offered the market by the Buffalo Automobile Spring Company, 146 Virginia Street, Buffalo, New York. The carrier attaches to the rear of the car and is so designed as to provide for attachment to it of a standard Ford tire carrier. One of the selling points advanced in connection with this product is that its large weight capacity makes it usually unnecessary to load luggage on the running boards, thus keeping the running boards clear for easy entrance and exit. The device measures 20 in. by 32 in. and bolts on to the car, no drilling being necessary. Price $15.

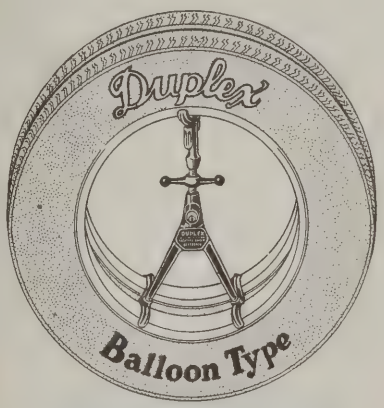


Reed Shock Absorber

Battery Terminal Treat

PREVENTION of corrosion of battery terminals, thus eliminating corrosion's resistance to the flow of electricity from the battery to the starter and ignition coil, is said to be accomplished through the use of Red Head Battery Terminal Treat which is being made and marketed by the B & W Sales Company, 4145 Broadway, Oakland, Cal. The company guarantees the product to stop corrosion. List prices: 2 oz. bottle, 25c., 8 oz. can, 60 c., 16 oz. can, $1, 1 gal. can, $5.

Elite Metal Visor



AN attractive visor, quickly attached, adjusted up or down by the turn of a wing nut and furnished with one style of adjustable brackets to fit open or closed cars is a product of the Automotive Specialty Corp., 47-29 West 63rd street, New York. It is known as the Elite Metal Visor. The visor is made of cold rolled sheet steel, ends being die cast in aluminum with a hole in back of an aluminum center strip through which a screw is fastened to the top of the car. It is equipped with a gutter to carry off rain at the sides. The color is dark green rust-resisting enamel on top and light green underneath. The visor will fit all cars with windshields up to 44 in. wide. List price with brackets $6.

Elite Metal Visor

Duplex Carrier and Rim Tool

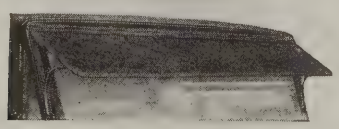
TRIPP-SECORD & Co., Kerr Building, Detroit, are in production and distribution on its Balloon Type Duplex Carrier and Rim Tool which accessory is said to possess a variety of advantages for the motorist. This product combines the facilities of a second spare tire carrier, locking device and rim contractor and expander. Tires held by the carrier are kept apart, preventing chafing and permitting use of covers on both tires. The cylinder lock which also serves as a rim contractor or expander securely locks either tire separately or both tires. The device is attractively designed. List price is $10. Besides offering the Balloon Type Duplex the company produces a Standard Type Duplex.

Duplex Carrier and Rim Tool

Kokomo Mirror Display Cases

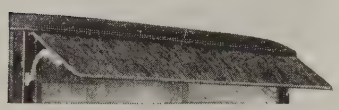
IN line with its campaign of more effective dealer helps the Kokomo Automotive Manufacturing Company, Kokomo, Ind., has announceed a new and attractive counter or window display box for its line of Kokomo Mirrors. The display box holds ten mirrors in individual boxes. The box is designed to occupy minimum space and at the same time show the products to best advantage. Each set of ten mirrors comes packed in one of the display cases.

Descriptions of additional acessory items will be found on the following page.



THE MARKET'S NEW OFFERINGS

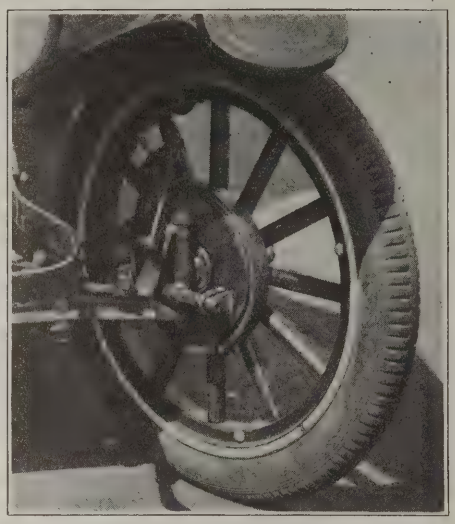
Accessories—Equipment—Supplies



Two New Visors

TWO new visor types are being produced by the McKinnon Dash Co., of Buffalo, N. Y. One of these is designated as the Celotex Core Visor and the other as the Upholstered Visor. Both are of the fabric type. The company offers the Celotex type as being of simple and rigid construction, light in weight with smooth surfaces and no projecting parts; a core made of special fiber and a reinforcing steel molding so applied that the ordinary thickness of the body portion is not increased; improved and concealed means for attaching the two supporting brackets. The body portion of this visor is made of Celotex, the main ingredient of which is sugar cane fiber. This material is light in weight, waterproof and durable.

Lightness of weight also is said to characterize the upholstered Visor, with an absence of all panel markings and a general appearance of rich softness and pliability. Construction consists of a special steel frame, well trussed and padded to produce a core for the covering of high grade art leather, giving the impression of upholstery. The frame is oval in shape. Construction of these visors is said to prevent rattling caused by the car's vibration. Both types of visors are attractive in appearance.

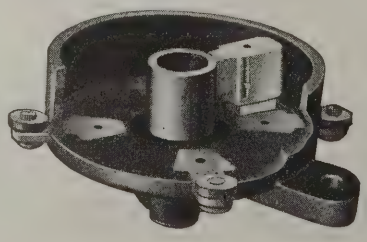


Celotex Core Visor

Upholstered Visor

New Turner Junior Timer

A NEW model Turner Junior Timer, an all Bakelite device for use on Ford cars, trucks and tractors has been announced by the Turner Manufacturing Company, of Kokomo, Ind. The new timer is built on the same principle as the Turner 2 in 1 Timer, also made by this company, with sliding contact, self-cleaning construction. It differs from other timers made by this concern, however, in that it connects directly with the regular Ford wiring assembly. The entire shell of the new timer is made of Bakelite while the keystone shaped contact inserts are of brass. List price $1.90.

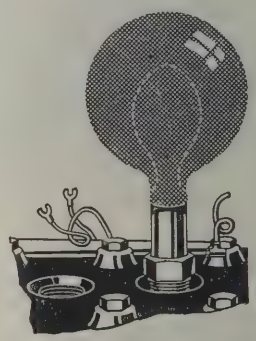


McNerny Four Wheel Brakes

(Cut Shown Above)

FOUR Wheel Brakes designed especially for Fords, Overlands and Chevrolets are manufactured by the McNerny Products Corporation, which has general offices in the Grant Building, San Francisco, and a plant in that city. It is said the attachment provides the small car with the same braking advantages as are found in larger cars similarly equipped. Installation requires no drilling or machining and can be accomplished by the average mechanic in an hour or two. The McNerny Four Wheel Brake is operated in the ordinary way from the regular brake pedal. All parts are easily accessible for lubricating. It is claimed that the device will not affect steering, on the contrary permitting absolute freedom of operation.

Engineering tests of the McNerny brake on a Ford stock car are reported by the makers to have shown a 100 per cent increase in tire mileage, 50 per cent increase in the life of transmission bands and brake linings and a 100 per cent increase in braking efficiency. The tests are also said to have developed a 50 per cent decrease in stopping time and stopping distance compared with the usual equipment.



Price $37.50 f. o. b. San Francisco.

New Turner Junior Timer for Ford cars, trucks and tractors

Cylinder Compression Tester

CONSTRUCTED in a manner enabling simple operation by the car owner the Goodwin-Morgan Company, Akron, Ohio, has placed on the market a device for testing compression in automobile cylinders. The tester consists of a plug, similar to a spark plug, which screws into the spark plug hole. A small rubber balloon fits on the end of the plug. After screwing the tester into place the engine is turned over with the crank until the balloon is inflated. The speed of deflation indicates the rate of cylinder leakage. There also is a metal clip which can be screwed on to the tester and which holds an ordinary tire gage. By using the gage it is possible to compare compression the cylinders. This tester fits all cars except Hudson, Essex and Nash and retails at $1.50.

Goodwin-Morgan device for testing compression in cylinders

Crescent Long-Nose Pliers

(Cut Shown Below)

THE CRESCENT TOOL COMPANY, Jamestown, New York, is marketing a tool that should appeal to accessory dealers who stock equipment for the

radio owner. This tool is known as the new Crescent Long Nose Plier catalogued as No. M16. Besides being useful to the person working around a radio outfit the tool is recommended for general utility, especially for working with wire. With these pliers it is said wire can be bent to any shape desired. It has an especially strong wire cutter while its teeth take firm hold on a screw or a nut. The pliers list at 75 cents each. The company furnishes a display board for counter use at no extra cost which shows an assortment of six pliers.

EDITORIAL

Under One Roof

THE automobile merchant who fails to provide for all the service and automotive merchandise requirements of his customers is shifting a definite responsibility. The automobile that is used requires maintenance and to that end the owner almost from the day he buys the car is interested in mechanical repairs and adjustments, tires, batteries, lubrication, fuel and useful and ornamental accessories. Many of the best and most successful automobile merchants are providing a complete service under one roof for the car owner. Those who are doing so are developing the business to its full possibilities. Those who neglect to provide this complete service are falling short of their proper function as automotive merchants and also are overlooking a lot of highly profitable business that might just as well be theirs.

In the same way the independent shop which is not connected with any new car agency should make its service as complete as possible. There will always be room for good shops of this kind. They justify their existence by rendering a definite service to the car owning public and they have the whole range of the automotive market, except new cars, from which to draw business and profit.

SLICK UP now and CLEAN UP this winter.

It pays to be a two-car salesman rather than a used car buyer.

A Business Fit to Enter

A STUDENT who expects to complete his course at Harvard next year sought our advice the other day about the automobile business. It is his desire, upon the completion of his school education to start in some phase of the automobile business. He thinks he would like to sell, but he is ambitious to have a business of his own. He has considered the possibility of starting to work in a factory organization where he could learn something about distribution methods and lay the ground work that would qualify him, with experience and some capital, to undertake a retail business of his own.

He believes that the highest type of training in business and economics is desirable for one who expects to succeed on a large scale as an automotive merchant. He realizes that a great many dealers fail and that many others do not make an adequate profit, and he believes he sees the reason in the lack of understanding of fundamental business principles that marks so many men who have just drifted into this business.

To this young man we gave hearty encouragement. We hoped he is sufficiently imbued with enthusiasm, vision and determination to stick to his course until he has attained his goal. We see ahead of him many obstacles and discouragements, and we expect that many times he will be tempted to turn from his aim and compromise with his ambition.

But if he only sticks we believe that in time he will prove a credit to the automotive industry and pay enough income tax to get his name in the newspapers.

Easy sailing comes from sales at a profit.

Flat rate will make the flat pocketbook fat.

Lighter Cars in Prospect

NOW we are warned to look for the introduction of the very light European type of motor car in the United States next winter. This naturally takes us back to the cycle car craze of a few years ago, which faded so quickly. But since then the Europeans have made great progress in the design of small vehicles of very low horsepower and it would not be at all surprising if such cars should find a permanent place in this country within a limited market. Of course American design will continue to lead in the automotive affairs of the world, and the American product will continue to be demanded by the great majority of Americans. Even if the Europeans have produced a vehicle that might be economically used within certain limits in this country the chances are that American engineers will take hold of it and produce a modification that will be better adapted to our needs.

Cars won't run without tires. Why shouldn't every car dealer sell them?

It is never too late to SLICK UP; nor too early.

WE are glad we turned out to be wrong in our editorial last week in which we spoke of loss of life in connection with the disappearance of the naval plane, P-N 1. The successful riding of the high seas for nine days by this plane, with safety to its crew, is a wonderful tribute to the efficiency of this form of motor transportation.

New Production Records Are Expected

Deferred Purchases Are Now Showing Their Full Effect

Output Rate for Whole Industry to Be at Peak When Ford Attains Volume

NEW YORK, Sept. 16.—New production records are likely to be made this month by some of the automobile companies that introduced new models toward the end of the summer. These producers are now feeling the full effect of the deferred demand for their products from buyers who were awaiting the appearance of the new cars. All the factories, however, are benefited from the normal upturn in sales during the early fall, which is being felt with particular force this year, since demand held during the summer at an unusually high level.

When the Ford company attains full volume production on its new models, the production rate for the industry as a whole will be far ahead of any previous record for the season. This is unmistakably an "automobile year," and the generally prosperous state of industry coupled with sound agricultural conditions must be credited as the source of the demand for cars and trucks.

Forecasts made by representative parts makers indicate a continuation of good sales through the fourth quarter of the year. There will undoubtedly be recessions, but the level should be well above that of the corresponding period last year. Prospects for parts business are an excellent index of future conditions for the entire industry.

Interest is being focused on small cars of the European model, with shorter wheelbases and lower horsepower than any of the American makes. Cars of this type will be placed on sale abroad by several of the American producers, thus affording direct competition with the factories overseas. But beyond that, it is known that attempts will be made to popularize the small cars in the domestic market.

There is an initial prejudice to overcome, but many believe that traffic congestion in the centers of population, aside from motives of economy, will lead to the adoption of cars that can be parked and operated in small areas. Taxicabs will probably be the first to be brought out, and these may afford the entering wedge for general use.

GOODRICH PLANS MOVE

INDIANAPOLIS, Sept. 12.—The Goodrich Tire and Rubber Company yesterday sold its Indianapolis office and distributing plant at Capital Avenue and Walnut Street and leased the basement and four floors of the Spink Industrial Building at Washington and Liberty streets. This will give more room for service to tire dealers and distributors which now constitutes the bulk of the Goodrich branch business here, whereas when the original distributing plant was established 10 years ago it was mainly devoted to service to Indiana automobile plants. The change to the new location will be made November 1 according to H. C. Boyer, Indianapolis manager of the Goodrich Tire and Rubber Company. The old building was sold to the Indianapolis Paint and Color Company.

A. A. A. Standings

WASHINGTON, Sept. 12.—Standings of drivers with the A. A. A. contest board are as follows:

Driver	Points
1. DePaolo	2500
2. Milton	1070
3. Hartz	1040
4. McDonogh	905
5. Cooper	695
6. Lewis	465
7. Elliott	330
8. Comer	284
9. Shafer	270
10. Duray	185
11. Batten	145
12. Kreis	117
13. James Hill	55
14. Bordino	54
15. Bennett Hill	50
16. DePalma	46
17. Shattuck	35
18. Devore	21
19. Hepburn	16
20. Mourre	11

Cunningham Prices Are Increased $350 to $400

ROCHESTER, Sept. 11.—James Cunningham, Son & Co., have announced price increases of $350 on their open models and $400 on their closed models. This is the second price increase made by Cunningham inside of two months, their prices now being from $700 to $850 higher than they were in July.

Following are their latest prices and those in effect before the latest price increase:

Model	New Price	Old Price
Touring	$7000	$6650
Sport touring	6500	6150
Coupe	8000	7600
Limousine	8500	8100

BLACK & DECKER REDUCES

TOWSON, MD., Sept. 12.—The Black & Decker Manufacturing Company has announced to the trade a substantial price reduction on the Black & Decker Nos. 8 and 81 portable electric drills. The No. 8 Drill which previously listed for $205 for 110 volts and $200 for 220 or 250 volts, has been reduced to $175 for any voltage. The No. 81 has likewise been reduced so that the price for any voltage is now $195. A reversing switch for either of the above units is furnished at an additional cost of $20.

Overland Reduces Price of Standard Sedan to $595

New Features Added to Model Announced at Same Time as $60 Drop

TOLEDO, Sept. 13.—A price reduction on the Overland Standard sedan from $655 to $595 is announced by Willys-Overland which brings the price of this model to the lowest figure ever made on a full-sized sedan with sliding gear transmission.

The price reduction on the Standard sedan follows closely on the heels of a general price reduction announced last month which affected materially every model produced by Willys-Overland.

Willys-Overland officials point out that the tremendous success of the Overland Standard Sedan in conjunction with improved and increased production facilities for this model are responsible for the $60 drop in price.

In making the new announcement, Willys-Overland also announces that several important features have been added to the standard Sedan. The latest in one-piece windshields now comes as standard equipment on this car. Wider and deeper seats and cushions add to the comfort and riding ease of the car, while the radiator and head lamp rims are now available on all standard sedans in nickel finish.

Long narrow windows, giving the maximum of vision and ventilation, also provide safety facilities for the small family, while the arrangement of the specially folding front seat backs permit free and unencumbered access to the rear seat.

A. E. A. Offers Cash Prize for Best Christmas Sales Story

CHICAGO, Sept. 12.—A $50 cash prize is to be awarded by the Automotive Equipment Association for the best letter or story telling how it payed to "Ask 'Em to Buy Something for the Car for Christmas" last holiday season, Commissioner William M. Webster of the association has announced.

All accessory dealers, car dealers, garagemen, service station proprietors or any others engaged in the resale of automotive equipment and service anywhere in the United States or Canada are eligible to compete in the contest. There is no entry charge.

Pictures of displays, samples of advertising used last year, will add to the value of the story, according to the announcement to the trade. Any material should be sent now or as soon as possible to Arthur R. Mogge, merchandising director, Automotive Equipment Association, City Hall Square Building, Chicago.

Car Industry Only One That Cut Cost, Says Durant Head

Campbell Tells Carolina Tradesmen All Other Essential Businesses Have Raised Prices

WILMINGTON, N. C., Sept. 12.—The American automobile today is 29 per cent lower in price, quality and serviceability considered, than it was before the World War, the Summer convention of the North Carolina Automotive Trade Association was told by Colin Campbell, of New York, vice-president of Durant Motors, Inc., in his address, which marked the peak of interest for the two-day meeting. Mr. Campbell's address was delivered at a banquet attended by approximately 200 automobile distributors, dealers, salesmen and shop foremen.

While the American automobile industry is giving the riding public a better car for less money, Mr. Campbell pointed out, all other essential industries have increased the prices of their products, some of them as much as 250 per cent.

The automobile manufacturing industry must be careful now, however, Mr. Campbell asserted, for this consistent effort to give greater values for less money is threatening to bring about trade evils, the severity of which cannot be forecast. Shaving prices too much, he pointed out, even in the face of the tremendous competition of the present day, may bring a repetition of experiences of other industries in such circumstances, when sharp practices were undertaken both by the manufacturers and the distributors, to the hurt of themselves and the buying public as well.

Mr. Campbell asserted he knew of no worthwhile reason for the recent severe wave of price-cutting in the automobile manufacturing industry. "Maybe it was to 'crowd out' the so-called 'weak sisters'; maybe it was hoped to increase volume and cut overhead cost per unit; maybe it is to stimulate sales. Certainly it is not because there has been any reduction in manufacturing costs commensurate with the retail price reductions," he said.

Turning to the subject of financing retail sales, Mr. Campbell urged the dealers to patronize local bankers as much as may be found possible. He expressed the opinion that the "manufacturer should not go into the business of financing the dealer's paper. Many evils are attendant on the system and confusion always results," he added.

Thomas McP. Glasgow, of Charlotte, N. C., president of Southern Automotive Jobbers' Association, presided at the banquet.

Harry Clendenin, of Greensboro, president of the State association, addressing the opening session, told of plans to increase the membership of the association, which now numbers 177 dealers and distributors. Sales promotion, accessories sales, service policies and other subjects were discussed by leaders of round-table talks at several sessions.

Canada May Ban Tourist Bond

QUEBEC, Sept. 12.—A Dominion wide movement is now on foot to have the customs regulations with regard to the entry of motor tourists to Canada changed so that the tourists may enjoy a longer stay without being put to the trouble of furnishing a bond, as they must do under the present system. The movement is sponsored by the Automobile Club of British Columbia, and it has already enlisted the support of automobile clubs all over the Diminion of Canada. Under the new plan the deposit now enacted will not be necessary. A tourist who wishes to extend his permit over the 30 days will merely have to satisfy the officials that he is a legitimate tourist, and that he will return upon the expiration of the extension. The automobile clubs suggest that this extension be for 30 or 60 days at the option of the tourist.

EPSTEIN SALES MANAGER

CHICAGO, Sept. 12.—Samuel P. Epstein has been appointed general sales manager of the Garfield Motor Sales Co., Inc., Wabash avenue and Garfield boulevard, Chicago. J. P. Vandenorth has been promoted from the sales force to be assistant to Mr. Epstein. The Garfield Motor Sales Co., occupying a whole block, is dealer for Oldsmobile, Oakland and Flint.

PEORIA HEARS KROH

PEORIA, Ill., Sept. 12.—Motor car dealers from many points in central Illinois assembled here Sept. 10, to hear an address by A. R. Kroh, sales promotion advisor of the National Automobile Dealers Association, and Edward Payton, market analyst, a recognized economist who has made a special study of the automotive business. This conference is the only one of the kind allotted to Peoria and a general invitation was sent out to all members of the Illinois Automotive Trade Association to attend and several hundred responded. These and similar conferences, have been invaluable in aiding the dealers in the solution of three big problems: management, sales, and maintenance.

DEALERS SHOW AT FAIR

QUINCY, ILL., Sept. 12.—Seventy-five cars, representing the largest automobile show ever staged in connection with the Adams County fair, are displayed under an 80x280-foot top, at the grounds here this week. Eighteen dealers are represented in addition to several accessories and tire dealers. The automobile tent is drawing huge crowds and the auto men are finding renewed evidence of good auto trade this fall in the inquiries and prospects being indexed this week.

Official Warning Sounded in Trade Association Methods

Government Will Allow No Deviation From Cement and Maple Flooring Decisions

WASHINGTON, Sept. 12.—Warning that the government will act quickly to prevent any deviation from the principles laid down in the U. S. Supreme Court's "trade association decisions" was broadcast when William J. Donovan, assistant to the attorney general, addressed the National Association of Attorneys General.

Describing in detail the decision in the Maple Flooring Manufacturers' Association and Cement Manufacturers' association case Mr. Donovan said:

"The course has now been charted. Deviations from the course must meet with the natural consequence following upon conscious violation of the law."

The plea of uncertainty can no longer be taken advantage of by trade associations, according to Mr. Donovan, who showed how, in the past, no official definition existed limiting their legal activities.

"Properly read," Mr. Donovan continued, "these decisions emphasize that the misuse of information to effectuate contracts, agreements or understandings, or any concerted action through combinations which has the necessary tendency to destroy competition through price fixing, restriction of production, or other similar results, is unlawful."

OPENS FACTORY BRANCH

CHICAGO, Sept. 12.—A. A. Wester, president and general manager of the Cork-Sealed Piston Ring Corp. of Denver has announced the opening of a factory branch for this organization at 2332 S. Michigan avenue, Chicago. The corporation has maintained representation in Chicago for more than a year, developing a business justifying establishment of a factory branch here which will handle sales for the eastern half of the United States, according to Mr. Wester. G. A. Wester will be in charge of the Chicago branch.

PARTS FIRMS MERGE

ATLANTA, Sept. 12.—One of the most important mergers of recent years in automotive circles in the Southeast occurred the early part of September when officials of the Alexander-Seewald Co. announced the merging of this concern with the Ozburn-Abston Co. of Georgia. For years these two companies have been engaged in the wholesale accessory and parts business in Atlanta, and they were two of the largest firms of this kind in the whole South. The merger of the two companies thus makes the firm one of the largest distributors of accessories and parts in the United States. The company will henceforth be known as the Alexander-Seewald Co., all of the stock of the Ozburn-Abston Co. having been taken over by stockholders of the former concern.

Hudson-Essex Advancing Rapidly on West Coast

Ford Now Outdistanced in Dealer Representation—Several Executive Changes Announced

LOS ANGELES, Sept. 12.—Continuation of the sales expansion program of the Walter M. Murphy Company, Hudson and Essex distributors, in the Los Angeles metropolitan territory, by the appointment of new dealers, is the principal subject of discussion along Automobile Row here. There are now sixty different sales rooms from which Hudson and Essex cars are being merchandised in and immediately adjacent to Los Angeles—a situation without precedent in automotive merchandising in the West. And with few exceptions, these sixty sales rooms are operated by as many different dealers.

The Hudson and Essex now far outdistances Ford in dealer representation in this territory, and the tremendous sales force behind this car is being reflected markedly in new car registrations. For several months the combined Hudson and Essex sales in Los Angeles and throughout Southern California have been exceeded only by Ford.

Other news developments in distributing circles include several new dealer appointments and executive changes. Slaughter Motors, Inc., Southern California distributors for the Rollin, have taken an associate dealership in Flint cars. The Los Angeles branch of the Durant Motor Company of California announces the appointment of the Coast Motor Company, at Ventura, the J. L. Rawding Company at Oxnard and D. W. Roberts at Long Beach as new Star dealers.

Fred T. Johnson, who has been identified with California automobile selling for many years has been appointed sales manager of the Auburn passenger car division of the White Auto Company.

Ed Burnett, sales manager for Lynn C. Buxton, Southern California distributors of the Stearns-Knight for the past three years, has resigned to take a subagency of another line of cars.

Erskine Says Studebaker in Best Position in History

NEW YORK, Sept. 12.—A. B. Erskine, president of the Studebaker Corp., commenting on the policy and condition of the company, said:

"We are building solidly for the future, both in the quality we are maintaining for our product and the strength of the company behind that product.

"Our cash holdings have been increased this year and now stand at upward of $17,000,000, after deducting about $2,000,000 in dividends paid September 1. Viewed from any angle, the corporation is in the strongest position in its history.

"The automobile business continues at a surprising rate and I look for a big third quarter. Our sales in July and August amounted to 25,000 cars, and September's business will probably bring the total to more than 35,000 for the third quarter. We have been operating close to capacity since March 1, and there are at present no signs of any severe letup. About 85 per cent of our production is now in closed models."

Milton Visits Ascari's Monument

Tommy Milton, passing through Paris on his way to compete in the Italian Grand Prix and World's Championship Race at Monza, visits the Montlhery Track near Paris and stops in front of the monument erected on the spot where Antonio Ascari, famous Italian race driver, was killed during the French Grand Prix. At Milton's right is W. F. Bradley, MOTOR AGE'S Paris correspondent. In the oval, left to right, are M. Virioz of the French Hartford Shock Absorber Co., Tommy Milton, Albert Guyot, French race driver, and W. F. Bradley.

Maas & Sonneborn Is New Automotive Export Concern

NEW YORK, Sept. 12.—The new export selling organization of Maas & Sonneborn, Inc., located at the Fisk Building, Broadway at Fifty-seventh, has been organized and will be managed by men with years of experience in the automotive export field.

Peter Maas has been traveling and selling in the overseas market for a number of years. He was associated with several prominent motor and cycle firms of Great Britain and the Continent. For the last ten years he has been connected with the export selling business in the United States.

Herman Sonneborn has been connected with the foreign trade department of the Chilton Class Journal Co. since 1916. He was special representative of *El Automovil Americano* and the overseas edition of *The American Automobile*. He has had long experience in the planning and organizing of export departments and has aided some of the most prominent automobile manufacturers in solving their foreign sales and advertising problems.

The efforts of the new firm will be confined entirely to the automotive trade, acting in the capacity as export sales managers for a limited number of high-grade, non-competitive automotive accounts.

Studebaker Dealers of South Meet in Dallas

DALLAS, Tex., Sept. 12.—More than 100 Studebaker dealers from seections of Texas, Oklahoma and Louisiana were in Dallas last week for a discussion of business plans and to hear the plans of the Studebaker Corporation. The speakers, a half dozen of them, considered the used car problem one of the biggest confronting the dealers today.

They were unanimous in the opinion that the used cars should be, and could be bought and sold at figures which would represent a profit to the dealer. They all favored thoroughly re-conditioning cars and placing service guarantees behind them. The majority of the dealers declared the automobile retailer is meeting too few people who buy cars. They decided next season the Studebaker dealers would mix and mingle more with the people, take more interest in community affairs, and in fact become part or the people rather than purely automobile dealers.

H. S. Vance of the factory discussed the plants of the company for the coming year with the dealers. George Keller of Dallas, and C. R. Helm, used car expert, were among those addressing the dealers.

Mexicans See Their Country As Fertile Field for Cars

New Road Building Program Expected to Double Sales Within a Year

DALLAS, Tex., Sept. 12.—There is going to be a wonderful increase in the automotive business in Mexico and a very attractive field for investments in those lines in the republic below the Rio Grande in the next twelve months according to Mexican officials and business men who have been in Texas recently.

The drawback to the automobile business in Mexico all along has been the lack of roads, these men said. That is to be remedied.

Mexico is now launching a $40,000,000 road building program. The machinery is moving to the border from Chicago and other points now and actual construction of highways will begin immediately.

In the United States a $40,000,000 road program would mean little, Mexican business men said, but in Mexico it is different. Labor there is cheap. Material is at hand everywhere. The $40,000,000 will provide some 3,000 miles of paved roads and 2,000 miles of graveled or surfaced highways.

It is planned to connect Laredo, Tex., or Brownsville, with Mexico City by a paved highway through Monterey, Saltillo and San Luis Potosi. The work on this road will begin immediately. Highways will be built from the cities mentioned some 40 miles in all directions. Another highway is planned from Mexico City to Vera Cruz and a branch to Tampico. These are to begin at once. Still another is planned from Mexico City to Guadalajara on the Pacific Coast and one from Mexico City to Juarez opposite El Paso.

This would give two good highways from Texas or American points to Mexico City. The one from Laredo would be 600 miles while that from Juarez would be about 900. Graveled roads from various cities on the main highways would lead to points of interest in the Republic.

The highway, the Mexican business men said, would mean the coming of thousands of tourists next year, but at the same time would mean the automobile will supplant the horse and the cart as means of transportation in Mexico. They predicted the number of automobiles in Mexico will be doubled in the next twelve months.

NEW CLEVELAND DEALERS

CLEVELAND, Sept. 12.—New dealers added to the organization of the Cleveland Automobile Company include:

W. G. Crosby and Sons Garage, Nashua, N. H.; Bronaugh & Pendergrass Inc., Portland, Ore.; Yorton Kratzer Motors Inc., Syracuse, N. Y.; Chandler Cleveland Auto Co., Madison, Wis.; Frank E. Guptill, Boston, Mass.; Madison Hilliard Garage, Lakewood, O.; United Motor Sales Co., Somerville, Mass.; Knox Motors Association, Tuscaloosa, Ala.

Motors Are Making England Drier

NEW YORK, Sept. 12.—Voluntary prohibition is coming to pass in England as a result of the automobile. said Sir Henry Maybury, director general of roads of Great Britain, speaking at a dinner in his honor at the Ritz-Carlton Hotel. The dinner was in the joint honor of the director general and of the U. S. official delegation to the Pan-American Road Congress in Buenos Aires Oct. 30. It was tendered by Roy D. Chapin, chairman of the highways committee of the National Automobile Chamber of Commerce.

"The motor industry in England is prospering," said the speaker, "while general business is quiet; and this motor trade is developing at the expense of liquor. There is a rapidly growing interest in motor travel and the money of the public instead of going for beer is being used in the purchase of automobiles."

The director general is visiting this country to study the traffic methods here and made a number of observations concerning the differences between this country and England.

HOFFMAN MAGNETO SOLD

ST. LOUIS, Sept. 12.—James R. Medart has purchased the S. G. Hoffman Magneto Company, which has been in the automotive electrical field in St. Louis for fourteen years, with Sam G. Hoffman at its head. Medart was formerly foreman and superintendent of the Hoffman Company and lately has operated the J. R. Medart Ignition Company. The Medart and Hoffman companies will be merged and incorporated as the S. G. Hoffman Magneto Company. Medart says the contract of sale stipulates that Hoffman shall not re-enter the automotive electrical field in St. Louis for ten years.

NEW KELLY BRANCH

CHARLOTTE, N. C., Sept. 12—Establishment of a branch of the Kelly-Springfield Tire Company in Charlotte, with the expectation that the company's sales in the territory will be increased 100 per cent, was announced by W. C. Blake, representing the general sales office, at New York, who closed a lease for the building.

C. H. Luebbert, recently of the company's branch at Richmond, Va., was named manager of the branch here. Four salesmen will travel the territory which this branch will serve, including Western North Carolina and all of South Carolina. The North Carolina territory has been served by the Richmond branch and the South Carolina territory by the branch at Atlanta, Ga.

Southern Dealers Working Hard to Supply Car Demand

Cotton and Sugar Crops Bring Big Returns—Building Activity Gains

NEW ORLEANS, Sept. 12.—With an estimate of a crop of 1,550,000 bales, the Mississippi cotton situation is rosy with promise. Cotton is opening rapidly on account of the hot days, and the good price paid for picking is having a salutary effect on the automobile business in general. As the pickers get their money, many of them are investing in used cars. This demand relieves the dealers of their used car supply and makes it possible for them to go after new car business zestfully. Since the cotton is also placing money into the hands of cotton growers, it is not a hard thing for the automobile dealers to place new cars and take in used ones to have to dispose to the pickers.

Distributors, located in New Orleans, report that it is difficult to obtain cars in large enough quantities to supply the demand in the Mississippi cotton belt. They also report that the same satisfactory conditions are seen in a lesser degree in the cotton districts of north Louisiana.

The sugar cane crop in Louisiana is reported in good condition as about 78 to 85 per cent of normal. Rice is also said to be in a satisfactory state although some was salt water damaged.

Building and industrial activities are in a very healthy state in New Orleans and other cities of the two states. Mississippi Coast is bidding heavily for a big slice of the winter tourist crop this season with good prospects of getting it. Real estate is not booming in Mississippi or Louisiana as it is in Flordia, but values are high enough in the country on account of good results from truck crops throughout the trucking sections and anticipated returns from cotton, sugar cane, rice and pecans, the trees of which are breaking under a record crop.

The summer has been unusual on account of the great number of new automobile dealer buildings going up in the different towns. These buildings are more pretentious and better equipped for display and service facilities than the older buildings are. Practically all dealers have "slicked up" their places during the summer.

FEDERAL NAMES GRIFFIN

OAKLAND, CAL., Sept. 12—George O. Griffin, of Oakland, has been appointed branch manager for the Federal truck sales and service plant in San Francisco, according to announcement by the Federal company, which also announced plans for the enlargement and expansion of the San Francsico plant. Griffin has been in the truck business in Oakland for the last ten years.

Dealers Restricting Used Car Deals to Fewer Makes

N. A. D. A. Believes Less Than 15 Kinds Will Be in Stock by End of 1926

ST. LOUIS, Sept. 12.—By the end of 1926, used car stocks of the majority of automobile dealers will include less than 15 different makes of automobiles. This is a belief voiced by officials of the National Automobile Dealers Association, which arises from surveys conducted this year, in which it was found that many dealers already are restricting their purchases of used cars to a very few lines of cars. Dealers generally will not go outside of their own and popular and handled lines.

Careful restriction of the makes of cars that will be accepted by an automobile dealer's used car stock is one of the prime essentials of building a successful used car business, according to National Association authorities. It will have the effect of causing the dealer to refuse some deals in which he would deliver a new car, but it also will enable the dealer thereby to refuse new car business that he would obtain only at the expense of a large loss on the used car accepted.

One reason for the enormous reduction in used car losses from $126,000,000 in 1922 to less than $40,000,000 in 1924 was the determination on the part of dealers generally to refuse to take unprofitable deals. One big reason why stocks are lower, sales greater and losses more largely reduced in 1925, is that the dealer has restricted his used car deals to a certain list of makes which he knows have a resale popularity in his particular territory. The trend toward applying good business principles to used cars, has been aided by the public acceptance of the principles.

C. G. ABBOTT PROMOTED

BOSTON, Sept. 12.—Chester G. Abbott, who had been in charge of the Maine territory for the Henley-Kimball Company of Boston, New England distributors of Hudson and Essex cars since 1915 when Fred A. Ordway left there to purchase an interest in the Boston company, is now in Boston where he has been promoted to sales manager of the entire organization. He had done so well in Maine that when there was need of a man to take charge of the expansion through the distributors signing up for 22,500 cars in the 1926 season, Mr. Abbott seemed the logical choice.

USED CAR SHOW TRIED

COLUMBUS, Sept. 12.—The Winfield S. Jewell Co., central Ohio agents for the Studebaker, has tried an innovation at the Ohio State Fair, held the first week in September at Columbus, in the form of a display of used automobiles. This is the first time that used cars have been displayed in that manner and it was expected not only to sell a number of cars but to educate the farmers on the value of reconditioned used cars. A tent to accommodate about a dozen high class used cars was erected and the display was in charge of A. E. Miller, manager of the used car department of the company. The same company had a display of new cars in the regular show building.

GRANT HEADS CAMPAIGN

CINCINNATI, Sept. 12.—R. H. Grant, vice president and general sales manager of the Chevrolet Motor Company, has come to Cincinnati to take charge of the Chevrolet campaign to sell 35,000 more automobiles in September, October and November than in the same months in 1924. Assisting Mr. Grant in the Cincinnati zone will be R. K. White, general manager of sales promotion; M. D. Douglas, regional manager, and J. H. Irwin, sales manager of the Cincinnati plant. The campaign begins officially September 1. At the sales conference to be held here there is to be an attendance of about 500 retail salesmen. The leaders in the contest are to be given a banquet by Sales Manager Irwin at which the first Chevrolet car ever built will be exhibited beside the two millionth Chevrolet car.

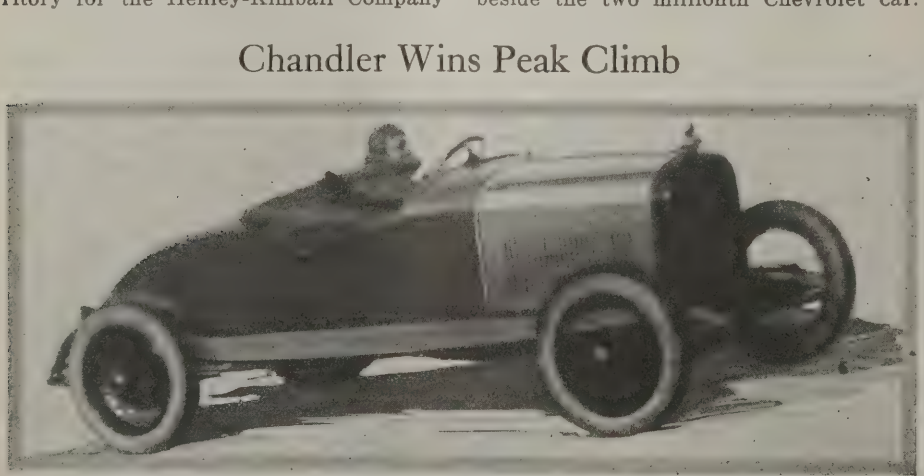
California Titles More Cars in First Half Than All 1924

Total Registration of Last Year Exceeded by 150,000—Los Angeles County Leads

SAN FRANCISCO, Sept. 12.—Exceeding the total registration for all of last year by approximately 150,000, a total of 1,283,821 automotive vehicles were registered in California during the first half of 1925, according to announcement at the end of August by Will H. Marsh, chief of the state motor vehicle department. This registration resulted in the collection and setting aside of $2,728,158.52 in fees during the same period for apportionment to the counties of the state, of which $2,351,821.97 will be devoted to highway work. Of the remainder so collected, $171,187.06 represents salaries paid traffic officers in the first six months of 1925, and $205,149.49 was the amount with-held to meet similar salaries coming due in the last six months of the year.

In this distribution of funds, as well as proportionately in registration, Los Angeles led the counties of the state, receiving $1,082,175.44 to be applied to its highway funds. San Francisco county came second, but a long ways behind Los Angeles, receiving $212,460.36. Alameda county was third, getting $195,788.84; Fresno, fourth, receiving $95,304.84, with San Diego almost tying the raisin belt with $95,084.50 Mono county received the smallest appropriation, only $497.30.

Total registrations for the state, as announced by Marsh, for the half year ending June 30, 1925, are: Passenger cars, $1,120,017; pneumatic-tired trucks, $158,784; solid-tired trucks, $39,974; motorcycles, $9,782.



Sales reported by members of the San Francisco Motor Car Dealers' Association, the California Automotive Trades Association, and the San Francisco Automobile Trade Association indicate that total registration by the end of December, 1925, will reach well over 1,500,000 automotive vehicles of all kinds.

Passenger car sales showed a tendency to improve the last week in August, after remaining quiet throughout the month. Truck sales are slow, and will remain so, if the experience of other years persists this year, with the end of September.

STUDEBAKER DEALERS MEET

PORTLAND, Ore., Sept. 12.—To formulate plans for taking care of the deluge of Studebaker business in the Northwest and to initiate policies of far-reaching significance to the motor buying public was the purpose of a conference of Studebaker dealers and sales managers called by J. A. Snoddy here. The representatives from the Studebaker corporation who attended the conference were H. S. Vance, general sales manager; F. W. LaPierre, accountant; J. W. Helm, used car merchandising adviser; George Nicodemus, service expert, and George L. Williams of the sales department.

Chandler Wins Peak Climb

Charlie Myers in Chandler car that won annual Pike's Peak climb Labor Day

N. A. D. A. Urges Production Be Kept Within Demand

Analysis Shows Dealer Mortality Increases Directly With Unnecessary Output

St. LOUIS, Sept. 12—"Dealer profits have been more satisfactory than for several years," declares C. A. Vane, general manager of N. A. D. A. reviewing the progress of the first six months of 1925. "But they will be kept so only by manufacturers keeping production within legitimate demand.

"In 1922 when there was a 50,000 overproduction of motor cars and trucks, there was a dealer mortality of 25 per cent. In 1923 when there was an overproduction of approximately 350,000 cars and trucks the mortality rate rose to nearly 35 per cent. Last year when production was kept within bounds of sales, this mortality rate was checked being reduced to approximately 21 per cent. If the last six months of 1925 are sanely watched by all this mortality rate should be further reduced. There is no question but that over-production and dealer mortality go hand in hand."

Analysis of production and sales during the first six months of the year by N. A. D. A. shows that the United States came closer to an automobile shortage on July 1, than ever before. On that date there were approximately 10,000 new automobiles in the hands of 45,000 dealers throughout the nation, indicating that there were a greater number of dealers without new cars of any kind. At the same time there were approximately 200,000 used cars in the hands of the same dealers. In 1924 there were about 20,000 new cars in dealers' hands and approximately 300,000 used automobiles. In 1923 there were 60,000 new cars in dealers' hands and 400,000 used cars and in 1922 about 175,000 new and 400,000 used cars in dealers hands.

The period in addition to being good for the dealer was also advantageous to the manufacturers, as is shown by the tremendous increases in the net earnings of the leading producers, the gain in the stock market quotations of their shares and by the extra dividends declared by many and the swelled cash reserves with which they will go into the fall and winter months.

A. E. A. to Give Prizes for Best Window Display Photos

CHICAGO, Sept. 14.—For the third consecutive time the Automotive Equipment Association will award cash prizes again this year for the best photographs of Christmas window displays made by retail automotive merchants. In last year's contest $500 was distributed to dealers who entered the contest.

The contest this year will be conducted along the same lines as that last year. The merchandising department of the A. E. A., under the management of Arthur R. Mogge, merchandising director, will prepare literature and decorative material which will be distributed to dealers by the A. E. A. jobbers.

Details of the contest will be announced shortly and full information may be obtained by dealers from the A. E. A. or from jobbers and their salesmen.

Tourings Hold Lead Survey Shows

WASHINGTON, Sept. 12.—How many automobiles of various types are in use in the average American city?

This question has been answered here by the report of McClellan and Junkersfeld, New York engineers, conducting a comprehensive survey of the transportation facilities of the National Capital.

Touring cars predominate in Washington, there being 37,542 of this style in use. The next type in popularity is the sedan with 14,447 driven by Washingtonians. The number of other types in use is: coupes, 9,245; roadsters, 6,235 and coaches 2,693.

There are also 10,631 motor trucks in service here.

PAIGE PLANS NEW CAR

DETROIT, Sept. 12.—Distributors and dealers of Paige and Jewett lines have received information that a new car which may round out the existing lines may be expected about show time. It is thought that the new car will fit into an unoccupied place in the price scale below the present Jewett. No statement of verification is forthcoming from the home office at this time although officials stated that considerable attention is being devoted to such a move. Several experimental jobs have been on the road but the status of policies and plans for the moment does not warrant any direct statement of either denial or confirmation.

JORDAN MAKING READY

CLEVELAND, Sept. 14.—In preparation for a new car to be announced in these columns next week, the plant of the Jordan Motor Car Co. is busily engaged in tooling up for quantity production of the new model. It is understood on reliable authority that the new Jordan car will be a smaller brother of the present eight-in-line Jordan and that it probably will be the lowest priced eight on the market.

EXTRA REO DIVIDEND

LANSING, Sept. 12.—The board of directors of the Reo Motor Car Company at their recent meeting here, voted to declare an extra dividend of 3 per cent cash and a regular dividend of 2 per cent to be paid October 1 to holders of Reo stock as of September 15.

St. Louis Dealers to Try Auction Plan on Used Cars

If Venture Is Successful Firms Plan to Continue Scheme Throughout Winter

ST. LOUIS, Sept. 12.—Six members of the St. Louis Automobile Dealers' Association will hold a used car auction on each of five Saturdays starting Sept. 12 at the St. Louis County Farmers' Cooperative market, Sarah street and Laclede avenue. Should the venture prove successful it will be continued through the winter.

The names of the firms who have entered into the arrangement will not be made public in connection with the auction. It will be held under the direction of A. A. Selkirk, auctioneer. The automobile dealers will consign 10 automobiles to him each Saturday morning and if there are any left they will be driven back each Saturday night. The certificates of title will accompany each car to the auction ground and there will be representatives of two finance companies on the ground to take care of any purchasers who desire extended payment.

While the used car stocks in dealers' hands here at this time are low, lower than any time during the last five years, according to Robert E. Lee, manager of the Association, the dealers feel that they would like to go into the winter with as few used cars on hand as possible. That is the reason why the auction plan is to be tried. The dealers feel that they will be able to reach many prospects at the market who otherwise would not visit the automobile establishments.

A. E. A. Plans Resumption of "Ask 'Em to Buy" Campaign

CHICAGO, Sept. 14.—Revival and expansion of the "Ask 'Em to Buy" campaign of the Automotive Equipment Association is under consideration by the merchandising committee of the A. E. A. The success that attended this campaign when it was first introduced about three years ago leads the committee to believe that it could very profitably be made the central activity of the merchandising department for an indefinite period.

Concentration on this campaign probably would include a revision of the motion picture, "Ask 'Em to Buy," and other material used in the original effort. The campaign could be expanded to include the whole realm of automotive merchandise as well as accessories.

This subject probably will be one of the major considerations at the convention of the A. E. A. in Chicago in November.

OVERLAND DIVIDEND

TOLEDO, Sept. 12.—Directors of the Willys-Overland Co., at a meeting here yesterday, declared the regular dividend of $1.75 on the preferred stock, payable Oct. 1 to holders of record Sept. 21.

Rickenbacker Sees Smaller, Lower Automobile in Future

Manufacturer Believes Balloon Tires Eventually Will Take Place of Springs

ST. LOUIS, Sept. 12.—What of the motor car of the future? Capt. E. V. Rickenbacker, vice-president of the Rickenbacker Automobile Co., was asked this on his visit to St. Louis last week to help launch the Rickenbacker St. Louis Co., new distributors of the Rickenbacker car in St. Louis territory.

"Well," said Rickenbacker, "first you must bear in mind how rapidly we are building more and better smooth roads, and how congestion and traffic problems are multiplying. There is no longer any reason why an automobile should take up the space used by 20 people to carry an average of three. Therefore, it is obvious that cars must grow smaller, shorter, lighter and more economical of gasoline and oil. Engines must become steadily smaller and more efficient.

"What I am now going to say is in no sense a foreshadowing of the Rickenbacker factory plans. It is merely an attempt to visualize the car that is to come in the next five or ten years.

"I believe that springs will be eliminated, as also will be the overhang of a car front and rear.

"There are two sources of riding comfort—natural and mechanical. The natural source is air, the mechanical is springs. Air is the proper cushion for an automobile, not springs. We have good roads that are growing better, and balloon tires. Why not center our efforts for comfort in the balloon tire? Why not make it bigger in cross section and smaller in diameter? This would mean doing away with wheels, which would become drums for the brakes. With the roads we will have in five or ten years, road clearance of four inches or so will be sufficient, making the small thick balloons practicable. Then the frame can be hung directly from the axles.

"The body can be built out so as to overhang these small tires, and the tread can be narrowed to, say, 40 to 46 inches, and still the car can carry as many passengers as the large cars of today.

"The trend toward such cars, it seems to me, is natural, being forced by the logic of events. The number of cars operating over our roads is rapidly increasing. It is entirely possible that some day we may have as many as 30,000,000 of them. This will mean more roads, increased property values, greater congestion in population centers, larger consumption of gasoline and oil. Space and expense must be economized.

"The demand for small, compact, economically operated cars is beginning to be felt. It will be felt with increasing strength until it has resulted in a complete change in automobiles."

GRAHAM OUTPUT HEAVY

DETROIT, Mich., Sept. 12.—Official figures have been released showing that 10,800 Graham Bros. trucks have been shipped for the first half of 1925. This equals their entire 1924 output. The daily production of Graham Bros. trucks is 40 per cent higher at present than in January and according to factory officials is being further increased to supply the demand. Retail deliveries during June and July have held up to the record deliveries established during March and April.

RADIO DEALERS BANQUET

BOSTON, Sept. 12.—Frank Murray, general manager for the Post & Lester Company's Boston headquarters, was host here at a dinner held at the Hotel Brunswick, attended by the sales department of the organization and 137 distributors of radio operating under the company.

While primarily a radio dinner with Alex Eisemann, treasurer, and Paul Connel, advertising manager, of the Freed-Eisemann Radio Corporation of New York as the special guests, merchandising topics came up regarding motor sales in a general way, and the adaptation of radio to the motor accessory dealer's line. Vice President J. D. Tarcher, of Homans, Tarcher & Connell, and Sales Manager W. C. Chandler, of Post & Lester, were also present. Mr. Eisemann gave the principal address.

Old Ford Dealer Firm Gives Up Franchise for Chevrolet

CHARLOTTE, N. C., Sept. 12.—One of the most surprising announcements in the history of the automotive industry of this section was that in which the Pyramid Motor Company, oldest Ford dealer in this city and one of the oldest in the Carolinas, announced it had surrendered its contract with the Ford Motor Company and had closed a contract for the Chevrolet dealership for Mecklenburg county. This company moved a few months ago into its $250,000 building here. Fred Anderson is president of this company.

The Chevrolet line has not been represented in this county by a dealer during the last year or more and representatives of the Chevrolet factory at the branch here explained this was due to the large investment required to meet the terms of the Mecklenburg county dealer contract.

Whether the branch of the Ford Motor Company here will name a dealer to succeed the Pyramid Motor Company remained speculative, as no announcement was forthcoming from Ford officials. Two Ford-Lincoln dealers are now in business here.

GAS TAX EXCEEDS ESTIMATE

LOUISVILLE, Sept. 12.—Kentucky motorists have paid a total of $3,003,100.08 as gasoline tax in Kentucky for the year ending June 30, 1925. The tax is three cents. This amount exceeded the original estimate by $500,000. The biggest month of the year was June, 1925, when collections totaled $295,918.76.

Dealer Net Profits Show Slight Increase in 1924

N. A. D. A. Figures Reveal Average Profit is 3.4 Per Cent of Sales Volume

ST. LOUIS, Sept. 12.—Automobile dealer net profits showed an increase of four-tenths of 1 per cent, as a national average for 1924, in an announcement of the National Automobile Dealers Association. This increase in net profit, was due almost entirely to the reduction in used car losses in 1924. In affecting this increase in the total net profit, it was noticeable that the cost of doing business had risen over the level of 1923.

Closer buying of used cars, a greater knowledge of the used car market, a longer time and greater expense in selling new cars, an increase in advertising costs, all were a part of the increased cost of making car sales. The consequent reduction in used car losses had the substantial result of increasing net profits.

The average net profit actually recorded for all automobile dealers in 1924 was 3.4 per cent on the total sales volume. This is compared with 3 per cent recorded in 1923 which was an increase over 1922. The amount of net profit which the automobile dealer earns on his total sales volume has been very much inflated in the public mind, national association executives assert. For more than three years the national association has been carrying on a consistent effort to arouse the automobile business to the necessity for the automobile dealer to realize a 5 per cent net profit on his sales volume, in order to justify good business men remaining in the automobile retail business.

In one certain line of automobiles, at which the public looked as one of immense profit for the dealers, only 10 dealers made a net profit equal to 5 per cent in 1923. In 1924 that line had 41 dealers with a net profit up to the 5 per cent goal. That line of cars has more than 1,000 dealers.

Used car losses in 1923 were equal to 9 cents per dollar of car sales volume. This was reduced to 8.2 cents per dollar of car sales volume for 1924.

VELIE WORKING NIGHTS

MOLINE, Sept. 12.—Working two nights a week until 9 and Saturday afternoons until 4 the Velie Motors Corporation is endeavoring to catch up on its back orders. Output continues at better than 50 cars daily and September shipments will surpass those of the same month a year ago, when more than 700 cars were sent out. The E. H. Wilson Manufacturing Company, formerly the Moline Body Corporation, continues turning out about 50 bodies daily for the Velie Motors Corporation besides supplying several other automobile shops in the east. Several departments are working nights.

Leading Tire Firms Show Big Increases in Earnings

First Eight Months of 1925 Better Than All of 1924, Figures Reveal

AKRON, O., Sept. 12.—Earnings of the leading tire and rubber companies during the first eight months of the year already have exceeded those of the entire year of 1924. For this reason, business in the last four months of 1925 could fall off 50 per cent or more and still run far ahead of the previous year.

Authorities in the industry such as E. G. Wilmer, chairman of the board of the Goodyear Tire & Rubber Co., and B. G. Work, president of the B. F. Goodrich Co., express the opinion that business of the rubber companies in the last half of the year will be less than it was in the first half.

There is certain to be a sufficient return, however, to bring this year's total income of the well established concerns well above that of 1924, which means that 1925 will be the best year the industry has enjoyed since the depression of 1920. 1920.

Goodyear's net income in the first half year was $9,011,407, compared with $4,173,120 for the first six months of 1924. Net profits of Goodrich were $7,710,000 for the first half year, against $2,755,617 in the same period of 1924. A gain of $1,000,000 was reported in sales volume.

Net earnings of the United States Rubber Co. for the six months ended June 30, 1925, were $5,875,204, against $4,422,487 reported in the first half of 1924. This report did not include income from the plantation companies operated by United States, which made large earnings, due to the rise in crude rubber prices.

A recent report of the Miller Rubber Co. for the first half year shows net earnings of $2,048,343, after taxes and interest, compared with $2,216,878 for the entire year of 1924.

Profits available for the common stock were $32.81 a share, against $29.52 for all of 1924, $25.37 for 1923 and $32.63 for 1922.

On the basis of business in July and August, the majority of rubber and tire companies probably will report sales and earnings during the third quarter almost as large, if not equal to the record breaking second quarter.

Original equipment business, which declined somewhat during July and the first part of August, is showing an increase, due to greater sales of new automobiles, following announcement of price cuts and the bringing out of new models.

NEW LOCOMOBILE DEALERS

BRIDGEPORT, Conn., Sept. 12.—The Locomobile Company of America, Inc., announces the appointment of the following dealers to handle the new Junior Eight car, deliveries of which are now being made by the factory at the rate of 25 daily:

Ernest W. Taylor, Auburn, Me.; North Shore Locomobile Company, Huntington, Long Island, N. Y.; Union Square Locomobile Company, Cleveland, O.; Hoffman Motor Company, Bethlehem, Pa.; Victor H. Pontiere, Inc., Ocean City, N. J.; Anderson Motor Company, Malden, Mass.; Peabody Garage, Peabody, Mass.; Walter B. Reichardt, Yonkers, N. Y.; Morris Motor Car Co., Jersey City, N. J.; Santa Rosa Locomobile Sales Co., Santa Rosa, Cal.; The Ocean County Locomobile Co., Seaside Park, N. J.; Wagner and Bertrand Company, Springfield, Mass.; Central Florida Motor Co., Arcadia, Fla.; Palatka Nash Motor Co., Palatka, Fla.

New Stutz Vice President

Col. Edgar S. Gorrell, who has resigned as vice president of Marmon to accept vice presidency of Stutz Motor Car Co. of America

Nash Sales Inc. Is New Northern Distributing Co.

MILWAUKEE, Sept. 12.—One of the most important changes in the automotive distributing field of the Middle West in several years is represented by the incorporation of Nash Sales, Inc., Milwaukee, with a capital stock of $500,000, to take over the distribution of the Nash and Ajax in Wisconsin, upper Michigan and a part of Minnesota. Rudolf Hokanson, vice president and general manager of the same territory for the Nash Sales Co., the largest distributing organization connected with the Nash Motors Co., is president of the new company.

M. W. Libhart, who has been serving under Mr. Hokanson in the old organization as wholesale sales manager, becomes vice president and general sales manager, and E. J. Thelen, retail sales manager, has been elected secretary of the new corporation, and will continue in charge of Milwaukee retail sales. The sales organization for the entire territory embraces eighteen dealers in the Milwaukee metropolitan district and more than 150 dealers in Wisconsin, upper Michigan and that part of Minnesota included in the territory.

Details of Big M. & A. M. A. Montreal Meeting Arranged

Many Prominent Industrialists to Speak at Session Oct. 7-10

NEW YORK, Sept. 12.—Additional details of the plans for the convention of the Motor and Accessory Manufacturers Association at Montreal, Oct. 7-10, were made known this week by the program committee.

Francis H. Sisson, vice-president of the Guaranty Trust Co., will talk on "The World Outlook for Business," R. W. Procter, sales manager of the Black & Decker Manufacturing Co., will discuss "Making the Jobber a Partner in the Selling Enterprise," and J. H. Barber, Walworth Manufacturing Co., will speak on "Maintaining Turnover on a 20,000 Item Line."

Chairman of the various sessions include E. P. Chalfant, Gill Manufacturing Co., president of the association; L. A. Safford, vice president of the McQuay-Norris Manufacturing Co.; E. V. Hennecke, vice president of the Moto-Meter Co.; R. E. Hayslett, treasurer of the Hydraulic Steel Co.; J. F. Hennessey, general manager of the Phinney-Walker Co.

The program committee has voted to waive the usual $10 registration fee and is urging executives to bring as many of their department heads as possible. The sessions will be held at the Mount Royal Hotel, where the delegates will be welcomed by Mayor Charles Duquette of Montreal. Local tours and entertainments will be given with the co-operation of the Montreal Automotive Jobbers' Association, headed by M. W. Drayton of the Canadian Fairbanks-Morse Co.

Chrysler Transfers Parts Factory to Dayton, Ohio

DETROIT, Sept. 12.—Transfer of the parts plant of the Chrysler Corporation from Newcastle, Ind., to Dayton, O., has been announced by the company through J. E. Fields, vice-president in charge of sales. In the future all replacement parts for the Chrysler four and six, the Maxwell and Chalmers will be marketed from the Dayton plant, all the service parts manufacturing equipment having been transferred.

The change was made possible through placing the closed body work with the Fisher Body Corporation, releasing the buildings at Dayton in which this work was formerly done. The buildings at Newcastle have been turned over to the production department, adding 150,000 more square feet to that department. Approximately 300,000 square feet has been acquired at Dayton.

The transfer of the parts and service activities to Dayton were accomplished under the direction of John Squires, director of service of the Chrysler Corporation.

Along Automobile Row

CHARLOTTE, N. C.—Purchase of the McGlamery Auto Company, of Greensboro, N. C., by the Wiggins Motor Company, also of that city, for $100,000 was reported in press dispatches received here. The McGlamery Company is a dealer in Ford and Lincoln motor cars. J. M. Wiggins will be manager of the company hereafter. He formerly was connected with the City Motor Company, of Winston Salem, N. C., and recently was a Ford dealer at Apex N. C.

ROCKFORD, Ill.—Work is under way on J. Frank Deuel's new garage which is to be occupied early in November by Paul Thinker, who has secured the Pierce-Arrow agency here. Mr. Thinker was formerly with the Rockford Packard agency.

ASHLAND, Ore.—Harrison Brothers, who for several years past have had the Ford agency, have announced that they have cancelled their contract with that firm. Their future plans have as yet not been announced.

POPLAR BLUFF, Mo.—Charles F. Rickman, and Lawrence Cornell have accepted the agency for the Cleveland automobile and will open their garage and salesroom in the Berryman-Kennedy building. The company will be known as the Rickman Motor Sales.

SIOUX CITY, Ia.—Roy S. Potter, service manager for the Overland and Willys-Knight Motor Company several years, has succeeded W. L. Sloan as retail sales manager. Mr. Sloan will engage in business in Florida. Harry Spring, shop foreman, has been advanced to service department head.

PEORIA, Ill.—The Nelson-Wood Company, one of the best known automobile concerns in this section of the state, has taken the Peoria territory for the Marmon cars and is showing a line of late models.

LOS ANGELES.—The Locomobile Company of California announces the appointment of Roberts Motors to represent the Locomobile in Long Beach. D. W. Roberts, the Long Beach dealer, has been engaged in automotive selling here and in the Middle West for many years.

MILWAUKEE.—J. Frank Mitchell, Inc., is a new Milwaukee concern with headquarters at 636-640 Lincoln avenue, which has been granted an Overland and Willys-Knight franchise as a community dealer operating under the factory branch of Willys-Overland, Inc., Milwaukee.

ST. LOUIS.—St. Louis County Auto Co., 7915-19 Forsyth boulevard has been appointed a Nash dealer by Southwest Nash Co., St. Louis distributors. Harry V. S. Grover is president of the St. Louis County Auto Co.

COLUMBUS, O.—The Ohio Motors Co., central Ohio distributors for the Overland and Willys-Knight lines will soon move into a new building on Fifth street near Broad street, which will contain the salesrooms and service station.

BATON ROUGE, La.—The Reeds-Watson Motor Company, dealers in Essex and Hudson cars, is the newest automobile agency in Baton Rouge, opening recently on Laurel street. The members of the firm are E. C. and C. E. Reeds of Fulton, Ky., and J. S. Watson, who for fourteen months was in charge of sales at the Nash Motor Company in New Orleans.

DETROIT.—As part of an expansion program being conducted by George E. Clarks, Willys-Overland manager in Detroit, the company has announced the opening of another retail store at the corner of Jefferson and Gray avenues. Harold Perkins is manager of the new store and will have twelve salesmen working under his direction.

SIDNEY, O.—The W. P. Murray Sales Co. is the name of a new concern of this city incorporated for $50,000 by H. P. Murray, W. P. Anderson, Ward Cartright, Harry McClelland and Royon G. Hess to deal in new and used motor vehicles and operates a garage for service and storage.

ST. LOUIS.—J. M. Lederer & Co., Willys-Knight and Overland dealer will move into new quarters at 3128 Locust street, formerly occupied by the De Luxe Automobile Co., Oldsmobile distributors here now located across the street.

MILWAUKEE.—The White Co., Cleveland, has established a direct factory branch in Milwaukee at 671 Kinnickinnic avenue, in the sales and service building until now occupied by the Wisconsin White Co., pending erection of a new headquarters. T. C. Phillips has been appointed branch manager.

AURORA, Ill.—The Nash-Ajax Motor Car Company has been organized here and has opened a garage and sales agency. It is proposed to distribute several lines of motor cars, handle accessories and also do a general repair and storage business.

ST. LOUIS.—C. A. Welling Co. has been organized and authorized by the Moon Motor Car Co. to handle Moon and Diana cars at its establishment in Webster Groves, Mo. Conrad A. Welling who is head of the Welling Company has been in the automobile field in St. Louis, since 1910.

GREENSBORO, N. C.—Gate City Motor Company has taken on local distribution of Chrysler motor cars.

TOLEDO.—The United Automobile Service League, Inc., 955 Spitzer Building, has been incorporated with an authorized capital of $10,000 to render service to motorists. Incorporators are Louis and Howard H. Jacobson, Phillips E. Cramer, Louis C. Wassmus and Charles F. Redle.

NEW ORLEANS.—The New Orleans Buick, Inc., has established a new downtown showroom and service branch at 635 North Rampart street.

FOND DU LAC, Wis.—Robert Phinney, formerly engaged in the tire and equipment business in Milwaukee, but for the last year a city motorcycle policeman in Fond du Lac, has purchased the E. Eugene Raymer Sales & Service Station and takes over the Chandler and Cleveland franchise. Mr. Raymer retires from the trade after eleven years to give his entire time to new duties as president and general manager of the White House Crooker Co., Fond du Lac.

OAKLAND, Cal.—Increase in business since the end of June has compelled the Howard Automobile Company, Buick dealer here, to add four salesmen to their staff, according to announcement by William Kearns, manager of the Oakland store. The new men are W. J. Bondy, J. M. French, William Wood and P. L. Reppert.

TOLEDO.—The Bliss Motor Sales Co., Hudson-Essex distributors in the Toledo territory, have announced the opening of a new branch dealer at 1936 Broadway under control of the Leydorf-Barrata Co., which also operated a branch in West Toledo. E. H. Leydorf and A. C. Barrata are members of the firm. They will continue their former branch as a service station.

NEW ORLEANS.—The Coci Motor Co. Inc., Star and Durant dealers, has opened at 619-621 North Rampart street, New Orleans, with Joseph Coci, president.

ST. LOUIS.—St. Louis Auto Sales Co., Oakland dealer, has purchased a two-story brick building at 4036-38 Easton avenue, which it will occupy when it is remodeled. William Schrieber is president of the company.

DETROIT.—H. A. Schmid Company has taken over new Nash quarters at the corner of Gratiot avenue and Glenfield, Detroit. H. A. Schmid, president of the company is one of the veterans among Detroit automobile men having been connected with the industry for the past 18 years.

AURORA, Ill.—The Nash-Ajax company of Plano, Ill., incorporated with $15,000 capital will establish an agency in this city, succeeding the Coats garage. Howard Dewey is president; Paul Cornell and Louis C. Oleson members of the firm.

MADISON, Wis.—The Smart Motor Car 601 University avenue, Madison, Wis., has been appointed Paige and Jewett dealer.

CLEVELAND, O.—Sam's Auto Accessories, Inc., is the name of a new Cleveland concern, recently capitalized at $10,000 to deal in auto tires and accessories.

PORTLAND, Ore.—J. O. Fisher with the Braley & Graham Company, Dodge dealers has left for Marshfield, Ore., where he has taken over the Dodge franchise, which was formerly handled by L. H. Pierce. Mr. Fisher is the third salesman to get a franchise after serving with Bradley & Graham. H. C. Braley went to Centralia, Wash., and C. S. Eakin to Medford, Ore.

CHICAGO.—J. Toman, Auburn dealer of Oak Park, has opened an Auburn salesroom at 6037 Cottage Grove avenue. He will retain his Auburn account in the west side suburb, however.

ST. LOUIS.—R. J. Smith who has been connected with the distribution of the products of the Durant Motors Inc., has been appointed manager of the St. Louis Durant Co., the factory branch handling the Durant and Star lines here. The Company is located at 3205 Locust street.

COLUMBUS, O.—George Linge, formerly salesmanager of the H. B. Tait Auto Co., has been made manager of Flint branch in Columbus, 184 East Long street.

SHREVEPORT.—The Overland-Louisiana Company, formerly of 213 Travis street, Shreveport, has moved into its new home in Agurs, across the Market street bridge.

CHARLOTTE, N. C.—The Upchurch Motor Company of Greenville, S. C., has taken over the Studebaker agency here. The concern will be located in the West Trade Street Building formerly occupied by C. C. Coddington, Inc. The Rust Motor Company was formerly distributor for this company here.

AURORA, Ill.—Charles Leek has taken over the management of the Aurora Buick Motor Car Company, succeeding R. K. Hitchens who enters the service of the Northwest Buick Company of Chicago. Leek plans to enlarge the Buick service station and sales agency quarters here and will make a number of improvements during the fall.

MADISON, Wis.—H. E. Klein and W. H. Koch, formerly salesmen for the Madison Nash Co., have formed a partnership to become Chandler and Cleveland dealers in Madison, with sales and service headquarters at 515 University avenue.

CLEVELAND, O.—The Gates Ignition and Battery Service Co., has been incorporated with a capital of five shares, no par value designated, to repair ignition and storage batteries.

NEW ORLEANS.—New Orleans first big storage garage, Clark's Strand Garage at the corner of Gravier and Dryades streets, has opened. It is six stories in height and modern in every way.

AKRON.—The General Tire & Rubber Co., has been chartered with a $10,000 capital to do a general agency and commission business in automobile tires.

ST. LOUIS.—The Lambert-Graves Motor Company, Ford and Lincoln dealer, has broken ground for the erection of the company's third large building, to be erected directly behind the present Ford building.

MOLINE.—Agency for the Hudson and Essex automobiles has been taken by William M. McMullen of the McMullen Sales & Service Co.

DETROIT.—Leo A. Kelly one of the "oldtimers" on Detroit's automobile row has returned and is now connected with the Detroit branch of the Studebaker Corporation of America, C. A. Whittaker, retail manager has announced.

COLUMBUS, O.—The Lostro Auto Sales Co., Columbus, has taken the central Ohio agency for the Marmon.

With the Associations

Oregon Dealers Act

MARSHFIELD, Ore., Sept. 12.—The following resolution on the used car question has been adopted by the Automobile Dealers' Association of Coos and Curry County:

Whereas, the problem of trade-ins of used cars is becoming more and more serious with the seller of new cars, and,

Whereas, no satisfactory solution has yet been devised for meeting this economic problem, and,

Whereas, the dealer in new cars is at the mercy of unscrupulous competition; the prospect with a trade-in; overstocking of used cars; inflated appraisals of trade-ins by competitors; additional overhead necessary to handle trade-ins.

Whereas, the forced creation of used car markets would result from an ironclad policy on the part of manufacturers forbidding the barter and sale of used cars by dealers in new cars, be it therefore

Resolved, that the Automobile Dealers Association of Coos and Curry Counties in the State of Oregon go on record as favoring the formation of such a policy by the manufacturers, that a copy of this resolution be sent to the Automobile Chamber of Commerce, the Portland Automobile Dealers' Association, the National Automobile Dealers' Association, *Motor* and MOTOR AGE, and a copy spread upon the minutes of this meeting.

The president of the Association is Walter A. Guyer and the secretary is Robert C. Dillard. Other members of the Resolutions Committee are C. E. Smith and E. W. Barnum.

Faeh Heads Ohio Council

COLUMBUS, O., Sept. 12.—A. C. Faeh, who has been selected secretary of the Ohio Council, National Automobile Dealers' Association, which supercedes the Ohio Automotive Trade Association has established his office in the Majestic Theater Building. He has had extensive experience in organization circles, having been in charge of several large automobile shows. He is also an expert advertising man in automobile matters.

Sioux City to Have Show

SIOUX CITY, IA., Sept. 12.—The Motor Trade bureau of the Sioux City Chamber of Commerce is planning one of the largest automobile shows it has ever handled in connection with the Interstate Fair here Sept. 20-25. Already 25 dealers have applied for space in the newly decorated automobile building and many of them are negotiating with their factory chiefs for the display of the newest and most exclusive models. It is expected that at least 65 cars will be shown. Ryal Miller, president of the bureau, is handling the preliminary arrangements.

Tire Dealers Plan Details

NEW YORK, Sept. 12.—New arrangements have been made in connection with the annual meeting of the National Tire Dealers' Association at St. Louis, Nov. 17-19, it is announced by George J. Burger, president of the association.

The official meeting place and the official hotel will be the Hotel Chase in St. Louis. On the morning of November 17, registration will be at the Southeast Lounge of the hotel. The same day in the ball room, there will be a meeting of the board of directors and convention committee. In the Palm Room, there will be a general session.

On November 18, there will be a general meeting in the Palm Room and a banquet in the same place at 7:30 p. m. The general session and banquet will again be held Thursday, November 18 in the same room.

Cincinnati Plans Show

CINCINNATI, Sept. 12.—The 1926 automobile show will be January 16-23 at the Cincinnati Music Hall according to the announcement made today by Harry T. Gardner, manager of the Cincinnati Auto Dealers' Association. Many new features will be introduced and the display of cars will be larger and better than at any previous show.

Ask Excise Repeal

CHARLOTTE, N. C., Sept. 12.—Passage of a resolution, urging removal by Congress of the wartime excise tax on automotive parts and units featured a weekly meeting of the Charlotte Automotive Service Association. Tom McP. Glasgow, member of this association and president of the Southern Automotive Jobbers' Association, presented the resolution.

Memphis Exhibit Planned

MEMPHIS, Sept. 12. — The Memphis Automobile Dealers' Association, of which Ray R. Price is president, will conduct a show in connection with the Tri-State Fair, Memphis, Sept. 26 to Oct. 3. All of the Memphis dealers and distributors are now busy with plans for special displays. Closed cars will dominate the exhibit this season. Mechanical betterment will have an important part in the exhibit. Several displays of mechanical units will be made.

Des Moines Tradesmen Picnic

DES MOINES, Ia., Sept. 12.—The annual picnic of the motor trades bureau of the Chamber of Commerce, was held at Coney Island Park. All automotive establishments of the city were closed during the afternoon of the picnic. A well planned program of amusement was arranged by C. E. Van Vliet, secretary of the bureau.

Southern N. A. D. A. Meetings

MOBILE, ALA., Sept. 12.—The automotive committee of the Mobile Chamber of Commerce has sent invitations to dealers representing all branches of the automotive industry in South Alabama and adjacent territory to attend the Automobile Congress of the National Automobile Dealers' Association to be held in the city of Nov. 5, and indications are that the congress will bring together several hundred dealers from this territory.

On Nov. 4 the association will have a similar congress at Birmingham, Ala., and the Chamber of Commerce of that city also is sending invitations to all dealers and distributors in the Birmingham territory to attend. After the meeting at Mobile Nov. 5 the congress will move on to New Orleans where a similar meeting will be held Nov. 6.

The plans of the congress for all three of the above cities call for a thorough discussion of management, sales, maintenance, and similar subjects, particular attention to be given to the used car problem and the successful and profitable marketing of used car merchandise. Expert speakers will be heard at all of the meetings.

New Denver Association

DENVER, Sept. 12.—The Denver Automobile Dealers' Association, Tom Brader, secretary-treasurer, is located in the B. K. Sweeney Block on Broadway, and is limited to a membership of 30, with a present membership of 28. Besides looking after the general interests of the trade in this city, it publishes a monthly bulletin of factory and Denver prices of all cars handled in Denver, holds luncheons every two weeks at the Brown Palace Hotel and furnishes its members with what is in effect a local Blue Book on used cars each month.

All agencies report their used car sales, with data on model, year, price, and condition of car. These reports are condensed into one bulletin which goes back to the members.

In addition to the above service, the association has a secret advertising committee, which passes on all classes of advertising for its members, and either approve or leaves the soliciting medium "unapproved," in which case the members are not allowed to use the "unapproved medium," and are relieved of the responsibility of explanations.

Membership in this association is by invitation only, and names of candidates must pass through a membership committee before coming before the association.

The Secretary, in addition to his duties in the association is traffic manager for fourteen of the largest dealers in this city.

Coming Motor Events

Buenos Aires, Argentina—Oct. 3-13
Pan-American Road Congress.

London, England—Oct. 8-17
Olympia Passenger Car Show.

London, England—Oct. 29-Nov. 7
Annual Truck Show.

Goodyear Official Sees No Tire Price Drop in 1925

AKRON, O., Sept. 12.—There is little hope of a decline in tire prices during 1925, despite a drop of about 40 cents in the crude rubber market since July, according to the statement issued today by L. C. Rockhill, sales manager of the Goodyear Tire & Rubber Co.

The reason is, that tire prices have never gone up in proportion to the spectacular rise in the cost of crude rubber, he points out, and present tire prices are based on rubber values considerably under the present market.

"Although rubber reached $1.21 a pound in July, this had practically nothing to do with present tire prices, because very little rubber was bought by important manufacturers at this price," he states. "If rubber at this cost had entered into porduction of tires, tire prices would be a lot higher than they are now."

Detroit to Be Placed on Air Mail Line, Says New

DETROIT, Sept. 12.—Detroit is to be included in the itinerary of the air mail service planes, Postmaster General Harry S. New has assured local post-office officials after a conference with Henry Ford in which the subject of the airmail was thoroughly discussed.

But as for Mr. Ford building the planes that would carry the mail or the Ford planes now operating between Cleveland, Chicago and Detroit, Mr. New said that no agreement had been reached. Under the law Mr. New said that Mr. Ford would have to engage in competitive bidding before his planes could carry the mail. In the past it has been against the policy of the Ford company to sell air transportation under any consideration.

"In my conference with Mr. Ford and other officials of the Ford Motor Company, we discussed the need of an airmail service for Detroit," said Mr. New. "Mr. Ford was enthusiastic over the project and I am convinced that he will lend his aid to our plans for this city a reality."

Swearingen Joins Staff of Motor World Wholesale

NEW YORK, Sept. 12.—Charles C. Swearingen, for 15 years a contributor to Motor World has joined the Motor World Wholesale staff as managing editor. His activities in the automotive industry date back to 1910 when he organized the automobile department of the Louisville Courier-Journal and became the Louisville correspondent for the Class Journal papers.

His automobile section created much favorable comment in trade circles not only in the Blue Grass State, but throughout the country. He has been a familiar visitor at many of the larger automobile shows and other automotive gatherings for many years through which he has accumulated a wide acquaintance with automobile men and a broad understanding of their interests and problems.

Mr. Swearingen's appointment fills the vacancy on Motor World Wholesale headquarters staff caused by the resignation of Ralph Schrenkeisen, who has joined the Commerical Investment Trust Co., at New York headquarters, in an educational and merchandising capacity. Mr. Schrenkeisen's articles for distributors and distributor salesmen will continue to appear from time to time in Motor World Wholesale.

NEW CADILLAC DEALERS

DETROIT, Sept. 12.—New dealers added to the organization of the Cadillac Motor Car Co. include:

B. & C. Auto Co., Athens, Ga.; O. L. Darwin, Eau Claire, Wis.; McDermoth Motor Co., Inc., Brownsville, Tex.; Greenville Buick Co., Greenville, Miss.; Hammond Jones, Lakeland, Fla.; Oakland-Perrin Company, Mankato, Minn.; Roodhouse Motor Company, Okmulgee, Okla.; Edward J. Lawrence, Prescott, Ariz.

BRITISH SUBSIDIZE CABS

WASHINGTON, Sept. 12.—The English House of Commons, under the Trade Facilities Act, has decided to grant an advance or guarantee of £365,000 to the Beardmore people to enable them to construct and place on the streets of London approximately 750 new taxicabs, the automotive division of the Department of Commerce is informed. The taxicabs are to meet the annual normal wastage of about 500 cabs per year, and it is stated this aid was granted because, without it, the orders for the cabs, which are urgently needed, would have gone to French, Italian and American firms.

Engineer Blames Poor Light, Not Glare, for Most Mishaps

Three Times as Many Accidents Result From Insufficient Illumination, DeVine Says

DETROIT, Sept. 15. — Insufficient illumination ahead of the driver is the cause of three automobile accidents at night for every one caused by glare, according to Alfred W. DeVine, Boston, engineer for the Massachusetts Registry of Motor Vehicles. Mr. DeVine addressed the opening session of the nineteenth annual convention of the Illuminating Engineering Society, at Hotel Statler here. The first meeting was devoted entirely to the problems of automobile lighting and the place of light in controlling traffic.

"Glare cannot be entirely eliminated," Mr. DeVine said, "but the need for controlling glare should not be overlooked.

"A survey made in Massachusetts of several hundred fatal accidents with automobiles showed that insufficient illumination ahead was the cause of three times as many night accidents as was glare. These results have been confirmed by the experiences of many seasoned observers.

"Glare is not often unusually dangerous if the operator adjusts his head lamps to secure relatively concentrated beam directed below the horizontal, keeps his windshield clean and uses a curtain in the back of the car to prevent reflection of light into his eye from other cars approaching from the rear. If these precautions are taken, and the operator is careful to refrain from looking directly into the headlamps of approaching cars, he will, except in a few extreme cases, be able to see any object on the roadway ahead in time to avoid it."

Good illumination and glare are interlinked, DeVine pointed out, and may not be separated from each other in any consideration of the subject because good illumination may result in glare and glare may render good illumination almost useless.

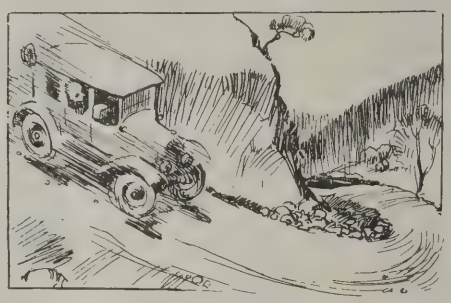
An ideal beam of light, as described by Mr. DeVine, "should be properly directed so as to strike the road surface where wanted under average conditions." The light, he emphasized should be uniform in intensity.

Many Sales Mark Show Held With Indiana Fair

INDIANAPOLIS, Sept. 12. — Good wholesale and retail business marks the automobile show held as a part of the Indiana State Fair which began Sept. 7, and ran to the end of the week. Eighteen distributors and branches exhibited about 100 new models at the show and several truck and body makers and a score of accessory and supply houses were represented in the affair.

There is a big demand not only from the public but from dealers of the state for more of the popular lines than the makers seem able to send into Indiana right now. A large number of distributors and branches report orders and sales far ahead of deliveries and a prospect for a continued good business through the entire fall.

Nearly all exhibitors report that a large number of dealers from out the state have visited the show and many of them have already started negotiations for new and added lines for the fall and next season. Some newer distributors whose state organizations are not yet complete report much better dealer interest than they had anticipated.



Indiana automotive dealers over the state are going into radio more generally than last year, according to three accessory and equipment jobbers who have devoted their entire show space to radio. Many new dealers have been signed up by each firm, it is reported and an unusual business in this department is expected.

FEDERAL NAMES ELLIS

OAKLAND, CAL., Sept. 12.—E. E. Ellis has been appointed manager of the Oakland branch of the Federal Motor Truck Company, according to announcement of that corporation.

SQUEEKS and RATTLES

EXPECTED

Passenger: "Driver! Driver! Have you lost your senses?"

Taxi Driver: "Not yet, but I reckon I will at the next turn—my brakes have gone flooie."

—Passing Show

"The new Dodge coupe has been approved by the Y. W. C. A. The stop light is inside."

—Greenwich Village Follies.

A boy has made a radio set from a peanut. It no doubt reproduces political speeches with pitiless accuracy.

—San Diego Union.

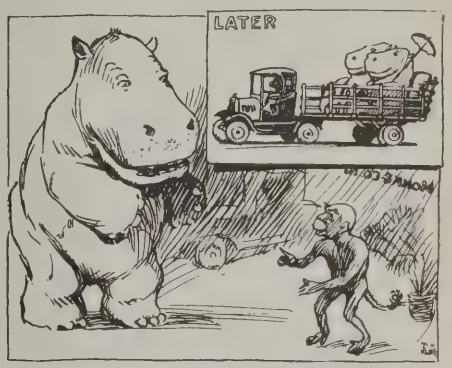
The Cry Today

"Is this Stratford?"

"Yes, sir. And Shakespeare's home—"

"I'm looking for a service station."

—Louisville Courier Journal.



Why Police Leave Home

"What are you doing there?" asked a policeman of a woman who had stopped her automobile near a corner, and was preparing to alight.

"Parking my car," she replied. "I thought this would be a good place. The sign there reads 'Safety Zone.'"

—Golden Circle

SALES DIFFICULTIES

Hippo: I'm looking for a smart little two-seater.

Salesman Monk: I have just the thing —Classy little limousine with chauffeur's box.

A Western plane traveled ninety miles on a cargo of vegetable fuel. At that rate it won't be long before the soft drink joints can qualify as aerial filling stations.

—Buffalo Express.

Exhibitors at Iowa Fair Report Number of Sales

DES MOINES, IA., Sept. 12. — Many sales were reported by automobile exhibitors showing at the Iowa State Fair which closed here last week. According to C. E. Van Vliet, manager of the automobile section, thirty-one different makes of car and trucks were exhibited at Machinery Hall.

This year's attendance at the fair was greater than at any previous fair, exceeding the attendance in 1919, when a record was set. The better financial condition of the state was responsible for the increased number of visitors, according to fair officials.

The exhibit of the Ford Motor Co. and 60 manufacturers of accessories and equipment for Ford products was one of the features of the fair, 280,000 square feet of space being occupied by the Ford exhibit. Demonstrations of Ford and Fordson appliances were conducted on a plot in the center, a set schedule being maintained each day. New models of Ford cars were shown. W. G. Arnold, manager of the tractor department, was in charge of the Ford display.

You can make Real Money selling

WESTINGHOUSE AIR SUSPENSION

WESTINGHOUSE

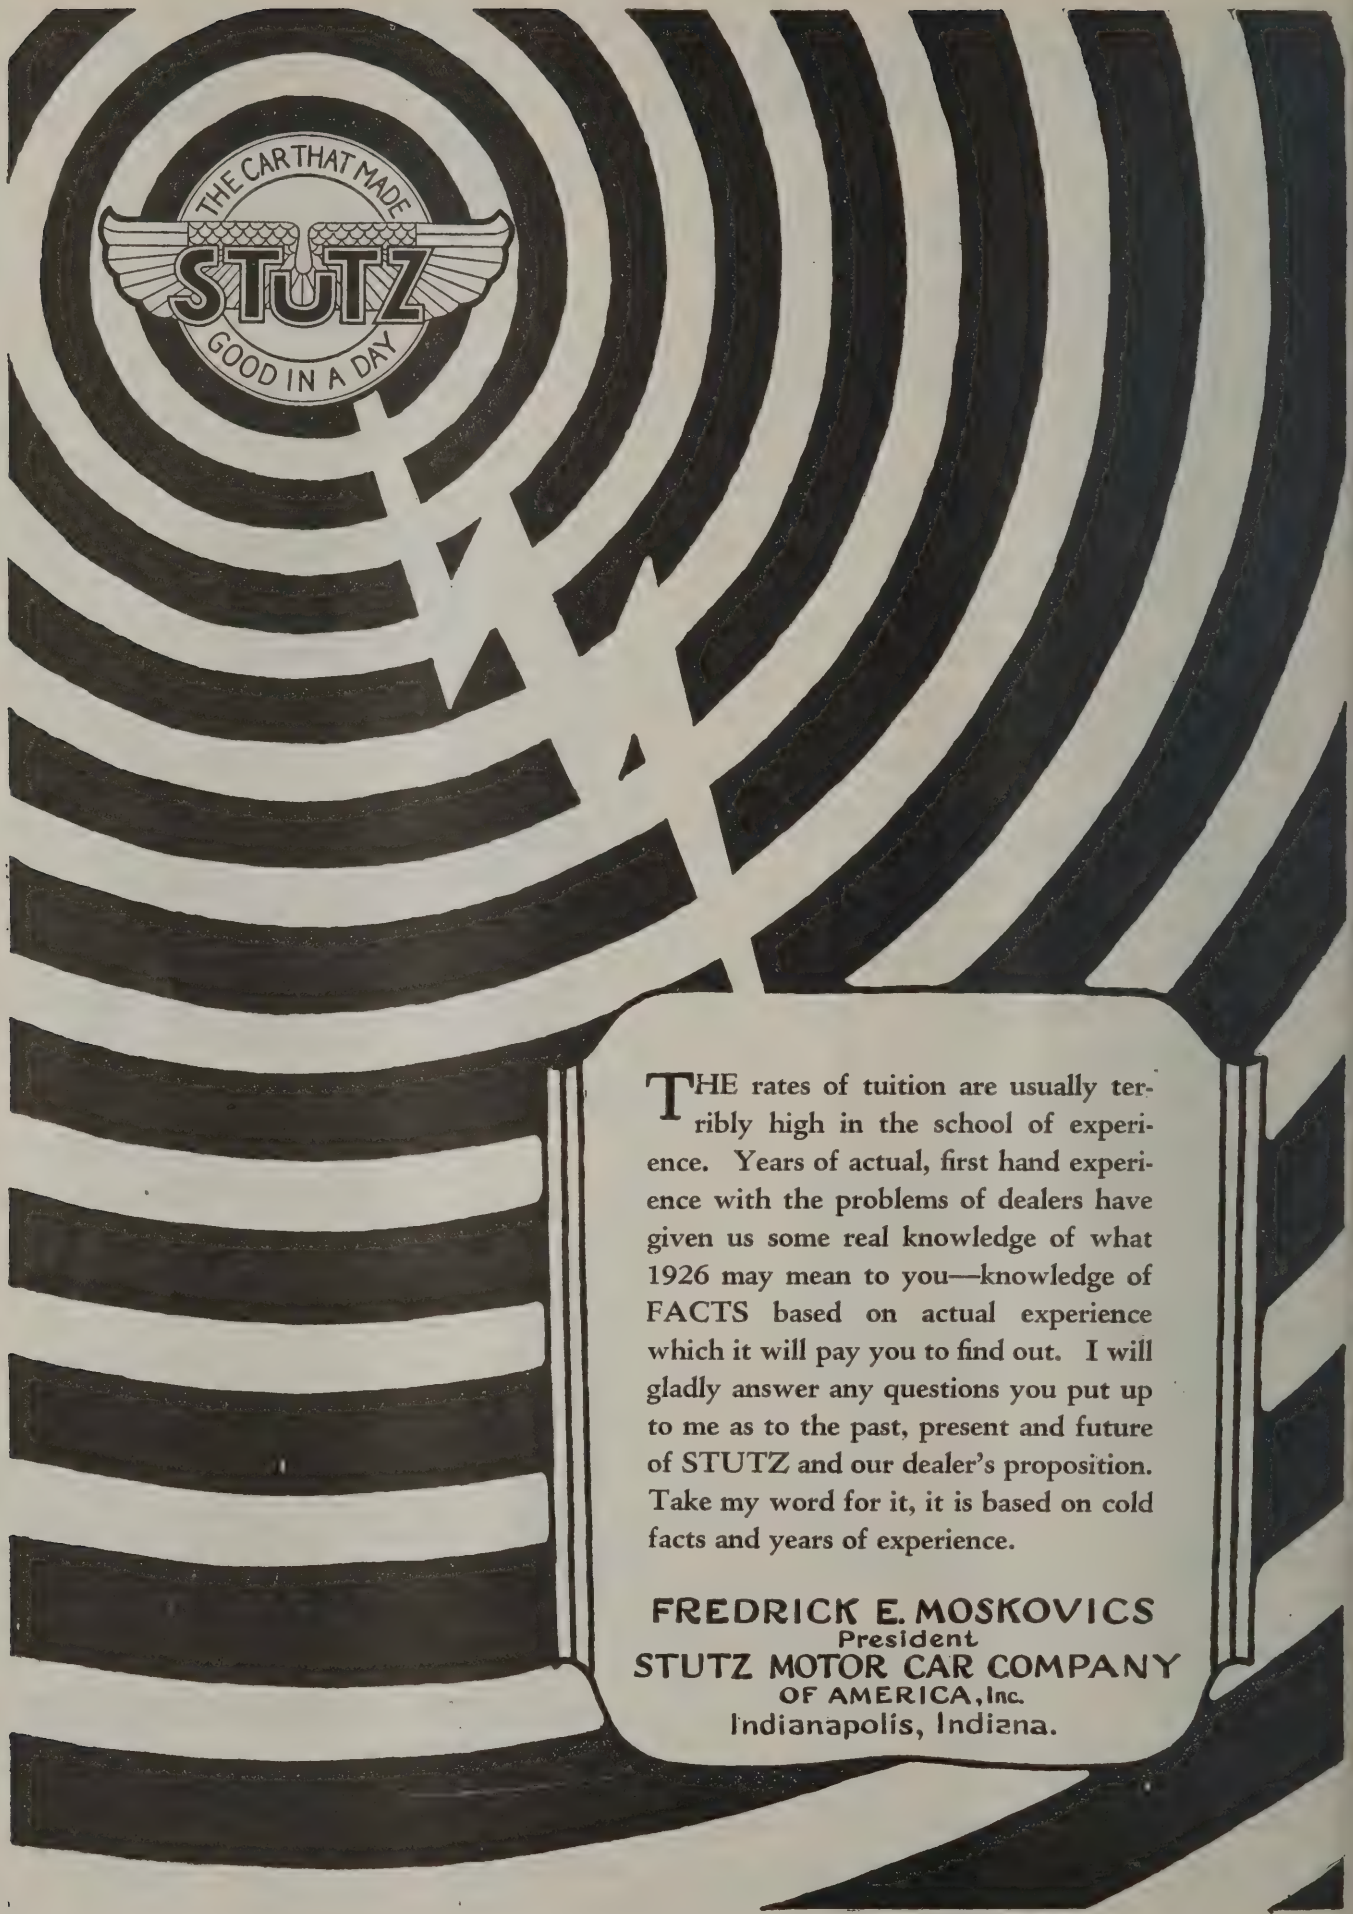
Junior and Midway AIR SPRINGS

are sold direct to recognized dealers at GOOD trade discounts.

To sell and to install Westinghouse Air Springs means real money to you, and satisfied customers, because you are selling them the

FINEST KNOWN DEVICE FOR SHOCK ELIMINATION.

Let us send you literature showing



1. New and improved designs.
2. New no-cut brackets—easier to install, interchangeable with standard car brackets.
3. Our new wholesale policy and prices. You can make large profits. We also help you sell and install them.

With Westinghouse you actually ride on cushions of air. Made for every type of passenger car, truck and bus. Get our wholesale prices and full details at once.

Address Dept. M

THE WESTINGHOUSE AIR SPRING CO.

THE rates of tuition are usually terribly high in the school of experience. Years of actual, first hand experience with the problems of dealers have given us some real knowledge of what 1926 may mean to you—knowledge of FACTS based on actual experience which it will pay you to find out. I will gladly answer any questions you put up to me as to the past, present and future of STUTZ and our dealer's proposition. Take my word for it, it is based on cold facts and years of experience.

FREDRICK E. MOSKOVICS
President
STUTZ MOTOR CAR COMPANY
OF AMERICA, Inc.
Indianapolis, Indiana.

Putting More Cars *on the* ROAD

By M. WARREN BAKER

To make room for more motor traffic the new Wacker Drive in Chicago is being constructed with two levels. This view shows a section of the drive with the upper level almost completed. This vast undertaking required the wrecking of millions of dollars worth of buildings that were erected before automobiles were dreamed of

FEVERISH activity has taken the place of lethargy in highway development in the last year, almost in the last few months. This would appear at first glance to have been the direct result of the unprecedented production volume in the automobile industry in the same period.

This has been one cause, but it has been secondary to the prime reasons underlying the present energetic development. The increase in automotive production has served to awaken city planners to a full realization of the heavy responsibility that is theirs as the result of the search for means to facilitate traffic movement.

Every city in the United States is confronted by the same problem. Where will the increasing number of automobiles be parked? How can narrow city streets, built for the ancient horse-drawn vehicle, bear the tremendous load of traffic that increases every day?

These are only some of the questions that city planners and highway engineers are being called upon to solve and the difficulties of their solution are increasing at a rate proportional to the rapid advance in the number of passenger cars, trucks and buses being built and delivered.

Underground garages, double-decked and even triple-decked streets, parking spaces on the tops of buildings, so-called "super-highways" and countless other devices which have been brought forth in very recent times are first answers to the bogey of highway saturation.

For years, dealers and automobile men in general have feared the time when the power of the public to buy motor cars would be reduced to such small proportion of its present strength as to be almost infinitesimal. There have been many statements and declarations that such a time is not far distant, but such would appear now to be only more of the announcements that would-be prophets have been famous throughout the years for making incorrectly.

On the basis of one car for each average family, only two states of the forty-eight are what could be called saturated. These are California and Iowa. Sales in California thus far in 1925 have not been up to the records of other states, but the dealers there are still in business and are optimistic enough to believe in better times ahead.

Now that energetic dealers are seeing the possibilities of two-car families, a new vista of sales opportunity is opened up and the fallacy of buying-power saturation is removed entirely from the horizon.

There is danger, however, of a condition of highway saturation, especially in and near the great cities of the country. All have been aware of it, and although very little has been said about the matter, at least from the viewpoint of the automobile industry itself, the fear has long been in the minds of automobile men.

Traffic Congestion Is Serious

City officials have become aware that the time has come when something must be done about the congested condition of the traffic arteries. State bodies have been putting forth great efforts to supply sufficient facilities for the flood of traffic that has surged upon them. But these efforts are not yet sufficient. In Wisconsin, for instance, it has been estimated by the state highway department that tourists alone spend $80,000,000 annually in the state. The profit on this amount of business is more than the state spends on its road system.

City planners have been lying awake nights to find some way out of the dilemma with a modicum of expense. Some of these sleepless nights have resulted in plans for street widening which may possibly care for the traffic for the next five years. Others have caused double- and triple-deck street projects, with heavy traffic on the lower levels, automobiles in the middle and pedestrian movement on the top.

Super-highways, through or around a city, are another

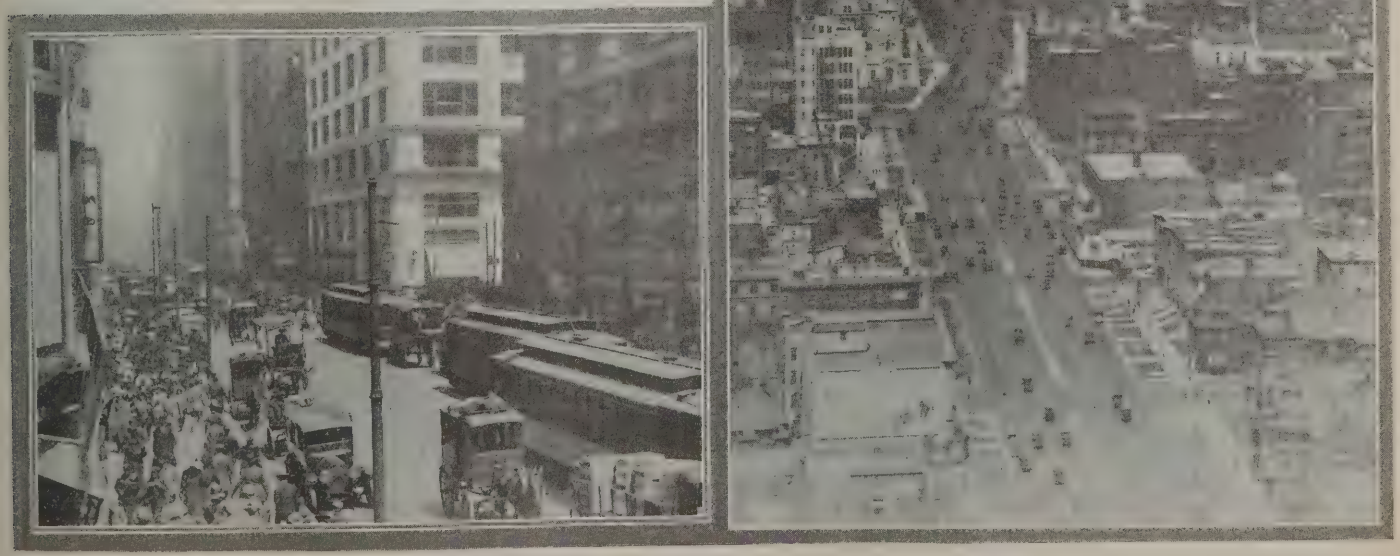
Street and Highway Builders Show Signs of Catching Up With Traffic Demands as Two-Car Families Increase—Double Deck Streets, Skyscraper Parking Garages and Superhighways Help

comparatively recent development. In some cases, high speed roads are being planned to connect two or more cities. Such super-highways around a town will serve fairly well the car owner who wants to go straight through a city without stopping, but these are few compared to those who want to shop, or see what makes the big city big.

Some relief within the city is being gained by the rapid replacement of the street car by the bus. The bus is able to squirm in and out of tight traffic holes. The street car must stick to the rail and if a nervous pedestrian blocks the way for a moment, there the trolley must stand, holding back all the straining traffic that is so unfortunate as to be behind.

Everyone has long known that country highways are a nice thing to have. Chambers of Commerce and Rotary Clubs have been told time and again that business is given a material boost if the town is on a trunk highway. How much the average tourist spends in each town on the highway has been a favorite subject of assignment by city editors for years.

These same dignitaries are now coming to a realization of the political power of the automobile. Political, because every automobile owner, whether he rides in a Ford or a Rolls Royce, is a brother under the skin when questions affecting his welfare or pleasure are brought forth.



Legislatures have learned to their cost that automobile owner and dealer associations are a potent factor when it comes to defeating proposed legislation inimical to the good of the industry. How long will it be before these same associations demand more and better traffic facilities and back up their demands with their organized might?

In Chicago alone there are now about 345,000 automobiles, trucks and buses. Chicago has 1,941 miles of pavement, which allows but 30 feet for every vehicle. A great many drivers need that much room to stop in, or park with the least damage to bumpers and fenders.

This figure does not take into account the number of cars registered in the suburbs, which daily drive into the downtown district and return. If all these were included, automobiles in Chicago probably would show less than twenty feet of space "per capita" and that is being cut down with every boatload of cars brought on the river docks.

If Chicago had one car for every average family the number of automobiles on the streets would be about 697,000, or more than twice the number at present. By 1950 the city officials expect there will be 4,500,000 persons resident in Chicago, and on that basis there then would be 1,046,000 motor cars on its streets. The metropolitan area of Chicago, taking a radius 35 miles from the Loop, then would have about 6,600,000 population, and 1,534,000 cars.

A large part of this population will have to live outside the present limits of the metropolis. Many will work in the downtown district as at present, and they will have to have cars to carry them to and from their businesses. Or they will ride elevated, surface or subway trains. They will either have to be given a place to park their cars downtown, or they will not buy them in such proportionate volume as at present. It is much more pleasant and restful to drive to work than to hang on a train strap,

The old and the new traffic. At right is a section of Michigan Boulevard, Chicago, looking north toward Drake Hotel, photographed from airplane. The double stream of motor traffic is shown. Below is State Street, Chicago, in the days when that street carried the kind of traffic for which it was planned

and the owners will demand parking space if the automotive industry fails to do so.

In either event it is foregone that parking facilities are absolutely essential both to the dealer and owner and the dealer might as well take the first step to obtain them. His organization is less unwieldy than is the owner's to perform such a service. Every day that brings good parking facilities closer, is a day of additional business for the dealer, because it will create more two-car families.

Newspapers are taking up the fight in Chicago. In a recent editorial on highways radiating from Chicago, the *Chicago Tribune* said:

"The Dunes road furnishes only one example of the congestion to be found on all the highways radiating from Chicago. All of them should be widened without delay; and it is our opinion that even 40-foot roads in this region will be inadequate to handle the traffic with safety."

A plan whereby Boston's narrow streets will have less of a traffic burden to bear has been put forward by the Boston elevated and street railway officials. The companies have begun purchasing land in the suburbs adjoining their terminals, for use as parking grounds.

Boston expects that about 400,000 cars will be operating on its streets by 1930. Immense sums would be necessary to increase the streets to the width necessary to handle this traffic. The officials are studying the possibilities of removing street cars from the thoroughfares and substituting buses.

Boston's Problem

It is estimated that about 140,000 cars enter and leave Boston every day. Tourists materially increase this number during the summer months. All the other New England cities are facing the same difficulty and the jam of traffic by 1930 is certain to be tremendous.

The street and elevated railway companies are of the opinion that the time to take steps toward the prevention of an unendurable situation is the present. Planning commissions have been attempting to correct existing evils and prevent future ones, but they are still confronted by the fact that any drastic impositions will keep a great many persons out of Boston who may wish to transact business there.

Indianapolis has just passed an edict called the "Thoroughfare Ordinance" which is expected to simplify the traffic situation there. The ultimate expenditure of $30,000,000 is planned for widening streets, building new

Type of skyscraper parking garage springing up in large cities. This is the new Auto Centre at Los Angeles, all the floors of which are devoted to parking and storage of automobiles, day and night

ones and making general improvements in traffic conditions. The ordinance also ratifies a plan whereby the city and the Belt Line railroad will co-operate in elevating the railroad tracks and eliminating grade crossings. The latter have not only been dangerous, but have held back extensive development in certain business sections of the city.

Possible fore-runners of the time when every motorist will be able to park within something like walking distance of his destination are to be seen in the tendency to build garages exclusively for parking and service. Such garages can be and are being built as high as office buildings, and are equipped with ramps so that the motorist can drive from ground floor to roof, or with high speed elevators.

Underground parking garages are another recent development. Still another is the widening of little-used streets to allow parking in the center.

Such means give some relief, but if the motoring popu-

Fresh Merchandise in a Clean Store

Slick Up Includes a Complete Overhauling of Stock to Make It Complete With Seasonal Goods and Articles in Demand

An example of how to slick up and display accessories

SLICK up is not merely for the floors and walls and shop of the automotive establishment. We have already discussed the importance of going over the salesroom to give it an inviting and attractive appearance. If the sales room is slicked up, redecorated, equipment rearranged, displays changed and brightened, much has been done to mark the store as a progressive business institution that does not shut up shop with the coming of cold weather. The proper overhauling of the shop, as outlined in last week's MOTOR AGE, will do still more to put the place in shape for profitable business this winter.

But the stock of merchandise itself requires attention. A busy summer has its effect on stocks. New cars have been coming in and going out and accessories and supplies have been sold in unusual quantities. The result is likely to be a somewhat unbalanced stock. Time probably has not been available for a complete and regular checking of the stock on hand in order to keep it up to date.

The result is likely to be a shortage of certain popular items, an accumulation of slow moving goods and lack of seasonal goods that have not been much in demand this summer, but will be from now on.

The first step in the slicking up of the stock should be an inventory to determine just what goods are on hand. The car dealer won't have much trouble listing his new cars. They are usually right out in front where he sees them every day and this summer sales have been so good that in most establishments the cars have moved right on to buyers. It would be well, however, to check up to see how long the cars have been on hand. If open cars are on the floor and have been there for some time a special effort should be made to move them at once. In fact any cars that have been hanging around long enough to begin to feel at home should be sent out to look for a new boarding house.

The used car stock should be given the same sort of treatment and a little more of it. A large used car stock at this season should be viewed with alarm and about the slickest thing any dealer can do is to send a lot of the old-timers away indefinitely.

The right sort of slick up activity will help move both new and used cars. For instance, if the dealer has on hand one or more open cars that have been standing in a corner and collecting dust because nobody wanted them his first step in slicking up will be to wipe them off and give the paint a chance to shine. Then he will put the cars out where people will see them and then probably he will put on winter enclosures, install a heater and otherwise make the open vehicle into a comfortable enclosed car.

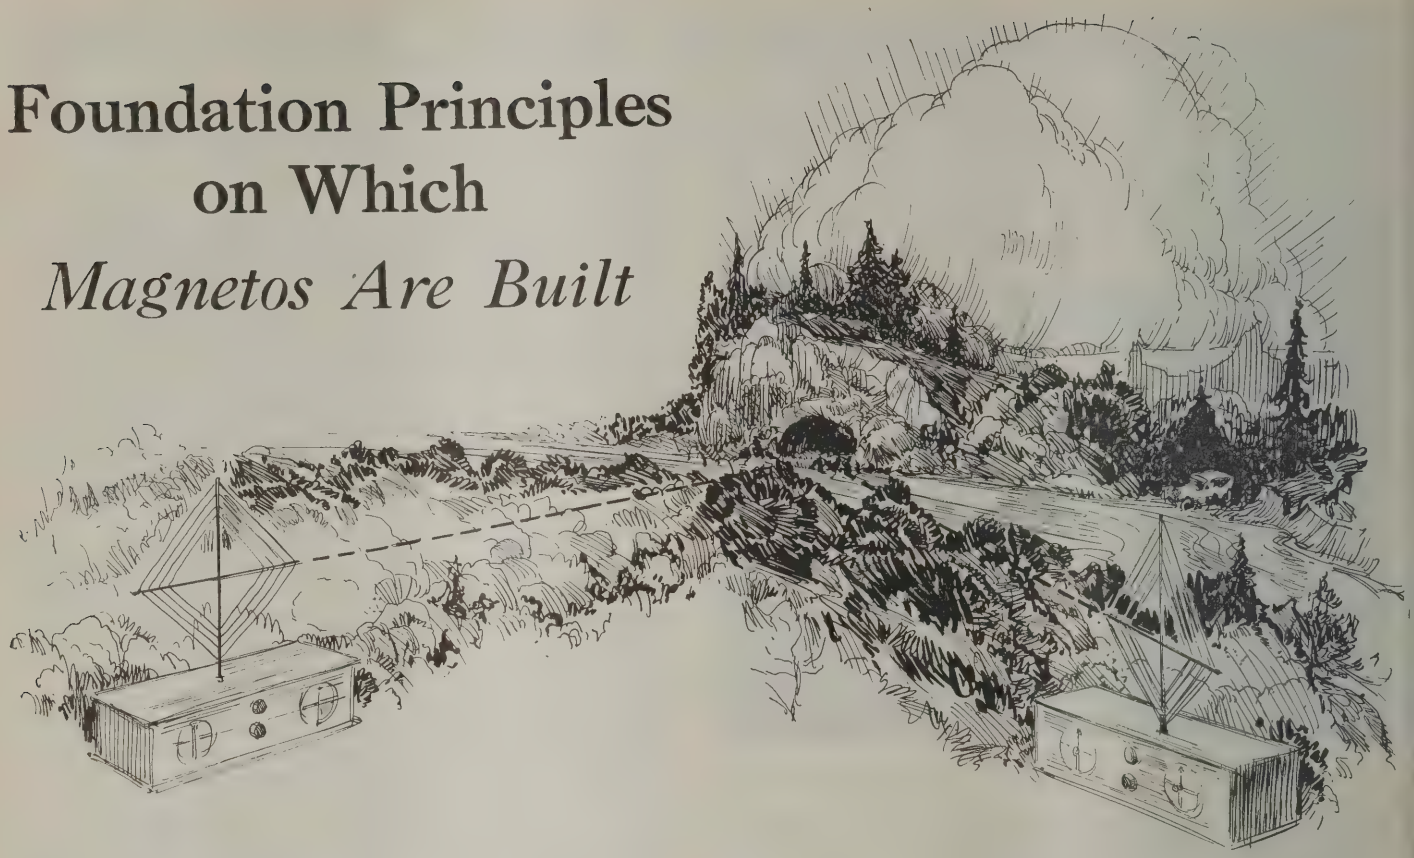
Paint will help to slick up the used cars and the open ones among them can also be made more salable by the installation of winter enclosures and heaters, or the fitting of new side curtains.

Probably the greatest need for slicking up will be found among the stocks of accessories, equipment and supplies. There are vacant spots in the shelves, worn and disfigured packages and merchandise bearing the marks of dust, rust and corrosion. The vacant spots indicate a healthy business, for sales have been good, especially in some lines. The worn and disfigured packages indicate merchandise that was overstocked or for which there is no demand. This sort of merchandise should be moved as soon as possible, by the bargain sale method if in no other way.

New merchandise to fill out depleted lines and the elimination of shop worn stuff are essential steps in slicking up a store. Customers do not like an untidy store, and disorderly shelves and dirty or damaged merchandise give the aspect of untidiness even more than actual disarrangement and dirt. A clean, fresh and complete stock of merchandise is a distinct asset and a valuable attraction for the dealer at this season.

The check up of merchandise should take into account the seasonal needs of customers. Colder weather is approaching and the automobile needs winter accessories just as its driver needs winter clothing.

It is merchandise of this nature that the dealer, in his slick up activity, should make certain to stock in ample quantity.



There is another seasonal appeal that the merchant cannot afford to overlook. Successful campaigns in the past

Foundation Principles on Which *Magnetos Are Built*

The Red Head and Valvy Tow a Stalled Race Car Back Home and Show Its Owner a Few Things About Ignition

By A. H. PACKER

OVER the rim of Coal City rose the sun, its fiery eye gleaming with a mischievous grin. Peering into the upper windows of Jake Pender's garage it saw, through the grimy pane, two sleepy lads, the Red Head and the Valve Grinding Fiend.

The Red Head could sleep through anything, but Valvy stirred uneasily under the sun's piercing glance. Then to his half awakened senses came the sound of a bell. "The clock," thought Valvy and groped to shut it off. But the ringing continued.

Valvy sat up. "What in the dickens is the phone ringing for, this time o' day," thought Valvy as he slid into some clothes and ran down stairs to answer.

Five minutes later, Valvy came tearing back, through the shop and up the stairs yelling as he came.

"What the Sam hill's bitin' yuh?" Red wanted to know, angered at being disturbed.

"P-p-p-plenty," Valvy gasped. "They g-g-got 'em."

"Got what, fleas?" said Red. "You certainly act as if you had 'em and no mistake."

"That gang that got you," panted Valvy, still puffing.

"Sit down and speel it," said Red. "Was that Sandy on the phone? I thought at first you'd gone loco or somethin'."

And as the Valve Grinding Fiend calmed down he managed to tell what Sandy had told him over the phone.

"Sandy put Federal agents on their trail. They took a tip from our radio experience and set up some special receiving sets at different places. Then they used a special kind of set with a loop aerial that hardly receives at all unless the loop is pointed the right way. At first they had no luck for they had to get their settings right and their loop pointing in the right direction before they could pick up the long wave messages being sent out from the gangsters' stronghold.

"Then one night they found 'em with one of the sets. That gave them the dial settings. Then they tuned in the other set the same way and turned the loop until they had 'em.

"It's too deep for me," said Red, "but I get the general idea. After they had the loops pointed from two directions they probably worked it out on a map by trigonometry and figured where the fellows were in hiding."

"Yeh," said Valvy. "Sandy said something like that.

BILL FIXIT STORY No. 11

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18, July 9, July 30, August 13 and September 3, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and at the Welsh mines are requested by Sandy, the foreman, to help out in fixing up a gasoline pumping engine. While there the money they had is stolen from the car, so they are forced to seek employment in Coal City with Jake Penders, the local electrician.

While at Jake's place a customer buys a tire, paying for it with a bill that Red afterwards recognizes as one stolen from them. Red goes after a job of wiring trouble that Jake had previously fallen down on, fixes it and then tells how it was done. At other times he explains electro-magnets, ignition principles, condenser construction and testing a systematic method of shooting ignition trouble on the car and a method of checking firing order and timing.

Anyhow they spotted the place, and the only way to get to it is up Crooked Creek. The bottom is hard and the water shallow and they even run their cars up to the cave that way."

"That's all very nice," said Red. "It means safer living from now on around this dump, but it doesn't mean much to us."

"It does, too," said Valvy. "I nearly forgot. You know that bird that fell down on the watchman job the night they blew up the pumping engines. Well he was one of the gang, but no one knew it. He had that job at the Welch mines so he could keep track of Sandy, but he slipped just once. He was the fellow that bought a tire here with one of the bills that was in our roll. When Sandy heard about it and saw him roll up with a new tire on his car he put two and two together, began to do a little detective work on his own account and now this fellow has confessed and we will get most of the jack back again. The gang has been so hemmed in for fear of the law that they haven't been able to get out to do much spending."

"What a change," the Red Head remarked. "A few months ago we started out like a couple of kings, saying good-bye for a time to Bill Fixit and the old gang. Then we were cleaned by a crook and were glad to get a job in this measly town, board with the hunkies and later sleep in the attic. Now we are sitting pretty on top of the world again. And so it goes."

"And where do we go from here," Valvy wanted to know.

"Now that it's possible, I almost hate to leave," said Red. "I'm almost getting fond of Jake, but I suppose we better be moving along in a day or so, finish up our touring spree and get back to Westville."

Several mornings later, Bill Fixit's roaming electricians said good-bye to Jake, shook the coal dust of Coal City from their tires, stepped on the gas and sped away in search of more adventure.

The Scene Changes

As the day wore on the mountainous mining country was left behind. Low lying hills and pleasant valleys took their place. The outcropping rocks became fewer and fewer and the soil richer. Miners' shacks gave way to substantial farm houses and on every side there was evidence of a bumper harvest and rural prosperity.

Lunch was obtained in one of the small towns. Red had seen visions of fried chicken, at least, as he drove through the thriving community, but when they stopped at the small restaurant, all that was left was corned beef and cabbage.

"Suppose we see if we can put up at some farm house," suggested Red. "I'm fed up on this city cooking gone to seed. I'd like to get some real grub for once."

Valvy was about to answer when a humming whine burst upon their ears, soon to change to the roar of an exhaust from an unmuffled engine. Looking back Valvy saw a home made race car with its embryo race driver stirring up the road for all he was worth. The car passed with a whirl and disappeared over the hill, while the Speedway car with the two adventurers jogged on at its accustomed pace.

Five miles farther on, however, the two trouble shooters were surprised on rounding a curve to see the home made racer stalled by the side of the road, and the driver disconsolately poking around under the hood. Red pulled up and the boys got out to see if they could be of assistance.

Barney Oldfield Smith was glad to get some help, for while clever at assembling his car he was shy on electrical knowledge and when the magneto failed to do its part he was stuck as badly as the car. The cause of the trouble was not evident even to Red and Valvy and as Smith lived but

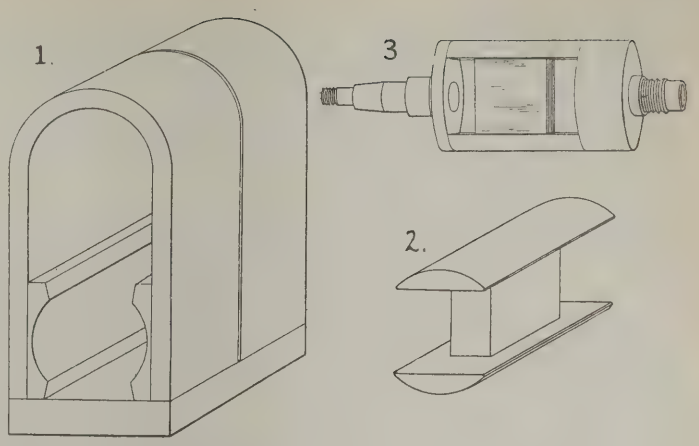

Fig. 1. Typical magneto frame. The base is usually brass, so that magnetism is forced through the armature. Fig. 2, magneto armature core. Fig. 3. Magneto armature core with end plates and shafts attached

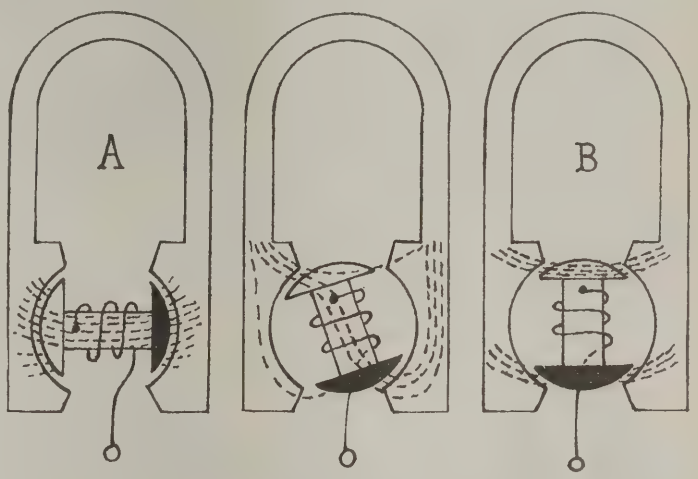

Fig. 4. Changes in the path of the magnetic lines of force as armature makes a quarter turn

a few miles up the road it was decided to tow the car to the farm where Smith lived and do the job right.

Red had another reason for handling the job that way and his sagacity was proved in the results, for the work on the magneto kept them busy until supper time and resulted in their staying at the farm for the night.

The next morning it was found that the magneto armature had a shorted condenser so there was nothing much that could be done until a new one was received. Red wired Bill Fixit at Westville to send one by parcel post and was about to show young Smith how to install it, but Smith was not satisfied to let it go at that.

"Can't you fellows stick around a while? We can hunt squirrels over in the woods or fish in the river. Of course if you have to be goin' I may be able to get by with it, but—"

"Red had been thinking of the fried chicken and apple pie they had stuffed themselves with the night before. It was almost too good to be true. Would they stay? "Yes, I guess we can," said Red. And so it was decided.

"And when you're doing nothing in particular," continued Smith. "You can show me something about magnetos, not only what's wrong with this one, but how other kinds work, too."

"That's a big contract unless you know something about electricity," said Red.

"I know a little," said Barney. "In school we had some experiments with coils and I have played with the battery ignition system on Dad's car, but I never tinkered with magnetos until I got one for this speed bus."

"In the ignition coil," said Red, "We get the high voltage produced by changing magnetism and the changing magnetism is produced by change of battery current in a heavier coil known as the primary. When it comes to magnetos we again have to have changing magnetism, as far as the coil of wire in the machine is concerned, but we get it by rotation."

"Many magnetos are made with a frame like this." And Red made a sketch (Fig. 1) to show what he was driving at.

Center of Armature Smaller

"The two U-shaped pieces are permanent magnets and in between their ends or poles we find the magnetic effect or field is the strongest. Then we take another piece like this (Fig. 2) which we call the armature and we rig it up on bearings so it can be rotated in between the poles of the permanent magnets. The center part of the armature is smaller than the rest and provides a place on which the coil or coils can be wound. At the end of the armature core it is customary to fasten two plates which each have shaft extensions, so that the complete armature core with shafts attached looks like this (Fig. 3).

"In this sketch (Fig. 3) the wide part at the right is a sort of hollow cup in which the condenser is carried, but we will not consider that part of the device much at this time. We first want to see how the current is generated.

"In this other sketch (Fig. 4) we have an armature shown in three positions and on the armature is a winding. At A the armature is in such a position that the lines of magnetic force in going from one magnetic pole to the other go through the center of the coil. As the armature turns to the right or clockwise it gets to the position shown in the center sketch.

"The armature is now not such a good path for the magnetism as formerly. Some of the lines of force still go through the coil, but others go across through the ends of the armature core. When the armature has turned still further as shown at B we have all the lines of magnetic force going through the armature pole tips and none through the coil.

"From this we can see that as far as the coil is concerned the magnetism has changed from a maximum to zero in one quarter of a revolution. Another quarter turn would again permit the magnetism to all go through the center of the coil, but in the reverse direction as far as the winding is concerned. And as changing magnetism in a coil generates a voltage we conclude that there will be a voltage generated in the coil. We also conclude that as the magnetism goes first one way and then the other in the coil, that the voltage will be first in one direction and then in the other, so that current taken from the coil would be alternating current.

"In this other sketch (Fig. 5)," Red continued, "We have some curves that look like spider webs, perhaps, but if we look at them carefully we may be able to figure the armature position that gives us the peak current and therefore the armature position at which the interrupter points should operate.

"At the bottom of this sketch (Fig. 5) we have the armature in different positions which it would take in rotating right hand or clockwise, the first two of these positions, A and B corresponding to A and B of Fig. 4. We will next use a horizontal line X-Y and in line with A we will lay off a distance X-L to represent in height the number of magnetic lines of force which go through the coil on the armature when in position A.

"The distance of the magnetic curve above the line will then represent the number of lines of force going through the coil in one direction while the curve below the line will represent the magnetism through the coil in

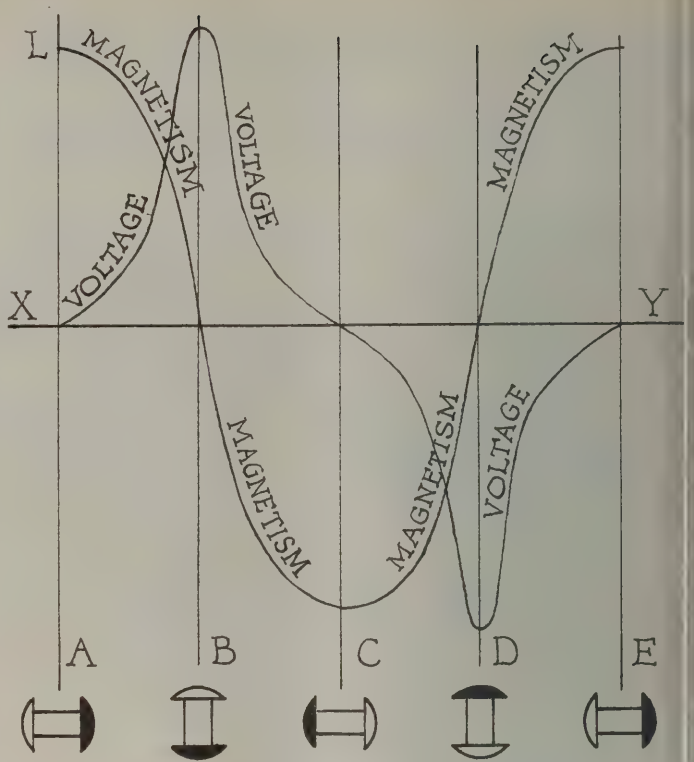

Fig. 5. Armature positions which give the peaks and valleys in the magnetism and voltage curves

the reverse direction. At position B we have lines of force through the pole tips only and none through the coil so our curve crosses line X-Y, the value of the magnetism being zero.

"At position C we have the reverse of the condition of position A, so the curve reaches a low point, while at D the magnetism is again zero and at position E we have the same condition as at A."

"Then we get the greatest voltage from the magneto with the armature crosswise, I suppose," said Barney.

"You're forgetting something," said Red. "Is it magnetism or change in magnetism that generates the voltage?"

"Gee, you're right," answered young Smith. "I don't know the answer yet, but what I said first was wrong, all right."

"We'll have the answer in a minute when we draw the voltage curve," continued Red.

"The high point on the voltage curve will be where the magnetism curve is changing fastest. In line with A, for an instant the magnetism is constant so there the voltage is zero. On the other hand the magnetism curve is steepest, and therefore is changing fastest at points in line with B and D, so one of these is our positive high point and the other the negative peak of the voltage curve."

A Delicacy in Sight

Valvy had heard it all before and was beginning to get restless. "What's that funny noise over by the river?" he wanted to know. "Sounds like dogs barkin'."

"Them's bull frogs," said Barney. "What d'ye say we pass up the magneto stuff for a while and go get a bunch of frog legs?"

"Ugh," said Valvy. "Do folks really eat 'em?"

"I'll say they do, they're better than chicken," volunteered Red, more experienced in the ways of the world.

"Better than chicken," cried Valvy in astonishment. "It sounds fishy to me, but I'm willing to be shown." And a few minutes later the three lads were busy hunting through the tall grass by the river's edge.

Jordan Announces a Lighter Eight

Lower Priced Line Has All Steel Bodies and Specially Designed Engine Developing 64 Brake Horse Power

New Jordan Eight 5-passenger sedan. Metal pillars and narrow door frames result in minimum obstruction of driver's vision. Bumpers and spare tire not included in list price of $1845

By LESLIE S. GILLETTE

THREE new standards have been set by the Jordan Motor Car Company in presenting its new series J model with eight-in-line engine. This is the lowest priced car of this type yet produced, it is the shortest and lightest passenger car chassis employing an eight in line engine and is the first car selling above $1,500 using an entire line of all steel bodies. Although the wheelbase of the new car is 9½ in. less than that of the larger car it is said that the interior space in the bodies is almost the same due to the all steel construction and special design of the portion of the body adjacent to the engine.

The all steel construction of the body makes possible improved vision due to smaller corner posts. Removable upholstery is incorporated in the construction, this facilitating cleaning, and the repairing of body dents.

The interior of the sedan is decorated with inlaid walnut trim, flush type vanity cases and silver hardware of New England design. A cowl ventilator is included and the windshield is of the one-piece type.

On the Playboy model the collapsible top is easily removed, while the curtains are carried in a door pocket. Upholstery in this model is genuine hand buffed leather while the exterior finish on both models is lacquer.

The engine is designed by the Jordan company and built by Continental, the bore and stroke being 2⅞ in. by 4¾ in., giving a piston displacement of 246.6 cu. in. The engine develops 64 b. h. p. at 3,000 r. p. m., while the rated S. A. E. horse power is 26.4.

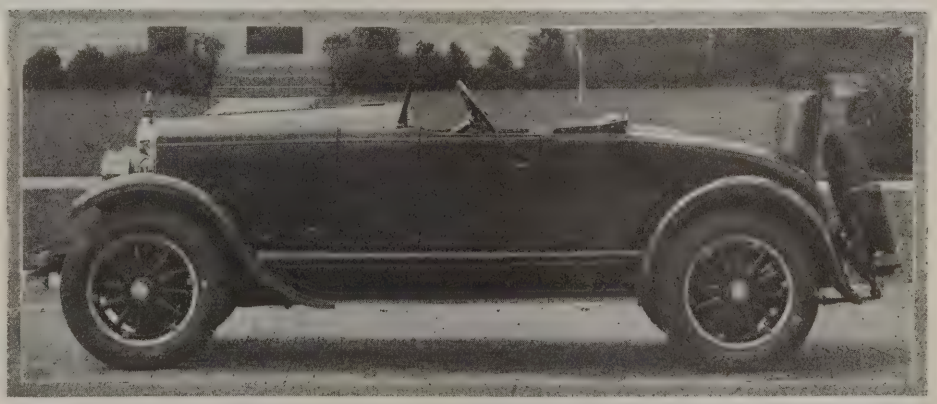
This power plant, in one of the sedans is capable of showing a speed range in high gear of from 2 to 68 miles per hour, without appreciable vibration at any speed. Gasoline consumption is said to be from 16 to 18 miles per gallon and oil consumption from 600 to 800 miles per gallon. Cylinder head is detachable and the cylinders are cast in a unit with the upper half of the crankcase, while the oil pan is of pressed steel. Four point suspension is provided as in the older model.

The crankshaft has five main bearings and is provided with a Lanchester vibration damper. The rear main bearing is 2½ in. in diameter while the others are 2⅝ in. in diameter, each bearing being 1½ in. long.

Connecting rods have a center to center length of 9¾ in. there being at the lower end, babbitt lined bearings 2¼ in. in diameter and 1$\frac{5}{16}$ in. long. Phosphor bronze bushings are used in the upper ends of the connecting rods. Piston pins are 2 17/64 in. long and 55/64 in. in diameter. Pins are locked by means of a set screw and a snap ring at the end of the piston pin.

Cast iron pistons are used, these being 3⅝ in. long and fitted with three rings, all located above the pin. Oil holes are drilled through the piston wall beneath the lower ring.

The generator and camshaft are driven by a silent Morse chain. By graduating the diameters of the five camshaft bearings from 2$\frac{5}{16}$ in. down to 1¾ in. it is possible to withdraw the camshaft through the front of the engine. The three center bearings have a length of ⅞ in. while the length of the rear bearing is 1 in., the front bearings being 1$\frac{11}{16}$ in. long.



Valve Timing

Valves have 45 degree seat face angle and $\frac{5}{16}$ in. lift. The inlet valve has a diameter in the clear of 1½ in., the exhaust valve diameter being ⅛ in. less. Valves are operated by mushroom type tappets. Double valve springs are used. The valve timing is as follows:

Exhaust closes 8 deg. after T. D. C.
Exhaust opens 40 deg. before B. D. C.
Inlet opens 8 deg. after T. D. C.
Inlet closes 40 deg. after B. D. C.

A gear type pump is used to force oil to the main bearings and through holes in the crankshaft oil is then carried to the connecting rod bearings. Passages in the crankcase web carry oil from the main bearings to the camshaft bearings. The crankshaft holds 7 qts. of oil when filled to the proper level.

Oil from the crankcase may be emptied by operating a plunger at the side of the engine, this plunger opening a valve in the lowest point of the oil pan. The same construction is used on the larger eight. Along side of the plunger is a bayonet type gage for measuring the amount of oil in the crankcase. The

Playboy roadster in new Jordan Eight line. This model has all-steel body and lists at $1695. Detachable top, not shown in picture, is included. Bumpers and spare tire are extra

At the left is shown the left-hand side of new Jordan power plant, Vibration damper is seen at front of crankshaft. Plunger for dumping crankcase oil is at right of oil gage under engine name plate. At the right the right-hand side of the Jordan power plant is shown with rotary air cleaner and combined ignition and generator unit

water pump and fan are built in one unit, the drive being by means of a belt. Belt adjustment is taken care of by means of a movable flange on the fan pulley.

The method of attaching the radiator and shell is somewhat different from that used on the larger car. The radiator core is carried in a cradle which is fastened by means of studs to the front cross member. Leather washers are used to assist in absorbing the shocks and prevent straining the radiator. Water capacity of the entire cooling system is 4¼ gal.

Fuel System

The fuel system includes a Stewart vacuum tank, a 17 gal. tank at the rear of the chassis, a Gas-Co-Lator and a Stromberg model OX-2 1¼ in. carbureter. A United air cleaner is also fitted as standard equipment. The intake manifold is 1⅜ in. inside diameter and is connected with the exhaust manifold to form a hot spot.

American Bosch generator and starter are used as on the larger car. The starting mechanism includes Bendix drive and a 2 to 1 gear reduction, giving a total reduction of 22 to 1. The generator has a field fuse to protect it in case of open circuit between the generator and battery. The ignition unit is provided with automatic advance and is driven from the rear end of the generator.

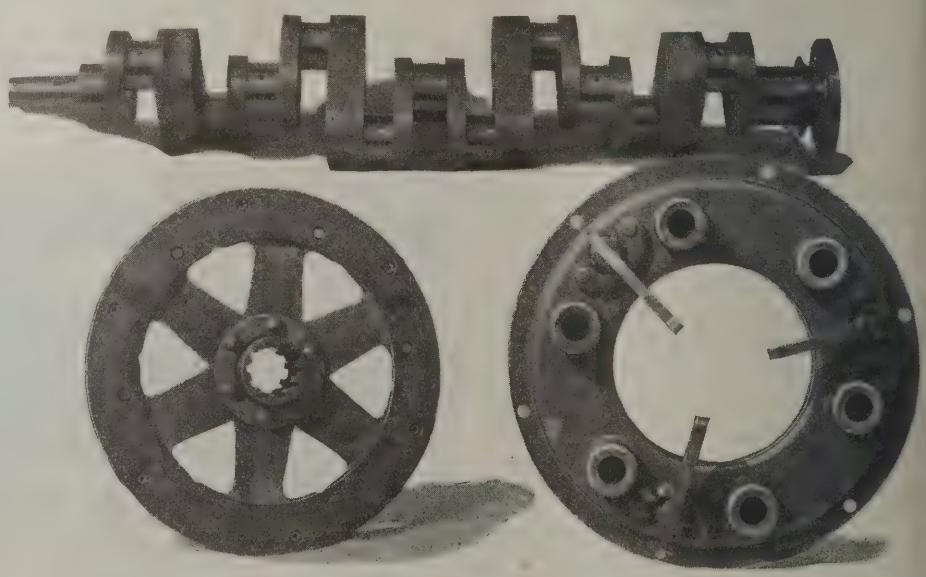
The electrical units also include a Willard battery and Champion spark plugs. The firing order of the cylinders is 1-6-2-5-8-3-7-4. Ignition cables are carried in conduit.

The engine power is transmitted by means of a Long clutch of the single dry plate type while a Warner Gear Co., model T-69 transmission is used. The gear ratios are as follows:

Low:	3.12 to 1
Second:	1.69 to 1
Third:	1.00 to 1
Reverse:	3.78 to 1

The transmission is fitted with an approved type of transmission lock. The propeller shaft is tubular, being 1¾ in. in diameter and provided with metal oil type universal joints at each end, these being made by the Universal Drive Shaft Co.

A Timken rear axle is employed, this being of the semi-floating type, employing a spiral bevel gear drive, the power being transmitted through the springs by means of the conventional Hotchkiss construction. The bevel pinion is straddle mounted. Side thrust is taken by two Timken roller bearings at each wheel. Standard gear ratios on the Playboy and sedan models are 4 5/11 to 1 and 4 7/11 to 1 respectively. A Timken front axle is also used, the "I" section changing to cylindrical near the knuckles to take the torque due to the front wheel braking action. Ball thrust bearings carry the load on the knuckles to assist in steering and parking.



A model 80 Gemmer worm and sector type steering gear is used, the reduction being 11½ to 1 which is specially adapted for balloon tires. The tires used are 30 by 6 in.

Many parts of the Lockhead hydraulic brake used on the new car are interchangeable with the older model. Dimensions of the drum are 14¾ in. outside diameter and 2 in. wide. The emergency brake is at the rear of the transmission the drum being 8 in. in diameter by 2½ in. wide, the brake being of the external contracting type.

Springs are of chrome vanadium steel 2 in. wide. The front spring is 37 in. long and the rear spring 55 ¾ in. long. Self lubricating shackle bolts are employed, lubrication of the chassis being taken care of by means of the Alemite system.

Road lighting is provided by means of Edmunds & Jones headlights which are also equipped with 4 c. p. bulbs for city driving. A combination tail and stop light is also provided. A 75-mile Stewart speedometer and clock are mounted in the right hand panel on the instrument board while an oil and gasoline gage and ammeter are in the left hand panel. The following items are also included as standard equipment; automatic windshield cleaner, rear view mirror, transmission lock, cowl ventilator, motometer, set of four shock absorbers and combined vanity and smoking cases on the closed car.

Except for several minor refinements the larger car is continued without change and will in addition to being companion car to series J model, round out the Jordan line for the coming year.

Important Improvements Made in Marmon 74 Chassis

Double Fire Ignition, Oil Purifier and Self Lubricator Added to Increase Power Output and Performance. Fuel and Oil Mileage Also Bettered

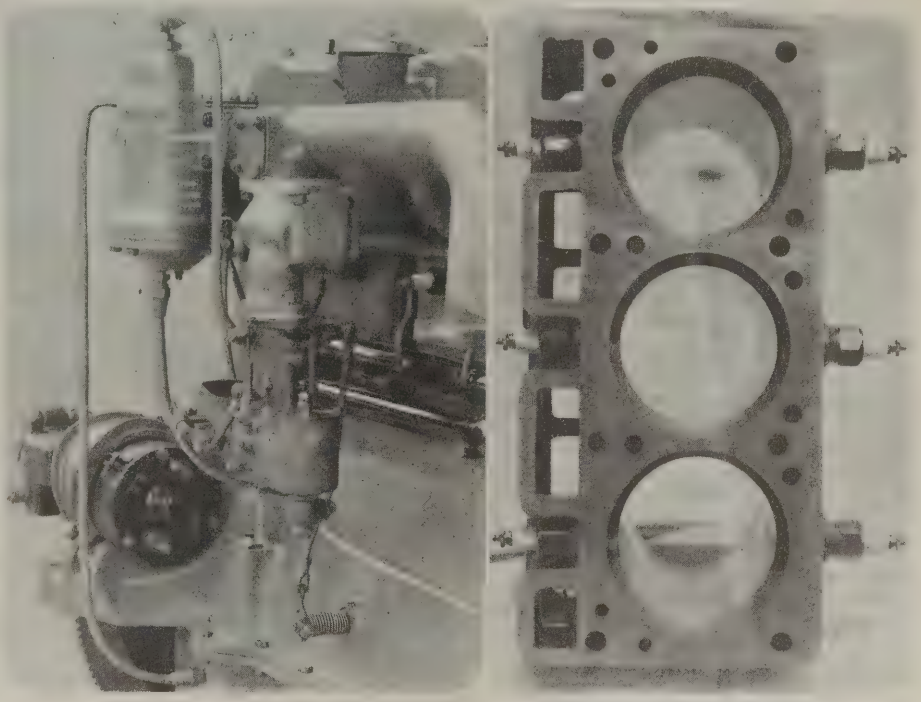
By B. M. IKERT

THREE major improvements have been made in the Marmon 74 chassis. They consist of a double fire ignition system; three-way oil purifier and a self-lubricating system for the chassis.

As a result engine performance has been materially added to in the way of better acceleration, better fuel economy, entire absence of the so-called heavy fuel knock, greater oil mileage and prolonged life of the units.

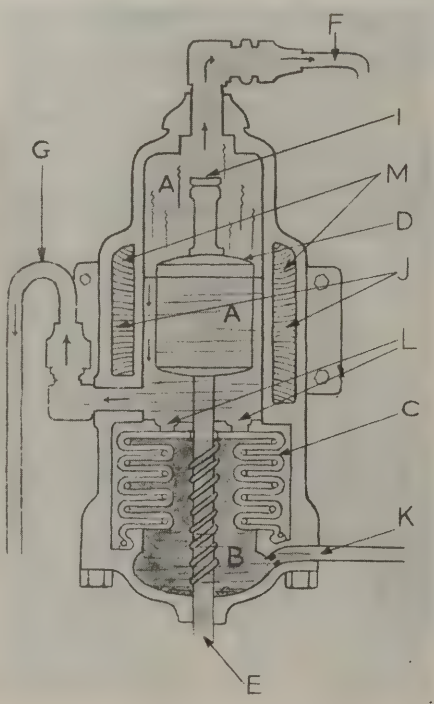
The results which have been attained with the new Marmon cannot be attributed to a single improvement, but rather to a series of improvements, the combination of which has worked out to good advantage. Thus, the Marmon Company states that with its valve layout type of manifolding, double fire ignition and oil purification method the following results have been obtained:

1.—Increased gasoline economy.
2.—Increased power.
3.—Increased acceleration.
4.—Cooler exhaust valves and manifold because of more complete combustion during the down stroke of the piston.
5.—Less carbon deposit.
6.—Less tendency towards crankcase oil dilution, because the fuel oils are burned more completely.
7.—Smoother engine power.
8.—Absence of spark knock under all conditions.



Additional Spark Plugs

In the double fire ignition, system two plugs are used per cylinder, these being on opposite sides and firing at the same time.



The system consists of a battery and generator on the rear of which is mounted the distributor head having 12 contact points with six pairs of wires going to the twelve plugs.

The current goes to two sets of breaker points, one for each set of plugs. Each breaker controls the primary low voltage current to each coil. Each coil then feeds the high voltage current to the contact points in the distributor head, the forward coil being connected to the center point and the rear coil to a point offset from the center and operating through a carbon brush running on a metallic ring in the distributor head.

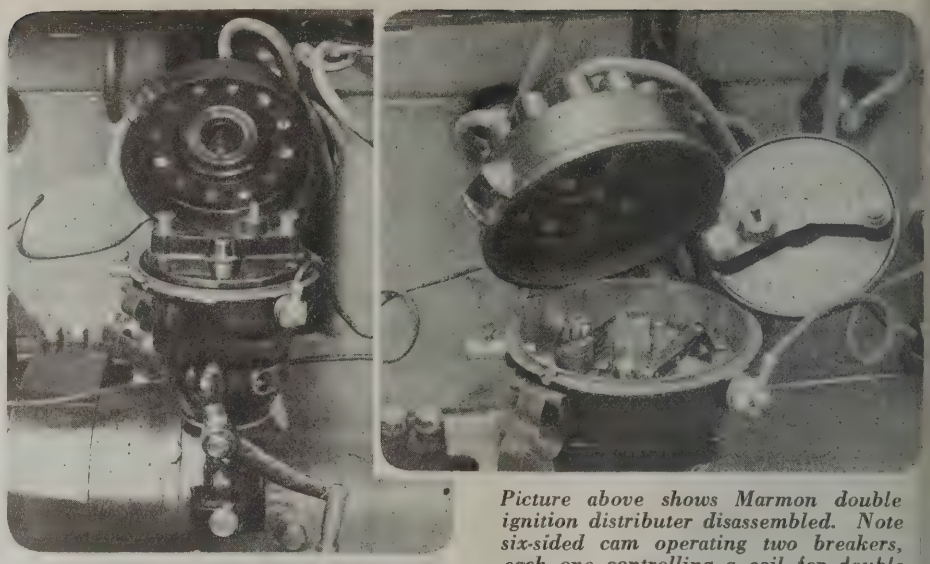
The two high tension contact points in the distributor head carry the current to each of the two rotor buttons on the rotor and these two buttons in turn determine the cylinder that is to be fired when the breaker points make contact.

Oil purifier installation on new Marmon; at right is view of one of cylinder blocks showing two spark plugs to each cylinder

Marmon 3-way oil purifier—sectional view

In designing its oil purifier the Marmon company sought the removal of the four following elements:

1.—Abrasives.
2.—Carbon.
3.—Water.
4.—Low quality fuel oil.

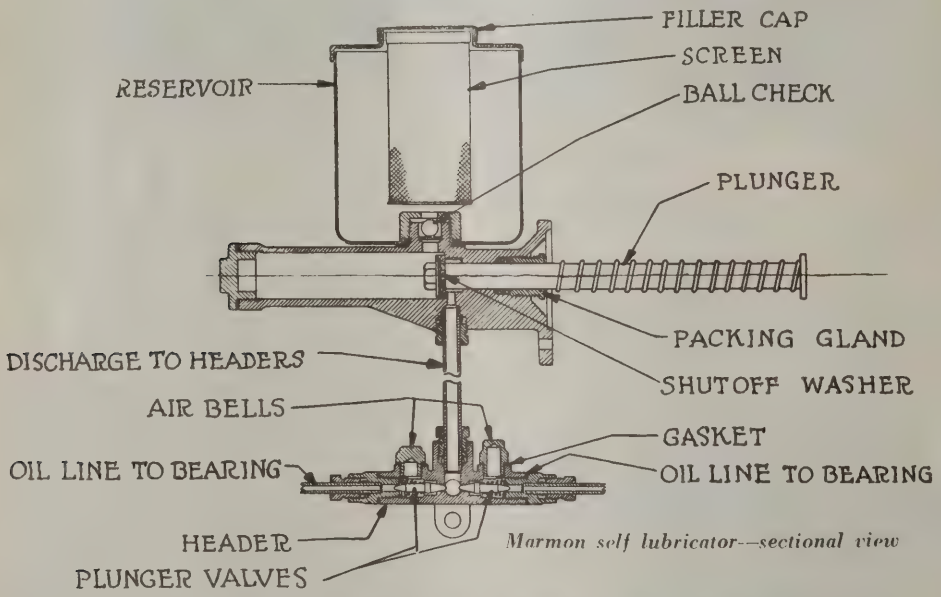


Naturally the removal of abrasives is easier to accomplish with hot oil than with cold oil, since the hot oil will flow through a much finer filter with the results that the finest particles of abrasives are removed. To get proper heat to the purifier the Marmon three-way purifier is fastened to the exhaust manifold between cylinders 4 and 5 and the exhaust gases from cylinders 5 and 6 pass around the distillation chamber A through the gas passage J. The purifier consists mainly of two chambers, A, the upper or distillation chamber and the filtration chamber B.

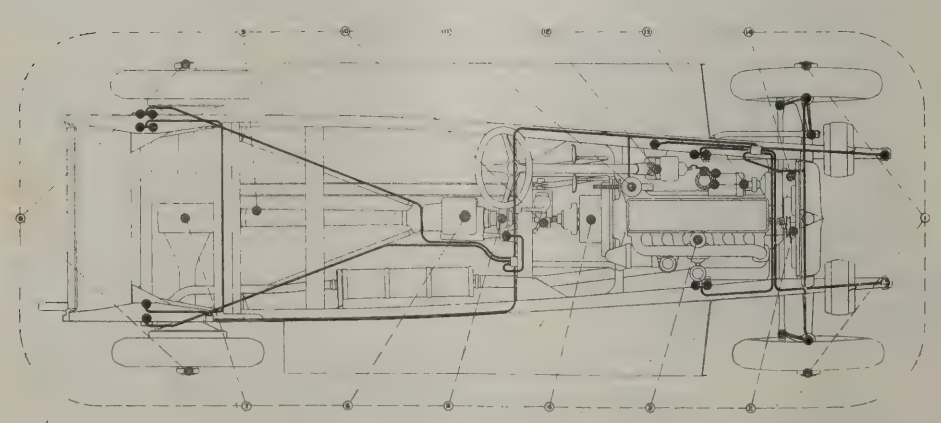
Four tubes lead to the purifier. Tube F from the upper chamber carries fuel and water vapors to the carbureter intake to be drawn into the engine along with the mixture. Tube K is the oil feed tube, the oil being fed under pressure from the pressure regulator to the purifier. E is an air inlet tube, leading from the crankcase up through the center of B into the upper part of A, creating a condition of atmospheric pressure during the time that oil is

being drained from A. Tube G is a syphon which automatically drains off the oil from A each time the float D rises, permitting atmospheric pressure to exist in A. The asbestos filtering sack C prevents abrasive from being fed back into the oil. I is an air valve operated by the float D. The filter sack C has a very large area and the passage of oil through it is consequently very slow. In the process of filtration, all carbon suspended in the oil is removed.

After having passed through the filter sack, the oil passes out of the top of chamber B into chamber A, through the openings L. Here the oil is subjected to a much higher temperature, which is regulated to a point where it will just evaporate the water and fuel oil, but still remain well under the temperature point where there is a possibility of charring or breaking down the oil.



As the temperature of the oil increases, while in chamber A, water, which is in emulsion, is quickly turned to steam and is drawn off through the vacuum lead F to the carburetor opening. As the temperature of the oil continues to rise in chamber A, the process of distilling fuel oils out of the lubricating oil takes place. These, too, are vaporized and pass off through the vacuum lead F. The lubricating oil continues to rise in chamber A until it reaches a level almost at the top of the float D.



Picture above shows Marmon double ignition distributer disassembled. Note six-sided cam operating two breakers, each one controlling a coil for double ignition. Picture at left shows two rotor buttons and 12 contact points

Also the tube G is filled with oil and when the lubricant in chamber A reaches a point, level with the highest point in tube G, this tube becomes a syphon and seeks to draw off the oil in chamber A. Due to the action of the carbureter intake on the end of the tube F, a vacuum is created in the upper part of chamber A. So long as this vacuum exists, tube G, the syphon, cannot become operative.

It is therefore necessary to create a condition of atmospheric pressure in the upper part of chamber A, and this is done by means of the float D. When this float rises, the valve I at the top of tube E is opened and air rushes in from the crankcase through E to create atmospheric pressure in chamber A. At this point, the syphon in tube G becomes operative and draws off all of the oil in chamber A. With the oil level again lowered, float D lowers to close the valve I and the operation of distillation in chamber A is repeated.

Marmon self lubricator—sectional view

Marmon self lubricator chassis layout

Displacement Type Plunger Pump

The Marmon self lubricator takes care of all spring shackle bearings, all front axle bearings (except wheel bearings), tie rod bearings and two drag link bearings. The system makes use of a displacement type plunger pump located on the dash and operated by the driver's right foot. Oil is fed by gravity into the pump from a tank, a ball check preventing a return flow of oil to the reservoir when the plunger is operated.

From the pump the oil is forced to three main points on the chassis called "headers" for distribution to the various bearings. These headers measure the quantity of oil going to the bearing. The controlling devices consists of small double-end plunger valves held in place by light spring pressure. An air bell is placed immediately above the plunger of each valve and the size of this air bell determines the amount of oil for the bearing.

As pressure is built up against the plunger valve, it is unseated from its normal position and seats itself in the opposite direction, preventing any flow of oil to the bearing. As the pressure increases, the air in the air bell is compressed by the liquid which flows in.

Immediately the pressure is reduced by allowing the main pump to return to its normal position, the plunger valve reseats itself in its normal position and the oil that has entered the air bell is forced out and to the bearing by the air pressure in the air bell.

Four New Types of Radio Receivers Announced

R. C. A. Also Adds New Tubes

FOUR new types of radio receiving sets, three new types of loud speakers, and two types of current supply devices were formally announced by the Radio Corporation of America at a recent dinner and demonstration to the trade press at the Hotel Commodore, New York City. A series of five new types of vacuum tubes, supplementing but not replacing previous types, and the adoption of standard bases for the complete line of tubes, were previously announced.

Foremost among the new model sets is Radiola 30, embodying the new R. C. A. eight-tube superheterodyne, Radiola loud speaker Model 100 of the cone type, the whole capable of operation direct from the 110-volt alternating current house lighting mains. The battery eliminating devices employ the new Rectrons, which are vacuum tube rectifiers able to convert lighting current into the required "A," "B," and "C," voltages. No antenna is required with this model. It retails for $575, complete.

Radiola 28, a desk model, is an 8-tube superheterodyne, dry-battery operated, which can be used with the ordinary loud speaker or in conjunction with the new combination power amplifier-rectifier-loud speaker. It lists at $260, less batteries and speaker.

Radiola 25 is a second harmonic, six-tube superheterodyne which can be used with any of the R. C. A. or other loud speakers. It sells for $165 with Radiotrons but without batteries.

Radiola 20 is a new type of five-tube, balanced radio frequency receiver which differs from the conventional in that it employs regeneration. It sells for $102.50, without vacuum tubes.

Radiola loud speaker 104 has built-in amplifiers and rectifier tubes in conjunction with cone speaker. It is capable of tremendous volume and pure tonal quality. It sells for $245, with all necessary vacuum tubes.

Radiola loud speaker Model 102 is supplied with a rectifier-amplifier unit by means of which it can be operated direct from the lightning mains, drawing therefrom grid, plate and filament voltages. It is of the cone type. The retail price with vacuum tubes is $140.

Model 100 loud speaker is a cone type speaker selling for $35.

The new rectifier units, R. C. A. Uni-Rectron Model AP-935 and R. C. A. Dup-Rectron Model AP-937 supply "B" battery current from the lightning mains. The former includes also a stage of power amplification. Either can be attached to prevailing types of receiving sets. They sell for $105 and $65 respectively.

Vesta Radio "A" Battery

THE Vesta Battery Corporation, Chicago, announces that its low priced competition line of Vaco Batteries will be supplied as "A" Radio batteries at regular prices.

This provides Vesta dealers with four lines of "A" Radio batteries, consisting of the "De Luxe", "EAU," Standard and Vaco.

The "De Luxe" is furnished only in the 100 ampere hour size, but the other lines are supplied in various capacities.

There are also complete lines of Vesta

Vesta "A" battery

"B" Radio Batteries, and the Vesta Chemical Charger, for charging "B" batteries.

The revised edition of Vesta Bulletin 102, illustrating and describing these lines, and giving interesting battery information, will be gladly supplied to interested dealers.

Good Show in Los Angeles

LOS ANGELES.—The third annual National Radio Exposition, which opened in Los Angeles September 5th and continued until September 12th, was by all odds the largest and most successful show of its kind ever held in Southern California. A total of 175 exhibitors engaged every available display space in the large auditorium on the grounds of the Ambassador Hotel where the exposition was held. Every known type of radio was on display from the small tube instrument little bigger than a matchbox, to a huge multi-tube set capable of picking up programs from any point in the civilized world. There were machines that send photographs by radio, others clicking off printed matter like a typewriter without a human hand touching, and all controlled by wireless.

There was a radio set to please everyone, and from prices varying from less than a dollar to more than $1,000. A complete broadcasting station enclosed in glass provided by the Radio Corporation of America, was in constant communication with an airplane that soared a thousand feet over the auditorium every afternoon.

Radio jobbers, distributors and dealers are enthused over the prospects for radio equipment in the Southern California market this year. At a preview meeting held just before the show was opened to the public, it was generally agreed among the representatives of all branches of the radio business that this market will yield unusually well this season.

Waldo T. Tupper was managing director of the exposition. J. A. Hartley was chairman of the finance committee; C. A. Stone, chairman of the arrangements committee, and J. W. Boothe, chairman of the publicity committee. Serving on the various committees were L. E. Taufenback, W. D. Scott, Lombard J. Smith, R. B. Yale, H. C. Braden, F. D. Hutchinson, H. W. Mason, C. H. Mansfield, Al Meyer and C F. Hall.

Radio Operates Cars

RADIO automobiles operated by remote control short-length waves will be a feature attraction at the Wisconsin Radio Exposition to be held in Milwaukee, Nov. 11 to 15, inclusive. Maurice Francill of New York will operate a driverless automobile through downtown Milwaukee, making it conform to all traffic regulations. Later during the exposition he will operate two cars in the same manner and on the closing day will make four cars race each other, hold hill climbing contests, cut each other into curbings and perform other stunts. Seventy-five per cent of available booth space at the exposition has already been taken by exhibitors.

Dealers Meet in Alabama

DEALERS in Atwater-Kent Radio sets and parts for the state of Alabama, gathered at Birmingham on Aug. 26 for their first annual convention. The meeting was held at the Birmingham Electric Battery Co., state distributors, and Ed Henley, president of the company, presided over the meeting.

The dealers gathered promptly at nine o'clock to hear the merchandising plan of their company for the coming radio season and President Henley opened the meeting with a short speech of welcome. Julian Schwartz, automobile editor of the Birmingham News followed with an interesting talk on newspaper advertising.

Automotive Leaders Praise Trade Press

A. L. Reeves, M. L. Heminway and A. H. Bartsch Among Speakers Who Predict Continued Progress of the Industry—C. A. Musselman Tells of Benefits of Publishing Merger

At the annual sales conference of the Chilton Class Journal Company, held in Philadelphia at the publishing headquarters during the past week, which was attended by all of its advertising salesmen from various parts of the country, a great deal of emphasis was given a key-note slogan "Know your stuff," which emanated from A. H. Bartsch, general sales manager of the American Bosch Magneto Corp., Springfield, Mass.

Mr. Bartsch was one of the speakers at the conference and also at the banquet held at the Union League on Friday evening as were Alfred Reeves, general manager of the National Automobile Chamber of Commerce and M. L. Heminway, general manager of the Motor and Accessory Manufacturers Association.

Mr. Bartsch stated that a new note has been sounded in the merchandising of automotive products; that during an era, now passed into history, the salesman who had a good fund of funny stories, "personality," and an acquaintance in the trade could get along pretty well—or at least in many cases did get along pretty well.

But today the salesman who tries to get by without a specific knowledge of his merchandise, a definite knowledge of his competitive market, and a thorough conception of the customer's needs, is a failure—both to himself and the company he represents.

Superficial Salesman Passing

Mr. Bartsch made it quite plain that the superficial salesman is rapidly passing from this industry and trade. He said that another negative brand, the man who is forever discussing reasons why "it can't be done," is also speeding toward the exit turnstiles.

"The salesman of today and of tomorrow," he said, "is the man who, when he enters your office has something really constructive to say—and says it. Such men are welcomed by the executive who sits in the buyer's chair. The inefficient salesman who, perforce, receives scant consideration at the hands of such a buyer may tell you that the buyer is hard boiled and crusty. Well, he has got to be when empty handed salesmen attempt to monopolize his productive time."

C. A. Musselman, president of the Chilton Class Journal Company, upon opening the conference, addressed the salesmen upon general subjects relating to policy, etc. Among other things he said:

"Now, for the first time since the merger of the Chilton and Class Journal companies we find our reorganization practically completed and the decks cleared for action. This merger has been as beneficial to the industry as it has been to us.

"Our internal problems have been minimized and should find us turning outward toward sales possibilities instead of inward toward problems of administration.

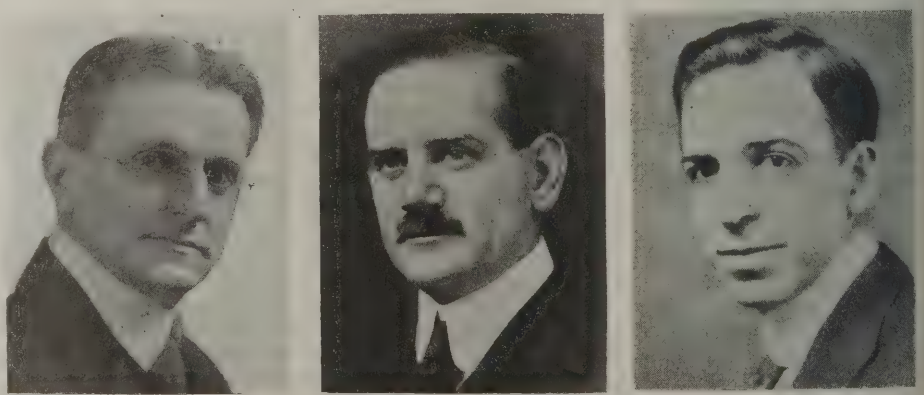
"This meeting is the first under the new order, and I hope the knowledge of our present ability to go forward will be as inspiring to you men in the field as it is to us who have been making plans for this turn of the tide.

"There have been many changes, some of a radical nature, since the two publishing interests came together, but I believe the rank and file of the organization are fully convinced that these changes were not only necessary but inevitable.

"It is true that an individual or a corporation cannot go forward if it remains in a rut. Ruts create resistance and when riding in them the slower ones ahead cannot be passed. Let us all take heart in an appreciation of the fact that we are out of the rut.

"Great changes have occurred in the manufacturing and merchandising of automobiles and automotive products. Comparable changes have been made, and are being made, in the publishing service we are rendering the automotive manufacturers.

"You men who represent us in the various territories must be constantly mindful of the new order of things. Your contact with our clients and prospective clients, must be on the basis of serving those contacts faithfully, honestly and well with a group of papers which specifically function to specific needs—whether those needs be manufacturing, wholesaling or retailing the products of the greatest and most interesting of any industry the world has ever known."



At the conclusion of the convention, on Saturday at noon, Mr. Musselman stated:

"A company with ample finances, with the leading publications, and the right men directing it, such as we find on the United Publishers Corporation board of directors, is one so well entrenched that it is unassailable so long as the manpower is of the quality we have in this organization.

"You on the firing line are more fortunate than many men I know of on other sales staffs, because you have as your sales director a man who understands selling, a man who understands human feelings, a man who is tolerant and helpful, and can lead by example.

"Therefore, I know of nothing more fitting than to give a rising vote of confidence and also of thanks to Joseph S. Hildreth, who is ever looking after your interests."

Guests Who Spoke at Chilton Class Journal Sales Convention

From left to right: M. L. Heminway, General Manager, Motor & Accessory Manufacturers' Association; Alfred Reeves, General Manager, National Automobile Chamber of Commerce; A. H. Bartsch, General Sales Manager, American Bosch Magneto Corporation, Springfield, Mass.

At Chilton Class Journal Sales Meeting

Group of those attending Chilton Class Journal sales convention

At the conclusion of his welcome to the staff Mr. Musselman turned the conduct of the sessions over to Mr. Hildreth, vice-president and sales director.

Alfred Reeves, New York, general manager of the National Automobile Chamber of Commerce in his address said:

"Do not let any one minimize the importance of trade papers in the automotive industry. This has been a big, fast-moving and fast-growing industry, but it has been guided very largely by the trade papers.

"The surveys which you have made in the past have been very helpful. Information is valuable, and the kind we can always depend upon getting from you is especially valuable to those executives throughout the industry who are looking ahead and planning for the future.

"You men in the advertising end of this business are big factors in the industry. Carrying news of high value to the industry the trade paper is of great service and I do not know of any industry in the country where they have been of greater service than in the automotive field.

"It is axiomatic that where you find good trade papers you also find a good, successful, co-operative industry. We want good, independent, thinking papers which will not hesitate to constructively criticize and to comment on the evils of the industry. I am opposed to 'association organs'.

Two Things for Dealers to Do

"There are two things a successful automotive dealer must do: first, read his daily newspaper every day, and, second, read a good trade paper regularly.

"There is room for improvement in automobile advertising. In the class of certain advertising that has come out within the last thirty days you could take one firm name out of a piece of copy, put in another name—and the argument would apply with equal force in either case.

"We have a great big field because the motor car is an article of universal desire. It is going to increase in numbers and in use. We are making thirty-one miles of automobiles every working day of the year.

"Bankers tell me that the automobile business has been the most wonderfully conducted of any business in this country, especially during the first six months of this year. A good measure of credit for this desirable condition of affairs belongs to the trade papers. During this period the dealer made money, the industry made money, there were no price cuts, and no new model announcements until after the first of July, which is as it should be.

"Automobile financing is the best of any being done in this country. Sixty-five per cent of all cars manufactured are sold on time, but the loss to the finance companies is less than two-fifths of one per cent.

Three Normal Problems

"The automobile industry has three normal problems: Engineering, that is taken care of; production, which has been mastered, and, third, sales, advertising and distribution.

"In this third problem you, and the publications you represent, can continue to be highly helpful.

"I want to congratulate you on your magnificent plant and your organization. A big organization has advantages which a small one can never have. Hence your advantages are big.

"If you are going to get results you must have team work. Many times you, as individuals, are obliged to do things you would rather not do, but those things are necessary parts of successful team work. Keep up the Chilton Class Journal team work."

The next speaker was General Manager M. L. Heminway of the Motor and Accessory Manufacturers Association, who evidenced a considerable degree of optimism for the future of the industry and, like Mr. Reeves, stressed the important part taken by the principal trade papers in making this the greatest and fastest moving industry of all time.

William M. Webster, commissioner of the Automotive Equipment Association, was scheduled to speak but could not be present owing to a death in his family.

Speakers at the banquet, in addition to Messrs. Reeves, Heminway, Musselman and Hildreth, were Charles G. Phillips, New York, president, and A. C. Pearson, New York, vice-president of the United Publishers Corporation, of which the Chilton Class Journal Company is a component part.

Mr. Phillips spoke on the subject of "Empty Hands" and laid particular stress upon the mental and other equipment necessary for the present day advertising salesman if he is to be successful.

Mr. Pearson outlined to his nearly one hundred auditors the incomparable advantages they possess in having access to the industrial and merchandising laboratories of the United Publishers Corporation in obtaining authoritative market analyses and trade surveys, not only automotive but those which deal with other United Publishers Corporation units, including iron and steel, hardware, textiles, shoes, leather, etc. He pointed out that these broad research facilities are available to any Chilton Class Journal Company client who can use them.

Position of U. P. C.

He further stated that the U. P. C. is the largest business paper publishing company in the world, and that in the publishing of its periodicals the printing was done upon paper made in the U. P. C. paper mills, from wood grown in the corporation's forests, that the company owns its own engraving and printing plants and, except for the printing inks used, is entirely independent of outside sources of supply.

During the sessions of the sales conference various of the Chilton Class Journal executives and department heads furnished convincing evidence that the automotive industry and trade are in better condition today than ever before, that 1926 will prove bigger than the current year, and that the Chilton Class Journal publications are in stronger position than at any time in automotive history to render both industry and trade an improved editorial service, with circulation distributions virtually blanketing the fields covered.

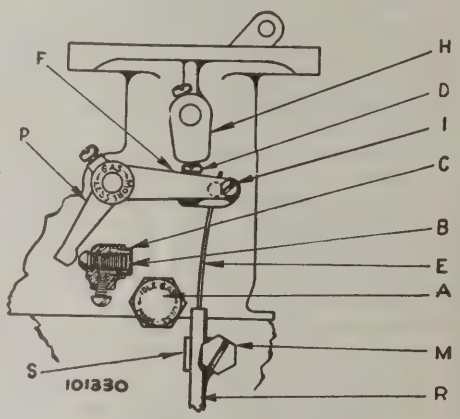
Schebler Model S Adjustments

Q. We have a new model S Schebler carbureter on a Reo six which has been run 14,900 miles. We cannot get this to run right at low speeds. The car will not run evenly much under 10 miles per hour, but at other speeds it is all right. It pulls better on a slight grade. The car has new plugs and had valves ground. J. E. Worster, Old Point Garage, Madison, Maine.

According to our specification tables the latest Reo car is shown as having a Schebler carbureter, but in the Reo instruction book the Rayfield carbureter is shown. In accordance with your request, however, we are showing an illustration of the Schebler carbureter and also giving instructions for making adjustments which are as follows:



Idle Adjustment.—Turning the idle adjusting screw (A) to the right (clockwise) gives a lean mixture. Turning it to the left (counter clockwise) gives a richened mixture. This adjustment is not sensitive and can be turned from three to ten notches without seriously affecting the idle.

The idle adjustment should be set so that by depressing the air valve slightly (about 1/32 to 1/16 of an inch) the engine will start to cut out, showing that the idling mixture is about right. If the mixture is too lean the engine will stop when the air valve is depressed slightly. If the mixture is too rich the engine will speed up slightly on depressing the air valve and the air valve will have to be depressed considerably before the engine cuts out.

Important.—If the idle adjustment is turned to the right (clockwise) too far, the air valve will not seat, since the needle is shut off too far. Turn to the left or (counter clockwise) until air valve seats and adjust as explained above.

Range Adjustment.—This adjustment is only effective in the driving range at speeds from 20 to 40 miles an hour and does not affect acceleration or hill climbing. This adjustment as shipped from the factory will usually be found to be the best unless it is necessary to give a lean or richened mixture at speeds from 20 to 40 miles an hour. Turning the range adjusting screw (B) to the left (counter-clockwise) gives the driving range a lean mixture. Turning it to the right (clockwise) so that more of the threads of the screw (B) are exposed gives the driving range a richened mixture. To obtain the original setting as shipped from the factory, set the head of the range adjustment screw (B) flush with the range adjustment bushing (C). If the range adjustment is changed it is necessary to readjust the idle mixture.

High Speed Adjustment.—This adjustment as shipped from the factory ordinarily need not be changed. This adjustment is not sensitive to one turn in either direction and is effective only at wide open throttle running. In changing this adjustment try it on a hill after each change for best results. In extreme cases it may be necessary to furnish a leaner or richer mixture for wide open throttle position. The adjusting cam tappet screw (D) is turned to the left (counter clockwise) to give a richened mixture and turned to the right (clockwise) to give a leaner mixture.

Reo Six carbureter adjustments

To obtain the original setting as shipped from the factory, the head of the range screw (B) should be flush with the range adjustment bushing (C). With throttle wide open adjust the cam tappet screw (D) until there is about 7/32 to 1/4 of an inch space between the dash control lever (P) and the end of the range screw (B).

FIRST ESSEX TO USE TIMING CHAIN

Q—What was the serial number of the last Essex four-cylinder car which used timing gears or what was the serial number of the first car which used chain drive at the front end.—Russel W. Moore, 908 E. Marshall Street, Paris, Ill.

The first Essex four cylinder cars which had chain drive at the front end were as follows:

Phaeton	620945
Cabriolet	842961
Coach	512041
Chassis	900048

All cars previous to these numbers were equipped with metallic gear front end drive. This information is furnished through the courtesy of the Hudson Motor Car Company.

When a Car Bucks—What to Do?

Q.—We have a Ford coupe that bucks between 15 and 20 miles per hour, this being a 1925 model. The car ran perfectly for the first 2½ months and began bucking, at which time we began to look for trouble. First operation included reseating and grinding valves, testing intake manifold for leaks with gasoline, replacing new timer wire, timer and roller, inspection of coil box connections and porcelain and plugs, also adjusted valve stem clearance to .008 inches, with no better results. The second operation included refitting pistons and rings after which we had 50 lbs. compression in each cylinder under the compression gage. Also tightened rear hubs on axle shafts, replaced universal joint with new one and inspected transmission which seemed to be o. k. Have adjusted commutator pull rod to right position. Car runs fine for about 75 to 200 yards then the bucking starts and continues until car is speeded up. George N. Smith, Meridian, Texas.

We would recommend your testing to see whether the spark misses or not before you do any more work. Disconnect one spark plug wire at a time and with the engine running at a speed corresponding to the speed at which the trouble occurs, check the spark. The end of the high tension wire should be held about 3/16 inch from the cylinder block and the spark should jump regularly. We suspect that a coil is giving trouble and while you mention checking the coil connections you do not say that you tried a new set of coils.

Even if the spark is o. k. it is possible that the plugs are bad and we would recommend your using a set of plugs from a car which is operating all right. Another possibility is that the carbureter is adjusted to give too rich a mixture or that the float is not operating properly and occasionally permits flooding which would give too rich a mixture and cause the engine to gallop. You might try a new carbureter as this would be a simple test to make.

WHICH WAY DOES A BELT GO ON THE PULLEY?

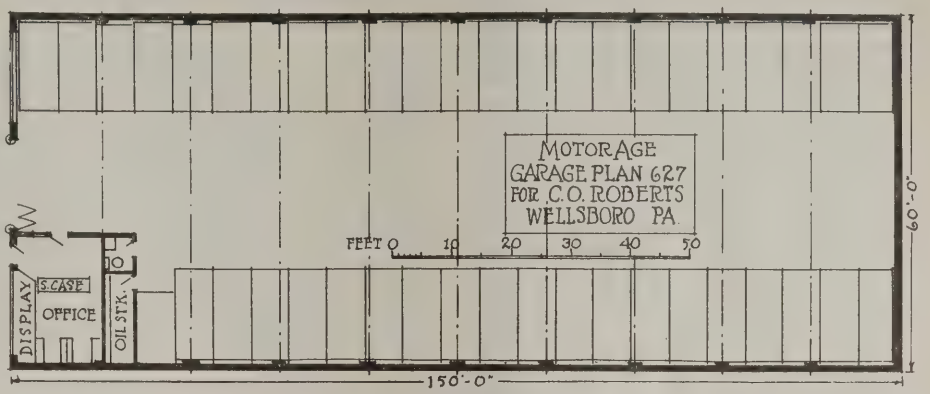
Q.—Which way should a leather belt be applied to pulley, smooth side of belt or rough side to pulley? Petterborg-Nash Motor Co., Preston, Idaho.

The hair or grain side should be against the pulley. One side is as good as the other as far as friction is concerned. The strength of the belt, however, comes from the inner or flesh side of the hide. As the belt goes around the pulley the outer portion is stretched and carries the greatest amount of the driving strain, consequently, this outer portion should be the flesh or rough side.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE



A Storage Garage With Ample Aisle Space

Q.—I am planning on building a one-story garage 60 ft. x 150 ft. and would be pleased to have you offer some ideas and plans regarding same. C. O. Roberts, Main Street Filling Station, Wellsboro, Pa.

We judge from your letter that you want a purely storage garage, but as most garages of this sort handle a few accessories, we have arranged for a show window, show case, small office and accessory stock room. This building will be a little wider than absolutely necessary, but we consider this a very good fault as it gives you a wider aisle and makes it much easier to handle the long cars with their bumpers, etc. The wide aisle space will also make it possible to store trucks, if business of this sort is available in your vicinity. This building should have a trussed roof, the trusses spaced about as indicated, and they may be either of wood or steel the wood getting as favorable an insurance rate as the steel.

It would be well to make your front entrance wide enough to permit traffic both ways, but of course, this is not absolutely necessary. The heating plant for a building of this kind is usually installed in a small basement arranged in one corner of the building. Some communities require an outside entrance to this basement and if this is necessary where you are, the entrance would have to be from the alley if there is one or from the street in front.

Steam is usually preferred as a heating medium as it is cheaper to install and quicker of action than hot water and gives a better distribution than hot air unless some sort of blower system is used.

It would be advisable to have some skylight here even if the building is not surrounded and can have plenty of side windows; the aisle would be dark without them

REDUCE THE OUTPUT TO MAKE GENERATOR RUN COOLER

Q.—We have a Wagner generator, model E M 155 on a 1918 Saxon, model S—4-T. This generator charges 18 amperes and seems to be all right except that it overheats. New brushes have been fitted and the commutator turned down, but it gets so hot you can hardly bear your hand on it. It is correctly wired according to an automobile hand-book. Should the cutout be grounded? There is no sparking at the brushes and all wires are in good shape. It has me stuck. C. A. Harrington, 10 Brookside Park, Milton, Mass.

We believe that 18 amperes is too much output for a machine of this size. Twelve amperes would be sufficient in summer and 15 in winter. The cutout should be grounded and if it is not grounded the generator will not cut in and will not charge the battery by itself and will only charge if the cutout points are closed by hand. Accordingly if the cutout operates all right you know that it must be grounded. We do not believe there is anything wrong with the machine and that the heating is nearly normal for this much current output.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

Q.—Last May I contracted with an advertising company to furnish me "One single column cut series D cartoon and reading matter weekly for one year" in advertising my automobile repairing and radiator business. It also states that the contract cannot be cancelled without written consent of the company. Now the contract does not define or describe the Series D line, the only description I have of it is the solicitor's description and the samples he showed me. The cuts they are sending me are not living up to the description he gave me nor as good as the samples he showed me. Also the reading matter half the time cannot be used at all, branching off into other lines such as fixing sewers and guttering roofs. I have refused to accept the cuts at the postoffice and refused to pay for them on the assumption that a contract that does not bind them to live up to their agreement does not bind me to live up to mine. Can I do this or do I have to pay for anything they care to send? Pedersen's Garage, Cozad, Neb.

Regarding your contract for advertising. You are correct in the assumption that a contract which is not binding upon both parties is not enforceable in law. This kind of contract is not binding because of its very quality of lacking "mutuality" as termed in law. While you are right on this rule of contracts you may be wrong in your conclusions. If you have contracted for delivery of a certain thing, you should consider whether you are getting what you bargained for. It is a rule of contracts that where an agreement is reduced to writing the written agreement supersedes all preliminary statements and offers and is presumed to more definitely state just what the agreement is.

But the contract may not embody all the terms of the contract and oral testimony may be resorted to in order to determine just what has been left out of the written part. For instance, where the description of a service sold is left out of the written agreement, I am of the opinion that your court would permit oral evidence as to what representations were made as to the kind of service, etc. Now the rule is that where goods are sold by sample and the goods delivered are not in accordance with sample, the buyer may return the goods and bring suit to recover money paid, or he may keep and use the goods and sue for the difference in value of the inferior goods to the sample. The statement that contract cannot be cancelled without written consent of the company means little in law. The rule is no party has a right to cancel a contract unless under a provision of the contract giving that right. The provision may indicate that the other party will not agree to a cancellation without suit. So, if by negotiations you are told you may cancel the agreement you should get the consent in writing, then you will have complied with the provision. Of course you are not required to pay for anything a seller cares to send and which is not in accordance with the contract of sale.

AN ELECTRICAL MYSTERY

Q.—I put on a new timer and roller on a Ford car but it would fire on two cylinders at the same time. Turning the engine by hand it would fire on three and four and then turning it farther it would fire on one and two. A new timer shell and new wires and tested coils were used but it worked the same way. After about an hour I found out the trouble and I wonder if there are any MOTOR AGE readers who could guess what it was. C. E. Loring, Loring Garage, Riverdale, Kansas.

Mr. Loring told us the answer to the above mystery. We are going to see if any MOTOR AGE readers can tell us what caused the engine to act this way.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

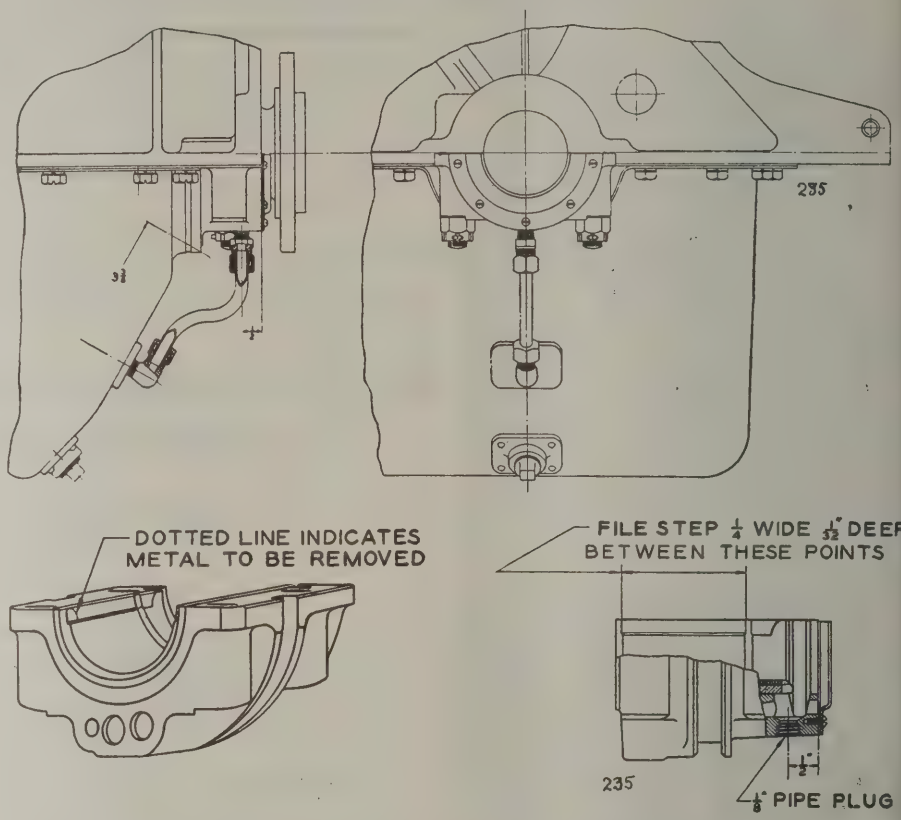
Curing Oil Leak at Rear Main

Q.—Referring to your instructions, relative to stopping oil leak through the rear main bearings, 1924 Hupmobile 4. I wish to inform you that we got ahold of one of these cars last week and that we followed your instructions. To date the car has been driven a few hundred miles and the leak has increased. Also the oil pressure is recording on dash gage much lower, in fact, after car is warmed up and at from 25 to 30 miles per hour, it records only from five to seven pounds pressure. Will you please see if you can investigate this case further and get me some additional information on this trouble. D. S. Milne Garage, Fairmont, Minn.

The following instructions have been supplied through the courtesy of the manufacturers of the car, the Hupp Motor Car Corporation, Detroit, Michigan. The bulletin covering the repair of the oil leak is as follows:

"Certain conditions cause rear main bearing oil leaks and in most cases they can be corrected by chamfering the top edges of the lower bearing as shown at the lower left sketch of illustration No. 235. Aggravated cases sometimes require a tube installation to return surplus oil to the oil pan. Follow the chamfering instructions first.

"To chamfer bearing remove rear main bearing cap and file the babbitt along the upper end of the bearing from the circular oil groove to the inner end of the bearing which is nearest to the crankshaft counterweights. Do not file beyond the oil groove. Be sure that the oil retainer plate screws are tight and that the plate seats firmly at all points along the gasket; also be sure that the plate does not touch crankshaft.



Amount of Clearance Required

"One sixty-fourth of an inch clearance is required at all points between crankshaft and plate. If this cannot be obtained by shifting the position of the plate it may be necessary to use a half round file on plate to obtain this clearance. The main bearing shims should not touch the crankshaft in rear of the oil fling and must have 1/16 inch clearance at this point. If necesary cut ends of shims with snips. While bearing is removed install a ⅛ inch pipe plug for the purpose of tube installation should this become necessary. Drill a ⅛ inch guide hole in the center and at the bottom of bearing cap oil trap ½ inch from the rear end of cap casting as shown at the lower right hand sketch of illustration No. 235. Follow this by drilling 11/23 inch hole. Operate drill from outside of cap—tap and install a ⅛ inch pipe plug securely.

"Remove the necessary shims from rear main bearings until a drag can be felt on the crankshaft when bearing nuts are tight. Use gasket glue or shellac along top and side surfaces of bearing cap when assembling.

"On engines from No. R-100,000 to R-100,019 always renew the new cork inserts on each side of rear main bearing shim. Install oil pan and check engine for leak. If above procedure does not correct the trouble remove oil and procedure with the following instructions.

"Clean back end of oil pan thoroughly and drill a ⅛ inch hole in the center of pan, 3⅜ inches from bottom of oil pan packing surface. Make up a brass plate ¼ inch thick by 1¼ inches square. Drill a ⅛ inch hole in center of plate and solder same to oil pan securely, lining up the two ⅛ inch holes. Using the ⅛ inch hole as a guide drill plate and pan with 11/32 inch drill and tap hole with ⅛ inch pipe tap. Then install a ⅛ inch tubing elbow. Now remove ⅛ inch plug from bearing cap and install ⅛ inch tube coupling. Install oil pan. Cut a piece of 5/16 inch tubing 3¾ inches long and install a union nut and sleeve at each end connecting the two with bearing cap and oil pan elbow as shown in the two upper sketches of illustration No. 235. Be sure that tube enters coupling in elbow ¼ inch and that union nuts are drawn up securely. The parts required are one length of 5/16 copper tubing 3¾ inches long, one brass plate ¼ inch thick and 1¼ inch square. One No. 45400 pipe coupling, two No. 45402 sleeves, two No. 45403 union nuts, one No. 45404 union elbow.

Chamfering the bearing and installation of drain pipe will carry excess oil back to the crankcase

READER'S VIEWS ON CAUSE OF SHIMMY

From time to time I see readers asking the cause and cure for shimmy in front wheels, and your answers do not satisfy me. From my observations in over sixteen years at this work shimming at low speed is always caused by excessive tilt in the front axle. If bushings and pins are stiff and steering gear absolutely tight, it is possible to prevent shimmy even if the tendency is there. In many light cars it is common to see the tilt of spindle bolts up to and over one-half inch. The cure is to reduce the tilt to not over one eighth inch. This will also cure the tendency to pull hard to the low side of the road. On the small Overland lengthen the radius spring under the front axle. Phil Churchill, proprietor North Bend Garage, North Bend, Wash.

Clearing Up Electrical Trouble

The READERS' CLEARING HOUSE

Too Many Secondaries Spoil the Sparks

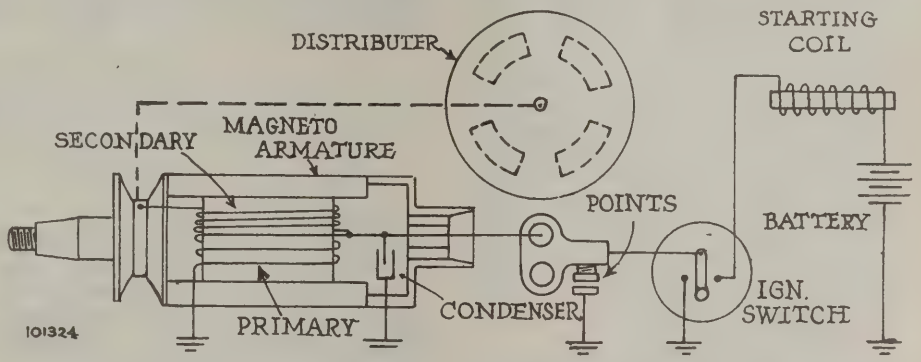
Q.—We have a 1912 Stevens Duryea engine No. 509 from which the Connecticut battery system has been removed. We have a Bosch model V. D. switch with which we are using a Ford coil, not having the Bosch coil. Wiring it according to the enclosed diagram which is the original Bosch diagram we could get no results, at all, simply because we had a continuous flow of current in the primary winding of the magneto.

Again with the magneto points closed, we get a spark from the Ford coil, but this is impractical because the spark occurs on the compression stroke. We are under the impression that the Bosch V. D. coil is a low tension coil and have accordingly shorted the Ford coil secondary. It is our opinion that we have overlooked something and wish you would show us what that something is. F. L. Tighe, Central Auto-Electric Company, 2639 Harlen avenue, Baltimore, Md.

We are not going to try to straighten out your wiring diagram, but we wish to point out the way battery current can be used to strengthen a magneto spark at low speed and some of the pit falls that are encountered when an installation of this sort is attempted. The illustration shows the circuits of a high tension magneto as well as a coil shown connected at the right. When the magneto is operating normally it generates currents in its own primary winding, due to the rotation of the armature in the field of the permanent magnets.

Armature Magnetism Changed

The flow of current generated in this primary winding of the armature is through the interrupter contacts to ground and back to the primary. When the interrupter contacts open, the primary current is suddenly interrupted and there is produced a sudden change in magnetism in the armature of the magneto. This change in magnetism is more sudden than could possibly be produced merely by the rotation of the armature. For this reason the secondary winding which is also on the armature has a voltage generated in it which is much higher than could otherwise be obtained. The condenser in the armature which absorbs the arc at the interrupter points makes the stopping of the primary current still more sudden and thereby helps to raise the secondary voltage.



When the armature is rotating at very low speed the secondary voltage is correspondingly low and in some cases may not be enough to give a good spark at the plugs. Our recommendation from a practical standpoint is to have the magneto put in A-1 condition and then if the spark is insufficient to have an impulse coupling installed. It is possible, however, to get a hot spark at low speeds by using a battery and an extra coil. As the magneto already has its secondary winding connected to the distributer it is not feasible to use a Ford coil as you tried to do and if you short the secondary winding it has an effect on the primary which to a great extent neutralizes its action.

The coil required is similar to the coil used in a make and break system as used on some stationary engines, being nothing more or less than a coil of wire wound around an iron core, the core usually being made of a bundle of iron wire. Such a coil is shown connected with battery, switch and magneto armature in the illustration previously mentioned. With the switch in the middle position the magneto operates as a straight high tension machine. With the switch at the left the magneto is shorted so that this would be the stopping position. With the switch at the right we have a circuit from the battery to the starting coil and through the interrupter points or the primary to ground.

When the interrupter points are closed you will notice that they short out the primary winding, so that the battery current would not flow through it. The battery current, however, would flow through the starting coil and would magnetize its core. Then when the magneto is rotated and the interrupter points open there would be a sudden rush of current through the primary winding of the magneto armature due to the magnetic effect of the core of the starting coil. This sudden rush of current through the primary winding would suddenly produce magnetism, which in turn would generate a voltage in the secondary winding.

The difference between this condition and the one previously described is that the magnetism suddenly rises instead of suddenly dying away. A circuit of this kind will work with the ordinary high tension magneto when it is rotating very slowly. As soon as the rotation is appreciable, however, we find that there is voltage generated in the primary of the magneto armature which has the effect of strengthening two of the sparks and weakening the others, so that if we tried this scheme we would find that the engine will run on two cylinders and the other two will not fire, so that as illustrated, the scheme is hardly practicable.

To overcome this difficulty the Duplex magneto was made at one time by one or two concerns. This magneto was similar to a straight high tension magneto except that the interrupter cover had two semi-circular brass pieces or segments on the inside, these segments operating as a two part commutator. The interrupter carried two brushes which rubbed on these segments and the effect of the whole construction was to reverse the relative connection of battery and magneto armature at each half revolution. This had the effect of making all four or six sparks as the case might be, stronger, and at the same time reduce the tendency to weaken the magnetism of the magneto magnets. Any authorized electrical service station can tell you the approximate expense of installing one of the Duplex type interrupters and getting a suitable coil.

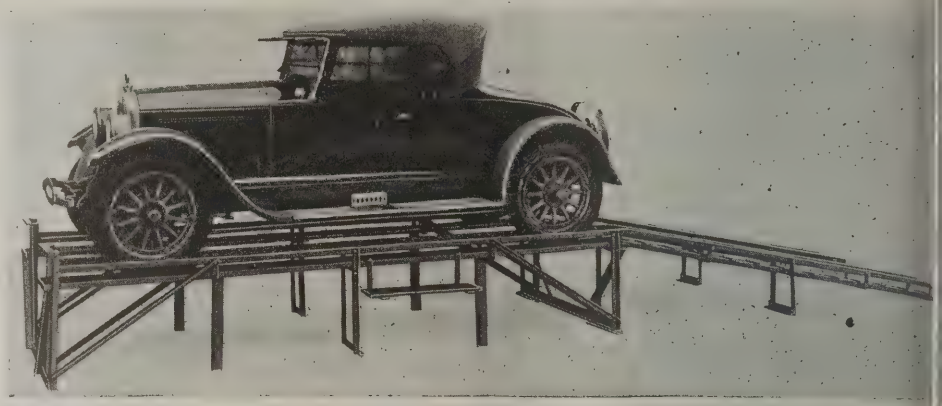
Experimental circuits for obtaining a stronger magneto spark at low speed

Impulse Coupling Preferable

On the other hand they can quote you on an impulse coupling to remedy the trouble you are experiencing. Referring again to the electrical problem, wish to point out that it is impossible to merely connect a battery to the magneto without using a coil of some sort or the interrupter contacts would constitute a short circuit and burn out the wiring and points. On the other hand a coil with a secondary winding cannot be used with a straight high tension magneto, although it can be used with a Dual magneto.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT



Flat Rate Means More Than Merely Adopting Fixed Prices

JUST because a shop may have a flat price for every operation it is likely to perform this does not mean no trouble ever will be encountered. There will be snags at times as with everything else. If such were not the case we should never need executives and managers for all other lines of business.

In using flat rates there must be a constant striving to make the system better. It is possible very often to perform some operations more quickly than the time limit set up for the job and on which the price to the customer is based. The live shop is always on its toes to develop new methods and equipment to cut down the time factor.

Putting the men on a piece work basis (providing the shop is large enough to handle a volume of work warranting it) produces an incentive for them to evolve new schemes to do the work more quickly and at the same time not sacrifice quality.

When you install a flat rate system you have just started to work. As time goes on you will be able to adjust prices and time schedules to suit your conditions more adequately.

THINGS THAT HELP FLAT RATE

Being able to get at the job is half the battle and when it is necessary to get underneath the car a raised platform or runway, as shown above, helps very materially. It gives the mechanics a chance to work in comfort and under such conditions they are bound to do a better job

Maybe the Flat Rate Manual Would Tell?

The other day a car owner found it necessary to take his car to a "garage" for repairs and was told he must buy a new rear axle housing, a bearing and several other parts. He had run the car and in some manner the pinion shaft housing broke away from the differential housing. Naturally quite a bit of damage was done. Also, the repairman said a new ring gear and pinion were advisable. While he was about it, the owner decided to also have the engine put in shape by regrinding the valves and taking up the bearings, installing new clutch disks and several other jobs. He was telling us about the work and we asked him what the job was going to cost. He said, "I don't know, you see they can't tell until they see how much work they have to put in on it."

Looks like flat rate still has to win over some garages and shops.

MOTOR AGE'S FLAT RATE FORUM

No. 32

FLAT RATES FOR OAKLAND CLUTCH OPERATIONS

Manufacturer's Official Designation		Time Hrs.	Min.
6-1	Clutch Assembly. Removed, refaced, any necessary part except clutch hub change, assembly replaced	4	
6-2	Clutch assembly. Removed, overhauled complete except leather and clutch hub and assembly replaced	3	
6-7	Clutch equalizer bolt removed and replaced		45
6-8	Clutch equalizer bolt removed and replaced (drilled out)		30
6-9	Clutch leather trued and fitted after assembly to cone		20
6-10	Clutch leather treated with neats foot oil or Fuller's earth		30
6-12	Clutch and brake pedal shaft auxiliary bracket. Removed and replaced	1	
6-13	Clutch pedal shaft freed up		30
6-14	Clutch assembly. Remove transmission, change clutch release bearing, retainer and nut and replace transmission	2	
6-15	Clutch release bearing oil kip removed and replaced and bearings oiled		15
6-17	Clutch release springs or support bearing removed and replaced	2	30
6-18	Clutch release spring or support bearing removed and replaced, (transmission down)		30
6-19	Clutch release bearing oiler tube removed and replaced		30
6-20	Clutch assembly. Clutch driven disc or clutch clamping plate removed and replaced, one or all	3	30
6-22	Clutch assembly. Removed, overhauled complete or any part changed and clutch assembly replaced	3	45
6-25	Clutch release fork or shaft removed and replaced (transmission in place)	3	
6-26	Clutch release fork or shaft removed and replaced (transmission down)		25
6-27	Clutch release shaft operating lever removed and replaced		30
6-28	Clutch driving bolt removed and replaced, one only		30
6-31	Clutch pedal removed and replaced		45
6-32	Clutch pedal adjusted		30

Operation 6-1, applies to models 34, 6-44, 34-C and 6-54, incl.
Operations from 6-2 to 6-17 apply to model 34 to 6-44, incl.
Operation 6-19 applies to models 34-C to 6-44, incl.
Operations from 6-20 to 6-28 apply to models 6-54.
Operations 6-31 and 6-32 apply to all models.

Flat Rates for Trucks

STATE TRADE SCHOOL.
Vancouver, B. C., Canada.

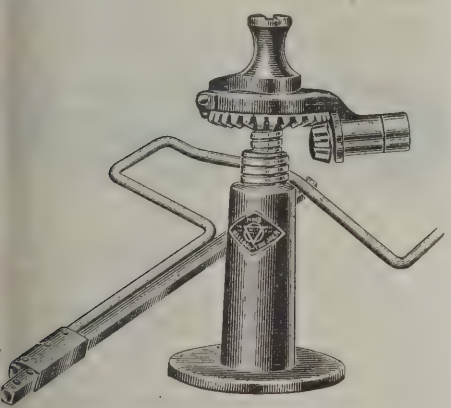
To the Editor of MOTOR AGE:

If you publish a Flat Rate Manual for motor trucks, we would appreciate it very much if you would forward a copy to us at your earliest convenience.

HAYES-SLUMAN MOTOR CO., LTD.

Excepting for the flat rates operations given in MOTOR AGE's Flat Rate Manual on a few light delivery cars such as Chevrolet and the Reo Speed wagon, we have not as yet brought out a flat rate manual covering the various makes of trucks.

You probably will appreciate the fact that it is much more difficult to make up a list of such operations for trucks, since the work involved is of a different nature than that found in passenger cars. Usually where trucks are operated in fleets it is customary for the owners of the trucks to operate their own maintenance shop and to them flat rate prices or time schedules are not so important.

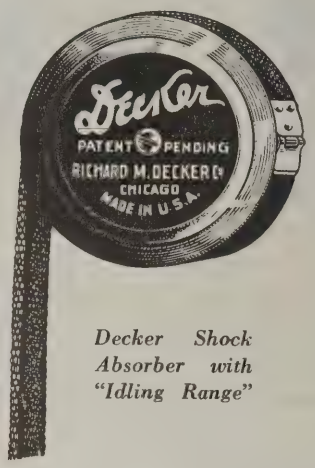


In the rural sections, however, where a shop often is called upon to work on a farmer's truck, for instance, it probably would be quite an advantage to be able to quote a flat rate price for maintenance work.

THE MARKET'S NEW OFFERINGS

Accessories -- Equipment — Supplies

Decker Shock Absorber



A SHOCK absorber which is said to control spring action of the motor vehicle "only" when necessary and which at the same time responds powerfully and efficiently when called upon by unusual road conditions, is being manufactured by the Richard M. Decker Company, of Chicago. This shock absorber, by reason of its "Idling Range" comes into action only when the riding condition ceases to be normal and up to that point leaves the springs of the car free to function as they should under normal requirements. In other words, it is designed to control excessive spring action. The "Idling Range" remains the same regardless of the load carried, automatically adjusting itself to changing weights. The working parts of the Decker Shock Absorber are enclosed in a heavy metal housing, being thus protected against dirt, water or other elements that tend to destroy efficiency. To service the device it is only necessary to remove the cover. Price for set of four (for all cars except Ford), $32.50. Price per pair for Ford, $17.50. Attaching charge extra on all cars.

National Standard Company's New Balloon Tire Jack.

Standard Auto Jack No. 18

A BALLOON tire jack which the makers say will serve the most extreme conditions is being produced by the National Standard Company, of Niles, Mich. The appliance is designated as Standard Auto Jack No. 18. It can be used under the lowest hung axles with the largest size balloon tires. A telescoping screw eliminates breakage of springs and other working parts. The telescoping feature of the handle permits its use at any length. The height of the jack lowered, is 6 and 7¾ in. The height, raised, is 14 and 15¾ in. The capacity is 2,000 lbs. and the weight of the jack is 7 lbs. It is suitable for a car weighing 5,000 lbs. The list price is $6.50.

Decker Shock Absorber with "Idling Range"

"Pressure" in Selling Over the Counter

High pressure salesmanship in the accessory store is all right providing the pressure is properly directed. The conception entertained by some of high pressure salesmanship is to coax, din and worry the customer until he is stampeded into buying... That is positively misdirecting the pressure and it is dynamiting future business.

In selling over the counter the sales pressure must be applied in a different manner than in other forms of selling. Yet in the general business system of the store there is ample room for "high pressure"—in the advertising, in the direct-mail campaigns and in other progressive devices for getting business.

Cultivating the good will of customers is a very profitable form of "pressure" and often the accessory dealer finds that the highest sort of pressure is, in fact—no pressure at all, to use the word more literally.

McCord's Cellular Radiator for Fords

Kelly Roadlite

THE Kelly Roadlite, manufactured by John B. Kelly, 4617-19 W. Harrison Street, Chicago, is attached to the front wheel spindle and therefore turns with the front wheels, giving full illumination of the road on curves as well as straight ahead. One or two lights may be used, depending upon the amount of illumination desired, for Ford, Chevrolet and Overland installation, but for other cars two lights are required. Two types of brackets and three types of studs are furnished to provide for practically universal application to all makes of cars. The brackets and studs are shown in the illustration. The lamp is made in two sizes, Model No. 1, 6¼ in. in diameter, priced at $5 each or $8.50 a pair, and model No. 2, 5½ in. in diameter, priced at $3.50 each or $5 a pair, at retail. The prices include necessary wire and switch.

Kelly Roadlite

Cellular Radiators for Fords

COMBINING many advantages in construction and service the McCord Type "B" Cellular (hexagonal) Radiator for Fords, is being manufactured by the McCord Radiator & Manufacturing Co. of Detroit. One feature is its triple-riveted side brackets which are strongly made of spring steel and which protect the radiator by absorbing the road shock and vibration before reaching the center core of the radiator. This feature is said to lengthen the life of the radiator. The radiators are tinned inside and out to afford protection against corrosion through the action of chemical or mineral substances in the water. The top and bottom tanks are constructed of heavy gage brass and it is said they will last the life of the radiator core. The McCord Type B core and shell are interchangeable with the regular Ford product. No. R-123, Type "B" radiator for Fords, complete 1916-23, lists at $16, No. R-124, Type "B", complete less shell, 1916-23, lists at $15, No. R-126 Type "B" radiator for Fords, complete, 1924-25, lists at $17. No. R-126, Type "B" radiator for Fords, complete less shell, 1924-25 lists at $16.

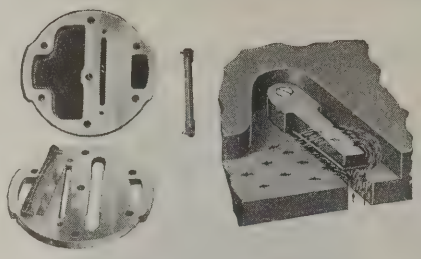
GETTING MORE OUT of the SHOP

Worthington Feather Valve Vertical Air Compressor

Worthington vertical "Feather" valve air compressors were designed to meet the demand for a small machine for use in garages, repair shops and small industrial establishments. They are made in two types: air-cooled and water-cooled. The air-cooled compressor is made in 2½x3 in. and 3½x4 in. sizes and is exceptionally well adapted for tire inflation. The water-cooled type is made in four sizes up to 6½x5 in. and is suited for supplying compressed air for one or more of the following uses: tire inflation; air-blast cleaning; pressure and air-mist car-washing systems; pneumatic jacks, lifts, hoists, drills, hammers and other tools; forced draft for brazing forges, etc.

Automobile-type construction was adapted in designing Worthington vertical compressors so as to obtain the long life, low upkeep and reliable service. Accordingly pressure forced-feed lubrication and accurate balance of reciprocating parts were incorporated.

The "Feather" valves used in these compressors are similar to those used in larger and more costly Worthington compressors. The valve proper consists of a strip of light, ribbon steel which, when closed, covers a slightly smaller slot in the ground face seat. The strip is restrained but not rigidly secured at the ends by a curved drop forged steel guard which allows the passage of air on either side of the strip. Quiet operation and maximum life is insured by the lightness of the valves and by the fact that there is no destructive impact. The valve itself is all but indestructible while the expense of renewals, which are seldom required, is obviously nominal being confined to the replacement of the valve strips.



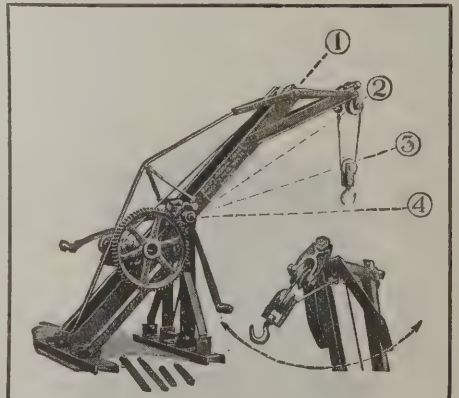
The suction and discharge valves and guards are identical and interchangeable. The openings for these valves are located on the same side of the cylinder. The cylinder head and valves may be removed without breaking pipe connections.

Another feature of the Worthington vertical compressor is forced-feed lubrication of all bearings. The oil is forced through drilled oil passages in the main crank-shaft and delivered to the bearings under pressure.

The piston is ground to size and fitted with three hammered piston rings. Special provision is made to wipe surplus lubricating oil off the walls and return it to the crank case.

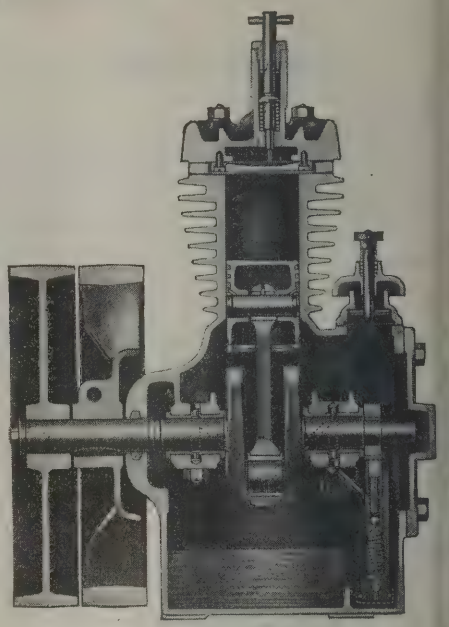
The wrist-pin of hardened steel, ground to size, is held in the piston by a spring ring on each end.

The main bearings are of the two-part removable die-cast babbitt type and may be readily adjusted, removed and replaced. The shaft, crank pin and counter weights are drop forged in a single piece. The connecting rod is a drop forging of "I" beam section which gives maximum strength with minimum weight. All reciprocating parts are heavily counterweighted to reduce vibration and to prevent pounding of the bearings.



Details of the valve used in the Worthington compressor

Manley 2 Ton Quick Detachable Wrecking Crane



The Manley 2 ton quick detachable wrecking crane is built on exactly the same principle as the combination crane, except that it is designed to be almost instantly detached from the service car by removing two pins. When the rear pin is pulled out it allows the crane to swing back and by removing the king pin in the saddle the crane is free from the car. The hinged saddle folds out of the way on the car platform or may be completely removed by taking out another pin and two bolts. All of this requires about 3 minutes.

The tilting beam on the No. 102 crane is accomplished in the same manner as on the larger crane by changing the length of the links at the rear end, which allows the beam to tilt into any position. It does not interfere in any way with the quick detachable feature. The crane also has a swivel nose permitting a chain to pull on any angle and eliminates the possibility of its running off the sheave pulleys. Two handles are now supplied, enabling two men to operate the winch in case of extreme heavy loads. The price complete with hoist and 24 ft. of chain is $95 and without hoist and chain, $65. The swivel nose can also be bought separately for $8.50.

The crane is made by the Manley Manufacturing Co., York, Pa.

Mack's Wheel Pullers

Mack's wheel pullers are made in sizes to fit every car and so built that the shock is distributed, a pilot preventing damage to the threads while the threaded body prevents damage to the end of the axle shaft. Because of their short, sturdy construction they prevent an off center blow from springing the axle shaft. Heavy duty pullers are also made for trucks on special order. In use the hub cap of the wheel to be taken off is removed and the opposite wheel jacked up. Next the axle shaft nut is removed and the Mack's wheel puller screwed tightly to the axle shaft. The puller is then struck with a hammer the jar of which loosens the wheel. The carbonized pilot fitted to the inside of the puller is made a slightly loose fit and the body of the puller is made of machined steel, heat treated after machining. The mechanic's set containing five pullers which take care of practically every standard make of car, lists at $10.00. The smallest of these has a thread size 5/8 in. by 18 in. for such cars as Ford, Chevrolet, Star, Essex 6 etc. and the largest has a thread size 1 1/8 in. by 12 in. for cars as the Haynes 57. Buick Master 6. Fulton Model A truck, etc. Heavy duty truck pullers in sizes from 1 1/4 in. to 1 1/2 in.—12 S. A. E. list at $5.00 and $6.00 respectively. These pullers are made by the American Sharpening Machine Co., Kalamazoo, Mich.

Mack wheel pullers

EDITORIAL

More Roads Are Coming

IN this issue of MOTOR AGE is an extensive article on the progress being made in city and country in building streets, highways and parking places to relieve traffic congestion. The last few years of unprecedented increase in the number of motor vehicles have resulted in almost intolerable conditions in the vicinity of many large and medium sized cities. Even in the less populous centers the available paved highways frequently have been found inadequate.

But there are many encouraging signs. Not only are the states and counties building modern highways, but cities of the first rank are spending millions of dollars to open up the bottle necks and give free flow to the traffic that comes from both town and country.

In and near such cities as Chicago the delay and traffic jams that result from narrow and inadequate outlets, railway grade crossings and devious routes that have to be followed cost the motor vehicle users vast sums. That is why cities like Chicago can afford to put many millions of dollars into the construction of such traffic expedients as the solid concrete double-decked Wacker drive or the great proposed viaduct that will connect the north and south sides across a vast expanse of railway yards and the Chicago river.

Activities like these, which are being duplicated, on a comparable scale, in hundreds of other cities and towns mean a great deal to the automotive trade.

Service with a smile is a good motto, but whose smile is it? There should be two smiles—one by the dealer and one by the customer.

Ask 'Em to Buy Again

THERE are some merchants in the automotive business who seem to think that when once they have feebly whispered in a customer's ear, "Wouldn't you like to buy?" they have fulfilled all the requirements of the Ask 'Em to Buy Club and are thenceforth elected to full membership with access to the treasury and nothing more to do but count their profits. They seem to think they have spoken a magic password that admits them to a higher circle wherein the streets are paved with gold and no one worries. There they appear to have no use for business energy and soon forget even the magic words that they depended upon to bring them immunity from further industry.

Asking them to buy is not a thing to be done once and forgotten. The successful man in any business practices it constantly. He may not be always droning into the ears of customers, "Won't you buy this or that?" Probably not. More than likely his verbal entreaties are in the way of subtle suggestion. "Here is a fine little article that will give you a lot of pleasure and comfort in your driving." "You will like this device so well that after you have tried it you wouldn't let it be taken off your car for anything." "If you would like to try this article I'll put it on your car and if you don't like it I'll take it off and you won't owe me a cent."

But asking them to buy is not always by word of mouth. The air of cheerfulness with which customers are waited on is a distinct invitation to come back and buy more. Clean merchandise well displayed with the price plainly marked speaks louder than words in its appeal to the customer. Intelligent advertising wisely placed is another constant invitation to the public to buy.

There has been criticism of automotive merchants that they do not know how to sell goods. This criticism has been directed especially at dealers in accessories and supplies. We know that the proportion of good merchants in the automotive trade probably is as great as in any other industry. But still there are many dealers who need encouragement and help in the direction of promoting sales.

The Automotive Equipment Association has done a wonderful work with its Ask 'Em to Buy campaign. But there are some indications that this campaign has not been recently pushed, that it has lagged due to the energy that the merchandising department of the A. E. A. has diverted to other phases of its beneficial work.

Now would be a good time to again turn the spotlight on "Ask 'Em to Buy" and leave it there. This campaign has such vast possibilities and can be expanded to so great an extent with profit to the whole industry—cars, parts, accessories, supplies, equipment—that if it does nothing else but properly develop the Ask 'Em to Buy movement the A. E. A. and its merchandising department will have rendered a service of inestimable value to the industry.

How long will the recollection of quality continue after the last note is paid?

Common Sense in Buying

RETAIL dealers in the automotive trade are constantly being given the opportunity to "get in on a good thing." A chance to buy goods at special discounts, bargain lot assortments, exclusive agencies and what not. There is usually something the matter with any proposition that is held up as offering the dealer the opportunity to buy at extremely low prices or make an exorbitant profit. Legitimate business is pretty well standardized and competition maintains a fairly level basis of prices and profits on reputable merchandise. Dealers who think they are getting special advantages by devious methods usually find they are stung in one way or another. It pays the dealer to confine his buying to reputable establishments about whose honesty and integrity there can be no doubt.

Industry Continues Ahead of 1924

Ford Production Is Rapidly Turning Toward Normality

Largest Gains in 1925 Business Thus Far Are in Export Volume—Parts and Equipment Best

NEW YORK, Sept. 23.—The decrease of approximately 140,000 in car and truck production in August as compared with July is an indication of the divergent courses taken during the last six or eight weeks by the leading factors of the industry. A majority of the producers reported gains in August and early September over the July levels, but Ford output has been at the lowest point of recent years. Ford production normally is slightly more than 50 per cent of the total for the industry.

As September draws near its close, the situation is being reversed, and Ford is rapidly gaining while some of the others are tapering off. But conditions on the whole continue to be better than they were last year at this time. This is emphasized by reports of the representative parts, accessory and service equipment manufacturers, showing that the year to date has been 30 per cent over the corresponding period of 1924 in volume of business. A survey of prospects in these allied industries indicates that about the same ratio of gain will continue until the end of the year.

At the same time, the current business being done by original equipment companies, and by the automotive steel producers, indicates clearly a progressive decline in car production from now on. Truck and bus output is being maintained on a more even basis, and there is no indication of very considerable month to month changes in this field.

The largest gains for 1925 so far have been in exports of motor vehicles. If export business for the last six months is equal to that of the first six, the total for the year will be about 540,000 vehicles, as compared with the record of 377,000 made last year.

NEW OAKLAND MODEL

DETROIT, Sept. 21.—A new two-passenger Oakland roadster, listing at $975, has been added to the latest six series, it is announced today by the Oakland Motor Car Co. Finish is pyramid two-tone duco with red striping and upholstery is in genuine leather. Special features include one-piece windshield and collapsible top.

SAFETY CONTEST PLANNED

WASHINGTON, Sept. 19.—A trip to the national capital and cash prizes will be awarded to the winners of the fifth annual national safety lesson and essay contest sponsored by the National Automobile Chamber of Commerce and conducted by the Highway Education Board. The essay contest is open to children in the grade schools, while teachers in the grade schools may compete in the essay lesson contest, according to an announcement made here by the chamber. The first prize for the pupil will be a trip to Washington and a gold watch; the first prize for the teacher will be $500 in addition to the trip to the National Capital.

Attention Is Called to Trade Marks

NEW YORK, Sept. 19.—The need for warning automobile companies to attend promptly to the renewal of expiring trade marks is seen by several men of the industry here who have had occasion to look into the situation.

Many trade marks are expiring this year, as the present Federal act under which they were issued for twenty-year terms was passed February 20, 1905 and made effective April 1, 1905. Applications for a renewal should be made six months prior to the date of expiration or the registration automatically lapses.

In some instances, it is reported, company executives have overlooked the necessity for applying for renewals.

REMY PLANS NEW PLANT

INDIANAPOLIS, Sept. 19.—The Remy Electric Company of Anderson, Ind., has announced that it is establishing an additional plant at Muncie, Ind., to take care of business from old customers and to handle models on which it will go into production shortly. The new Muncie plant, one of the factory buildings of the Muncie Products Company, a division of the General Motors Company, has a floor area of 80.000, and the force that will be established there will have about 300 persons when it gets into operation. In making the announcement C. E. Wilson, general manager of the Remy Company. also announced that A. B. Gomery, who has been chief inspector of the Remy plant, will be superintendent of the Muncie plant. He will be succeeded at Anderson by M. E. Van Meter. Fred E. Kroeger has been promoted to the position of factory manager with general supervision over the Remy plants 1 and 3 at Anderson and the Muncie plant also

FORD BOOKING HEAVY

CHARLOTTE, N. C., Sept. 19.—Orders for Ford cars totaling 10.161 were booked in this territory by authorized dealers within a week after the announcement of the new models, according to an announcement at the Ford Motor Company's assembly plant here.

August Output of Passenger Automobiles Totals 221,756

Production Both in U.S. and Canada Shows Decrease From July Figures

WASHINGTON, Sept. 21.—August production of motor vehicles, as announced by the Department of Commerce, was 221,756 passenger cars and 37,643 trucks, of which 214,326 passenger cars and 36,207 trucks were made in the United States, and 7,430 passenger cars and 1,436 trucks in Canada.

Production in both the United States and Canada showed a decrease from July figures, this being accounted for almost entirely by the fact that Ford production in August was restricted by preparation for the improved models recently announced.

Passenger car production in the United States and Canada fell from 357,883 in July to 221,756 in August, and truck output decreased from 41,748 (revised figures) to 37,643.

The total of 214,326 passenger cars produced in the United States in August was 133,039 less than the revised total production in July, whole Canadian passenger car production dropped 3,725.

The decrease in United States truck production was 3,761, and the Canadian decrease was 344.

The total of 391,302 passenger cars and 47,822 trucks produced in the United States and Canada in April is the monthly high for the year so far, each month since showing a decrease, except that July truck output gained over June.

In August, 1924, passenger car production in the United States and Canada increased to 255,232 over the July total of 244,544, and truck output increased from 26,391 to 28,647.

Total passenger car production in both countries for the first eight months of 1925 was 2,516,339 against 2,351,913 during the same period of 1924, while total truck output for this year so far has been 316,215 as compared with 257,462 for the same months last year.

ROBERTS JOINS KOKOMO

KOKOMO, Ind., Sept. 19.—Joseph J Roberts, formerly sales manager of the Herbrand Company, Fremont, Ohio, has been placed in charge of sales in Michigan and Ohio, for the entire line of Kokomo Products, manufactured by the Kokomo Automotive Manufacturing Co., of Kokomo, Ind.

As direct factory representative, Mr Roberts will sell to automobile manufacturers exclusively. An office has been opened at 14344 Robson Blvd., Detroit The Kokomo line includes windshield wings, mirrors, transmission linings and Checkers.

Motor Truck Industries, Inc. Holds Session in Michigan

Next Meeting to Be Held in Washington Week of November 8

BUCHANAN, Mich., Sept. 19.—More than 100 truck and parts maker executives attended the opening meeting of Motor Truck Industries, Inc., here this week.

"This organization," says B. A. Gramm, of Lima, Ohio, secretary and treasurer, "should not be regarded as a rival of any other, or as duplicating any work by any other. This is an association of executives banded together for the fundamental interests of the motor truck industry, the user as well as the builder, and it means a great help to every association that has anything to do with motor trucks."

Group committees were appointed on standardization of units, sales and finance. H. Colin Campbell discussed highway improvement as affecting standardization of automotive products and William H. Dawes, president, Central Trust Co. of Illinois, talked on greater protection for loans.

Directors and members were entertained by officers of the Clarke Equipment Co. at their plant. The invitation from the Department of Commerce to hold the next meeting in Washington was accepted. The meeting will be held during two days of the week of November 3. Twenty-five new members were admitted.

Klugh Takes Duffus' Place With Pennsylvania Body

HARRISBURG, Pa., Sept. 19.—Claude S. Klugh, for nine years with the bureau of motor vehicles of Pennsylvania, as assistant registrar, has been selected as secretary-manager of the Pennsylvania Automotive Association, it is announced by E. T. Satchell, president. Mr. Klugh takes the place of R. C. Duffus, who has accepted a position with Hare & Chase, as manager of the Detroit office of that firm.

Plans are going forward rapidly under the direction of Mr. Klugh for the convention of the Pennsylvania association in Pittsburgh, October 12-14. Both Mr. Duffus, the ex-secretary, and Mr. Klugh, the new secretary, will be present at the convention.

Mr. Duffus has long been associated with the automotive industry and in his new capacity with Hare & Chase, will continue that association. He started in the automobile business in the Oldsmobile plant at Lansing 17 years ago, where he was motor builder, tester and race driver. He then joined the Buick engineering department where he worked with Walter P. Chrysler and C. W. Nash.

When Edward Ver Linden took charge of the Olds works, Mr. Duffus was made factory wholesale man for Illinois and Iowa, with headquarters at Chicago. He then joined Briscoe and Studebaker as wholesale man. During the war he bought steel for Liberty motors for Packard, then retailed Packard in Detroit, then built and managed the Packard branch at Kalamazoo when Packard brought out the single six. Mr. Duffus then took over the Hupmobile and Pierce-Arrow contract at Kalamazoo.

Following this connection, he was made assistant general manager of the N. A. D. A. under C. A. Vane, and joined the P. A. A. three years ago.

St. Louis Used Car Auction Opens With Spirited Bidding

ST. LOUIS, Sept. 19.—The first of five auctions of used cars conducted by A. A. Selkirk Company was held at the St. Louis County Farmers' Market, Sarah street and Laclede avenue last Saturday. Six automobile firms consigned ten cars each to Selkirk and there were 19 cars sold, ranging from a Ford which went for $75 to a used Nash which brought $625.

Expenses of the auction were prorated among the six firms participating but they were not otherwise identified with the endeavor.

About 200 persons attended and the biddng was spirited.

The auction will be repeated next Saturday morning and on each of the following two Saturdays at the same place. Should the business justify it this method of disposing of used cars will be continued throughout the winter.

CHANDLER DEALERS MEET

CLEVELAND, Sept. 19.—A three days convention of Cleveland and Chandler dealers closed here last week with an inspection of plants of the two companies. There were 1,500 dealers in every state in the union in attendance, and reports from every section indicate that fall business will far eclipse the record of the corresponding period a year ago.

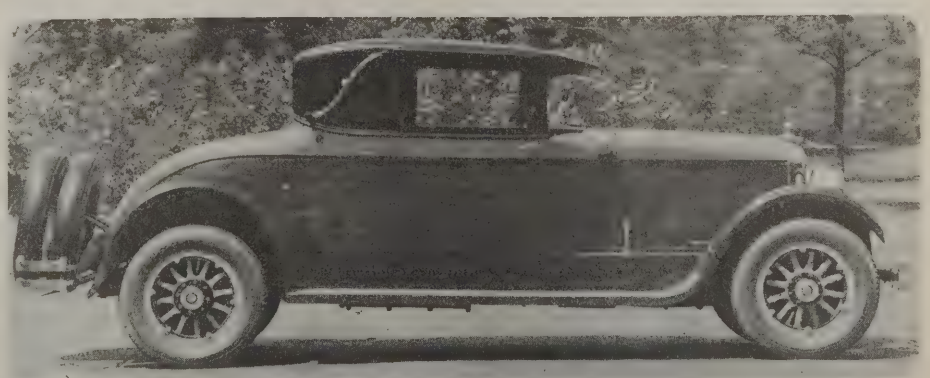
O'BRIEN JOINS REO

DETROIT, Sept. 19.—R. C. Rueschaw, general manager of the Reo Motor Car Company has announced that Thomas T. O'Brien, formerly assistant sales manager of the Olds Motor Works has joined the sales organization of the Reo Motor Company.

Revenue Collections From Industry Growing Smaller

Decrease in Year is $33,326,964.10 —Total Levy for 1925 is $124,686,745.30.

WASHINGTON, Sept. 19.—The automotive industry contributed the sum of $124,686,745.30 to the receipts of the Internal Revenue Bureau for the fiscal year ended June 30, 1925, it is shown in a preliminary statement of the Treasury Department just made public here. This total is considerably less than the sum of $158,014,709.40 which the automotive industry paid during the fiscal year ending June 30, 1924.



The decrease in the automotive receipts, however, the statistics reveal, is a normal one as the total collections from all sources of revenue for the fiscal year 1925 were $2,584,140,268.24 or $212,038,988.82 less than were the receipts for the fiscal year ended June 30, 1924.

In the itemized statement it is further shown that the receipts from automobile trucks and automobile wagons for the fiscal year ended June 30, 1925 were $7,807,811.16 or $3,702,751.89 less than in 1924; that the receipts from "other automobiles and motor cycles" for the fiscal year ended June 30, 1925, were $94,141,539.29 or $18,728,987.28 less than for the fiscal year ended June 30, 1924 and that the receipts from "tires, parts, or accessories for automobiles, etc." for the year ended June 30, 1925, were $22,737,384.85 or $10,896,224.93 less than the receipts for the fiscal year ended June 30, 1924.

GEYLER LEAVES INDUSTRY

CHICAGO, Sept. 19.—Louis Geyler, president of the Louis Geyler Company, 2635 South Wabash avenue, one of the pioneers of the automobile trade in Chicago, has retired from the industry. He has severed his connection with the Case and Chandler companies, for which he was distributor in the Chicago territory and is now devoting his entire time to his radio interests. He is a stockholder and a director in the Electrical Research Laboratories.

New Marmon Coupe

The new Marmon two-passenger coupe. *See story on page 19*

Automotive Electrical Men Study Motor Bus Equipment

Head Lighting and Parts Distribution Also Subjects Before Convention of Association

EAGLESMERE PARK, Pa., Sept. 19.—Motor coach electrical equipment, head lighting and parts distribution were among the major topics discussed at the ninth annual convention of the Automotive Electrical Association which closed here this week.

The elimination of the dash ammeter and the use either of a voltmeter or a charge-off-discharge indicator in its place on motorcoaches having voltage regulators, was recommended. The reason given is that with voltage control the reading shown by the ammeter is often so small that the operator believes the battery is not receiving sufficient charge and he changes the adjustment of the regulator, with consequent overcharging of the battery.

In order to meet the requirements of summer and winter bus operation, it was adopted as recommended practice that provision be made so that the driver could change the charging rate conveniently, within a certain range. This control will be in the form of a small lever which can be thrown either into the summer or winter position.

In the discussion following the paper presented by Williard C. Brown of the National Lamp Works on head lighting, a resolution was adopted directing the preparation of a booklet on the adjustment of headlights and the equipment required for this service. This booklet will be mailed to all electrical service stations in the country.

The subject of parts distribution through authorized electrical service stations came in for much spirited discussion and the association plans to study this subject with the view of increasing sales through these outlets.

Fabric Body for Essex Coupe

ST. LOUIS, Sept. 19.—Hudson-Frampton Motor Car Co., Hudson and Essex distributor in St. Louis, has introduced a new fabric body for the Essex coupe here. The body is built by the Fabric Body Co. at Detroit and mounted on the Essex chassis here. Three color options are provided: midnight blue and black; gray and black and all black. The price is $1275 delivered in St. Louis with full equipment.

Fresh Merchandise in a Clean Store

(*Continued from page* 13)

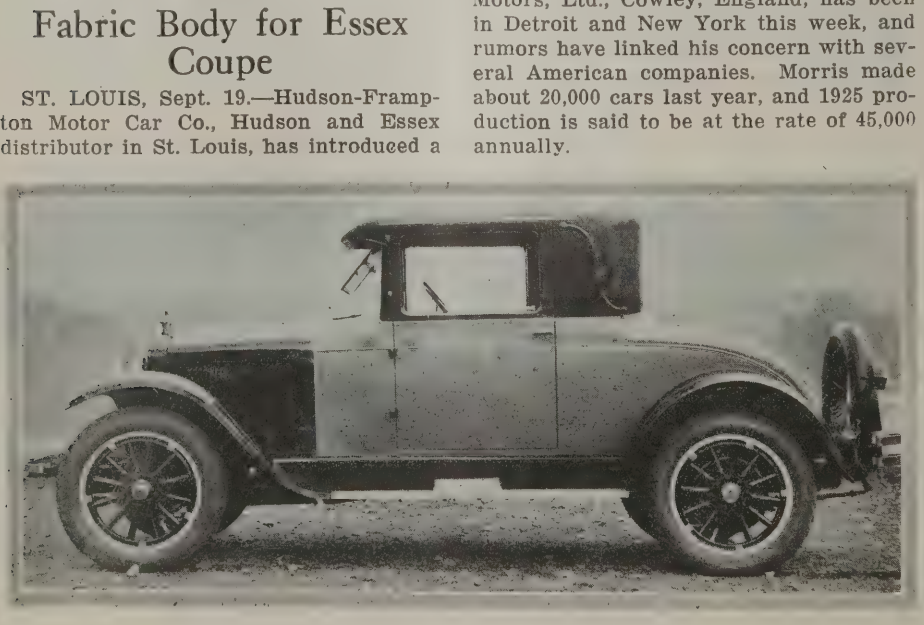
have demonstrated that automotive merchandise can be sold for Christmas gifts. Merchants who have put special effort on Christmas selling campaigns have been bountifully rewarded with a large volume of profitable business. Now while the slick up process is under way is the time to make plans for a large Christmas business and select the kind of merchadise that will be salable. The proper display of this merchandise with the holiday background must be provided.

Summing up, then, the stock of merchandise should be slicked up by:

Moving new cars that have been on hand too long.

Fixing up and reducing used car stock.

Getting rid of shop-worn and slow moving merchandise.



Filling up depleted stocks.

Stocking seasonal merchandise and arranging seasonal display.

When these steps have been taken the slicked up store will present a new selling appeal.

AUSTIN DEAL DEFEATED

NEW YORK, Sept. 19.—The proposed purchase by the General Motors Corp. of the Austin Motor Car Co., Ltd., has been defeated by the opposition of some of the share holders, according to cabled advices from London that have not been denied here. Reports of other developments that would result in the entrance of American manufacturers into the European light car field are unabated, however. W. R. Morris, governing director of Morris Motors, Ltd., Cowley, England, has been in Detroit and New York this week, and rumors have linked his concern with several American companies. Morris made about 20,000 cars last year, and 1925 production is said to be at the rate of 45,000 annually.

Directory of Technical Books and Libraries Is Published

Nearly 50 Large Collections on Transportation and Communication Included

NEW YORK, Sept. 19.—There are almost 50 libraries in the United States wholly concerned with transportation and communication, it has been revealed by the second nation-wide survey completed recently by the National Special Libraries Association. Railroads lead the list in the volume of transportation literature, with automobiles and street railways coming next. Literature dealing with aviation is rapidly increasing and literature of radio is now well commenced.

Among the larger transportation libraries are: the collection of over 100,000 volumes of the Bureau of Railway Economics—the largest transportation library in the world; the libraries of the Boston Elevated Railway and the Philadelphia Rapid Transit Company; the general, engineering and legal libraries of the American Telephone and Telegraph Co., totalling some 25,000 volumes; the well-known library of the National Automobile Chamber of Commerce with its collection of 300,000 automobile patents; and the rapidly-growing aviation libraries of the Manufacturing Aircraft Association and the United States Air Service.

The subjects covered run from aeronautics to tractors; from motor trucks to navigation; from shipbuilding to subways; from tires to terminals; from radio to river improvement, and from telephones to marine engineering.

The results of the survey have been published in the form of a directory covering all special libraries in the business and technical fields. Use of the directory is facilitated by means of title, subject, and geographic indexes. Copies of the volume may be obtained from Gertrude D. Peterkin, treasurer of the association, Room 2513, 195 Broadway, New York.

Chevrolet Demand Forces Big Production Increase

DETROIT, Sept. 19.—Sustained demand and a growing list of unfilled orders has caused the Chevrolet Motor company to increase heavily its production schedule during September.

The schedule revision involves an increase of more than 16 per cent over the production program originally planned for September. The new schedule calls for 53,165 motor cars and trucks in September, a Chevrolet record for that month and only 3,078 less than the highest production month in the history of the company.

Both day and night shifts have been augmented to maintain the new schedule. The company shipped 4,284 cars to dealers on Aug. 31, establishing a new record 600 higher than the largest previous shipment for one day.

Cleveland Announces Four New Cars at Lower Prices

Two Coupes, a Touring De Luxe and a Sedan Are Added to 1926 Series

CLEVELAND, Sept. 19.—The Cleveland Automobile Company has announced four entirely new models in the 1926 series, and has reduced prices as much as $200, the heaviest cuts applying on the new Cleveland Six four door sedan at $995 and the special four door sedan which now lists at $1295 f. o. b. factory. Formerly these models were priced at $1195 and $1495 respectively.

A coupe model, an entirely new creation, is announced at $975. Included in this same series is Touring De Luxe model, which features a sportive touch throughout. This car lists at $1025.

In the Special Six series a new coupe also makes its debut at the price of $1175. The De Luxe Sedan and Sport Sedan have both been reduced $100.00, now listing for $1595 and $1625. A $50 reduction has also been made on the Sport Touring; this model is now $1245. The Coach is priced at $1295 while the two touring cars list at $895 and $1095, the latter being the Special model.

The new low priced Cleveland Six sedan is in beige brown. A gray forms the interior color scheme. It also includes a one piece windshield.

In the Special Six series the four door sedan carries Cleveland blue color as its body finish while the interior is in gray broadcloth. This creation is characterized by a raised bead in contrasting color, running completely around the car. A one piece, waterproof V type windshield is shown with this model. Pockets are provided in both rear doors and the hardware is in mat silver finish.

Both coupe models in the Cleveland Six series are finished in Cleveland blue with a bead in different color running from the hood to the rear of the car. Doors are wide to allow easy entrance and exit. A notable feature with these coupe models is the rear deck compartments which provide ample carrying space for luggage and other cumbersome articles of travel. Directly back of the driver's seat another storage space is available for small incidentals. Genuine leather constitutes the upholstery material of the coupes but gray corduroy is optional at no additional cost. There is ample room for three passengers in either of these coupes.

The new Touring De Luxe model is featured in two tone sage brush green with a body bead in different color. Throughout the interior it is finished in spanish leather. It is fully equipped, carrying front bumper, bumperettes, windshield wings and is further enhanced at the rear by a trunk rack with base bars upon which is mounted a trunk. Windshield cleaner and rear vision mirror are also included as standard equipment with this model.

All models come in durable Duco finish. Balloon tires are standard while four wheel brakes are provided as optional equipment.

The well known One Shot automatic chassis lubrication system is a distinctive feature with the 1926 Cleveland Six line, inasmuch as it eliminates entirely manual lubrication of the chassis.

Nevada Has Road of Gold

LOS ANGELES, Sept. 19.—Promises held out in ancient hymns that the future home of the good will have streets paved with gold are being realized in White Pine County, Nevada. Here the state highway department is building a road between Ely and McGill from materials including flour and flake gold. The precious metal was discovered in the gravel being excavated eight miles from Ely for road construction, and while it is not present in quantities sufficient for profitable mining, when panned it shows the colors so eagerly sought by the Argonauts of '49.

Chromium Cited as Perfect Substance for Reflectors

DETROIT, Sept. 19.—Chromium, good friend of all who work with steel, was introduced yesterday to Detroit automobile men and to the Illuminating Engineering Society delegates in convention at Hotel Statler here, as the perfect substance for automobile lamp reflectors. Robert J. Piersol, physicist, of East Pittsburgh, Pa., told the delegates it stood all the tests and strains which must be encountered in motor car headlamps.

Every owner of an automobile knows the anxiety of seeing his headlight reflectors gradually darken, without knowing what to do to stop it. Cleaning the reflectors usually results in scratches. Most reflectors are made of silver or nickel, the former being more common. At high temperatures, such as are found near electric lamps, the reflectors tarnish.

Chromium, widely used in the making of steel alloys, "Stellite," a substitute for tool steel, and stainless tableware, has excellent reflecting properties and its polished surface cannot tarnish or darken. It is very hard and cannot be easily scratched. Mr. Piersol predicted its use for flood-lighting and searchlight reflectors, as well as for automobiles.

WILLYS ADVANCES KNAUS

PORTLAND, Ore., Sept. 19.—Appointment of A. H. Knaus, sales manager of the Willys Overland Pacific company, as assistant branch manager, in charge of the Seattle branch of the company is announced by J. H. Alfred, manager of the company. Jack Crittenden, formerly with the Portland Motor Car Company has been named sales manager of the Portland branch.

Plans for Ford's Dirigible Given to Navy Department

Airship Would Be Smaller, Safer and Would Cost But About $300,000

WASHINGTON, Sept. 19.—Construction of an all-metal "flivver" dirigible, invented by engineers of the Ford Motor Company is being seriously considered by the Navy Department, Secretary Wilbur declared here this week.

A group of Detroit experts, including William B. Mayo, chief engineer for Ford, have laid before the Bureau of Aeronautics complete details, illustrated by a model, of such an airship which, they assert, will answer all the purposes of the Shenandoah, but will be smaller, safer and less expensive.

Mayo and his associates offered to turn over all of their data—the results of four years' experiments — so that the Navy can build the dirigible at its Philadelphia aircraft factory.

The Ford dirigible would cost approximately $300,000, as compared with $2,000,000 for the Shenandoah. It would have the general shape of an egg, 150 feet long and 50 feet at its greatest width.

The motors would propel it at a cruising speed of 60 miles an hour, and its cruising-range would be 2,000 miles.

FRASER LEAVES INDUSTRY

PEORIA, Ill., Sept. 19.—W. H. Fraser, for a number of years with the General Motors Corporation, has left the automobile industry to join the W. B. Wilde Co., Peoria, Ill., in the manufacture of oil burners. Mr. Fraser was branch and district manager for the Cadillac division of G. M. C. and comes to the Wilde concern as director of sales, a department being developed under the new extension policy of the oil-burner manufacturing concern.

NEW BOOKLETS ISSUED

CHICAGO, Ill., Sept. 19.—The Stewart-Warner Speedometer Corp. has issued a series of booklets on "Shop Management" for the benefit of automotive retailers. These booklets cover the following subjects: Bookkeeping for Dealers in Cars, Parts, Repairs and Accessories; Stock Records for Replacement Parts and Accessories; Turnover in the Selling of Accessories and How to Determine Mark-Up for Profit Overhead. Another booklet entitled, The Golden Key" is a compilation of the experience of automobile accessory dealers who tell the various methods they have used to succeed. Copies of these booklets are sent free to interested dealers.

SERGARDE WITH REO

DETROIT, Sept. 19.—Fabio Sergarde, for a number of years chief engineer of the Olds Motor Works, has joined the engineering forces of the Reo Motor Car Company, according to an announcement recently made by N. T. Thomas, vice president and chief engineer of the Reo company.

Mack's New Home Declared Largest of Kind in Country

Los Angeles Plant Occupies Two Blocks and Gives Five Acres Floor Space

LOS ANGELES, Sept. 19.—The new home of the Mack-International Motor Truck Corporation in Los Angeles, which was recently occupied, is declared to be the largest, most modernly and completely equipped building in the United States devoted to the sale and service of commercial motor vehicles. The plant is fully two blocks in length, all enclosed, and it represents an investment of approximately $1,000,000.

The ground area covered by the new building is three and one-half acres and the total floor space is more than five acres. The salesroom floor is 160 feet long and has a depth of 57 feet. A portable screen of lattice work separates the used truck display from the new truck department. The screen is in sections and can be placed wherever desired, extending or reducing the area to meet the requirements. A unique feature, which is original and exclusive with the building, is the inside court, which is 125 feet by 100 feet in size.

The spacious shop has many points of unusual interest, particularly the type of construction of the repair pits. The pit proper is almost 400 feet long and nine feet wide, built of concrete. Access is from ramps at each end. A continuous bench 30 inches wide runs the full length. The bottom of the pit is four feet below the floor level. Daylight facilities are provided by means of windows which extend to within 18 inches of the top of the bench. At the floor level on the side opposite the windows are 14 bays each 24 feet wide. Each bay will accomodate two trucks and has a drift from the main pit five feet wide under each.

In front of each bay is a board runway 12 inches higher than the floor level thereby affording five feet of headroom clearance beneath the vehicle. This makes it possible for a mechanic to do his work standing upright. At the back of each runway is a bench for hand tools. A pipe railing incloses each bay and there is a stairway on both sides to the floor level.

MODEL GARAGE PLANNED

SPRINGFIELD, Ill., Sept. 19.—The Weaver Manufacturing company, makers of garage equipment and supplies, is to erect a "laboratory" garage at 2158-68 South Ninth street, covering a tract 125x129 feet. It will be a distinctive enterprise, architecturally unique, all brick construction with re-inforced steel and cement floors. Repair departments will face street windows, the shop will be plotted as an ideal garage for exposition and demonstration of the Weaver products, and the builders hope to end forever the practive of condemning repair departments and garages, to ill-lighted, stuffy corners of a building. Although primarily intended for a display room there will be a storage section and limited public service will be offered.

NEW LACQUER BRANCH

ATLANTA, Sept. 19.—The Egyptian Laquer Co. announces the opening recently in Atlanta of a new southern branch and warehouse as distributors of the line of Egyptian lacquer finish for automobiles in the southeastern territory. W. E. Hutchison is named as manager of the new branch.

WITWER BATTERY BOUGHT

DANVILLE, Ill., Sept. 19.—The Danville Battery Manufacturing Company has been organized here by L. T. Allen, W. T. Gunn, J. E. Epler, J. F. Geddes, and H. E. Douglas and capital stock fixed at $200,000. The new company has taken over the plant, equipment, contracts, and patents of the Witwer Battery Company, which suspended a year ago. Epler will be general manager. Production will be resumed shortly.

SCOTT JOINS FLINT

FLINT, Mich., Sept. 19.—The announcement is made of the appointment of George R. Scott, one of the country's seasoned production men, as assistant general manager of the Flint Motor Company. He also becomes a member of the board of directors and of the executive committee. This appointment is just made public by R. H. Mulch, recently elected vice president and general manager, and C. O. Miniger, chairman of the executive committee.

TAYLOR TAKES TECH CHAIR

DETROIT, Sept. 19.—C. Fayette Taylor, M. E., who has served as chief power plant engineer of the Wright Aeronautical Corp., of Paterson, N. J., for the last three years, has resigned to join the faculty of the Massachusetts Institute of Technology. Since Mr. Taylor's graduation from the Sheffield Scientific School of Yale, he has devoted his entire time to aeronautical engineering, having served with the National Advisory Board, and later at McCook Field experimental station prior to his association with the Wright Co. Mr. Taylor will take up his new duties on January 1, 1926, and will have charge of the research work in connection with aeronautical and automotive power plants.

GILMER NAMED BY OLDS

CINCINNATI, Sept. 19.—R. C. Gilmer, formerly assistant manager of the Oldsmobile Company in the Kansas City zone has been named to succeed Walter Zimmerman, formerly in charge of the Cincinnati district for "Olds" distribution, who was recently appointed export manager of the Peerless Motor Car Company at Cleveland. Mr. Zimmerman was factory representative of the Oldsmobile company in the Cincinnati district for more than a year and has many friends here. Mr. Gilmer is making a fine record here in the sale of 1926 "Olds."

Hupp Expects to Produce 15,000 Eights in 192

Statement From Factory Says Esti mates Are Exceeded 50 Per Cent Every Month

DETROIT, Sept. 19.—The great inter national demand that the Hupmobil Eight has created will result in its sale for 1925, its first year, exceeding 15,00 says O. C. Hutchinson, general sale manager of the Hupp Motor Car Cor poration, in a statement emphasizing th remarkable success which has attende that car ever since its inception.

"A record of 15,000 sales in its firs year for a car of the high quality of thi eight is a mark never before approache in the automotive industry," the state ment reads. "It means a demand mor than three times as great as that en joyed, during its first year, by any othe company manufacturing eight cylinde cars.

"What Hupmobile has actually don has been to increase its initial estimate for eight cylinder output over 50 pe cent. Last December we made plans t produce 9,999 of these cars during 192 What has happened is that we have ex ceeded our production estimates ever month since the first car was buil Within five months the eight became th most demanded car of its type in th world. Since it gained that honor, it sales have been even greater, until toda they are rapidly approaching a poi where they will surpass those of a other eight-in-line cars put together. Th reduction in its original prices of fro $180 to $230 on each model brought th car to a point where it has since repre sented an outstanding value."

In making this record, the compan announces that sales by its distributo and dealers for the last three month have exceeded those for the same perio a year ago by nearly 50 per cent. I export sales likewise show an unusu demand abroad, more than $2,000,0 worth of these cars having been shippe to countries overseas during the fir eight months of 1925.

McCRUDEN IN ST. LOUIS

ST. LOUIS, Sept. 19.—J. H. McCrude until recently Chicago branch manager the Victor-Springfield Tire Co., is no associated with John Glenn of the Gle Tire Co., Grand and Pine, St. Louis di tributors of India Tires. J. L. O'Donne formerly of the General Tire & Rubb Co., has recently joined the sales for of the Glenn Tire Co.

McCORMICK IN MILWAUKEE

MILWAUKEE, Sept. 19.—Malcomb M Cormick, formerly sales manager of t McCord Radiator & Mfg. Co., Detroit, h joined Milwaukee Motor Products, In Milwaukee, manufacturers of Milwauk Timers, as director of sales and adve tising. He succeeds W. P. Ferris, w has resumed active management of t Pressed Metal Mfg. Co., Waukesha, W

ales by General Motors Are 21,704 Above August, 1924

'otal Purchases by Consumers 76,546—Dealers Buy 75,973 Last Month

DETROIT, Sept. 19.—The sale of Gen-:al Motors passenger cars to ultimate)nsumers during August totaled 76,546 : 21,704 greater than for August, 1924. he total for that month was 54,842. he sale of passenger cars and trucks to ealers by the manufacturing divisions lso showed a corresponding increase, ie total for last month being 75,973 or 7,359 greater than for August, 1924.

The following tabulation shows monthly ales of General Motors passenger cars y dealers to ultimate consumers and ales by the manufacturing divisions to ie different dealers.

YELLOW ENGINE OUTPUT UP

EAST MOLINE, Ill., Sept. 19.—A pro-uction schedule of 1,000 engines monthly hroughout 1926 is anticipated by L. R. Tuthenberg, general manager of the local nit of the Yellow Sleeve-Valve Engine Vorks, which is now averaging 500 ngines monthly with night shifts em-loyed in some departments to maintain he schedule. Increased demand for the ngines since the General Motors Cor-oration merger with the Hertz interests as sped the plant to capacity and fur-her increases by the first of the year re expected.

BABCOCK LEAVES HOLT

PEORIA, Ill., Sept. 19.—Col. George). Babcock has resigned as manufactur-ng executive of the Holt Caterpillar Tractor Company and will make his eadquarters in Syracuse, N. Y. His fu-ure plans are not yet announced. He vas formerly associated in the manu-acture of the Franklin motor car, and oined the Holt organization in 1918.

Three-Passenger Coupe Is Latest Velie Product

Three-passenger Velie coupe finished in duo tone blue. Upholstery is in blue Spanish leather with headlining of matched broadcloth

A three-passenger coupe in duotone blue duco is the latest of three new body types recently introduced by Velie Motors Corp., Moline, Ill. It is mounted on the standard Velie chassis of 118 in. wheel-base on which Lockheed hydraulic four-wheel brakes and balloon tires are standard equipment.

The new coupe is low hung and symmetrical in appearance. A curved steel visor is built integral with the roof. Laundalet bow in black, nickeled at the imitation joint, contrasts with the black leatherette of the top. The windshield is of the one-piece ventilating type and the cowl ventilator is operated from beneath the dash. An automatic windshield wiper, rear vision mirror and transmission lock are standard equipment.

Upholstery is of grained blue Spanish leather with headlining of matched broadcloth. The instrument board is in black with garnish rails to match. Speedometer, ammeter and oil gage are under a glass in a single panel of satin silver—indirectly lighted by a lamp concealed within the panel.

The light control lever is placed on the steering post and the ignition switch and choke lever on the dash at each side of the steering post. The seat is 46 in. wide, seat back to floor board, 43 in. and from seat to roof 35½ in.

Dura hardware is used with four turn regulators on the door windows. Outside door handles are of black, with nickeled ends. There is a package compartment behind the seat back and large space under the rear deck for cases, golf bags and large packages.

Finish is of duotone light blue below a ¾ in. black moulding running from radiator shell to the lower edge of rear deck and above a ¾ in. black moulding which encompasses the body at bottom of the superstructure from the windshield pillar. The space between the moulding, top of cowl and hood is in dark blue. There is a stripe of imitation gold below the upper and above the lower moulding.

DENVER HAS CAR HOTEL

DENVER, Sept. 19.—The Transcontinental Investment Company of Denver has just completed and opened for business the first Autohotel in this section of the country, with E. W. McDowell, president of the company in atcive management. This building, built under patents held by the Ramp Building Corporation of New York, is three and one-half stories in height with seven levels for car storage. There are no elevators, the cars being driven to their individual stalls under their own power, and the longest ramp is only 30 feet in length. and the steepest grade only 14 per cent. No repair work will be done in this garage, and no accessories will be handled. The service will be confined to furnishing storage, washing, greasing, gas and oil.

NEW DURANT BRANCH

NEW YORK, Sept. 19.—Colin Campbell, vice president of Durant Motors Inc., announces the establishment of a new wholesale office at 12 Colcord Building, Oklahoma City, in charge of Emery Miller, sales manager. This makes the nineteenth wholesale office established by Durant Motors since the reorganization of its sales facilities.

Personnel and Training Are Features of S. A. E. Meeting

Gear Grinding Also Brought Up for Discussion by Automotive Engineers

CLEVELAND, Sept. 19.—Better understanding of the human element and training of men in various phases of automotive work is necessary to further increases in production efficiency. That was one of the chief ideas brought out at the annual production meeting of the Society of Automotive Engineers, held here September 14-16. Mutual interchange of troubles and problems between automotive manufacturers and machine tool men, evidence of considerable interest in gear grinding, announcement by Col. H. W. Alden that Timken Axle Co. is working on an entirely new type of gearing, and discussion of inspection methods and machine tool safety were other outstanding features of the meeting.

Attendance at the S. A. E, gathering totalled over 300. The large machine tool exhibit held in connection with an exhibition staged by the American Society for Steel Treating convention attracted many of the automotive engineers. The A. S. S. T. annual meeting, which was held here September 14-19, had an attendance of over 3,000. An important statement developed at the steel treaters' meeting was that the automotive industry is large responsible for the current activity of the steel business.

Emphasizing quality as the paramount objective of production, and quantity and low cost as other prime considerations, K. T. Keller, general manager, General Motors of Canada, Ltd., told the S. A. E. men at the annual production dinner on Tuesday evening, that efficient production from every standpoint gets back to proper handling of personnel.

Col. H. W. Alden, Timken Axle Co. stated his belief that the present basis of gear tooth forms is all wrong and said that his organization now has in the mathematical stage some new developments.

R. M. Hidey, White Motor Co., and W. G. Cariens, Ajax Motors Co. gave the car builders' side of the machine tool problem, while Cook of Warner Swasey and Earnest F. De Breuile, general manager, National Machine Tool Builders' Association, and others, showed how the vehicle makers can get better results from further co-operation with the machine tool industry.

Chenard-Walcker Wins Boillot Cup

Lagache in Chenard-Walcker which won Boillot cup road race

PARIS, Sept. 1.—(By Mail).—Averaging 63.5 miles an hour for a distance of 325 miles, A. Lagache won the Georges Boillot Cup handicap road race at Boulogne yesterday, with a Chenard-Walcker car of 67 cubic inches piston displacement, carrying touring equipment. The winning car embodied many distinctive features.

The four cylinder engine had two big diameter vertical intake valves and one very small exhaust valve in the head, with operation by pushrods and overhead rockers, and at the base of the cylinder there was an auxiliary rotary exhaust valve. As the greater portion of the exhaust gases were discharged at the bottom of the stroke, the exhaust in the head did not need to be of big size, thus leaving space for two big inlets.

Another advantage of this design, for which Engineer Toute was responsible, was that with the additional exhaust port spark plugs did not overheat or give trouble. Although there were three valves in the head, room was found for the spark plug also in the cylinder head, the plug as well as the valve operating gear being under an oil tight aluminium cover.

The chassis and the body formed one construction, the width of the body being equal to the full length of the car, thus enabling the front wheels to be encased without interfering with steering. A narrower track was used at the rear, and the driving wheels were entirely hidden. Duralumin was used throughout for the body panelling.

This type of body was accepted by the Jury as being in accordance with touring practice, although being a distinct departure from standard design.

On the varied Boulogne roads the small Chenard-Walckers showed themselves equal in speed to cars of twice their piston displacement and under the handicap the bigger cars had no chance of catching them. Three cars started, but two were forced out with defects not associated with the engine.

Second place was won by Laly on a 183 cubic inch Aries and third position fell to C. M. Harvey on a 122 inch English Alvis.

The scratch cars were two Belgian Excelsiors driven by Arthur Duray and Charlier, which allowed 1 hr. 6 min. 30 sec. to the limit of cars, a couple of Austins of 46 cubic inch piston displacement.

Head of Morris Motors, Ltd., Studies U. S. Factory Methods

DETROIT, Sept. 19.—For the purpose of studying American production methods, W. R. Morris, governing director and owner of Morris Motors, Ltd., of Oxford, Coventry and Birmingham, England, has been spending a week in Detroit. While here, Mr. Morris confirmed the announcement of the purchase by him of the Leon Bollee Company, manufacturers of the Bollee car of Le Mans. This company has been a moderate producer of a high grade French car for many years, and Mr. Morris announced his intention of introducing modern American production methods in the French factory for the purpose of greatly increasing production.

Mr. Morris stated that his company in England has just finished the fiscal year with the production of 50,000 cars. This is ten times more than any other manufacturer in England

GAS TAX PARLEY PLANNED

MILWAUKEE, Sept. 19.—A national convention of state officials charged with administration of gasoline taxes in the various states will probably be called at Madison, Wis., this fall. Soloman Levitan, state treasurer of Wisconsin, has invited all state officials interested to attend such a meeting at Madison and out of 35 replies received thus far, 31 executives favor the parley. Forty-four states in the union have gas taxes.

Canadian National Motor Show Is Best Ever Held

Attendance Sets Record—Authorities See 1926 As Dominion Industry's Greatest Season

TORONTO, Sept. 19.—Canada's National Motor Show looks even better in retrospect than it did in prospect. Measured by the criterion of attendance, sales and active prospects it was the most successful event of the kind ever held in the Dominion. Automotive business since the first quarter of the current calendar year has been excellent in Canada and continues so. The summer sales valley proved unprecedentedly small and shallow and it is the concensus in the trade that the automotive year of 1926 will be the best in the history of the industry in Canada. The current production schedules of the motor plants of the Dominion are record breaking ones.

Back of the demand that has produced this unprecedented output is a growing prosperity. Following his annual national survey T. A. Russel, the re-elected president of the Automotive Industries of Canada (the N. A. C. C. of the Dominion) declared that the Canadian West is harvesting a crop that will net it two hundred millions of dollars more than the very profitable crop of last year.

The fact that the Canadian dollar has been above par for a coonsiderable period is indicative of the soundness of Canadian credit and the incipient prosperity evidenced by growing optimism and expressed in the record demand for automotive products.

Sir William Letts, president of the British Society of Motor Manufacturers and Traders and the Crossley Company, Ltd., Charles Kettering, president of the General Motors Research corporation and past president of the S. A. E., and T. A. Russel, president of the Automotive Industries of Canada and Willys-Overland, Ltd., were the speakers at the C. N. E directors' luncheon on automotive day. Among the United States automotive industry leaders who came to Toronto during the show, most of whom spoke at national dealers meetings convened by manufacturers, were Henry Ford, Charles Kettering, John North Willys, Field of Chrysler, Benjamin Gotfredson and E. H. McCarthy.

It is noteworthy that the annual meeting of the Automotive Industries of Canada was the most largely attended meeting of that organization ever held, every director being present and the conventions of the dealers called by the Canadian manufacturers—Chrysler, Dodge, General Motors, Gotfredson, Studebaker and Willys-Overland—each established a new record in attendance.

The attendance at the show likewise established a record. Approximatey 1,000,000 persons saw the new season models. The Transportation Building could not accommodate all exhibits so some cars were displayed in the Coliseum with the buses, trucks and automotive equipment exhibits, which drew far larger crowds than ever before.

More English makes were represented than in many years—A. C. Morris, Oxford and Morris Cowley, Rolls-Royce, Sunbeam, Trojan and Vauxhall among the cars and Leyland and Thorneycraft among the trucks. Col. A. Hacking, secretary of the Society of Motor Manufacturers and Traders stated while in Toronto that Humber, Morris and Standard are maturing plans to establish Canadian plants next year.

Among the passenger cars there were thirteen makes of "fours" represented. In the order they appeared on the floor plans they were: Chrysler, Dodge Bros., Vauxhall, Gray, A. C., Morris Cowley, Morris Oxford, Ford, Willys-Knight, Durant, Star, Sunbeam, Hupmobile, Chevrolet and Overland.

The twenty-nine "sixes", in the same sequence, follow: Packard, Chrysler, Rickenbacker, Gardner, Oakland, A. C., Peerless, Willys-Knight, Moon, Franklin Sunbeam, Reo, Ajax, Nash, Studebaker, Essex, Hudson, Rolls-Royce, Oldsmobile, McLaughlin, Marmon, Overland, Jewett, Paige, Flint, Pierce-Arrow, Chandler, Cleveland, Auburn. There were nine eights of which three were V. type—Cadillac, Lincoln and Peerless—and six of the "in line" type—Auburn, Diana, Gardner, Jordan, Packard and Rickenbacker. The little Leyland built Trojan is a two cylinder light car.

There were twenty bus and truck exhibits and seventy-five automotive equipment displays. The motor boats were shown in the Grand Stand Building and the tractors in the Tented City.

New Federal 2-Ton Model Will Sell for $500 Less

DETROIT, Sept. 20.—Sensing the strong demand for a truck of from 1½ to 2 ton capacity to be used in heavy duty work, both in highway transportation and heavy hauling, officials of the Federal Motor Truck Company of Detroit have announced their latest model, a truck of this capacity, motored by the famous Knight sleeve-valved engine, at a substantial reduction in price over the former Federal model of the same capacity.

The new model, at a new low price $500 below that of the former Federal truck of the same capacity, brings the use of the sleeve-valved motor into the heavy duty trucking field, where it is expected to more than bear out the unusual performance records of hundreds of owners of the one-ton Federal-Knight truck which was introduced some time ago.

The absence of many parts found in the poppet type motor, lighter weight and stronger construction in the new model has met with acclaim by truck owners. It represents the first time that a sleeve-valve motored-truck has been introduced to the field demanding exceptionally sturdy construction.

Cleveland August Sales Are Above Those of Last Year

Volume for Month Is Within 9 Per Cent of July, 1925, Record

CLEVELAND, Sept. 19.—Sales of both new and used automobiles in Cleveland during August broke all records for that month, according to the Cleveland Automobile Manufacturers' and Dealers' Association. The volume for the month just closed was within 9 per cent of the July record, and it was 100 per cent greater than in August, 1924.

The remarkable increase recorded is due to the announcement of improved cars and lower prices, selling points that can not be eclipsed, the association believes.

Bills of sale for new cars that were filed with County Clerk George Wallace during August totaled 3,993. This compares with 2,773 for August, 1924 and 3,095 for August, 1923.

The used car sales recorded totaled 13,853, as compared to 6,182 for August, 1924, and 6,303 during August, 1923.

In July this year there were 4,383 sales of new cars recorded, the decline during August being but 9 per cent this year, while last year the drop in sales from July to August was 19 per cent.

VAN FLEET JOINS PEERLESS

CLEVELAND, Sept. 19.—F. A. Van Fleet, for the last 10 years managing editor of the State Journal at Lansing, Mich, has been appointed advertising manager for the Peerless Motor Car Co. For a number of years he was engaged in editorial work in Detroit, specializing on the automobile industry. He was at one time secretary to the mayor of Detroit.

INAUGURAL RACE OCT. 17

SALEM, N. H., Sept. 19.—The Rockingham Speedway near here is nearing completion and the management has all arrangements made for the opening race on October 17. This Inaugural Race will be 250 miles. Jack LeCain, general manager, declares this will be the fastest track in the world. It is being built by the Prince Construction Co. of Oakland, California. Its straightaways are 1,460 ft. long and the turns banked as high as 49½ degrees at the steepest part.

BRISBANE BUILDS GARAGE

NEW YORK, Sept. 19.—Arthur Brisbane, nationally known for his newspaper editorials, will begin shortly the construction of a 750 car garage employing d'Humy motoramps on a plot, 100x 200 ft., located on 102nd street just off Fifth avenue. The new garage will serve the needs of car owners residing in nearby apartments, and will be operated by the Fifth avenue and 102nd street Garage Corp., under the name of the Brisbane Fifth Avenue Garage.

Along Automobile Row

BOSTON.—Linwood H. Young is now handling the Renault line with salesrooms on Newbury Street. For years Alfred Cutler Morse had the agency in Boston, but gave up business here and moved to Taunton where he made his home.

KNOXVILLE, Tenn.—The Red & Gray Tire Co., has announced plans for the construction of a new and permanent home at Locust Street and Western Avenue. The company conducts both a wholesale and retail tire department.

HASTINGS, Neb.—The Frank Rose Mfg. Co., announces the appointment of the E. H. Baughman Company, 88 Spring Street, Atlanta, Ga., to represent them in the southeast territory for the sale of Rose tire pumps, lubrication, equipment and other Rose products.

EUGENE, Ore.—B. F. Goodpasture has obtained agency for Buick cars. F. E. Calkins has been named agent for the Oldsmobile line.

DETROIT.—Stephens H. Moffitt, Nash dealer for Lansing, Michigan, and the nearby vicinity is building new and larger quarters at the corner of Michigan and Eighth Streets which will be occupied October 1.

MINNEAPOLIS.—Reilly-Craig Co., 1201 Harmon Place, Minneapolis, formerly distributing the Maxwell-Chrysler, has been made sales agent for the Willys-Overland, Inc., which has moved its wholesale and retail department to the Overland building, St. Paul.

BUFFALO.—The A. W. Haile Motor Company, 1291-1299 Main Street, has been appointed as an authorized dealer of the Ford Motor Company. The Haile Company will service the various Ford units.

MEMPHIS.—The Richardson Motor Sales Co., located at 257-259 East Butler Street, has taken on the Star and Durant lines of automobiles.

WINNIPEG.—The Robert Bosch Magneto Co., Inc., of New York, has appointed the Acme Magneto & Electrical Co., Ltd., this city, as official service station.

ASHLAND, Ore.—One of the largest business transactions made in this region this year was announced today when Harrison Brothers, who for several years have been Ford agents in Ashland, announced the sale of their business to H. L. Claycomb, formerly of Walla Walla. Harrison Brothers, purchased the Patton-Robinson agency for the Chevrolet automobile in Medford, Ore.

SALT LAKE CITY.—A. E. Tourssen, Oldsmobile distributor and dealer in Salt Lake City has been selected chairman of the advertising and publicity committee of the Salt Lake Chamber of Commerce Commercial Club.

HARTFORD, Conn.—The S. & M. Sales Corporation, handling the Overland and Willys-Knight, has occupied the north side salesroom and service station in the new Buick building at 80 Washington Street.

LITTLE ROCK, Ark.—Grady J. Greene, for the last three years service manager for 555 Tire and Service Company, Little Rock, has been appointed manager of the 555 Tire and Service Company at Stuttgart.

MEMPHIS.—The Memphis Motor Car Company, Hudson-Essex dealers, will have a sales and display room in the new twelve-story Hotel Peabody, which recently opened here.

EUGENE, Ore.—Sweet-Drain Automobile Company has taken the agency for the Studebaker line.

BOSTON.—The New England Cycle & Radio Company, Inc., for some years at 840 Washington Street has just moved into new and larger quarters on that same street. Originally it was a bicycle and accessory store, but has branched out into one of the largest radio houses in Boston.

EDMONTON, Alta.—Edmonton Motors, Ltd., Chevrolet and Reo dealers, has organized under the management of Frank Wolfe.

PAWTUCKET, R. I.—Bradburn Motors Co., Oakland dealer, has moved from old quarters at 91 Exchange Street, this city, to a larger building located at 127 High Street.

COLUMBUS.—E. H. Huffman & Sons, has been made agent for the Hudson and Essex lines by the Walter B. Zimmerman Co., central Ohio distributors.

OSCEOLA, Ark.—The Osceola Motor Company has occupied its new home on Walnut Street, erected at a cost of $16,000 and equipped as a Ford sales station.

WOODSTOCK, Ont.—R. J. McCarron has been appointed representative in Woodstock of the Ford Motor Company, to succeed Elliott Bros.

BOSTON.—Snow, Coombs & McBeath, Ford dealers, are to move October 1 to 642 Beacon Street in the building formerly occupied by the Autocar Sales & Service Company.

LONGVIEW, Wash.—Fred Hess Motor Company has secured the Ford agency. Green-Porter Nash Company has opened a new garage at 1337 Vandercrook Way.

MOBERLY, Mo.—A. J. O'Hern of the Durant Motor Co., signed a new contract for the current year with A. C. Sibbitt & Son to handle the Durant and the Star cars.

BLYTHEVILLE, Ark.—Tom A. Little, Chrysler dealer, International Motor trucks, farm implements and wagons, has moved to a new location with a floor space of 125 by 116 feet. A service station for automobile and truck customers and a full line of parts and accessories for Chrysler and International is carried.

BUNCETON, Mo.—The Cline Garage of Boonville, agents for the Chevrolet Motor cars moved from their home location with the Freeman Implement Co., to the building on Morgan Street, until recently occupied by the Hobrecht Motor Co., agents for Overland cars.

ST. LOUIS.—Ford-Seifert Auto Electric Co. has occupied a new building at 2629 Locust Street erected expressly for it. The company's business consists of the repair and replacement of all electrical automotive equipment.

MILWAUKEE.—Shawano Motor Car Co. has been organized at Shawano, Wis., with capital of $10,000 by E. H. Ramm, E. F. Ramm and J. J. Henderson. Fords and Ford products will be sold.

NORTHAMPTON, Mass. — George P. Beaudry, president of the F. C. Magranis Co., Hudson and Essex dealer, has bought Mr. Magranis' interest in the concern and has become sole owner.

HARTFORD, Conn.—Harry L. Nichols, proprietor of the Nichols Auto Top Co., William P. Allen, formerly vice-president and sales manager of the L. & H. Motor Co. and Elmer P. Sellew, formerly service manager of the same organization have formed the firm of Nichols, Allen & Sellew and will sell and service A. B. C. fuel oil burners.

MILWAUKEE.—Berbanatz & Boll, Inc., a new Chrysler dealer agency, has been organized at 1914 North Avenue in Milwaukee.

DES MOINES, Ia.—The O'Dea Motor Co., former Ford dealer in East Des Moines, has taken the Hudson-Essex contract for that section of the city. John Beller of the Beller Franklin Co. has acquired an interest in the company.

CHARLOTTE, N. C.—E. G. Godwin has closed a contract for the Willys-Knight and Overland agency at Goldsboro, N. C. His salesroom is located at 212 North Cedar Street, there.

MINNEAPOLIS.—The Zenith Motor Co. Duluth, has moved into a new building at 222 East Superior Street, opposite the new Hotel Duluth. The building is three stories and will have service quarters as well as show rooms, also an oil station. J. H. Kohn is the new proprietor. The company is agent for Hudson-Essex cars.

DES MOINES.—Leroy V. Jones, manager for the Gibson Motor Company, the last year, has taken charge of the retail sales department of the Herring Motor Company, Ford distributors. Mr. Jones was formerly with the Cleveland Automobile Company before coming to Des Moines and is well known in automobile circles of the Middle West.

TOLEDO.—The Riley Nash Co. has been incorporated with an authorized capital of $25,000 by William J. Dean, Harley F. Riley, Howard H. Harpst, Harold J. Rehoe and Frances Rothschild. The new concern will do a general agency and commission business in automobiles and trucks.

KOKOMO, Ind.—The Wilbur Johnson Company, of Indianapolis, has opened a branch agency here, with both sales and service departments for Cadillac and Hupmobile cars. Glenn Ellis, of this city, has been appointed manager.

BOSTON.—Knowlton M. Watson, for the last year in charge of the New England agency for Stewart trucks, has rejoined the sales force of the C. P. Rockwell Company, Nash and Ajax distributors.

DETROIT.—Willys-Overland last week gained a new establishment when Fred W. Turrill, manager of the Northwestern Sales Company of Bay City, Mich., opened a new show room for the display of Willys-Overland and Willys-Knight cars.

NORTH ADAMS, Mass.—The City Garage & Sales Co., Dodge dealer, has let the contract for a new $15,000 service station, to be completed early in October.

DES MOINES, Ia.—Leroy V. Jones, manager of the Gibson Motor Co., Iowa distributor of Chandler and Cleveland, has joined the Herring Motor Co. as manager of retail sales. Mr. Jones will have supervision over Ford and Lincoln sales in Des Moines.

COLUMBUS.—Ralph E. Brown, formerly connected with the Columbus branch of the Kelly-Springfield Tire Co., has purchased an interest in the E. J. Benson Tire Co., distributors for the Corduroy line.

MINNEAPOLIS.—The Wills-Ste. Claire Automobile agency has moved to 723 Third Avenue. S. Kenneth Kingsley is manager.

ST. LOUIS.—Sam L. Chorlins, president of the State Tire Co., 2235 Washington Boulevard, is to sever his connections with the company and move to Florida to engage in the real estate business. The State Tire Co. will continue business as usual under the direction of other officers of the firm.

NORTHAMPTON, Mass.—Bernier & De Roschers have taken over the Chevrolet agency from L. A. Rust, who retains the franchise for Easthampton.

MILWAUKEE.—Joseph Collins of Madison, Wis., has become associated with the Wisconsin Motor Sales Co. of that city, dealers in Locomobile, Durant, Flint and Star cars.

PITTSFIELD, Mass.—Ralph Hooker has been appointed Chrysler and Maxwell dealer and is opening a show room in West Street.

ST. LOUIS.—The Riesmeyer-Yates Motor Co., a newly authorized Ford dealer, has begun business at 110 West Lockwood Avenue, Webster Groves, Mo., in the building formerly occupied by the Wielandy-Reller Motor Co.

MILWAUKEE.—H. F. Van Horn, former automobile editor of the Indianapolis Star and for the last two years publicity director for E. G. (Cannonball) Baker, test pilot for the Rickenbacker Motor Co., has joined the Stader Auto Sales Co. of Milwaukee, downtown Rickenbacker dealers.

EDMONTON, Alta.—The Paige-Jewett franchise has been taken over by Lou Keeling, formerly of NorWest Motors.

With the Associations

N. Y. Jobbers Plan Drive

SYRACUSE, N. Y., Sept 19.—"Keep ur Shop Busy This Winter." This rase is to be the keynote of a very tive and money making campaign for r distributors and service stations, unched by the New York State Jobbers ssociation. Together with the A. E. A. sk 'Em to Buy", "Shop Profits", and rofitable Maintenance" campaigns, is phrase is to be heard and recognized roughout New York State during the ming season as a major program.

At a special meeting of the New York ate Jobbers Association held in Syra-se, the A. E. A. jobbers of New York ate, exclusive of Metropolitan district, ere represented 100 per cent strong. An tire day was spent in discussing the ed car problem and the repair shows' nter slump as it has been noted in the st few years. Every jobber present was cidedly in favor of any action or move-nt which would assist their customers improve this condition.

R. W. Procter of Black & Decker nufacturing Company, a member of e merchandising committee of the A. A., and George Fleming of the Flem-g Machine Tool Company, made ad-esses, starting a line of thought which lminated in a campaign to be developed the New York State Jobbers Associa-n and in the slogan, "Keep Your Shop sy This Winter". A committee com-sed of Arnold, of the Onondaga Auto pply Company, Syracuse; Murphy, of ited Auto Accessories, Buffalo; and hipple, of Whipple's, Binghamton; re appointed to confer with manufac-ers, distributors, dealers, and associa-ns who would be interested in this ovement.

Active plans are already under foot to unch this campaign through a state de agitation, sponsored by the 16 A. A. jobbers in attendance at the meet-g. Very interesting and profitable de-opments for the car distributor and rvice station were phophesied and de-opments already started show evidence a very active campaign to be launched hin the next few weeks.

Window Space Supplied

LOUISVILLE, Sept. 19.—Use of the ow windows in the new headquarters the Louisville Automobile Dealers' As-ciation has been offered to the automo-ile trade of this city for the display of cessories and other automotive equip-nt, and at present the windows are oked for the next two months and many plications have been made for dates. Eh firm is priviledged to display its oducts for one week and in order to ke the displays more attractive the widows will be well illuminated each ening until after theater hours.

St. Louis Opens Winter

ST. LOUIS, Mo., Sept. 19.—The first fall meeting of the St. Louis Automobile Dealers' Association was held at the Claridge Hotel with a large number of dealers and their employes in attendance.

H. D. Bullock, sales expert from San Francisco, J. L. Spencer, automobile editor of the St. Louis Post-Dispatch and L. Frank Brown, special representatives of the Prudential Insurance Co., were the speakers.

Bullock said that 80 per cent of automobile sales were traceable to hard work and only 20 per cent to sales analysis but that expert sales analysis will double the results of the hard worker.

Spencer spoke on the relation of good roads programs to automobile sales and told how good roads would leave some communities now lively high and dry and make other backward towns into important centers.

Brown told how the insurance of the heads of firms increases the credit standings of those firms.

The Oliver Cadillac Co., recently appointed Cadillac distributor in St. Louis was elected to membership and Robert E. Lee, manager of the association presented the applications of five other companies for memberships and their election followed: they are, St. John's Motor Car Co., Paige and Jewett dealer, Love-Johnson Motor Co., Ford dealer, Townsend-Bohn Motor Car Co., Dodge dealer, West Side Nash Co., Nash dealer, MacCarthy-Pardue Motor Co., Chevrolet dealer.

Delegates Are Named

CHARLOTTE, N. C., Sept. 19.—Five delegates were named by the Automotive Service Association, of Charlotte, N. C., to attend the convention of the National Tire Dealers' Association, at St. Louis, November 17-19. They are Keeley A. Grice, president of the local association, Victor Shaw, J. H. Huntley and J. C. McDonald. Mr. Grice, as president of the North Carolina Gas and Tire Dealers' Association, said he will endeavor to influence other local associations of this state to send delegates, in the hope a large combined delegation will attend the St. Louis event.

Denver Sales Congress

DENVER, Sept. 19. — The National Automobile Dealers' Association has announced a sales congress to be held in this city December 9. These meetings are held with the sanction of the National Automobile Chamber of Commerce. A number of prominent speakers will attend, and the Denver Automobile Dealers' Association will be in charge of the local arrangements. Special emphasis will be laid upon the marketing of used cars.

Portland Studies Credits

PORTLAND, Ore., Sept. 19.—At the regular monthly meeting of the Portland Standard Parts association eleven members of the association were present. The matter of credits was gone into thoroughly and a resume of the activities of the various members in the field was carefully considered. Due to the increased business in the garage and repair lines it was generally considered that the credit situation was much improved. The association has established a credit clearing house and it is found of much benefit to members who are asked to open accounts and also to those whose present credits in some instances are "overdrawn."

Would Have All Cars Insured

CINCINNATI, Sept. 19.—Strong efforts will be made by the Cincinnati Automobile Club and the Cincinnati Automobile Dealers' Association to induce the Ohio General Assembly to pass an act providing for compulsory insurance for all motorists. One of the plans favored most is to place the burden of cost of the accident on the person found to be responsible for the accident. An objection to this plan is that numbers of irresponsible drivers have their cars heavily mortgaged and have no financial responsibility whereby they can be made to pay. Judge Louis R. Marx of the Superior Court at Cincinnati is carrying strong campaign to accomplish the compulsory insuring of all motor vehicles. An extra session of the Ohio legislature may be called in January, when this bill is to be introduced.

New Orleans Plans Congress

NEW ORLEANS, Sept. 19.—Leaders of the automobile industry are expected to be in New Orleans for an annual sales congress of the National Automobile Dealers' Association and the National Automobile Chamber of Commerce, November 6, according to an announcement recently made by the publicity department of the New Orleans Association of Commerce. On the program will be addresses by the sales managers of some of the larger automobile manufacturers. This sales congress, which is one of several the N. A. D. A. is holding throughout the country this fall, will bring together in New Orleans a number of representative dealers and distributors in the Louisiana and Mississippi territory.

Coombs Heads Radio Trades

TORONTO, Sept. 19.—R. H. Coombs, general manager of the Canadian National Carbon Co., Ltd., Toronto, has been elected chairman of the manufacturers' division of the Canadian Radio Trades Association.

Indianapolis Chamber Plans Survey of Air Development

Will Determine How Many Would Use Airport if One Were to Be Built

INDIANAPOLIS, Sept. 19.—An air mail survey is to be made at once by the Indianapolis Chamber of Commerce to determine what support air mail and Indianapolis Airport could depend upon. John B. Reynolds, secretary of the chamber, says that several air mail and express transport companies have made inquiries recently as to the support which such service can expect in Indianapolis, and the possibilities of the city establishing an adequate airport.

The survey will be made through the newspapers to learn of the number of local factories and commercial houses and individuals who will use the air mail and express service if it is established here. At present the city is without a suitable landing field although the government maintains an army flying field.

It is understood that representatives of Ford flying ventures were here recently to investigate the army field and the possibility of using it for the civilian service. Unfortunately, the government owns the ground of the landing field. It is said that if the field were operated by the government on leased land that some joint use of the army and the civilian air service could be worked out. This condition will necessitate the city acquiring a proper field for its airport if the survey shows sufficient demand to warrant such an investment by citizens.

Secretary Reynolds later announced that he will appoint a committee to meet and welcome the planes of the First Airplane Reliability Tour which leaves Detroit September 28 and reaches Indianapolis on the last leg of its journey October 2. It is hoped that by that time the survey will be completed and a plan for action, if such is deemed advisable, will be put to the citizens and interest in the venture stimulated by the arrival of the planes engaged in the tour.

Coming Motor Events

Automobile Shows

Dallas, Tex.—Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

Fresno, Cal.—Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Berlin, Germany—Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina—Oct. 3-13
Pan-American Road Congress.

London, England—Oct. 8-17
Olympia Passenger Car Show.

London, England—Oct. 29-Nov. 7
Annual Truck Show.

MOVIE COMEDY IS AD

CHICAGO, Sept. 19.—Motion pictures, in the form of a comedy-drama, are being employed by the Bassick Manufacturing Co., supplementary to their other advertising media, as a means of exploiting Alemite. The film, produced and released by the Atlas Educational Film Co. of Oak Park, Ill., is having national theatrical distribution in conjunction with a unique method of introducing and popularizing the Bassick company's lubricant. "Squeaks" is the title of the picture, which is being run in addition to the regular program, in numerous motion picture houses throughout the country. The plan operates in association with the local Ford dealer. When the film is shown, patrons of the theater are given coupons which they fill out, giving names, addresses and stating whether or not they own an automobile. These coupons are numbered and are collected as the crowds pass from the theater. Later, through the local Ford agency, holders of lucky numbers receive awards consisting of Bassick merchandise—Alemite and grease guns—valued at from $15 to $26.

WILCOX MANAGES SHOW

MINNEAPOLIS, Sept. 19.—H. E. Wilcox of Wilcox Trux, Inc., of Minneapolis, has been named as manager of the 1926 automobile show of the Minneapolis Automobile Dealers' Association. The show will be staged in Minneapolis the week of February 8 to 13. Mr. Wilcox managed the 1925 show of Minneapolis dealers and it proved to be one of the greatest automobile shows Minneapolis has ever seen.

THOMPSON ADDS TO STAFF

CLEVELAND, O., Sept. 19. — C. E. Thompson, president of The Steel Product Company, announces the appointment of T. P. Cagwin as his personal representative for The Steel Products Company and Thompson Products, Inc., both manufacturers of automobile engine valves and chassis parts. Mr. Cagwin was formerly an official of the Gibraltar Savings Company, Cleveland.

JOHN KELSEY RECOVERS

DETROIT, Sept. 19.—John Kelsey, president of the Kelsey Wheel Co., has returned to Detroit after having spent five weeks in the Mayo Brothers' Hospital in Rochester, Minn. Mr. Kelsey has recovered from a series of operations and his health now is said to be excellent.

Details of Christmas Photo Contest Announced by A. E. A.

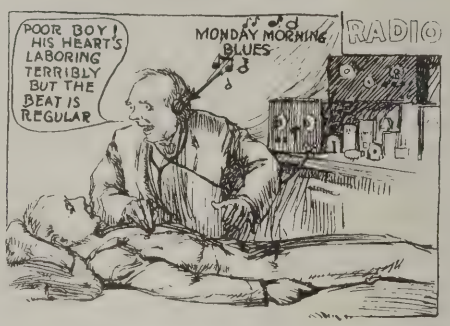
Prizes Aggregating $500 Will Be Given for Best Window Display by Dealers

CHICAGO, Sept. 19.—Details of the third annual Christmas display for automotive dealers have been announced by the Automotive Equipment Association. As in previous contests fifteen prizes aggregating $500 will be awarded to dealers submitting photographs of the best trimmed windows featuring the idea, "Give Something for the Car This Christmas."

The first prize will be $150, second prize $100, third $75, fourth $50 and fifth $25. The next ten prizes will be $10 each.

The contest is open to all accessory dealers, car dealers, garage men, service station proprietors and others engaged in the resale of automotive equipment and service anywhere in the United States or Canada. No entry fee will be charged.

One condition of the contest is that the window must have displayed in a prominent place at least one large card, poster, streamer or paper sign reading, "Give Something for the Car This Christmas."



The contest will be decided from photographs which must be not smaller than post card size. It is suggested that they be eight by ten inches. Each photograph entered must have an official entry blank attached and must be endorsed on the back, "Approved and released for publication," with the date, firm name and address, and signature of the entrant. Entry blanks will be supplied free by A. E. A. members or their salesmen.

Judges of the contest will be the following editors of automotive business publications: Leon Banigan, Motor World Wholesale; Ken Cloud, Jobber Topics; A. V. Comings, Automobile Trade Journal; S. P. McMinn, Automotive Merchandising; Sam Shelton, MOTOR AGE; Ray W. Sherman, Motor; Ray P. Cloan, Automobile Topics. The contest closes at 5 p. m., Dec. 24.

Photographs should be mailed to Arthur R. Mogge, merchandising director, Automotive Equipment Association, City Hall Square Building, Chicago, Ill.

SQUEEKS and RATTLES

CLINICAL MELODIES

Doctor Neersite has been called to treat an injured mechanic. The old man forgot his spectacles and got the radio receiver instead of the stethoscope.

A driver of a taxi was recently fined for being intoxicated while at the wheel. We understand that suspicion was aroused when he started to slow down at corners.

—London Opinion

Priscilla—Going downhill yesterday I stripped the gears.

Prim—O-o-o-oh! How terrible! Did they show?

—Williams Purple Cow.

Mrs. Benrich: I gave my husband an imported meerschaum for his birthday.

Mrs. Newrich: Oh how charming! Touring or sedan?

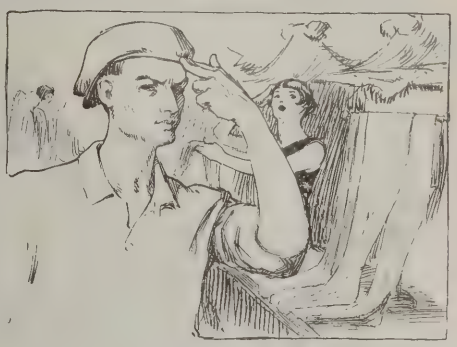
—Ziff's.

Automotively Speaking

Nashes to Nashes,
Stutz to Stutz,
If the Buicks don't get you,
The Chevrolets must.

—The Pure Oil News

Friend: Steady! You barely missed running over that man. If he hadn't jumped—



Lady Driver: Oh, that's all right. It was my husband, and the doctor said he needed exercise.

—Answers

While you were reading this, Henry Ford made ten dollars.

—Harvard Lampoon

TRIALS OF BILL FIXIT

Absent-minded mechanic, shopping for some garters for his wife:

"What'd I want? Le's see. Oh yes, a set of hose clamps, I believe."

Putting More Cars on the Road

(*Continued from page* 12)

lation increases in future years as it has in the past, such projects will have to be rushed to completion with all speed to cope with the situation.

Every city in the United States faces in varying degree these same conditions. The country population has its roads, or is getting them, and consequently visits the city a great deal more often than in former years. This adds another load to the city traffic burden not considered when the plans of the city were drawn. Nor, for that matter, was the automobile and its great and rapid development, counted upon when most of the larger cities of the United States were planned.

In their attempt to catch up with this unforeseen traffic condition, city planners and every one else interested, have put forth gigantic efforts. It is only recently, however, that they have been able to make appreciable headway. It is evident that a twenty-five year start on the part of the automobile business will take time for the traffic experts to overcome. They need help now and will need it still more urgently as long as the automobile continues to sell in such volume. But with proper encouragement it is evident that comfortable and economical traffic facilities will ultimately be provided for all the motor vehicles the people want to use.

A. N. Johnson, chairman of the highway research board of the National Research Council, in a recent address declared:

"Probably no more perplexing problem is prpesented than that of traffic congestion today. We provide radial or arterial roads which concentrate such a large flow of traffic at given points, as of itself to cause stagnation through these centers. We may bring traffic readily and rapidly to the confines of a city, only to discover that there is not traffic area sufficient to take care of the volume that has been so attracted.

"Eventually this must cause so great inconvenience as to reduce the amount of traffic. The problem before us, is to determine, if possible, what may be the ultimate flow of this highway traffic and the provisions which should be made for its accommodation. What may very likely happen is the essential readjustment of the distribution of population, tending to disperse it, rather than continue concentration as has been the case for so many years, witnessed by the upbuilding of our great cities."

THOR HAS NEW BRANCH

CHICAGO, Sept. 19.—The Independent Pneumatic Tool Company, manufacturers of Thor pneumatic tools and electric tools, announces the opening of a branch office at 288 East Water street, Milwaukee. A complete stock of Thor tools, electric tools, spare parts and accessories will be carried. The Milwaukee branch will be in charge of G. H. DuSell, an experienced pneumatic and electric tool man, who has traveled in the Milwaukee district in the interest of Thor tools for a number of years.

Thor

Construction Makes Portable Electric Drills Pay Their Way

(This is another of a series of advertisements showing Thor superior construction. Ask for booklet "Inside Facts" and get the whole story.)

Fourth-Commutator Design Is Correct

None but a motor so perfectly balanced could make the performance records that Thor drills have set. Balance is the keynote of Thor design. First the commutator and fan, and then the complete armature, are balanced separately, so there is no distortion or vibration.

Furthermore, in the Thor motor the commutator is not attached direct to the steel armature shaft—because steel does not expand the same under heat as copper. The Thor commutator is a separate unit, built up on a brass sleeve that expands and contracts evenly with the copper segments, thus making sure that these segments will not work loose and rise. That's why Thor commutators are free from loose segments, which occur when the commutator is built on the steel armature shaft.

Paige-Detroit directors decide to call $500,000 block of notes six months before maturity. Financing plan will cut funded debt a million dollars. Page 32.

Four wheel brakes will be fitted to Willys-Knight 4-cylinder cars. Page 32.

Three new features added to all Kissel models. month in 1924. Page 34.

September business in Chicago shows gain over month in 1924. Page 34.

Hold drawings for A. E. A. show in Chicago November 9. Page 14.

Battery manufacturers hold meeting at which several new members are admitted and steps taken to increase general efficiency of organization. Page 35.

Moscow committee awards American passenger cars seven out of total of 15 major prizes in 3000 mile trials. American trucks take four of five major prizes. Page 43.

Trouble prevention will be keynote of joint session by S. A. E. and N. A. C. C. in Chicago October 9-10. Page 33.

Dining car buses are one of California's latest innovations. Page 39.

Financial details of Yellow Cab-General Motors merger are completed at board meeting and new corporation now ready to build trucks and coaches. Page 39.

Hudson-Essex passes record output mark of 200,000 automobiles. Page 42.

Ford may enter textile industry in North Carolina, reports declaring he will buy mills now making fabrics for tires. Page 42.

August registrations in Illinois show 32 per cent decrease. Page 42.

All automotive lines show gains in Texas territory during September. Page 36.

Automobile plants in Toledo continue to increase their production, while employment shows gain of 1,014 in week. Page 36.

Salt Lake City territory business is in healthy condition during September. Deliveries are one problem. Page 37.

Survey shows that it costs 5.85 cents per mile per passenger to drive an automobile in national capital, figuring average capacity of 1.9 passengers to a car. Page 37.

September business this year in northern and central California is 22 per cent ahead of the same month in 1924. Page 38.

Des Moines business is marked by conservative trading in September. Page 38.

In Next Week's Issue—A Practical Trade Association Program

Christmas window display arranged last season by Olympic Auto Supply Co., Seattle, Wash. This window was awarded tenth prize in the A. E. A. contest in which prizes totalling $500 were given. A similar contest has been announced for this year by the A. E. A.

SOMETHING ON THE CHRISTMAS TREE

Santa Claus Will Hang Up Profits for Those Who Aggressively Push Holiday Merchandising Plans

THE Christmas merchandising campaign of the Automotive Equipment Association will be conducted more vigorously this year than ever before. The merchandising committee has laid its plans early so that there will be ample time for manufacturers, jobbers and retail dealers to arrange to get the full advantage of the campaign. Director Arthur R. Mogge has already prepared the promotional literature and shortly it will be possible for dealers everywhere to make use of the strikingly colored window cards, streamers, wreaths and other decorations provided by the A. E. A. for the purpose of creating a holiday atmosphere.

Meanwhile the opening of the third annual Chirtsmas window display contest for dealers has been announced by the A. E. A. Details of this contest, in which prizes amounting to $500 will be awarded, were published in last week's issue of MOTOR AGE. An additional prize of $50, will be awarded this year to the one of the window prize winners who submits the best letter telling how he decorated his window.

The promotional work done of the merchandising department of the A. E. A. in the two preceding years to popularize the idea of using automotive products as Christmas gifts provides a background of favorable opinion upon which the committee and Mr. Mogge believe it will be possible this year to build up a much greater volume of Christmas business than ever before.

It is not too early for the retail dealer to begin his plans for the holiday season. Actually it is 12 weeks until Christmas. But in recent years the shop early idea has grown so much that one can be sure a large number of people will be buying Christmas gifts late in November and early in December. At the latest the dealer should be pre-

Automotive Gift Suggestions

Give Something for the Car this Christmas

pared to offer the public a full selection of Christmas merchandise the first week in December.

The time intervening before the dealer should be fully stocked up with Christmas merchandise, well displayed and decorated, is therefore only nine weeks. It will take some time for the dealer to study his market, make an analysis of his probable requirements and place his orders. Orders should be placed early enough that a complete assortment of goods will be on hand by Dec. 1.

Car dealers have to think about arrangements for making deliveries of new cars on or about Christmas day. With the lower prices in effect this year it is likely that new automobiles will be more in demand as Christmas gifts than ever before and a corresponding problem of delivery will be presented to the dealer. This means the salesmen should get their Christmas orders signed up as early as possible so that dealers can get the cars from distributors and factories in time for Christmas delivery.

To aid in the Christmas campaign this year the A. E. A. has prepared an elaborate assortment of window cards and decorations which will be distributed to dealers through the A. E. A. jobbers. Stock assortments include two window streamers with holly sprays in green and red at either end and the words, "Give Something for the Car This Christmas" in green letters. Also included are two large green and red holly wreaths, some window cards with the words, "We wrap your Christmas parcels in holly paper," some large and small Santa Claus price cards which the dealer can use to mark the prices of individual items, and two large counter cards with appropriate Christmas messages on them.

Another feature of the Christmas assortment is a handsome little booklet filled with suggested automotive Christmas gifts at various prices. This little booklet, which will easily fit into a vest pocket or a woman's purse, has covers strikingly printed in red and green. In addition to a suggested list of automotive gifts it contains memorandum space for listing the names of persons and the gift selected for each.

It is the intention of the A. E. A. to supply these booklets to dealers at nominal cost in any desired quantity for general distribution. The dealer's name and address can be imprinted on the back cover.

In surveying his market the dealer should take into account the number of each of the various makes of cars in his territory, the number of closed and open cars, the age of cars and other factors which will influence owners in the desire or use for various types of accessories and supplies. The buying habits of the people of the community also should be taken into consideration.

The automotive merchant may enjoy a profitable Christmas season if he will make his plans early enough and carry through energetically. He will have the assistance of the expert merchandising representatives of not only the Automotive Equipment Association, but also of many manufacturers and jobbers. The extent to which dealers avail themselves of these helps will largely determine their degree of success.

Some of the promotional printed matter provided by the A. E. A. for this year's Christmas merchandising campaign

$300.00
AND WHAT HAPPENED TO IT
Told in Three Letters

This is a story with a moral that automotive dealers can readily pick out for themselves. The actual correspondence is printed here in the sequence in which it was written. The first letter was received in the MOTOR AGE editorial office on September 9, 1925. It follows:

So-Called Buying Corporation Offers Low Prices

Brockport, N. Y., Sept. 7, 1925.

Motor Age,
Chicago, Ill.
Gentlemen:

I have been approached by a representative of the ———— Corporation of New York City who has a proposition that seems to be good. They want a deposit of $300 that stays in their hands as long as a dealer buys from them and in return they enable him to buy his accessories at big savings.

Knowing that you are always ready to be of assistance to the trade I am writing you asking for your advice for a dealer as to joining this corporation.

If you can, will you send me your report by direct mail instead of waiting for it to be used in your magazine, so that I can decide the question at once.

Thanking you for your interest in this matter.

Yours truly,
E. A. COAPMAN,
Brockport Service Garage.

This letter was answered at length on Sept. 10 by the Editor of MOTOR AGE, as follows:

Editor Advises Dealer to Keep $300 at Home

Chicago, Sept. 10, 1925.

Mr. E. A. Coapman,
Brockport, N. Y.
Dear Sir:

I am especially glad to give you the best advice I am capable of in this case.

You say that in order to do business with this buying corporation and get the benefit of low prices on accessories you must deposit with the corporation $300 in cash and leave it there as long as you buy from this concern. I wonder why that requirement? It sounds to me like a shoe string concern trying to raise capital to do business on. If you and a hundred or so other retailers in your part of New York State would advance $300 apiece to your leading automotive jobber you would furnish him with a wonderful amount of ready cash for working capital upon which he would not have to pay a cent of interest and maybe he, too, would be able to give special low prices.

You have not given me very many details upon which to base an answer. You do not say how much lower you could buy from this corporation than from any reputable jobber. You do not say how complete a line of accessories and equipment you will be able to buy from the corporation. You do not say what assurance, if any, you have that the corporation will return (or be able to return) your $300 in case you desire to pull out of the arrangement.

These are among the points that you should consider before making your decision.

You do not state what volume of business you do or what proportion the $300 deposit bears to the monthly purchase you probably would make from the corporation. You do not say whether or not you would be obliged to purchase goods in any certain amount or quantity to get the advantage of the low prices. I wonder if this corporation carries a complete stock of automotive merchandise from which it is prepared to ship on short notice articles for which you will have sudden demand.

If you sign up with this corporation will you have to confine your buying to it or will you be free to purchase elsewhere at your option? Are the "low prices" bona fide and applicable universally to the whole realm of standard automotive merchandise, or only to special items or unknown brands?

I assume that you are an honest automotive merchant who wants to build a permanent and profitable business on the basis of fair prices, square dealing and courteous service to the motoring public. I believe it is your desire to sell merchandise that you can stand behind with the reputation of your house. Can you do it with the merchandise and service that you would get from this corporation?

It seems to me that if I were an automotive merchant in a town like yours I would establish cordial business relations with a high grade automotive wholesaler close enough to give me prompt and reliable service, and would confine most of my buying to that source. I would make my store a valued customer of a reputable house and then I believe that I would possess every business advantage that I would need. I would look not so much for bargain prices as for the opportunity to get quick turnover on a well selected stock of merchandise at a fair profit. I wouldn't start out to be a price-cutter nor a patron of price-cutters. I would make my store trusted by the public and I would deal only with those wholesalers who command my respect and confidence.

And I would keep that $300 on deposit in my local bank as a reserve fund to help me always to take advantage of cash discounts and maintain my position as a preferred customer of a preferred wholesaler.

If I had been in possession of more details of the proposition confronting you I might have answered somewhat differently, but I doubt if my conclusion would have varied from that given here. I will appreciate it if you will enlighten me further on this proposition and tell me what you have decided to do and why.

Yours very truly,
MOTOR AGE,
SAM SHELTON, Editor.

Meanwhile the high-pressure salesman of the so-called buying corporation had been busy and had gotten the dealer's check. But the dealer was quick to realize the mistake he had made and on Sept. 12 wrote the editor as follows:

But Experience Is Still the Best Teacher

Brockport, N. Y., Sept. 12, 1925.

Motor Age,
Chicago, Ill.

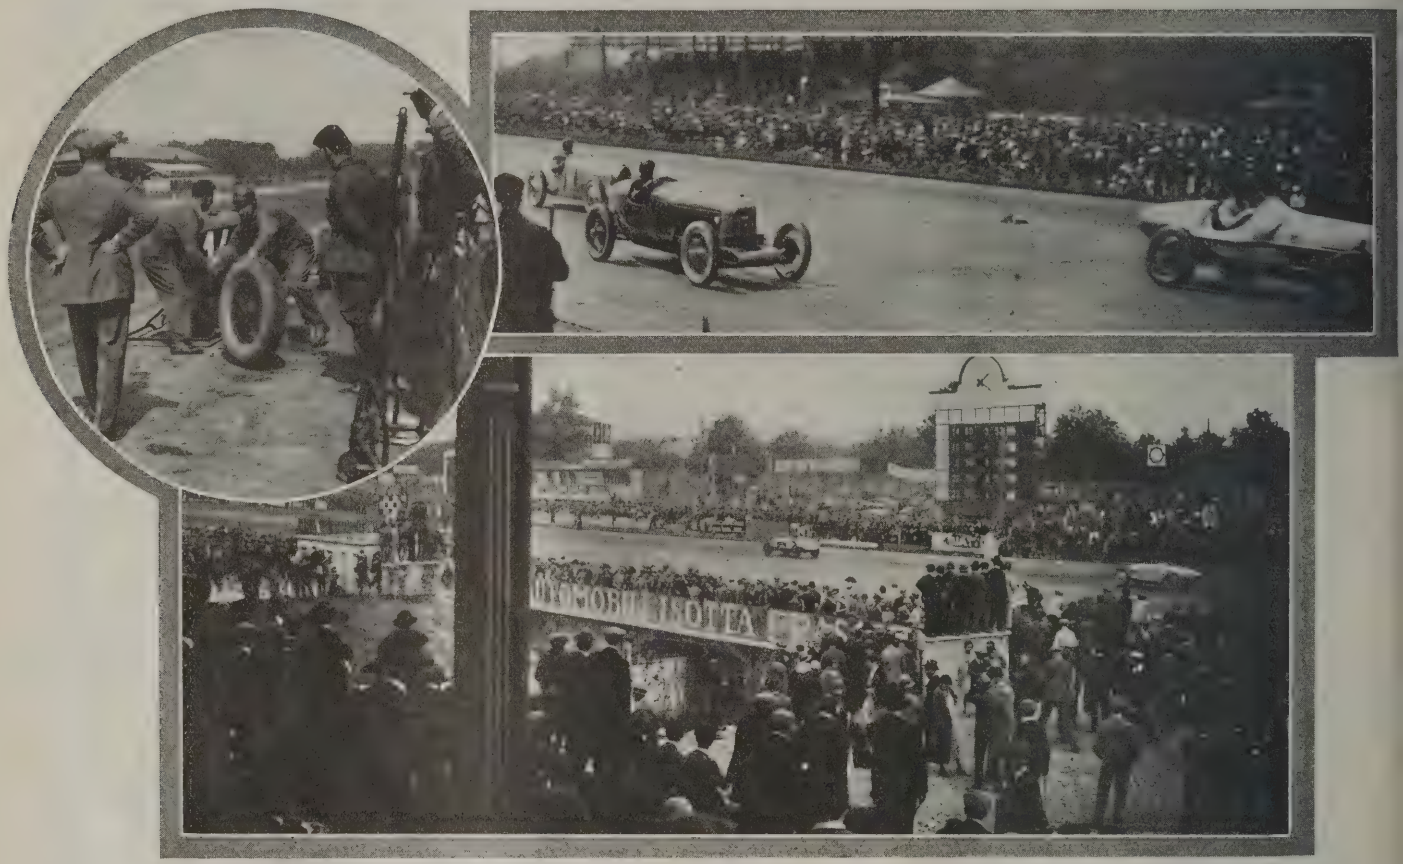
Attention Sam Shelton.

Gentlemen:

I want to thank you for your interest in my behalf and for the prompt answer to my letter of last week, regarding the ———— Corporation.

The proposition of theirs is that by a dealer tying up the $300 with them he is then entitled to purchase anything that they have in the line of accessories that they handle, which is quite complete. Their prices are about 25 per cent lower than we are now able to buy through the regular jobbers. I fell for the line due to the fact that we are now getting a lot of competition from "gyp" dealers in Rochester which is only 18 miles from here.

Their salesman wrote on the back of their contract that I was to have back my $300 any time that I was not satisfied with their service. He also told me that they would be glad to have me get a report on them, and that my check would not be back here before I got this report. He immediately tried to get my check certified, but the bank called me and I told them to stop payment on it until the report came back. This made their man very mad, but he said all right. The report came back that they had $2800 in cars, $1700 in stock and that their good will was valued at $20,000. This decided me that the check would say "stopped."



Accordingly the check was protested, and now I am wondering if there is any way that they can collect it. Their man signed the paragraph in which it states that I can withdraw at any time. I sent this on to the firm to see if they would also endorse this item so that it would be more binding, but they have not as yet seen fit to send it back as I requested.

I trust that my experience will be a lesson to other subscribers of your valuable paper.

Very truly yours,
E. A. COAPMAN.

As we have said before, profit begins with buying. It is advisable for the retail dealer to strive to obtain the best prices consistent with good merchandise, satisfactory service and honest practices, but whenever unusually low prices or extremely high profits are offered it is well to be cautious.

Italian Grand Prix Stresses Handicaps of American Driver Racing Abroad

In circle: Brilli Peri, driving Alfa Romeo to victory, stops to change tires; top: Tommy Milton in Duesenberg (on far side of track) who finished fourth despite loss of 26 mintues for repair of broken oil line; bottom: View showing crowds and the finish of the race

IF American cars failed to capture the Italian Grand Prix, held at Monza, Sept. 6, and did not succeed in bringing the world's Automobile Championship to their side of the Atlantic, they proved their right to be matched against the best in the Old World. Racing abroad presents difficulties which were enhanced in this case by the fact that the American Automobile Association does not possess an international voice.

European racing rules specify a 122-inch engine, a two-seater body 31 inches wide, with one man aboard. America races with single seater bodies. The two Duesenberg cars arrived in Milan with the assurance that they would be allowed to race with two plates, 6.6 ins. square added to their head resistance equal to that of the wider European cars. The organizers of the race, however, appear to have overstepped their powers in making this concession, and the jury insisted on 31 inch bodies being built. The rule that the two seats should be side by side was not enforced, the American drivers sat in the middle while the European drivers were on the right.

The difference between American and European rules caused friction and created a situation which needed very diplomatic handling.

The story of the race is easily told. Kreis took the lead on the second lap, but driving too fast he spun round on one of the curves, was unable to withdraw the clutch and broke the second gear in the transmission. Milton was delayed a few seconds on the starting line and had to go right through the group of slower 91-inch cars running with the 122-inch models in this race. For twelve laps, (72 miles) he trailed the three Alfa Romeos, then on the thirteenth lap caught up and passed De Paolo. Near thirty laps he was on the tails of the two other Alfa Romeos, and when the Italian cars stopped for gas and tires he went into the lead. At forty laps, half distance, Milton made his first stop for tires and gas, but on the following lap he had to stop again owing to a broken oil line to the right hand camshaft. The repair cost him 26 minutes and removed all chance of winning the race. In addition to this Milton had broken his right rear shock absorber very early in the race, and had broken the countershaft in his transmission during the fifth lap.

The twenty-six minutes occupied in repairing the broken oil line, dropped Milton from the leading position he had occupied for seven laps down to eighth position, behind all the Alfa Romeos and also in the rear of four of the 91-inch Bugattis. Realizing that he had no chance of winning, Milton took things easy from this point on and although he got ahead of the Bugattis again, with the exception of the one driven by Constantini, he did not attempt to beat the Alfa Romeos.

De Paolo, in an Alfa Romeo, never got the lead, his best position in the race being second.

There was not much competition among the 91-inch cars, excepting that provided among themselves by the four drivers of the Bugatti team. Two Chiribiris went out

(*Continued on page* 43)

Outside "Slick-up" on this order is bound to attract business

Clean Surroundings Attract Business

Slick Up for Winter Business Is Not Complete Until Outside Appearance of Dealer's Establishment Has Been Made Neat and Inviting

By CLARENCE PHILLIPS

SEVERAL years ago an interesting story appeared in one of the popular magazines under the title—"All Front and No Back." It had to do with the false manner of living pursued by a young married couple who gave all thought and money to "front."

Putting up an elaborate front, to their way of thinking, was more important than having something worth while behind the "front." All sane business men will agree they were following an illusion, that their logic was wrong and that the "front" they affected, without a proper "back," was a very poor investment.

The "All Front and No Back" theory is just as wrong in the case of the individual's or couple's living habits as it is when applied to the management of an automotive business establishment. And all sane business men will agree on this point.

At the same time the theory which prescribes "All Back and No Front" is wrong.

While it is admitted that the "back" must be maintained in the highest degree of business efficiency and "slicked up" as much as possible—while we know that the salesroom, shop and other units composing the "back" must be given religious attention in this connection—it is highly important not to forget or neglect the "front." It must be generously remembered.

Consider Appearance Details

So in the process of slicking up for winter business the show windows, front exterior of the building, sidewalk and everything outside bearing on the store's appearance to persons in the street should come in for close consideration.

The value of the neat and attractive "front" to the automotive establishment is reflected in the big sums of money spent by large and successful merchants for this purpose.

There is no other mechanical line in the country which is displayed in show window settings more attractive than those which we often observe surrounding an exhibit of automobiles.

When we speak of the automobile dealer's "show windows," we mean, of course, those portions of the salesroom display arranged to catch the eye and command the attention of persons passing along in the street. Ordinarily the automobile dealer's "show windows" constitute the front and side extremes of his salesroom, usually the front, all on the same floor level. Only rarely will you find a dealer establishment of much consequence with show windows elevated materially above the level of the salesroom floor.

Good Reason for This

Some good reasons can be found for this. Orginally the custom likely was started because of difficulties exacted by the highly elevated show window in the handling of cars. A common floor level naturally lends itself more readily to this phase of the automobile merchant's operations.

But there is another good reason for this popular arrangement bearing closely upon the necessity for a "front slick up."

Such a plan offers superior advantages for stock display. Under this arrangement the entire salesroom is, in fact, a show window—the "back" view being merely an extension of the effect beheld by the observer on the sidewalk or in the street.

The relationship between the "back" and the "front," from a "slick up" or display standpoint therefore, is very close—so much so that neglect of one is to neglect the other.

And just as the front of the show room is related in this manner to the back so is the entire exterior related to the interior.

History of Motor Car Depicted at Smithsonian

Exhibits in National Institution at Washington Include Original Productions of Many Pioneer Automobile Builders as Well as Examples of Modern Design

By H. L. COBB
Washington Correspondent of Motor Age

Washington, September 24.

A GREAT collection of automotive parts tracing the life history of the automobile is being assembled at the Smithsonian Institution, Hall of Arts and Industries, here, and eliciting the admiration of scores of automobile engineers who have visited the museum to examine the older cars exhibited there. The collection includes working models showing how every portion of an automobile motor operates, the relationship between parts and methods of lubrication. It is growing rapidly and officials expect it to be one of the most complete of the industrial groups.

The Autocar Co. has presented to the museum a 1921 model of its four cylinder truck motor, with cutaway portions and careful labeling so the layman can trace in detail every operation of the motor. The power plant is operated by an electric motor, geared down, with a wall switch so the visitor can operate it himself and stop it at any point for detailed study.

The Ford Co. has presented a full size operating model of the Ford ignition system, consisting of magneto, induction coil and commutator, operating in conjunction with a vibrator on the induction coil. In this model sparks appear at regular intervals on a graduated dial, these sparks being the same as jump the gap of the spark plug. The model is equipped with an exterior switch so the visitor may operate it.

A working model, driven by a hand crank, of half of a single cylinder of the sleeve valve type has been installed by the Willys-Knight representatives. The model includes a dial showing the various stages of the operation, such as: "Spark compression," "explosion," "exhaust opens," etc.

The Haynes Automobile Co. installed a six cylinder engine of the 1914 type, with cutaway sections showing all working parts. The motor is of 65 horsepower capacity and weighs 1,000 pounds.

Original Cars Shown

A full-size chassis and motor, with cutaways showing all working parts throughout, has been presented and installed by the Cadillac Motor Car Co.

The Autocar Co. also is represented by two beautiful ¼ scale models of its trucks, one with dump body.

In the historical section of the exhibit are a number of the original cars which occupy pinnacles in the automobile Hall of Fame. The first of these was constructed by Charles L. Duryea at Springfield, Mass., in 1892. With an old carriage body chassis, it has as a power plant a four-cycle, water cooled engine with spray carburetor and make and break ignition. Chain and sprocket drive is used, with two speeds forward and one in reverse. Steering is accomplished by an up and down motion of a long handle.

The romance of the early days of the automotive industry is being preserved for posterity in the great Smithsonian Institution, a national museum, at Washington, D. C. The accompanying article describes the scope and purpose of this historical exhibit. The exhibit includes some of the first motor vehicles made in the United States in the days of experimental pioneering.

One of the first Cadillacs, of the vintage of 1903, has a post of honor. This ancient machine has a single cylinder engine, of 5 by 5 in. bore and stroke, mounted horizontally, giving 10 horsepower. Planetary transmission is used, with two speeds and reverse.

Elwood Haynes is represented by a one horsepower car built by him at Kokomo, Ind., in 1893-94. On its initial trip, July 4, 1894, it developed a speed of six to seven miles per hour. It is the gift of the late Mr. Haynes.

A rotating gas engine was used by Stephen M. Balzer in his model, constructed in 1894.

The original Oldsmobile, built by R. E. Olds at Lansing, Mich., which made a speed of ten miles per hour with four passengers on its maiden trip in 1896, is one of the interesting exhibits. It has a one-cylinder six horsepower plant.

Another interesting car was that built in 1901 by Louis S. Clarke, former vice president and consulting engineer of the Autocar Co. This car was driven from Ardmore, Pa., to the automobile show in Madison Square Garden, New York City, on December 11, 1901, making the ninety-mile trip in six hours and fifteen minutes. It is thought to be the earliest American shaft driven gas automobile. It is equipped with sliding gear transmission, giving two speeds and reverse.

In another part of the museum is a collection, now only partially completed, showing the development and construction of the modern pneumatic automobile tire. An operating model of the type of machine used in weaving fabric carcasses for the pneumatic tire has been installed.

Some Regular Skid Chains Fit Balloon Tires

In announcing its full line of non-skid chains for balloon tires, the American Chain Company points out that special size chains are not necessary for all tires of the balloon type.

It is pointed out, for example, that a standard Weed chain intended for a cord tire 31x4 can be used properly on a balloon tire 31x4.40. Likewise, the car owner may use cord tire chains, size 32x4½ on 32x4.95 balloon tires; 33x4½ cord chains on 33x4.95 balloon tires, 34x4½ chains on 34x4.95 balloons, 33x5 cord chains on 33x5.77 balloons, 34x5 chains on 34x5.77 balloons, and 35x5 chains on 35x5.77 balloons.

All other sizes of balloon tires require regular balloon tire chains although a dealer or car owner may fit 32x6.00 balloon tires with 33x6.00 balloon chains, or a 30x4.75 tire with 31x4.95 chains, simply by trimming the side chains down to the required size. Tire chains for sectional sizes are similar for all diameters, it is pointed out, except for length and number of cross chains.

It is also interesting to know that 4-inch cross chains can be used on 4.40 balloon tires, 4½ cross chains on 4.75 tires, 4½ cross chains on 4.95 tires and 5 in. cross chains on 5.25 and 5.77 balloon tires.

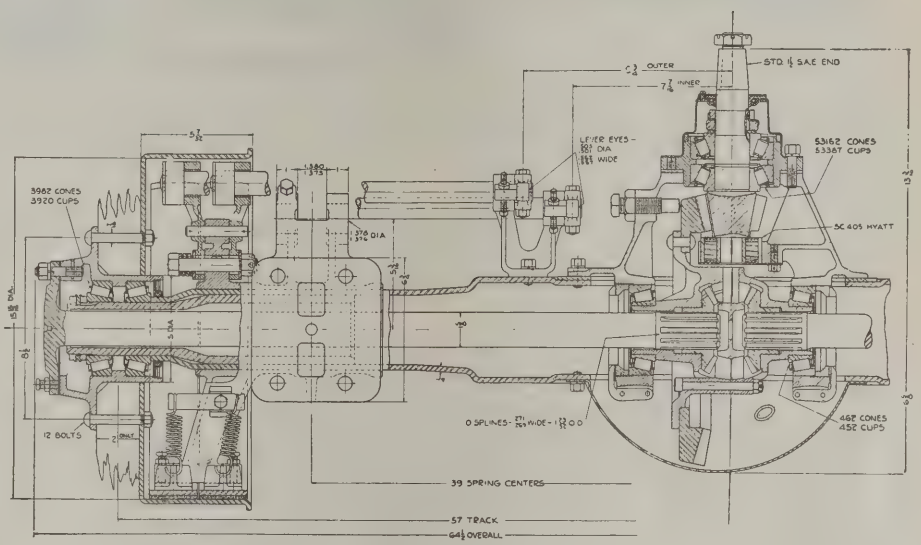
Timken Adds 1½ Ton Truck Axle to Its Line

OF interest to the manufacturers of small buses and 1½ ton truck chassis is the latest model of standard axle to be put into production by the Timken-Detroit Axle Company, Detroit, Mich. Known as type 5620, the new full floating bevel gear axle provides for a total weight allowance, including load of 7,000 lbs. on the rear wheels. Throughout, the axle is characterized by its sturdy oversize construction which harmonizes with factory statement that the axle was especially designed with a particular view to withstanding the exacting service expected of the faster commercial vehicle of today.

Designed for use with pneumatic tires only which allows a 57 in. tread with 2 in. spokes, axle 5620 is constructed with integral spring seats for mounting overslung springs 2½ in. wide and providing 39 in. spring centers using two ⅝-in. spring clips on each spring. In the form of bosses on the spring seats provision is made for the attaching of radius rods.

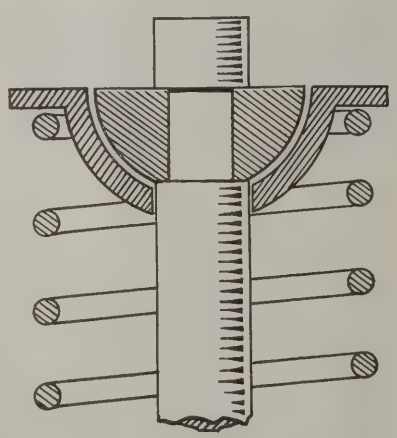
The housing or body of the axle is a steel stamping of the banjo type formed of ¼ in. stock and having ends of 3⅛ in. diameter which are reinforced by heavy seamless tubular sleeves. Bolted to the front face of the housing which mounts the differential carrier unit is the pinion shaft, drive gear and differential assembly. The differential case assembly to which the drive gear is riveted, is carried on two Timken tapered roller bearings of ample capacity with readily accessible adjustment for the slight wear that will take place.

To prevent possible destruction of the gear teeth gearing momentary overloads which tend to force the gear and pinion teeth out of mesh, a safety device in the form of a large adjusting screw is mounted on the carrier at the back of the drive gear and is set at the factory to have .005 in. clearance with the gear. This screw is threaded into the case and provided with a lock nut.



Bearings are provided directly in front and in back of the pinion teeth providing a straddle type of mounting making for exceptional ruggedness. Two Timken tapered roller bearings of the same size are mounted in front of the gear each having ample capacity to handle the full thrust, with one bearing taking the forward thrust and the other the reverse thrust. The rear bearing, a Hyatt having a radial load only, is of the straight roller type and permits an "in" and "out" adjustment of the pinion without any bearing adjustments. To take up bearing and end play of the forward bearings special adjustments are provided.

Gears which are of the helical bevel type made of chromium vanadium steel, with teeth carbonized and hardened are dimensioned with a pitch diameter of 12 3/5 ins. and tooth face 1 11/16 in. Adjustment of the pinion is accomplished by shims between the pinion cage and carrier face while the pinion cage and pinion shaft assembly are readily detachable by removing six cap screws.



Mounted side by side on each drum, the emergency and service brakes are of the internal expanding band type. The size of the drums is 15 13/16 in. in diameter and 2¼ in. wide which permits their being submerged in 20 in. base rims when it is desired to use dual tires.

Axle shafts of 1⅝ in. diameter having upset driving flanges and made of high carbon nickel chromium steel provide a full floating type of drive. The axle shafts are designed to withstand a portion of the wheel's skid thrust load through the driving flange while the load at the inner end of the axle shaft is taken by Timken tapered roller bearings and mounted on the differential case. Consisting of two Timken roller bearings of equal size and capacity, the wheel bearings are mounted on each housing sleeve and held in position by adjusting nuts which are locked by a washer.

Malleable iron hubs, drilled for twelve 7/16 in. diameter hub-bolts for 2 in. wide wood spokes and stamped steel drums of 7/32 in. stock with reinforcing flange, are supplied as standard equipment. The axle, complete with hubs, flanges, bolts, nuts, wheel bearings and brake drums, weighs 445 pounds, not crated.

Cross sectional view of Timken axle made especially for small buses and 1½ ton trucks

Ball and socket construction of Elliot Valve spring retainer

Race Driver Develops Valve Spring Retainer

Frank Elliot, well known race driver, is a student of the car as well as the track, and in analyzing the trouble caused at times by valves operating at high speed and under the strain of heavily compressed springs, he has conceived the idea of a ball and socket type of spring retainer which would eliminate most of the side thrust.

The thrust of a conventional spring is never exactly parallel to the valve stem, the result being that the stem is pushed sideways, so that there is excessive wear on the stem and guide. The illustration shows Elliot's retainer, this being put on the market by Elliot Brothers, 331 E 33rd St., Los Angeles, Cal. The ball is split in two parts and is fitted into a groove at the tip of the valve stem.

Foursome Roadsters and Brougham Round Out Gardner Line for 1926

Left: The foursome roadster on the eight-cylinder chassis, a new addition to the Gardner line for 1926. This body style also is made on the 6-cylinder chassis. Center: Gardner Anniversary Sedan on 6-cylinder chassis, listing at $1,595. Right: New brougham on 6-cylinde chassis which lists at $1495

Adjustable Steering Wheel Is New Feature of Roadsters—13 Body Types on Six and Eight Chassis Comprise Company's Offerings

GARDNER Motor Company's 1926 line as finally rounded out and as it now stands contains an offering of thirteen different units mounted on the six and eight chassis. Six of these units, designated as Model 6-A, are on the six cylinder chassis while seven of them, designated as Model 8-A, are on the eight.

The 1926 line besides including the Gardner Company's Fiftieth Anniversary Sedan, which was introduced about a month previous to formal announcement of 1926 models, takes in one new body type on both chassis, the Foursome Roadster, and a five-passenger brougham on the six. The Foursome Roadster on the six lists at $1595 f. o. b. factory while the one on the eight lists at $1995. The new brougham on the six lists at $1495.

As now constituted the Gardner line is as follows:

Model 6-A (Six Cylinder)

Ship. Wt.	Pass.	Body Style	Price
3070	5-p	Touring	$1395
3200	5-p	Brougham	1495
3210	4-p	Foursome Cabriolet	1845
3030	4-p	Foursome Roadster	1595
3280	5-p	Anniversary Sedan	1595
3300	5-p	De Luxe Sedan	1895

Model 8-A (Eight Cylinder)

3350	5-p	Touring	1995
3510	5-p	Brougham	1995
3480	4-p	Foursome Cabriolet	2245
3350	4-p	Foursome Roadster	1995
3620	5-p	Anniversary Sedan	1995
3620	5-p	Sport Sedan	2295
3600	5-p	De Luxe Sedan	2495

No effort was made by Gardner to bring about radical mechanical departures for its 1926 list of passenger cars. In fact, save for the appearance of the new body types mentioned the only changes are in minor refinements and a wider choice of colors. With the eights the company now is furnishing an ornamental radiator emblem in the form of a silver Griffin which is featured in the Gardner coat of arms. The emblem has proved quite popular with dealers since it was first brought out and there have been many calls for it on sixes on which models, however, the emblem is not offered as standard equipment.

The Gardner product, generally speaking remains substantially as it was, the big element in the factory's 1926 program being to bring the price of the closed car down more to the level of the open car price without making a sacrifice in closed car quality. The company's Anniversary Sedan on the eight now lists at the price of the eight touring. The five passenger brougham on the six lists at just $100 more than the six touring.

Gardner's newest body units, it is explained, contemplated list prices from $200 to $300 higher than those in the current table before these new model introductions, a lowering of the original figures being decided upon to meet conditions obtaining as a result of the recent movement of price reductions. At the same time, it is declared the downward revision of these figures was made without eliminating any equipment or qualities originally contemplated.

The five passenger brougham which now appears among the Gardner sixes is a short-coupled four-door body job having a full front seat instead of the divided seat according to popular practice in such types of body. The finish is two-tone lacquer, trimmings are ribbed velvet. Hardware conforms to the high standard obtaining in Gardner's highes priced jobs. The instrument board also conforms to the Gardner standard, al units being under glass, the instrument including a heat indicator and a gasolin gage. There is a one-piece windshield operating with a rotary lift, a satin rea window curtain and other modern fea tures. The rear end of the front sea is cut away to provide extra leg room

Equipment going with the five pas senger brougham is as follows: Auto matic windshield wiper, cowl lamp nickeled radiator, balloon tires, natural wood wheels, trunk rack, dome light rear vision mirror and a transmissio lock.

Adjustable Steering Wheel

One of the interesting features of the Foursome Roadster, which is offered o either the six or eight chassis, is its adjustable steering wheel, so arranged that, by use of a wrench the driver ca easily raise or lower the wheel over a playing space of two inches. This makes it possible for the driver to elevate o lower the wheel when it interferes with clear vision of the road ahead and to fix the position of the wheel for purposes o greater comfort and convenience. Gard ner finds that the feature has a strong merchandising appeal.

This roadster also has a two-tone finish, nickeled radiator, nickel-trimmed lamps, cowl lamps, five Disteel wheels and a spare tire, snubbers all around bumpers front and rear, nickeled wind shield frame. There is a rumble seat and the top can either be let down o entirely removed at the driver's discre tion. The upholstery of both the front seat and the rumble seat is in machine buffed Spanish leather in a color to har monize with the body finish. There is a

compartment behind the main seat for the storage of tools and light luggage.

Gardner's Anniversary Sedan, which as previously stated, was really introduced some time before the formal announcement of the 1926 line, is proving the outstanding body of the entire list from the standpoint of popularity. This applies both to the six and the eight. The unit has been extensively described previously in this magazine and the trade is more familiar with it likely than with the other later Gardner additions. Standard equipments with the model are as follows: Transmission lock, snubbers, front and rear; balloon tires, Disteel wheels, automatic windshield wiper, stop light, large nickel-trimmed lamps, indirect non-glare lighting, cowl lamps, one-piece ventilating windshield operated by rotary lift, cowl ventilator, rear-vision mirror.

Closed Car Production Heavy

The Gardner Company's production at present is running nearly 90 per cent closed cars, although there is a big demand and an outlook for a growing demand for the Foursome Roadsters. The company expects September's business to set a new record and looks for no tapering off in production until about November 1. September will go down, it is said, as the biggest month of the year. The big sales stimulus of the season is said to have come through the popularity of the eight-in-line cars in addition to the influence of intensive national advertising. Production has increased at the Gardner plant steadily since last April.

The Gardner Eight Anniversary Sedan, listing at $1,995, the same price as the touring car. This model and the Six are proving the company's most popular body offerings

More Profits From Merchandising

Many excellent merchandising suggestions are offered in the book prepared by Edward A. Filene under the title of "The Model Stock Plan—More Profits From Merchandising." The author is president of William Filene's Sons Company, operators of the large and highly successful department store in Boston, who is well qualified to speak on the subject of retail selling. While much of Mr. Filene's book deals with department store fundamentals he offers ideas in general for the merchandiser which any retail dealer would find interesting. Some of the principles he enunciates are especially applicable to the business of retailing automotive accessories.

One of these sections relates to the planning of the store's buyer, the following being some of the "main facts" which Mr. Filene says the buyer has to draw in in this important phase of the work:

"Statistics showing what was sold of each class of merchandise in previous seasons—this is the history that enters into the making of the plan.

"Statistics of what is currently selling—the facts by classes and amounts of merchandise gathered day by day.

"Records showing the kinds of merchandise that customers are calling for and that cannot be supplied from stock.

"Information, presented in statistical form or otherwise, as to what competitors are selling that you do not have in stock.

"Early data regarding merchandise offered or to be offered by manufacturers or wholesalers.

"What is selling in other cities or abroad.

"Information as to the probable purchasing power of the community as compared with commodity prices."

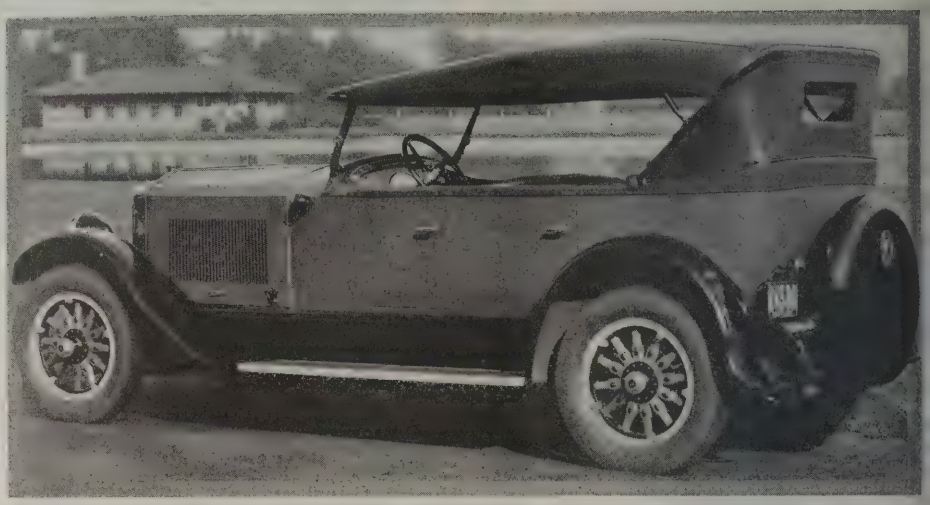
The purpose of "The Model Stock Plan," as dealt with in this work is "to have the right goods, at the right time, in the right quantities, and at the right prices. "The Model Stock Plan" is discussed extensively.

Mr. Filene's book is published by the A. W. Shaw Company, New York, Chicago and London. The price is $2.50.

Lincoln Chassis 14 in. Longer Than Standard Now Available

Three-quarter view of the Lincoln chassis with a special body for ambulance use. The chassis is 14 in. longer than the standard

THE Lincoln Motor Co. division of Ford Motor Company is now producing a chassis 14 in. longer than standard to meet the existing demand for a high powered chassis suitable for mounting ambulance, police patrol and funeral coach bodies.



Except for the changes necessary to the frame, propeller shaft and brake rods, the 150 in. chassis is identical with the standard 136 in. model. The price of the new chassis alone is $3,800 while complete with ambulance body it lists at $6,800.

The bodies for the funeral coaches now being built by the coach makers are in keeping with the high quality of the "standard" bodies, having identical style of design and appearance and same completeness of appointments. According to the factory engineers, the new chassis is not designed or recommended for heavy bus work or the operation of fire pumps.

Raised Body Panel Marks New Diana Phaeton

Raised panel forms arrowhead on hood of new Diana phaeton

Photograph of new Diana phaeton showing how raised panel is carried all the way around the body

Displaces Moulding and Forms Arrowhead on Hood — Seats Are Extra Wide and Sides Are High.

MOON Motor Car Co. has started production on the new five passenger phaeton "arrow head" model of the Diana which sells for $1895 f. o. b. factory. Deliveries will begin soon.

A number of unique ideas have been incorporated into the design of the phaeton. The moulding which has been so prevalent on so many makes of cars during the past few years has disappeared entirely and a raised panel, different from anything seen before, has been substituted. This effect is achieved by offsetting the body panels at approximately the same location formerly occupied by a moulding and eventually working this offset over the cowl and hood and forming an "Arrow Head" with its apex at the rear end of the radiator shell. The arrow is not terminated at this point but spread out into a three-quarter inch line running down the front edge of the hood, giving a distinctive appearance at this point.

The European tendency to raise the body sides, which give the appearance of a passenger sitting in rather than on the car has been followed, the result being a considerably lowered appearance. though as a matter of fact the head room in the body remains unchanged.

The general thought in designing the phaeton was to compose a series of fully rounded and freely flowing lines with the entire elimination of any sharp corners or breaks which might cause the eye to falter for a moment. The recent trend to widen automobile bodies to the fullest extent possible has also been followed with the result that both the front and rear seats of the phaeton are unusually roomy and will seat their full quota of passengers with ease and comfort.

The method of carrying the raised panel around the rear corners and back of the body of the Diana is unique. Beginning at a point slightly behind the rear door the offset panel tapers out to a greater width due to the fact that the bottom edge remains parallel with the chassis frame while the top edge curves upward in a gradually rising curve to give the proper height for the rear seat back, thus causing the offset panel t vary in width from one-half to fou inches at its widest point at the bac of the car.

The body is done in two tone "Duco, the offset panel being finished in sag green while the lower part of the bod and hood is in soft French gray, thi color combination being neutralized by green stripe about one-quarter of an inc wide which runs along the raised portio of the body and hood.

The equipment of the phaeton includes Lockheed hydraulic four-wheel brakes "easy park" cam and lever type steerin gear, one piece ventilating windshield heat indicator on the instrument boar and a light control lever on the steerin column.

Another feature of the phaeton whic is now standard on all Dianas is th Diana statuette on the radiator cap.

Campaign Letter Goes to Physicians

Harold W. Booth, sales manager of the Willys-Overland St. Louis branch in St. Louis recently conducted a direct-by-mail advertising campaign addressed to all members of the medical profession in St. Louis. All letters of the campaign were individually signed and mailed as first class postage.

A specimen letter follows:

"Dear Doctor:

"If you could have built a car that would fully meet the requirements of your arduous profession, wouldn't the specifications read something like this?

"Two-passenger. enclosed (of course), non-rumble construction, leather upholstered, wide doors, big rear window, one piece windshield, cowl ventilator, side door to rear compartment for instrument case (or golf clubs), "effortless" steering and gear changing, engine with no vi bration at any speed, a car of dignifie appearance, with a permanent lacque finish, and (most important) the lastin quiet that is only found in Knight sleeve valve engines.

"Briefly, those are the specifications o the Willys-Knight Coupe. We have thi Professional Coupe on our floor and ex tend you a cordial invitation to inspect it Another car that has been driven a littl is ready to prove our claims as regard performance.

"May we have the pleasure of showin you this car that might almost hav been created to fit your specifications Truly, its design spells "Custom-Built."

Yours very truly,
WILLYS-OVERLAND, Inc.,
Retail Sales Manager."

Shows Indicate Rapid Radio Expansion

Business for Next Five Months Should Exceed That of Corresponding Period Last Year

Greater Values Now

MAKING due allowance for the high enthusiasm generated by two big national expositions and several affiliated events of scarcely less importance in New York this month, there is good reason to believe that the next five months will develop more radio business than for the corresponding period last year. That may appear to be the usual reaction to the stimulus such affairs produce, but there seems to be a firm basis for the prophecy freely made as the season opens.

The most obvious reason is the greater range of popular appeal in the new products, some of which were shown for the first time at one or both of the expositions, and few of which have been widely distributed thus far. The new receivers include important though not revolutionary refinements in their internal construction and a decidedly striking improvement externally. Some rather sensational developments in vacuum tubes were shown. The list of accessories has been increased also, among them many battery eliminators, chargers, etc., while parts and kits for home construction continue to be shown in considerable number, despite the tendency in some quarters to consider this market completely dead.

There is general agreement, wherever manufacturers, wholesalers or retailers assemble that the refinement in exterior appearance of radio receiving sets will be the major factor in extending the market this season, resulting in the purchase of sets by a vast number of people to whom even the more attractive of last year's receivers did not especially appeal.

Summed up, the radio industry again exhibits several points in common with things automotive, which must have been self-evident to automotive men who visited the expositions at the Bronx Armory and Grand Central Palace, New York.

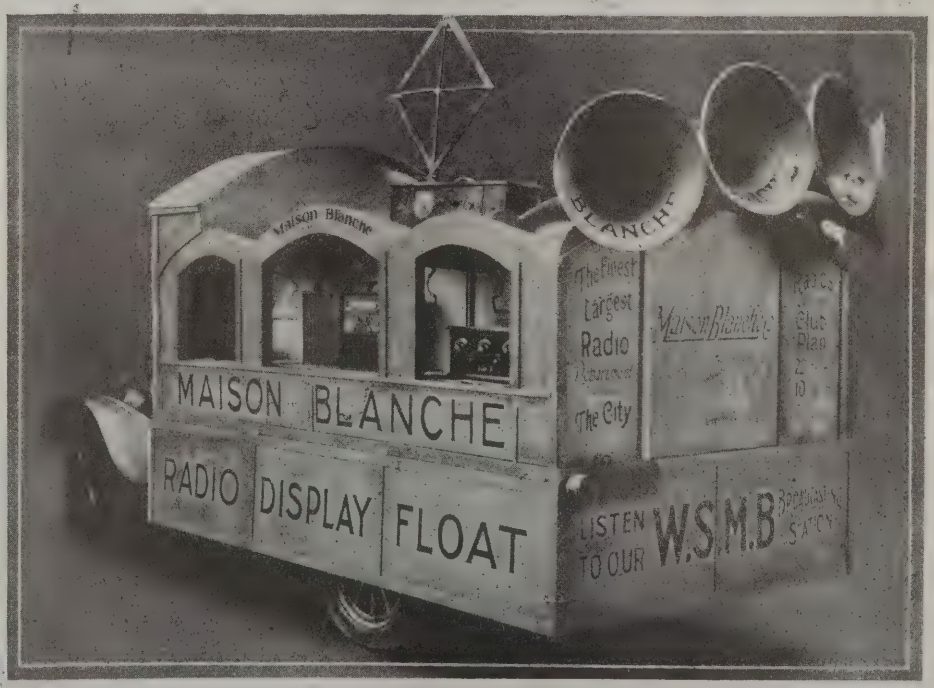
Among these are the greater values this year, for products have been improved and the prices reduced in a majority of instances; the probable expansion of installment plan sales due to the advent of the more expensive console models, and the likelihood of the "trade-in" phase developing to an important point.

The three big events were the Fourth Annual National Radio Exposition which opened Sept. 12 at Grand Central Palace and closed Sept. 19; the Second Annual Radio World's Fair, official Radio Manufacturers' Association show, which ran from Sept. 14 to 19 at the 258th Field Artillery Armory in the Bronx, and the Radio Industries' Annual Banquet, which took place in the ballroom of the Hotel Commodore on the evening of Sept. 16.

Both of the radio shows occupied more floor space this year than last, had more exhibits and were well attended. While no accurate figures were available, it was generally accepted that the shows were both successful from a merchandising point of view. Reports were current that actual orders placed were in excess of those placed either at Madison Square Garden, where the First Radio World's Fair was held last year, or in last year's show at the Palace.

Columbus Show Date

THE second annual radio show at Columbus, O., will be held at the Memorial Hall, November 7 to 14 inclusive under the auspices of the Ohio Radio Show Co., and the Columbus Daily Dispatch. The Ohio Radio Show Co., consists of M. A. Pixley, president of the Erner & Hopkins Co., large radio and electric dealers, Lee M. Boda and Robert F. Boda. The large hall in which the display will be held will be artistically decorated and the arrangements will be in booths. All of the latest radio sets and supplies will be displayed. Already a large number of manufacturers and dealers have announced their intention of exhibiting their products. Robert F. Boda, is general manager.



Indianapolis Radio Show

INDIANAPOLIS, Sept. 26.—Indianapolis is experiencing its first Radio Show in an exhibit put on by the Broadcast Listeners' League of this city. Practically all of the distributors of leading radio lines have exhibits and several of the wholesale accessory dealers who also handle radio are participating in the affair. The show is staged at the Cadle Tabernacle and after the first night the crowds began to grow until capacity houses appear billed for the remainder of the week. Leading distributors with displays of sets report good business prospects are being listed at afternoon and night shows, and that a considerable amount of actual sales will be developed by the show. Many distributors report that growing retail organization throughout the state will make new retail records this fall and winter.

Radio Dealers Named

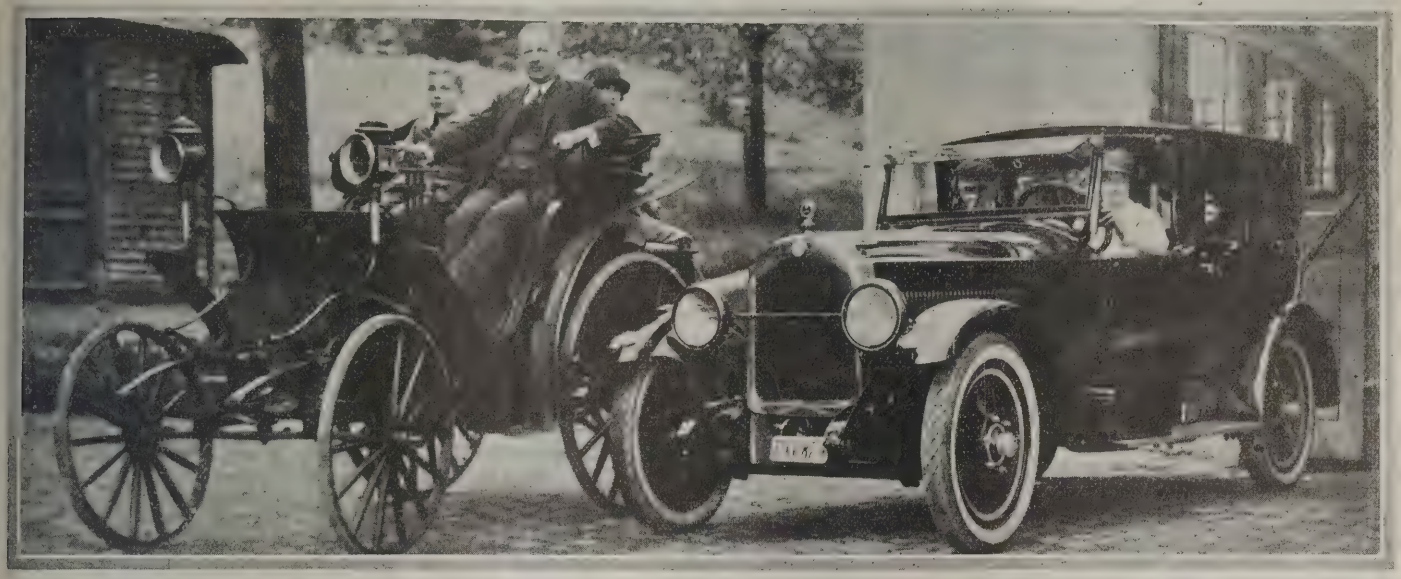
ATLANTA, Sept. 26.—Sam D. Katz, manager of the Automotive Sales & Service Co., 10 E. Harris St., Atlanta, distributors of the Splitdorf Radio line, advises that the company is now appointing dealer agencies in the Atlanta territory to handle the new line of modern receivers now being put out by the Splitdorf company.

Equipped to Sell Radio Sets

This truck is used by a large department store in New Orleans to sell radio sets. By means of a powerful receiving set and four loud speaking horns this truck makes radio programs audible over wide areas. Salesmen accompany the truck

MOTOR AGE'S PICTURE PAGES

RARIN' TO GO. Just before the start of a 15-mile-an-hour-dash at Huntington Park, Cal. A 1902 Oldsmobile, an 1897 Sears-Roebuck and a Maxwell of more recent vintage participated. The Oldsmobile, entered by Leslie R. Lumley, Huntington Park dealer, won.



FLIER MAKES 302 MILES AN HOUR IN AIRPLANE. Lieut. Alford Williams, U.S.N., is shown standing before the new Curtiss pursuit plane in which on Friday, Sept. 18, he flew 302 miles an hour at Mitchel Field, Long Island, N. Y.

WIDEAWAKE PUBLICITY. H. O. Harrison Co., Hudson-Essex distributors, San Francisco, "cashed in" on the evolution discussion. The pilot of the 1909 car wore a "monkey suit," while the 1925 coach carried a live monkey as a passenger.

OF AUTOMOTIVE INTEREST

THE MARCH OF PROGRESS. Baron Liebieg of Czecho-Slovakia at the guiding stick or handle of an automotive Methuselah. The baroness is at the wheel of her Studebaker Six limousine. The picture was furnished by E. & J. Frolich, automobile dealers at Prague.

ANOTHER CONTEST. Whether Youngstown's place in the sun should be based on steel making or feminine pulchritude is difficult to decide after seeing Miss Mildred Moore who represented the Ohio City at the Atlantic City Beauty Pageant.

DETROIT TO ANTWERP — DIRECT. Consignment of Rickenbacker cars being loaded for shipment at Detroit on the Belgian S. S. "Nico." This method, rather than shipping by rail to the seaboard, saves time and money, according to factory representatives.

A "ONE-LUNGER" CLIMBED PIKES PEAK. Roscoe Butcher of Wichita, Kans., seated in his motor car of 1902 vintage, which recently chugged its way up the famous peak. The climb was made in four hours, and the car went into low speed only once—at the start—staying there and not being changed for the entire distance.

Axle Pumps Grease Into the Transmission

Q—We wish to ask if you have ever met this experience. We have a party who has a model K-45 Buick and he complains that when he puts transmission grease into the rear axle that within a few days this grease is in the transmission case. The construction of this Buick is such that there is a path for grease from the rear axle to the transmission but one would never expect it to travel in that direction. We would be pleased to know if you have ever met this condition before and what is the cure. We have not examined this car, but thought we would write first and see if you could offer an explanation.

The owner claims that he has many times taken the grease out from the transmission case and returned it to the rear axle only to have it return to the transmission case again. He has to keep a special leather cover over the shift handle where it comes from the transmission case in order to prevent the grease from coming out all over the floor. He claims that the transmission case will fill so full that when he opens the cock that the grease will run out with a force indicating that it is under pressure slightly. We thank you for any suggestions that you may make about this peculiar action. —Baender Engineering Co., Parsons, Kansas.

Looseness in Pinion Bearing

There is apparently some looseness in the pinion bearing which allows the pinion and drive shaft to work back and forth, thus producing a pumping action. On this model Buick we understand that immediately in front of the pinion in the rear axle is a large washer. The rotation of the bevel ring gear will tend to throw grease in all directions and if this washer moves forward there is a possibility of grease being thrown behind it. As the drive shaft moves back and forth the washer will move forward and force the grease up the torque tube. The remedy would appear to be in correcting this condition of end play. We are told however, that it also helps to drill a $\frac{3}{16}$ in. hole in the top of the torque tube about half way from the axle to the transmission. This is said to relieve the vacuum to some extent and prevent the pumping action. It is also said that a hole drilled in the gear shift lever housing immediately over the transmission will also relieve conditions. However, if there is pressure in the transmission it would be our personal opinion that this would merely afford an outlet for the grease. We think the remedy is worth trying however, for it is simple and it would be no great job to plug the holes if the results are not as anticipated.

STUDY THE CONSTRUCTION

Q—Will you please print in the MOTOR AGE a blue print of the water pump, oil pump and distributer and explain how to take the water pump off of the Continental engine in a Davis motor car.—Harold A. Bogart, Sweet Valley, Pa.

We regret to advise that we do not have a drawing which shows the construction you refer to. We understand, however, that there is no difficulty encountered in removing the water pump. The drive comes through the generator and through a universal coupling to the pump. It is necessary to disconnect the hose connections, take the bolts out of the coupling and loosen the pump and remove it. We believe that the average mechanic would have no trouble in doing this, merely by observing the construction employed.

Welded Brake Drum on a Ford—Will It Do?

Q—Last winter in overhauling a Ford we brazed a small crack in the brake drum. Since then this car has given trouble with the brakes holding and frequent adjustments of the brake bands seem necessary. Other garage men maintain that it is impossible to braze or weld a brake drum and get satisfactory results afterwards, even if the surface of the drum is smooth and the drum is perfectly round. We have welded many of them and have never had the least bit of trouble before. We would like to know what you think of this and what experience other MOTOR AGE readers have had.—Baender Engineering Co., Parsons, Kansas.

If a welding or brazing job is well done, the surface is smooth and the drum is turned so as to be perfectly circular, we can see no reason for a job of this sort giving trouble. We do not recall that this question has come up in the Clearing House section, at least for the past three years, so we hope that other MOTOR AGE readers will let us know if they have had similar experience. Perhaps one reason for replacing a drum that is cracked, instead of welding or brazing, is that the comparatively low cost of Ford parts, makes it advisable to replace those which are worn or broken instead of trying to repair them.

This may account for the practice of other garages in replacing a cracked drum. rather than having a good engineering reason for doing so. We believe that the type of service to which the car is subjected and the way it is driven will have much more effect on the frequency with which brake adjustment is necessary than any theoretical condition of this sort. We recently saw a case where a Ford car in perfect condition went down a hill about four blocks long. The oil level was about half way between the lower and upper pet cock. The application of the brakes down this fairly steep hill for four blocks was sufficient to necessitate readjustment when the car reached the bottom of the hill. In this case the brake drum was in perfect condition, but if it had been a drum which had been welded there might have been some tendency to blame the drum for the necessity of readjusting.

A TRICK IN REMOVING ESSEX PISTONS

Q—We have been looking at page 24 of the July 9, 1925 issue of MOTOR AGE and have a suggestion to offer in regard to removing Essex pistons. Where trouble is experienced with the No. 2 piston it is well to remove the No. 1 piston first and then the No. 2 can be slid forward and taken out past the No. 1 crank pin.—L. R. Young, 44 Market Street, Muskegon, Mich.

Planning Your New Building

By TOM WILDER

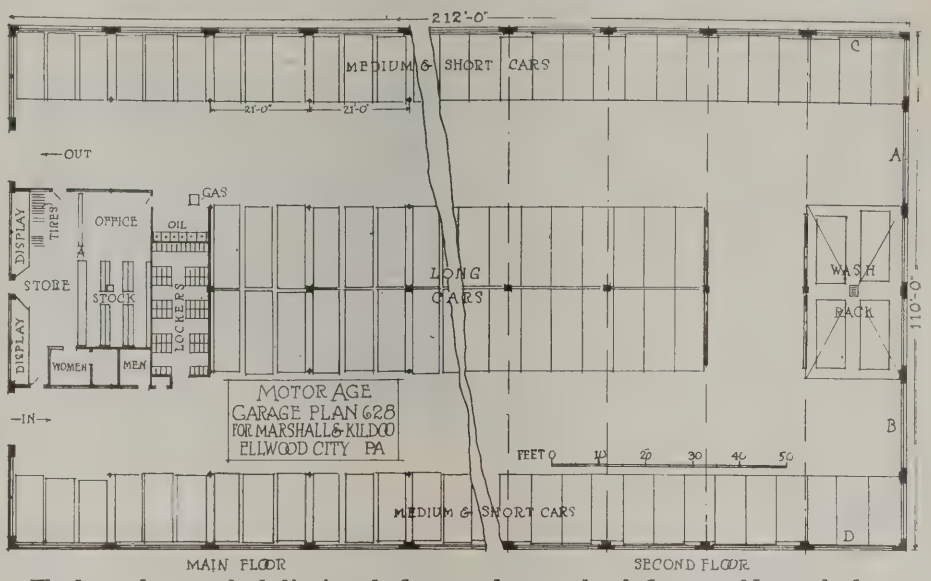
The READERS CLEARING HOUSE

Ample Space and Natural Ramp? It Can't Be True!

Q—We would like to have some information on size, best arrangement and structure of a building for storage with a capacity of 100 cars on ground floor, and approximately same on second floor. On the ground floor a wash rack, a small office, ladies and men's toilet, locker space and space for minor adjustments and oil and gas service inside of building.

The second floor will be entered by a street level due to a rise in ground. There should be a stairway for attendants to go back and forth and also locker space and ladies and men's toilet. We would like also to have you advise best method of heating. The space is not limited in reference to ground space, the building will be located as at a corner.—Harold L. Kildoo, Marshall & Kildoo, 25 Line Avenue, Ellwood City, Penn.

We have been a little at a loss to know which way the ground sloped on your lot and consequently where the entrance would be to the second floor. We have assumed, for the purpose of getting started, that the street in front was level and that the lot sloped back so that by building a driveway alongside, it could be entered toward the back end or at the rear, and if this is the case, doorways may be installed at any position along the side walls, such as (C) or (D), or if it is convenient at (A) or (B), the latter would be preferred, inasmuch as these spaces do not interfere with any storage space.



In case the ground slopes in the street upon which the building will face, it might be better to make the building longer on the frontage and not so deep. You will note that this building is divided into two 55-foot sections, each having storage on the side with an aisle space through the center. This makes an ideal storage layout, but if your street slopes as just suggested, it might be well to make the frontage consist of three or even four of these 55 foot sections, making a center entrance at one end in one section and at the other end in another section on the second floor. This latter scheme would be the better of the two since both of the entrances would be on the main street.

You will note that on the first floor, the space is divided up by columns which support the second floor, these columns being spaced 21 feet on centers. This measurement is used because it makes a good liberal storage space for three cars and will allow for a 12 by 12 or even 14 by 14 concrete column. In order to gain space, however, we would suggest that you use pipe columns filled with concrete which will not be more than inches in diameter, and will allow just that much more space between the cars. On the second floor the cars are spaced so that each has 6½ feet. Here the use of trusses will avoid the necessity of columns, although the columns may be used as on the first floor, if desired. We would suggest that you use the second floor for your minor repairs and adjustments where the light will be better and where space can be more easily arranged, especially if you do not use the columns on the second floor. We have shown a room for lockers on the first floor, but believe that a better way is to have lockers built into the wall at each car space.

The windows on the side wall should occupy only the upper one-third of the wall space, so that they will not interfere in any way with the lockers. We have not shown a stairway, but it may be installed almost anywhere, preferably near the office.

Our building as laid out will hold approximately 200 cars, depending somewhat upon the amount of space used in repair and other features.

The heating may be either steam of the direct type with coils along the outside walls and ceilings, or may be a combination of direct steam with some sort of hot blast which will also help in ventilating.

We have shown only half of each floor as the completed floor would merely be a repetition of the half. 50 ft. units instead of 55 ft. could be used but if you expect a reasonably large number of large cars we would recommend the larger measurement

THE STUFF THAT GRIDS ARE MADE OF

Q—Is the grid of a storage battery made of pure lead or is it made of a composition of metals? If so, is there any difference in the positive and negative grid? —J. W. Stratton, R. 4, Box 339, Springfield, Mo.

The grid of a storage battery is made of lead and antimony. The antimony is added to give the grid the stiffness which the pure lead does not have. There is no difference between the grid used for positive and negative plates. The difference is in the paste.

Trouble May Be in Trough

Q.—We have a sport model Hudson, year of 1921. This engine has been rebored by a local garage but since that time has scored No. 1 cylinder on two different occasions. One mechanic says that the oil pressure or the oil pump plunger must be changed according to the size of the motor which has been bored to .020 oversize. We have examined this motor for oil pipes, for being plugged up and have found everything in first class shape. The writer has never, in all his experience, changed the oil system because the motor has been rebored. Cooke & Paul Garage, 116 Exchange street, Freeport, Illinois.

It is not necessary to increase the oil pressure on any engine solely because the cylinders have been enlarged by reboring or grinding. In the case of this particular car it may be that the trough or scoop of the No. 1 rod is deranged. The trough may be in such a condition that it is leaking or so deep that the oil level is not sufficient to touch the dipper on the connecting rod. The dipper also may be deranged, broken off, or too short.

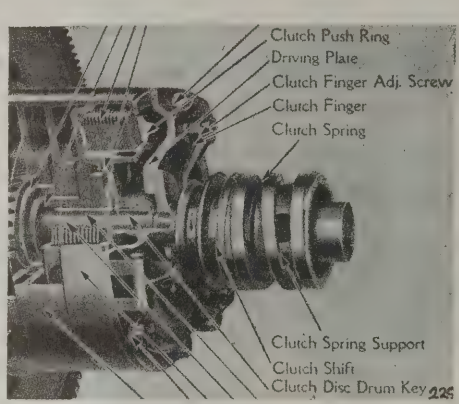
With regard to oil pump it is advisable if the car is to be driven at high speed for long drives to increase the stroke of the oil pump to about 3/32 of an inch. A later model sub base for the oiling system has been provided and we understand that this can be installed on the 1921 cars. It may be secured from any authorized Hudson dealer and its installation is recommended.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Test With One Piston Left Out

Q.—I have encountered a knock in an Essex four, that I cannot take out. It sounds like a loose connecting rod but I have tightened them, fit new pins and aligned rods. By shorting No. 3 plug the noise disappeared. I have lapped an oversize piston in the cylinder. Have changed rods and pistons around in different cylinders, but knock is always in No. 3 cylinder. I have examined cylinder for ridges or any chance to strike. Any information you might give will be appreciated. Main Garage, Kenton, Ohio.

It is possible that you have a loose piston in the No. 3 cylinder. Lapping of aluminum alloy pistons with ordinary abrasive is not recommended and it is possible that the process left the piston with more clearance than it had originally. We would suggest that you very carefully micrometer the cylinder bore at several points to see if it is uniform in diameter and without taper or ridges and if it is you can then try the piston in the cylinder testing it with a feeler gage to determine the approximate diametral clearance. If the clearance is in excess of .007 for the old style piston it will cause piston slap. The new style split skirt pistons may be fitted to as close as .003.



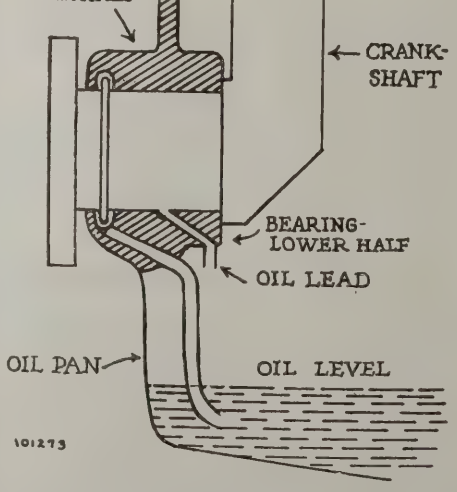
As a last resort we might suggest that you remove the connecting rod and piston assembly from the No. 3 cylinder and operate the engine to see whether or not the knock is still present. If the removal of the piston shows that the knock has been eliminated it would indicate that the noise is caused from some part of the assembly and only cut and try methods of testing each part of the assembly will give the ultimate location of the noise.

It is also advisable to check the amount of clearance between the piston pin and the piston boss when the pistons are at normal operating temperature. If the pins are fitted to what would be considered a good fit when cold the expansion caused from engine temperature will usually give piston pin knock after the engine has warmed up. We assume that you have checked these points and are aware of the conditions mentioned and if our suggestions do not enable you to cure the trouble, we would appreciate hearing from you again.

CLUTCH ADJUSTMENT MEASUREMENTS

Q.—I find in one of my instruction books on the Ford car where it says when the clutch is properly adjusted there should be 13/16 of an inch space between the lower side of the clutch and the drive plate. I am not sure that I understand what this means and will you kindly explain it. Kentucky Mountaineer.

The instruction book which mentions 13/16 of an inch dimensions should have read "between the lower side of the clutch shift and the clutch drive plate." The clutch shift is shown at Fig. 229 and by studying this and also the drive plate of



The Ford Clutch

the clutch you will understand that when the clutch spring is compressed to about 2 inches it will give the distance of 11/16 at the points mentioned in your other instruction book.

Curing Rear Mains That Leak Oil

Q.—We have an Oakland six 1920 model which gives trouble, due to a stream of oil running out of the rear end of the rear main bearing. The return hole through the bearing cap is open and we have cleaned out the holes in the crankshaft and cleaned out all the oil lines, but this does no good. Can you suggest a remedy. —Hoosier Repairman.

We are showing a sketch of a method which has been found to be effectual on one car and should prove effectual on the car in question. At the rear of the rear main bearing both in the upper half and in the cap a groove is cut. On most

Method of keeping oil out of the flywheel housing

engines a groove of this sort already exists and a raised portion of the crankshaft known as the oil slinger rotates in this groove. The trick in making this effectual, however, is to connect from the bottom of this groove a pipe which will run to a point below the oil level in the crankcase. Capillary action causes the oil to drain back into the crankcase more effectively than would ordinarily be the case.

What Should the Oil Pressure Be?

Q—At the Myers Garage we have recently become engaged in a disagreement. The question is about the oil pressure in the engine of a Buick 24-44 or Master Six roadster. One opinion is that something should be done when the oil pressure gets down to 3 or 4 or 5 or 6 pounds when driving at a speed of 40 miles an hour. The other party contends that as long as any pressure is showing it indicates the pump is working and that there is nothing to worry about. The bearings are tight and the pressure does not go down until the oil gets hot. Who is right? Would it do any good to use heavier oil? These heavier oils keep the pressure up to 9 and 10 pounds.—E. W. Clark, Pawnee, Okla.

The pressure should be about ¾ pound for each mile per hour. That is at 40 miles per hour you should have from 25 to 30 pounds pressure on the gage. Depending on the mileage which the car has gone it is possible that the pump gears need replacing. Wear at the teeth or side play will allow leakage of oil so that the pump does not operate efficiently. This is indicated when you say that it works fairly well with heavier oil, but does not work when the oil is light or when it becomes thinned out. You say that the bearings all fit properly, but unless you have tested these by forcing oil through the system you are not sure. The pump should be disconnected and oil forced through the system to see how it comes from the various bearings.

If it drips slowly from each one, the fit is correct, but if there is a flood of oil from any one bearing it indicates that that one is improperly fitted, and also accounts for the loss of pressure. We assume of course, that you have checked to see that the oil screen is clean. The party contending that any pressure at all shows the system to be O. K. is thinking of the type of engine where a pump forces oil into a series of troughs and connecting rods dip into these troughs. With this circulating splash system it is correct that any pressure on the gage shows that the pump is functioning. In a pressure lubrication system however, where oil goes to the main bearings and then through the crankshaft to the connecting rod bearings, it is necessary to have a higher pressure.

Clearing Up Electrical Trouble

EDITED BY A. H. PACKER

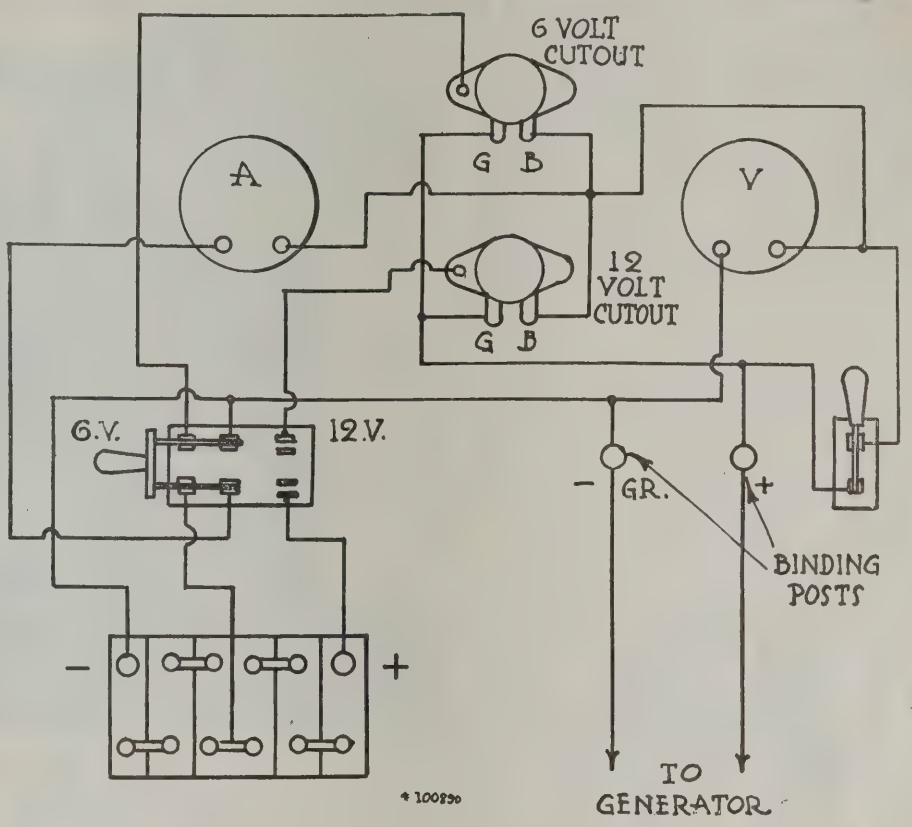
Test Bench a Necessity in Electrical Work

Q—We wish to build a complete electrical testing bench for garage use for testing automobile starting motors, generators, magnetos, lights, spark plugs, ammeters and coils.—Geo. H. Ainge Tool, Die & Machine Works, Springfield, Ohio.

Most garages find that they can utilize their time to better advantage in developing their own business rather than in trying to build specialized equipment of this nature. However, for those who wish to build up testing equipment we are publishing a diagram which takes care of generators either 6 or 12 volt. It would be necessary to purchase a suitable driving motor together with vise for holding the generator.

Can Be Mounted on Vertical Board

All of the equipment shown can be mounted on a vertical board at the back of the test bench. Only two switches are used, a two-pole double-throw and a single-pole single-throw, as indicated. Instruments that are suitable include an ammeter, which should be a 30-0-30, and a voltmeter, which can be a 0-15 meter. A 6-volt and a 12-volt cutout also are required. When you have a generator which does not have a cutout on it you leave the switch at the right open. Then you throw the double-pole switch to the left for a 6-volt generator and to the right for a 12-volt generator. This not only connects up the battery properly but also connects the proper cutout into the circuit. The two wires shown connected to the binding post are used to connect to the generator.



These wires would go on the two terminals on the generator, or if you have a grounded generator with only one terminal, then one wire goes to this terminal and the other wire goes to the frame of the generator. If the generator already has a cutout mounted on it or in it, you do not need the cutout on your test bench. You then close the single-pole switch at the right, which shorts these out. If you want battery current to test with, you merely close the single-pole switch at the right and use the two wires that are on the binding post. Using these wires for checking an ignition coil, for example, you will have the ammeter reading the amount of current that the coil takes.

The voltmeter is so connected that it will be reading about 6 volts or 12 volts, depending on which way the left-hand switch is thrown. As shown on the diagram the negative binding post is indicated as the ground terminal. This is all right for testing any generator.

Some generators, however, when installed on the car have the positive instead of the negative grounded. As a precaution, therefore, it is well to close the cutout points once by hand after the generator has been installed on the car. On the other hand, if you happen to know that a certain generator is used on a car where the positive terminal is grounded you can of course reverse the leads on your test bench, connecting the positive terminal to ground and the negative terminal to the live terminal on the generator.

If only occasional work is done a starting motor test may be dispensed with. If the armature turns freely and the brushes and commutator are in good condition and the starting motor will rapidly attain a very high speed it is quite likely to be O. K. Many test benches, however, provide for measuring the current and pounds pull on a lock torque test.

When it comes to magnetos the best test is to give the coupling a quick turn and see if the magneto fires in the safety gap. If not, it needs more or less work which usually necessitates tearing the magneto down. Spark plugs are tested with any ignition system by opening the plug gap or by putting insulation such as mica between the points to make the spark jump at least $\frac{3}{16}$ in. Coils are tested by connecting with a battery and interrupter so that the connections are the equivalent of the ignition circuit on the car. Ammeters are tested in series with a correct meter.

Circuits for testing 6 or 12-volt generators

TESTING BY ELIMINATION—A RELIABLE METHOD

Q.—What would cause the ammeter hand to vibrate on a Dodge Brothers car? The generator has been checked but we are not sure about the brushes. If the wrong third brush is installed in this car would it cause this trouble? D. C. Slick, The East Granite City Garage, Granite City, Ill.

The third brush should be black in color and the two main brushes should be yellowish indicating that they have more copper than carbon. If the brushes are incorrectly installed the main brushes which carry heavy current will have high resistance and the third brush which should have a high resistance will have such a low resistance that it will cause arcing, at the commutator. Whether this would produce vibration of the ammeter hand or not is another question.

We would suggest eliminating the cutout from the circuit by running temporary wiring from the generator to the ammeter and another wire from ammeter to battery, or you could use a separate ammeter and battery on the running board for test purposes. If the combination cutout switch and starting switch is not in good condition it may be that the points are flashing and burning and the cutout armature is vibrating back and forth. If you eliminate the car wiring, you will know whether the trouble is there or in the machine itself.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Electrical Flat Rates Bring More Shop Profits

"WHAT should I charge to repair a Ford generator?" one MOTOR AGE subscriber wanted to know. Another one asked if there were any flat rates put out like those prepared by some of the automobile manufacturers. It is a burning question, for with flat rates on mechanical overhaul operations sweeping the country, the question naturally arises, "Why can not electrical repairs also be made on a flat rate basis?" The answer is that they can.

Electricians familiar with the general nature of the work to be done can readily establish their own rates to suit prices in their locality. The start can be made with the units on the car most frequently serviced, and with the unknown cars still on a time basis. Then as experience is gained additional jobs on other cars may be added to the list.

Suppose the overhaul of a certain generator takes the average mechanic in a certain town three hours and the customary rate is $1.25 per hour. Then the average charge would be $3.75. Sometimes the mechanic working faster might turn out the job in less time, giving the customer better service at a reduced price, while if he worked slower he would give worse service at a higher price; obviously not a fair basis.

On the other hand let us suppose that $3.75 is established as a fair price on that job and car owners and shop men learn to accept this price as reasonable. What then are the chances of profit? The speedy electrician doing the job in two hours will earn for himself or the shop, $1.87 instead of $1.25 per hour and if paid in proportion to the work he does will have a chance to earn more. With an extra incentive he will speed up and develop short cuts so that each job will be more profitable than before.

THINGS THAT HELP FLAT RATE

The contact man is the all important factor in flat rate. He must not only be very familiar with the car or cars in question, but also able to intelligently write the repair order and above all able to meet the general public

Keeping a Flat Rate File

Chicago, Ill.

To the Editor of MOTOR AGE:

I have been saving the flat rate forum. Have you any idea as to how I could file them to readily locate the chart covering any particular car at a moment's notice? I am also interested in the articles on electrical trouble shooting and like to keep those articles separate and read them at leisure.

I tried this. I took two old thick MOTOR AGE copies that had over 260 pages, divided them into 10 pages for each letter of the alphabet and started to file, Buick, page 20, Cadillac, 30, Dodge, 40, etc. Then when I started to cut I found it spoiled the "Clearing up electrical troubles" as they were on the other side. For example, in the September 3, 1925, issue, page 27, electrical troubles are destroyed by cutting out No. 29 MOTOR AGE Flat Rate Forum for Dodge Brothers. Was thinking if No. 29 had been placed on page 24 instead of page 28, it would have been better as the picture pages don't mean anything after the first glance. I want to be able to turn quickly to Chevrolet, Dodge Brothers, etc., in a book on the desk to quote prices for the required operations on any car.—G. I. DeVault.

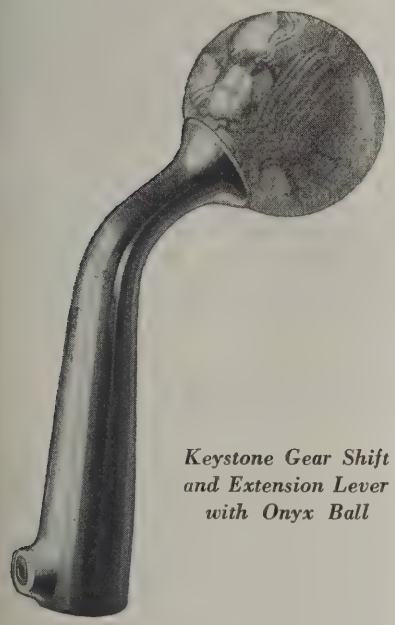
We quite appreciate the difficulty you are up against in cutting up the various copies of MOTOR AGE to save certain pages.

Perhaps a solution would be to not paste the pages down, but retain them in a loose leaf binder and make an index of the contents on the back of the page, that is, the ones relating to the electrical questions of the Reader's Clearing House, so you could refer to them when necessary. This would give you a flat rate book, which normally would be used as such, but which still would contain the information on other subjects you desired.

MOTOR AGE'S FLAT RATE FORUM

No. 33

FLAT RATES FOR FRANKLIN MISCELLANEOUS ENGINE OPERATIONS

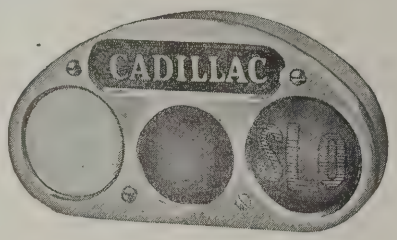


Manufacturer's Official Designation		Charge
10-703	Tune engine	$ 3.65
10-705	Clean engine	2.20
10-704	Oil change	1.50
10-719	Oil pump. Inspect, adjust and install new gaskets	5.54
10-730	Valves. Oil and adjust	1.18
10-731	Scrape carbon and kerosene grind valves. (Includes oil change)	7.71
10-727	Grind valves and clean carbon. (Six cylinders.) Includes tune engine	20.68
10-726	Valves. Grind (free up) and clean carbon. (One cylinder)	4.56
10-732	Valve walking beam (exhaust). Install new	2.66
10-711	Crankshaft and connecting rod bearings. Take up	21.55
10-738	Timing chains. Install new. (½ in. pitch)	13.15
10-737	Timing chain. Adjust	.85
10-756	Clutch. Install new. (Brown-Lipe to replace standard series 10 types)	46.10

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Keystone Gear Shift Extension Lever



THE Norlipp Co., 568 West Congress Street, Chicago, Ill., recently introduced the Keystone gear shift extension lever. One of its main features is the fact that the ball is self locking so that it cannot be removed. The extension lever is securely locked into position by means of a set screw, making a firm joint. In the groove in the thread of the lever ball a ratchet spring is placed so that when the ball is screwed on it is permanently protected from theft. The extension lever is nickel plated and made to fit gear shifting levers of all cars in the various types or groups. A chart is supplied indicating by number the type of extension lever used on the desired car. Price, without ball, $1. With 1⅝ in. onyx ball, $2.75. With 1⅞ in. onyx ball, $3.

Keystone Gear Shift and Extension Lever with Onyx Ball

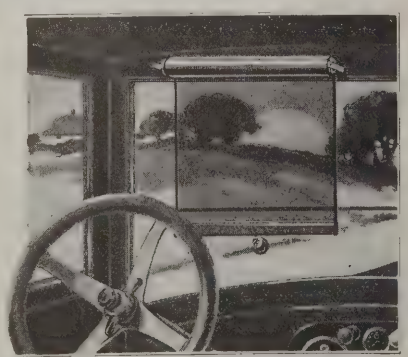
Glare-Sun Roller Shade

CLARMAX Manufacturing Company, 5353-57 N. Western Avenue, Chicago, offers the trade what it calls the Glare-Sun Roller Shade which shields the driver and other occupants of the car from the glare of sun, bright lights or snow. The Glare-Sun Roller Shade is installed similarly to a window shade and operates on the same principle. It is said to be adjustable to every angle to satisfy the eyes. A rubber suction holder at the bottom prevents the shade from flapping. This device is made in a standard size of 12 in. in green and is priced, complete with fittings, at $2.75. Special sizes are made to order at an extra charge of 40 cents per inch.

Four Features in Beacon Lamp

Cut shown above

COMBINING the features of a stop signal, tail light, reverse light and a car monogram the Beacon Standard No. 650 has been placed on the market by the Beacon Motor Lamp Manufacturing Company, 1243 West Third Street, Cleveland, Ohio. The left hand light is white, the middle light red and the right hand light is green. Centered over the top is the monogram unit. List price, $5.50.



Let the Customer Know What It Is

The accessory store's shelves, counters and cases display a wide variety of items. The proprietor of the store or the experienced clerk knows all of these items by sight, just what they are and what they are for.

But what about the average customer who wanders through the store inspecting the stock?

His knowledge of the accessory stock is limited. While he might have developed interest in some device through the reading of advertisements or comment of other motorists there is a big chance he would not recognize the appliance in the store's display case should he run across it.

An identification label of some sort on the item would facilitate matters for him immensely and maybe lead to a sale which otherwise would be lost. If the article does not easily identify itself—label it.

Glare Sun Roller Shade

The Platelite

AS suggested by its name the Platelite is a road light and license plate holder combined. It is made of heavy compressed aluminum, the lower portion or plate holder being a solid piece and the upper section containing the lighting unit which is shaped like a kidney to cover the blinding glare of the bulb and obtain other benefits. This lamp, it is said, will project a beam of light spreading over the entire road for a distance of from 200 to 300 feet, waist high, and below the line of vision of the on-coming driver. The construction of the reflector and specially designed lens throws the light not only on the road but on roadside ditches and turns. The Platelite retails for $7.50 and is made by the American Automatic Devices Co., Chicago.

The Platelite

Sport Model French Trumpet Horn

WHILE the Sport Model French Trumpet Horn can be used on all models of open and closed cars it is designed particularly for use on sport types. It is made of brass and entirely nickel

Sport Model French Trumpet Horn

plated, with a very high polish and Duco finish. Colorings are green, grey, blue, brown. orange and maroon, A black enamel bracket is furnished. This horn will make a shrill trumpet-like sound with a slight pressure on the bulb. It is made by the Mid-City Auto Devices Company, 1430 South Michigan Avenue, Chicago, and lists at $4.

Descriptions of Additional Accessory Items Will Be Found on the Following Page.

Clean Surroundings Attract Business

(*Continued from page* 15)

If it is good business to present an attractive inside picture it follows that the substance in which the jewel is set should be made to do its full part as background.

Slick up to the best of your ability on the inside in preparation for winter business—and then give the best of your slicking up talents to the outside. While it is wrong to have "All Front and No Back" the "back's" full efficiency is dependent upon the efficiency of the front and outside surroundings.

In slicking up the front begin with the outside surroundings. If there are any unsightly rubbish piles or other eyesores affecting the picture—start out by removing them. The dealer establishment with an adjacent vacant lot has an asset in this lot now and then but the danger is that the vacant lot will be permitted to harbor hideous sights that do anything but strengthen the show room's setting. Rusted wrecks of used cars on the lots amount to just so much actual sales resistance.

Clean up the lot, if one is there, and clean up generally as a starter. Take a tip from the practice of large filling station operators. They have the idea when it comes to outside slick-up. Only a few days ago a filling station in a small city was observed which was against a neat latticed background, the lattices being painted white and trimmed in green. The purpose of the lattice work was to hide ugly views over which the station has no other control. The entire area between the lattices and the street had been covered with white crushed rock—not that cars would use all this space—but to further the neat and clean appearance of the station and its surroundings.

Filling stations, we might say, do business entirely with a "front" with no "back" to worry about, and the result is they have gotten the outside slick-up down to an art. They know the selling influence of the slicked-up establishment. They know the patron would prefer to go to a tidy, attractive stand for his gasoline than to one of the other sort.

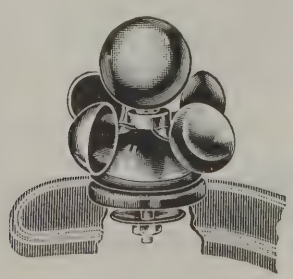
The same sort of sales psychology applies to the prospective automobile buyer, or the prospective buyer of accessories or maintenance. In fact, human beings in this particular are very much alike. In trading of any sort we find ourselves naturally gravitated toward the more inviting business institutions.

It should be needless to remark that clean windows are vital in a slick-up program, yet there are automotive establishments that neglect their windows more or less. Shops perhaps are the worst offenders regardless of the fact that clean windows will let in more needed daylight and more business. Cleanliness on the noticeable exterior of the shop should prevail as well as on the interior, especially where there are rear and side drives along which shops often permit accumulations of junk and other unsightly things.

Out in front there may be some signs to think about. Signs that are hopeless eyesores should come down. Others should be slicked up, possibly treated with fresh paint. If electric, dead bulbs should be replaced. A sign is a business help but the slicked up sign helps business more than the one which looks ancient or mangy.

And speaking of paint there are many places where it might help the appearance of the outside and outside surroundings. Maybe the front of the building needs a freshening up with paint. There might be gas pumps, greasing racks or other service appliances on the sidewalk which paint would help. The next door neighbor often enters into the problem and it might help matters if he could be induced to do some touching up with paint and general slicking up.

Without a doubt the "slicked up" front will help get business. But the work of front slick up is not complete without general slicking up on the outside. It is well to remember that the prospective buyer is more likely to enter the store with slicked up front and slicked up outside surroundings than the store of the other type.



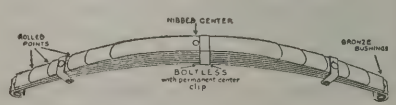
THE MARKET'S NEW OFFERINGS

(*Continued from page* 29)

The New Rotascope

Cut shown below

THE Wiggler Co., of Buffalo, N. Y., has put on the market a new type of rotascope. Originally the rotascope was designed to fit on the radiator cap. It was found that this interfered with temperature indicating devices so in order to remove this objection the rotascope has been adjusted so it can be put on the fender if preferred. The device consists of four cup-shaped disks, finished with bright red enamel and highly polished nickel. When the car is moving the breeze sets the disks in motion producing a colorful effect. Weight, about one pound. List price, $2.50.



Common Sense Ventilator

Common-Sense Window Ventilator

ANNOUNCEMENT was recently made by Ackerman-Blaesser-Fezzey, Inc., Detroit, of the introduction of the Common-Sense Window Ventilator for closed cars. This ventilator, made of sheet steel and treated to prevent rusting, fits into the upper portion of the window. As it is placed outside the glass, raising or lowering the window is not interfered with. Louvres or air holes are spaced to offer maximum ventilation without permitting rain or wind to enter the car. Installation can be accomplished by the owner by removing the three strips that hold the glass in place, inserting the ventilator and replacing the strips. Stock sizes are made for all standard closed cars. Price, $1.75 per pair.

Perfection Front Springs for Fords

FEATHERED edges, bronze bushed eyes which prevent freezing of shackle bolts, boltless center and quick and easy installation are some of the points offered for the Perfection Spring for the front of Ford cars, manufactured by the Eaton Axle & Spring Company, Cleveland, O. The leaves of this boltless spring are held in place by steel straps at the center. Deliveries are offered in seven, eight and nine plate sizes.

Perfection Ford Spring

EDITORIAL

Facts About Time Payments

A VALUABLE service will be rendered the automotive industry by the survey of credit terms being made by the National Association of Finance Companies. There has been too much wildcatting among finance companies. We have gone through a period of cheap money and hundreds of new companies have started in the business of financing automobile sales. In their eagerness to get a large volume of business quickly many of these companies have offered extremely liberal terms.

The National Association of Finance Companies now proposes to classify and sum up the experiences of the various companies with terms of varying liberality. The result should be a reliable indication of basis upon which the business can be conducted safely and soundly.

It is very much to the interest of the dealer that finance terms be stabilized on a sound basis. It doesn't help the dealer to sell cars on what is equivalent to a rental basis. Cars that do not stay sold return to plague the dealer even though the repossession may be by a third party and not by himself. The dealer's interest is in seeing that cars are sold on a basis that will keep them sold. Common sense, if given a chance to exercise itself, will dictate these terms.

Flat rate will knock L out of the flat purse.

Salesmanship in the Service Station

ENTIRELY too many service shops are lacking in either the inclination or ability to properly sell their services. There recently came to our attention an instance in which complete lack of salesmanship proved costly to a dealer's service department. A customer whose car had done a good many thousands of miles in the two years it had been out took it in to have the engine put in good condition. He was prompted to do this by the fact that an annoying piston slap had developed. His chief object was to have the noise removed because generally the engine was still operating in a creditable manner.

The service foreman dismantled the block and said he thought two new pistons would cure the trouble. The owner told him to go ahead. After this work had been done and the engine reassembled the service foreman found the slap still existed. He took the engine down again and renewed the other two pistons and rings. The owner was perfectly willing to pay for the complete new set of parts and their installation, but not the extra operation of taking off and replacing the cylinder head and pan the second time.

But that was not the end of the trouble. There was still a bad slap in the engine and the car came back. This time the trouble was traced to worn valve stems. It was necessary to install a complete new set of valves, but here again the service department could not properly charge for the operation of removing and replacing cylinder head and grinding in the valves, for the old valves had been ground and charged for the first time the head was off. The owner was willing to pay for the valves and the operation of installing them minus the grinding.

The moral here is that the service foreman in the first place should have sold the owner on the idea of fitting a complete new set of pistons, rings, pins, valves, and other necessary parts. But actually no effort was made at any time to sell a complete job. The effort rather was to see how little work the shop could get by with. As it turned out the owner paid for a rather complete engine overhaul, including parts, but the shop lost heavily on the labor end of the job through having to do so much duplicate work for which it could not properly charge.

The owner in this case would readily have authorized the complete job for which he ultimately paid and the shop would have saved money, if the least bit of salesmanship had been used.

Shut off profit and shut up shop.

Keeping Busy This Winter

THE automotive jobbers of New York state, 100 per cent strong, have decided to carry on a special campaign this fall and winter for the purpose of helping car dealers and garages keep their shops busy during a period when there is usually a normal decline. The movement is a worthy one and should be followed in other sections of the country.

One phase of the campaign will be the encouragement of dealers in the direction of having all used cars on hand fixed up before they are offered for sale. It is believed that this fixing up will make these vehicles more marketable at better prices and will provide the service shops with a great deal of profitable work and furnish an outlet for a great amount of parts and supplies.

At the same time the practice of reconditioning used cars before offering them to the public helps to hold the good will of the car buyers and is a good thing for the whole industry.

It pays to be a preferred customer.

Let's Stay Slicked Up

THE slicked up store is such a satisfaction to the owner and such an attraction to customers that it would pay to keep it that way all the time. And it's not much of a job after it has been done once. A little attention daily is all that is necessary. But it must not be neglected. Only a few days of neglect will allow the slickest place to run down and become shabby and then it is a real job to bring it back. A few minutes a day will keep the store slicked up.

Trade Outlook Is Highly Favorable

Good Tone to New Car Sales Almost Everywhere in Country

Used Vehicle Movement Satisfactory on Average but Spottiness Marks Time Selling

NEW YORK, Sept. 26.—Generally excellent new car sales, reasonably satisfactory movement of used cars in most parts of the country and a spotty situation as regards time payments and repossessions—that is the picture of the automotive retail condition as the industry enters the Fall season.

Reports from every section of the country show that new car sales have been very good almost everywhere, September totals exceeding those of August in many cases and falling materially below August in practically none. Some areas had a marked slowing up in new cars business during the first week or ten days of September, but heavy buying in the middle of the month compensated for the early slump. Coupled with these very favorable records of September business come highly optimistic and apparently well found opinions that October also will show results which will compare favorably with those of August and September.

Dealers Press Factories

Used car stocks seem to be in pretty good shape all over the country, although reports from Texas and parts of Ohio indicate that the number of used cars in dealers' hands is rising despite reasonably active market in the used vehicles. New cars stocks, of course, are low, with many dealers pressing their factories for deliveries.

The very active new car market and the satisfactory used car situation, when coupled with the decrease in factory schedules which is taking place in a good many cases, combine to make the current automotive outlook highly favorable. The indications are that most factories are not being misled by the size of immediate demands into thinking that this peak pressure from the retail field will continue indefinitely. Consequently, there are strong evidences to indicate a steady balance between production and consumption will be maintained throughout the fall and winter whatever turn the retail sales curve may take.

Spotty Time Sale Situation

Underlying this excellent situation, however, is a somewhat spotty times sales situation.

Telegraphic reports from many correspondents indicate that the credit situation is thoroughly satisfactory or improving. Such statements, for instance, come from Milwaukee, Louisville, Canton, St. Louis, Toledo, and Birmingham. But to offset these favorable reports are others from such centers as Los Angeles, Charlotte, N. C., Philadelphia, and other centers indicating that repossessions are on the increase.

More Mail Routes Motorized

WASHINGTON, Sept. 26.—Motorization of 498 new rural free delivery routes has been announced by the Post Office Department, bringing the total number of mail routes, now covering the United States to 4,228. According to the report of Postmaster General Harry S. New, just issued, on June 30 this year mail was delivered on 45,189 rural routes, as compared with 44,760 on June 30, 1924. Rural mail routes in the United States have an aggregate length of 1,223,391 miles, and serve 6,508,178 families, or 30,351,618 individuals.

Paige-Detroit Company Will Cut Funded Debt to Million

DETROIT, Sept. 26.—Directors of the Paige-Detroit Motor Car Company at their meeting Friday, after considering the company's strong cash position and favorable business outlook, decided to anticipate the redemption date of $500,000 of the company's outstanding serial gold debenture notes by calling for payment Dec. 1, this year, the block of notes which would fall due June 1, 1926.

The company, on Dec. 1, this year, will also retire $500,000 of the notes coming due at that time. Of the originally authorized issue of $3,000,000 dated March 1, 1924, and maturing $500,000 June 1 and December 1 to June 1, 1927, the company already has retired $1,000,000 of notes as they fell due.

Under the terms of the note issue they are callable by the company on any interest date at 108 and accrued interest before June 1, 1925, at 102 and interest before June 1, 1926, and at 101 and interest before June 1, 1927.

"Our company has had a very successful year, and business is continuing in record volume," says President H. M. Jewett. "The company is in an exceptionally strong cash position and the directors decided it would be wise to call the notes maturing in June next year, for payment with those coming due December 1, this year. This will reduce the company's funded indebtedness to $1,000,000, no part of which will fall due until December 1, 1926.

DICK IS SERVICE MANAGER

FLINT, Mich., Sept. 26.—R. H. Mulch, vice-president and general manager of the Flint Motor Company, announces the appointment of Joseph R. Dick, as service manager. Mr. Dick has had wide experience in service work with several other prominent manufacturers of automobiles.

4-Cylinder Willys-Knight To Have Four Wheel Brak

Equipment Will Be Similar to Th on Six and at No Added Cost

TOLEDO, Sept. 26.—Four wheel brak similar in operation and construction those employed on the six cylinder mod announced Jan. 1, 1925, will be fitted the four cylinder Willys-Knight ca effective Oct. 1, it was announced tod by Willys-Overland, Inc.

All models on the smaller chassis w be regularly equipped with the ne brakes and included in the present l price, there being no extra charge f the front wheel brakes.

On the Willys-Knight cars, the intern front wheel brakes are different fr any design employed on domestic ca at this time. From the brake ped pressure is transmitted by a rod co nected to a lever which is pivoted a bracket attached to the front ax Pull rods from the floating equalizer the bracket are connected with univers ball jointed yokes, the latter carryi rollers in the brakes proper in the fro wheels.

The operating rollers are placed wedge shaped spaces formed by t curved portion at the lower ends of t two cast aluminum brake shoes. Wh the brakes are applied, the rollers a drawn in toward the center of the fro axle thus forcing the shoes outward a providing the necessary braking effo on the drums.

RICKENBACKER TO EXPAND

NEW YORK, Sept. 26.—A minority i terest in the Rickenbacker Motor Co., Detroit, has been purchased by Noyes Jackson, members of the New York a Chicago Stock Exchanges, and W. Jackson, of Chicago, and A. G. Boes of New York, are to be added to the boa of directors. The seven present directo are department heads in the Ricke backer organization, and heretofore banking interests have been represent there. The company announces that th step will mark the beginning of a ra expansion program, the first step which will be the amalgamation of body concern with the Rickenback Motor Co.

NORTH EAST HOLDS MEETING

ROCHESTER, N. Y., Sept. 28.—Nor East Service, Inc., opened its annu branch managers' convention here tod at the general offices of North East Ser ice, Inc., in Rochester. A special featu was the attendance of the managers the North East foreign branches inclu ing those of Toronto, London and Pa offices. Further development of t North East service policy to meet the i creasing demands will be planned at th time.

Meeting at N. A. C. C. Office Starts Fight on War Tax

Representatives of Every Branch of Industry Confer to Plan Campaign

WASHINGTON, Sept. 26.—Representatives of all automotive interests marshalled their forces here this week at a meeting held in the offices of the National Automobile Chamber of Commerce for the purpose of launching a winning fight in the Sixty-ninth Congress for the elimination of all war excise taxes, which include those on motor vehicles, parts, tires and accessories.

The representatives found themselves in perfect unanimity in the belief there should be no compromise but that all the taxes which have so long been a drag on the industry should be speedily killed. Decision was reached that each automotive group should work out its own line of action in its own way with specific attention to the particular phases affecting it.

Those in attendance at the meeting reported that they are gratified to learn through conversations within the past few months with members of Congress that there is a very general appreciation on the latter's part of the justice of the demands of the automotive industry. It was the consensus that the arguments for the elimination of the war taxes this winter will get a more receptive hearing than they have in the past.

It was reported at the meeting that representatives of all of the automotive groups have requested time when the house ways and means committee meets next month which no doubt will be granted.

Foreclosure Suit is Brought Against Lexington Motor Co.

INDIANAPOLIS, Sept. 26.—Suit to foreclose a $1,500,000 mortgage against the property of the Lexington Motor Company of Connersville has been filed here in the Federal Court by the Central Union Trust Company of New York, as trustees for the holders of first mortgage sinking fund gold bonds of the company. In the complaint the trust company sets out that interest payments due last year and this year on the bonds have not been met, an amount which runs to $56,250 for each six month period since March, 1924, when the first semi-annual payment was due.

In Connersville another foreclosure suit was filed against the Ansted Engineering Company which formerly made the motors for the Lexington car. This suit is to foreclose a mortgage of $1,000,000 on Ansted Engineering Company property which was originally held by the Lexington Company to secure repayment of ten promissory notes given by the engineering company to the Lexington concern. Later this mortgage was assigned by Lexington to the Central Union Trust Company at the time the Lexington company negotiated its mortgage to the trust company.

The Lexington Company since April, 1924, has operated under a receiver appointed by the Federal Court at the time the interests first got into serious difficulty. Receiver William P. Herod has been operating the plant on a small production schedule. The Ansted Company is in the hands of Receivers Hyatt L. Frost of Connersville and Arthur Dixon of this city. It is understood here that one possible outcome of the suit will be steps toward a reorganization, though it also is understood that some previous attempts to reorganize the interests have so far failed of success.

A. H. Rosenberg Heads Central Finance Credit Association

CHICAGO, Sept. 26.—A. H. Rosenberg, vice-president of the Motor Car Securities Corp., was elected president of the Central Automobile Finance Credit Association, with headquarters in Chicago, at the annual meeting. The Central organization is an association of auto-

A. H. Rosenberg

mobile finance concerns, whose members write an aggregate of more than $1,000,000,000 a year. It is affiliated with the National Association of Finance Companies.

Other officers elected were S. J. Steinberg, vice-president; A. J. Deutschman, secretary; John B. Perlee, treasurer; J. L. Nau, R. A. MacDonald, H. M. Lilly and John H. Little, directors.

Mr. Rosenberg was a member of the board of directors before being elected to the presidency

LANE TOURS WEST COAST

OAKLAND, Cal., Sept. 26.—Ralph S. Lane, president, and D. M. Sweeney, field supervisor of United Motors Service, are on tour of the Pacific Slope, having spent several days in September in Oakland. Expansion of service stations throughout the country is being arranged, according to Lane.

S. A. E. and N. A. C. C. to Hold Joint Meeting Oct. 9-10

Chicago Convention Will Stress Subject of "Preventive Service" in Operation

CHICAGO, Sept. 26.—Trouble prevention will be the keynote of the Society of Automotive Engineers and National Automobile Chamber of Commerce joint meeting, Hotel La Salle, Chicago, November 9-10.

The joint meeting with the Society of Automotive Engineers, which is the third annual event of this kind, will have much to do with what is sometimes called "preventive service," directing attention to the precautions that should be taken and the things that should be done to prolong satisfactory car operation and defer inevitable repairs that wear eventually entails.

There will be morning and afternoon sessions on each of the two days, the first and last being in charge of the N. A. C. C. Service Division. The S. A. E. will be responsible for the Monday afternoon and Tuesday morning sessions

The Automotive Equipment Association show will be held that week at the Coliseum, and a conference with members of that association and the factory service managers will be held Wednesday morning following the official service convention.

Rochester Business Is Good In All Lines During Month

ROCHESTER, N. Y., Oct. 1.—Business in the automotive industry in Rochester and vicinity continued to hold good during the past month and prospects for the next 30 days point to a slight increase in all lines. The new car situation is especially good with practically all dealers reporting more orders than they have cars to fill.

The used car business is holding up well but this end of the business is expected to fall off during the current month. Stocks of new cars are small while the used car stocks are reported as not abnormally large for this time of the year.

General business conditions vary, some sections of the territory being prosperous while in others there is considerable unemployment. On the whole however, the situation is a healthy one for the automotive trades. Accessories, tires, trucks, replacement parts and electrical equipment are all in good shape with bright prospects for the next 30 days.

MICHIGAN ENGINEERS TO MEET

DETROIT, Sept. 26.—The Michigan Engineering Society has arranged its annual convention to take place in Grand Rapids October 28 and 29. The dates were set to enable the members to attend the first annual Good Road Show of the Michigan Association of Road Commissioners and Engineers.

Kissel Adds Three New Features to All Models

Oil Purifier, Air Cleanser and "Gas-co-lator" Now Standard on Both Sixes and Eights

HARTFORD, Wis., Sept. 26.—The Kissel Motor Car Company, Hartford, Wis., announces as standard equipment on all models, three new features: dual oil purifying system, air cleanser and gasoline purifier.

The most important of these is the adoption of the dual oil purifying system which was added only after a series of exhaustive tests extending over a period of months.

The system has the resemblance of a vacuum tank. It draws contaminated oil from the crankcase and removes dilution, abrasives and sludge, and sends it back on the job cleaned.

The air cleanser has been standard equipment on Kissel Eights for some time, and owing to its successful performance it is now installed on Kissel Sixes as well, making it standard equipment on all models.

The gas purifying system known as the "Gas-co-lator" removes all dirt, grit and water from gasoline, and Kissel engineers claim it will do much in eliminating motor trouble previously caused by impure gasoline finding its way into the carbureter.

The new features are being added at no extra cost on cars now being delivered from the factory and Kissel dealers in all sections are being equipped to install them on previous Kissel models at a nominal charge where owners desire them.

Auburn Production Reported Heaviest in Firm's History

TOLEDO, Sept. 26.—The Auburn Automobile Co., whose plant is located at Auburn, Ind., has reported its largest production in history of the company during the last week.

The production has averaged 50 cars a day for the week, which is 25 per cent increase over any previous seven-day period, according to E. L. Cord, vice-president and general manager.

Unfilled orders continue to increase and there appears to be no immediate prospect of production keeping pace with the demand for the new Auburn models in the opinion of plant officials.

FORD PLANT OPERATING

MILWAUKEE, Sept. 26.—The Milwaukee plant of the Ford Motor Co. is operating at capacity again after a seven-week shutdown necessitated by preparations of introducing the new line of improved models. H. M. Buckley, manager of the Milwaukee branch states that a daily output of 200 cars per month through the fall and winter months is contemplated.

PEERLESS REINCORPORATES

CLEVELAND, Sept. 26.—Formal action was taken Tuesday at Richmond, Va., to transfer the assets of the Peerless Motor Car Company, the operating company which is an Ohio corporation, to the Peerless Truck and Motor Company, the holding company and a Virginia corporation. With this done, the Peerless Motor Car Corporation is to be formed as a successor to the Peerless Truck and Motor Company, which will be dissolved. The new company will be a Virginia corporation but licensed to do business in Ohio.

Exhibitors at A. E. A. Show Have More Space This Year

All But Few of Numbers Already Contracted—Drawings Held in Chicago

CHICAGO, Sept. 26.—Drawings of space for the annual show of the Automotive Equipment Association were held this week in Chicago, with the result that only four small spaces on the main floor were left open for members who did not have their space already contracted.

The show this year will be held in the Coliseum, as usual, November 9 to 14. Every space in the main building, the North Hall and the South Hall, with the exception of the four, is now taken by the manufacturing members of the association and the trade papers. A total of 220 exhibits has been contracted.

Last year there were 229 exhibits, all placed on the main floor of the Coliseum, while this year space requirements were so great that it will take the main floor and both North and South annexes to house the 220 displays.

Exhibitors who require space after the four small sections are contracted, will use the balcony, officials of the show say.

All but 40 of the members of the association have already contracted for their space, thus assuring the association that the exhibition this year will be the greatest thus far held.

NEW CADILLAC DEALERS

DETROIT, Sept. 26.—New dealers appointed by the Cadillac Motor Car Co. include:

Jones Mercantile Company, Canton, Ga.; Roy W. Milligan, Miles City, Mont.; Leo J. Dettling, Ann Arbor, Mich.; Logan Buick Company, Logan, W. Va.; Williamson Motor Company, Williamson, W. Va.; Wilbur Johnson Company, Kokomo, Ind.; F. M. Nelson, Panama City, Fla.; Park Motor Car Company, Lyndhurst, N. J.; Central Louisiana Motor Car Co., Alexandria, La.; Chapman Motor Inc., Plattsburg, N. Y.; N. B. Haney, Ada, Okla.; Spurgin Motor Company, Fairfax, Okla.; Cass Motor Company, Bloomington, Ill.; Wirt-Carter Motor Company, Tucson, Ariz.; Monnett Motor Company, Walla Walla, Wash.; Steuben Motor Company, Corning, N. Y.; W. M. Lofland, Norwalk, O.; DeForest Buick Company, Sharon, Pa.;

September Business Shows Gain Over 1924 in Chicag

Crop Conditions Cause Upturn i Rural Sales — October Expected Good

CHICAGO, Oct. 1.—September in th Chicago automotive trade showed a muc greater volume of business than Septem ber a year ago. Factory production wa sustained at a high level in all the Illi nois plants. Distributors and dealers especially those who are showing nev models, or whose product is selling a a lower price, report their Septembe business as good as, if not better than any other month this year.

Many distributors and dealers starte the month slowly, but the last two week have shown decided improvement, and number of them see in October the great est sales possibilities of the year.

Crop conditions throughout the rura districts in the Chicago trade territor are excellent and a consequent large volume of rural sales is now appearin and is expected to grow during the com ing month.

Some dealers are reporting that de livery is a problem. Delivery of the new Ford models has not started in volum as yet, but the factories are putting forth great efforts to get the new cars on th road as fast as possible.

The used car situation is distinctly favorable with the greater number o dealers entering the fall and winter sea sons with the smallest stocks in years Replacements are good, tires good, and time payments excellent.

Parts and Equipment Men See Big Autumn in South

ATLANTA, Sept. 26.—Stocks carried by the automotive and equipment jobber in the principal southeastern cities fo the fall and early winter trade are re ported by salesmen representing th northern manufacturing concerns an larger manufacturers' agents in this ter ritory to be the largest they have bee in the past four or five years at this time of year, with virtually all of these job bers apparently looking forward to on of the most active fall and early winte seasons in the history of the industry in the Southeast.

Both parts and accessory sales the las month have been very active in all part of the South, and there is every indica tion, jobbers in Atlanta advise, that they will continue so well into the fall months The holiday season is expected to be by far the best it has ever been in this dis trict, so far as accessory business is con cerned.

This, as stated, is true of a majority of the principal southern cities, infor mation at hand from larger jobbing firms in Atlanta, Jacksonville, Memphis, New Orleans, Nashville, Knoxville and Bir mingham.

Survey to Determine Sound Automobile Finance Terms

N. A. F. C. Sends Questionnaire to All Companies Handling Such Paper

CHICAGO, Sept. 26.—An extensive survery is being conducted by the National Association of Finance Companies to determine what are fundamentally sound credit terms in the time payment plan of selling automobiles. To get the facts, C. C. Hanch, general manager of the association, has sent a questionnaire to all companies known to be in the business of financing automobile sales.

At the same time Mr. Hanch announces that the annual meeting of the association will be held in Chicago Nov. 17 and the conclusions from an analysis of the returns of the questionnaire will be made public at that convention. The detailed program of the convention has not been completed, but will be finally arranged at a meeting of the convention committee in Chicago Oct. 6. It is probable that more than one day will be taken for the convention.

Finance companies that answer the questionnaire are assured that no details of their individual businesses will be made public, but only the average facts determined from an analysis of all the returns.

Among the questions asked are:

Average loss per repossessed car which had twelve equal monthly payments.

Average loss per repossessed car which had 16 to 18 equal monthly payments.

Average loss per repossessed car which had balloon note or more than eighteen equal monthly payments.

On new cars, the percentage of repossessions when down payment was one-third of cash price or 30 per cent of time selling price, when down payment was 25 per cent of time selling price, and when down payment was less than 25 per cent of time selling price.

On used cars, percentage of repossessions when down payment was 40 per cent of cash price or 37 per cent of time selling price and when down payment was less than 37 per cent of time selling price.

Percentages of used car paper handled.

Percentage of total used car paper which is handled with recourse.

Percentage of paper calling for more than 12 equal monthly payments.

Percentage of paper with 35 per cent or less down on used cars and with 25 per cent or less down on new cars.

The association management is especially desirous of having complete returns from all companies engaged in automobile financing so that when the average conclusions are made known they will be turly representative of the whole country and will be of value to the industry.

CHRYSLER VISITS FRANCE

DETROIT, Sept. 26.—Walter P. Chrysler, president of the Chrysler Corporation, sailed today for Havre and Paris and before returning to America October 17 will visit Saint-Didier in Paris, distributors of Chrysler cars in France, and the nineteenth International Motor Exhibition organized by the Society of Motor Manufacturers and Traders, Ltd., in connection with the Royal Automobile Club, at the Olympia in London. J. E. Fields, vice-president in charge of sales, and Fred M. Zeder, vice-president in charge of engineering, of the Chrysler Corporation, sailed ahead of Mr. Chrysler but will return with him.

Builds Apartment for Baby Families Only

Walter O. Briggs, president of the Briggs Manufacturing Company, Detroit, one of the world's largest manufacturers of closed automobile bodies, plans the immediate erection of a large, 16-family apartment building to cost $500,000. It is to be located in Detroit on a frontage of 245 feet on Covington Drive and construction is to start immediately. The singularity of this plan lies in the fact that these thoroughly modern apartments are to be rented only to families who have babies under five years old, the plan designates that this unusual venture is to be operated on a non-profit producing basis for the owner.

ZIMMER IS PROMOTED

NEW YORK, Sept. 26.—L. M. Zimmer has been appointed general sales manager of the Linde Air Products Company, manufacturers of oxygen, and of the welding gas division of the Prest-O-Lite Company, Inc., manufacturers of dissolved acetylene, succeeding L. M. Moyer, who resigned August 1. Mr. Zimmer entered the employ of the Linde Air Products Company nine years ago as a junior salesman and has steadily risen in rank. Most of the time he has represented the company in the Central West, coming to New York early in 1924 to act as assistant general sales manager.

CLYDESDALE RECEIVER NAMED

TOLEDO, Sept. 26.—The Commerce Guardian Trust & Savings Bank has been named receiver for the Clydesdale Motor Truck Co., of Clyde, following filing of a petition here in federal court by the Continental Motors Corporation of West Virginia. Judge John M. Killits also named P. R. Taylor, a local attorney, as special master to hear claims. It is declared in the petition that the company is apparently solvent with assets of $598,549 and indebtedness considerably less than that amount.

AUTO-LITE DIVIDENDS

TOLEDO, Sept. 26.—The directors of the Electric Auto-Lite Co., have declared the regular $1.50 quarterly dividend on common stock of the company payable October 1 to holders of record September 21. Several new accounts have been taken on by the company.

Battery Manufacturers Are Enthusiastic at Convention

Steps Taken to Increase Efficiency of Organization — New Members Admitted

NEW YORK, Sept. 26.—Cooperation was the keynote of the meeting held by the National Battery Manufacturers' Association at Hotel Roosevelt. Enthusiasm marked the sessions, four new members were admitted and several other steps taken to increase the efficiency of the organization. About 60 members attended and the convention was the best ever held.

The rating of the Society of Automotive Electrical Engineers was adopted for automobile batteries as standard for the association members. Radio battery ratings were also adopted.

Dan H. Kelly of the U. S. Light and Heat Corp., president of the association, presided. One of the most interesting discussions was that by A. G. Hancock of the Home Insurance Co., who described a new insurance policy for rented and loaned batteries. This policy, offered at a low rate, covers fire, theft, loss and lightning casualty on land or water. Although no official action was taken on this subject, it aroused keen interest among the manufacturers and was offered for their consideration in connection with their own service stations.

The necessity of gathering and formulating statistics for the industry was pointed out by Commissioner O. B. Towne and it was voted to start in a small way to collect statistics on certain agreed upon items, for the purpose of providing a more accurate understanding of the actual condition of stocks on hand, number of batteries manufactured and the number sold.

Alfred Reeves, secretary of the N. A. C. C., discussed the Federal excise tax on automobiles, particularly from the standpoint of the parts and battery manufacturer. Arrangements are being made to have a representative of the association in Washington when this subject comes before the taxation committees of Congress.

These new members were admitted: Westinghouse Electric and Manufacturing Co., Lyons Storage Battery Co., W. F. Price Battery Supply Co. and Pioneer Storage Battery Co

A committee was appointed to study the matter of creating a cred.it department and committee chairmen reported.

NORTON RESIGNS FROM G. M.

PONTIAC, Mich., Sept. 26.—S. V. Norton will resign October 1 from the position of service manager of the General Motors Truck Company at Pontiac, Mich., which he has held since 1920. For fifteen years prior to his connection with the Truck Division of General Motors, Mr. Norton was with the B. F. Goodrich Rubber Company, Akron, as manager of truck tire sales, and in other executive capacities. His future plans have not been announced.

All Automotive Lines Show Gains in Texas Territory

Accessory, Parts and Equipment Business Declared Best of Year

DALLAS, Texas, Oct. 1.—All automotive lines were looking up in Texas and parts of Oklahoma, Louisiana, New Mexico and Arizona in September.

Automobile distributors and dealers said sales were above the August mark for new cars while the business in used cars was increasing. Practically all dealers are carrying light stocks and in some instances it was difficult to obtain certain models. Medium priced cars were selling briskly. The lower prices machines were moving in large numbers. Distributors were hustling to keep dealers supplied with these makes.

The accessory, parts and equipment business was the best for the year. The accessory jobbers have had trouble in supplying demands for lighting equipment, lens and reflectors due to operation of new headlight law. Distributors are behind with deliveries and retailers are pushing them for stocks. All automobiles in Texas probably will not be equipped to meet requirements of the law before November 15. The business in these lines was the heaviest in the history of concerns handling them.

Accessory jobbers are putting on new salesmen and automobile concerns are taking on new men to solicit business. Advertising in all lines is persistent and sales campaigns are being pushed energetically.

The tire trade was normal. High prices and necessity for many sizes caused many retailers to carry limited stocks. Taken as a whole, however, the trade was said to be normal with the outlook some better.

SIX WHEEL CO. TO EXPAND

PHILADELPHIA, Sept. 26.—The Six Wheel Co. is preparing to extend its truck building operations, hitherto on a limited scale. The former manufacturing plant of S. S. Emerson, recently acquired by the company, will be available for the truck building, and a new plant will be erected on a five acre site. The Six Wheel Co. is a subsidiary of the American Motor Body Corp., of which Charles M. Schwab is chairman. The corporation has sold its Detroit body plant to the Chrysler Corp., as was announced previously.

TEXAS TITLES GAIN

AUSTIN, Tex., Sept. 26.—Motor vehicle registration in Texas continues to increase at a rate which shows that the automobile and motor truck trade is in a most flourishing condition, notwithstanding the drouth that has caused a crop failure in a big scope of the central and southern parts of the state. From January 1 to September 15 a total of 818,787 motor vehicles were registered. This was about 19,000 more than for the whole of last year. It is expected that the total registration for 1925 will reach 1,000,000 as there is usually a heavy buying of automobiles and motor trucks during October, November and December. The number of automobiles registered up to September 15 was 549,400, motor buses 3,056, tractors 238, motorcycles 2,480, commercial vehicles 78,254, transfers 183,359.

GERMANS HAVE NEW CAR

WASHINGTON, Sept. 26.—The Automotive Division of the Department of Commerce learns by cable that the German firm of Schmidt and Benzdorf G. m. b. H., of Mannheim Baden, Germany, has introduced into the German market a small car named "Mops." This machine is of a three-wheel design and is equipped with a two cylinder four stroke valve in head motor with three speeds forward and one reverse. At this time the car is only produced in one model, a single seater, two-passenger car and is priced at 2400 marks including electric starter, storage battery, top, electric lights, clock, speedometer, windshield, tools and an extra wheel with tire. In view of the low price for this machine it is believed that a good demand will be created.

Sparks-Withington Adds 50 Cents to Extra Dividend

CLEVELAND, Sept. 26.—An indication of the prosperity enjoyed by the automobile accessory industry in this city is given in the eight months' report of the Sparks-Withington Co., manufacturers of Spartan horns and other auto accessories. Directors have increased the extra dividend from 50 cents to $1 a share.

This will make $5.25 that the company has paid this year; $1 in January; $1.25 each in April and July and $1.75 to be paid October 1 to stockholders of record on September 22.

Earnings for the eight months of the present year that ended August 31 before taxes and dividend, amounted to $435,988 as compared to $195,111 in the corresponding period last year. These earnings show that about $11.40 a share has been earned in the eight months period after allowing for preferred dividends.

The current assets of the company amount to $1,087,279 while the current liabilities are but $53,000. The book value of the stock is $42.50 a share.

FORD RUSHES OUTPUT

DETROIT, Sept. 26.—All efforts at the Ford plants at Highland Park, Ill., Dearborn and River Rouge are being centered in turning out the improved models recently announced by the company. Getting the different models to future owners is the one thing uppermost in the minds of the workers and officials alike. Deliveries are now being made to those who placed their orders with various dealers in the Detroit area and while the number of unfilled orders is the largest in the history of the industry, those at the factory expect no trouble in making deliveries once the assembly line gets at top capacity.

Toledo Plants Continue to Increase Car Production

Employment Shows Gain of 1,014 in Week Bringing Total Above Last Year

TOLEDO, Sept. 26.—Automotive plants in Toledo continue to show an upturn in business with a gain of 1,014 employes in the last week for a total of 25,547 now at work in 51 plants which report in a weekly census on employment conditions.

This is compared with 16,286 at the same time last year.

The entire year of 1925 promises to be the most evenly balanced in the automobile industry ever experienced in Toledo. Practically all plants have kept going at the same pace throughout the year with only slight trends away from the normal. September will be a big month in automotive production and October may surpass the present month. Willys-Overland has set a schedule of 26,000 cars for October. President John N. Willys says the company can sell all the cars it can turn out in the next 60 days and plans to run at top speed.

Electric power consumption is at a new high peak in Toledo and volume of general business has registered a gain of about 15 per cent over what it was a year ago.

Boston Dealers Report Big Sales Increase in Month

BOSTON, Oct. 1.—Motor car sales in Boston and the outlying sections have taken on a new lease of life with the passing of the vacation season and the salesmen are on the jump with a new impetus now. Distributors say that while the first few days of the month were inactive there has been a noticeable quickening in the last 10 days. Being able to get deliveries now has been a helpful factor after all the announcements the past few weeks.

This seems to be due to the general improvement in trade conditions. The building trade strikes have been settled. There is a better tone to various textile work. The shoe trade shows improvement. The state bank commissioner shows in his report that there are many more millions in the bank than formerly.

Dealers in used cars and accessories say business is fair with indications showing a tendency to go up.

FIAT OUTPUT GAINS

WASHINGTON, Sept. 26.—The Automotive Division of the Commerce Department is informed by consular dispatches from Italy that the Fiat is busier than ever and is declared to be turning out 150 cars daily as compared with an output of 120 reported the latter part of June by the consul in Turin. According to a Turin business weekly, "L'Informasions Industrials," the rate of production in 1926 is expected to reach 500 cars daily, when work on the new light model 509 really gets under way.

New Car Business Healthy In Salt Lake City District

Used Automobile Stocks Are Slightly Above Normal—Deliveries Hinder Some

SALT LAKE CITY, Oct. 1.—There is every reason for optimism here regarding the automobile business in the next few months. Crops are well above normal with ready markets for everything at excellent prices. Added to this is the satisfactory condition of the manufacturing and mining industries of the state while the tourist business, now drawing to a close, has been better than ever before.

Automobile men, with scarcely an exception, describe business right now as being in a healthy condition. The new models and lower prices have stimulated much interest. Used cars are giving a few dealers cause for concern. There are more used cars in the city at this time than there should be. Used cars of the open class unless in good condition are becoming somewhat of a drug on the market owing to the growing popularity of the closed models.

Few dealers seem to be overstocked with new cars, while not a few are finding it difficult to get all they can sell; this being especiaaly true of those having new models or lower prices to offer. An officer of one big firm said today that they were refusing to accept any trade except for good clean merchandise which they could offer at a fair price to the used car buying public, and this policy was keeping their used car stocks down to the lowest possible point. Some firms discontinued trade-ins entirely a short time ago because of large used car stocks on hand.

OAKLAND SPEEDS OUTPUT

PONTIAC, Mich., Sept. 26.—Retail sales of Oakland cars for August were the highest for any month so far this year and 34 per cent greater than the best previous August in the company's history. Production at the Oakland factory is being stepped up to meet the increased demand and during the remaining months of this year will be at peak.

FIFTEEN DRIVERS SIGN

CHARLOTTE, N. C., Sept. 26.—Fifteen automobile race drivers have signed contracts to participate in the November 11, Armistice Day, 250-mile race on the one and one-fourth mile speedway here for a purse of $10,000, according to a telegram to Osmond Barringer, manager of the speedway, from Fred Wagner, official starter, at Altoona, Pa. These drivers are Jerry Wonderlich, Jim Hill, Leon Duray, "Doc" Shattuc, Bennett Hill, Frank Elliott, Harry Hartz, Phil Shafer, Fred Comer, Bob McDonogh, Earl Cooper, Batten, Hepburn, Devore and Spooner. Wagner's telegram said "I shall obtain contracts from Milton, DePaolo and Kreis upon their return from Italy."

Baby Carriages May Carry Lights

MILWAUKEE, Sept. 26.—Baby carriage "drivers" as prospects for automotive equipment loom up on the horizon following discovery by Milwaukee attorneys that literal interpretation of city ordinances would necessitate headlights and tail lights on baby carriages. The ordinance which opens up the new "market" says among other things:

"No vehicle shall be used on the streets of Milwaukee between the hours of sunset and sunrise unless on such vehicle, there shall be a lighted lamp, lantern or other means of lighting, said lights to be visible at a distance of 200 feet."

Discovery of the potential market came when a motorist nearly ran down a woman pushing a baby carriage in a Milwaukee park. During the altercation which followed the woman advised him to choose his route more carefully while he in turn suggested hanging some lights on the perambulator. Speculating on the necessity for this latter maneuver he consulted his attorney, resulting in discovery of the ordinance quoted.

NEW FLINT BRANCH

CINCINNATI, Sept. 26. — A factory branch has been opened by the Flint Motor Company at 1042 Gilbert avenue and the Flint company will handle its own cars in the Cincinnati territory hereafter. The branch is to be in charge of J. M. Finlayson, as manager with W. E. Kuhn in charge of retail sales and B. J. Thill in charge of service. The Flint distribution here was formerly in the hands of the Herschede Motor Company which recently took over the Peerless agency in this territory.

NEW PEERLESS DEALERS

CLEVELAND, Sept. 26.—New dealers appointed by the Peerless Motor Car Co., include:

Charles H. Fisher, Amsterdam, N. Y., Beverley Hills Peerless Sales, Chicago, West Side Peerless Sales, Chicago, General Sales and Service Company, Chicago Heights, Ill., Automotive Sales Corporation of Connecticut, Hartford, Morton Lown, Kingston, N. Y., H. H. Cassabaum, LaSalle, Ill., and Al Ahart Auto Sales, Waukegan, Ill.

NEW MOON DEALERS

KANSAS CITY, Sept. 26.—Carl L. Zellor, recently appointed zone manager of the Moon Motor Company, with headquarters at Kansas City, has appointed the following new dealers in his territory:

George W. Sweircinsky, Belleville, Kas.; Corder Service Station, Corder, Mo.; James Crook, Chanute, Kas.; M. H. Broschinski, Goodland, Kas.; Hughes Motor Co., Joplin, Mo.; Leonard Motor Co., Leavenworth, Kas.; St. Joseph Track & Tractor Co., St. Joseph, Mo.; C. S. Rarick, Lawrence, Kas.; Hodgins & Geis, Wichita, Kas.; Southwest Motor Co., Springfield, Mo.

Survey Shows Automobile Driving Cost 5.85 Cents Mile

Street Car and Bus Patrons Pay Slightly Less—Taxis Much Higher

WASHINGTON, Sept. 26.—The cost of driving a private automobile, assuming an average load of 1.9 passengers per vehicle is estimated here as 5.85 cents per passenger mile. It is further shown that regular street car riders pay the street car companies 2.44 cents for every mile they travel; regular bus patrons pay 3.66 cents per passenger mile; while the Washington taxi rate averages 23.9 cents per passenger mile.

These averages represent the day in and day out experience of approximately one-half of the working population of Washington, says Maj. William E. R. Covell, assistant engineer, commissioner of the Public Utilities Commission, under whose supervision the traffic and transportation survey has been made in the national capital by McClellan and Junkersfeld, Inc., New York, at the expense of the North American Company.

The extent to which Washington automobile owners use the streets as all-night garages was brought out during the survey by a careful count made by the police department. On the night of the checkup, no less than 18,000 of the city's 85,000 registered cars were found to have no other roofs than the stars. Police estimate that on ordinary fair nights during the summer months between 25,000 and 30,000 motor vehicles are parked on the pavements.

G. M. LTD. DEALERS MEET

TORONTO, Sept. 26.—At the banquet convention of 350 dealers and distributors of Ontario and eastern Canada of General Motors of Canada Ltd., R. S. McLaughlin, president, stated that General Motors of Canada, Ltd., would shatter its production record this year by building 50,000 motor cars. C. F. Kettering, president of the General Motors Research Corporation, and acknowledged authority on the scientific side of the automobile industry, gave an address. Jack Beaton, general sales manager, presided.

GETS CONTINENTAL PARTS

TORONTO, Sept. 26.—Continental motor parts for all Continental built motors have been made available to service men this month through an arrangement effected by the Hall Gear and Machine Co. Ltd., Toronto. In addition to other standard parts the Toronto Company has secured exclusive distribution of Continental built parts for servicing all makes of Continental motors in the territory east of Winnipeg, Man. At the same time exclusive distribution in the eastern half of Canada, including the Maritime Provinces has been secured for the Timken-Detroit axles, Morse Silent chains, Borg and Beck clutches and Spicer joints.

September Better Than Last Year in Northern California

Dealer Stocks Low and Delivery Presents Problem in Some Makes

SAN FRANCISCO, Oct. 1.—Sales in central and northern California and Nevada for the first week in September showed a slight drop from those of August, but picked up thereafter and the remaining three weeks of the month showed an increase of approximately 22 per cent over those of September, 1924. Early rains, receipts and distributions of considerable sums tof money for the fruit crops, and the growing conviction in the mind of the public that there will be no more price-reductions prior to the New Year, lowered the sales resistance materially in this territory, all of which is tributary to San Francisco.

Dealer stocks are low, and there has been some delay in getting cars in some of the lower-priced models. This has led to a movement among the dealers for the establishment of co-operative warehouses, in which several dealers, merchandising cars of about the same price, could combine to reduce storage charges.

Equipment dealers have had a better month in September than any previous similar period since 1922, owing to the large number of old cars rebuilt and retained by their owners, during August and the earlier part of September, before the majority of the price cuts on new cars went into effect.

Used-car dealers are complaining that the recent price reductions have seriously cut into their business, and a number of the smaller dealers in second-hand cars only are closing out their stocks, or combining with the larger dealers.

Trucks are moving slowly in the smaller towns and in the agricultural districts, but are about holding their own in the cities.

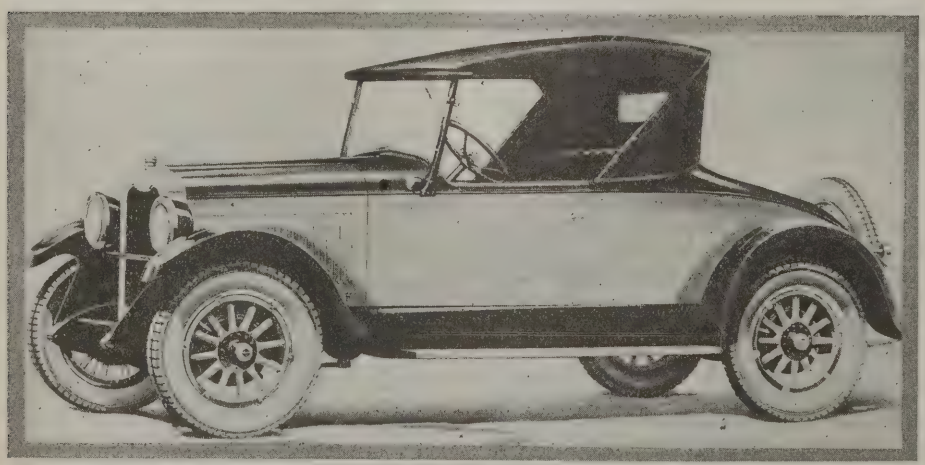
SMILEY MANAGES BRANCH

FORT DODGE, La., Sept. 26.—Bert Smiley, former electrical shop proprietor here, is moving to Los Angeles, where he will establish a branch of the American Gear Company, handlers of gear replacement parts for all models of cars. The company has 14 brances and Mr. Smiley is becoming financially interested in the concern as well as general manager of the Los Angeles branch.

Three New Buildings Will Be Added to Overland Plant

TOLEDO, Sept. 26.—Preparing for a big increase in production next spring the Willys Overland Company here is now going forward with its improvement plan which includes the building of a new forge shop, new heat treating plant, and warehouse now under construction. The program will involve between $2,000,000 and $3,000,000.

The forge shop will be 750 by 75 feet and will be erected at the rear of the Kinsey Manufacturing Department. The heat treating plant will be 570 by 75 feet. The power plant will be completely remodeled with new 500 horsepower boiler capacity and modern stoker equipment.



Plans for the structures are being prepared by the engineering department of the company and will be in the hands of contractors in a few days. Necessary pilings for some of the building footings are being put in by the plant construction department. There are nearly 12,000 men at work in the plant and additions are expected to be made to keep production at a high level during the rest of the month.

NEW GARDNER DEALERS

ST. LOUIS, Sept. 19.—Gardner Motor Co., Inc., has added the following dealers to its organization:

C-S Motor Sales Co., Buffalo, N. Y., H. W. Nicholson, East Whittier, Cal., L. D. Powell, Racine, Wis., W. J. Dunker Co., Ludell, Kas.

New Oakland Roadster

New two-passenger roadster which has been added to Oakland six series, listing at $975

Conservative Trading Marks Des Moines Used Car Sales

Accessories, Replacements and Radio Sell Better in September Than Any Month

DES MOINES, Oct. 1.—New car business has been slower during the last two weeks of September. It is doubtful if the car registrations for September will equal the new car sales for the corresponding month of last year. Three conditions are held responsible for the poor showing of the last thirty days. The usual seasonal decline in business has affected sales as has the approach of the fourth quarter for registrations.

It is pointed out that many prospective buyers are waiting to take advantage of the decreased registration fee which is effective October 1. The third reason given for the fewer sales during September is that Ford dealers have been able to make but few deliveries.

Used cars are moving more slowly. Dealer stocks are low and conservative trading prevails. Dealers are determined to enter the winter season with a minimum of used cars on hand.

General line jobbers are reporting excellent business in all lines. For the jobber of accessories, equipment supplies and radio, September was the best month of the year. Due to a lack of anticipation on the part of dealers, jobbers are having difficulty in filling orders in some lines. This is especially true on radio and the shortage will undoubtedly become more acute before the winter is over. Radio business promises to be better than ever before. The business is already 30 days ahead of last year.

NASH DEALERS EXHIBIT

ST. LOUIS, Sept. 19.—St. Louis County Nash dealers took advantage of the County Fair held recently at Upper Creve Coeur Lake to show the products of the Nash Company. Their exhibit included the Ajax and eight models of the Nash. An Ajax chassis stripped of its body expressly for the exhibit and an Ajax motor, stripped for examination were on view. The dealers taking part in the exhibit were: Briggs-Nash Service Co., Affton, Mo.; Hensiek-Nash, University City; Heintz-Nash, 8100 Ivory Ave., Cardonelet; Nartman's Nash Service, Carondelet; St. Louis-Clayton Auto Co., Clayton, Mo.; Eicher & Son. Nash Co., Wellston, Mo.; Lamb Motor Co., Vanita Park.

MARYLAND TITLES UP

BALTIMORE, Sept. 19.—Maryland's automobile registrations will exceed 240,000 by the end of this year, according to estimates made by the license bureau here. So far 224,970 licenses have been issued as compared with 195,429 during the same period last year. The cars in use at the end of the year, it is estimated will represent one for approximately every six of the 1,449,000 inhabitants in the State. The total of registrations will be almost double what it was in 1920.

Leading Rubber Firms Plan To Ban Spring Date Policy

Companies to Ship Only Such Quantities as Can Be Readily Absorbed

AKRON, O., Sept. 26.—A canvass of the leading rubber factories in this district indicate that practically all of them are preparing to abandon the spring dating policy, which in the past has been used to bolster up automobile tire production during the winter months and late fall. If any companies do so they say it will be on a very limited scale.

In previous years manufacturers began soliciting their dealers for orders as early as October. Shipments were actually made in November, December, January and February, but the orders were dated forward into the spring months, which meant that the dealer did not have to pay for his tires until April, May or June, when the theory was that part of the stock, at least, would have been sold.

Abandonment of spring dating is designed primarily to conserve the limited stocks of crude rubber, the intention being to regulate the demand so that raw materials would be used only in manufacturing tires which would go directly into the hands of consumers. In other words it would prevent an artificial demand being created, and it is believed the slowing up in production will allow depleted stocks of rubber to be replenished to some extent.

Over-production, which has been one of the great evils of the tire industry, will not be so apt to occur because of the elimination of spring dating.

Dining Car Buses Latest Innovation on West Coast

SAN FRANCISCO, Sept. 26.—Operation of through dining-observation-car motor coaches between San Francisco and Los Angeles will be inaugurated September 15 by Pickwick Stages, Inc., according to official announcement by this corporation, which adds that these are the first dining-car automobile stages ever operated in the world.

The two cars so far built are on exhibition in San Francisco, and four others are being constructed in the Pickwick shops here. One stage will leave San Francisco at 7 a. m., every day, and one from Los Angeles at the same hour, arriving at their terminals, 468 miles distant, at 9 p. m., of the same day. The fares, both one way and round trip, are approximately the same as railroad fares between the two cities, exclusive of the Pullman and observation car fees on the rail lines.

The new coach is divided into three sections—observation, smoker and buffet kitchen. There are twelve moveable reclining seats in the observation compartment, and eight in the smoker, giving the stage a capacity of 20 passengers. A button in the side of the coach at each chair, furnishes means of calling the steward and luncheon and dinner is served on small removable wall tables, which can be set up beside each chair.

The Pickwick company announces that it plans to put a number of these coaches in operation between the larger cities of the Pacific coast, until, by this time next year, one may travel in them from Vancouver, B. C., to Tia Juana, Mexico.

County Has Fewer Clocks Than Cars

Macomb, Ill., Sept. 26.—McDonough county possesses more cars than watches, according to summaries of the assessors' books published here. The assessors listed 4,143 cars and 3,881 watches and clocks. There were 3,064 carriages and wagons in the county.

Champion Builds Two New Closed Bodies for Fords

ST. LOUIS, Mo., Sept. 26.—Champion Body Co., 3147 Locust boulevard, has introduced two new bodies for Ford cars, the Champion sport sedan and the Champion coupe.

The bodies are of hardwood and steel, finished in baked enamel with quarter panels and roof of soft construction to avoid closed car rumble. Doors are 28½ inches wide with up-to-date hardware and fittings, windows are raised and lowered with mechanical lifts and the windshields are of the one-piece type. Ventilators in cowls, sun visors, full crown fenders and mahogany instrument boards are features.

The sedan has a combination gas tank and trunk at the rear while the coupe has a gas tank and a roomy luggage compartment at the hear. The body has been lowered ten inches without sacrificing headroom, adding to the appearance and avoiding any suggestion of top heaviness. The sedan body sells for $360 and the coupe for $295.

NEW AUBURN DEALERS

AUBURN, Ind., Sept. 26.—New dealers who have recently been added to the Auburn organization include:

Bland's Auto Exchange, Springfield, Mass.; Wilshire Motors, Los Angeles; General Auto Shop, Appleton, Wis.; Calvin R. Smith, Marion, Ind.; Badger Garage, Wausau, Wis.; Auburn Sales Co. of New Jersey, Union City, N. J.; F. P. Rocco & Co., San Pedro, Cal.; Superior Motor Sales Co., Cleveland, O.; Eben Lesh & Carl W. Vicker, Huntington, Ind.; Norfolk County Motor Corp., Sharon, Mass.; Craddock Motor & Supply Co., Medford, Mass.; J. E. Dare, Harrisburg, Pa.; Foust Brothers, Hughesville, Pa.; Bazak Motor Co., Chicago, Ill.

CINCINNATI CO. ELECTS

CINCINNATI, Sept. 26.—At a reorganization meeting of the board of directors of the Cincinnati Electrical Tool Co., the following officers were elected: Joseph Wolf, president and treasurer; R. K. LeBlond, vice president; Edward G. Schultz, secretary.

Financial Details of Yellow Cab-G. M. Merger Completed

Directors of New Truck & Coach Mfg. Co. Announce Plans Following Board Meeting

DETROIT, Mich., Sept. 26.—Financial operations incident to the recent merger of the Yellow Cab Manufacturing Company and the truck division of the General Motors Corporation are announced by directors of the Yellow Truck and Coach Mfg. Company, the new holding corporation. The merger was announced July 7.

A stock dividend of $15,000,000 in 150,000 shares of 7 per cent preferred will be distributed among holders of the 600,000 shares of class B stock, of record October 2, at the rate of one share of preferred for every four shares of B.

A new issue of 800,000 shares of $10 par common was authorized for delivery to the General Motors Corporation, in payment for the assets transferred to the new company.

The present preferred stock, consisting of 6,750 shares of $100 par value, owned by the Chicago Yellow Cab Company, will be retired at a price not stated.

The July 31 balance sheet of the Yellow Truck and Coach Mfg. Co., giving effect to the financing announced today, with the exception of new preferred issue, shows assets of $36,662,989.71, with a surplus of more than $16,000,000.

CANADA G. M. HEADS MEET

OSHAWA, Ont., Sept. 26.—Following the resumption of the McKenna duties, which means a great deal to the export business of General Motors of Canada, Ltd., came the visit of E. R. Reilley, managing director General Motors Ltd., London, England, and J. S. Castle, his assistant. These men visited Oshawa for the purpose of conferring with the executives of General Motors of Canada, upon export problems.

RAINBO PATENT BOUGHT

CHICAGO, Sept. 26.—D. W. Blanc, owner of the Sterling Auto Devices Company, 2016 West Lake street, has acquired through purchase from Nels B. Lundahl, Chicago, the patent on the Rainbo Dash Lamp Cap, which is now being marketed by the Sterling Auto Devices Company in connection with the Rainbo Accessories Company

NEW REPUBLIC DEALERS

ALMA, Mich., Sept. 26.—According to an announcement by the Republic Truck Sales Corporation, new dealers have been appointed during the past few weeks as follows:

Dakota Auto Sales Co., Bismarck, N. D.; Buffalo Republic Truck Sales Co., Buffalo, N. Y.; Des Moines Republic Truck Co., Des Moines, Ia.; Service Motor Sales Co., Mandan, N. D.; T. L. Parker, Salt Lake City; Lind Automobile Co., Twin Falls, Ida.; Paige-Jewett Co., Houston, Tex.; T. L. Bowers, Toledo; Republic Sales Co., Wilkes Barre, Pa.

Along Automobile Row

DENVER.—The newly organized Locomobile Agency of Colorado has opened for business. Leo Cullen, the president, is a brother of the senior partner of Cullen-Thompson Motor Co., distributors of Chryslers.

MEMPHIS.—Burt-Overland Motor Co. has leased a place near its former home for the growing Memphis business. This will double the company's space by adding 13,000 square feet.

GALESBURG, Ill.—The P & M Motor Company, for the last 17 years dealer and distributor of Willys-Overland motor cars, has changed to Hudson-Essex.

MOLINE.—Ground has been broken and the foundation is well in for a new combination automobile show room and garage building under course of erection on Moline's main thoroughfare, Fifth Avenue. When completed the building will be occupied by the Service Motor Company of which Julius Gottlieb of Rock Island is president. This company has agencies for the Star, Durant and Flint cars.

DENVER.—Tom Savage, Inc., who has had the Gardner agency in this city for a number of years has added the retail Oldsmobile agency to his business.

DES MOIN5S.—E. G. Matthews, for many years prominent in automotive fields in this section of the state, has been named Urbandale dealer for the Ford. This brings the Des Moines Ford agencies back to their original number, three. The Herring Motor controls the downtown sales district and the Jensen Motor the Highland Park agency.

MINNEAPOLIS.—The J. N. Johnson Co., Inc., a pioneer tire sales organization, has leased a building at 1110 Harmon Place for its sales and repair work. The new place gives much more room for display and service.

BOSTON.—The Connell & McKone Company, New England distributors of the Gardner car, has announced that it has appointed Frank P. Anthony Company, 7 Brighton Avenue, for several years MacFarland distributor, its retail distributor for the Gardner line in Boston and vicinity.

DENVER.—Lewis B. Skinner, who has had the Jordan agency here, has resigned from the Denver Auto Dealers' Association and has retired from the automobile business. He will make his home in Tampa, Fla.

SPRINGFIELD, Mo.—Dillon Brothers Garage Company has taken over the Packard automobile agency for this district. Cars will not be displayed on the floor until Dillon Brothers move to their new building on January 1. The M. & W. Motor Company formerly had the Packard agency.

BOSTON.—The Boston Oldsmobile Company has appointed Alfred Reid, the former race driver, and formerly with the Leghorn Motors Company, that handled Gardner until recently, as used car manager.

DENVER.—The Denver Motors Company has taken the downtown agency for the Star and Durant line.

CLEVELAND, O.—C. W. Fields, formerly manager of the Flint branches at Pittsburgh, St. Louis and Flint, has been made manager of the Lakewood Walter F. Wright Co. branch here. He will sell Chrysler cars.

SAN ANTONIO.—Tex.—The Auto Radiator and Body Works at 610 West Travis Street is one of the latest automotive concerns in San Antonio. George E. Norris and Ed Hudspeth compose the new company.

WILMINGTON, Del.—A new building is to be erected at the northwest corner of Eleventh and Washington Streets for the Studebaker Sales Company, of which H. H. Harper is president. This will give the company much more room than it has in its present location.

MOOSE JAW, Sask.—The Superior Motor Co., Ltd., Durant and Star dealer of this city, is removing to larger quarters where it will have greater facilities for handling increased business.

AKRON.—The Mankin-Ferris Automobile Co., distributor and dealer for Studebaker cars in the Akron territory, has broken ground for a $150,000 garage and show room at Market and West Streets. The building will be 76x130 feet and three stories high.

CHICAGO.—The Irving Park Flint Company, 4140 Irving Park Boulevard, announces a change in its corporate name to the Fine-Thomas Motor Sales. It will handle the Reo instead of the Flint hereafter.

DES MOINES, Ia.—The Gibson Motor Car Company has been incorporated by William Gibson, president; T. R. Storey, vice-president, and Fred C. Hurst, secretary-treasurer, to handle the Cleveland Six in this territory.

MILWAUKEE.—Verbanataz-Boll, Inc., a new dealer firm, has been appointed Chrysler community dealer in Milwaukee and has established headquarters at 1914 North Avenue.

EAST MOLINE, Ill.—B. M. McKinzie has opened a Hudson and Essex agency in the Square Deal garage and made arrangements to provide service department for his patrons. Mr. McKinzie was with the Warren Sales and Service the last year and for three years prior to that with Horst & Strieter.

SALT LAKE CITY.—W. R. Cram, formerly a salesman for the Intermountain Motor Car Co., Salt Lake City, Utah, has organized the Cram Motor Car Co., headquarters of which will be in the Sugar House section of Salt Lake City. He will handle Star and Durant cars as an associate dealer.

CHICAGO.—The C. Hollenbeck Motor Sales Co., 6244 South Western Avenue, has been appointed dealer for Reo cars. Charles C. and William J. Hollenbeck are associated in the firm.

CALGARY, Alta.—Snell Motors, Ltd., has been appointed authorized dealer in Calgary for Oakland cars.

DETROIT.—Art T. Robins has been made manager of the East Side Overland Company, Lansing, which has just opened a sales and service branch at the corner of Michigan and Larch Streets. Mr. Robins is a veteran of the Lansing Automobile Road.

ST. LOUIS.—A used car salesroom will be opened by the factory branch of Willys-Overland, Inc., at 2926-28 Locust Boulevard in the building formerly occupied by J. M. Lederer & Co., Willys-Knight and Overland dealers.

WILMINGTON, Del.—Carl Nagle, a pioneer automobile man here, has become sales manager for the Delaware Nash Motor Co., Inc.

MILWAUKEE.—E. A. Drott, E. H. Groth, and Joseph H. Kerber who recently purchased the King Motor Supply Co., of Milwaukee, have changed its name to the Replacement Parts Corporation and have entirely reorganized the company. Headquarters have been moved from 131 Oneida street to Sixteenth and Wells streets. Changes in stock have been made and the company now specializes in crankshaft bearings, piston rings, pistons, bushings, valves, gaskets and similar parts.

CHICAGO.—H. Paulman & Co., for twenty-three years distributors of Packard automobiles in Chicago, after October 1 will be engaged in the real estate business, selling Chicago and Florida lands. Henry Paulman and Joseph V. Lawrence are the members of the firm. Offices will be maintained at 332 South Michigan Avenue.

VANCOUVER, B. C.—Motor Drome, (L. McLeod) proprietor, has opened a new garage at 1378 Broadway West. This firm handles Hudson and Essex cars.

DETROIT.—Reo Motor Car Co. branc building on East Michigan avenue, Lans ing, has been remodeled which will giv it more display space and greater accom modation for looking after the needs o Reo owners.

BUFFALO, N. Y.—Charles S. Dussing Ford salesman for the last 10 years, for merly with the Allen Street Garage, an Edmund Riselay, Ford dealer, is now man ager of Buffalo's Used Ford Car Market 854 Genesee street.

VANCOUVER, B. C.—Willis-Kingsle Motors, Ltd., Studebaker dealer, is nov occupying a new modern garage which i one of the most up-to-date in Weste Canada.

GENOA, Ill.—E. W. Lindgren, who ha been Ford agent here for some time, ha given up his contract, but will continue t handle Ford parts and accessories. H has taken on the Hudson-Essex cars.

With the Associations

Durham, N. C., Has Association

DURHAM, N. C., Sept. 26.—With every local agency except one represented, Durham automotive dealers organized the Durham Automotive Trade Association. Officers were elected to serve until January 1 and it was decided to hold bi-weekly sessions with the next meeting scheduled October 2 at 1 o'clock at Forest Hills club.

S. P. Alexander, of the Alexander Motor Company, was named president, and A. M. Worth of the Worth Motor Company, was selected as secretary-treasurer. Committees will be announced at the next meeting by President Alexander and a more permanent organization effected.

From the outset it was agreed that too many rules and regulations have proved fatal to automotive associations in Durham in the past and the present organization was effected with idea of being a vehicle for bringing competitive interests together every week or so for a frank, open discussion of problems peculiar to the automotive industry.

A resolution adopted at the summer convention of the North Carolina Automotive Trade Association at Wilmington recently protesting against excise tax on automobiles was unanimously approved.

Harry Clendenin, president of the North Carolina Automotive Trade Association, and C. W. Roberts, secretary-treasurer of the state organization, both of Greensboro, addressed the meeting and aided in perfecting organization of the local association.

Detroit Season Opens

DETROIT, Sept. 26.—With the coming of fall, the Detroit Auto Dealers' Association has resumed its monthly meetings. The first of the fall meetings was held at the Book-Cadillac hotel in Detroit. Walter J. Judd, president of the association, presided with Douglas Malloch, noted humorist, as the principal speaker of the evening.

Concentration Protested

GREENSBORO, N. C., Sept. 26.—The North Carolina Automotive Trade Association has formally requested automotive financing companies to cease assembling cars at central locations, even bringing them from other states, after possessing them to satisfy claims, according to C. W. Roberts, secretary of the association, whose office is located here. It was explained that this concentration and later sale tends to demoralize the used car markets of such concentration points. The association suggested that the finance companies resell the cars at the towns where the dealer made the sale.

Jaywalking Is Attacked

CHARLOTTE, N. C., Sept. 26.—Jaywalking, a national evil, the direct cause of unnumbered hundreds of fatal traffic accidents, is epidemic throughout the United States because pedestrians "just didn't think," according to C. W. Roberts, of Greensboro, N. C., secretary of the Carolinas Automotive Trade Association and secretary of the Carolina Motor Club, the largest organization of motor car owners in the South. Mr. Roberts is conducting a "safety first" campaign, which is under the active direction of C. T. Matthews, whose staff is proving the claim of the Motor Club's executives that the jaywalking menace can be removed to a large extent by nothing more drastic than merely influencing the public to "think."

Denver Branch Organized

DENVER, Sept. 26.—Members of the Denver Automobile Dealers' Association have just completed the organization of the Denver Used Car Managers' Association, as an auxiliary of the main body. Tom Braden, secretary of the dealers' association, is temporary secretary of the new organization, which will elect permanent officers at its first monthly meeting.

It is planned to hold these meetings at the various places of business of the members at regular intervals, and to have particular members responsible for each program, as well as to have informal discussion of trade problems. Letters have been sent to member firms, giving the name and phone number of one member from each firm, who will be available to answer calls and give reliable and definite information on values in used cars of the makes handled by his firm.

In this way it is hoped that a greater feeling of confidence will be developed in used car information acquired from each other, and the used car market in Denver thus be put on a more satisfactory basis than has been the case in the past, where such information was secured in a haphazard manner, and often from salesmen who had no particular interest in taking pains to make accurate replies to inquiries from other firms.

Minneapolis Show Dates

MINNEAPOLIS, Sept. 26.—The Minneapolis Automobile Trade Association has selected February 6-13, 1926, as the dates for the annual automobile show, which will be in the Overland building across the city limits of St. Paul. Harry E. Wilcox is manager.

Milwaukee Automotive Merchants Picnic

Here is one group at the annual picnic of the Milwaukee Automotive Merchants. Happy? Of course

MILWAUKEE, Sept 26.—Every branch of the automotive industry in Milwaukee, including automobile dealers, accessory manufacturers, jobbers wholesalers and service station executives was represented at the Milwaukee Automobile Dealers' Association annual picnic, at Lakeside Hotel on Pewaukee Lake, near Milwaukee. One of the days features was a baseball game between passenger car and truck dealers; another was a golf tournament and another a big booster dinner and community sing which closed the picnic. W. B. Achen, president of the dealers' association was in charge.

Hudson-Essex Passes High Output Mark of 200,000

Production Increases From 60,000 in 1922, 88,000 in 1923 and 128,000 in 1924

DETROIT, Mich., Sept. 26.—More than 200,000 Hudson and Essex cars have been manufactured to date this year, according to figures released this week by the Hudson Motor Car Co.

This total of six cylinder cars—the largest number of sixes ever produced in a similar length of time in the history of the industry—is growing at the rate of 1200 cars a day. With the autumn season still ahead, it seems assured that this year will be recorded as one of the most sensational successes ever scored by any concern.

The growth of Hudson-Essex in recent years may be judged from the fact that production was 60,000 cars in 1922; that it increased almost 50 per cent to 88,000 in 1923; and that it added 50 per cent to this enlarged total by scoring 128,000 in 1924.

Now, with 200,000 cars already manufactured and with business booming at an unprecedented rate, it seems that 1925 will double the business done in the 1924 season.

Ford May Enter Textile Industry in N. Carolina

CHARLOTTE, N. C., Sept. 26.—An impending invasion of the textile manufacturing industry of the South by Henry Ford was seen by leading figures here when reports gained wide circulation that the Detroit automobile magnate was engaged in negotiations for the purchase of the Loray mill, at Gastonia, near here, which is valued at from $6,000,000 to $7,000,000.

Confirmation of the report is lacking, and executives of the mill, one of the units of the Manville-Jenckes chain of mills, declined to discuss the report. These executives did not deny the negotiations are in progress however.

It was understood that Edsel Ford made a visit to the mill a fortnight ago, and offered $6,000,000 for it, after surveying the property. It was reported the Manville-Jenckes Corporation, of Pawtucket, R. I., set $7,000,000 as the value of the plant, which manufactures fabric used in the manufacture of automobile tires.

August Titles in Illinois Show 32 Per Cent Drop

CHICAGO, Sept. 26.—Registration of statistics covering new passenger cars in Illinois during August reveal that there was a decline of 32 per cent as compared with the previous month. Registrations normally are heavy in July due to the fact that many defer them until after July 1 in order to take advantage of the semi-annual license fee, a fact which probably accounts for the decrease.

Registration of Fords was 44 per cent under July, caused probably by buyers waiting to see what the new models would be. Low-priced cars (excluding Fords) declined 25 per cent from the July figures, while the losses in the medium and high-priced classes were 24 and 30 per cent respectively.

Following are the detailed figures for the first eight months of 1925:

Mo.	Fords	Low, excl. Fords	Med.	*High	Total
Jan.	4,060	2,275	5,748	808	12,891
Feb.	3,424	1,718	4,977	612	10,731
March	5,714	2,729	6,416	784	15,643
April	9,010	3,755	8,801	861	22,427
May	8,751	3,644	8,014	899	21,308
June	6,473	3,400	6,383	828	17,084
July	8,499	4,305	8,787	1,035	22,626
Aug.	4,686	3,218	6,646	720	15,270
Total	50,617	25,044	55,772	6,547	137,980

*Includes miscellaneous cars not named.

The foregoing figures were compiled from data furnished to MOTOR AGE by Robinson's Advertising Service, Springfield, Ill.

Coming Motor Events

Automobile Shows

Salt Lake City.....Oct. 1-7
Third annual Automobile Show and forty-seventh annual State Fair in Coliseum Building, Wm. D. Sutton, supervisor of Automobile Show.

Danbury, Conn.....Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston.....Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago.....Oct. 10-17
Seventh annual Used Automobile Show under auspices of Chicago Automobile Trade Association, at Coliseum.

Dallas, Tex.....Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

Boston.....Oct. 12-17
Annual radio show in Mechanics' Building. Shelton Fairbanks, manager.

Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exhibition Co., Chamber of Commerce Building.

Chicago.....Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Louisville, Ky.....Feb. 15-20
Louisville Automobile Show, Armory, under the auspices of the Louisville Automobile Dealers Association, J. Garland Lea, manager.

Races

Fresno, Cal.....Oct. 3
Rockingham (Salem, N. H.).....Oct. 17
Baltimore.....Oct. 24
Charlotte, N. C.....Nov. 11
Los Angeles, Cal.....Nov. 26

Conventions

Buenos Aires, Argentine.....Oct. 3-13
Pan-American Road Congress.

Des Moines, Ia.....Nov. 12-13
Automotive Merchants' Association Convention.

Montreal, Que.....Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Pittsburgh, Pa.....Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis.....Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Montreal.....Oct. 13-14
Convention of the National Association of Automobile Insurance Companies.

New York.....Jan. 11-13
Second World Motor Congress, under auspices of National Automobile Chamber of Commerce.

Foreign Shows

Berlin, Germany.....Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina.....Oct. 3-13
Pan-American Road Congress.

London, England.....Oct. 8-17
Olympia Passenger Car Show.

London, England.....Oct. 29-Nov. 7
Annual Truck Show.

New Chevrolet Dealers Are Named by New Orleans Firm

NEW ORLEANS, Sept. 26.—Felix Doran Jr., sales manager of the Chevrolet Motor Company, distributing headquarters for rthe Chevrolet line in Louisiana and Mississippi, announces the appointment of Brownlee-Wells Motors, Inc., of Shreveport, La., formerly Maxwell and Chrysler dealers, as the new Chevrolet dealers in Shreveport.

The sales force has been practically doubled, the capacity of the service station increased and many unfilled orders for cars booked, according to Roy C. Wells, director of sales. Other recently appointed Chevrolet dealers, according to Mr. Doran, include:

Doucet-Chevrolet Co., Ville-Platte, La.; Red Arrow Service, Inc., Bunkie, La.; Insley Motor Co., Delhi, La.; Marion Chevrolet Co., Marion, La.; Minden Chevrolet Co., Minden, La.; Wilkins Chevrolet Co., McComb, Miss., and Collins Motor Co., Collins, Miss.

American Cars Win Seven Of 15 Major Soviet Prizes

Trucks Made in U. S. Capture Four of Five Awards in Motor Trials

WASHINGTON, D. C., Sept. 26.—In the 3,000-mile international motor trials, which have just been concluded in the Soviet Union, covering a period of 30 days, American touring cars took seven of the 15 major prizes and American trucks took four of the five major prizes, according to a cable received by the Russian Information Bureau here from the committee of award in Moscow.

Nearly 100 motor cars and 50 trucks, including the principal makes of the United States, Germany, France, Italy and Austria, and some English cars, participated in the trials. The passenger cars covered a route of 3,000 miles, from Leningrad to the Black Sea and return to Moscow, and the trucks covered 1,200 miles. Heavy rains and washouts were encountered over part of the trip. Demonstrations were given in the principal towns on the route.

The passenger touring cars were sent off in three columns or groups, prizes being awarded for each column as follows:

First prize offered by the state, for best general performance: First column, Mercedes; second column, Buick; third column, Steyer.

Prize for solidity and endurance: First column, Studebaker, second grade Cadillac; second column, Buick second grade Pierce Arrow; third column Austro-Daimler, second grade Steyer.

Prize for economy of operation: First column, Fiat; second column, Buick; third column, Praha.

Speed prizes: First column, Mercedes, second column, Buick; third column, Austro-Daimler.

Trucks, state prize for general performance, Mercedes, economy of operation, G. M. C., passing ability, White. Endurance and solidity, Pierce Arrow. Passing ability, second grade, Dodge Brothers.

Brilli Peri Wins Big Italian Race

(*Continued from page 14*)

Rather early, one of them turning over without any damage to the driver. Eldridge, the English driver, came with a car which had never been run and did not endure for more than a dozen laps. Gilles Goux took the lead of the 91-inch group and held it for 450 miles, when he was forced out with broken valves. This gave Constantini, who had been held back at the beginning by spark plug trouble the necessary opportunity to get into the lead. The fastest lap among the 91-inch cars was made by Constantini at 93.91 miles an hour, and his average for the 500 miles was 86.479 miles an hour. The fastest lap among the 122-inch cars was 3 min. 37.49 sec., equal to 104.03 miles an hour, made by Brilli Peri. During practice both Milton and Kreis had turned laps in 3 min. and 31 sec. Final results:

1. **Brilli Peri, Alfa Romeo (122 inch) ..... 5:14:33.33 (Average, 94.76 miles an hour)**
2. **Campari, Alfa Romeo (122 inch) 5:35:30.19**
3. **Constantini, Bugatti (91½ inch) 5:44:40.91**
4. **Milton, Duesenberg (122 inch) 5:46:40.46**
5. **De Paolo, Alfa Romeo (122 inch) 5:48:10.27**
6. **Fernand de Vizcaya, Bugatti.. 5:59:49.39**
7. **Foresti, Bugatti 5:55:19.55**
8. **Pierre de Vizcaya, Bugatti.... 6:1:32.7**

SQUEEKS and RATTLES

Autoepitaphs

Tom Jones has gone to heavenly heights;
He tried to drive without his lights.
Jack Hayes this busy life forsakes;
He never would re-line his brakes.
Here's all that's left of Amos Bossing;
He tried to beat it to the crossing.
No more from Brown are earthly smiles;
He took the curve at forty miles.
Ted Small has gone to his abode;
He kept the middle of the road.
Here lies our friend, poor Tony Dix;
For booze and gasoline won't mix.
Jim Henry's friends are all bereft;
He made a short turn to the left.
Ben Gray is free from earthly pains;
A rainy day—he had no chains.
Poor Bill's beneath the sod, alas!
He speeded up and tried to pass.
Now Tom has joined the heavenly band;
He tried to drive it with one hand.

—Georgia Highways.

No Alternative

We are forced to lead a fast life, as those not in pursuit of happiness are fleeing from trouble.

—Ziff's.

The scenery is that green stuff you see between the billboards.

—The Road.

The Point of View

"Before you get one," writes S. H., "they are 'those confounded autos'; after you get one they are 'these darn fool pedestrians'."

—Boston Transcript.

The supreme penalty is called for when the car carries no headlights and the driver is all lit up.

—Syracuse Herald.

Our guess is that aviation will never be thoroughly successful until the aviators can park in the sky.

—Dallas News.

Reasonable

"Why have they got that man in chains?"

"They caught him slipping."

—Ziff's.

The Lingo

A boy left the farm and got a job in the city. He wrote a letter to his brother who elected to stick to the farm, telling of the joys of city life in which he said: "Thursday we autoed out to the Country Club, where we golfed until dark. Then me motored to the beach for the week-end."

Greater Reduction in Tire Replacements Is Expected

AKRON, O., Sept. 26.—A still further reduction in the average number of tire replacements per car is expected by tire and automotive engineers in 1926, as a result of improved methods of construction, which cut the average consumption of automobile tires per car almost in half from 1917 to 1924.

The average number of tires used as replacements on each car in 1917 was 4.52, while in 1924 this figure was reduced to only 2.74 tires. This record was made, despite the fact that the average automobile in 1924 was used more than the average car in 1917.

The production of automobile tires, however, has kept on the increase, although they last longer, because of the rapid increase of automobiles in this country.

KENNEDY GOES TO EUROPE

CLEVELAND, Sept. 26.—J. A. Kennedy, "champion tire-changer of the world," brother of James Kennedy, president of the Pacific Rim Tool Co., Cleveland, sailed today for contests at the Olympic Show in London, and will later visit Holland, Sweden and other points on the Continent.

CORRECTION

In last week's issue of MOTOR AGE was a news item stating that Louis Geyler, long known in the automotive industry in Chicago, had retired from the industry, having severed his connection with the Case and Chandler companies. This was in error in that Mr. Geyler has not at any time been connected with Chandler which is now and for many years has been distributed in Chicago by Thomas J. Hay. Mr. Geyler's latest connection with the industry was as Chicago distributor for Case and Gardner.

BACKED BY 35 YEARS OF "KNOW-HOW"

Confidence

13 Years Before the First Ford

Since 1890—35 years ago—Miller has been building *dependable* vehicles; adopting new ideas, but clinging always to the good old ideals—honest workmanship and sincere service.

Miller BUILT BELLEFONTAINE, OHIO

WHY is it that the man who buys one Miller Bus is soon operating two or three, or four? Why is it that Miller owners refuse to "shop around" but come straight to headquarters for "another bus just like that last one?"

You can sum up the situation in a single word —confidence! Why guess and gamble—why experiment—when you have a record of *proved performance,* that simply can't be beaten?

Here, then, is the biggest factor in the remarkable success that Miller is scoring. Confidence is the one element that can't be bought or bartered. It must be earned by ceaseless effort.

Write today for detailed specifications, and some mighty interesting facts and figures.

A Practical Trade Association Program

Member

AUTOMOTIVE TRADES ASSN OF GREATER KANSAS CITY

The Automotive Trades Association demands that members use every honorable means to uphold the dignity and honor of his vocation, to exalt its standards, to extend its spirit of usefulness and shall regard themselves as being engaged in a business in which there is a well defined duty towards the public and themselves.

Efficient Service and Skillful Workmanship
Courteous Treatment.

How Various Service Agencies in Kansas City Have Brought About Closer Cooperation Resulting in More Profit to Themselves and Greater Satisfaction to Customers

By BEN S. BROWN

THE economic justification for the existence of an automotive trades association lies in the fact that it enables its members to make more money and to render better service to the public.

At least, that is the opinion of George W. Arnold, president of the Kansas City, Mo., Automotive Trades Association. And working out this idea, the membership of this association has doubled in the past eight months, and bids fair to make another increase of fifty per cent before the year closes.

Mr. Arnold was one of the organizers of the Kansas City Garage Association, the predecessor of the present organization. He has been closely allied with the institution since its first meeting, either as an officer, or a director, or as a working member. He has had a great deal to do with its development. At the beginning of the present year he became the president of the new organization and it is growing in membership and what is more important, in influence and effectiveness as the months go by.

As Mr. Arnold is an eminently practical business man, he insists that an association of business men, even in its social features, should be practical, and be conducted in a businesslike manner. Hence it is not to be wondered at that this association is doing work which is at once efficient in its service to the public and successful in increasing the net profits of its membership.

It is a little difficult to give an accurate outline of the program of this association, for the reason that it is constantly changing—broadening—extending its scope and elevating its ideals. It began with the idea of increasing profits for its members; now it stresses the service it is to render the public, and it is finding that this is the only sure way of making more money for its members.

Starting with these ideals, the program, which is worked out in a tentative form, and will soon be put into a definite one for the guidance of the members and the information of the public, includes the following items:

1. Improvement of the members—This is fundamental, and is recognized as the first thing to be done. The making better workers and merchants out of the membership means that they will deserve more pay, and the management of the association is certain that the members will get the better returns for their work just as rapidly as they deserve them. Then the first problem is, How can we get our members to be WORTH more money to the community? The method which is worked out for the accomplishment of this end may be stated in a single word—Education.

2. Improvement in the Garages—This refers to the buildings themselves. It is insisted that attractive appearing houses will invite trade. Clean garages are not only inviting, but are money-making, in that they reduce the risk of loss by fire, and tend to reduce the cost of insurance. Better lighting systems and other items which improve the working conditions, increase production and thus reduce the cost of doing business. To improve the garages means more money in the pockets of the membership.

3. Improve the shop equipment—It is recognized that poor tools are costly at any price, and that labor-saving tools and those which are especially adapted to the work to be done are money-makers. This being true, the association insists that in order to become a member of the association at all the garage be equipped with a collection of tools which will enable the worker to do good work at a reasonable rate, and make a profit on the jobs.

4. Improve the Mechanics—In the past, the rapid development of the automotive business, and the fact that anybody who had even a rudimentary knowledge of tools

and their uses could "get by" in the business has invited many incompetent men into the industry. But the public demands a higher class of workmanship now, and it is to the interest of the garage man to furnish the best possible.

5. Give better service to the customer—This is in addition to the work of the mechanic. There is need for better merchandising and service in every department in the business. As the customer is getting it in other departments of the automobile business, he is demanding it from the trades. It is the business of the association to develop the service for the customer.

6. Standardize the service which is to be rendered to the public—The garage men themselves need to know just what service is to be rendered free, for instance. Air? Water for radiator? What? And when the services are rendered, a standardizing of prices based on the cost of the service, and the overhead cost of doing business. Also, an understanding as to just what is included in certain services to the customer.

7. The use by the garages of cost finding and accounting systems which will enable the garage man to know when he is doing business at a loss or at a profit—This is a protection to himself, and an assurance that the customer will receive his service at a reasonable price—not paying too much for one job, and too little for another. It is the only way by which a garage can be sure that it will be able to continue to do business at all.

8. The operation of a credit system by the association for the benefit of the members which will enable them to collect past-due bills, and to meet the encroachments of the dead beats which infest every community—This reduces cost to the honest customer, and makes money for the members of the association.

9. To advertise to the public that certain garages are association members, and thus guaranteeing to the prospective customer that in this garage he will find good service, courteous treatment and fair prices.

10. To secure by cooperation the enactment and enforcement of laws and ordinances which will promote the welfare of the trade and benefit the public.

The idea of expansion which controls the management of the work is shown in the change in the name of the association, made some time ago. It was originally called the Kansas City Garage Association. It became evident that if the garage men were to get the most out of the business for themselves, it would be by association with the other members of the trade. In order to include these other concerns, the name was changed to The Kansas City Automotive Trades Association. The members have been classified for work in the association into the following departments, which show the present classes of automotive men now included in its membership:

1. Garage and Repair Men.
2. Parts and Accessory Men.
3. Radiator and Fender Men.
4. Battery and Electrical Men.
5. Refinishing, Paint and Top Men.
6. Machinists.

In addition to these there has been recently made a way by which the jobbers have been admitted to membership. It was felt that the jobbers could greatly help the trades to understand many of the problems which confront them; and that it would be to the advantage of the trades to get the jobbers in touch with them so that they in turn could learn first hand how better to meet the needs of the trades. In a recent monthly meeting of the association both of these ends were realized. A jobber came to tell the members of the trades how to merchandise parts, and he gave some very valuable information. The address was followed by a discussion which centered about the problems connected with the trades meeting the demands of the public for quick service, and

A trade association starts out to help its individual members make more money for themselves.

It sees a chance to develop better service to the public by fuller cooperation.

It broadens its membership, helps other organizations, and secures cooperation from other bodies in furthering the welfare of the community.

By working out a program of service and forgetting immediate profit, the members find that they are making more money than ever.

The individual business of the association's president illustrates the principles that the association is promoting—and shows how practical they are.

Association program includes brake testing to increase business. This is the group that put the program over in Kansas City. Left to right, front row: George W. Arnold, president of Automotive Trades Association; Carlton Robb, secretary of the association; George Lockridge, Kansas City Auto Supply Co.; Ira Wilkinson, Raybestos Mfg. Co.; Ed Stewart of Trades Association; back row: Julien Harvey, director of Safety Council; Ray Barnett of the Safety Council staff; R. N. Stroup, H. S. Traine and W. M. Hackett of Johns Manville Co.

Most of the points in this program have been tried out by the Kansas City Automotive Trades Association to such an extent that it can vouch for the effectiveness of the plans in making money for the members, but some of them are just being introduced. While this is true, the successful operation of the Keystone Garage, owned by the president of the association, along the lines indicated is considered a demonstration of their practicability. Indeed, Mr. Arnold states that the adherence to this program has been the secret of his success, and the growth of his business may be taken as a typical example of the beneficial effects of such trade association activities. The story of how Mr. Arnold applied these principles to his own business will be told in an early issue of Motor Age.

the jobber was told in no uncertain language of the needs of the trades which grew out of the urgent demands of the public; then suggestions were made as to how these needs might be the better met on the part of the jobber.

The fundamental working idea of the association is that these desired ends are to be secured by education, and not by legislation. Most men will not be told by others what they must do, or ought to do, but will be glad to adopt and adapt suggestions which are made to them as to what they might do. Working on this basis, the association does not presume to tell the different departments how they are to work out their problems, but a meeting of this particular group is called, and the questions involved are discussed, and maybe a committee of members of the group appointed to investigate and report. Or they may decide to invite an expert on the particular problem to address the group. But whatever the method of procedure, the purpose is to get before the members the facts in the case, and to put up to them the responsibility of deciding what they will do in the matter.

It is usual for the group to make no formal ruling in the matter, but after the discussion, come to some understanding as to what it will be well to do, and yet leave each member to work out the solution of his problem as he sees fit, or to leave it unsolved if he shall so choose. The position taken is that it will be impossible to drive all the members into accepting the findings of the majority, and it is better to leave each free to accept and put into operation such parts of the better plans discovered by the conference as his conditions seem to warrant, hoping that with changing conditions all of the members will ultimately adopt and put into operation the methods of the best.

Many of the problems which arise are such that they affect all members of the association. In such a case, it is the policy to have these discussed at the regular monthly meeting of the associations. There is no difficulty in getting an expert to tell of these matters, for the factories usually have men who have made a special study of the subject, and are skilled in the presentation of it to an audience, and these will be sent on request with no financial obligation on the part of the association.

Recently a representative of a brake factory came and told how to merchandise brake linings. He did not say how to sell HIS brakes, but the suggestions were applicable to any and all brakes, and what he said was of benefit to every member of the association. On another occasion motion pictures illustrated how spark plugs were made, and how they were to be repaired; and other interesting and valuable information concerning them was presented. Hydraulic brakes was the subject of another lecture. At another meeting the topic was "Lubricati —How to Sell It."

To create a favorable attitude on the part of the me bership, the meetings are opened with a dinner, and leave a pleasant recollection of the event, the progra closes with an entertainment of some sort. Added to the monthly meetings are special social events, the prima purpose of which is to promote good fellowship, and get the members to realize that they are all friend cooperators in the big job of keeping the cars of t public running satisfactorily, and not rivals who w prosper in proportion as they cut one another's throa or tear down one another's business. Indeed, the theo on which they work, and the idea constantly stressed that their real competitors are the men in other lines business who are trying to get the money that shou legitimately go into the tills of the members of the aut motive trades.

The manner in which the association is attempting educate the public, and how these attempts result in i creased business for the trades, is illustrated by Bett Brakes Week, which was held in June of the present ye

The idea of holding brake test week in Kansas Ci was first presented to the association by President Arno The cooperation of the Johns Manville Company w secured, and the district manager, H. L. Faust, manag of the automobile department for this district, gave eve assistance possible in promoting the scheme. At t suggestion the Safety Council of Kansas City was ask to join in putting over the "Week" in a big way.

In conjunction with the Safety Council the cooper tion of the Police Department of the city was secure and it helped in advertising the event, passing out 5,0 steering-post cards to motorists, and furnishing poli protection at all the Test Stations during the week.

The Park Board gave permission to use certain stree for the test—in fact these streets were closed for traf and dedicated to the tests during the whole week. T Board further assisted by placing twelve large signs the boulevards directing motorists to the test statio

Through the Safety Council several men from t garages of the public utilities were secured to help at t stations. Also, the council was helpful in securing pre publicity, and mailed out from its office several thousa letters and posters announcing the tests.

Jobbers Furnish Clerks

The men for the operating detail were drawn from t membership of the Automotive Trades Association, pri cipally, although a few men were obtained from the Fo agencies and other dealers. Each of the principal supp jobbers furnished men to act as clerks, etc., during t week. The Johns Manville Company furnished three m for the entire week.

President Arnold, Secretary Stewart and Executi Secretary Robb, of the association, were on the j throughout the entire week. During the week, Preside Arnold gave a radio talk, which was broadcasted by t *Kansas City Star*.

As a result of the Better Brakes Week on trade, Pre dent Arnold made this report to the association membe at a later meeting:

"Business picks up as a result of Better Brakes Wee My own shop shows an increase of over $50 a day over la month, of which the most is brake work. I know abs lutely of at least a dozen cars of my customers that we sold re-line jobs as a direct result of the brake test, al of a number of other jobs that were driven in for bra service. Our average re-lines per day now are from thr to five, where last month the average was about one a da I have sold other work also as a result of the tests.

Safety Experts See Hopeful Traffic Signs

Spirit of Optimism for Solution of Motor Vehicle Problem on Streets and Highways Pervades National Safety Congress

By SAM SHELTON

ALTHOUGH the prevention of motor vehicle accidents on streets and highways continues to be one of the chief concerns of safety organizations everywhere, there was a distinct hopefulness displayed at the Fourteenth National Safety Congress at Cleveland that better traffic conditions are on the way which should result in an improvement in the accident ratio. The Congress opened Monday, Sept. 28 and continued throughout the week.

Confidence and conviction on the part of the public that the traffic problem can be solved has taken the place of the despair and hopelessness that seemed to surround this subject a few years ago, in the opinion of Thomas P. Henry, president of the American Automobile Association, whose paper on Safety and the Automobile was read before the Public Safety section of the Congress. This is the basis of Mr. Henry's optimism.

Edward S. Jordan, president Jordan Motor Car Co., who addressed National Safety Congress on "The Automobile and Safety"

An aroused popular interest in the problem and definite progress by public agencies in relieving traffic congestions were the grounds upon which Col. A. B. Barber of Washington, D. C., based his hopefulness. Col. Barber, who delivered an address at one of the sessions and entered into the discussions, is a director of the National Conference on Street and Highway Safety, the organization formed by the Hoover committee on safety.

Aroused public opinion apparently is working in two directions, according to the views and reports of various officials and safety experts at the convention. One is toward the comprehensive and uniform regulation of traffic throughout the United States and the other is toward providing better and more modern physical facilities to carry the traffic.

On the point of more comprehensive and uniform regulation the Congress went on record through the adoption of a resolution favoring the licensing of drivers, "whose qualifications to operate motor vehicles shall have been determined by mental tests and practical demonstrations conducted by competent and honest examiners." The revocation or suspension of such licenses should be provided for, the resolution stated.

Another resolution stated: "It is important that uniform traffic regulations shall be formulated and adopted. Traffic movement should be considered as a state and local problem of engineering importance."

Uniform System of Marking

An important step taken by the Bureau of Public roads looking toward uniformity of traffic conditions was announced by E. W. James, chief of the division of design of the bureau. This was the adoption by the joint committee appointed by the Secretary of Agriculture of a uniform system of marking United States highways throughout their length in as many states as they may pass through. This committee has designated certain interstate highways in the Federal Aid system as United States Highways and these roads are to carry the same numbers and uniform markings from beginning to end.

For marking these roads Mr. James' department has designed a completely standardized set of number plates, direction and distance signs and warning signals. The warning signals designate curves and turns, schools, railway crossings, hills and the like. Each signal has a distinctive shape and symbol in addition to the word, "turn," "hill," or other instructional word. It was the sense of the Safety Congress that the universal adoption of these markers on all state highways would be a great help to safety because drivers would soon learn to recognize their meaning at a glance.

It was felt, also, that uniformity in this respect would pave the way for certain other standardization in both traffic rules and road design that would be of tremendous value to all motorists and incidentally to the automotive industry.

Mr. Barber stated that at the next meeting of the National Conference on Street and Highway Safety, which probably will be held in December, the commission of the various states on uniform laws will submit proposed legislation to bring about uniformity in the United States in the registration of motor vehicles, the licensing of drivers and the use of roads.

Tendency to Widen Roads

Some of the physical improvements which are rapidly being worked out to facilitate traffic, especially in and near the large cities where congestion has been at its worst, were mentioned by Mr. Henry. Among these were the widening of intersections, rounding of corners, repaving of streets not now used because of poor pavement and elimination of grade crossings. Mr. Henry also mentioned the tendency to build new roads and streets wider and widen old ones wherever possible.

Frank F. Rogers, State Highway Commissioner of Michigan, told how that state is building a great boulevard with two 40-foot roadways between Detroit and Pontiac. He showed lantern slides depicting the progress of this great enterprise. Other lantern slides showed the methods generally used now to build paved roads with sufficient right of way and grade to enable widening to at least double capacity when traffic demands.

Means of avoiding motor vehicle and highway accidents were discussed by speakers of national prominence, among them being Rear Admiral William S. Sims of the United States Navy; John Barton Payne, chairman of the Central Committee of the American Red Cross, and Edward S. Jordan, president of the Jordan Motor Car Co.

Bamford Rebuilds Instead of Repairing

Walter Bamford in his working clothes. His chief assistant is at the left

Car Owners Can't Buy Make-Shift Jobs o Superficial Repairs in This Successful Smal Town Garage—$5 Offer for Dissatisfied Cus tomer Goes Begging

By LOWELL R. BUTCHER

SOME years ago, a young garage owner at Colo, Iowa, read an article in MOTOR AGE on the subject of motor reconditioning. The writer pointed out the possibilities for profit in the rebuilding business, making the statement that the majority of cars brought in for overhaul should be rebuilt rather than repaired. Walter Bamford, the garage man, thoroughly agreed with the writer. Car owners around Colo are average car owners. They like to instruct the mechanic as to the repairs or adjustments to be made on their cars and they howl just as loud as the average owner, when the car fails to perform after the "cobbling" is finished.

The war came to interrupt Mr. Bamford's plans, but he parked the reconditioning idea in the back of his head, determined that some time he would operate a shop which catered to "complete"—and satisfactory—reconditioning service. But when he returned from service, he found that his plans for equipping an up-to-date shop must wait. His garage business was "shot." He hustled out and obtained a job as a mechanic. Little by little, he saved from his wages, laying by as much as possible each month. Early last year he decided that his savings amounted to enough to obtain the necessary equipment for his shop. He returned to Colo and looked around for a location.

And Three Other Garages

Good citizens of Colo, Iowa, might be indignant if it were inferred that their city is not large from the standpoint of either population or business possibilities. But figures are figures. A late census of Colo gives the population as 507. Three other garages were doing business in Colo when Mr. Bamford decided to locate his recond tioning shop in his home town. Well-meaning friend shook their heads. Shortly after the first of last yea the shop was equipped for business.

From the very first, its proprietor made it plain to th public that he did not cater to ordinary overhaul an repair work. He refuses flatly to take any job when th owner persists in outlining the work to be done. Perhap we should not say he makes a flat refusal, for he diplomatic. He "sells" the idea that it is possible only t turn out a satisfactory job when he is allowed to do complete job. He points out that a smoothly workin engine is possible only when every part is correctly fitte and functioning 100 per cent. He will not stake hi reputation as a mechanic on a job when the owner dictate the amount of work to be done or specifies the parts t be replaced. He makes estimates but he will not bid o work.

Satisfied Customers Bring Business

It took some time for the idea to "take" among the auto mobile owners in the vicinity of Colo. A few satisfactor jobs and more customers came. By the latter part o 1924 Mr. Bamford and his one helper were flooded wit work. During the first six months of 1925, the sho turned out twenty-six reconditioning jobs; jobs that cos from $100 to $400 each, averaging better than $200. Th twenty-six jobs were drawn in from a radius of 100 mile of Colo. One satisfactory job has sold another. The rin of satisfied customers is constantly growing and enlargin

Most of the reconditioning work is done on the engin

Mr. Bamford finds that the engine will require rebuil ing before the chassis needs adjustment. The engin rebuilding is carried through in an orderly way. The firs step is to pull the engine and disassemble. The startin motor and the generator are checked, rebuilt and lai aside. The next step is to check every bearing point o the motor, noting what parts need refinishing or replace

Where Bamford rebuilds automobiles. This garage in a town of 500 population gets all the work it can do

These two photographs show some of the equipment used in Walter Bamford rebuilding shop. Bamford makes costly equipment pay by charging a flat service fee on machine operations in addition to the regular hourly labor charge

ment. The clutch is disassembled and inspected. If the clutch bearings betray wear they are replaced. The clutch lining is almost always replaced.

The engine itself, comes in for a complete rebuilding. Cylinders are reground and fitted with new rings and pistons. Valves are reseated and refaced. Connecting rods are rebabbited and reamed to a bearing fit. If a check of the crankshaft shows that it is to the slightest degree out of round, the shaft is reground. Precision measuring instruments are *used.* After the valves are refaced and reseated, every chatter mark is removed by grinding. Insofar as tools and expert workmanship can do it, the reconditioning work is of a high order.

Since almost every kind and variety of car is brought in for work, and it is almost impossible to forecast the amount of work necessary to put any particular job in first class condition, this garageman does not make flat rate charges for his work. He charges $1 an hour for the work done on the car. He augments this charge by a service charge for the use of certain machines in his shop. On a cylinder regrind, he charges a $10 service fee for the use of his regrinding machine and $1 an hour for operating it. Valves are refaced for 15 cents apiece, plus labor at $1 an hour.

Sells Idea of Equipment

By this system of making charges, Mr. Bramford "sells" the idea of his equipment to the public. Customers who would regard a higher hourly charge as excessive are perfectly willing to pay the $1 hourly rate plus service charges on certain expensive machines.

The Bamford shop lacks little in the way of rebuilding equipment. A list of the more important equipment follows:

Cylinder Regrinder
Cylinder Hone
Valve Refacing Machine
Valve Reseating Tools
Babbitting Machine
Bearing Boring Machine
Press with Jig for straightening Crankshafts
Piston Alignment Gage
Piston Vise
Flexible Shaft Buffer
Drill Press
Brake Lining Machine

Aside from the tools and equipment listed, the shop abounds in good hand tools. Mr. Bamford believes that first class work cannot be turned out with poor equipment. His equipment would do credit to shops in large cities, but he is not yet satisfied. As his business expands, he intends to add other machinery to his shop.

The rapidly growing business is an indication of the satisfaction which this shop's work is giving. When a reconditioned car leaves his shop, the proprietor does not regard his responsibility as ended. He is careful to impress the owner that a reconditioned car must be carefully handled at first. A sticker, which he places on the windshield, warns the car owner that the car should not be driven over 25 miles an hour during the first 500 miles. The owner is cautioned to use oil in the gasoline until the motor is "broken in." When the car has been driven 2,000 miles, it is brought in for a complete inspection.

Mr. Bamford refuses to take many jobs. Where the general condition of the car does not justify reconditioning, he is frank in telling the customer. He accepts only the jobs where the owner will receive full value for the money spent in re-conditioning. Not every car, he claims, is worth rebuilding. When he feels that he cannot recondition a car so that the owner will be thoroughly satisfied, he will not accept the work. Mr. Bamford has a standing offer of $5 for anyone who will produce a dissatisfied customer. So far, not one has been produced.

The rebabbitting bench in Bamford's shop

Ten Turnovers a Year

Accessory Department in San Francisco Car Agency Does Approximately $15,000 Worth of Business Monthly on a $20,000 Stock.

No. 4. Special glass show case

No. 3. Special portable cabinet

A FEW years ago the Chester N. Weaver Company (Studebaker dealer in San Francisco) started an accessory department on a very small scale which now does approximately $15,000 worth of business monthly on a $20,000 stock. There are approximately ten turnovers yearly.

The accessory department is in charge of N. W. Gordan (shown in photo No. 1) who has one assistant, Mr. Harris (shown in photo No. 2). The cooperation of all salesmen has been obtained by giving them a commission of 5 per cent on business that they are directly responsible for, thus they become sufficiently interested to bring many possible customers to Mr. Gordan or Mr. Harris. Even service men never overlook an opportunity to inform Mr. Gordan or Mr. Harris of possible customers, for they make 2½ per cent on business that they are directly responsible for.

Photograph No. 3 shows a special portable cabinet that Mr. Gordan has built, the top section of which is used for carrying bulbs. There are eight shelves for carrying the bulbs each shelf accommodating 56 bulbs. Holes are drilled in the shelves into which the end of the bulb is inserted keeping bulbs about an inch apart so they do not become broken or mixed. On the top of this cabinet is a whistle. In the lower part of the cabinet there are twelve drawers for minor accessories for automobiles such as gages, valve caps, horn equipment, small flash light, etc.

In photo No. 4 there is shown a cabinet consisting of 42 drawers, built along the wall, for carrying such articles as tape, tire valves, cut-out valves, screw drivers, certificate holders, pedal pads, spot lights, grease guns, flash lights, clocks, small oil cans, bumper parts, etc.

In front of the cabinet just described is a special glass show case in which are displayed cut glass vases, cigar lighters, ash trays and beautiful hand bags and vanity cases. Directly across from this case there have been arranged wicker chairs and writing desk for the use of women while they are waiting for their automobile to be released. Thus their attention is forcefully called to the ornaments in this show case. On the top of this case there are various types of trumpets and horns and an exhaust horn, which can be demonstrated by an attendant.

Photo No. 2 shows a number of special cabinets, the one at the left carrying polish, etc. Weed chains are carried on a counter extending between the two cabinets arranged along the end of the room. In the foreground and resting on the floor there can be seen a special pyramid for carrying accessories including camping stove, thermalware, spot light, tow-rope, canteens for water, oil and gasoline, camp chairs, etc. This pyramid can carry and and display more articles than if they were merely placed on the floor.

Photo No. 1 shows the tire rack at the left and in the center is a glass floor show case in which there are carried over 200 different styles, kinds and sizes of ornaments for motor cars such as agate balls for shifting levers, foot pedals, clocks, spot lights, etc. At the right of this case can be seen a counter that serves to divide the business section of the office from the accessory store proper, and at the same time acts as a display stand for oils and greases.

No. 1. Part of accessory department

No. 2. A number of special cabinets

Oklahoma Dealers Boost Sales With Comic Strip Advertising Stunt

IF you want business—advertise!

If you want your advertising to make business, make the public read your advertisements.

These, in a few words, are the two central thoughts of the creed of A. E. Kull, manager of the bus department of the Shelburne Motor Company, wholesale and retail agents for Reo and Hupmobile automobiles, trucks and buses in Oklahoma City. Upon them, through his many years in business in Oklahoma, Mr. Kull has built success and found for himself a place in the minds of newspaper and magazine readers.

A few months ago there appeared in the columns of *The Oklahoma City Times* a striking novelty. It was a feature in the advertising sections, a little square cartoon, something like the usual run of comics newspaper readers are familiar with, but, in fact, something decidedly different. It caused a stir of comment among readers and among advertising men, as well.

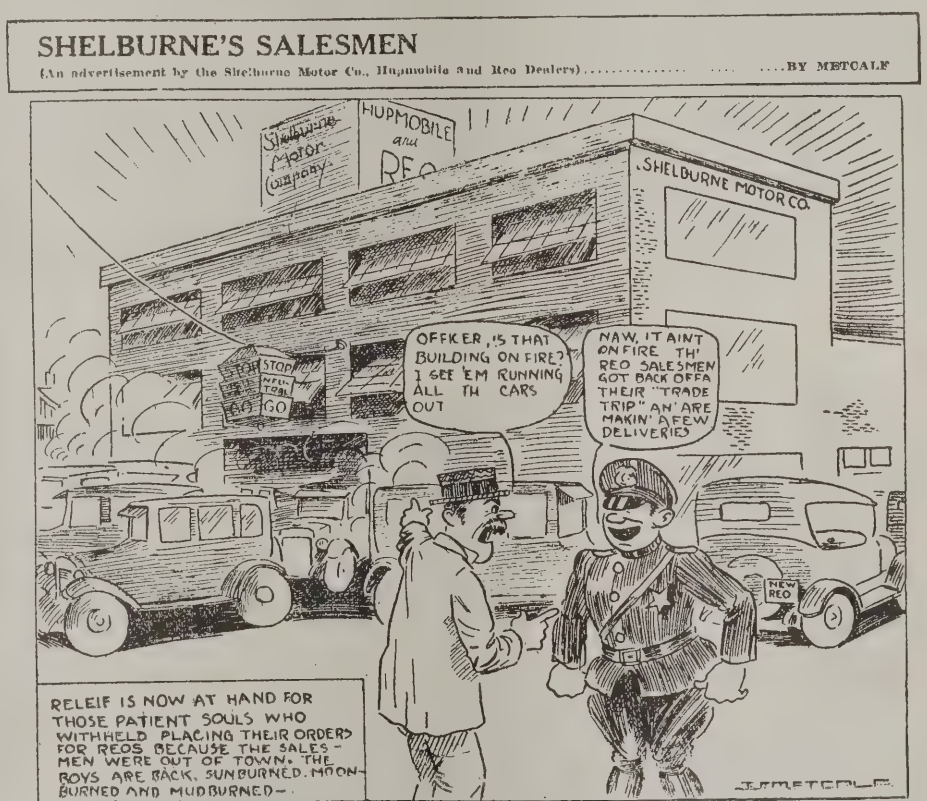
This little cartoon announced that hereafter Shelburne's salesmen would do their "daily dozen" in a comic strip, instead of in the solemn terms of quarter-page and half-page advertisements, decorated with fancy borders and set in special faces of type.

In other words, Mr. Kull decided that if the dignity were taken out of the advertisements of his company and a warm, intimate touch substituted, his company would profit.

Old advertisers who look at their ledgers and see the expenses running far into five figures smiled complacently at the new idea.

But orders have been attesting to the efficacy of the new departure.

"Our cartoons, which to a large extent have taken the place of conventional advertising," said Mr. Kull," now are attracting state-wide interest and are carrying our name and our message into places we never could have reached before. We make friends through the advertising and those friends do not forget us when they want a passenger car, a speed wagon, a truck or a bus. *They know us*, and if advertising will not do that for a firm then what is it doing?



"When we began the cartoons we figured this way: If our salesmen could appear in a comic strip every day and if the strip could be made funny enough to create a following for itself, it would introduce Shelburne's salesmen to everybody in Oklahoma City. We only hoped for that, at first, but we got state interest to boot.

"Instead of being ordinary automobile salesmen they would become outstanding characters in the community, they would become talked about and laughed at, too, for that matter, but they would be 'somebodies.'

"Then there was still another angle. If a prominent citizen could be brought into the picture each day in a friendly way, or some item of local interest included, that prominent citizen would be pleased, and each prominent citizen has at least a hundred close friends who would be pleased which, when reduced to a common denominator, simply spells this: In three hundred days you will have pleased and amused 300,000 people, people who feel a real, personal interest in the performing characters.

"In addition to this, thousands of others are interested and amused because of the local application.

"After a three months trial we find that folks in all parts of the state have become intensely interested in Doc Johnson's 'prospect hound,' which was introduced as a character early in the life of the strip, as well as in the cocky conduct of Hi-Power Colling, another salesman. Roy Fasken and Claude Eichor do their stuff like old 'vets' and are better known. As a result, all of these men are better salesmen than they ever have been."

Specimen cartoon used by the Shelburne Motor Co. for advertising purposes

Mr. Kull had a good chance to find out just what his comics are doing a few weeks ago. He headed a "Reo Circus," made up of a train of Reo buses and trucks, which covered a large part of Oklahoma, and everywhere he went he found the name of his company and the names of his salesmen were familiar. They were received like notables in many towns and cities. All because they were advertised unconventionally, in a friendly, intimate, sort of a way, just as "folks," with all the aloofness and dignity stripped off.

It is the firm belief of Mr. Kull that the cartoon got crowds for that sales strip when full page advance advertisements in the newspapers of every city visited would not have brought out a baker's dozen to see a parade of motor trucks and automobiles.

A Practical Trade Association Program

(*Continued from page* 12)

This increase in sales and service on brakes was felt throughout this territory.

The association, however, does not content itself with simply telling and showing its members the better ways, but makes a definite effort to train them in doing the things which make for success. For instance, it believes that it is essential to success for the garage man to be a merchant as well as a mechanic. In case he does not understand the science of cost finding and accounting, a man who is expert in the matter is sent to him, and he is taught how to apply these things to his business. A cost finding system is installed, and he is taught how to use it, and at stated periods, the accountant visits his place of business to see that he is operating it correctly. So also in the matter of credits. He is helped not only to collect his past-due accounts, but is induced to cooperate with the association credit department in such a way that not only he, but also other members of the association are protected against the dead-beat, and the man who runs bills with one firm as long as he can and then turns to another when he cannot get any more credit with the first.

In the matter of shop equipment it is necessary, as has been stated, that the applicant for membership have a certain amount before he will be admitted to the association at all. After he is in, the conferences which are held in his department tend to make every member appreciate the necessity of having better tools, and pride, if nothing else, will induce him to keep pace with his fellows.

In other things better understandings are being had and standards are being raised. Bad practices are being eliminated, and better methods are being introduced. Uniform customs are preventing the man who wants for nothing all kind of accommodations, which are really services, from imposing on the association men, and compelling him to pay a fair price for what he gets. The raising of standards of service and work is weeding out the incompetent and indifferent, and assuring the public of a quality of work that it can rely upon, and which is well worth the price asked for it.

In return for this privilege of supervision by the association the member receives in return the endorsement of the association. This is given in the form of a membership card, which bears the seal of the association printed on it.

Along with this membership card, which is to be hung in a conspicuous place, goes a window sign, which is to be transferred to the glass where it may be seen by all who pass in front of the garage. This sign is in blue and gold. It is the ambition of the association to make this the recognized guarantee of good service and fair and courteous treatment, so that the member will receive the benefits which come with the confidence of the public, and the public shall have the satisfaction of knowing that in an establishment with this sign on it he will find a guaranteed service which will meet his every need. It will stand in pretty much the same place as the trade mark of a nationally advertised article in any line of business.

Safety Experts See Hopeful Traffic Signs

(*Continued from page* 13)

All of these speakers emphasized the importance of educating automobile drivers and the whole public in the hazards of the streets and highways and how to avoid them. It was agreed this education should begin in the home and be continued through schools, churches, factories and other places where people gather. It was the opinion of Thomas P. Henry that through constant drilling a safety instinct can be developed that can be depended upon to keep the great majority of persons out of trouble on the highways.

The motor vehicle has been made so safe in its design and construction that rarely is an accident attributable to any defect in the vehicle itself, Mr. Jordan said. In his opinion the most important safety factors in driving are brakes, steering mechanism, the driver, vision and lights. Other important factors are ample power, cast of shifting gears and sturdy wheels. The congestion of traffic on main highways near large cities on Sundays and holidays causes a great many accidents, he said.

The relation between law enforcement and safety was discussed by Judge Alva R. Corlett of the Municipal Court of Cleveland. Judge Corlett cited figures to prove his contention that when traffic violators are dealt with leniently fatal motor vehicle accidents increase, and that when stern justice is meted out the deaths on the highways are fewer.

The statistical committee of the National Safety Council made its report, estimating that there were nearly 85,000 deaths from fatal accidents in the United States in 1924. The committee reported that during the year there were not less than 17,400 deaths in motor vehicle accidents, not counting the accidents which involved railroad trains and street cars with automobiles. If these and motorcycle accidents were included, the committee estimated the total would reach 20,000.

The first results were given of the Safety Council's effort to have a uniform system of reporting accidents adopted. Following last year's Safety Congress the Committee on Public Accident Statistics developed an accident reporting system and recommended its general use. Suggested record forms were drawn up and submitted to police and other officials in all cities of 25,000 or more population. It was reported that 38 cities already are using or taking steps to use this uniform reporting system, which will give the National Safety Council reliable data for classifying the nature and causes of accidents.

From reports already received for the first half of 1925 certain analyses have been made, including one on the type of motor vehicle involved in accidents. This analysis follows:

AUTOMOBILE ACCIDENTS INVOLVING PERSONAL INJURY

		Resulting Fatally	Non-Fatal
Total cases reported	21,444	799	20,645
Private passenger car	18,468	496	17,972
Truck or commercial	4,245	243	4,002
Taxicab	1,896	67	1,829
Jitney	95	4	91
Bus	156	11	145
Motorcycle	579	16	563

These figures represent the experience of a comparatively few cities and are not put forth as indicative of conditions throughout the country. They show, however, how the Safety Council hopes by means of more complete reports to tabulate and analyze information that will be of value in helping to reduce automotive and other accidents.

Hannum Steering Gear Provides Variable Ratio

A VARIABLE ratio, no line contacts, reduced backwhip and hardened and ground bearing surfaces are embodied in the Hannum steering gear recently introduced by the Hannum Mfg. Co., Milwaukee, Wis.

The steering leverage is low for straightaway driving, but increases as the sliding member in the trunnion shaft block moves outward on turns. Naturally this means easy handling of the car at corners and particularly parking with balloon tires. The absence of line contacts, results in reduced friction and wear. The displacement of grease inside the housing of the gear has a dash pot action which softens and reduces the backwhip. All thrust and radial loads are taken on ball bearings.

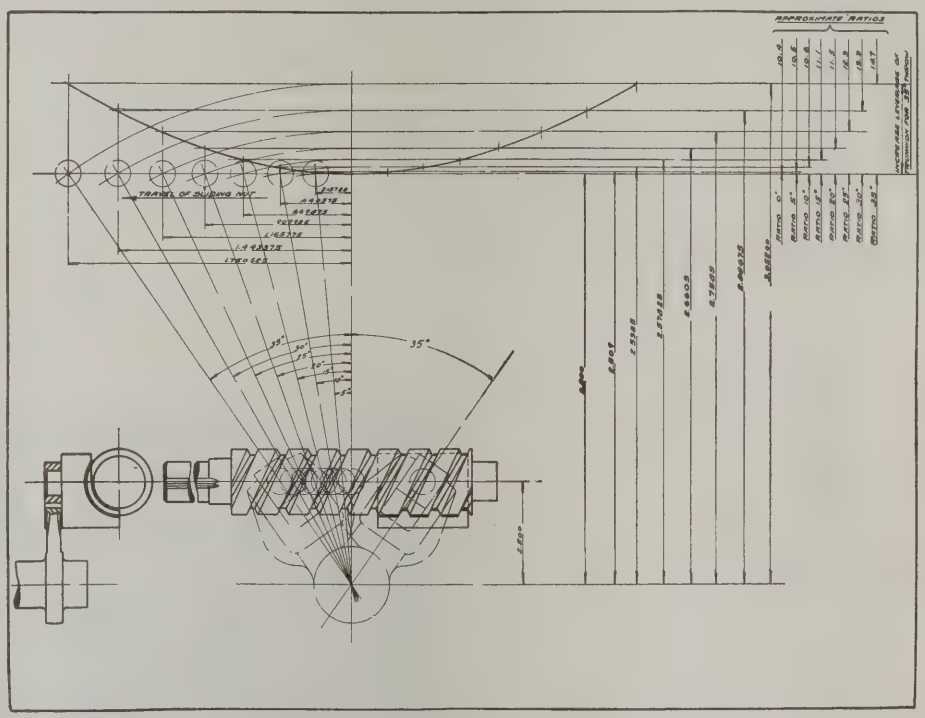
In designing the new steering gear the Hannum company did considerable research work and took particularly into consideration parking of cars when they have to be in small places. It was therefore decided that the gears should have enough leverage or gear ratio when the steering wheel is turned in the extreme left or right position. It was also realized that most of the driving of the motor vehicle calls for little deviation from straight ahead and that most of the driving demands only a half turn or so of the wheel. To get these qualities in the Hannum steering gear the company brought out an apparatus which requires only a small movement of the steering wheel for the greatest steering movement of the front wheels to get comfort to the operator of the vehicle. The steering gear turns normally 2½ times for complete travel.

The accompanying illustrations show the general construction of the steering gear and it will be noted that the trunnion block pivoted on a pin integral with the nut connects to the front jaws of the rocking shaft to the steering drop arm. At the extreme travel the nut moves to the end of the screw thread and the trunnion block moves out further along the jaws thus increasing the leverage operating the drop arm. The sliding of the trunnion block increases the gear ratio and how this is accomplished is shown in the diagram which indicates the change for every five degrees movement of the steering wheel from the straight-ahead position. From this it will be seen that less steering effort is required at extreme travel while parking and less movement of the steering wheel during ordinary driving.

A rather novel feature of the Hannum steering gear lies in the design of the gear nut since it embraces only a quarter turn on the screw shaft. This has the advantage, it is stated, that when a shock is transmitted to the drop arm it is transferred to the nut by the trunnion pin, which is not at the center of the nut. This action causes a momentary rocking on the nut block the face of which is fitted accurately to the gear housing and a thrust is imposed on this face actually tending to force the grease out from the faces. The viscosity of the grease acts as a cushion to absorb part of the blow and the shock is therefore largely dissipated and absorbed in the housing and only a small part of it is transferred to the hands of the driver. In the conventional type of gear in which the nut embraces half or all of the screw shaft the nut is supported almost entirely by the threads and a shock to such a gear is much more readily transferred to the operator's hands, the company states.

The threads on the nut have an actual bearing area of one square inch in the medium car size while the truck and bus sizes have up to five square inches.

Lubrication is novel since due to the construction of the mechanism in the housing the nut virtually acts as a piston and forces the lubricant to the housing and all the wearing surfaces. This naturally has an important bearing on



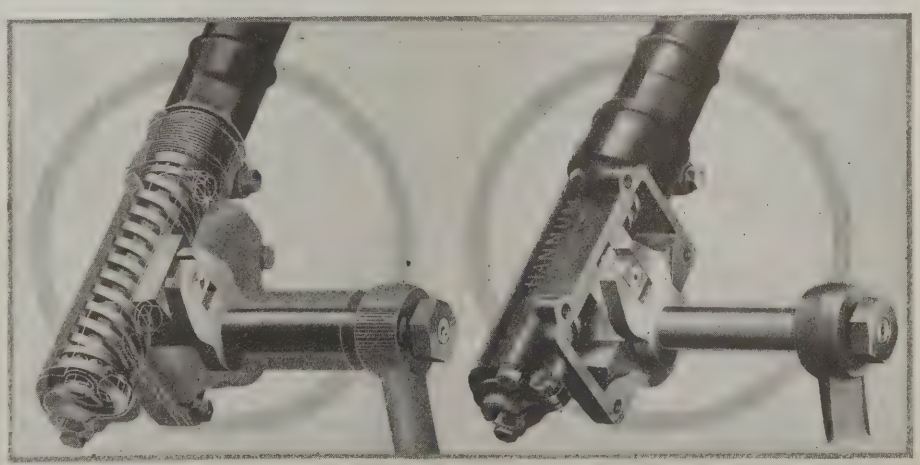


Diagram showing the increase of leverage of the trunnion in the Hannum steering gear for 35 degrees of throw

Two views of the Hannum steering gear. Note that the gear nut embraces only a quarter turn instead of the more usual turn or half-turn on the screw shaft

the ease of steering, long life and low maintenance cost of the device.

The housing is of malleable iron and all bearing surfaces and faces are milled in jigs to secure proper alignment. The trunnion shaft and block are of heat treated steel and the nut is ground after case hardening. The trunnion block is made with a spherical seat in the forks of the rocking shaft which permits of a slight swivelling action and permits the block to align itself. The casing is made oil tight by the use of ground surfaces and a gasket and oil can be used as a lubricant where desired. The gear is interchangeable with the worm and sector type and is lighter in weight.

Heldt Brings Out New Book on Fuels and Carburetion

Volume four of the Gasoline Automobile, by P. M. Heldt is now available for automotive engineers and service men. This volume deals with fuels and carbureters.

This book is a valuable addition to any engineering library and takes up not only various types of carbureters, but also discusses various fuels available and their characteristics which affect carburetion. The contents of the book are best described by the chapter headings which are as follows:

Gasoline—Its History, Source and Methods of Production.

The Chemistry of Petroleum Fuels.

Early Carbureter Types.

Theory of the Simple Carbureter.

Mechanically Controlled and Multiple Jet Carbureters.

Automatic Carbureters.

Floatless Carbureters.

Detail Design of Carbureters.

Description of Modern Carbureters.

Fuel Tank and Feed Systems.

Air Cleaners.

Servicing of Carbureters.

Carbureter Adjustment by Exhaust Gas Analysis.

Carbureter Laboratories — Equipment and Tests.

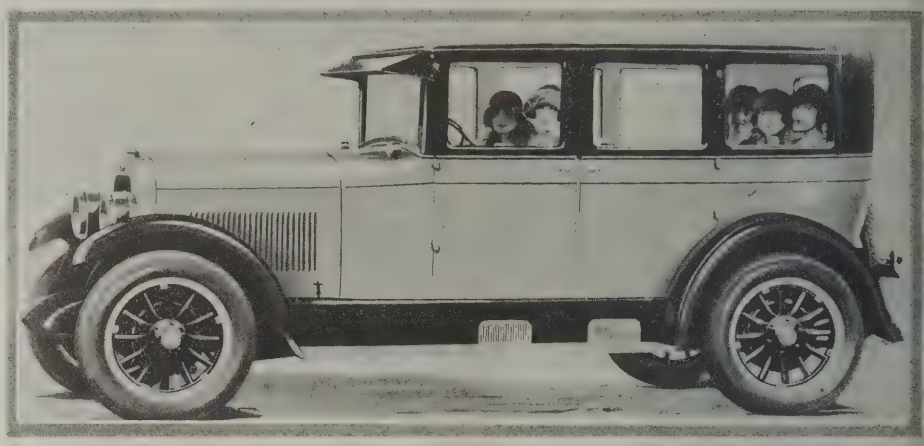
Kerosene and Kerosene Carbureters.

Benzol.

Alcohol.

Blended and Miscellaneous Fuels.

Producer Gas and Gas Producers.



Combustion and Detonation.

The price of the volume is $5. It is published by P. M. Heldt, Nyack, N. Y.

LARGER BRANCH QUARTERS

BOSTON, Mass., Oct. 5.—Black & Decker Manufacturing Company announces removal of its Boston Branch office to new and much larger quarters at 62 Brookline Street, Boston. This new office will be in charge of A. D. Geiger recently appointed branch manager of the Boston territory to succeed D. G. Caywood who has been put on special work by the company.

Cleveland Special Sedan Roomy Car

Cleveland Special Sedan, seating five passengers and which lists at $1295 f. o. b. factory

ONE of the new model announcements of the Cleveland Six which has made it necessary for the factory to increase its production schedule is the Special Six Sedan, a roomy car seating five passengers.

The body is hung low and completely paneled in metal. Doors swing wide for easy entrance and exit. Interiorly the color scheme is gray. Broadcloth constitutes the upholstery and the instrument board is finished in circassian walnut. The rear doors have individual pockets. Balloon tires are standard equipment while four wheel brakes are optional at a slight extra cost.

Cabriolet Roadster Latest in Wills Sainte Claire Six

Wills Sainte Claire Roadster in which the windows can be raised when the top is down, effecting side windshield wings

THE latest body style to be added to the Wills Sainte Claire line of six-cylinder cars is the new Cabriolet Roadster—a two-seater. The top is Burbank with natural wood bows. It can be folded down easily and quickly, with the top lying close to the body, harmonizing with the stream line effect. The sun visor is covered with the same material as the top. The windows can be raised when the top is down, effecting side windshield wings. There is a large compartment for golf bags opening on the right side and another smaller compartment just behind the front seat. The upholstering is Beige, hand brushed Spanish leather, fashioned over deep cushions. There is a rumble seat which accommodates two comfortably. The rumble seat is finished with the same leather upholstering, with nickeled arm rests.

The addition of this body to the Wills Sainte Claire line is another indication of the demand for the two seater roadster. The construction of the top affords all of the comforts of a closed car and yet it is possible in a vehicle of this kind to quickly change it to an open model. For touring in mountains certainly it is very desirable to possess a vehicle in which the top can be folded down easily. The fact that the windows can be raised in this model with the top down makes it very desirable for touring purposes.

Radio Dealers Stage Show at Chicago

Stabilization of Radio Merchandising Indicated By the Lack of Fundamental Changes Evidenced Since the Exhibits of Last Season

Making Radio an All-Year Business

Chicago, Oct. 5.

AS FAR as Chicago and the central west are concerned, the radio season has started with the National Exposition held from Sept. 28th to Oct. 3rd at the American Exposition Palace under the auspices of the Radio Dealers' Association of America.

To put the radio business on a substantial basis it is essential that it be as nearly an all-year business as possible.

A year or so ago the radio sales started just before Christmas and stopped soon after, then they began covering a period of two or three months. Now the boom in radio is starting with the first fall days and the holding of a show at this time demonstrates the trend of radio merchandising toward an all-year program.

Another radio show, under the supervision of the Radio Manufacturers' Association, will be held in Chicago during the week of Nov. 17-22, and in this connection it is interesting to observe the parallel in merchandising methods used in radio and automobile sales. For a number of years there have been automobile shows in Chicago in January, but for several years there has also been an earlier show held in the fall for the purpose of presenting to the public the closed models.

Trade Days Observed

This radio show takes on a similar aspect, that of presenting to the public its wares at an early date, but it also affords an opportunity for dealers to meet with each other and with manufacturers and take up their merchandising problems.

At this show, the hours from 11 a. m. to 2 p. m. were reserved for dealers, the public being admitted in the afternoon only.

A representative of MOTOR AGE, visiting the show, frequently asked the question,

"What do you consider the high point of the show; that is, what new and striking development is presented which we did not know about a year ago?"

And the answer universally was "There is nothing radically new."

As far as the radio dealer is concerned, this is the most encouraging indication that possibly could be obtained. Developments, of course, are being made, but the indication is these changes will be gradual, that a set that is good merchandise this year will not be obsolete next year.

Due to some improvements in later models it may be of less value, but it will be far from obsolete.

There are of course developments of interest. At one booth for example a miniature three tube complete set was shown which occupied a space 3½ in. by 4 in. by 7 in. without space for batteries. On the other hand there were console sets with provision for concealing A and B batteries, which partook more of the dimensions of the grand piano, and between these extremes were sets of all styles and prices.

To Spread Radio Net For Car Thieves

MILWAUKEE, Wis., Oct. 5.—A radio net for automobile thieves under plans worked out by the automobile squad of the local police department may cut down the number of successful automobile thefts in Wisconsin during the next few months.

The plan provides for broadcasting a report and description whenever a car is solen, with further announcement of whatever reward may be offered by insurance companies for return of the car and capture of the thief.

It is hoped that expectation of earning the reward will prompt many in the radio audience to keep on the lookout for the cars.

The announcements will be broadcast from Milwaukee's two powerful stations, WHAD Marquette Universiy-Milwaukee Journal station and WSOE School of Engineering-Wisconsin News station.

Simplification of control was noticed on some sets where a single knob or dial is used for tuning. The simplification seems, however, to be from an external standpoint, as inside the set the unit control resolves itself into a simultaneous control of two or three condensers.

B battery eliminators still arouse interest although the number of console sets made with provision for batteries does not indicate any immediate revolutionary step. One B eliminator excited more than passing interest as it to some extent puts the radio set and its battery on the same basis as the battery in the automobile. This device is known as Socket Power, being the product of the Philadelphia Battery Co. It combines with the eliminator a rectifier which is automatically connected to give the A battery a trickle charge when the set is not in use.

Radio Winter Sales Asset

PORTLAND, Ore., Oct. 3. — Garage dealers throughout the Pacific Northwest are slowly beginning to realize that the radio will be a big asset for them during the winter months when car sales begin to slow up. Among the recent garage and automobile dealers who have recently been appointed as dealers for Grebe Synchrophase by the Stubbs Electric Co. of this city who are distributors for this equipment in all of Oregon. Washington and Idaho, are the Addington Garage, Addington, Idaho; Jordan Electric Company, Ashland, Ore.; Thompson Garage, Athena, Ore.; Purkheiser Electric Co., Caldwell, Ida.; Cambridge Garage, Cambridge, Ida.; Tourist Garage, Clatskanie, Ore.; Latourell Auto Co., Heppner, Ore.; Shurtless Garage, Payette, Ida.

A Booklet on Storage "B" Batteries

THE advantage of storage "B" batteries both from a cost and operating standpoint are pointed out in a booklet being distributed by the National Battery Manufacturers Association, 17 W 42nd street, New York.

The material for the booklet was prepared by Mr. H. A. Harvey, engineer for the U. S. Light and Heat Corp., this concern being a member of the association. The information is based on careful investigation and should be of interest to garage men, battery men, radio dealers and radio manufacturers. Samples of the booklet will be sent on request and quantities for distribution over the counter or by mail may be had at nominal rates.

Build Broadcasting Station

THE Kierulff & Ravenscroft Company, Southern California pioneers in radio distribution, Los Angeles, has constructed in its building an up-to-date 500-watt broadcasting station at present operating on 250 watts, 208 meters, 1440 kilocycles, using storage battery equipment throughout. It is the only station of its power so equipped on the Pacific Coast.

The Kierulff & Ravenscroft Company is distributor in the state of California of the Kennedy and Crosley radio receivers, Cunningham tubes and Burgess batteries. The station has been primarily constructed by radio men for radio men and it is the intention to assist by broadcasting for any and all radio manufacturers, jobbers or dealers throughout the state.

Fan Not Used at High Speed

Q. A diagram and explanation of the principle of operation of the fan and fan releasing mechanism as used on the Wills Ste. Claire would be appreciated. Oscar Shilts, 630 Gary place, Chicago, Ill.

At Fig. 205 is shown a section of the fan and fan releasing mechanism of the Wills Ste. Claire engine. The principle of operation of the fan release mechanism is exactly the same as the camshaft brake used on the same engine. Briefly the action is as follows: Oil enters the drilled fan shaft, flows to the end, as will be noted in the diagram. At the end of the fan shaft there is a small cone which engages with a female cone backed up by a coil spring as shown. At ordinary engine speeds, or, in fact, at all speeds up to approximately 35 miles per hour in high gear the pressure exerted between the male and female cones by the spring provides a connection between the fan shaft and the fan propeller blade. However, as the engine speed increases and the oil pump pressure goes up oil is forced out of the hole in the small cone and counteracts the tension of the coil spring and allows the fan to slide on the film of oil between the two tapered surfaces. In other words, the pressure on the oil passing through the fan shaft pushes the male and female cone apart and the drive is partially disconnected, although the fan will continue to rotate at a certain speed made possible by the friction of the fluid itself.

Q. A diagram of the water circulation pump as used on the Packard eight will also be appreciated.

Diagram requested is shown at Fig. 206.

Q. Also a diagram of the sylphon attachment that regulates the temperature of water as used on the Packard car.

This shown in connection with the water circulation pump at Fig. 206.

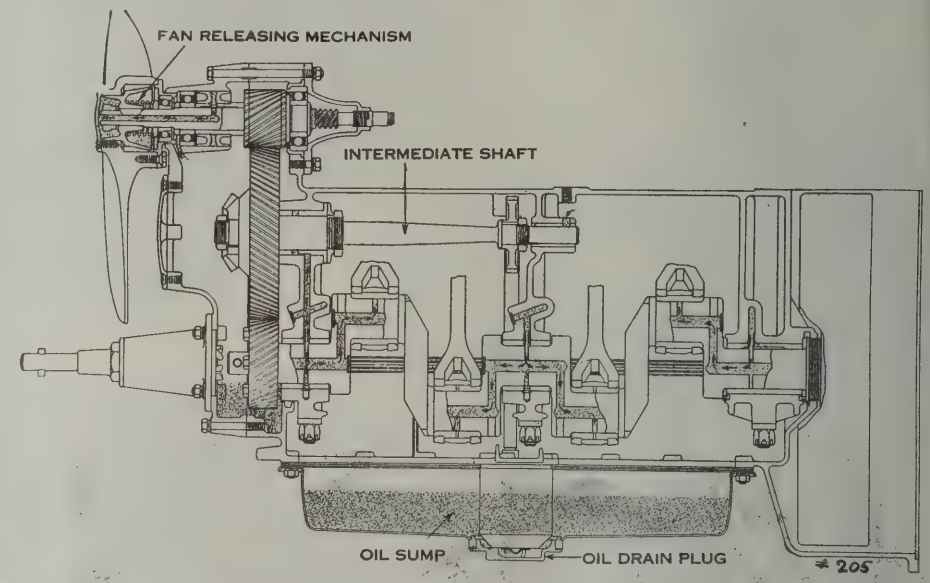
THINGS THAT MAKE GEARS CLASH

Q—We have a baby Overland in which the gears clash when shifting the clutch. Can you give remedy for same? The clutch and transmission seem to be in perfect order. We have put in new clutch sleeve but that does not seem to remedy the condition. We tried loosening the clutch but the clutch pedal strikes the foot board on the back if loosened any more.—Kaw Valley Garage, Grantville, Kansas.

One possibility is that the clutch brake is adjusted too close, another being that the clutch brake fiber is worn. Other possible causes are in a clutch brake where the surface is rough or in clutch pedal improperly adjusted. If the shifting forks are bent this same trouble will be experienced. The clutch will also drag if the lubrication is too heavy or if a disc is broken. Another cause is in excessive wear of the transmission main drive gear bushing or bearing while loose countershaft gears will also cause this condition.

REMEDY FOR STICKING CLUTCH

I notice in the June 25th issue of MOTOR AGE that Mr. F. X. Witt of Metamora, Ohio, is having trouble shifting gears on his Fordson. I think that if he replaces part No. s-408, clutch drum, that his trouble will end. The clutch plates wear notches in the drum and they will not release freely. J. W. Berry, Burrton, Kansas.



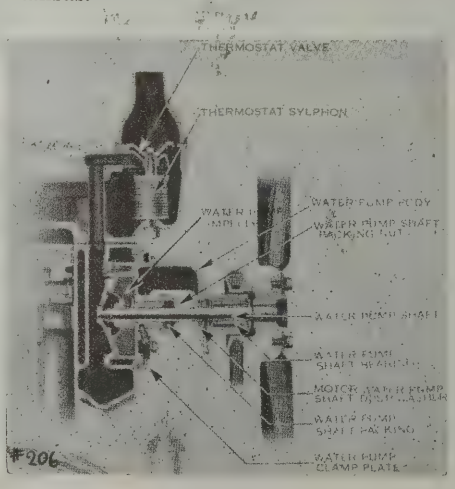


Diagram showing fan release mechanism on the Wills Ste. Claire. A spring controlled cone type clutch is released by oil pressure at high speeds

Sectional view of portion of Packard eight engine showing water pump and Sylphon thermostat

Trouble Is Probably Due to Corrosion

Q—We have had a great deal of trouble with the exhaust valves rusting in the guides on a 1917 Haynes. There are no cracks in the cylinder block and we have put in new guides and valves but this did not help any. Could you give any information on this.—Croft Machine Co., Moberly, Mo.

It seems strange that the exhaust valves would rust more than the intake. We accordingly feel that this is not rust but is corrosion due to the exhaust gases. Possibly the muffler is badly clogged up and causes sufficient back pressure to force some of the exhaust gas to go out past the valve stems. This would tend to blow off the lubricant and corrode the stems and guides. If the car has not had a new muffler for two or three years, it would be desirable to install one and to thoroughly clean out the exhaust pipe.

If the corrosion occurs on both exhaust and intake valve stems to some extent, it may be that the stems are receiving insufficient oil. You can probably determine this by examining the inside of the valve chamber where the valve springs and stems are enclosed. In some cases where insufficient oil gets to the valve stems, it is found desirable to drill one or two small holes from the valve chamber into the crankcase, so that more oil vapor will enter.

Planning Your New Building

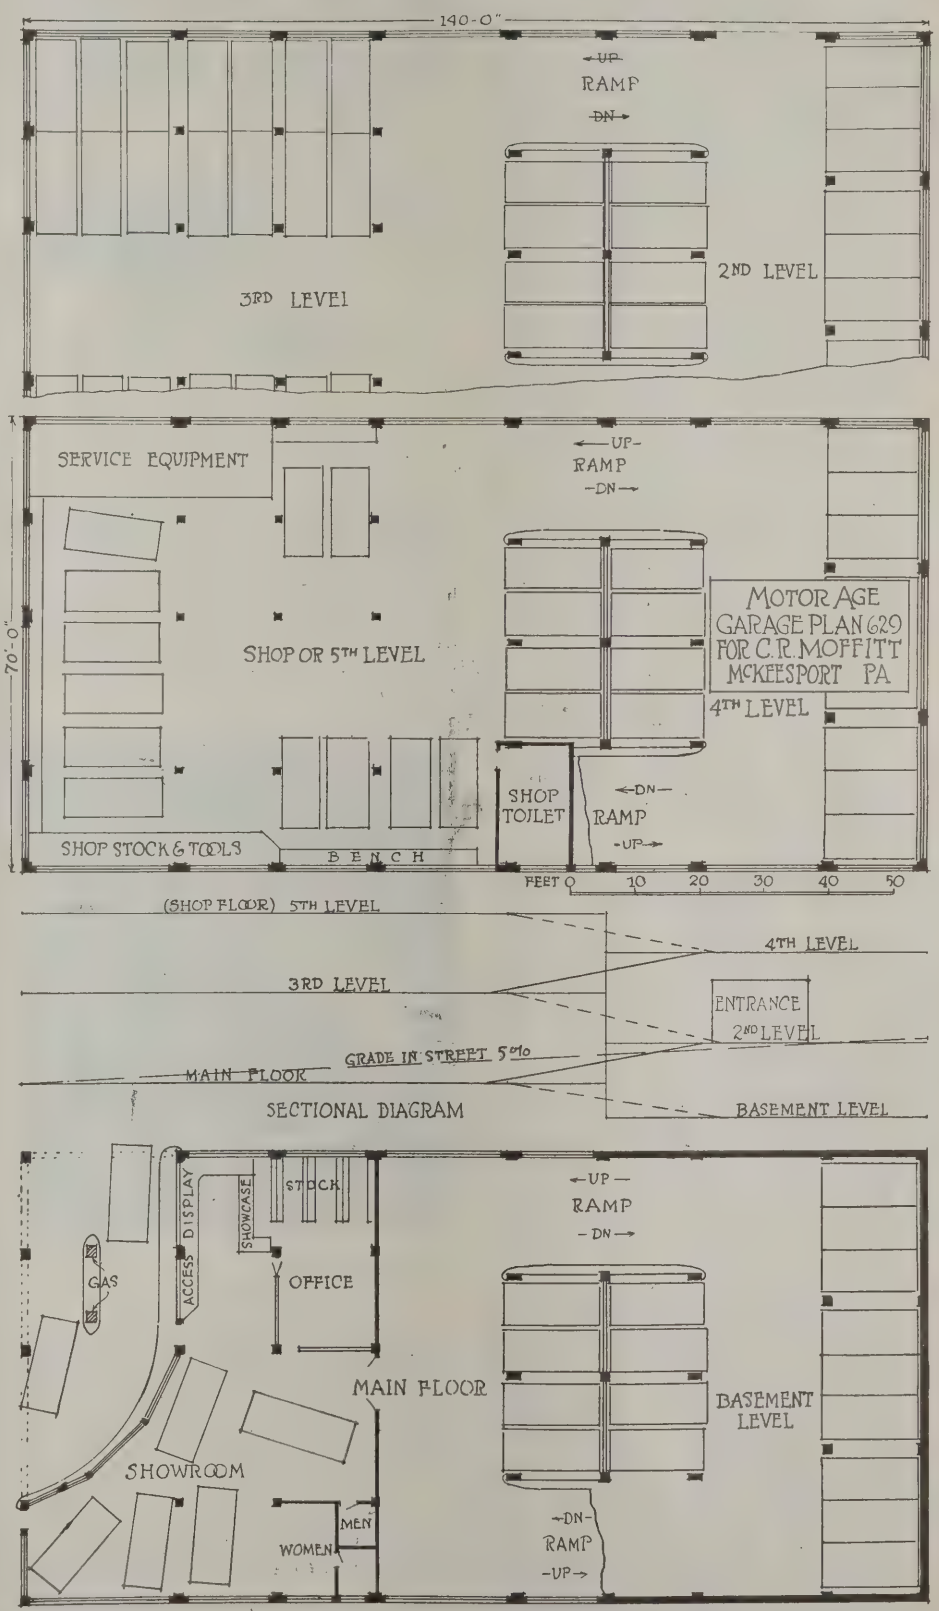
By TOM WILDER

The READERS CLEARING HOUSE

A Tall Building With Short Ramps

Q. I am interested in a sales and service garage about 70 by 140 feet, three or four stories and basement, to be located on corner lot open on four sides as per sketch below.

I would like to have any back numbers of MOTOR AGE containing plans or photos of buildings approximating these requirements, also any special numbers or articles dealing with arrangement, requirements and construction of modern commercial garages.



We have used a scheme in this building which has become quite popular in storage garages and should be just the thing here.

If the grade in the side street were sufficient to carry the street to the second floor level, then we would be inclined to use an ordinary type ramp, but since it will take you only approximately half way up by staggering the floors and using an intermediate floor between each main floor level, as indicated in our sectional diagram, cars may enter on the second level and go from there to the basement or to any other upper level with no trouble whatever. This type of construction has the advantage that it can be added to at any time. The ramp may be continued up, using the roof as storage space and as more space is needed other stories may be added to take the place of the roof and a new roof built over them. In this respect you may add more floors below the basement level as shown.

In our layout we have made the upper, or fifth level the shop space, but the third level might also be used for shop purposes in the same way. The fact that you have open space all around your building, makes it possible to use the lower floors for shop space where in other buildings it could not be done. It may be however, that the third level would be a very suitable space for a used car showroom and that the basement, second and fifth level floors would take care of all the storage you have.

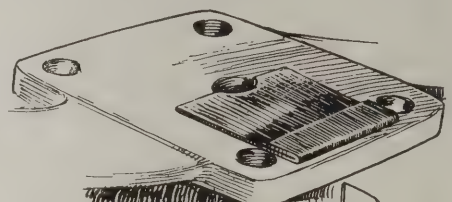
If we were building this place ourselves, we would think a long time before using the best part of the first floor for a filling station. Filling stations of course, have their use and their advantages, but it seems to us rather a scar on the face of a beautiful new building, such as this is going to be, and we would much prefer having a beautiful showroom in its place. The columns might also be arranged to better advantage if the filling station had not to be considered.

This however, is a matter of personal opinion and it may be that your location is especially adaptable to this sort of trade and it may do you a lot of good, where it would be a detriment to some places. The type of construction used in this layout is said to be patented, but the royalties charged for the use of it, are not excessive and it is considered well worth the price.

The diagram shows how the floors are arranged, half of them intermediate between the others, the short ramps connecting the aisles. The filling station seems out of place in a building of this sort

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Negative Caster a Recommended Cure



Q. I have a straight eight Packard which is equipped with balloon tires. When I purchased this car it had the Packard worm and nut steering gear and the bad habit of shimmying, at speeds above 25 miles per hour. I had their new type worm and segment steering gear put on and it has taken the jerk out of the steering wheel and some of the shimmy. However, if any play is allowed to get in the gear or rods the shimmy shows up in proportion. Do you think it would help to tilt the front axle by putting in some tapered plates between the springs and axle? I would be glad to have any suggestions that you have to offer. Jerry Robinson, Albin, Miss.

The Packard maintenance organization in this city suggests that the toe-in of the front wheels be reduced to $\frac{1}{16}$ of an inch. The next step in the correction of the shimmy is to secure a piece of $\frac{1}{32}$ sheet stock wide enough to cover the spring width and long enough to extend from the front of the axle spring pad to the rear of the spring center bolts plus one inch. Fold this piece of stock over so that there is a portion of it one inch long, $\frac{1}{16}$ of an inch thick, the remainder $\frac{1}{32}$ inch. Cut a slot in the thin end to go around the spring center bolts so as to keep the shim in position and install with the thick end toward the front. This gives a negative caster or tips the top of the axle forward. A clear idea of the method of blocking the springs is illustrated at Fig. 228.

WEAK GOVERNOR SPRINGS CAUSE KNOCK

Q—We are servicing a 1922 Jewett. It runs fine except that after motor gets warm it has a fuel or spark knock, that we have been unable to do away with. Cleaning out the carbon helps for a short time. Have changed ignition setting and also changed mixture. When car was new could step on it hard and it never murmured. Shortly after the customer got car it started to pump oil and we put in some oil rings and stopped that. We cannot afford to experiment too much with the car and thought you might be able to give us a lift. On a couple of other Jewetts we have changed valve timing and used 2-head gaskets but with no great success.—John H. Suter, 507 Cornhill Street, Peoria, Ill.

According to information supplied by the local Paige-Jewett Maintenance Organization the trouble is most likely in the ignition distributer unit. At Fig. 226 you will note a top view of the ignition unit. Directly below breaker arm mechanism is the automatic spark advance governor mechanism. There are provisions made for three springs on this governor and a few cars have come through with one or two springs only. The knock is caused from weak governor springs allowing the weight to fly out and advance the spark too far at the time engine is accelerated. The cure is to increase the tension. If there is only one spring on the governor install a second one and try the car. If the second spring does not eliminate the knock install the third one. If the governor has three springs at the present time it probably will be found that there is considerable lost motion in the governor before springs start to lengthen.

An added shim to curve the shimmy

The amount of this lost motion can be determined by moving the weights with the finger while the engine is stationary. The cure consists in cutting off each spring so as to eliminate all lost motion. When you have done this set the spark in regular position. The normal spark setting for the 1922 model is 1½ inches past top dead center position on the fly-

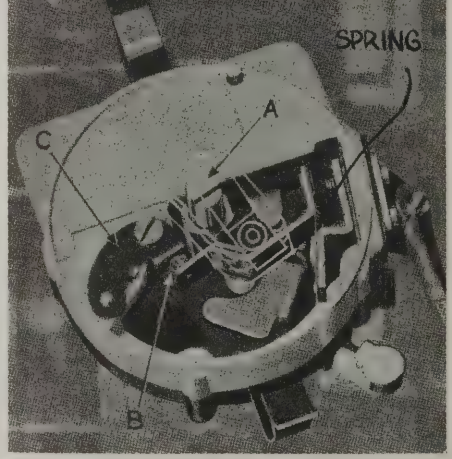


Fig. 226—Atwater Kent ignition on Jewett cars

wheel with full retard. If owner complains of spark knock after governor has been tightened it indicates that he accelerates too rapidly in which case it may be advisable to disconnect governor and use manual control only.

A MOTOR CLUB SUGGESTION

The following mechanical hint is sent to us by the Chicago Motor Club. When working on push rod assemblies, it will be found that time and trouble is saved by slipping a wedge of hard wood under the head of each valve. This saves loosening and lowering all the tappets. Th wedge holds the entire valve group o the tappets.

Camshaft Bearing Construction on Lincoln

Q. I have several questions to ask i regard to Lincoln cars. How is the cam shaft held in place?

The camshaft bearings are bronze The rear one is cast in the case and i held in place by a cap screw. The fou bearings immediately forward of the rea one are sleeves pressed into the case The front camshaft bearing controls th end play. The shoulder on the camshaf located behind the rear of the front bear ing prevents the camshaft moving for ward while the sprocket prevents th camshaft moving toward the rear. Th front camshaft bearing is held in plac by means of two cap screws through a elliptical flange.

Q. Why can only one shifting shaft i the transmission be moved at a time?

The shifting shafts are notched on th side of the shaft which face each othe A pin with rounded ends is mounted i such a way that the ends rest in thes notches. When one shaft is moved i forces this pin farther into the othe notch so that the other shaft is locked Before the other shaft can be moved th first shaft will be returned to the neutra position so that the pin can enter th notch in this shaft and permit the othe one to be moved.

Q. What is the purpose of the larg vacuum tank employed? Nebraska Sub scriber.

The large vacuum tank which hold about two gallons makes it possible t run with wide open throttle for a con siderable distance. Under these circum stances the vacuum in the intake man fold is very low which tends to prevei the tank drawing up gasoline from th main fuel supply tank while driving wit wide open throttle. The large vacuu tank merely supplies an ample reserv for such conditions.

OIL PRESSURE ON GARDNER

Q—What is the proper oil pressure on 1924 Gardner car and how can pressu be increased?

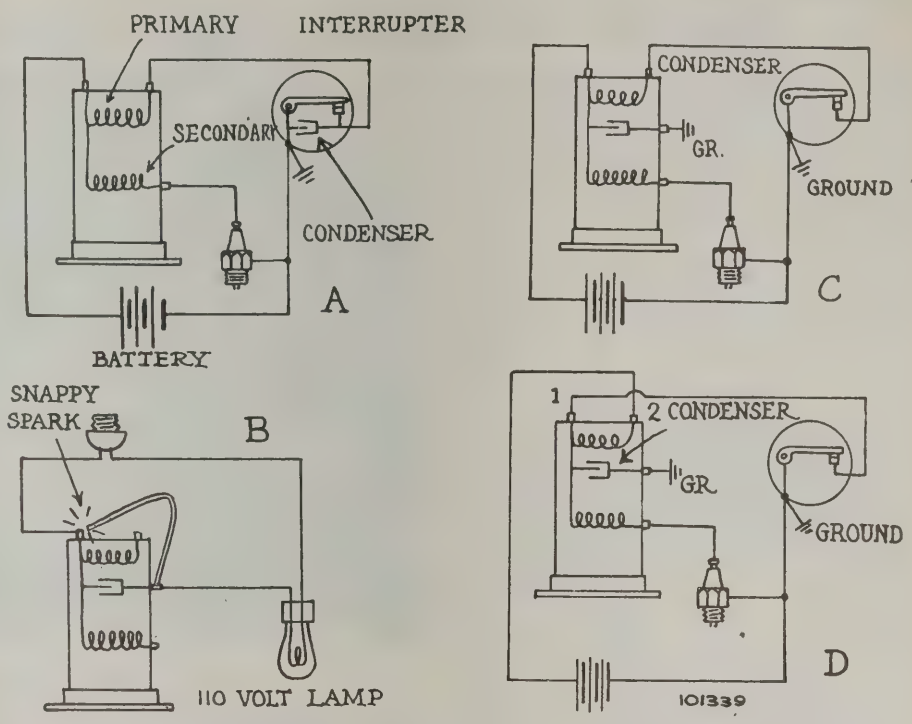
The recommended oil pressure at ave age speed is 2 to 7 pounds. The throtti is directly connected with the by-pass o the oil pump and as the throttle is opene the pressure is increased giving greate pressure when greatest power is r quired. It is possible to regulate th pressure reading on the gage by adjus ing the link connecting the pump to th accelerator.

In addition to this linkage there is spring loaded relief valve in the pum body which can be adjusted to give highe pressure at idling speed.

Clearing Up Electrical Troubles

EDITED BY A. H. PACKER

How to Connect Ignition Coils. Who Knows?



Q—Please tell us a simple way to test automobile coils.—Crutchfield Motor Co., Orangeburg, S. C.

We are showing an illustration which gives four sketches, A, B, C & D. When the coil does not contain the condenser the test is comparatively simple as shown at "A". An interrupter of some sort should be used which either contains a condenser or has one connected across its contacts. To make the test a 6-volt storage battery is normally used as most of the ignition systems are 6 volt. In the case of a Dodge Brothers ignition unit or other 12-volt outfit a 12-volt battery would be used. On the ordinary coil it is usually evident which terminals are connected to the primary winding, but if in doubt a test can be made with battery and ammeter.

The primary winding will usually allow from two to eight amperes to flow, depending upon the type of coil. In sketch "A" it will be seen that the current from the battery flows through the primary of the ignition coil, then through the interrupter to the grounded side of the interrupter and back to battery. This completes the primary circuit. From the secondary or high tension terminal a wire goes to a spark gap which can be made from a spark plug with the points opened up to give a gap approximately $\frac{3}{16}$" wide.

When the condenser is in the coil the problem is a little more complicated for there is a chance to wire the coil correctly so that the coil condenser is connected across the interrupter contacts. It is also possible to wire it incorrectly so that the condenser is not connected across the interrupter points. Sketches "C & and D" give the two methods and we are going to let you study these and see which one you think is correct. We hope other Motor Age readers who are not clear on this question will send us their answer and we will be glad to reply telling whether answer is correct or not.

In testing a coil of this kind it is first desirable to make a sketch showing the various terminals and then test to locate the primary, secondary and condenser and draw in these units on your sketch. At "B" there is a method shown of finding the condenser by using a 110-volt lamp. If the lamp is connected across the primary it will light up, which will show that these are not the condenser terminals. If connected across the secondary the lamp may not light up on account of the high resistance of the secondary, but a faint spark will be seen when the circuit is broken. If connected across the condenser the lamp will not light and there will probably be no spark visible. The test to make then consists of leaving the 110-volt lamp connected to the condenser as shown at "B" and while it remains connected, take a short piece of wire and connect across the condenser. When this is done a snappy spark which makes a noise like the crack of a small whip will be seen and heard. Having located the primary, condenser and secondary the coil can be wired up in accordance with sketches "C or D," one of which gives good results and the other, being incorrect, gives poor results. Note that no condenser should be used in the interrupter in sketches "C and D" as this would give an incorrect test showing a good spark from a coil in which the condenser might be defective.

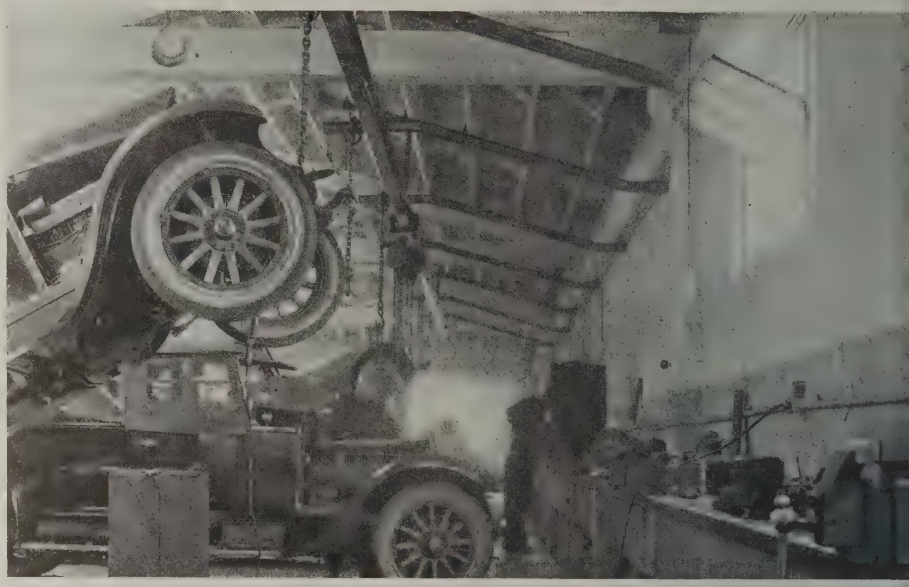
A: Simple way to test an ignition coil; B: Locating or testing the condenser; C and D: The right and wrong way to connect a coil which contains the condenser

Modern Electricity Flows the Other Way

Q.—I would appreciate a little more information on the article "Electro Magnets" in the July 18th, 1925 issue of Motor Age. One man considered to be one of the best electricians tells me you are wrong. He says the current flows from the negative through the circuit and back to the positive, but in all my text books and teachings I learned that the current flows from the positive to the negatives. Please advise whether I am right or wrong. Arthur T. Kennedy, 300 N. 7th street, Salina, Kansas.

Nobody knows what electricity is and it is very doubtful whether any one knows which way it flows, or in fact whether electricity actually flows or not. However, in working out our electrical problems it is very convenient to figure that electricity flows very much as water flows through a pipe except that the electricity is imagined to flow through a solid conductor. All of the theory of electricity and magnetism that is in use in designing electrical machinery such as generators and ignition coils, is based on the belief that the flow is from positive to negative.

The situation is quite similar to what we might have if someone would design a clock in which the hands would go around the other way. It would probably work just as well as the clocks we use today. In like manner all of our electrical theory has been worked out on a certain basis so it seems to be more convenient to continue in that way.



Your electrician is doubtless correct according to the latest data obtained in radio where it seems that electrons or negatively charged particles of electricity actually travel from the filament to the plates in the radio tubes. If this is actually the case then it does appear that the flow is from the negative to the positive. It would be evidently quite a job to write all of our text books over again and as we can work our problems out from them by using the theory in the old fashioned way, it may be better for the time being to think of current as flowing from positive to negative except in the case of the radio tubes or other devices in which the electron theory comes into play.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Orderliness and Cleanliness in Stockroom Help Flat Rate

THE stockroom may not have any direct bearing upon the workings of the flat rate system, but there certainly is something to be said about speeding up operations by a neat and well kept stock of parts. In fact, some of the leaks in many a shop and the failure of the flat rate system to bat 100 per cent can be often traced to a poorly arranged or kept stockroom. Much money is tied up in parts and accessories for the particular car or cars handled by the dealer or distributor and it is just as important for the stock department to be run on a businesslike basis is as any other part of the business. Too often does the dealer send hurry-up orders to the factory for supplies or parts, only to find that he has sufficient of them on hand, but they were not where he thought they were, hence he assumed the supply exhausted. This means not only tying up money in unnecessary parts or supplies, but it breeds dissatisfaction in the customer who is obliged to wait for things to come from the factory. Service means service, and there is no department more important to the full meaning of the word than the stock room.

THINGS THAT HELP FLAT RATE

Above is shown a system for supporting motor cars for repair by means of a chain extending from a steel I-beam. These I-beams in turn support the track on which the chain hoist operates. Such a layout permits one chain hoist to be used in raising and lowering 11 cars in this particular shop. The hoist raises the car until the chain can support it whereupon the hoist is released for the next car

Know Your Stock

There should be a place for everything, and then the men must be under the strictest of orders to keep everything in the designated bins or compartments provided. It should be looked upon as an unpardonable offense for the foreman of the stockroom to have to send wire orders for parts. He should carefully check the quantities of each thing, and order more when the predetermined minimum is reached.

In this the factories' own methods should be followed as closely as possible, for through long experience the stoc departments of the factories have almos all devised schemes of stock keeping an maintenance that cannot help but be benefit to the dealer if adapted to hi own business with whatever modifica tions are required to meet his particula needs and conditions.

Many factories are supplying the dea ers with special instructions for stoc room maintenance, and some even hav special forms and systems which the recommend installing.

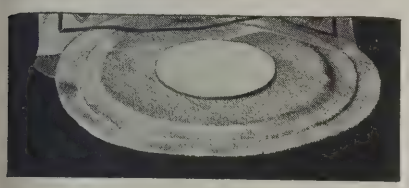
Systems Sometimes Too Elaborate

Of course the man running a large cit sales agency is called upon for a mor extensive system and scheme of checkin than the dealer who does business in smaller way. Nevertheless the sam efficiency should be practiced by both Certain extensive schemes of stock keep ing that pay the city man would wast money for the little fellow, and therei is the secret of any man's success. H must adapt efficiency methods to th needs of his business, and not try t remake the business to conform to an efficiency schemes. For instance, i would be a waste of money for the smal dealer to have a stock keeper who di nothing else but take care of the stoc room, although the city dealer would b very foolish if he did not have a stoc keeper where he has a large business an a big service station. In the small gar age, the shop foreman can very well tak care of the stock in good shape.

MOTOR AGE'S FLAT RATE FORUM

No. 34

FLAT RATES FOR FORD MISCELLANEOUS ENGINE OPERATIONS



Operation Number		Labor Charges
1.	Overhaul motor and transmission	$35.00
2.	Overhaul motor only	30.00
3.	Overhaul transmission only, or repair or replace magneto	22.50
4.	Rebraze crank case arms or support or repair leak in case by taking out motor	20.00
4a.	Replace crank case only (no other work)	17.50
5.	Install or refit one piston or one connecting rod	6.00
6.	Install or refit two pistons or connecting rods	8.00
6a.	Install or refit four pistons or connecting rods	12.00
7.	Tighten one connecting rod bearing ($1.00 per rod for each additional rod)	3.00
9.	Replace transmission bands (Sedans and Coupes $1.00 extra) Starter types $1.00 extra	4.00
10.	Replace transmission cover gasket (Sedans, Coupes and Starter types $1.00 extra)	4.00
10a.	Replace transmission cover (Sedans, Coupes and Starter types $1.25 extra)	7.50
11.	Change motor	10.00
11a.	Change motor and starter equipment	12.00
12.	Replace cam shaft and refit bearings	10.00
13.	Replace cam gear—large	4.00

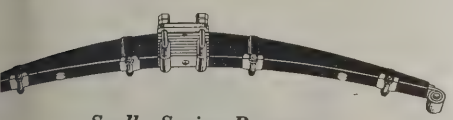
15a.	Special tune-up	2.00

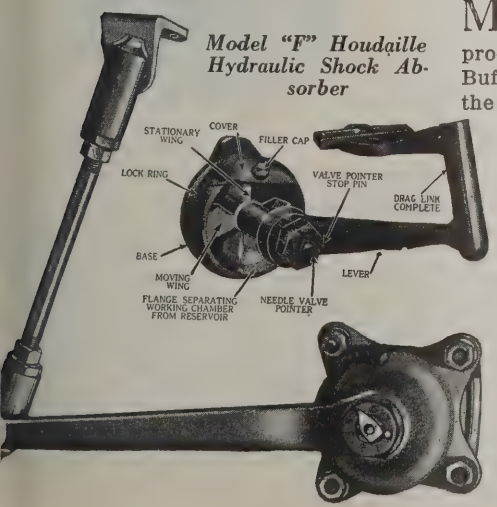
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

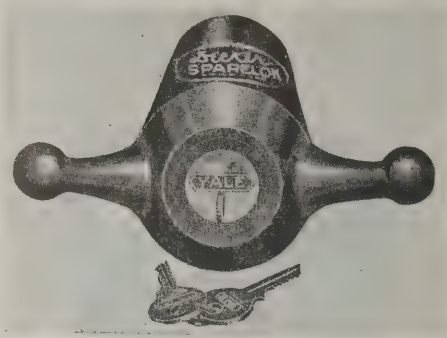


Gates Bullseye Patch

ON the theory that the most important part of the patch for punctured castings is the center or the area immediately around the hole or crack the Gates Rubber Company, Denver, Colo. brought out the Gates Bullseye Patch. The central portion of this patch is made of amalgamated gum, a special self-sealing compound which cures in service. The gum is said to have exceptional binding properties. The "bullseye," or central portion of the Gates patch, is reinforced with wide, circular



Gates Bullseye Patch



plies of tire fabric made of a high quality material. The company declares the patch makes a quick, easy and permanent repair on both balloon and high pressure casings. Dealer price for patch No. 1, 5½ inches in diameter, in lots of less than ten is 17 cents; from 10 to 50, 15 cents; from 50 up, 13 cents; Cons. list, 35 cents. Dealer price for patch No. 2, 7 inches in diameter, in lot of less than ten, 23 cents; from 10 to 50, 21 cents; from 50 up, 19 cents. Cons. list 45 cents. The patches are packed, 10 patches per carton with printed directions on envelopes.

Scully Spring Protector

Model "F" Houdaille Hydraulic Shock Absorber

Decker Sparelok

Get Lined Up for Winter Business

Winter business is near at hand and enterprising accessory merchants are getting ready for it.

Special thought is being given to stocking with the items that will have ready sale through the influence of cold and bad weather.

One thing the enterprising accessory merchant will do will be to remind car owners not to delay attention to their cold-weather automotive needs.

With the merchant who advertises in newspapers it is not too early to allot space to this purpose. Those who reach the owner by this or other methods will find him in many cases with winter accessories on his mind.

By whatever plan the owner is reached it is well to get him to thinking about his winter needs now—or better yet—buying now.

Houdaille Shock Absorber and Scully Spring Protector

MODEL "F" double acting Houdaille Hydraulic Shock Absorber is a new product of the Houde Engineering Corp., Buffalo, New York. In the illustration the full view shows the instrument used for the rear installation on Fords while the insert shows the fittings for the front Ford installations. Each fitting is an integral part of the instrument—nothing being loose. A Ford installation can be made in 25 minutes and costs $25, complete.

Scully Spring Protectors, also made by this company, are designed to protect springs from dust, mud, water and other deteriorating agencies. They are made of cellulose leather especially developed for this purpose.

Decker Sparelok

PROTECTION against theft of the spare tire or disc wheel is offered in the Decker Sparelok which is being produced and distributed by the Richard M. Decker Company, of Chicago. The Decker Sparelok replaces the nut or bolt which holds the spare tire or disc wheel on the carrier. It is screwed on tightly with the hand, a Yale key is removed and the device is in the locked position. Finished in black enamel and attractively designed the Decker Sparelok lists at $4.50.

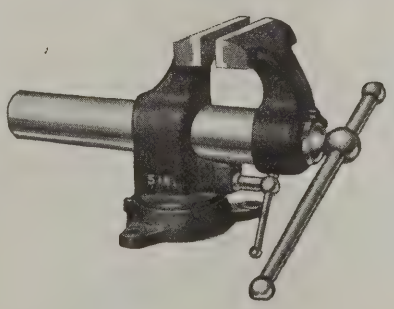
American Bosch Electric Windshield Wiper with which two wiping arms can be made to operate in unison.

New Bosch Wiper

INCORPORATING important improvements a new model of the Bosch Electric Windshield Wiper has been put into production by the American Bosch Magneto Corporation, Springfield, Mass. Elimination of lost power through friction and elimination of noise resulting from worn gears is said to be accomplished in this wiper through transmission of power by direct linkage instead of through the usual train of gears. The power developed by the Bosch wiper is claimed by the company as an especially attractive feature. This permits use of a tandem attachment, or additional wiping arm, mounted on an adjustable rod and makes it possible for the driver to have the two wiping arms working in unison. They can be located closely together or used widely apart. The tandem arrangement is furnished at a slightly added cost. The price of the wiper complete, with attaching cord, including tax, is $9.50. The Tandem Attachment costs $1.75 extra.

GETTING MORE OUT of the SHOP

Jackson Valve Grinder and Drill



A general service tool in the form of a combination valve grinder and drill has been brought out by Mann & Briggs, Wabash avenue at 21st street, Chicago. Because of its short oscillation it never throws off the grinding compound, it is said, even at top speed and the valve can be ground in from 8 to 10 seconds. The oscillation is ⅛ of a turn which permits the use of the valve grinder at an angle of 45 degrees making it possible to grind valves under overhanging cowls.

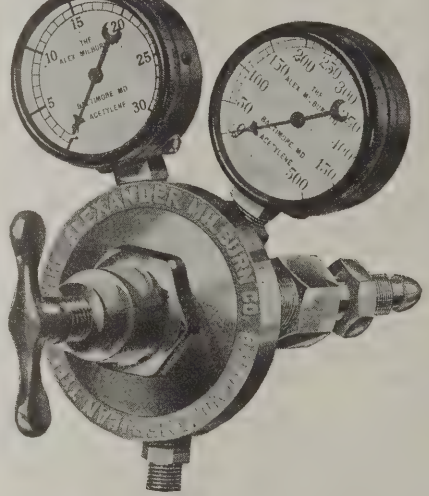
As a drill it is said to be light and easy to handle and has a capacity up to ¼ in. With a special steel carbon removing attachment for the oscillating spindle, carbon can readily be removed. The combination valve grinder and drill with a 4 in. by ¾ in. emery wheel attachment has ample capacity for grinding chisels, drills and other tools and is said to make a compact all around small bench grinder. It is operated by 110 volt universal motor and weighs 8½ lbs. The tool with cable and connector plug, valve grinding spindle, two valve tips, one valve spring, ¼ in. drill chuck, and bench grinding arbor is priced at $45, f. o. b. Chicago. An attachment for grinding valve-in-head motors can be had for $2 extra and the price of the carbon removing brush is $2.25.

Dropfo Bench Vise

Under the trade name of "Dropfo," a vise that is made entirely of drop forgings, excepting only the handle, is now available. Each part is machined to be interchangeable with the same part on any other vise of the same size. The jaw plates are knurled and forged under the hammer and doweled onto the jaw. Thus it is possible to replace the jaw plates, which are naturally subject to wear.

The Dropfo Vise is lighter in weight than a cast iron type and made with a swivel base and wedge lock that is quick

Dropfo Bench Vise

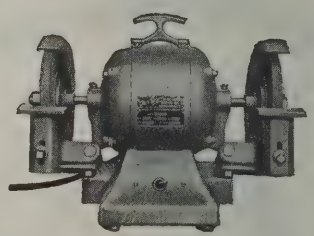


to set and automatic in tightening up, and has a grip that cannot shake or break loose, it is said. It is also made in the stationary type.

The vise is made in four sizes: 3 in. with jaws opening 5½ in.; 4 in. with jaws opening 6 in.; 5 in. with jaws opening 8 in.; and 5 in. heavy duty with jaws opening 8 in.

The vise is manufactured by The Fulton Drop Forge Company, Canal Fulton, Ohio.

Jackson valve grinder and drill, a compact unit for the automotive shop



Milburn Acetylene Regulator

(Cut shown above)

Gas such as oxygen which is compressed in cylinders for welding and other purposes has to be delivered at reduced pressures ranging from several ounces to several pounds per square inch. Regulators are made for this and one of the latest of these is the Milburn made in various sizes known as the Standard, Single Gage for decarbonizing and ordinary gas regulating and Master regulators for the delivery of large volumes of oxygen or other gases to a number of outlets. The Milburn regulator is said to be noted for its extreme simplicity and accessibility. The rear opening is only 1⅛ in. in diameter which enables the cap to be unscrewed, the seat and nozzle to be immediately reached without undoing any other part. In the case of its requiring a new seat it can be immediately reversed or replaced. Bronze forgings are used for the major parts and the nozzle is of Tobin bronze. The operating pin is made of monel metal and a renewable coupling nut is provided. The diaphragm is made of resilient nickel silver and the adjusting key is quite large and provided with an easy grip. The seat is subject to very slight wear as the spring closing the seat with instead of against the pressure enables the seating to be effected by a sealing pressure of several pounds instead of hundreds of pounds. The maker is the Alexander Milburn Company, 1416 W. Baltimore street, Baltimore, Md.

Van Dorn 6 in. Bench Grinder

This grinder comes complete with two grinding wheels, adjustable tool rests, wheel guards, switch and cable, ready for use. It is provided with a handle for convenience in carrying about the job. The real improvement lies in the wheel guard. This particular grinder has an improved wheel guard which can be adjusted very easily with one bolt so that at all times the front end of the guard is always close to the grinding wheel. This allows the emery wheel to be used with complete safety to the operator even when the diameter has become very small. Of course the tool rests are also adjustable so they are the proper distance from the grinding wheel. The price is $38. It is made by the Van Dorn Electric Tool Co., Cleveland, Ohio.

Van Dorn 6 in. bench grinder

WORTHINGTON AIR COMPRESSOR

In the September 24 issue of MOTOR AGE on page 30 there was published a description of the Worthington Feather Valve Vertical Air Compressor, but the name and address of the manufacturer were omitted. Worthington Pump & Machinery Corp., with offices at Broadway & Cedar St., New York City, are the makers.

EDITORIAL

Guessing Versus Knowing

WE still come in contact with automobile dealers and repairmen who ridicule modern methods of ccurately diagnosing and correcting mechanical roubles. New oversize pistons are fitted in cylinders o overcome piston slap, but the cylinders are not eground or honed. They looked round to the mechanic nd he did not use a micrometer. When the job is one the slap is still there. Cylinders must be out of ound, says the mechanic. The time for him to have nvestigated that possibility was before the work was one.

Valve tappets are noisy. The mechanic scorns the lea of using a feeler gage to get the right clearance. Ie says he can set them right from the feel. When e is through they work all right but the noise indicates hat the clearances are not uniform. The customer is ot satisfied.

These are only two of the instances in which the use f the right tool at the right time would have enabled he repairman to do a better job in less time and would have saved the owner money. Fingers were nade before forks but in the modern scheme of things ve eat with forks. Hands were made before tools, but ots of good tools are sold every year.

Double-Smile Service pays.

Let Safe and Sane Credits Prevail

WITHIN the last year we have heard quite a bit about the wisdom of more sound time-sales olicies on the part of automobile dealers. Doubtless he trade at large has materially improved its practices long this line and headway toward saner credits has een made—yet here lately there have been numbers f stories indicating more or less "slipping" and a weakning of the knees.

There is no more excuse for credit extensions exceedng twelve months on new cars now than there was ix months ago.

If a limit of twelve months was good policy last year vhen such a limit was indorsed by leading finance comanies, bankers, dealers and manufacturers—it is good olicy today.

At the same time extensions are being liberalized in ome instances where not long ago there was hope of n approach to safe standards if not their actual attainnent.

The trade has been enjoying a good business and a eriod of good business might cause a dealer to let lown the bars a little in the matter of credit. His eceipts being larger than normally he feels he can ake more chance, but in his departure from safe and ane practice he cuts down profits that otherwise would ome his way and in the end is not so well off financially as he might have been. Also he gets into the swing of a bad habit that might eventually mean his ruin.

What these instances of "slipping" have to do with the "bad spots" found in the time sale situation we do not know but there might be a relationship and in some sections there are far too many repossessions.

Even when the demand for cars is good safe and sound credit policies should prevail.

Another thing about that "faint heart" stuff—it never "asked 'em to buy."

More Reconditioning Needed

ONE of the noticeable features of trade reports received recently relates to the insistence of used car buyers for vehicles in good mechanical condition.

Out in California the used car which has not been reconditioned is said to be extremely difficult or next to impossible to move.

Word comes from Texas that buyers right now are demanding higher standards of mechanical fitness in second-hand vehicles than ever, while a correspondent from the southeast writes that the used car in poor mechanical condition is substantially a drug on the market. And thus they come.

The wave of price reducing possibly is responsible to a considerable extent for this situation, the used car buyer while willing to step up into a higher price bracket that he would have invaded before the cuts demands that the car he buys is in good fettle. Rather than accept a car in poor mechanical condition he will drop back into a lower price bracket for his used car or buy, in instances, a new car for the sum he intended to spend.

But the big reason for the situation probably will be found in the growing disposition on the part of used car buyers to want better products. A few years ago it was much easier to sell automotive junk in the guise of transportation than it is today. Junk has been getting constantly more difficult to dispose of and right now we simply are getting a loud expression from the buying public on this point.

All of which means that the automobile dealer will have to pay close attention to the quality of cars he receives on trades.

Reconditioning used cars promises to be a much more popular practice by automobile merchants in the future. Insistence by the buying public for high standards of mechanical fitness in the used car will propel us in that direction.

What the trade needs now is more reconditioning. Sell transportation mileage and put as much transportation mileage in each car as possible. That is what the buyers are demanding.

Sales Are Booming Throughout U. S.

Exports Given Big Boost By Reductions in Prices

Dealers Meet Used Car Situation by Reducing Allowances on Trade-ins

PHILADELPHIA, Oct. 6.—Few signs of recession appear on the automotive horizon. Most of the large factories are holding production steadily to unusually high level for this time of year, and at least one large factory has been gradually speeding up for the last two or three weeks. Stimulated by price reductions and easy time payment terms, sales are booming in virtually all parts of the country.

Exports of cars and trucks, after a slight early summer recession, are again climbing, the figures for August showing a gain of about 100 per cent in unit numbers over the July totals. Lower prices have undoubtedly contributed to this gain, helping to boost the American vehicles over the foreign tariff walls. Several of the automobile and truck companies have expansion programs for overseas trade under way, and the industry as a whole is considering measures for better financing of sales abroad and for the reduction of distribution and delivery costs.

Several factories have announced plans for additions to their plant capacity, and this forecasts a period of unprecedentedly keen competition beginning later in the season. The year 1926 will be one of the hardest that sales departments have ever faced, because on them will fall the burden of keeping distribution up to the increased capacity of the plants.

A repercussion of the recent price cuts is being felt in the used car markets. Stocks of the traded-in and resold vehicles have been increasing in many of the important sections of the country, which to an extent is a normal seasonal trend; but the tendency is enhanced by the extremely attractive prices and terms on which the new cars can now be acquired. Dealers are frequently having to take losses to move their used car stocks, but on the whole they are meeting the situation in the best possible way—by reducing their allowances on trade-ins.

The public is showing an increasing disposition to demand only the best in used cars, insisting on models of good appearance and with essential parts rebuilt or placed in the best running condition.

ESTABLISH TIRE BRANCH

CHARLOTTE, N. C., Oct. 3.—Establishment of a branch of the Henderson Tire Company, of Cleveland, Ohio, in this city was announced here. T. H. Cline was named branch manager.

LUXOR ENTERS BUS FIELD

FRAMINGHAM, Mass., Oct. 5.—The Luxor Cab Manufacturing Corp. has announced that it will enter the bus field in addition to its line of taxicabs. Plans are now under way for the launching of the Luxor "Utopian," including advertising, sales, production and delivery problems, investigation and mapping out of bus routes and launching of bus operating companies. The bus division will follow the policy established as regards Luxor cabs, that is, protect franchises given to its operating companies.

Champion Athletes Join Sales Force

ST. LOUIS, Mo., Oct. 5.—Terrell C. Peters, former roller-skating champion, Jules J. Wehrli, a high class tenpin bowler and Frank Mulligan a former soccer star have been added to the sales force of the Lambert-Graves Motor Car Co., Manchester avenue and Kingshighway boulevard, Ford and Lincoln dealer. The company seems to have a penchant for adding athletes of prominence to its sales force.

Hupp Six at Popular Price Soon to Make Appearance

DETROIT, Oct. 2.—A popular priced six-cylinder Hupmobile car which will act as a companion to the well-known eight-in-line model, will be illustrated and described in MOTOR AGE at an early date.

According to the officials of the Hupp Motor Car Corp., the newcomer is of conventional design throughout, using the same quality of materials and identical standards of inspection as employed in the construction of the larger Hupmobile car. It is understood that the performance and riding qualities of the new model are very unusual.

OPEN GARDNER BRANCH

CHICAGO, Oct. 3.—The Gardner Motor Company, Inc., of St. Louis, has opened a wholesale factory branch at 2001 Michigan avenue, Chicago, in charge of Helm Walker, a well known Chicago automobile merchandiser.

In announcing this development in the distribution of Gardner cars, Russel E. Gardner, Jr., president of the Gardner Motor Company, states: "We determined to operate our own wholesale branch under experienced Gardner management to further assist our large dealer organization in the Chicago trading area in rendering Gardner owners the permanent and efficient sales and service facilities to which every automobile buyer is entitled. Our factory branch will carry a complete stock of parts, and warehouse Gardner cars for our dealers."

Kissel Co. Cuts List Price on Various Models $100 to $20

Four-Passenger Enclosed Speedste Also Is Added to Big Line Maintained

HARTFORD, Wis., Oct. 3.—The Kisse Motor Car Company has announce price cuts ranging from $100 to $200 o all six cylinder models except the fiv passenger brougham sedan and the fiv passenger brougham, and also price cut on the eight cylinder enclosed two pas senger speedster and de luxe victoria In addition a four passenger enclose speedster and a de luxe addition of th same model have been recently added t both the six and eight cylinder lines, th six cylinder and enclosed speedster bein listed at $2185 with the de luxe mode selling at $2685 and the eight cylinde enclosed speedster listing at $2585 wit the de luxe model selling at $3085.

Equipment on these standard enclose speedster models includes artiller wheels, rear view mirror and automati windshield wiper. The six cylinder d luxe model is in addition fitted with spar tire, front and rear bumpers, shoc bumpers and a clock. The eight cylinde de luxe speedster has artillery wheel front and rear bumpers, snubbers, auto matic windshield wiper, rear view mi ror and clock included as standar equipment. All four models are upho stered in leather and are lacquer finishe

Following is a list of the model affected by the recent price cuts togethe with old and new prices.

AERIAL TAXI SERVICE

SAN FRANCISCO, Cal., Oct. 5.—A aerial taxi service is operated out San Francisco, flying to Sacramento, miles, in one hour, and to Los Angele 468 miles, in a little more than fo hours. Cost of travel is 20 cents p mile per each passenger, provided tw go in the same direction.

Automotive Exports First Half Year in Big Increase

Forty Per Cent Over 1924 Period Puts Industry Second in Foreign Shipping

WASHINGTON, Oct. 5. — Exports of automobiles, parts and accessories by the United States for the first half of 1925 increased $45,000,000 or 40 per cent over the first half of 1924, making the automotive industry rank second in exports, it was made known here in the semi-annual analysis of America's world trade by the Foreign Commerce Department of the United States Chamber of Commerce. Raw cotton was the leading export, increasing $111,000,000 or 31 per cent in value and 737,000,000 pounds or 65 per cent in quantity.

It is further shown that during the first half of 1925 exports of motor trucks and buses increased from 14,571 to 23,296 or 60 per cent over the first half of 1924 and passenger cars from 80,293 to 118,174 or 47 per cent and automobile engines from 13,722 to 93,678 in number, or 583 per cent. Notwithstanding the increased domestic consumption of gasoline, American exports of the third leader, gasoline, naphtha and other light products increased $8,400,000, or 9.5 per cent and 38,358,000 gallons, or 6.5 per cent in quantity. Another noteworthy increase in quantity though not among the 50 chief exports was tractors, gaining 47 per cent.

The analysis shows that the foreign trade of the United States as a whole took a jump during the first six months of the year, exceeding in value the total for the same period in any previous year except the war years of 1917 and 1918 and the post-war years of 1919 and 1920.

Farm Outlook Prompts Large Expansion Program by Pence

SIOUX FALLS, S. D., Oct. 3.—After inspecting the farm country in this state Harry E. Pence, president of the Pence Automobile Co., Minneapolis, Minn., distributor of Buick cars, forecast such a promising future agriculturally that he decided on a $200,000 enlargement program, including a new lease on a $25,000 building at Watertown, a new $60,000 Buick building at Huron, a $65,000 structure at Mitchell, and a $75,000 building here. Contracts have been let for the Mitchell and Huron buildings.

PEABODY GOES WITH VELIE

MOLINE, Ill., Oct. 5.—C. W. Hadden, general sales manager of the Velie Motors Corporation, has announced appointment of F. D. Peabody as district representative for Velie in the Pittsburgh district.

Mr. Peabody was for several years connected with the Studebaker Corporation in various sales capacities, and later with the Lally Light Corporation. For the past year he has been associated with the Chrysler sales organization, leaving them to assume his present responsibility.

Trade in Mexico Is On Upgrade

SAN ANTONIO, Texas, Oct. 5.—The automobile business in Mexico City is improving rapidly, according to reports from dealers in the capital of the republic south of the Rio Grande. The financial situation in Mexico is better than it has been for many years. Streets and roads are being improved and more inquiries are being made concerning automobiles.

William C. Benbow, distributor for the Dodge Brothers products in Mexico City was in San Antonio recently buying accessories, parts, tires, etc. He declared sales for all lines of machines represented in Mexico, are increasing. He said also, the outlook for trade is better than it has ever been. Mr. Benbow said most sales in Mexico are for cash or cash and paper which can be handled easily. Other members of the Mexican trade visiting San Antonio make similar reports.

HOLD TRACTOR SCHOOL

MEMPHIS, Tenn., Oct. 5.—The Memphis Branch of the Ford Motor Company has just held a school for Fordson tractor salesmen. C. E. Fawcett was the director. Road graders, scrapers, drag lines, street sweepers, trailmobiles, agricultural implements, and every piece of equipment used in this territory with a Fordson tractor were shown. One hundred and sixty-eight salesmen attended from points in Tennessee, Alabama and Mississippi, Arkansas, Missouri and Texas.

OPEN NEW WHITE BRANCH

LOS ANGELES, Sept. 26.—Announcement is made here of the establishment of a direct factory branch in that city by the White Company. J. L. Sydnor, who has been attached to the Pacific coast headquarters of the company at San Francisco, heads the Los Angeles organization. The White Company has been operated through a dealership in Los Angeles for about fifteen years and has a large number of its trucks in service.

WILL MAKE METAL BODIES

FREMONT, O., Oct. 3.—Papers have been filed with the secretary of state chartering the Fremont Metal Body Co., with a capital of $50,000 to manufacture metal bodies for automobiles. The incorporators are George D. Welles, Ray E. Zackman, Henry E. Saney, Frank A. Harrington and Charles Weinrich.

TO DO MANUFACTURING

AKRON, O., Oct. 3. — The National Steydford Co., has been incorporated with a capital of $15,000 by Don E. Williams, N. N. Pollock, Clarence V. Cole, Edward Kohl and A. V. Burkhart to manufacture and sell automobile parts and accessories.

Custom Coachwork Classics On Display in N. Y. Nov. 15-23

Say New Styles at Salon Will Tend Strongly to Brilliant Color Effects

NEW YORK, Oct. 2.—American and foreign custom coachwork makers will offer the latest products of their art at the twenty-first annual Automobile Salon to be held at the Hotel Commodore here Nov. 15-23. It is predicted that the new styles will tend strongly to contrasting colors in brilliant hues, rather than the combined and harmonizing shades that have come into general use of late years.

The carossiers exhibiting at the Salon are Blue Ribbon, Brewster, Brunn, Derham, de Causse, Dietrich, Fisher, Fleetwood, Holbrook, Judkins, Le Baron, Locke, Merrimac, Rollston and Willoughby. Nineteen chassis, representing six nations, will mount the custom bodies of the designers. They include Amilcar, Brewster, Cadillac, Cunningham, Duesenberg, Franklin, Isotta-Fraschini, Lancia, Lincoln, Locomobile, Marmon, Maybach, Mercedes, Minerva, Packard, Pierce-Arrow, Renault, Rolls Royce and Wills Sainte Claire.

A new rule of the Salon limits to twelve the number of chassis of any one make which may be exhibited.

Gas Volatility Holds Well To Federal Specifications

WASHINGTON, Oct. 5.—Results of the twelfth semi-annual motor gasoline survey, recently completed by the Bureau of Mines, Department of Commerce, indicate that the average volatility of motor gasoline now being marketed throughout the United States falls well within the limit of Federal Government specifications. The investigators found that the average gasoline sold today is about the same quality as that sold in the summer of 1924. As would be expected, gasoline sold in the summer of 1925 shows a slight decrease in volatility as compared with the gasoline marketed last winter.

A slow but certain tendency towards uniformity among the various gasolines marketed has been manifested since 1917.

BUDD ERECTS NEW PLANT

PHILADELPHIA, Oct. 5.—The Edward G. Budd Manufacturing Co., of Philadelphia, through its subsidiary, the Edward G. Budd Manufacturing Realty Co., is erecting on Charlevoix avenue, Detroit, a plant for unholdtering and finishing a substantial proportion of the bodies made in its plant here. The new factory will employ about 2,500, and will have available for working purposes 336,540 sq. ft. of floor space. The structure, which is being built on a tract of eleven acres, will be four stories high, 725 ft. long and 100 ft. wide. The cost will be about $1,500,000.

The Budd concern specializes in all steel bodies for automobiles.

Rubber Industry's Growth Is Reflected in New Buildings

About $4,000,000 Worth of Factories to Be Completed Before End of 1925

AKRON, O., Oct. 5.—Physical evidence of the growth and prosperity of the automobile tire industry in the last few years is reflected in a report of construction activities just made public by the city building department.

Before the end of 1925 approximately $4,000,000 worth of new factory buildings will have been completed or started by rubber companies in Akron.

Nearly everyone in the industry predicted two years ago that the city's excess factory floor space would not be occupied for the next 20 years. Today every inch of surplus space has been occupied, and the manufacturers are running new units and additions to completion.

A new $2,000,000 warehouse will be completed by the B. F. Goodrich Co. about Nov. 1. It will be six stories high, with a basement. This will make Akron the central distributing point for tires and other Goodrich products, eliminating rented warehouses in the large cities. The company also is building a new branch office building here.

Construction has just been started by the Goodyear Tire & Rubber Co. on a five-story factory unit, which with equipment will cost more than $800,000. The machine shop building, which was begun six years ago, but left uncompleted when the financial slump hit the industry, has just been finished, and is now occupied.

The General Tire & Rubber Co., completed additions to factory and office buildings, at an estimated cost of $225,000. A heater unit is now being constructed, and plans are being made for a larger building program next year.

Three additions to its factory and warehouse units are being made by the Seiberling Rubber Co.

The Firestone Tire & Rubber Co., which ranks next to Goodyear in point of tire production, is building a $350,000 warehouse and a $50,000 heater unit.

The Miller Rubber Co. has completed this year factory additions valued at $350,000. In the last three years the company has spent, entirely out of earnings, $5,000,000 for new equipment and other factory improvements, according to officials.

HAWKEYE TO RESUME

DES MOINES, Ia., Oct. 5.—The Hawkeye Cord Tire Co., has been organized to take over the plant formerly operated by the Hawkeye Tire & Rubber Co., which has been in the hands of a trustee for some time. High pressure cords as well as balloons will be turned out by the plant when operations are resumed. Officials of the company hope to have production under way by October 15. John T. Christie and Bert Springer have been appointed temporary officers.

VISIT G. M. PROVING GROUNDS

DETROIT, Oct. 2.—Members of the Detroit section, Society of Automotive Engineers, and a number of their friends in the industry, were the guests for an afternoon and evening of the General Motors Corp. at the proving grounds maintained by the corporation at Milford, Mich. The afternoon was spent in witnessing tests of passenger cars to determine their hill-climbing capacity, maximum speed, fuel economy, braking efficiency and other characteristics. The members later were guests of the corporation at a buffet supper served on the grounds. In the evening, O. T. Kreusser, resident engineer in charge of the proving grounds, read a paper on methods employed at the grounds in determining important characteristics of cars and accessories.

NEW POST FOR J. S. HUNT

NEW YORK, Oct. 5.—J. S. Hunt, general factory manager, Star Car Division, Durant Motors, Inc., has been appointed vice-president of Manufacturing of the Star Car Division, according to a factory announcement. Mr. Hunt's headquarters will continue to be at the Elizabeth plant.

MAKING FLOOD LIGHTS

COLUMBUS, O., Oct. 3.—The Madison Service & Sales Co., which has been operating as a partnership between Ralph Madison and S. G. Smith for the past year, for the purpose of manufacturing and selling automobile accessories, has been incorporated for $15,000. The concern will retain its old quarters at 118½ East Long street. The company is now engaged in the manufacture of flood lights especially adapted to buses, trucks and touring cars.

Moon-Diana Head Enthused Over Foreign Trade Outlook

Germany Offers Especially Fertile Field for American Cars, Believes Stewart McDonald

NEW YORK, Oct. 5.—After ten weeks travel and observation of business conditions in Europe, Stewart McDonald, president of the Moon Motor Car Company and Diana Motors of St. Louis returned to this country greatly enthused over the outlook for American progress in the automobile market of Europe.

Mr. McDonald in his statements concerning the increasing use of American automobiles abroad augments the optimism in export trade conveyed by other prominent automobile manufacturers recently returned from Europe. Especially in Germany does Mr. McDonald see a remarkable fertile field for American cars. In his opinion England stands second only to Germany, from the standpoint of popularity of American made automobiles, he being greatly impressed by the growing use there of many well known American makes.

In discussing the progress of his own cars, Moon and Diana, Mr. McDonald estimated production for year at 15,000 cars including 5,000 Dianas. He further stated that production at his factories for September this year exceeded the same month in 1924 by 50 per cent and that for the first nine months of 1925 the Moon and Diana output exceeded that of the whole twelve months of 1924, the increase being largely due to the success of the new Diana eight. He considers outlook for future business, by far brightest in history of his company.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(*From* MOTOR AGE *of Oct.* 11, 1900)

Automobile Racing at St. Louis

Albert Champion and Kenneth Skinner proved the chief attraction at the Missouri State Fair in St. Louis, Thursday, Oct. 4. They were supposed to be on hand to help out the trotting races by enlivening the program, but the marvelous speed of their motor tricycles and the reckless skill displayed in their riding caught the unassembled St. Louisians agape and held them enthused during the afternoon.

Further Concessions in Boston

BOSTON, Mass., Oct. 8.—After considering the results of a public hearing held last summer the Boston park board has voted to grant the owners of automobiles further concessions than those already enjoyed, by extending the time within which motor vehicles shall be allowed to be driven in the park system an hour at each end. This means that automobiles may be run in the parks from 8:30 in the evening to 11:30 a. m.

The Motor Age Exhibition

The dates for the automobile exhibition, being promoted by the publishers of the MOTOR AGE, are March 18 to 25, inclusive. The building where the exhibition will be held is the Chicago Coliseum located less than a mile from the business center of the city and accessible by various lines of transportation.

Philadelphia's Big Celebration

PHILADELPHIA, Oct. 8.—To celebrate their victory in securing the passage of the ordinance to throw the park road open to all classes of horseless vehicles and to demonstrate to the public the growth of automobiling, the officials of the Pennsylvania Automobile Club and of the Automobile Club of Philadelphia set apart last Saturday afternoon for a parade of self-propelled vehicles, and in order to make the exhibition more impressive, an invitation was extended to all "unattached" motorists to participate

Stutz Third Quarter Output Over Double 1924 Period

Chief Work of Last Six Months Directed at Rounding Out Distributing Organization

INDIANAPOLIS, Oct. 5.—A report covering third quarter production of cars by the Stutz Motor Car Company of America, Inc., shows that an increase in production has been made over last year's records of 213 per cent. The report also shows a marked increase in distribution with many strong new distributors and dealers added at impotant points.

"The work of the past six months," says president Fredrick E. Moskovics, "has been chiefly directed at rounding out the Stutz distributing organization, and we now have assurances that by the first of the year Stutz will be well represented in every important market in the country. During the same period we have made important forward strides in Stutz production methods and are now in a position, both from a production and a distribution standpoint, to do a greater business in 1926 than has ever been known in the history of the organization.

"Today we hear a great deal of the economies effected in the production end of the automobile industry. A recent report of one of the leading manufacturers states that they were producing as many cars with 11,000 men as were formerly produced with 17,000 men on the pay-roll. Another manufacturer has claimed a reduction of one-half in men employed with production figures for the smaller group exceeding those of the larger.

"While we feel that there are many economies being effected in manufacture, we at the same time believe that the greatest ecenomies of the future are going to be centered around the problems of distribution. Our policies include no sacrifice in design, materials or workmanship for Stutz cars. In fact we contemplate making Stutz cars better than ever before, but we are vitally concerned in new policies in relation to sales, the used car problem, distributors overhead and wasteful advertising and sales expenditures which have steadily increased the cost of selling.

"We believe the buyer of the car is more interested in saving from the cost of selling than he is in saving at the cost of production expenditure. Every dollar that is wasted in distribution must be paid by the buyer of the car. We believe our distributing policies, without sacrifice of profit to the dealer and distributor will make important savings to the buyer. Our present distribution organization, including our six branches in the larger cities and established responsible distributors and dealers at other points is reflecting a policy 'helping the owner to buy,' rather than going into high pressure sales methods. And on this basis we anticipate a shortage of Stutz cars in the coming months even in view of our plans for larger production."

LARGE AUTOMOBILE DISPLAY

PHILADELPHIA, Oct. 3.—Exhibits of motorbuses, parts and equipment will be larger than ever before at the show held by the American Electric Railway Association in connection with its 44th Annual Convention at Atlantic City, October 5-9. Over 200 manufacturers have taken over 100,000 feet of space, and of this 40 per cent will be occupied by bus manufacturers and the companies making parts and equipment for the motor coaches.

PAIGE-DETROIT PROFITS

DETROIT, Oct. 3.—Paige-Detroit Motor Car Company announces that its August profits, including all branches but before preferred dividends and taxes, amounted to $532,281.48. Profits for the first eight months of 1925 were $2,634,186.06. The cash resources of the company as of Sept. 27 were $5,429,000. President Harry M. Jewett declares that the outlook for fall business is very favorable, and that the improved models announced in August at reduced prices have been eagerly received by the trade and the public.

Percy Owen Drops Federal Post to Join Dodge Brothers

DETROIT, Oct. 3.—Percy Owen, chief of the automotive division, United States Department of Commerce, joined Dodge Brothers, Inc., Detroit, Oct. 1 as director of foreign sales. Announcement of Mr. Owen's appointment was made by F. L. Sanford, general sales manager of the corporation.

Mr. Owen is known throughout the United States and abroad for his long and important activities in the automobile industry and as an official of the Department of Commerce. His entry into the automobile industry dates to 1899. For twelve years he was dealer, branch manager, importer and eastern sales manager for Winton, Bianchi (Italian) and Chalmers cars. In 1912 he became general sales manager and director of the Chalmers Motor Car Co., Detroit. In 1915 he was vice-president of the Saxon Motor Car Co. and from 1916 to 1924 was president and general manager of the Liberty Motor Car Co.

At this time he joined the Department of Commerce and in the capacity of chief of the automotive bureau, has served on a number of important commissions.

MEMPHIS BUSINESS GOOD

MEMPHIS, Oct. 5.—September, despite unprecedented heat, has presented good activity in the automobile trade. The Ford Motor Co. that was closed down awaiting new models is resuming and in a short while will be running full capacity. This has stimulated somewhat interrupted accessory trade which also waited after a fine spring and summer activity. Automobile sales, parts, service, garage and affiliated departments are very active. A number of new cars have been placed on this market and a number of the concerns have enlarged their places.

Daily Auction to Feature Chicago Used Car Exhibit

Thirty-five Dealers Will Participate in Big Display and Market Oct. 10-18

CHICAGO, Oct. 5.—Finishing touches are being put on arrangements for the Seventh Annual Used Automobile Show, which will be held at the Chicago Coliseum, Oct. 10-18. There will be 35 exhibitors this year and it is announced that all available space in the big exhibition building will be occupied.

The most interesting new feature added to the show this year will be a public auction to be held every evening in the Coliseum Annex. Here cars will be sold under the hammer and it is promised that many big bargains will be "knocked down" to highest bidders. The show usually is well patronized by the public, but it is believed the auction will draw an attendance of larger proportions than at any of the earlier used car displays.

Only "tested and approved" used cars bearing the green tag of the association will be shown on the floor of the Coliseum, thus assuring the purchaser that the car he buys is in good condition. To obtain this "tested and approved" green tag an automobile must undergo a rigid examination by an impartial committee of experts, after which it is priced by an Appraisal Committee, made up of used car managers who know the market value of all such machines. In this manner the association strives to protect the buyer and it is by strict enforcement of rules upholding the integrity of the green tag that the association hopes to perpetuate the annual used car mart and maintain the confidence of the public.

Inspection of cars to be shown at the Coliseum now is under way. Hundreds of "tested and approved cars" will be offered for sale on the floor and put on the auction block.

Following is the committee which is in charge of the exhibition and sale: Chairman, W. E. Butler, Franklin-Butler Motors; George C. Norwood, Thomas J. Hay, Inc.; Gordon Bird, Bird-Sykes Company; Harry P. Branstetter of H. P. Branstetter, Inc.; H. A. Wehmeier of Community Motors, Inc.; O. G. Heffinger, Chicago Motor Car Co.

FORD CLINIC HELD

COLUMBUS, O., Oct. 5.—A service clinic was held at the salesrooms of the Miller-Van Horn Co., local Ford dealers recently. This was attended by approximately 35 Ford dealers and some 20 authorized service station men, all located within a radius of 35 miles of Columbus. The clinic was under the supervision of factory engineers from the Columbus branch of the Ford Motor Co. and was held with the purpose of assisting Ford sales and service dealers in rendering more satisfactory service. Factory experts demonstrated the most efficient use of modern shop equipment in the furnishing of genuine Ford service.

Milwaukee Sees Last Half Ahead of First Six Months

September Outstanding From Sales Standpoint With Delivery Only Problem

MILWAUKEE, Oct. 3. — Predictions made earlier in the year that motor car sales in Wisconsin for the last half of 1925 would be equal to or in excess of sales for the first six months of the year appear at this time to be almost certain of fulfillment. Retardation of sales from now on will come principally from manufacturers unable to meet distributor demands with adequate production schedules.

Following an August business satisfactory in all respects, car retailers in Wisconsin hit a stride in early September which promises to make that month an outstanding one in sales. Inability to obtain cars hampered September sales to some extent, but most distributors kept pace with retail sales during the month.

New car registration in August of this year exceeded registration for August, 1924, by 225, figures being respectively 5,995 and 5,770. Milwaukee county accounted for more than 60 per cent of this increase, its contribution to the excess being 146 new cars. Extended comparison of August sales this year with July sales this year and August sales last year with July sales last year reveals a loss, however. This was due, not so much to any tendency as to the unusually good sales in July of the present year.

Time payments are being met promptly and distributors and dealers point out that if payments are made as well during October as they are being made now, it is safe to assume that the financial rating of the average citizen is most excellent. October with its fuel and winter apparel obligations to meet is usually a crucial month for automobile credit men.

Mail Course School Hit in Trade Commission's Ruling

WASHINGTON, Oct. 5. — Using the name "Chicago Auto Shops" as a trade name for the business of conducting a correspondence course in the repair of automotive vehicles was denied B. W. Cooke, C. E. Wesch and Job-way Home Study, Inc., all of Chicago, in a cease and desist order issued by the Federal Trade Commission which alleges this group has been guilty of unfair methods of competition. The order also denies the company from using the name "Associated Drafting Engineers."

The order also sets forth that the company must cease making the following representations to prospective automotive students:

"That any person, regardless of age or the amount of schooling or education he has had can and will within the period of one year be qualified as an expert in all matters pertaining to the repair of automotive vehicles by taking the correspondence course offered.

"That pupils who take the course of instruction in the repair of automotive vehicles are generally able to secure positions as superintendents or other executive officers at salaries ranging from $75 to $200 per week and from $3,000 to $10,000 per year.

"That there is a great demand for persons who have completed respondents' correspondence course in automotive repair."

39,733 Persons Are Drawn by Stunt

CINCINNATI, Oct. 3. — E. S. Gahagan, proprietor E. S. Gahagan Company, Eight and Broadway, Studebaker distributors, reported that the recent endurance test of a continuous drive of 100 hours and one minute of a Studebaker Six had attracted 39,733 persons to his show rooms by actual count from about 6 to 11 p. m. He said the test was the best advertising he has ever done and had given his sales a very substantial boast.

DINES DODGE BROTHERS DEALERS

ST. LOUIS, Mo., Oct. 5.—Phillips Motor Co., Dodge Brothers dealer opened its new building at Lockwood and Summit avenues, Webster Groves, on October 1 with a dinner for 150 Dodge Brothers dealers in the St. Louis territory, a parade, a reception and a dance.

The Phillips Co. has been handling the Dodge Brothers car in Webster Groves for seven years, formerly having been located at 720 Big Bend road.

The cost of the new building was approximately $125,000.

SCOTT LEAVING OLDS

LANSING, Oct. 3.—I. J. Reuter, president of the Olds Motor Works, has announced the resignation of John M. Scott as factory manager. Mr. Scott has been factory manager for several years and has resigned to obtain a rest. He will leave soon on a six months' tour around the world. J. J. Carter has been named to succeed Mr. Scott. He has been assistant factory manager since coming to Lansing with Mr. Reuter, at the time the latter assumed the presidency of the Olds works.

LINSLEY HEADS SALESMEN

DETROIT, Oct. 1.—D. R. Linsley of Chicago, was elected president of the Packard Master Salesmen's Association at the annual convention of the organization just closed here. More than 300 salesmen, picked after a sales contest as the star Packard salesmen of the entire country, attended the convention. In order to render a better service to prospective purchasers and to persons to whom they have sold cars, the master salesmen were taken for a three-day tour of the factory, to study manufacture, sales and service.

New Light Six Car in Lower Price Class Planned by G. M.

Unit Will Be Companion to Oakland and Produced at Plant in Pontiac

PONTIAC, Oct. 3.—A new light six passenger car to sell at a price ranging between the Chevrolet and Oldsmobile, somewhere between $700 and $800, will be built by General Motors at the Pontiac plant of the Oakland, it was announced by officials of the corporation.

It is possible that the new product will be exhibited at the New York show in January, but production and delivery is not expected before spring.

Two years of experimenting have resulted in the completion of plans for the new car. Production of about 60,000 cars is expected the first year after its introduction. The name of the new car will not be announced until later, it being understood that the name will be selected through an advertising campaign, in which the public will participate.

The heavy production that Oakland has maintained this season has retarded the introduction of the new car, as the new product will be built in the Oakland plant and is announced as a companion car to the Oakland.

Manager A. R. Glancy of the Oakland plant announced that about $3,000,000 will be expended in the introduction of the new car and in preparation for its manufacture. Oakland dealers throughout the country will be authorized to handle the new car.

The new car will be equipped with a Fisher body, but all other specifications are to remain a mystery until the car is shown about the first of the new year.

Fifty Buyers Out of 2054 Who See New Ford Models

OAKLAND, Cal., Oct. 5.—Don Neher, Ford dealer here, kept actual count of the number of visitors at his showrooms for the first 24 working hours after the arrival of the new Ford models, and found that 2,054 persons came through the doors to see the new cars. This number of spectators produced fifty orders for cars. The crowd started to come within half an hour after the first of the new models had been placed in the showroom.

BUSINESS AHEAD OF 1925

ST. LOUIS, Oct. 3.—The McQuay-Norris Manufacturing Co. reports that business so far this year has shown an increase over the corresponding period of 1924, with the exceptiion of February, which was a few hundred dollars below the same month of last year. The increase has been distributed well, with the piston and pin plant at Connersville, Ind.; the piston ring plant at St. Louis; and the bearing plant at Indianapolis all sharing.

Balloon Tire Sales So Far in 1925 Over Twice 1924 Volume

Rise of Low Pressure Design in Favor of Automobile Owners Has Been Rapid

AKRON, O., Oct. 5.—Although there has been some falling off in balloon tire production during the past two months, sales of balloon casings so far this year have been twice those for the entire year of 1924, it is estimated by leading rubber manufacturers.

In the past two years the popularity of balloon tires has grown by leaps and bounds. They have gained the favor of the public in a shorter time than did the cord tire in comparison with the fabric casing.

Less than two years ago only a few high priced automobiles were equipped with balloon tires. Now practically all new cars, including Fords, are sold with balloons as original equipment.

Until July of this year, the proportion of balloon tires over high pressure pneumatics had grown steadily larger. In that month, however, balloon casing production fell from 1,729,121 in June to 1,561,806, according to figures just compiled by the Rubber Association of America, Inc. Inventories increased from 1,527,629 to 1,654,629.

Production of high pressure pneumatic cord casings gained from 1,994,704 to 2,181,645, inventories decreasing from 2,870,827 to 2,502,056.

Several large manufacturers in the Akron district are taking steps to practically eliminate fabric tire production.

Better methods of construction which lengthened the life of balloon tires have helped to increase their popularity, it is pointed out.

SAM L. CHORLINS DEAD

ST. LOUIS, Mo., Oct. 5.—Sam L. Chorlins, formerly president of the State Tire Co., and vice-president of the Associated Tire Dealers of St. Louis, died here recently. Mr. Chorlins had given up his connection with the tire industry and had planned to go to Florida. Before leaving for Florida he entered a hospital for an operation for appendicitis. Complications followed and he died.

Many tire dealers attended his funeral and Robert E. Lee, manager of the St. Louis Automobile Dealers' Association delivered the funeral oration.

New Models Bring Increase Ford Ford's Weekly Pay List

DETROIT, Oct. 5.—As a barometer of the popularity of the new Ford models, the Ford Motor Co. cites the increase in enrollment for the Ford weekly purchase plan. During the last ten days in August, enrollments totaled 13,167 and in the following ten days, the first in September, the number of new purchasers under the plan reached a total of 16,054.

All those who enrolled under the plan at the time the new cars were announced, benefited by the change, for they will receive the new types and be given preference as to delivery.

More than 175,000 are now enrolled under the plan and with others coming in at the rate of 1,600 a day, it is expected that the enrollment list will reach 200,000 within a short time.

63 PER CENT CLOSED CARS

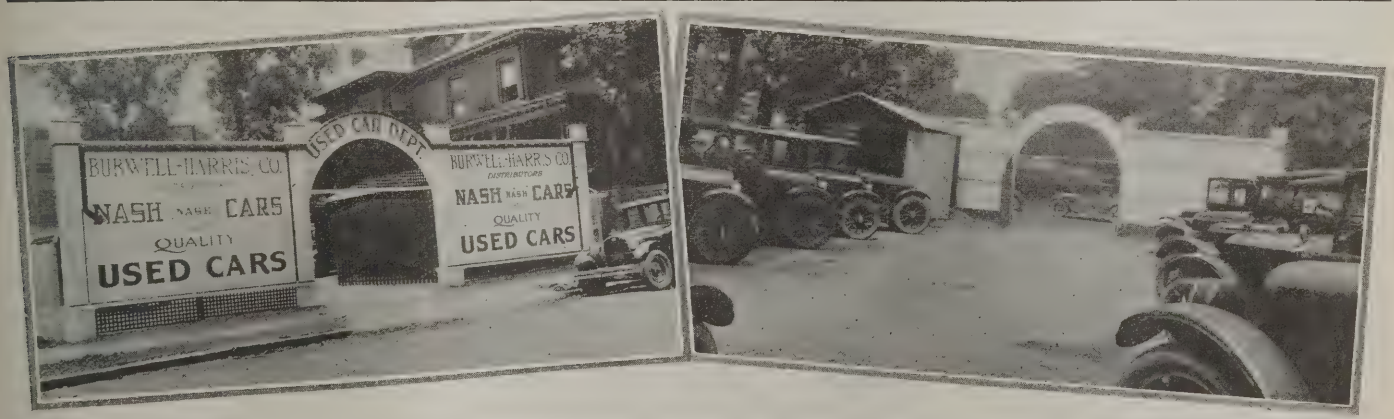
DETROIT, Oct. 3.—Sixty-three per cent of all cars sold by General Motors in August were closed models, the corporation announced today. This total compares with 40 per cent in August, 1924, 30 per cent in 1923 and 31 per cent in 1922. This comparison includes Chevrolet, Oldsmobile, Oakland, Buick and Cadillac, and as these makes represent practically all price classes, the corporation considers the figures for them representative of the trend toward closed cars in the entire industry.

Customers Wait And Texas Dealers Clamor for Cars

Almost Unprecedented Situation Is Found in New Vehicle Market for Lone Star Trade

DALLAS, Texas, Oct. 5.—Dealers of standard makes of medium priced automobiles in Dallas and most cities of Texas, are clamoring for shipments from distributors and factories while long lists of customers continue to wait week after week for new models they purchased some time ago.

The situation in this territory with reference to new cars is almost unprecedented. Business has been improving from month to month. In many instances the dealers are 100 to 200 cars behind on deliveries, and some of the sales have been made 60 days.



One dealer in Dallas said he was more than 100 deliveries behind and had been trying to borrow cars from agencies in five different places to make good delivery promises, but to no avail. Another dealer, 200 deliveries short, said he could use 20 car loads of new cars right now. Other stories are about like these.

But while the new car business has been setting new records the used car boogy involved practically every new car sale. While the dealers were generally badly understocked on new cars they were woefully overstocked on used cars.

ETTINGER TO WISCONSIN

DES MOINES, Ia., Oct. 5.—E. H. Ettinger, who for several years has been connected with the sales department of the Iowa Alemite Co., has been promoted and transferred to Milwaukee, where he will serve as assistant manager of the Alemite Lubricator Company of Wisconsin, a factory branch of the Bassick Manufacturing Co.

"Slicking Up" the Used Car Lot Is Something Many Dealers Neglect—But Not in This Case—And It Is Paying Dividends

Here is a "slick up" idea for dealers who would dignify and beautify the usually unattractive Used Car lot. The Burwell-Harris Company, Nash distributors in Charlotte, N. C., erected this handsome combination gate and billboard at the entrance of the property in the rear of its building. It attracts considerable attention and many prospective customers. On the inside of the Burwell-Harris Used Car lot the cars are arranged as if they were in a display room. The prices are plainly marked—but not smeared in ugly whitewash all over the windshield of the cars. In fact, this department is operated with the same high standards that govern the policies of the new car salesroom

Los Angeles Merchants Hold Second Big Closed Car Salon

Forty Motor Vehicle Models Representing Many Makes on Display at Hotel Biltmore

LOS ANGELES, Oct. 3.—All space available for the second annual closed car salon to be held at the Hotel Biltmore, Los Angeles, during the four days commencing Oct. 6, under auspices of the Los Angeles Motor Car Dealers' Association, has been assigned. Forty enclosed passenger cars, representing as many different makes, will be displayed.

Last year the salon was held in March and proved a marked success, with an attendance of 20,000 people, but President Robert S. Breyer this year believed that holding the event in the fall would stimulate more actual buying than in the spring.

The committee in charge of the show includes Lynn C. Buxton, Stearns-Knight distributor, chairman; J. S. Woollacott, of the Harold L. Arnold Company, Lincoln dealer, and H. E. Woodward, general manager of the Reo Motor Car Company of Southern California, and Burt Roberts, executive secretary of the dealer association.

Musical entertainment will be provided for the afternoon and evening sessions.

OFF TO EUROPE

DETROIT, Oct. 3.—Don S. Devor, vice-president in charge of manufacturing of the Timken-Detroit Axle Co., Mrs. Devor, Matthew B. Morgan, chief engineer and Mrs. Morgan, have sailed from New York for London. They will return early in November. Mr. Devor is also a director of the Timken-Detroit company and it is the intention of the two officials of the company to visit the principal automobile, truck, bus, axle and gear manufacturing plants in England and the Continent to observe methods and designs, particularly in bevel and worm gearing.

The itinerary of the party includes Paris, Brussels, London, Geneva, Interlaken, Lucern, Vienna, Berlin and Antwerp. They will attend any automobile, truck or bus shows that occur while they are in Europe.

Price Reductions Speed up Car Sales in Carolinas

CHARLOTTE, N. C., Oct. 5.—Out of conditions which caused apprehension in the automotive trade in this section of the country has come a well balanced and well distributed fall demand that is serving as the basis optimism. New car sales are brisk due largely to the cut in prices. Many of the dealers in the Carolinas are complaining of slow deliveries. The price cuts in most lines came when dealers' stocks were low. The used car situation is satisfactory, and the demand for light used cars is brisk. Extreme difficulty is being experienced in selling used cars in poor mechanical condition.

To Teach Salesmen Public Speaking

ST. LOUIS, Mo., Oct. 5.—A class in public speaking for its salesmen has been established by the Southwest Nash Motor Car Co., St. Louis Nash distributor. It is believed by the company that a salesman who is able to deliver a speech before an audience acceptably will be able to handle situations which arise in handling a prospect with more ease.

It is planned to make the school a feature of the regular Monday evening meetings which were resumed recently after having been discontinued during the summer. English literature and grammar will also be taught.

Indiana's Registrations Take 15 Per Cent Drop in August

CHICAGO, Oct. 3.—Statistics covering registration of new passenger cars in Indiana during August reveal that there was a drop of 15 per cent in the total as compared with the preceding month. Fords declined the sharpest with a loss of 34 per cent, due probably to the disposition of buyers to await developments concerning the new models. Low priced cars (excluding Fords) were off 4 per cent; there was a gain of .8 of 1 per cent in the medium priced division while high priced vehicles showed a gain of 10 per cent over July.

Following are the detailed figures for the first eight months of 1925:

Month	Fords	Low excl. Fords	Med.	*High	Total
Jan.	4,239	1,024	1,837	117	7,217
Feb.	3,515	896	1,533	103	6,047
March	5,778	2,042	4,031	205	12,056
April	5,002	2,292	3,641	243	11,178
May	4,819	2,205	3,413	175	10,612
June	4,176	1,982	2,920	153	9,231
July	4,314	1,965	3,245	164	9,688
Aug.	2,816	1,868	3,274	181	8,139
Total	34,659	14,274	23,894	1,441	74,168

*Includes miscellaneous cars not named.

The foregoing statistics were compiled from figures furnished to MOTOR AGE by Indianapolis Auto Trade Association, Indianapolis, Ind.

35 STAR DEALERS AT MEETING

SACRAMENTO, Cal., Oct. 5.—The sales convention for 1925 drew 35 Star dealers to this city, for a meeting presided over by H. W. Curtis, director of sales and branches of the Durant Motor Company of California. The session was for one day, and the W. I. Elliott Star Company of Sacramento acted as hosts to the convention at luncheon. The meeting was such a success that the dealers voted to have another similar convention here in October. Star dealers from all sections of northern California attended and heard Mr. Curtis present the Star Gold Certificate Plan, and several sales-systems that he has tried out successfully in different retail branches.

Production Capacity of Ajax Factory Will Be Doubled

Demand for New Nash Product Necessitates Enlargement of Factory Facilities at Racine

RACINE, Wis., Oct. 5.—Production capacity of the factory of the Ajax Motors Company is to be doubled in response to demand for the Ajax Six and active work preparatory to the installation of new machinery has already begun.

This announcement, coming as it does four months after the first Ajax was run onto the loading dock for shipment, is submitted by the company as evidence of the enthusiastic manner in which the public has received the new Nash-built car. Coupled with word regarding production expansion, it has been made known that Ajax Motors celebrated its fourth monthly "birthday" in the shipment of the 5,000th car to leave the plant since May 26 when the first Ajax was shown to a group of dealers.

"While it was felt, before actual production on the Ajax had begun, that demand for the car would be unusually heavy, I am frank to say that we did not anticipate public acceptance of so sweeping a character," said D. M. Averill, vice-president and general manager of the Ajax Motors Company. "With the opening of new dealer points, factory production has been increased to meet shipping schedules, but the demand has grown in proportions greater than our present facilities can supply, so we have literally been forced to prepare for doubling production considerably sooner than our original plans called for. When the Ajax Motors Company was organized it was Mr. Nash's fixed policy that nothing be left undone which would make the Ajax a quality product in every sense, and that production should be increased only as actual public demand for the car made greater volume necessary. And that is precisely the plan we have followed."

The program as carried out provided for limited production at first and as the cars passed into the hands of owners, their character of performance was closely checked by the dealer and by the factory. Production increases, on a careful basis, have been made from time to time until volume reached the point where the necessity of increased plant capacity was apparent.

41,500 Chevrolet Dealer Deliveries Made in August

DETROIT, Oct. 5.—The Chevrolet Motor Co. reports that a new record has been set in deliveries to Chevrolet dealers during August. A final check of August deliveries places the figure at 41,500, a larger number of cars than the company ever has placed during any preceding August.

This figure exceeds deliveries made in either June or July of this year.

Californians Demanding Rebuilt Used Cars

"As Is" Second Hand Vehicle Especially Hard to Move

Resale Business From Oregon Line South Caught in Complex of Unusual Problems

SAN FRANCISCO, Cal., Oct. 3.—Aside from stimulation of sales, in which they have been a considerable factor, recent reductions in new car prices have had several most interesting effects on the merchandising of used cars in California from Santa Barbara northward to the Oregon line.

Used car stocks in the hands of dealers of new cars have been increased materially; the demand for rebuilt used cars has increased to a point at which it is almost impossible to sell a second-hand car as is; credits for used cars turned in as first payments on new car purchases have been reduced to what appears to be about the minimum; dealers in new cars are endeavoring to take in only used cars of the makes they sell; dealers who handle used cars only are having rough going; and a large number, probably more than half, of the "wild-cat" used car dealers in central and northern California have been forced out of business, in some instances, particularly in the smaller cities and towns, leaving the banks holding the sack.

In addition to these conditions, a number of used cars, none of them rebuilt and few of them of little account as to transportation or appearance, have been scattered over this section of the state as a result of auction sales held hurriedly in an effort to realize something on the stocks of the used-car dealers who have gone out of business. This is not so good. The closing out of the "wild-catters" is a decided benefit to the general automotive merchandising industry all up and down the coast. Time alone will tell how the other newly introduced factors in the used-car situation here will work out.

Take in More Used Cars

Dealers in new cars have been compelled to take in more used cars on sales of new ones because of the great stimulation of demand by the recent price cuts. But the dealers, almost unanimously, have been allowing from 15 to 50 per cent less for these used cars than they did prior to the reduction in new-car prices. This means that, though the stocks of used cars in the hands of the dealers in San Francisco, Oakland, Sacramento, Fresno and other towns in this section, are probably larger on the average than they ever have been before, the amount of dealers' money tied up in these cars is only from 60 to 65 per cent of what it was at this time last year. It should be said in connection with this situation, that the months of September and October in this part of California are usually good passenger-car sales months, due to the influx of large sums of money in payment for the annual fruit crop.

Time on deferred payments on new cars has been extended in this section from the former usual 12 to 15 months, to 18, and, in some cases, 24 months. But the dealers who take in used cars on these new car deals are standing close together in an effort to hold down the deferred payments on such transactions to 12 to 15 months and no more. One of the results of this method, which is being generally accepted by the public, is that the dealer can then sell the used car he has taken in for cash on a very small margin and still come out in the clear. Or, he can sell this used car on a smaller down payment and longer time in the deferred payments, at a lower rate of interest, than he has been selling used cars in past years.

18 Months on Rebuilts

Reputable dealers in San Francisco and Oakland are selling good rebuilt used cars for down payments of $50 to $100, on time as long as 18 months, and at interest as low as six per cent. This is a lower interest rate than the buyer can obtain at a bank, and the dealer who is in a position to finance his used-car deals, or to have his financing done by his bank at 5½ to 6 per cent—as is being done here—is making some money on his used cars, largely due to the general reduction in factory prices on new cars.

Another interesting result of this price reduction is that more used cars are being rebuilt than ever before in the history of the industry in this part of the Pacific coast. At least 85 per cent of the dealers of the larger cities of this section are taking in almost no used cars except of the makes which they sell new, and then are rebuilding them, and selling them on a purely transportation basis.

There has been a very material in-

Milton Buys Two Little Peugeots

PARIS, Sept. 19 (By Mail)—When Tommy Milton boarded the French liner France for his return home after visiting and racing in Europe he had among his effects two Peugeot runabouts of a type common in France, having a four cylinder engine of only 40 cubic inch piston displacement. While in Europe Milton was impressed with the results obtained with small automobiles. He selected the Peugeot, which has a track of 37 inches and a wheel-base of 89 inches, as being the smallest of Europe's diminutive cars.

Foreign Trade to Be Topic at N. A. C. C. Fall Conclave

Drawings for Space at New York and Chicago Shows Also to Be Held

NEW YORK, Oct. 3.—Looking forward to 1926 as a new era in the export of American cars and trucks, the National Automobile Chamber of Commerce will have foreign trade as the chief topic of its annual fall meeting at its New York offices on October 8. The drawing for space for the National Automobile Shows at New York and Chicago will be held on the afternoon of that day.

The shows will take place at the Grand Central Palace, New York, January 9-16 and at the Coliseum, Chicago, January 30-February 6.

"We are trying to work for better motor travel conditions throughout the world," said John N. Willys, chairman of the foreign trade committee of the automobile organization, commenting on the program. "We want the foreign makers to get their share of the market. There is plenty of room for all. The problem is not what makes of cars will be sold, but rather how to improve roads, lower taxes, provide financing and get uniform regulations which will make motor travel readily available for all."

Preliminary details of the second World Motor Transport Congress, New York, January 11-13, will be made at this meeting.

Chandler Reduces Prices From $100 to $505 on All Models

CLEVELAND, O., Oct. 2.—Price reductions ranging from $100 to $505 are announced by the Chandler Motor Car Co. New prices compared with former ones and the amount of reduction are as follows:

	New Price	Former Price	Reduction
Twentieth Century Sedan	$1490	$1995	$505
Metropolitan Sedan de Luxe	1795	2195	400
Seven-Passenger Sedan	1895	2295	400
Brougham (2-Door, 5-Pass.)	1695	2045	350
Comrade Roadster	1695	1795	100
Sport Touring (5-Pass.)	1495	1595	100
Seven-Passenger Touring	1595	1735	140

CLIPS DE PALMA'S RECORD

TANFORAN, Cal., Oct. 5.—Frank Lockhart, driving a Miller Special, did the mile on the Tanforan track recently in 46 2-5 seconds, or two-fifths of a second lower than De Palma's record. Lockhart also took the 35-mile free-for-all.

Along Automobile Row

DENVER, Colo.—Boyle & Blunt, Inc., Denver Lincoln dealers, announce appointment of L. G. Murphy, formerly with the Wyoming Trust Company of Casper, Wyo., as sales manager.

MASON CITY, Ill.—W. A. Shipp has sold the Midway Garage here to George O. Zimmerman. The new owner is distributor of the Dodge Brothers car and Hart-Parr tractor at a plant on Tonica Street and has moved to the Midway Garage plant on South Main, a much larger building. Mr. Shipp's plans are not yet announced.

GOLDSBORO, N. C.—The Goldsboro Knight Company, of which Edward G. Goodwin is president, obtained the dealership for Willys-Knight and Overland passenger cars. The Odom Motor Company has closed a contract for the Nash dealership.

WATERLOO, Ia.—The Osbun Motor Corporation, Studebaker dealer in this district, celebrated its first anniversary and the opening of the Waterloo division's new quarters, at a banquet at which 40 members of the Waterloo and Cedar Rapids branches attended. Harold Plumb of the Associated Manufacturing company presided; A. C. McCormack, Cedar Rapids agency, B. M. Osbun, president of the firm; and Harry Padden, Waterloo head salesman, spoke.

FARGO, N. D.—J. C. Vincent & Co., distributors of Dodge Brothers cars have bought the Emerson Brantingham building from the Emerson estate for $140,000. The tire company will continue to occupy the east half of the building until the Emerson Brantingham lease on two floors expires in 1928. The Fargo Battery Co., will remain as a tenant. The building is 3 stories, concrete, 150x175, with a 45 ft. concrete platform on trackage. The site is 150x205.

CLEVELAND, O. — Berichon-McGhee, Inc., is the name of a new Ford agency in this city. Mr. Berichon has been connected with the industry since 1905. Mr. McGhee has been engaged in the automobile financing business.

LOS ANGELES.—W. D. Dunham, for 17 years connected with the Ford trade, has purchased the business of J. E. Coberly Company, Los Angeles Ford dealers, for years one of the largest merchandisers of Ford products in the west.

CINCINNATI, O.—The Max R. Miller Co., distributors for Willys-Knight and Overland cars at 1010 Gilbert avenue, has obtained a long term lease on the new stone-front Hake building at 2400 Gilbert avenue. The Miller Company will install increased service facilities.

PORTLAND, Ore.—The W. R. Cate Motor Company, Hudson-Essex dealer, has opened another retail store, used car showroom and service shop on Portland's east side. This new store will be operated in addition to Cate's original location at East Forty-second Street and Sandy Boulevard, and will be under the supervision of Arden Fugate. Mr. Cate will devote his personal attention to the new store.

INDIANAPOLIS, Ind.—The Miller Robinson Motor Company has been organized here to distribute the Oakland car in central Indiana. G. P. Miller is president; W. M. Thompson, the latter of Milwaukee, Wis., is vice-president; and W. J. Robinson, secretary-treasurer. The latter has been with the Oakland organization at Milwaukee since 1920. Mr. Miller has been with the Nash Sales Company of Milwaukee.

CINCINNATI, O.—Robert Sloan, president of the Robert Sloan Motor Company, Chrysler distributors in the Cincinnati territory, announced appointment of the Westwood Auto Sales and Service Company, at 3000 Harrison Avenue, as Chrysler dealer at Westwood, Ohio.

BELVIDERE, Ill.—Franklin W. Bauer of Rockford has purchased the Triangle garage here from Andrews & Beckington for $50,000 but possession will not be given until Nov. 1. The retiring owners have been in the garage business here for the past ten years.

CHARLOTTE.—The Locomobile Company of Western North Carolina has received its charter of incorporation with an authorized capital stock of $40,000 of which $2,500 has been paid in by J. E. Erwin of Morgantown; T. G. Mosley and J. C. Blanke of Charlotte. The company will take over a building at 500 North Tryom Street. Mr. Erwin is president, Mr. Mosley vice-president and general and Mr. Blake secretary-treasurer of the new company. The sub-agency at Winston-Salem will also be shifted to handle the Locomobile.

CEDAR RAPIDS, Ia.—Frank Weisbard, senior member of Wiesbard Bros., local Ford dealers, has purchased the brick building, 74 by 66 feet, adjoining the Weisbard station on the north. It will be remodeled for sales and service, the two buildings being thrown into one. The firm now has 132 foot frontage on both Washington and Second Streets.

CINCINNATI, O.—The Cincinnati Auto Specialty Company, 312 Main Street, has been named agent for the Southern Ohio and Northern Kentucky territory by the manufacturers of the Wedford automatic curtains.

BLYTHEVILLE, Ark.—The Jackson Motor Company of Blytheville, will represent Durant Motors, Inc., as selling agents here in the future. The company has discontinued Chevrolet.

NEW ORLEANS, La.—The United Motor Car Company, Inc., distributors of Hupmobile in the New Orleans territory and local dealers, now located at 718-721 St. Charles Street, secured the Go-Ro building at 4049 Carrollton Avenue, for a consideration of $90,000. The building covers a frontage of 99 feet on Carrolton Avenue and a considerable part of the 324 feet depth on Tulane Avenue. It will give the motor car company one of the finest dealer display room locations in New Orleans. Edmond H. Fairchild is president of the United Motor Car Company and Joseph H. Rule is vice-president.

FARGO, N. D.—The United States Tire Co., branch at 632 Second Avenue, proving too small, the company has leased 7000 square feet of space at 320 Northern Pacific Avenue, Manager C. W. Hulian reports. This gives an increase of 4000 square feet. The Stubes Top and Body Works will be a tenant of the second floor until it moves to the Nick Breyer garage building, under construction at Fourth Street and First Avenue, N.

GREENSBORO, N. C.—Coble and Starr, of Greensboro has become dealer here for Willys-Knight and Overland motor cars, taking over the franchise formerly held by T. and H. Motor Company, which now handles Studebaker.

CARTHAGE, Mo.—C. B. Nance has purchased the Durant and Star dealership in Carthage and leased the Hannum garage building, 124 Grant Street, where he will operate. In addition to a sales division the company will conduct a full equipped service garage and handle parts and accessories. The business will be conducted under the name of the Nance Motor Co.

DENVER, Colo.—Chas. E. Hilliker, formerly of the Martin-Hilliker Mortuary, and later connected with the Olinger Mortuary of this city, has purchased the interest of George Irvin in the Stovall-Irvin Ford agency located at Broadway and Alameda, and the firm will be known henceforth as Stovall-Hilliker. Mr. Irvin has bought the interest of J. O. Stannage in the Stannage-Vorbeck Company, also Ford retailers, this firm becoming Stannage-Irvin. They are located at Broadway and Arapahoe. Mr. Stannage is retiring.

CHATHAM, Ont.—Colonial Traders Limited, this city, have been appointed by the Russell Manufacturing Company of Middletown, Conn., as resident factors for "Russo" products throughout the Dominion of Canada and Newfoundland. Colonial Traders recently established a Western branch at Vancouver, B. C.

LOS ANGELES.—The Electric Equipment Corporation of Los Angeles has taken on Southern California distribution of Stromberg shock absorbers.

GALESBURG, Ill.—The new two-story garage on East Simmons Street built for A. L. Mulvaney is open for business. Mr. Mulvaney occupies the second floor with a general repair shop and Packard service for the Flannagan Motor Car Company, Packard dealers, whose sales rooms are on the ground floor.

DULUTH, Minn.—J. A. Kohn, proprietor of the Duluth Auto Exchange, Duluth, Minn., has bought from J. E. Davis the Zenith Motor Co., local agency for the Hudson-Essex. Mr. Kohn is associated with Jacob Jacobson and Harold Crassweiler of Jacobson Bros., contractors. The company has just moved from 316 E. Superior Street to a new 3-story building at 222 E. Superior Street.

LOS ANGELES.—F. L. Carley, for eight years with General Motors in Detroit, has been appointed service manager of the downtown headquarters of Stanley W. Smith, Inc., Los Angeles Hudson-Essex dealers.

BIRMINGHAM, Ala.—The Jordan Motor Co., of Birmingham, Ala., Oldsmobile distributors, announces the company's recent removal to larger quarters at 215 Twenty-first Street. The company also handles the Hudson and Essex line in the Bessemer, Ala., territory, where it operates a branch.

AKRON, O.—The Ge-Na Tire Sales Co., has been chartered with an authorized capital of 200 shares, no par value designated to sell tires, tubes and accessories. Incorporators are W. T. Nagle, F. L. Gehres, Lawrence Halter, C. T. Yeager and Dwight G. Hay.

MILWAUKEE, Wis.—Roman Gabryszek of Milwaukee has been appointed Hudson-Essex dealer in Bay View, a suburb, and has leased the building at 141 Ward Street formerly occupied by the Bay View Nash Co. He was formerly with the Edwards Motor Car Co., distributors for Dodge Brothers cars and Graham trucks.

CLEVELAND, O.—The Carrig & Collins Oil Co., has been incorporated with a $10,000 capital to deal in oils, greases, gasoline and automobile accessories. Incorporators are M. P. Carrig, C. J. Collins, W. G. Gibbons, John E. Gallagher and Emmett P. Dowling.

CHARLOTTE, N. C.—L. G. Rogers, formerly manager of the Southern Radio Corporation, of Charlotte, N. C., has assumed his duties as southern representative of the Radio Corporation of America, with headquarters at Charlotte.

CHICAGO.—The seventh branch establishment in Chicago of the Studebaker Sales Company is to be constructed at Lawrence and Avers Avenues, Albany Park, it is announced by H. R. Levy, president of the company.

TOLEDO, O.—The Francis-Raitz Auto Sales Co., 3412-16 Monroe Street, has been chartered with an authorized capital of $5000 to deal in automobiles and accessories. Incorporators are Horace E. Francis, E. P. Raitz, G. E. Raitz, Edward Sowden and R. P. Whitehead.

MINNEAPOLIS, Minn.—Two new Nash dealers in the city are the Halleen Garage, 3008 West Fiftieth Street and Miller Motor Co., 1909 Chicago Avenue. The appointments were made by S. G. Gunderson, assistant manager Northwest Nash Motors, 1008 Nicollet Avenue.

LOS ANGELES.—George Gardiner, for many years general manager of the Master Service Company, and president of the Los Angeles Automobile Trade Association, recently established a replacement parts distributing store in the commercial district of the city.

With the Associations

Exhibit Is Big Success

ABILENE, Texas, Oct. 3.—The fall show of the Abilene Automotive Trades Association, held in connection with the West Texas Fair, was the most successful the automobile dealers of West Texas ever staged. The accessory dealers of Abilene joined with the automobile men to make the show more complete. So did the tire dealers. Seventeen automobile dealers and several accessory and tire dealers had exhibits.

The fall show this year was held in the building erected by the automobile men especially for show purposes. This building was completed at a cost of $25,000.

Dealers report trade greatly stimulated through the show which was attended by some 50,000 persons.

Peoria Season Opens

PEORIA, Ill., Oct. 3. — At the first meeting of the fall of the Peoria Automobile Trade Association, President E. R. Maleham, presided. Rollen Travis gave the principal address, noting some of the pitfalls of the automotive industry and issuing a note of warning. It was voted to co-operate in a state membership campaign and committees will call upon every dealer within a radius of 50 miles and endeavor to procure his membership in the state association. Similar campaigns are to be carried in other districts in the hope of swelling the membership by several hundred.

Show Cars at Fair

MEMPHIS, Tenn., Oct. 3.—Favorable conditions attended the seventh annual show of the Memphis Automobile Dealers' Association which was held as a special feature of the Tri State Fair, just closed. The committee in charge of the motor vehicle display was composed of Harter B. Hull, Hugh H. Jetton, and Thomas H. Smart.

R. R. Price is president of the association.

In addition to exhibits of passenger cars, trucks, tractors and accessories were shown.

75,000 See New Models

TYLER, Texas, Oct. 3.—A successful automobile show was held in East Texas at Tyler, by the Tyler Automobile Dealers Association in connection with the East Texas Fair. The show lasted for one week during which more than 75,000 persons viewed the new models. Twelve dealers participated in the show. Dealers from ten surrounding counties were here. Business has improved as a result of the show, dealers declare.

LeQuatte Managing Iowa Association

T. W. LeQuatte

DES MOINES, Ia., Oct. 3.—At a meeting of the directors of the Iowa Automotive Merchants Association, T. W. LeQuatte, formerly of Des Moines but recently of Chicago, was elected secretary-manager of the association. For the past two years Mr. LeQuatte has been vice-president and director of sales for the Potts-Turnball Advertising Agency of Chicago. Prior to his connection in Chicago, Mr. LeQuatte was for 14 years advertising manager of Successful Farming, a Meredith publication at Des Moines.

Mr. LeQuatte is well known as an advertising man, having served as vice-president and treasurer of the Associated Advertising Clubs of the World, director and secretary of the Agricultural Publishers Association, president of the Associated Advertising Clubs of Iowa, president of the Advertising Club of Des Moines and vice-president of the Advertising Club of Chicago.

SHOW COMMITTEE NAMED

TOLEDO, Oct. 3.—Charles E. Doan, head of the Doan Motors Co., distributors of Nash cars in the Toledo territory, has been named chairman of the committee in charge of the Toledo Automobile Show to be held in February.

Other members of the committee selected by the Toledo Automotive Trades association are George W. Close, Jr., Thomas J. Cooper, secretary, John W. Banting, treasurer, and Warren E. Griffith, Paul H. Jones, Eli E. Culver, and Robert Butler.

Fire which destroyed the old Terminal Auditorium has made it necessary to secure a new show place. Lucas County Armory and one of the new downtown garages are being considered as possible show sites.

Names Sales Congress Committee

DENVER, Colo., Oct. 5.—At a meeting of the Denver Automobile Dealers' Association the following committee was appointed to handle the Sales Congress to be held in this city Dec. 9 under the auspices of the National Automobile Dealers' Association and the National Automobile Chamber of Commerce: Chairman, Tom Botterill, distributor for Hudson-Essex; W. J. Hoy, Buick branch manager, and Paul Jarrue, Chevrolet branch manager.

The meeting will probably be held in the ball room of the Brown Palace Hotel, and all dealers of lines represented in the association from Colorado, Wyoming, part of New Mexico, and Nebraska will be invited to attend as guests of their distributors. Four or five speakers of national prominence will appear on the program.

Urge Excise Tax Repeal

FAYETTEVILLE, N. C., Oct. 3.—Approximately 50 members of the North Carolina Automotive Trade Association attended the Fall meeting here of the association's third district, with Harry Clendenin, of Greensboro, the association's president, holding the gavel. A resolution urging repeal of excise taxes on automobiles was unanimously adopted.

Denver Show Planned

DENVER, Oct. 3. — Secretary Tom Braden of the Denver Automobile Dealers' Association has announced the choosing of Feb. 2, 3, 4, 5 and 6, 1926, as the dates for the annual Denver automobile show. This is held in the municipal auditorium each year, and is the principal event of its kind in the state.

Cottrell Is Advanced

SAN FRANCISCO, Oct. 3. — C. C. Cottrell, former manager of the good roads bureau of the California State Automobile Association, has been appointed consulting highway engineer of that organization, according to announcement by H. J. Burnnier, chairman of the association's good roads committee.

Organize at Durham, N. C.

DURHAM, N. C., Oct. 5.—The Durham Automotive Trade Association, recently organized, elected S. P. Alexander president and A. M. Worth, secretary-treasurer. Harry Clendenin, of Greensboro, president of the state association, attended the organization meeting.

Southeast Business Outlook Is Promising Despite Drouth

Collections Reported Slowing Up—Full Effect of Economic Disturbance Expected Next Year

CHARLOTTE, N. C., Oct. 3.—The immediate outlook for the automotive trade in the Southeastern states is promising, with many dealers and distributors reporting accumulations of unfilled orders, but important financing companies report a marked slowing up of collections.

The steadily increasing tightness of money is attributed in part to seasonal agricultural conditions and in part to industrial conditions resulting from a general partial suspension of hundreds of industrial plants because of lack of hydro-electric power incident to the unprecedented drought. The unfavorable aspects of the agricultural situation are expected to become more definite and the managers here of the divisional offices of finance companies indicated their expectation that an increasingly unfavorable affect on the automotive trade will be noted.

The larger dealers and distributors in this territory appear to expect their respective volumes of business in the next twelve months hardly will equal that of the previous like period. Many dealers reported they would be unable to make immediate deliveries on orders before October 15, when the heavy accumulation of orders, unloosed after the recent wave of price-cutting, will have been wiped out.

Some recent improvement was reported in the demand for accessories and garage supplies. The approaching close of the vacation season has resulted in a slackening of the demand for tires, though the tire business continues fair. The radio business continues, poor but is expected to show an early improvement. Only a fair demand was reported for Ford replacement parts.

The Ford Motor Company's assembly plant here reported receipt of orders for 10,200 touring cars within a week after the new models were announced. The plant had attained production only on touring cars by the middle of September.

Make Plans for a Greater Show at Jackson Mississippi

JACKSON, Miss., Oct. 5.—Work is in progress at the State Fair grounds here to provide for the enlarged automotive show, which it is claimed will be the most comprehensive ever shown in Mississippi at any fair, and equal to any show of its kind in the south. The automotive show will be held October 19-24 as a regular department of the State Fair. One of the largest structures, adjacent to the live stock section, is being fitted up for the purpose of housing the automotive show, which is under the personal direction of Dr. R. S. Curry.

Coming Motor Events

Automobile Shows

Danbury, Conn.—Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston—Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago—Oct. 10-17
Seventh annual Used Automobile Show under auspices of Chicago Automobile Trade Association, at Coliseum.

Dallas, Tex.—Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

Boston—Oct. 12-17
Annual radio show in Mechanics' Building. Shelton Fairbanks, manager.

Jackson, Miss.—Oct. 19-24
Automobile Show by local trade in connection with State Fair. Dr. R. S. Curry, manager.

Shreveport, La.—Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

Chicago—Nov. 5-7
Annual show in connection with convention of National Standard Parts Association, Coliseum.

Chicago—Nov. 9-14
Seventh annual exhibit of the Automotive Equipment Association at Coliseum, in connection with annual convention.

New York—Nov. 15-21
Twenty-first Annual Automobile Salon.

New York—Jan. 9-15
National Automobile Show in Grand Central Palace.

Newark, N. J.—Jan. 16-23
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exhibition Co., Chamber of Commerce Building.

Chicago—Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Louisville, Ky.—Feb. 15-20
Louisville Automobile Show, Armory, under the auspices of the Louisville Automobile Dealers Association, J. Garland Lea, manager.

Races

Fresno, Cal.—Oct. 3
Rockingham (Salem, N. H.)—Oct. 17
Baltimore—Oct. 24
Charlotte, N. C.—Nov. 11
Los Angeles, Cal.—Nov. 26

Conventions

Buenos Aires, Argentine—Oct. 3-13
Pan-American Road Congress.

Montreal, Que.—Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Pittsburgh, Pa.—Oct. 12-14
Pennsylvania Automotive Association Convention.

Montreal—Oct. 13-14
Convention of the National Association of Automobile Insurance Companies.

Des Moines, Ia.—Nov. 12-13
Automotive Merchants' Association Convention.

St. Louis—Nov. 17-19
Annual Convention of National Tire Dealers' Association.

New York—Jan. 11-15
Second World Motor Congress, under auspices of National Automobile Chamber of Commerce.

Foreign Shows

Buenos Aires, Argentina—Oct. 3-13
Pan-American Road Congress.

London, England—Oct. 3-17
Olympia Passenger Car Show.

London, England—Oct. 29-Nov. 7
Annual Truck Show.

Berlin, Germany—Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

RECEIVER FOR EARL MOTORS

JACKSON, Mich., Oct. 3.—Frank H. Shaw has been appointed receiver for Earl Motors Company of Jackson, by Circuit Judge Williams, in a decree filed by the Jackson City Bank against the company. All property of the company was ordered turned over to the receiver to be sold for the satisfaction of creditors of the concern. Appraisers have been appointed to value the plant and property. The decree sets forth that the concern owes various banks a total of $604,973.

GOES TO FLINT

OAKLAND, Cal., Oct. 5. — George R. Scott, assistant general manager of the Durant Motor Company of California, with headquarters in Oakland, since the Pacific coast Durant factory came under the management of Norman de Vaux, has been appointed assistant general manager in charge of production at the Flint Motor Company's Plant, Flint, Mich.

Toledo Prepares to Receive Fleet of Twenty Airplanes

TOLEDO, Oct. 2.—Arrangements are being made for the Glidden tour of a fleet of about 20 aeroplanes to stop in Toledo through Robert A. Stranahan, president of the Champion Spark Plug Co., leading Toledoan interested in promotion of commercial aviation in this part of the country.

The flyers will probably stop here at Heatherdowns, a large new subdivision in which suitable acreage for landing is available.

A committee headed by Stranahan is purchasing an airport for Toledo and some of the Ford aviation engineers have been in Toledo to survey various sites selected by the committee.

Stranahan proposes to purchase the field and develop it and later turn it over to the city when legal steps can be taken by the city to purchase such an airport

Luisville Begins to Feel Effect of Reduced Prices

Jed Car Stocks Lower Than Usual and Fall Is Expected to Be Best Season

LOUISVILLE, Oct. 1.—The effect of pe reductions and new models which, en first announced, failed to materially rease new car sales, is beginning to felt generally. September sales are ad of August and are expected to al July. Good general rains have ken the extended drouth which caused ributors some anxiety over the rural ation and fall sales throughout the e are expected to show quite an imvement over the summer months.

sed car stocks are lower than at any e during the past 12 months. Dealers tinue to buy used cars carefully and making strenuous efforts to keep ks low. Low resale prices are bling dealers to move used cars idly.

ord sales are showing a decided imvement over August, which had the est Ford sales record of any month year, and the dealers are enthustic over the bright outlook for sales the new models. Many of the new iel open cars have been sold and ivered and practically every dealer a stack of orders for the new closed ds and will begin delivering these iels early in October.

ime payments are satisfactory and y few repossessions are being reted. General business conditions are d. Collections are improving. Truck s are equaling last year's record but not keeping pace with passenger car s. Tire, accessory and replacement ts dealers report sales as fair while io jobbers and dealers report a slight provement and are optimistic over fall winter prospects.

SQUEEKS and RATTLES

Wife—"Dear, the doctor found two spoons and six buttons in baby's stomach."

Hubby (tuning radio) — "Wonderful what a small receiving set can pick up."

—College Comics.

The two great drawbacks to the happiness of the motor tourist are the billboard and the board bill.

—The New Yorker.

Good Excuse

She: Now, what are you stopping for?

He (as the car comes to a halt): I have lost my bearings.

She: Well, at least you are original. Most fellows say they run out of gas.

—Ziff's.

The Wall Street Journal thinks motorists, in the interests of pedestrians, should carry their spare balloon tires on the front bumper.

—The Road.

One headlight is all you need if the other fellow's guess about the side it's on is correct.

—Associated Editors (Chicago).

Take It or Leave It

Painted on the windshield of a used Ford roadster parked in front of **The Road** office was the expressive sign:

"For Sail. Cheep."

Of course the passing proof reader, who had been to spelling school, paused to smile over the sign and get funny at the expense of the rustic-looking owner.

"How soon does this boat sail?" he asked.

"Just as soon as some sucker comes along that can raise the wind," was the rustic's ready reply.

—The Road.

Impossible

"Have you heard the latest? Mrs. Fisher walks in her sleep!"

"How perfectly absurd . . . when they have **three** cars!"

—The Passing Show.

Mildred—What did you do when he proposed to you on that aeroplane trip?

Frances—Oh, I fell for it.

—Exchange.

LIFORNIANS DEMANDING REBUILT USED CARS

(*Continued from page* 39)

ase in the number of men and women o, in buying their first automobile, chase a rebuilt used car. These prosts buy rebuilt cars of standard makes ich sell when new up to $1,500. These s can be bought for $250 to $800 or 0, and this rather unusual wave of ing, which set in along about the inning of vacation time, in May and ie, has done some harm to sales of se cars priced, new, at up to $1,000. the other hand, these buyers have ved an excellent outlet for honestlyuilt cars in the hands of the new-car lers.

Rumors of overstocking in used cars the Pacific coast have gone out widely ough the industry, but it is quite apent to one on the ground that those lers who reduced the prices they alred for used cars to correspond with factory price reductions on new cars e not suffered any on their trade-ins. Probably less than 3 per cent of the dealers in central and northern California failed to do this, and they are the only new-car dealers who have suffered. In spite of the efforts of a number of car-owners who purchased automobiles this year prior to the recent price reductions to allow their cars to go by the board, and get new ones at the reduced figures, there have been comparatively few repossessions. In the opinion of the dealers of San Francisco and Oakland, these repossessions of new cars amount to less than 7 per cent of sales, and these mainly among cars priced at $1,500 or less. In used cars, priced up to about $750 or $800, repossessions are estimated at 9 per cent, slightly higher than among the new cars.

Takes Capital to Stay

Dealers in used-cars only have been having rough going, and only those with capital, or the ability to get capital, have been able to hang on, and the greater part of the used car business has gone back where it belongs, to the reputable and established dealers in new cars. The tendency to separate completely the new-car business from the used-car section is growing rapidly in the establishments of all the new car dealers. Some of these dealers are openly advocating the elimination of all "trade-ins," by the simple method of paying cash for all used-cars bought, and demanding cash first payment on all new cars sold. There has been a well-sponsored movement among San Francisco dealers for some time to enter into an agreement whereby each dealer would buy only used cars of the makes which he sells new, paying cash for them or taking them on new car sales, as he prefers. Both these plans have received very serious consideration by the leading dealers of San Francisco and Oakland, and indications are that the recent factory price-cuts and the resultant used-car complications may bring about definite action by the dealers' associations soon.

FORDS, CHEVROLETS AND OVERLANDS

EUREKA No. 32
Special Balloon Tire Jack
Low placement—high lift. Every part designed especially for balloon tire service. Double machine cut screw of high carbon steel. Fast and easy to operate. Equipped with 36 inch collapsible steel handle positively locked in action. Adjustment, 7 to 17 inches. Capacity, 3,000 pounds. Weight, 8½ pounds. Packed in individual cartons.
Price - - - - - - $5.75

EUREKA No. 28
A husky ratchet type jack. Lifting pawls are heavy and spring mechanism simple. Adjustment, 8 to 16½ inches. Capacity, 2,000 pounds. Weight, 4½ pounds.
Price - - - - - - $2.25

Who makes it?

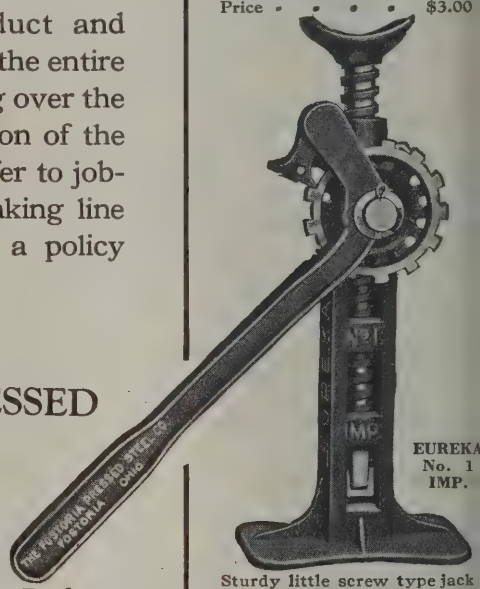
WHEN a jobber or dealer considers handling a line, of course he asks: "What is it?"

But the question of even more importance to him is: "Who makes it?"

A good pump is a good pump—a good jack is but a good jack, after all.

But when it comes to handling them, expecting to build a decent trade in them, make money and friends with them, and get real lasting satisfaction out of your relationship with them—the organization that makes them is the vital thing.

Back of every Eureka-Fostoria Jack or Pump is the integrity of the Fostoria Pressed Steel Company—a house whose reputation for quality of product and squareness of policy is known to the entire automotive trade. In taking over the manufacture and distribution of the Eureka-Fostoria line, we offer to jobber and dealer a money-making line that is a substantial one—and a policy that protects you.



Write for details.

THE FOSTORIA PRESSED STEEL COMPANY
(Successors to the Ashland Mfg. Co., Ashland, Ohio)

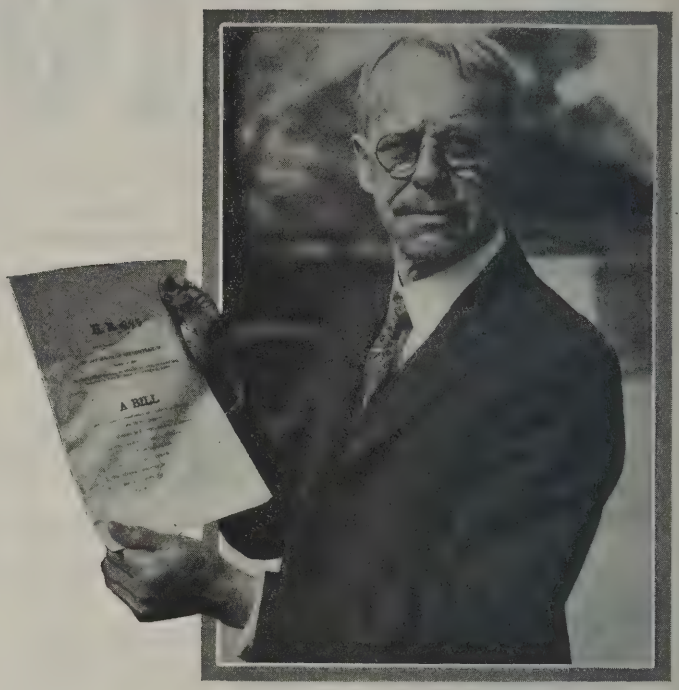
A TAX-DOGGED INDUSTRY APPEALS

For Relief

Repeal of Automotive War Taxes Urged Upon Congress as Ways and Means Committee Meets to Consider New Revenue Bill

The Ways and Means Committee of the House of Representatives will meet in Washington Oct. 19 to begin consideration of the tax reductions that will be incorporated in a bill to be presented to Congress when it meets the first Monday in December. On Oct. 24 and 25 the Ways and Means Committee will hear representations from those advocating repeal of the automotive war taxes. Trade associations and motorists can make their desires known to this committee without appearing before it in person by sending letters and telegrams to it at Washington, D. C. The personnel of the committee is given in another column.

By SAM SHELTON



AN industry that has been long suffering in bearing its burden of war taxes believes that it is now entitled to relief.

More than 12,000,000 owners of motor vehicles believe that the war has been over long enough for the Government to have adjusted its finances so as to get along without the imposition of a heavy tax on this essential transportation industry.

Citizens who next year will buy probably 4,000,000 new motor vehicles assert that it would be an injustice for the Government to collect from them an average of about $30 in war tax on each vehicle, or a grand total of $120,000,000 as penalty for using the most highly developed individual transportation system the world has ever known.

Manufacturers, distributors, retailers and users of motor vehicles, patriotic and long patient in the payment of a heavy war tax, are at last united in an overwhelming demand for the complete elimination of these taxes which are plainly an unjust and discriminatory penalty upon the greatest single industry in the United States.

In other words, an appeal is going up to Congress from the owners of more than 17,500,000 motor vehicles for relief from the war-time excise taxes that must be paid on the purchase of parts, tires, accessories and new vehicles. The trade joins in this appeal because it recognizes the unjust restriction that is placed on business by such a tax.

Will automotive war taxes be repealed in the new tax reduction bill? The Honorable W. R. Green from Iowa probably could give the answer. He is chairman of the House Ways and Means Committee, which must pass on all revenue bills, one of which he is holding in the photograph

The automotive war taxes are imposed by the Federal Government directly upon the manufacturer of motor vehicles, parts, tires and accessories. But this tax is passed on from manufacturer to dealer and from dealer to consumer. In other words, it becomes an addition to the retail price of automotive merchandise and the consumer, as in the case of most taxes, is the ultimate payer.

But the tax is nevertheless a burden to the trade. Its collection and accounting to the Government entails a great deal of machinery and overhead expense that ought to be eliminated. It serves as a distinct increase in the delivered price of motor vehicles, over and above the manufacturer's advertised retail price, and thus is an active creator of sales resistance. It is the almost universal practice of motor car manufacturers to advertise retail prices F. O. B. factory. To this price the dealer must add freight charges and the war tax. Customers knowing the advertised retail prices are at first shocked when the delivered price is quoted, the degree of the shock depending somewhat upon the distance from the factory, but augmented nevertheless by the war tax which in 1924 averaged nearly $30 on every vehicle.

The elimination of this tax would immediately amount to a substantial reduction in the delivered price of new motor vehicles, the amount of the reduction being proportionate to the price of the vehicle. But this reduction would not in the least cut down the profits of dealers, as most factory reductions do, or of the manufacturers, but would serve as a healthy stimulus to business and actually would enable the trade to make a more satisfactory profit through

doing away with red tape and extra bookkeeping and accounting.

The automotive excise taxes, commonly known as war taxes and imposed to raise revenue needed on account of the late war, have been in effect since Oct. 4, 1917, a period of eight years. In that time these taxes have taken from the motorists of America nearly one billion dollars. The American Automobile Association has computed the amount to have been $862,000,000 up to June 30, 1925. Approximately $15,000,000 more was collected in July this year and assuming that this was an average for the months of August and September there has now been added the sum of $45,000,000 making a grand total of $907,000,000.

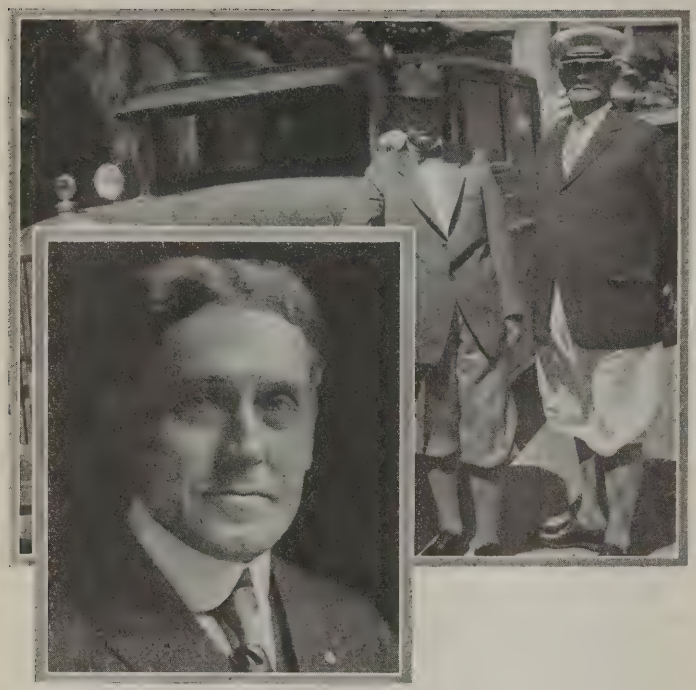
Automotive War Tax Collections for Fiscal Years 1918 to 1925

Year	Automobile motorcycle, etc 3 per cent	Motor Trucks 3 per cent	Automobiles and motorcycles 5 per cent	Tires, accessories, parts, etc. 5 per cent (Also truck parts 3 per cent)	Total
1918 (9 mo.)	$23,981,268.35	.....	.....	.....	$ 23,981,268.35
1919	24,076,261.97	$ 1,934,222.51	$ 17,915,510.81	$ 4,908,276.18	48,834,271.47
1920	.....	14,471,464.32	76,315,814.26	53,135,513.43	143,922,792.01
1921	.....	11,640,055.92	64,388,184.22	39,518,009.17	115,546,249.31
1922	.....	8,404,557.85	56,684,540.30	39,344,664.60	104,433,762.75
1923	.....	10,678,761.05	92,736,580.44	40,875,148.79	144,290,490.28
1924	.....	11,510,563.05	112,870,536.57	33,633,609.78	158,014,709.40
1925 (1st 6 mo. fiscal year†)	.....	4,333,708.23	43,576,048.73	12,452,098.66	60,361,855.67
Total	$48,057,530.32	$62,973,332.93	$464,487,215.38	$223,867,320.61	$799,385,399.24

† i. e. Last six months calendar year 1924.

The tax on automobiles was first imposed by the War Revenue Act of 1917, effective October 4, 1917, at a rate of 3 per cent on the wholesale value.

The tax does not end with the purchase of the motor vehicle. As long as the vehicle is operated it pays tribute to the war tax because of the imposition of a levy of two and one-half per cent on tires, parts and accessories. This tax was five per cent until last year when Congress, at the demand of the industry and motor car owners, cut it in half. At the same time the tax of three per cent on motor trucks and bodies was eliminated as applying to chassis of a wholesale value of $1,000 or under and bodies of a wholesale value of $200 or under. This is the only relief the industry has had since the taxes were first imposed eight years ago, although many other businesses and industries have been completely freed from war taxes.



The tax on tires, parts and accessories, from the beginning up to June 30 this year, amounted to $223,867,320. Last year its total was $33,633,609 and for the first half of this year, at the reduced rate, it was $12,452,098. In July this year it was $1,844,970. This is distinctly a tax on transportation because it adds to the cost of operating motor vehicles, taking its toll with every repair that involves the installation of a new part and with every tire replacement.

The automotive war tax was at first three per cent on vehicles, parts and tires. In 1918 the tax on passenger automobiles, tires, accessories and parts (except truck parts) was increased to five per cent. On trucks and truck parts it remained at three per cent. In 1924, as previously stated, the tax on parts, accessories and tires was reduced to two and one-half per cent, and the truck industry was to a considerable extent relieved of the tax.

These reductions, however, were not recommended in the revenue measure as reported by the House Ways and Means Committee. They were put in on the floor of the House after representatives of the industry and car owners had made vigorous protests to Congress.

Although 13 different types of war taxes were levied between 1917 and 1919 and something like 40 classes of merchandise were subjected to the excise levy on manufacturers and products, the great majority of these taxes

Leaders in the fight for repeal of automotive war taxes. Standing, Thomas P. Henry, president, and Ernest N. Smith, manager of the American Automobile Association. Insert, H. H. Rice, of General Motors, chairman of the special taxation committee of the National Automobile Chamber of Commerce

have been repealed and the automotive industry stands alone as the outstanding contributor to Governmental expense through a direct tax. The direct war tax on the older forms of transportation, including railway freight, express and passenger traffic, oil pipelines and telegraph and telephone, has been taken off.

Under the "manufacturers and products tax," which originally affected about 40 classes of merchandise, only seven classes remain subject to the tax. These are automotive products, cameras and lenses, cigar or cigaret holders and pipes, firearms and shells and cartridges, photographic films and plates, slot vending and weighing machines, mah jongg and similar tile sets.

Of all these the automotive products easily lead in the amount of revenue produced for the treasury. In fact the great productiveness of the automotive tax is the main reason it was not repealed years ago. It provides a single source from which the Government has been able to obtain more than $1,000,000 a year for the last six years, running up to $158,000,000 last year. This tax last year represented 5.6 per cent of the total internal revenue receipts of the treasury.

Apathetic Attitude a Factor

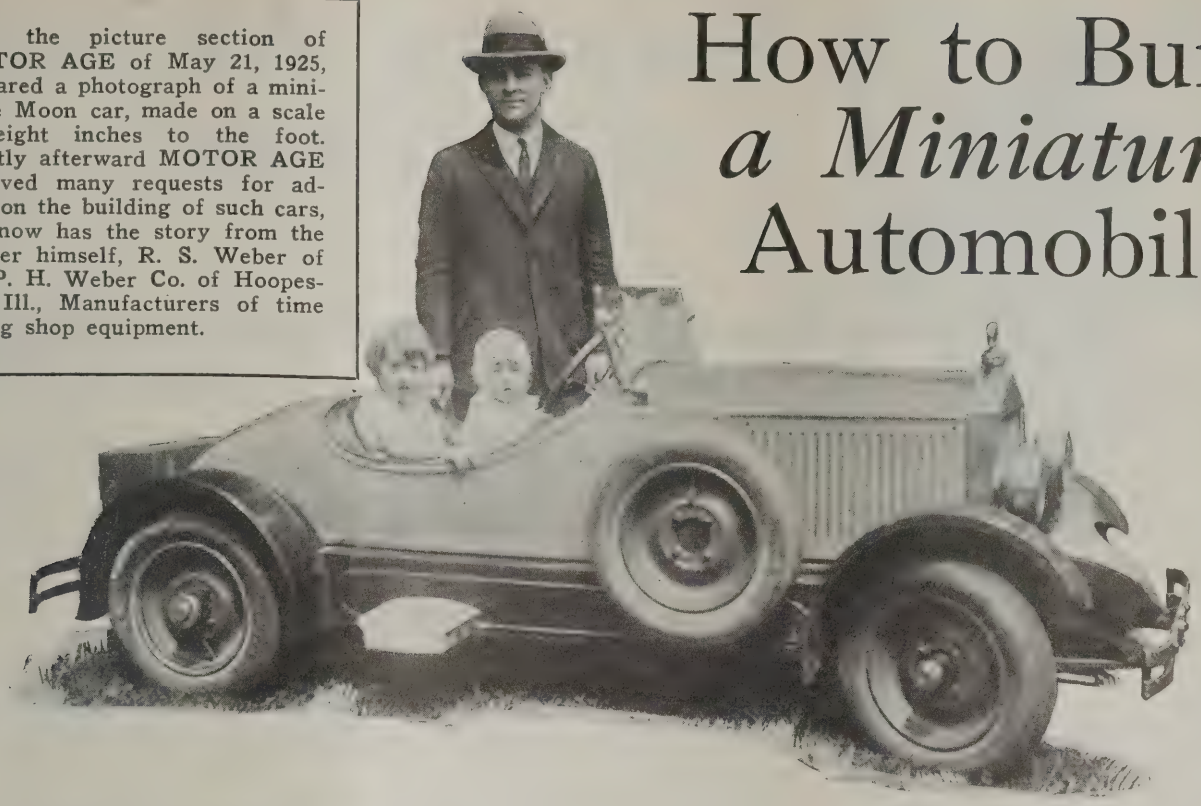
Another fact working against the repeal of the automotive war tax has been the apparent apathy of the industry and car owners. The tax was accepted in time of war with a spirit of patriotism and it was recognized by all concerned that it would have to continue for a reasonable time after the close of hostilities awaiting recovery of the Government from the great strain of war.

For these reasons the industry and its vast number of customers continued to bear the burden of war taxes without complaint. But the recovery of Governmental finances has been rapid. Treasury surpluses from year to year have permitted important tax reductions, and Congress being a political institution naturally has given relief in those quarters from which the loudest protests came. Hundreds of minor taxes have been repealed and the income tax has been materially reduced, and yet the slight relief so far granted the automotive industry does not aggregate more than about $25,000,000 out of annual taxation exceeding $150,000,000.

And yet practically three times as many people pay automotive war taxes as pay income taxes. In 1924 there were 4,000,000 income tax payers in the United States. In the same year there were 17,591,981 registered motor vehicles in the country, but it is estimated by the American Automobile Association that these were owned by 12,000,000 owners. Large fleets of buses, trucks and taxicabs, and multiple ownership of passenger cars account for the smaller number of owners. But so far as Congress is concerned up to this time the 4,000,000 income tax payers have made a louder noise than the 12,000,000 motor vehicle owners.

The industry and owners, however, have awakened to the situation. Treasury officials have estimated that the financial condition of the Government will permit this year a tax reduction of some $300,000,000, nearly twice the total annual contribution of the automotive taxes. The feeling has grown that under these conditions the car owners and the trade are entitled to relief, especially in view of the many other taxes imposed directly or indirectly upon the automobile owner. These include the state registration tax, gasoline tax in 44 states, personal property tax in most states, city registration fee or wheel tax in towns and cities, and in some states a driver's license fee and a title certificate fee. Not all owners are subject to all these taxes, but all pay one or more of them and the great majority pay several.

In the campaign to obtain relief from the Federal war tax the trade and motorists' organizations have united. The American Motorists Association comprising in its membership 700,000 car owners in 734 state and local clubs is exerting every effort to impress upon Congress the fact that car owners are now demanding repeal of the war tax. Cooperating in this campaign are the National Automobile Chamber of Commerce, the National Automobile Dealers' Association, the Automotive Equipment Association, the Motor and Accessory Manufacturers' Association, the Automotive Manufacturers' Association, and hundreds of local trade and owners associations.



The important fact, however, is that a tremendous demand has arisen from individual car owners for relief from this tax. Realization of the burden it is has struck the motorists, and this, together with the knowledge that the Government can afford to give up the tax, strengthens the demand for its repeal.

Members of House Ways and Means Committee which will draft tax reduction bill:

In the picture section of MOTOR AGE of May 21, 1925, appeared a photograph of a miniature Moon car, made on a scale of eight inches to the foot. Shortly afterward MOTOR AGE received many requests for advice on the building of such cars, and now has the story from the builder himself, R. S. Weber of the P. H. Weber Co. of Hoopeston, Ill., Manufacturers of time saving shop equipment.

How to Build *a Miniature* Automobile

R. S. Weber, Whose Replica of a Moon Car Has Been Widely Used for Advertising Purposes, Tells MOTOR AGE Readers How He Made It

By R. S. WEBER

IF the person building a miniature car is a good machinist, a welder, a woodworker and a tinner he will get by with the job. In fact, he almost has to be a Jack of all Trades if he desires to do all the work himself. However, if he lacks some of these qualifications he need not be discouraged, as one can call on any of the aforementioned mechanics who are always ready to do this work at a reasonable price in order to get the benefit of the advertisement which goes with a job of this kind, (and this I believe, is worth all the time and effort that one puts into it.)

The most important part of building a miniature car is getting the correct proportions. I have seen a good many miniature cars, but very, very few are well proportioned. If you expect your car to look like an honest-to-goodness automobile, it must have the proportions of a large car carried out to the smallest detail. The easiest way to do this is to take the specifications of a large car that you expect to model after, and use the scale of 8 inches to the foot or 2/3 (which is the scale that I used), or if you desire a still smaller car, 1/2 size, use 6 inches to the foot. If you hold this all the way through, you may rest assured you will have a good looking job when you have finished.

I think the most important tools in building a car are a hacksaw and a welding torch. Almost everything has to be sawed into, a piece cut out and welded back together.

An autmobile graveyard is the best place I know of to get parts. I would suggest for the frame, to use an old frame from one of the lighter style cars. This of course, will have to be shortened and made narrower by cutting and welding.

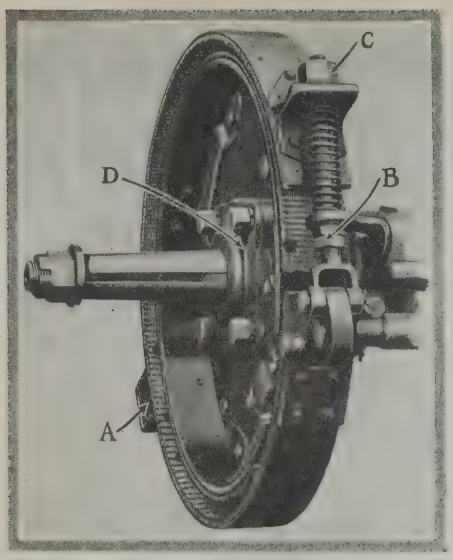
For the engine I used a small four cylinder, made by the Continental Motors Corporation of Detroit, Mich.

The radiator was made by cutting a core from an old used radiator. I then made a top and bottom tank for same and soldered these to the core which had been cut to size. Radiator experts can give you a lift on this.

For the front axle I would suggest using either a Ford or Chevrolet, which is a lighter type. In case you wish to drop them, or undersling them, you may do this by heating in a forge and bending to desired shape after which it will be necessary to cut a piece from the axle to get the proper width.

The rear axle and propellor shaft, of course, will have to be made short by the usual process of cutting and welding.

For the body, I made a wood framework similar to those built by the car manufacturers and covered with sheet metal or body steel. The hood was made by cutting the hood of a used car.



For wheels, I turned wood patterns and had them cast out of aluminum. Then it is necessary to take 3 1/2 inch rims and cut a piece out, heat and rebend to the diameter of the wheel you wish to use.

The tires used on the car shown in the picture are 20 by 4 inch airplane tires which were bought from an airplane supply house.

The accessories such as body rails, and parking lamps can be obtained from any supply house. For the drum head lights one can use Stewart Warner spot lights or any lamp that is of the right proportions.

The bumpers are made of spring steel and nickel plated. For a windshield I cut down a used car windshield and had the posts nickel plated.

The job is painted a light Duco finish, the color used being French cream and khaki.

In spite of the great strides made during the past few years by the four-wheel brakes, there still are many cars fitted with the conventional rear wheel brakes only. For that reason it is well for mechanics to be thoroughly familiar with the external contracting band and internal expanding type brake. Above is shown a typical external contracting band brake with adjustments at A, B and C. At D is the bearing housing plate which must be removed when adjustment of the rear wheel bearing is necessary before the brakes are adjusted

How to Adjust Brakes

Position of Levers Important — Several Supplementary Operations Often Necessary Before Band Clearance Is Corrected

By B. M. IKERT

(The first of a series of articles dealing with conventional rear wheel, mechanical four wheel and hydraulic four wheel brakes)

TO do a good job of adjusting brakes the mechanic must be prepared to spend a bit of time performing the work. It is not enough to merely give attention to the clearance of the bands on the drums and often supplementary operations must be performed to get the desired results.

It also makes some difference as to the car's mileage and one of the first things to decide is whether an adjustment or overhauling of the braking system is necessary. If the lining is worn very thin there is but one remedy—replace it with new. The relining of brakes will not be discussed in this article as it is the aim to deal here with brake adjustment only.

We believe not enough attention has been given in the past to selling the car owner that brake adjustment is quite an involved operation. Too often adjustments are attempted before other things are corrected, and presently the car owner comes back and says the job was not done properly.

Condition of Bearings Should Be Checked

Take the case of loose rear wheel bearings, for example. How many mechanics check up on the condition of these bearings before making brake adjustments? How many realize that it makes a difference in the adjustment of brakes if the work is done with the wheels jacked up or on the ground? How many pay proper attention to the position of the brake levers on the brake operating shafts in order to get maximum leverage with easy pedal action?

Then, there is wheel alignment, wear of the clevis and yoke pins, circularity of the bands, grooved drums, etc., all of which must be taken into consideration.

In a car fitted with conventional rear wheel brakes, speaking now of the service brakes operated by the foot pedal, there are three things to consider. They are:

1—Adjustment of the brake rods for proper length.
2—Adjustment of pedal and levers.
3—Adjustment of brake band clearance.

The brake rods always should be adjusted first. Very often proper brake action can be obtained by merely turning the turn buckles or yoke ends, if adjustable, on the brake rods. The thing to bear in mind is that the brake operating levers on the brake rocker shaft as well as on the brake camshafts must be set in the position where the greatest amount of travel is obtainable for applying the brakes. Reference to Fig. 1 will make this clear.

Here it will be noted that the lever A is set so a pull on the rod B moves it through the greatest distance possible. In order to show this more clearly we have divided the arc C-D into segments of 20 deg. each. If a pull is exerted on the rod B so the lever A travels 20 deg. it

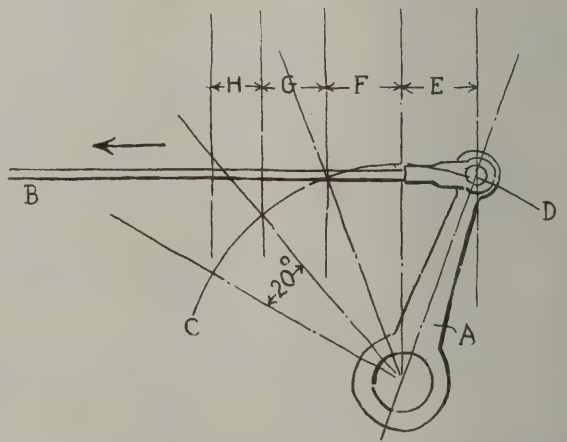


Fig. 1.—This shows a brake lever in positions 20 deg. apart. Note that the distance H and G are less than E and F. The lever operates most advantageously through the distances E and F. Hence, the necessity of getting the levers in the right position before adjusting brakes

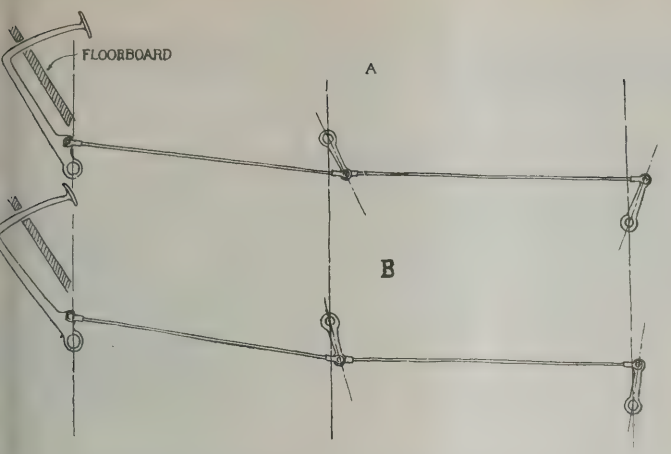

Fig. 2.—Conventional hook-up of rear wheel brakes. At A the foot pedal and levers are in the desired position, while at B the levers will not travel the full distance as they are too near the vertical line. A study of Fig. 1 will make this clear

moves the distance E and if another 20 deg. pull follows, t moves the distance F, which in this case is exactly the ame as E. If, however, an additional 20 deg. travel is dded the straight pull is not as great as either E or F, ut is represented by G. The distance H is still smaller han G. From this diagram it will readily be seen why n making brake adjustments the levers must be in the ost advantageous position.

On brake cross shafts where the levers point downward hey invariably must be swung toward the rear when the rakes are in the off position. Where they point upward he same thing holds true. Naturally there are modifica- ions of this because in some instances where the cross haft levers are comparatively short they may hang traight down.

Conventional Brake Hookup

In Fig. 2, is shown a more or less conventional brake ook-up and at A is shown the proper position of the foot edal in relation to the floor board and the brake operat- ng levers to get maximum braking effort. At B the pedal s too close to the floor and the levers being almost vertical 'ill not exert maximum effort when the brakes are applied.

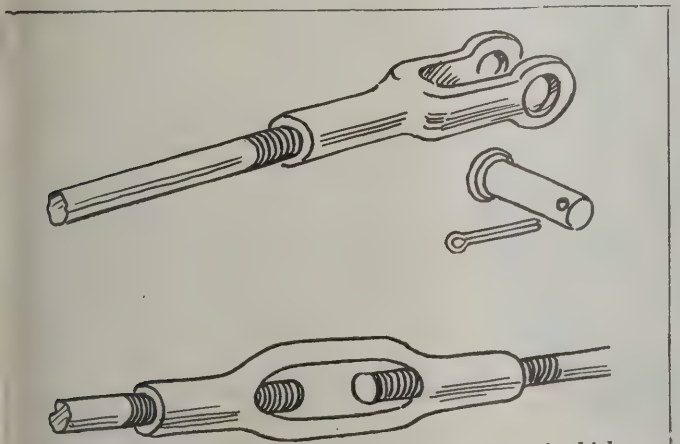

Fig. 3.—Yoke ends and turn buckles by means of which brake rods are adjusted for length. In the former the cotter key and clevis pin have to be removed during adjustment of the yoke. The turn buckle has a right and left thread and needs to be turned only

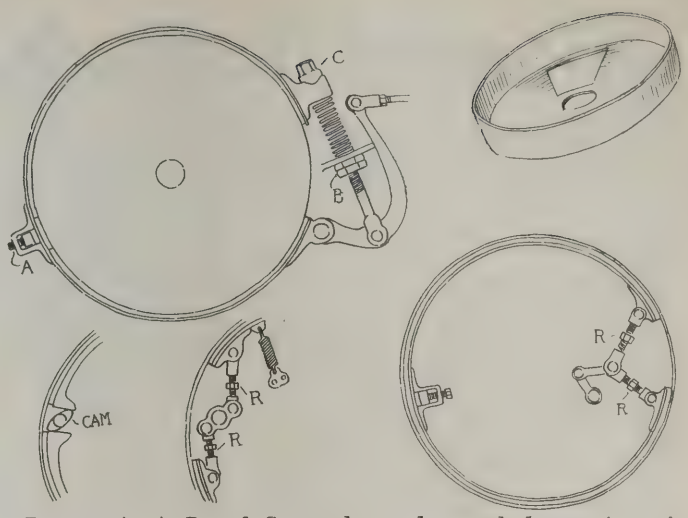

Fig. 4.—At A. B and C are shown the usual three points of adjusting an external contracting band brake. The anchor adjustment at A is first made, then B and C. Above is also shown a dummy drum cut-away so internal brakes, shown below, can be adjusted. At R are the expanding adjustments on a toggle type internal expanding brake. In many cases such brakes are operated by a cam as shown at the left

To get the pedal and levers in the proper position it is usually only necessary to turn the turn buckles to either shorten or lengthen the rods or where adjustable yoke ends are provided, as in Fig. 3, the procedure is to remove the cotter and clevis pin and screw the yoke end in or out on the brake rod.

If adjustment of the brake rods does not give the desired results and if the lining on the bands is still in good condition then the clearance between the band lining and drum must be adjusted, and in the conventional layout of an external contracting type of brake as shown at Fig. 4, there are three places of adjustment. These are designated by points A, B and C. The first one to go after is at A where the brake band is anchored and where usually some form of adjustment is provided in the way of a slotted screw which is turned inward to bring the band closer to the drum or outward to increase the clearance. The clearance at this point should be about the thickness of an ordinary business card.

To adjust the lower portion of the band the lock nut and adjusting nut at B are manipulated to bring the band closer to the drum or to increase the clearance as the case might be. Finally the upper portion of the band is given the proper clearance by screwing down on the adjustment C.

The procedure of adjusting an external band brake as given above is really quite simple, but the trouble is that too often the anchor adjustment at A is entirely forgotten. Many mechanics seek to adjust an external brake by merely turning down on the adjustment C or sometimes B and C, but this does not give uniform clearance around the entire band.

When it comes to adjusting internal expanding brakes, one of the quickest and best ways to do this is to have a dummy drum. Such a drum is shown in Fig 4 and is to all appearances a regular brake drum excepting that a portion of it is cut away so the internal brake mechanism can readily be seen and the adjustments made. Otherwise the wheel of the car has to be replaced and taken off each time the adjustments are made.

Internal, expanding brakes are usually of the cam operated or toggle operated type. The particular type has not much to do with the adjustment since the latter is carried out in much the same manner in each case.

(Continued on Page 20)

Hupmobile Six Now in Production

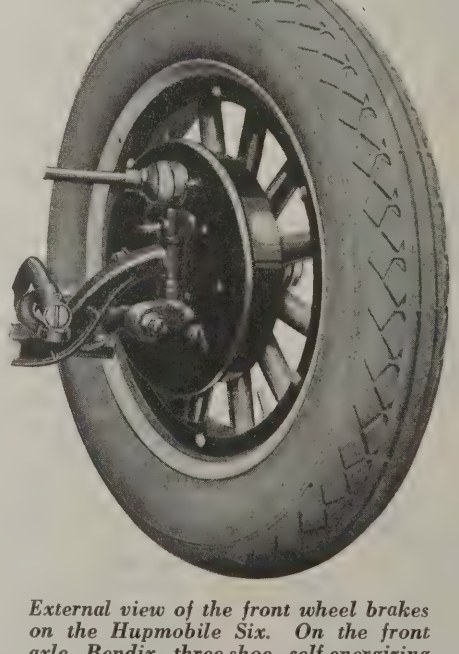
Complete Technical Description of Latest Product of Hupp Motor Car Corporation Offered in Sedan Model at $1285 and in Touring Model at $1225

By LESLIE S. GILLETTE

SENSING the demand for a popular priced six cylinder car, the Hupp Motor Car Corp., after building four-cylinder automobiles since 1908, announces this week the manufacture of a medium sized six. Besides acting as a companion car to the eight-in-line model introduced ten months ago, which except for minor mechanical improvements continues unchanged, the new six will complete the Hupp line for the coming year.

Presented in two body types only, a sedan at $1285 and a touring at $1225, the new six is powered with a 3⅛ by 4¼ in. bore and stroke "L" head engine mounted in a chassis of 114 in. wheelbase. The weight of the closed car fully equipped is 2,800 lbs. and that of the phaeton 2,650 lbs. Balloon tires, 30 by 5.25 in. size, and four wheel brakes are standard equipment.

On the front axle, Bendix three shoe self-energizing brakes are adopted which operate simultaneously with the orthodox contracting band rear wheel brakes. This arrangement is totally different from the Lockheed hydraulic four wheel brake principle employed on the larger eight cylinder car.



Excepting of course for the number of cylinders and the braking arrangement, Hupmobile's latest product may be considered a smaller edition of the higher priced model. The same principle of conventional design is apparent throughout while the materials as well as the inspection standards are identical to those employed in the manufacture of the eight. In step with the general simple design which characterizes the chassis, careful consideration has been given to those parts or units which are likely to require maintenance so that the cost and time required to service the car are cut to the minimum.

Acceleration Smooth

A representative of MOTOR AGE driving a regular sedan model was impressed by the all around performance of the car as well as the comfortable manner the car rides on bad roads at speeds above 40 m. p. h. The rate of acceleration throughout the entire speed range was unusually smooth and free from vibration, the car from a 2 m. p. h. high gear speed attaining a 58 m. p. h. speedometer speed in a remarkably short time.

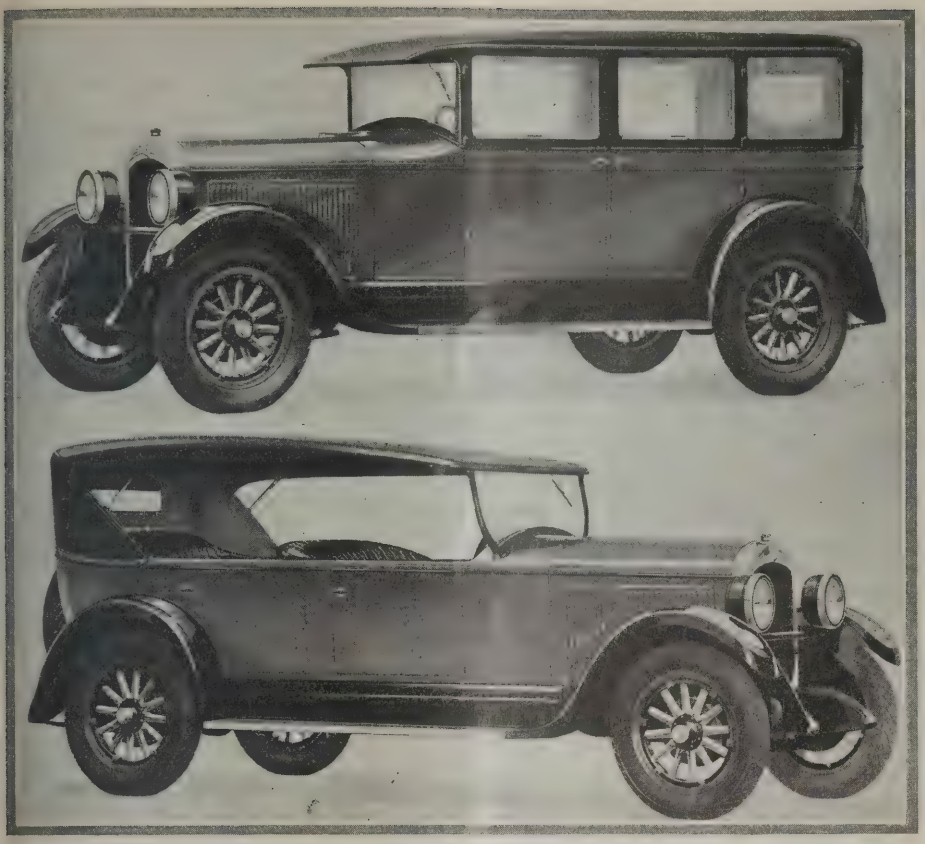
While the new engine has a piston displacement of 195.6 cu. in. and a S. A. E. rated h. p. of 23.4, excess of 50 b. h. p. is delivered at 3,000 r. p. m of the crankshaft. Installed at an angle, the unit powerplant provides a straight line drive to the rear axle thereby reducing the frictional losses at the universal joints to a minimum.

Cylinders and crankcase are cast in block with the head a separate casting. Four boring and two honing operations provide for exceptional smoothness in the cylinder bore which is held to a .002 in. variation in diameter. The combustion chamber is of the high compression type and is entirely machine finished. While a block casting, each cylinder is separated from the next allowing complete circulation of the water which extends down two-thirds of the piston travel. One of the unusual features of this engine is the capacity of the side water chambers which are formed by a removable cover running the full length of the block. The route followed by the water is from the radiator inlet to the water pump, the latter being of the impellor type and located integral with the front part of the cylinder block. From the pump, water is forced to the large side chambers, from there distributed around the cylinders. As the valve side necessarily requires more water, extra large holes on this side permit a rapid flow of water at this point. Smaller holes are used on the opposite side, thereby producing uniform combustion chambe temperatures. From the holes, the wate returns up through the cylinder head t the radiator the latter being of the ce lular honeycomb type and cradle mounte so as to be protected from shocks. Th water capacity of the entire system 3¼ gals.

External view of the front wheel brakes on the Hupmobile Six. On the front axle Bendix three-shoe self-energizing mechanically operated brakes are employed

Employing four point suspension, th crankcase is designed for utmost fram rigidity and ease of accessibility whic is exemplified in the fact that the piston and connecting rods can be withdraw through the bottom without disturbin any other part of the engine. The mai bearing caps which are recessed in th case to provide maximum rigidity carr the static- and dynamic balanced crank shaft in four bronze back babbitt line bearings. Dimensions of the main bear ings follows:

Front 1⅝ in. length by 2 11/32 in. diameter



Second 1¼ in. length by 2 23/64 in diameter.

Third 1¼ in. length by 2⅜ in. diameter

Rear 2⅛ in. length by 2 25/64 in diameter.

Bearing Caps Have Brass Shims

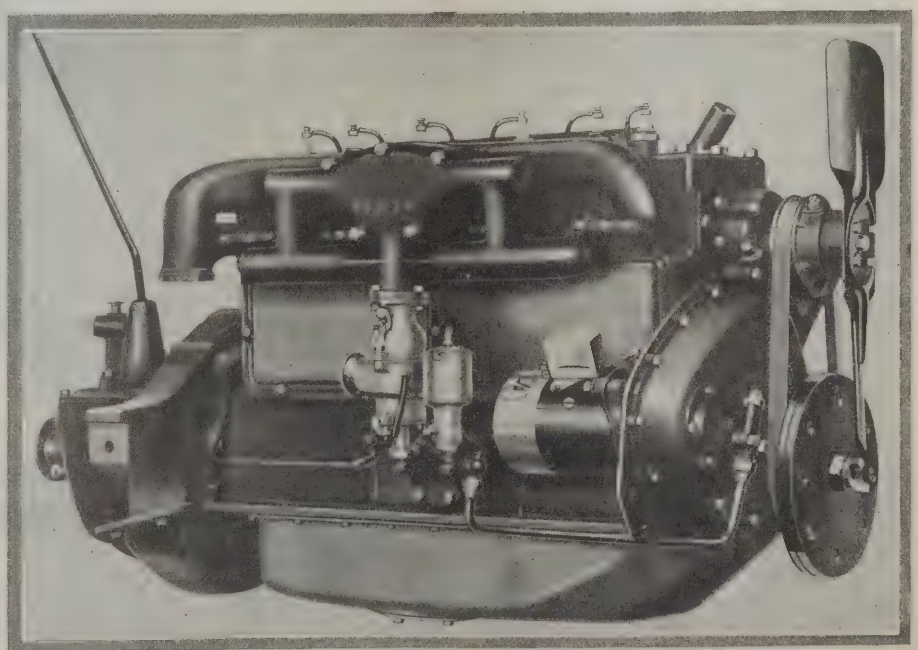
All bearing caps are provided wit brass shims and chrome nickel stee studs locked in position by recesses ma chined in the crankcase casting. Bear ings are bonded to the connecting rod by a special spinning process and ar machine broached before hand fitted t crankshaft. The length of the connect ing rod bearings is 1 17/64 in. with diameter of 2⅛ in. A Lanchester vibra tion dampener of the friction disk typ and similar to that adopted on the eight in-line engine a few months ago, i mounted on the front end of the si crankshaft and forms part of the fa drive pulley while at the opposite end the semi-steel flywheel is attached b four bolts. The crankshaft itself is o massive construction weighing 64½ lbs Thrust is taken by the flanged fron bearing provided with shims to take u shaft end play. The rear of the crank shaft is machined to receive a steel rolle bearing and bearing shell which sup ports the front end of the clutch gea shaft. The carbon steel connecting rod are machined all over and have a cente to center length of 8¾ in. with ⅜ in dia. bolts securing the bearing caps. Al rods are weighed and selected in group of six with an allowance of .01 lbs variation in weight. At the small end the pistons are secured by hollow hard ened steel pins clamped in the rods an

Top: Hupmobile new six-cylinder sedan listing at $1,285; Bottom: Five-passenger phaeton listing at $1,225

providing a bearing surface 1 5/16 in. long. It is claimed that the steel pins bearing against cast iron pistons makes for greater longevity than when the more usual bronze bushings are employed. The piston pins which are hardened, ground and polished, are of the same diameter as those in the four cylinder model being 7/8 in. dia.

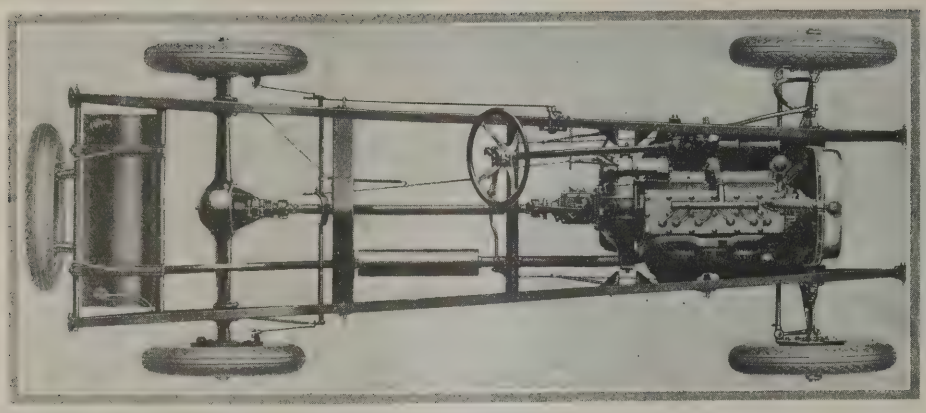
Steel dies are employed to form the gray iron pistons, each weighing 19 ozs. and 3 1/8 in. long. There are two 1/8 in. rings fitted above the pin with one oil scraping ring 5/16 in. wide below. The weight of the complete assembly including the connecting rods complete is 48 ozs.

A Morse silent chain 1 1/4 in. wide operates the camshaft and the generator, the latter being pivot mounted and provided with a screw and lock nut making for easy adjustment of the timing chain. The camshaft is a 15-25 point carbon steel forging carried on the right side of the engine the same as the generator. Four large removable phospor bronze bearings of the following dimensions carry the shaft which has its thrust taken by a special plunger and spring at the front end:



Front	2 3/32 in. diameter by	1 3/8 in. length
Second	2 5/64 in. diameter by	7/8 in. length
Third	2 1/16 in. diameter by	7/8 in. length
Rear	1 1/2 in. diameter by	1 1/2 in. length

Integral case hardened cams actuate the mushroom type valve lifters. The latter have their base formed of chilled iron and joined to a steel stem of 7/8 in. diameter. By the removal of three cap screws, it is possible to detach one of the two valve cluster assemblies complete. This operation is simple to effect as by the removal of the valve covers, the entire mechanism including the lifter assemblies is readily accessible making valve adjustment and other service work easier to check. Both inlet and exhaust valves have a 1 5/8 in. clear diameter, a lift of 5/16 in., 3/8 in. diameter stems and 45 deg. face angle. Two-piece construction is used to join the cast iron head to the steel stem of the inlet valve while the exhaust valve is made in one piece of special alloy steel. The springs are of oil tempered chrome vanadium steel exerting a pressure of 58 lbs.



One of the unusual features of the new six engine is the drive for the oil pump and the ignition distributor, the former being located on the upper right side of the engine and the latter on the lower left. The shaft actuating these two units while driven from the center of the camshaft by spiral gears is inclined across the engine at an angle approximating 30 deg. in relation to transverse horizontal plane of the crankshaft. Mounted at the ends of this accessories shaft, the two units are in a most accessible position, enabling the pump driving gear clearance to be adjusted on the outside of the engine.

Oil Distributed by Four Pipes

From the gear pump, oil is distributed to each of the main crankshaft bearings by four pipes each placed immediately below the bearings. By means of holes drilled through the crankshaft webs oil is led from the main bearings to the connecting rod journals. Cylinder walls, piston pins, valve mechanism and camshaft bearings are lubricated by oil spray which is doubly insured by the open construction at the junction where the crankcase joins the cylinders. Being mounted at an angle, a supply of oil is maintained in the oil pump at all times. A large strainer which can be removed quickly for cleaning purposes through a special hole in the pressed steel oil pan, completely surrounds the entrance of the oil suction pipe. The oil pressure relief valve located on the timing chain cover,

Manifold side of the Hupp Six showing the vibration dampener on the front end of the crankshaft and the combined fan and water pump unit

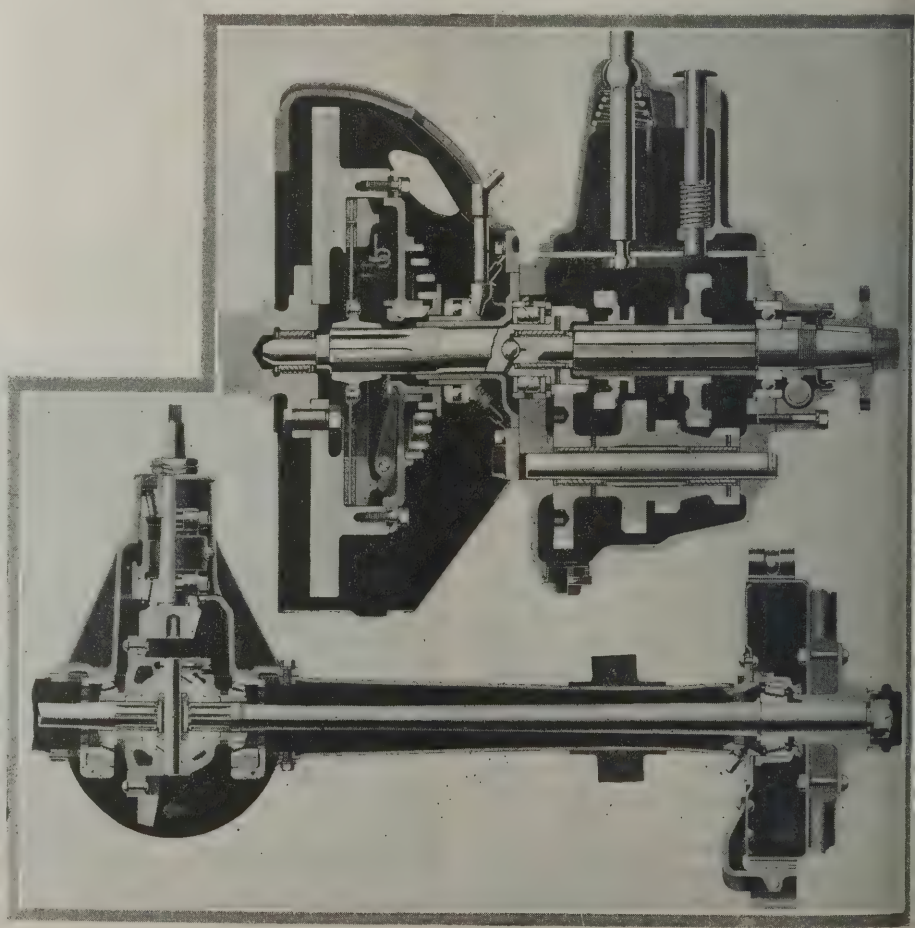
Hupmobile Six chassis showing the simplicity of design

controls the pressure at all engine speeds and its overflow is used to lubricate the front end drive. Mounted on the left side of the engine, the float type oil level gage is graduated to show 8 qts. of oil which is the capacity of the crankcase.

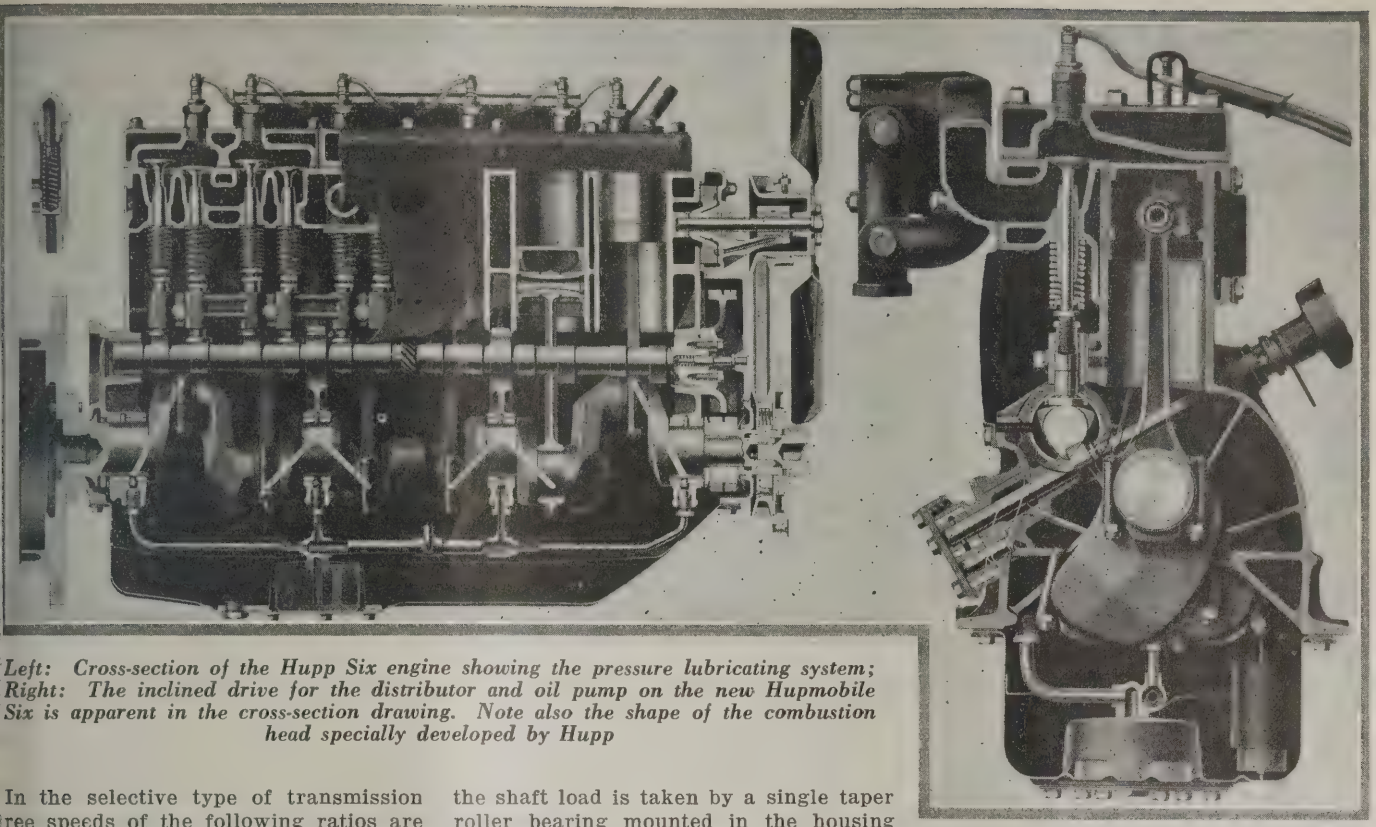
A Stewart model No. 25 carbureter of the plain expanding tube type is fed with fuel drawn from a 15½ gal. tank located at the rear by a vacuum tank. A supply gage of the hydrostatic principle built into the tank is supplied as standard equipment with the dial conveniently located on the dash. The design of the manifolds is somewhat unusual and has attributed to a large extent to the smooth running of the new six, it is claimed. The exterior intake manifold is connected directly to the hot spot on the exhaust. After the gas is volatilized at this point, it is delivered to large size distributing passages having abrupt square corners which tend to break up the mixture more, producing a highly turbulent gas to the cylinders. Exhaust gases are discharged through extra large valve openings and thence to the muffler, the latter being fitted with a tail pipe extending out to a point beyond the gas tank.

An Auto-Lite make of generator, distributer and starter are employed. As previously mentioned the generator is driven by the timing chain on the right hand side of the engine with the starter mounted in the clutch housing on the left side of the engine. Engagement with the flywheel gear is through a Bendix drive of the outboard type. Current for the distributer and the lighting system are supplied by a Willard 6 volt, 15 plate, 120 amp. hour battery carried in the frame.

Spark Control Semi-Automatic



Spark control of the distributor is semi-automatic and a special arm on the unit limits the advance and retard travel to provide uniformity of control. The hand spark lever is operated in a small arc at the top of the steering post. Besides being very accessible in the center of the engine on the left side, the distributer which has only three moving parts is well protected from mud and water likely to be splashed through the radiator. The coil is equally well protected on the front of the dash. The high tension wires running to the Champion spark plugs are protected by a metal conduit. Firing order is 1-5-3-6-2-4.



Forming a unit with the fan, the water pump assembly is attached to the front of the cylinder block by cap screws. The shaft carrying the impellor at the rear and the fan at the forward end, is of stainless steel and lubricated at the rear bearing by the Alemite system. On the forward end, the fan is carried on a special Hyatt roller bearing, this also being lubricated by an Alemite valve. The thrusts of both the impellor and the two bladed fan ar so arranged that they equalize one an other at all speeds. To reduce the neces sity of repacking the pump shaft, a spe cial arrangement in the form of tw metallic packings with an oil distributin ring in the center which are held in plac by an ordinary packing nut has bee adopted. The entire unit is driven by vee type belt which is adjusted by movable flange on the fan drive housing

Clutch Single Plate

Integral with the engine are the clutc and gearset. The clutch is of the singl plate dry disk type in which the drive member consists of one 9 in. diamete steel plate faced on both sides wit woven asbestos lining. One spring is em ployed which exerts a plate pressure i excess of 200 lbs. while special reductio leverages provide easy clutch control Adjustments are provided to compensat for the friction surface wear as well a for the pedal clearance, both of whic are accessible. Lubrication is necessar at only one point in the clutch assembly this is at the release bearing, the latte being of the radial thrust type. Hyat roller bearings are used to support th clutch shaft at either ends. The fron end is carried in a bearing in the flywhee and the rear is supported by the fron transmission bearing.

Top: Cross-section view showing the single plate clutch and transmission on the new Hupmobile Six. The roller bearing in the rear end of the crankshaft and carrying the front end of the clutch should be noted. Note also the roller bearing mounting of the secondary shaft; Bottom: The semi-floating rear axle on the new Six

Left: Cross-section of the Hupp Six engine showing the pressure lubricating system; Right: The inclined drive for the distributor and oil pump on the new Hupmobile Six is apparent in the cross-section drawing. Note also the shape of the combustion head specially developed by Hupp

In the selective type of transmission three speeds of the following ratios are provided:

Low, 3.24 to 1; Second, 1.71 to 1; Third, 1.00 to 1; Reverse, 4.15 to 1.

High carbon chromium steel is employed for the gears in which the teeth are given a burnish finish and have chamfered tooth ends to permit easy meshing. The sliding gear shaft is a six splined forging of 3½ per cent nickel steel and is supported at the forward end in a roller bearing and at the rear in a radial ball bearing. Countershaft gears operate on two Hyatt roller bearings which set on an inner bore of the shaft and ground to a mirror finish. The speedometer drive is taken off directly behind the main rear bearing. An approved lock is built into the housing while the gear shift lever is 26⅜ in. high.

Connection is made with the rear axle by a 2 in. diameter tubular propellor shaft carrying a metal oil-tight universal joint at either end. The rear axle is a spiral bevel, semi-floating design employing the Hotchkiss form of drive, and providing a standard gear reduction ratio of 4.9 to one. A pressed steel housing of the banjo type is employed with the differential carrier assembly bolted to the main housing. Supported on either side by an adjustable taper roller bearing, the differential assembly is detachable as a complete unit after the two high carbon chrome nickel axle shafts have been withdrawn. The drive gear along with the drive pinion, differential side gears and pinions are all formed of 3½ per cent nickel steel. Integrally formed, the drive pinion and shaft are held in an over hung mounting by two easily adjustable taper roller bearings. Drop forged wheel hubs are keyed to the tapered axle shaft while the shaft load is taken by a single taper roller bearing mounted in the housing near each of the wheels.

Spring bed plates are forged integral with the "I" beam 35-45 point carbon steel one piece front axle. To eliminate possibility of spring movement beneath the clips, the bed plates themselves are machined. The steering pivot pins are mounted in the axle in an inclined position while the steering knuckle thrust load is taken by special bronze and steel bearings. These two factors contribute largely to the easy steering experienced with the balloon tires. Steering knuckles and the steering arm are of forged chrome nickel steel with the tie rod of heavy construction and fitted with adjustable ball sockets at each end. Rebound snubbers for use with balloon tires are connected to the front axle only.

Exceptionally easy steering is a feature of the new car. The make of steering gear employed is the Ross cam and lever type which permits a 60 deg. total cut of the front wheels represented by two and one-half complete revolutions of the walnut 18 in. diameter steering wheel. The turning radius in either direction is given at 18½ ft.

Braking System

Two different operating principles are adopted in the application of four wheel brakes. The brakes on the rear wheels are of the orthodox external contracting band type consisting of a continuous piece of steel band lined with friction material. On the front wheels, the Bendix internal three shoe self energizing principle is adopted which uses the motion of the car to create and intensify its own stopping power. The three individually lined shoes are quickly replaceable and by means of an inspection hole in the totally enclosed brake housing, the shoes can easily be adjusted by the simple outside adjusting nut. After the drums have been assembled on the wheels, the interior braking service is machined insuring concentric drums, closer brake adjustments and adding to the smooth operation of the brakes.

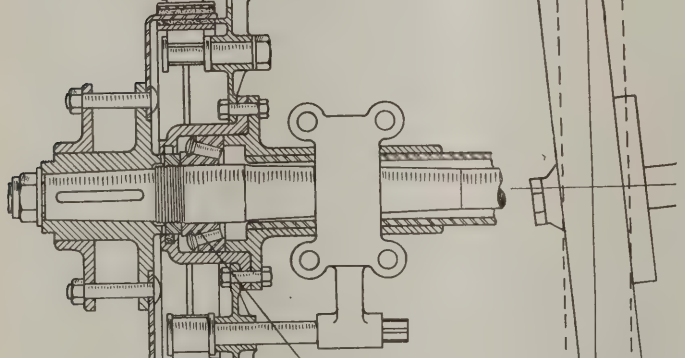
Both rear and front brakes are actuated simultaneously by the brake pedal. From the equalizer located immediately behind the center tubular frame members, the brakes are applied by rods, those on the front wheels being operated through the Bendix-Perrot control device and connected directly to the lever mounted on the shaft between the frame and the wheel. A universal joint is provided at either end of the short shaft, the one on the inside being bolted to the car's frame and the other joined to the operating cam inside the drum. This arrangement is claimed to be self adjusting and self cleaning. To give more room in the front compartment and make for a direct pull, the hand or parking brake is attached to the frame on the left side of the driver and operates independently the same set of rear wheel brakes that comprise the service for wheel brake hook-up.

The straight tapered frame with channel side members 5 in. deep, 1¾ in. flanges and of stock $\frac{5}{32}$ in. thick, is fitted with four torsion resisting tubular cross members and one channel member, the rear motor support acting as an additional brace. Metal running boards covered with corrugated rubber are employed.

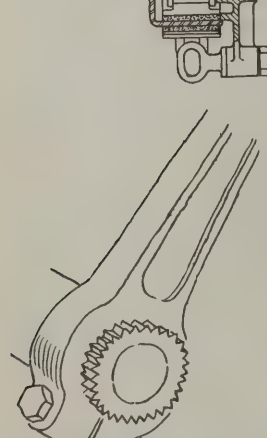
Spring shackles of new design consisting of drop-forged threaded links and a

series of laminated steel leaves are adopted. This type shackle requires no adjustment and maintains correct tension at all times and tends to eliminate noise. Springs are semi-elliptic being of high carbon steel with the main leaves of special alloy steel. Front springs comprise eight leaves 2 in. wide with a length of 37 in., while those on the rear which have ten leaves for the open model and eleven for the closed cars, are 54 in. long by 2 in. wide. Spring eyes are fitted with one piece bronze bushings into which fit ⅝ in. diameter case hardened spring bolts, except at the shackle at the front of the rear spring which carries a ¾ in. bolt. Chassis lubrication is provided for by 25 Alemite fittings. Twelve spoke natural finish artillery wheels together with straight side one piece demountable Kelsey rims are standard equipment. Minimum road clearance is 9 in. with standard 30 by 5.25 tires.

Both body models are built by Murray and are of composite wood and steel construction and finished in Duco. Taking into consideration the length of wheelbase, the amount of room, especially the leg space, is unusual in both bodies. The doors are extra wide, those at the rear being 27 in. across and the front 23½ in. wide for both the open and closed models. A new Olive Green color combination is adopted for both models being relieved by a fine line of striping in a contrasting shade. The sedan is upholstered in gray brougham cloth and fitted with a one piece vision ventilating windshield. The touring model also carries a one piece windshield and swings from the top of the side posts. In addition a cowl ventilator is provided. A gray mottled upholstery of genuine leather is employed on the open car while the side curtains of the folding type are stored in a compartment behind the front seat. The lines of both bodies are improved by a strip of moulding extending from the radiator entirely around the body, forming on the closed model the popular double belt effect. While of characteristi Hupmobile shape, the nickel plate radiator shell is of higher and narrowe design having its appearance enhance by fluting on the side nearest the cor



A tie bar upon which are mounted th interchangeable nickel plated barrel typ headlights serves as an additional brac for the front fenders and provides a plac for carrying the license plates. Twenty one c. p. headlight bulbs dimmed by resistance coil are furnished while th entire lighting and horn circuits are pr tected by a 25 ampere fuse. Non-glar lenses and a combination tail and sto light are fitted. Instruments enclosed b octagon shape frames are grouped i dividually and symmetrically on th walnut finish instrument panel. At nigh the flush set instruments are illuminate by an unusual design hooded light. Othe items besides the usual line and include as standard equipment are: Automati windshield wiper, rear view mirror, das gasoline gage, and transmission lock.



How to Adjust Brakes

(Continued from Page 15)

Usually the brake shoes are anchored at a point similar to that of an external contracting brake and the adjustment must be made here first to just clear the drum. After this the band or shoes is expanded slightly by means of an adjustment, such as shown at R in Fig. 4.

As in the case of external contracting brakes proper operating of the internal expanding brake can often be obtained by merely changing the position of the lever o the camshaft which actuates the brake. These levers a usually placed at the end of the cam operating shaft tube being held there by serrations or other means in th end of the tube or shaft and in the hole of the lever. clamping bolt on the lever keeps it in position and th bolt must first be loosened before the lever can be change to the new position. This is shown in Fig. 5.

Bottom: Fig. 5.—Serrations on end brake shafts by means of which the lever can be adjusted. A cam operated internal brake can be adjusted this way. A clamping bolt holds the lever in place; Top: Fig. 6.—Rear wheel bearings which must first be inspected and conditioned before adjusting brakes. A wheel out of alignment is shown at the right. Brake adjustment on such a wheel is difficult. A bent axle shaft may be the cause

As previously stated there is quite a difference betwee adjusting brakes with the rear wheels jacked up or wit the wheels on the ground, all depending on the adjustme of the rear wheel bearings. Obviously if a rear whe bearing is loose there is considerable up and down pla in the axle shaft and any brake adjustment made wit the wheel jacked up will be altered when the wheel rest upon the ground. For this reason repairmen frequent adjust brakes with the wheels on the ground unless very complete job of brake adjustment is desired. If th wheel is jacked up it should be turned by hand to see it runs true as a bent axle shaft will cause a wheel run out of line which naturally wears the brake linin rapidly and quickly spoils brake adjustment.

The wheels should be shaken by hand to test the bearin adjustment and if there is excessive play the wheel mu come off and the bearing either renewed or properly a justed. Every rear axle has some means of adjusting th bearing and a more or less typical layout is shown Fig. 6.

One of the common service operations performed in co nection with brakes is that of remedying squeaking brake This condition may be caused by several things and o of the most common is dirt forced in the pores of th lining when the brakes are applied. This dirt can temporarily removed with kerosene. A good preventati is to mix a small amount of resin and castor oil so th mixture is a fluid and then applying a small quanti to the brake bands. Application of soapstone sometim helps, but none of the remedies will do much good if th squeaking is due to the brake lining rivets scraping th drums.

Another article dealing with the matter of adjusting mechani four wheel brakes will be discussed in a later issue.

Surveys Show Automotive Merchants Lead as Radio Dealers

THE 1925-1926 Radio Advertisers' Data Book issued by Arthur Rosenberg & Co., New York City, contains a great deal of information of interest to all merchants engaged in the distribution of radio products. Quoting from a number of surveys that have been made, the book presents the conclusion that automotive merchants, including car dealers, garages and accessory stores, constitute the largest single class of retail outlets for radio sets.

One of these surveys, shown in chart No. 1, was made by the McGraw-Hill publications in a group of towns of 7,800 to 100,000 population. This survey concludes that automotive dealers lead as retailers of radio because of several factors, chief of which are:

1. Many radio manufacturers were (and still are) makers of automotive accessories, and they have used their old outlets.

2. Automobile dealers and garages are found universally throughout the country.

3. They have been seeking merchandise for non-automotive season sales.

A survey made by the Capper publications in four typical rural and small-town

CHART NO. 1

Who Sells Radio?

	POPULATION OF TOWNS							
	7,000 to 9,000	9,000 to 15,000	15,000 to 25,000	25,000 to 40,000	40,000 to 57,000	57,000 to 110,000	110,000 to 200,000	TOTALS
AUTO DEALERS, GARAGES, SUPPLIES	3	4	8	3	5	5	2	6	36
EXCLUSIVE RADIO RETAILER	3	0	1	9	1	2	1	9	26
MUSIC and TALKING MACHINE	2	2	1	2	4	1	3	6	21
ELECTRICAL DEALERS	0	2	3	1	3	3	3	5	20

FURNITURE DEALERS	0	0	0	1	2	0	2	1	6
SPORTING GOODS	0	0	1	1	1	1	0	1	5
HARDWARE	1	0	1	0	0	0	0	2	4
MISC. STORES - DRUGGISTS etc.	3	0	0	1	0	0	1	2	7

This chart from the Radio Advertisers' Data Book published by Arthur Rosenberg Co. was compiled from figures gathered in eight industrial centers. It shows the kinds of merchants selling radio in the various cities

sections of the Middle West showed that in 176 towns in those communities there were 105 automotive merchants selling radio. In the same towns there were only 44 exclusive radio dealers, but other merchants selling radio were found in the following numbers: Hardware dealers, 60; electrical dealers, 62; music stores, 38; drugs and sports, 32; general and department stores, 10; miscellaneous stores and agents, 112.

The Capper survey indicated that in towns of more than 5,000 population the exclusive radio dealer occupies a leading position, but that in smaller communities the most important factor is the automotive merchant.

It will be recalled that a survey made

CHART NO. 2

Who Sells Radio?

	POPULATION of TOWNS						
	50,000 to 100,000	25,000 to 50,000	10,000 to 25,000	5,000 to 10,000	2,500 to 5,000	1,000 to 2,500	UNDER 1,000

Misc. Stores Agents etc. — AVERAGE PER TOWN	1.16	1.15	.33	.72	.54	.50	.63

This survey made in sections of Ohio, Kansas, Texas and Iowa shows the rank of various types of merchants selling radio in the towns of those communities. Chart taken from Radio Advertisers' Data Book by Arthur Rosenberg Co.

by MOTOR AGE taking in 500 automotive dealer establishments showed that approximately 45 per cent are now selling some form of radio merchandise. The details of this survey were published in the Sept. 3 issue of MOTOR AGE.

Automotive Men Visit Radio Factory

TWENTY-FIVE officials and salesmen of the Washington Auto Supply Co., Washington and Peoria, Ill., recently visited the Neutrowound factory and Radio Station WOK, at Homewood, Ill., as guests of the Neutrowound Radio Manufacturing Co. After inspecting the factory and the radio station, they were taken to the Terrace Garden, in the Morrison Hotel, Chicago, where they visited WOK's studio, while the artists were performing, and were entertained at a dinner given in their honor. Following the dinner a sales conference was held with officials of the Neutrowound Company and plans discussed for a vigorous sales campaign for Neutrowound Radio Receiving Sets during the coming season. The visitors declared themselves as enthusiastic over the outlook.

The photograph below was taken while the visitors were at the radio station. Standing, left to right: Fred Ausbury, W. H. Smith, A. Mann, J. F. Strock, F. W. Gocker, H. G. Powell, A. P. Schmidt, R. W. Vogelgesang, C. Smith, R. Fredericks, H. A. Marshall, Lawrence Kans. Below, left to right: J. E. Ferguson, George Rinkenberger, H. I. Wallace, G. E. Trego, W. H. Stafford, Geo. W. Seay, Ed D. Waca, W. G. Blomeyer, W. H. Huber, H. J. Berlin, H. B. Herberger, Fred Yetter and M. H. Vowles.

Amateur Operators to Meet

TOLEDO, Oct. 9.—The Toledo Radio Club is sponsoring a convention of amateur radio operators from the first central division and third Ohio division here on November 6 and 7, preliminary to the annual radio show to be held at the county armory.

It is anticipated that possibly 500 may be induced to come to Toledo to talk over common problems and get the latest developments of the industry.

Details of the meeting have not yet been completed.

24-Hour Service Department

COLUMBUS, Oct. 9.—A radio service department, open 24 hours daily has been started by the Sell Electric Co., which is located in the heart of a good residence section. This is the first time that any Columbus concern has run a radio service department, which remains open at night. The company also carries a full line of radio sets and supplies and has made quite a name for itself in the radio as well as electrical fields.

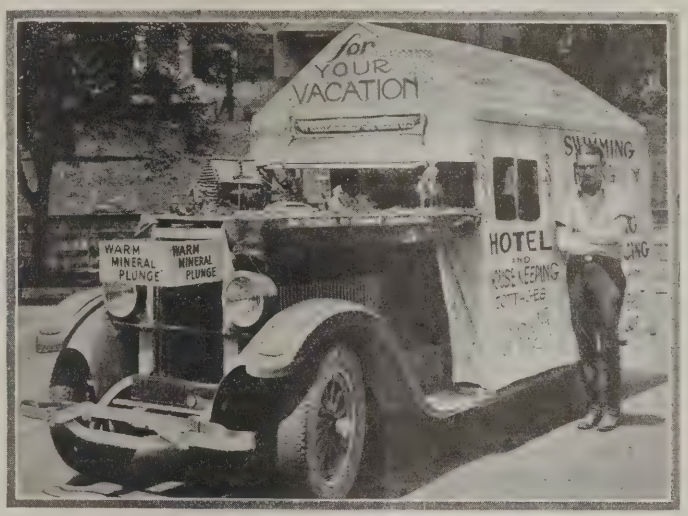
Sales representatives visit Neutrowound factory

MOTOR AGE'S PICTURE PAGES

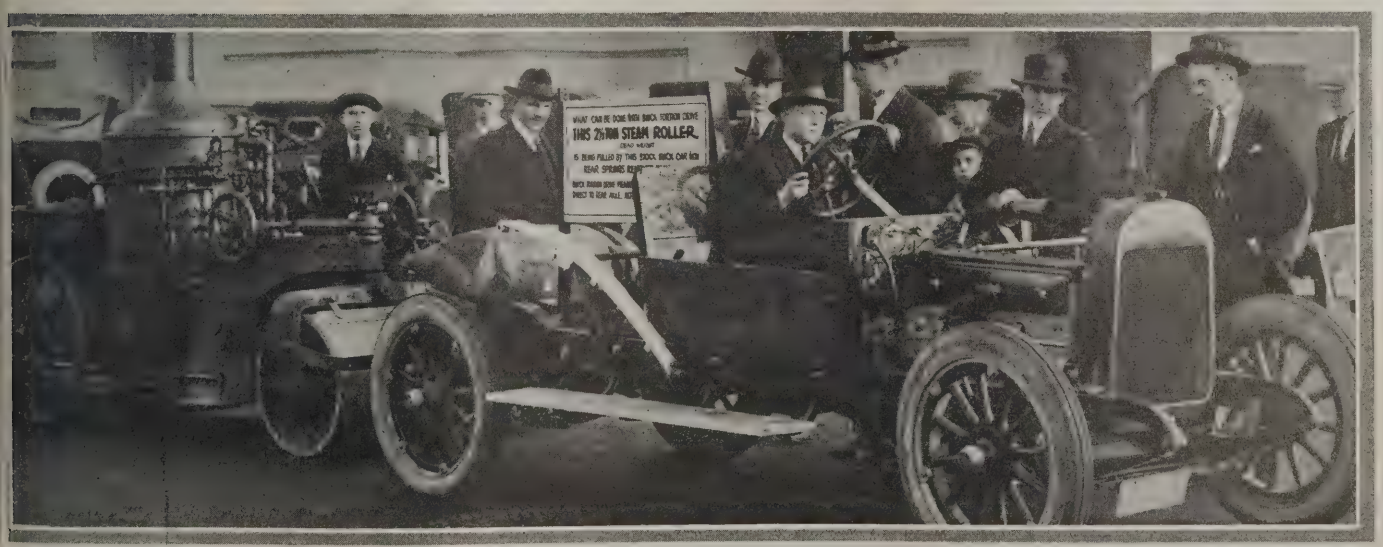
A FAITHFUL SERVANT. Electric ca driven 65,000 miles by Mark Hoffman R. F. D. postman, Manchester, N. H. Th car is 20 years old and is equipped with a Exide-Ironclad battery. It is a Waverl electric which first appeared in 1905. Mr Hoffman was one of the first of Uncl Sam's postmen to adopt the automobil for making deliveries, and the first in New Hampshire.

A NOVEL USE. The Weaver cranes shown in the photographs at the right were the means of saving the lives of starving cattle in Kansas following a severe drought. It is said that the cattle were so weak that when they lay down they could not get up without the assistance of the cranes.

1,700 PER CENT OVER HIS QUOTA. F. B. Fifrick of Marinette, Wis., hung up this record in a town of 14,000 population. As a publicity stunt he organized a parade of Velie owners. Then when the circus came along he put a car in front of the elephants and hung Velie banners on each of the six animals.



OF AUTOMOTIVE INTEREST



N AUTOMOTIVE TEAM. **Nine** members of the Philadelphia Athletics have bought Nash cars. The cars were placed through J. G. Roberts, local distributor

OU CAN'T MISS IT. Accessories at the Howard Automobile o. service station in San Francisco are carried in a specially uilt room in the service station designed in Mission style with ed tile roof. Automobilists driving in can't help seeing the accessories.

A HOUSE ON WHEELS. Wheeler Hot Springs, a vacation resort about 100 miles from Los Angeles, is being advertised with this Studebaker Special Six Duplex-Phaeton, on top of which has been built a tent house. A miniature replica of the springs has been set over the hood.

ROVING IT. For the purpose of demonstrating what could be done with the Buick tortion drive, a San Francisco automotive oncern pulled a 2½-ton steam roller through the streets with a stock car with the rear springs removed as shown in the photograph.

Questions and Answers on Dealers' Problems

BUILDING - ELECTRICAL - FLAT RATES
SHOP - LEGAL - PAINT & TRIM - ACCOUNTING

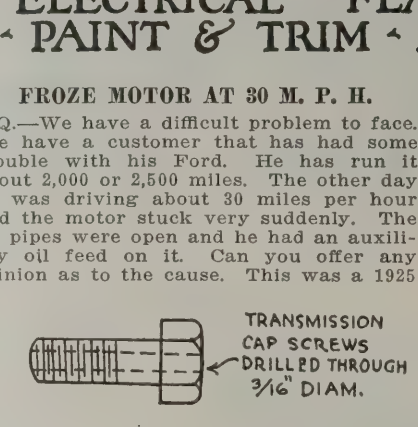
Keeping Fordson Lubricant Where It Belongs

Q.—We have a Fordson tractor that is letting the transmission grease out of the transmission into the crankcase. Give instructions as to method of stopping this. When filled according to direction it will let about a gallon per day into the crankcase.—Jackson Brothers Garage, Wyanet, Ill.

Readers of this article are requested to refer to the Fordson Tractor Parts Price List. The mixing of lubricant referred to in the question takes place through part No. S-327, this being called transmission housing plate.

The large opening in the transmission housing plate carries the bearing No. S-351 and the bearing in turn carries the transmission drive shaft part S-335. The transmission housing plate oil shield No. S-345 is supposed to prevent the lubricant from working back and forth through the large opening in S-327. A possible explanation of the trouble referred to is end play in the transmission drive shaft part No. 335 which in working back and forth produces a sort of pumping action which in some cases allows the 600 W. to work forward into the engine and in some cases allows the oil to work back into the transmission.

In order to relieve the pressure or vacuum, whichever it is, which is formed in the transmission by this pumping action due to the slight end play, it is possible to remove the transmission cap screws just under the tool box and drill a $\frac{3}{16}$ inch hole the full length of each cap screw as shown in the upper portion of sketch. This gives a sort of breather pipe construction to the transmission and prevents the formation of either pressure or vacuum in it.



Another method of overcoming the trouble is to use from two to six of the transmission housing plate oil shields instead of the one which is specified.

Another method is to use one of these oil shields made into a sort of fan. This is done by cutting half-inch slits radially in one of these shields No. S-345, these slits being about ¼ in. apart all around the oil shield. The radial projections which are left by the process are then bent either one way or the other, depending on whether the tractor shows a tendency for the heavy lubricant to go forward or for the light oil to go into the transmission.

Sketch showing this construction is also given. If the trouble has slowly developed as the tractor got older all parts that a visual inspection shows to be worn will have to be replaced. This usually includes parts No. S-351, S-327, and S-345.

FROZE MOTOR AT 30 M. P. H.

Q.—We have a difficult problem to face. We have a customer that has had some trouble with his Ford. He has run it about 2,000 or 2,500 miles. The other day he was driving about 30 miles per hour and the motor stuck very suddenly. The oil pipes were open and he had an auxiliary oil feed on it. Can you offer any opinion as to the cause. This was a 1925

Hollow bolt and fan shaped washers effect Fordson repair

Ford roadster. Only about two months old. Glenwood Trouble Shooters.

One possibility is that the pistons were fitted rather closely and that the clearance was not sufficient to allow for a speed of 30 miles per hour for any length of time. Another possibility is that the engine was somewhat low on oil and a third possibility that there was insufficient water in the cooling system. We feel that lack of water or tightly fitted pistons are the most likely causes of this trouble.

CASHING IN ON FUEL COMPOUNDS

Q.—We have a 1924 model Buick 6 and a 1924 Chevrolet, on which we wish to raise the compression in the cylinders to get the best results from treated fuel. Will you kindly tell us how much metal to remove from the detachable heads in these motors to get best results.—G. W. Hamilton, Dalton, Ga.

On the Buick it would be well to check up the clearance you have between the ends of the spark plugs and the cylinder block, for when material is removed from the cylinder head it will bring the spark plug nearer to both the piston and the cylinder block. We would recommend removing $\frac{1}{16}$ inch and trying the engine. If the operation is all right you might try moving another 32nd and then later on a second $\frac{1}{32}$ inch, making a total of not more than ⅛ inch removed. On the Chevrolet remove material from block.

Pierce-Arrow Truck Valve Timing

Q.—Inform us how to time a two-to Pierce-Arrow Army type truck Model 1 I have tried all ordinary ways withou success. This truck has two camshafts —Automobile Electric Company, 215 E 6th avenue, Pine Bluff, Ark.

Although there is Model 18 listed in the Pierce-Arrow data we are of the impression that this is what is known as the X4 Army type truck. The original timing is different from that which we supply you, but the latest timing can be accomplished on the old model and with better results than the original. This information is supplied by the local Pierce-Arrow truck maintenance organization.

The inlet should open five degrees before top dead center and the exhaust close five degrees after top dead center. The flywheel of course, will not be marked for this timing and it will be necessary for you to figure out the equivalent of five degrees on the flywheel. This may be done by determining the circumference of the flywheel and then dividing the circumference into 72 parts. One 72nd of the total circumference of the wheel will equal five degrees.

ENGINE SPEED FORMULA

Q. What is the motor speed in revolutions per minute at 25 miles per hour car speed on the following cars: Chrysler, Paige, Peerless six and eight, Cadillac, Lincoln, Pierce Arrow series 80 and 83, Wills Sainte Claire six and eight, Marmon, Jordan six and eight, Hupmobile eight, Buick Master Six, Willys Knight six, Franklin and Hudson. G. A. Huddleston, Service Manager, Packard-Rochester Motors, Inc., 1042 University avenue, Rochester, N. Y.

The engine r.p.m. may be obtained by the following formula:

$$R.P.M. = \frac{336 \times S \times G}{D}$$

In this formula S equals the car speed, G equals gear ratio and D equals diameter of the rear wheel in inches. The specification tables in MOTOR AGE give the tire size and rear axle ratio from which information you can calculate the engine speed for any car in which you are interested. Additional information will be given by letter.

THIS WAY OR THAT WAY—IT'S ALL O. K.

Q—When installing a worm wheel on differential housing is there a right or left side of the worm wheel relative to the housing? The axle in question is a Timken.—J. B. Scott, Kelly Motor Co., Buckhannon, W. Va.

We are informed by the local Timken service station that it does not matter which way the wheel is installed.

Planning Your New Building

By TOM WILDER

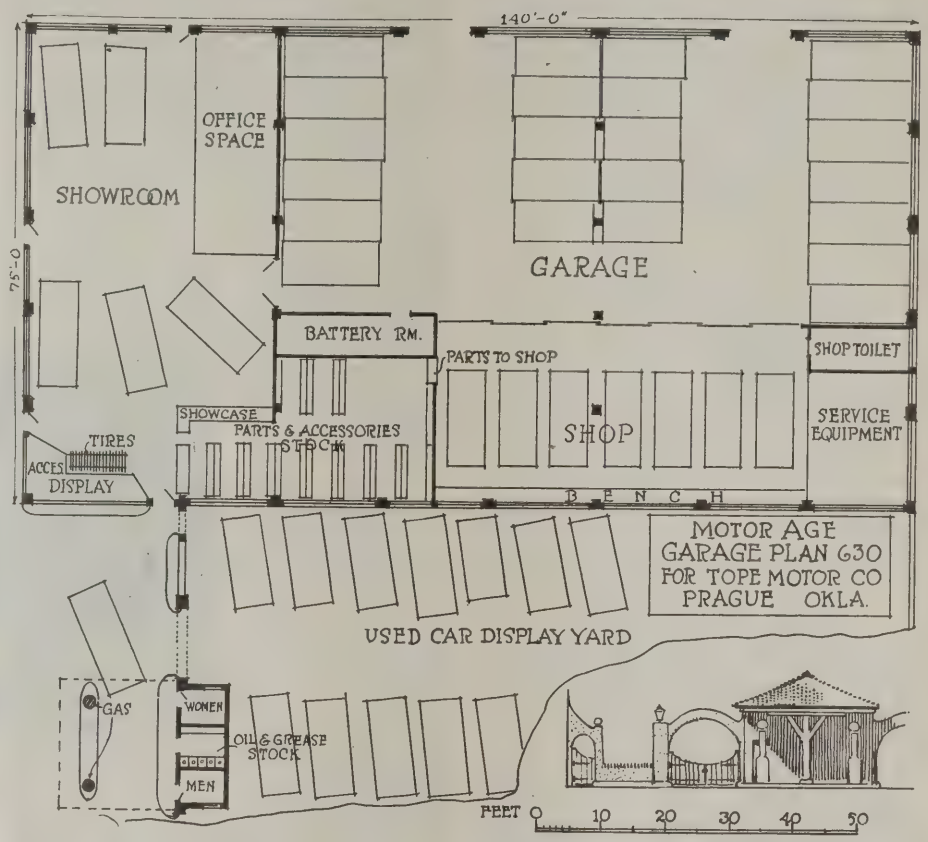
The READERS CLEARING HOUSE

Ford Sales and Service With Used Car Market

Q.—Inclosed you will find a sketch of a plot of ground that we want to use as a future home. It consists of six lots which front south on highway and principal street. Heavy coast to coast traffic. We want to get plans for erection of a new building on this plot. We are Ford dealers and have a good wide territory. We handle all Ford products. Our parts stock will average over $4,000 wholesale cost most of the time. We handle tires and a small stock of accessories, but we do not go very strong on this. We want separate bookkeeping office and a manager's office adjoining.—Clen E. Tope, Tope Motor Co., Prague, Okla.

We have placed the building on the half of the lot next to the corner with the used car market on the other half and the filling station in front of it. If carried out somewhat as we have shown, we believe the filling station would be just as effective here as it would be on the corner and would not cut into the building or spoil the showroom and office layout.

Good Exposure



With the showroom on the corner and the accessory store on the other side facing the filling station, you have good exposure in both directions down the street, and the filling station will be wide enough to show up well also.

There is another advantage in the arrangement and that is that it brings the traveling public in contact with your used cars and your accessory display in such a way that it should result in business, and since parts are retailed with the accessories, it will be easy for Ford owners to pick up parts when they stop for gas.

It is often found that a filling station will make congestion around the garage entrance, but here there is no chance for that, the garage is provided with a drive through entrance and exit on the side street and is all that could be desired in enience.

If more office space is needed, we would suggest that the front 40 ft. section of the building be made high enough to provide for a balcony to extend way across the back side. Then there would be plenty of room for an office, women's waiting room, salesmen's offices, private offices and in fact, many features not possible in the limited space now shown. The higher ceiling also would give a more airy and pleasant room and make a better appearance from outside.

The roof is planned to lie supported by 2 series of 50 ft. and one series of 40 ft. trusses extending lengthwise of the building.

In the layout the filling station will not kill the building but will tend to set it off. The sketch in the corner is a suggestion for making the filling station and used car market attractive

Legal Questions Answered

BY WELLINGTON GUSTIN, OF THE CHICAGO BAR

COLLECTING FOR REPAIRS

Q.—Will you kindly advise us how long we are required by law to hold a car left with us for repairs before we can sell it to cover the charges and storage. We thank you.—C. H. Goble, Goble Motor Sales Co., Casey, Ill.

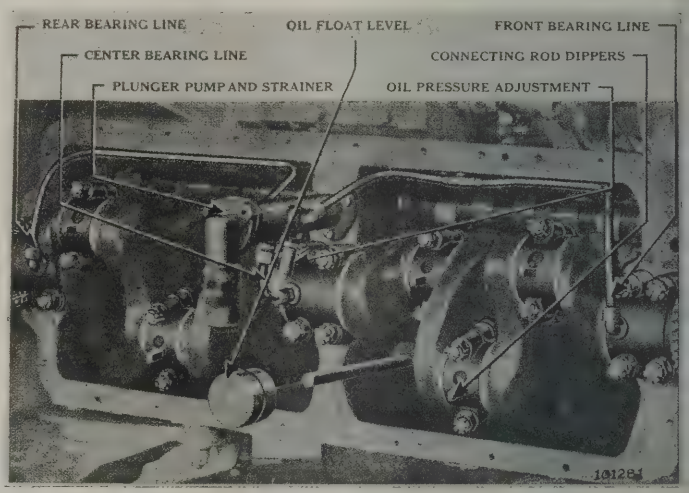
Under the Garagekeeper's Lien Law of Illinois the garagekeeper is required to file his lien claim with the recorder of deeds within 60 days from the date of delivery of the repaired chattel to the owner or his agent. This lien notice can be filed at any time and the garageman may proceed in the action to sell the car or other chattel. The first step is to give notice to the owner of the chattel of his intention to sell to collect on his charges. The owner is given 10 days to deliver to the sheriff a written and verified denial of the lien claims. If such denial is made then 10 days more are allowed for the lien claimant to prosecute his claim as in a foreclosure suit. If the suit is prosecuted then a decree is finally awarded and the property sold. This is an indeterminate time. But if the owner does not care to deny the claim within the first 10 days mentioned above, the sheriff shall advertise the property for a period of 10 days or more and shall then sell at public auction to the highest bidder for cash.

So, if no defense is interposed to the garagekeeper's action to sell for this charge, 20 days would be the least period within which a sale could be had. But this action can be started from the time that a copy of the lien notice is obtained from the recorder. To do this it is obvious that your claim must first be filed with the recorder. This is procedure under the statute and same must be strictly followed to be valid.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Vibration and Lubrication

Q.—What makes this Dodge Brothers motor vibrate so? It has new light weight iron pistons of equal weight and the compression is the same in all cylinders. This is a 1918 model. It started vibrating about a year before the pistons were replaced which was three months ago. Previous to this no parts had been replaced with the exception of the piston rings. A regrinding man says that by regrinding the cylinders this condition of vibration will be overcome. Explain if he is right. The cylinders will not take .003 oversize pistons.



The standard alloy Dodge Brothers pistons will reduce the amount of vibration, for they will reduce the weight of the reciprocating parts. In these engines the crankshafts were not as carefully balanced as they are today. It is also possible that if the clutch has been worked on the clutch spider is not perfectly balanced. If the alloy pistons are used the first oversize should be installed and the cylinders honed to enlarge them so that the pistons will fit. These pistons should just be an easy push fit in the cylinders. In some cases regrinding and the installation of new pistons will reduce vibration, due to the fact that more even compression is obtained. However, if you are sure that the compression is even in all cylinders this will have no appreciable effect. The difficulty, of course, is in being absolutely sure that the compression is the same.

2.—In the case of a Paige 6-39 Rutenber engine that repeatedly burns out rods; can this oil pumping system be changed successfully to supply oil as on a Studebaker and Dodge or even as on a Chevrolet. I mean to feed oil directly to the rod troughs. Illustrate how best to use the leads of this pump for such oiling. I tried the ideas of other readers of drilling holes in the front and rear main bearing leads and tightening all joints in pump plunger, but the pressure then does not hold up. Bearings stayed well under this method except for the pump trouble.—Roy W. Fredrickson, Service Garage, Lane, S. Dak.

We are showing an illustration of this engine. The oiling system to which you refer has all of the oil delivered to the pan into which the connecting rods dip. It is then necessary to provide some method of oiling the main bearings and in engines of this type it is taken care of by means of funnel shaped holes together with grooves cut in the shape of a letter X in the upper half of each main bearing. In general it is not advisable to change over from the method originally used, although if you should decide to make such a change we would be interested in hearing the outcome. Where trouble with this oiling system is encountered, we would suggest checking up on the following items: See that all crankpins are round, measuring them with micrometer calipers. See that oil holes and dippers are clear and not stopped up, with sediment. See that the x-shaped cross grooves in the connecting rod caps are deep enough to carry oil to all parts of the bearings. See that rods are properly aligned. See that oil dippers go from 1/8 to 3/16 inch below the surface of the oil in the pan. This can be checked by careful measurements. Disconnect and blow out all oil lines to make sure they are clear. See that pump is working and screen is not clogged.

It might be a good idea to try to test the pump and piping assembly to see how it operates. If the engine is torn down it might be possible to insert the pump in a pan of oil and operate the plunger up and down rapidly by hand to see in what proportion the oil flows through the three pipes. Another test that might be made would be to remove the plunger from the pump housing or cylinder and stop up the upper end of this cylinder. Then in the lower end make a connection to a one-gallon tank in which oil is placed. Then close up this one-gallon tank and apply air pressure to it so as to force oil through the three oil lines going to the three main bearings. With a pressure system of this sort distributing through the pump cylinder it would then be desirable to have someone get under the car to see how much leakage comes from the different bearings. In this way one might get a fairly good idea as to the cause of connecting rods burning out. For example if all the leakage came from the front main bearing and very little from the center main bearing it would account for lack of lubrication at connecting rods Nos. 4, 5 and 6. In the oil line running to the rear main bearing it is sometimes customary to have one very fine hole somewhat less than 1/64 inch in diameter.

A No. 50 or No. 60 drill is used in making this hole.

View of Paige 6-39 Rutenber engine showing oiling system

ADJUSTMENT OF STUDEBAKER CONE CLUTCH

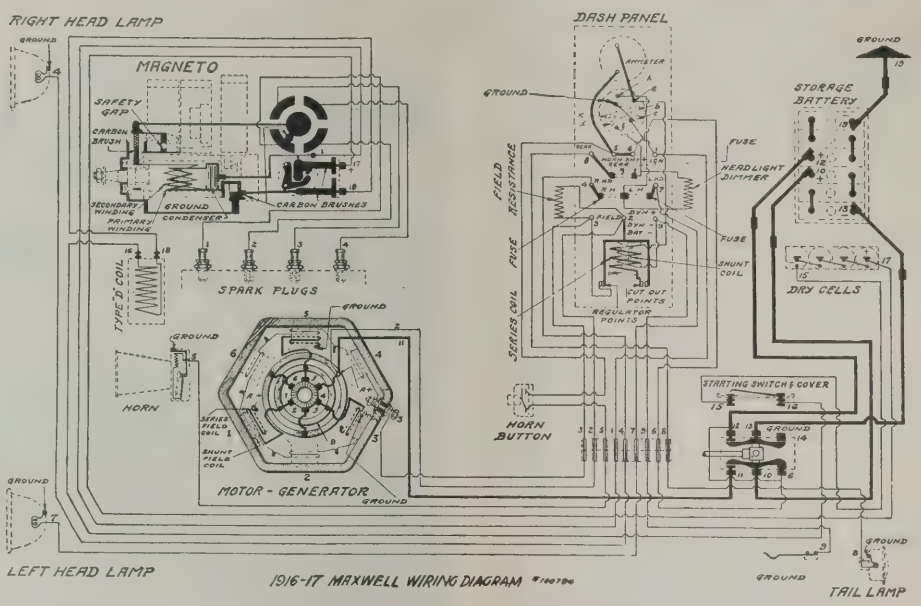
Q.—Tell how to adjust the spring tension in a cone clutch on Studebaker six serial No. 601576. This car is equipped with a Ferro six-cylinder engine.—Vernon O. Westrope, Mt. Etna, Iowa.

We believe that you have given the engine number instead of the serial number of the car and that the word Ferro is on the cylinder block and indicates the foundry which made the casting rather than the make of the engine. However, the construction of the Studebaker cone clutch is similar on the various models and trouble which you may have due to slipping or dragging can be traced to the condition of the leather clutch facing or else to wear in the bearings which support the cone. The spring tension itself is not adjustable. We would recommend your washing the leather with gasoline and then treating it with neats-foot oil. Do not use lubricating oil as this will cause the clutch to slip or grab.

After the leather has been treated with neats-foot oil it is also sometimes considered desirable to use a little fullers earth on the surface of the leather to assist the leather to take hold. If the leather is badly worn a new one should be installed. This is done by taking out the rear plug in the clutch hub, depressing the clutch pedal and inserting a small punch in plug hole, so that the clutch engaging spring will be held depressed on removing the retainer nut on the end of the crankshaft. The next step is to remove the clutch throwout, by removing the two bolts at each end which hold the shaft throwout bearings to the sub frame. Next take out the four bolts that hold the flexible disc to the transmission pinion flange, also the six machine screws which connect the flange to the clutch cone. This will permit the removal of the universal joint assembly.

Next take off the retainer nut on the crankshaft and remove clutch cone. New clutch leather obtained from authorized Studebaker dealers comes with the ends cemented together. The new clutch leather should be soaked in neats-foot oil and stretched tightly over the clutch face. The copper rivets used in attaching the leather cone should be properly clinched and should be driven down until the heads are well below the surface of the leather.

Clearing Up Electrical Trouble



EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Reversed Magnets Affect the Spark in "Bat." Position

Q.—We would like to have a wiring diagram of the electrical system used on Maxwell motor car some years ago where a Simms magneto was used. Battery current was used with this magneto in order to induce the initial spark in starting the engine.—International Harvester Co., 2600 W. 31st boulevard, Chicago, Ill.

The diagram is shown in accordance with your request, a grounded battery not being permissible with the magneto. It is for this reason that dry cells are used instead of storage battery current. It is also necessary to have a certain polarity to the dry cells. If the dry cells are reversed it will weaken the sparks in starting instead of making them stronger. The same thing happens if the two wires at the magneto interrupter are reversed. Trouble will also be encountered if the magneto is overhauled at any time and the magnets are reversed. In this case successful operation will be obtained with the switch in the magneto position, but in the battery position the spark will be poor. This can be remedied by reversing connections at the dry cell or at the magneto, the reversal of dry cell current compensating for the effect produced by the reversed magnets.

Maxwell wiring diagram showing magneto circuit with which no ground is permissible. Dry cells are used in starting instead of storage battery current

Chronic Cases of Pitted Points

Q.—We have been in the garage business for the past fifteen years and have always taken MOTOR AGE but have never used your question department. We thought we would write to you in regard to burning or coating of distributer points. It seems that we have had more trouble in the past year with distributer points on almost all ignition systems. We have installed a large number of new points and have dressed or honed a large number of used points, and in some cases the cars have only been driven a month or six weeks until they corrode or burn so that a very small portion, sometimes as small as 1/16th of an inch is all that is making contact. We have also noticed this on regulation points, made by the manufacturers of ignition systems as well as on points made by manufacturers of ignition parts.

Our men have been cautioned lately against touching the contact surfaces on the points with oily or greasy fingers when installing, as we figured some trouble was from moisture on points when installing. Please advise if you think this at all possible.

We are authorized Stromberg carbureter service station and naturally we are called on a number of times to correct, what our customers think is carbureter trouble. In about eight times out of ten we find that the trouble is due to the distributer points and in some cases where the same car has come back to us frequently, we have changed condensers, but we are at a loss to know exactly when this should be done.—C. L. Armstrong, Armstrong Garage, Lima, Ohio.

Oil on interrupter points will cause more trouble than moisture. When the points separate there is always a flash or spark of some sort. If oil is present, the oil tends to carbonize and then the carbon helps to produce an arc when the points open. The burning action is therefore more intense when oil is allowed to get on interrupter points than when they are perfectly dry. One condition which will make the points burn rapidly is an ignition coil which draws more current than it should. For example if the coil which comes with the car is replaced with another coil which is not properly designed and draws too much current this current flowing through the points will tend to burn them. In some cases a ballast or resistance coil designed to be used with the regular ignition is left off by the mechanic making the installation and this will permit too much current to flow. Impure material, usually Tungsten in which there is slag will cause contact trouble.

Cleaning the contacts with a file or by honing will remedy the trouble for a short time and then it shows up again. There is no way to tell when a condenser is low in capacity except by substitution, testing the ignition device on a test bench and trying first one condenser and then another to see which one cuts down the spark the best. Another condition which will cause burning of the interrupter contacts is high voltage produced by overcharging the battery or by small wires or poor contact in the charging circuit which backs up the voltage and causes an abnormally heavy current to flow through the ignition coil and through the points.

This could be checked with a voltmeter in cases where point trouble seems to be chronic. If new contacts are installed and touch at one edge or only at a small percentage of the contact surface the burning will be more severe and there will be a tendency for pitting to start. This will cause a projection to form on one contact and a depression to form in the other, and the operation of the ignition will be poor. If you do not succeed in overcoming the difficulty would recommend your getting in touch with the nearest authorized electrical service station which operates as representative for the large makers of starting and lighting equipment.

FIELD COILS THE SAME, ARMATURE TURNS CHANGED

Q.—I notice that the first Ford armatures had 9 turns of No. 17 wire in each coil and that now they use 10 turns of No. 18. Did they make a change in the field coils when they made this change in the armature?—J. B. Galloway, 420 W. Lead avenue, Albuquerque, N. Mex.

According to information we have the first 2500 Ford armatures for the generator had 10 turns of No. 18 wire in each armature coil, and after that each coil had 10 turns of No. 17. This change was apparently made in order to reduce the armature losses and armature heating. We are advised that no change was made in the field coils.

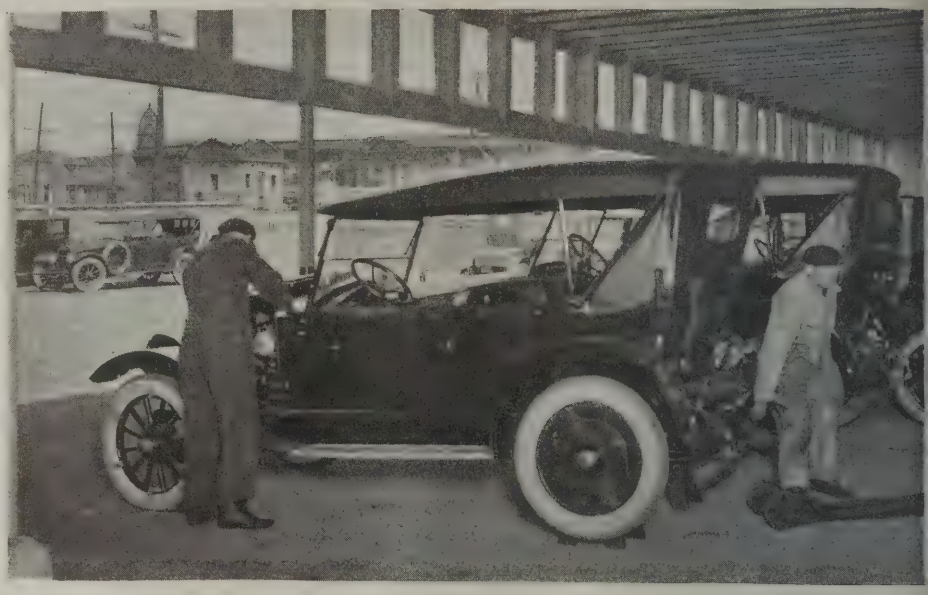
Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Let's Have the Job Clean to Start With

GETTING ready to do the job often requires far more time than performing the job itself.

It often happens in a machine shop, for example, that days are spent rigging up a lathe or other machine to perform a cutting operation that requires but 15 minutes or so to perform. Yet all the preliminary work is necessary before the desired results can be had.



We have thought flat rate operations might be greatly speeded up by a preliminary operation of cleaning the parts or the chassis from mud and grease. This enables the mechanic to get at the work in question to better advantage and as a rule insures a better all around job.

There is a shop we know of in which every car is cleaned from top to bottom before it goes to the shop proper for any mechanical work. The chassis is cleaned with steam to remove all traces of dirt and grease and the body, fenders, etc., are washed. The car is as clean as it is possible to make it and then it is run into the shop.

This may seem like going to a lot of trouble, but it has the effect of giving the mechanics the best possible chance to work on the car, speeds up the operations and makes for a clean shop.

It is well to remember mechanics do their best work when shop conditions are right. It's no fun to lie on your back on a cold cement floor and get your eyes filled with dirt taking off a crankcase oil pan. Besides, it is not good business to have a high priced mechanic spend his time cleaning mud and grease off parts before he can work upon them.

We believe in the long run it will pay any shop to install some sort of cleaning system by which the chassis can be quickly cleaned before the car is turned over to the mechanics. There is then vastly more assurance that the various operations will be performed in the specified time, or even in less time. The shop morale is improved when working conditions are right and we know from past experiences that those shops which have given this question of preparatory cleaning thought and installed a cleaning system, have gained in many ways.

THINGS THAT HELP FLAT RATE

It is often a problem to know how to handle the quick service jobs which do not require over half an hour's work to perform. One way of doing this is to provide a "yard" as one dealer has done and which is shown above. Such a layout prevents congestion in the main repair shop by cars which need only adjustments or minor repairs

MOTOR AGE'S FLAT RATE FORUM

No. 35

FLAT RATES FOR CHRYSLER CLUTCH OPERATIONS

Manufacturer's Official Designation		Time
5700	Remove and install clutch assembly including removal and installation of floor boards, toe boards, clutch and brake pedals, propeller shaft and transmission. Includes complete overhaul of clutch, installing new parts as required	5½ hrs.
	(a) Overhaul transmission completely in conjunction with 5700, see Operation No. 7704	2½ hrs.
	(b) Install new universal joint in conjunction with 5700, add	½ hr.
5701	Remove only clutch and transmission assembly including removal of floor boards, toe board, clutch and brake pedals and propeller shaft	1½ hrs.
5702	Install only clutch assembly including installation of parts removed in operation 5701	2 hrs.
	(a) Install new clutch in conjunction with above, add	1 hr.
5703	Overhaul clutch completely when removed from car	2 hrs.
5704	Remove and install front pressure plate including removal and installation of clutch and transmission	4½ hrs.
5705	Remove and install rear pressure plate including removal and installation of clutch and transmission	4½ hrs.
5706	Remove and install clutch pilot bushing including removal and installation of clutch and transmission	4 hrs.
5707	Remove and install clutch shifter yoke including removal and installation of clutch and transmission	4 hrs.
5708	Remove and install clutch hub including removal and installation of clutch and transmission	4 hrs.
5709	Remove and install clutch drive disc, one or all including removal and installation of clutch and transmission	5 hrs.
5710	Remove and install clutch spring, one or all	4 hrs.
5711	Remove and install clutch anti rattler springs	¾ hr.
7704	Overhaul transmission completely when removed from car	2½ hrs.
	(a) Overhaul clutch in conjunction with 7704, add	1½ hrs.

(Chrysler clutch operations to be continued next week)

Operations Are Comprehensive

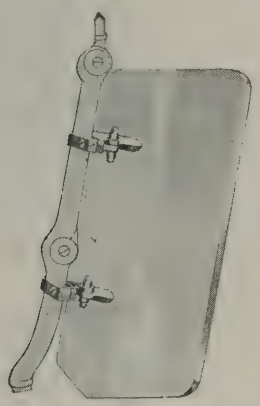
Bradford, Pa.

To the Editor of MOTOR AGE:

We have been greatly interested in your flat rate charts that have appeared in MOTOR AGE.

Please let us know if it will be possible for you to send us complete list of flat rates to date and what the charge would be.

STAR GARAGE COMPANY.



We are out of print on some of the issues containing the flat rate operations on various makes of cars and it is, therefore, impossible to send to you a complete set. You may or may not know that in the April 30, 1925, issue of MOTOR AGE, we published MOTOR AGE'S Flate Rate Manual which covered service operations on practically every American car. The car makers' flat rate manuals may be a little more complete as to the number of operations but the operations in our manual were carefully selected and should take in about every kind of work you ever will be called upon to perform in your shop on the various makes of cars. The manual is sold separately for 50 cents.

THE MARKET'S NEW OFFERINGS

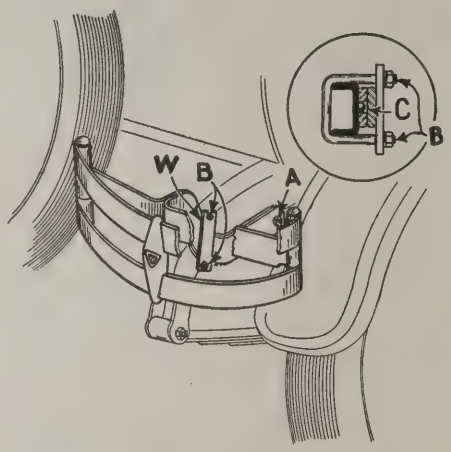
Accessories—Equipment—Supplies

New Eagle Windshield Wing

A NEW model of the Kokomo Eagle Windshield Wing embodying several improvements and changes has been announced by the Windshield Wing Division of the Kokomo Automotive and Mfg. Co., Kokomo, Ind. The new model is in production and deliveries are now being made to the trade. One of the features of the new wing is the rubber pad with a molded rim which fits into a recess in the clamp and which prevents the glass from slipping. Brackets are designed for strength and good appearance. The Kokomo Eagle Post Clamp may be attached to any standard windshield post. All fittings are nickeled brass. Plate glass, beveled and polished is used.

Kokomo Windshield Wing

Another Stevens Catalog



SO many new "Speed-Up" tools have been added to their line, that Stevens & Co., 375 Broadway, New York, have had to issue three catalogs this year. The third edition, designated as C-252, is now in circulation.

A feature of the new catalog is the convenient pocket size which will enable the shopman to make it an easy reference book.

The entire line of Stevens "Speed-Up" tools is shown—engine stands, valve face grinders, piston aligners, reamers, scores of universal tools and a large collection of special tools for Ford and Fordson.

Adapted for New Fords

THE Engineering Department of the Kokomo Automotive Manufacturing Co., Kokomo, Ind., announces that the Kokomo Checker, may be installed on the new model Ford cars with the same ease and convenience as on former models. The installation does not necessitate changing or removing any Ford parts, it is pointed out, and the springs are permitted to function normally when compressed.

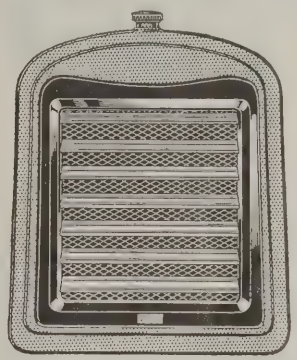
Weed Ajax Fender Guard

Cut Shown Above

A SPECIAL rear fender guard for the Ajax automobile which differs from other guards of the Weed line in attachment details, is announced by the American Chain Co., 215 N. Michigan Avenue, Chicago. The new guard is installed by placing the fender against the automobile frame (see illustration) so the hole in the fender arm nests over the rivet as shown in insert C. A hook bolt goes over the lower flange of the frame and through the fender guard at A. Lockwasher and nut are assembled but not tightened until after U-bolt around frame and guard is fastened in place by plate W at B. The operations are the same for both right and left guards. List price, $15.

Put the Spotlight on Your New Devices

The motoring public is always interested in the new. That is a reflection of the modern world's spirit of progress.

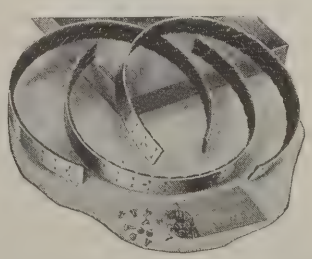


When a new accessory appears it is certain that a great many automobile owners would like to get the inside facts about it. If not to the point of possibly wanting to buy they are curious.

That is when they are in a receptive mood for the dealer's promotion. Some accessory merchants know this well enough and hence whenever they have anything new worth talking about they put it to the front.

Put your new stuff on parade. By that plan it will sell more readily and help sell other articles which you handle.

Pioneer Auto Shutter

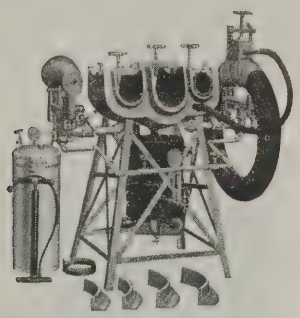


AMONG the new products which should interest the automotive merchant who is preparing to stock for winter business is the Pioneer Auto Shutter made by the Brewer-Titchener Corporation, Cortland, N. Y. This is an attractively finished radiator shutter which it is said will protect the radiator from freezing and keep the engine running steadily in cold weather. By means of a button on the dash the driver can open or close the Pioneer shutter according to the needs of his power plant. The makers say the shutter will not rattle and that it has no parts to get out of order. Price, $6.50. For Fords, $5.

Pioneer Auto Shutter

Oil Grooved Fibre Lining

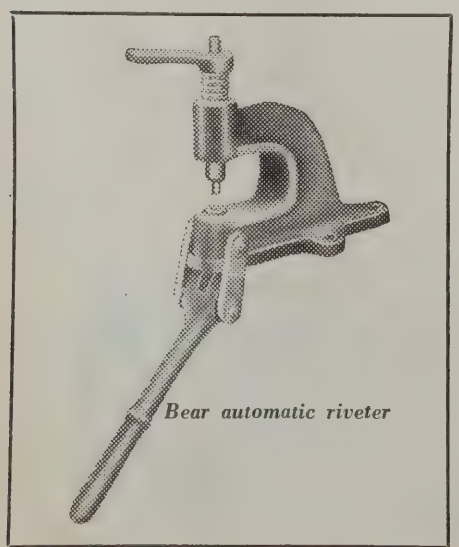
RECOMMENDED by its makers for its durability and non-grabbing qualities an Oil Grooved Fibre Transmission Lining for Fords is offered the trade by the Multibestos Company, Walpole, Mass. The lining is made of pure asbestos fibre. highly compressed and supported by a thin brass backing. The oil grooving is said to permit a free flow of oil, thus reducing chatter to a minimum. These linings are thoroughly treated with a heat and wear resisting compound which it is declared renders the fibre impervious to the action of the hot transmission oil. Assembling is quickly and easily accomplished. One set of three linings, along with necessary rivets, is packed in each carton, the list price per set being $4.



Oil grooved transmission lining

GETTING MORE OUT of the SHOP

Balloon Tire Vulcanizer



Charles E. Miller, Anderson Rubber Works, Anderson, Ind., manufacturers of tires, vulcanizers, and rubber specialties are meeting the demand for a balloon tire vulcanizer with the new Model "C" Balloon and Cord Tire Vulcanizer. This vulcanizer has been designed to repair tires from 4.40 to 7.30 in. inclusive and can be furnished with or without stand for steam line connection, also with boiler for gas or gasoline fuel. The price of a three cavity balloon tire vulcanizer for steam line without stand is $112.50 and increases with the number of accessories added.

Miller balloon tire vulcanizer

Bear Automatic Riveter

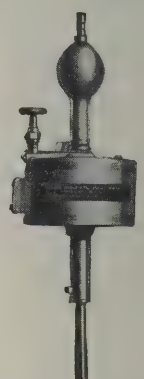
The Bear automatic riveter is a machine for relining brake and clutch bands and is easily mounted on the bench. A complete job is done in one setting, the band with its new lining is set in place and pushing down a lever automatically completes three operations—punches the lining, inserts the rivet and deeply countersinks it. Then the rivet is headed with a couple of hammer blows. All of this requires only 5 to 10 seconds per rivet. A distinct feature of the Bear is that it uses the rivet itself as a punch. Tremendous pressure forces the rivet through cutting a clean hole in exactly the right place to correspond with the hole in the band. In using the machine any style or make of rivet can be used as it produces equally good results with either solid, split or tubular, brass or copper rivets. The price complete is $19.50 and the machine is finished in combination nickel plate and enamel. It is made by the Bear Mfg. Co., Rock Island, Ill.

Bear automatic riveter

Robertson Tire Spreader and Inspecting Machine

The Robertson tire spreader and inspecting machine is powerfully built and will open high pressure tires including 6 in. and all size balloons including 7.30. It supports the tires top and bottom on rollers and the top row has a spring adjustment for all sizes. The hands are left free to turn the tire. The slotted side levers have five pulling positions whereby the fingers are made adjustable to small or large tires. This is a new feature. The bottom of the case is pushed upward while being opened thus stretching the cords and showing up trouble.

It is made especially for balloon tire work and by placing the segment plate on the machine tires are spread and pushed upward to a much greater degree making it easy to cut out cords and doing other work. The highest point of the foot lever is 60 inches from the floor. Its net weight is 64 pounds and the price including segment plate is $37.50. The machine is made by the Rockford Tire & Vulcanizing Co., 223 N. Church street, Rockford, Ill.



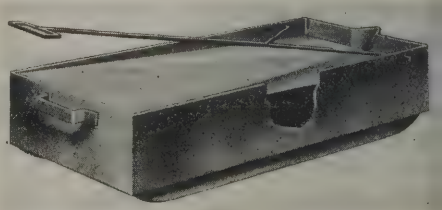
Robertson Tire Spreader and Inspecting Machine

Brunner Pneumatic Valve Grinder

The Brunner Mfg. Co., Utica, N. Y., has introduced a pneumatically operated valve grinder of unique design.

Hitherto, power operated valve grinders could be used only for the preliminary grinding—the valves had to be finished off by hand in order to obtain a perfect valve seat, the company states. With the Brunner Pneumatic Valve Grinder, the speed or number of oscillations per minute, can be varied from 10 to 1000 by merely opening or closing the handy control valve on the tool.

The frame is constructed of die cast aluminum and all working parts are case hardened and ground to exact size.



Brunner Pneumatic Valve Grinder in which the number of oscillations can be varied

Brookins Portable Drain Tank

The Brookins Portable Drain Tank, recently placed on the market by The Brookins Manufacturing Company, Dayton, Ohio, is an inexpensive article that now makes it easy for every garage and filling station to give crankcase service without drain pits or racks.

This new product is a combination pan and tank. The sloping top acts as a pan that catches the oil and conducts it into the tank underneath. It is equipped with a folding handle and steel runners that make it easy to move about or place under cars. When desired it can be conveniently carried by a metal strap at one end. Several cars can be drained before emptiying the tank. It holds about 5 gal. and is emptied by simply turning on end and letting the oil pour through a V-shaped spout.

The drain tank is also useful in draining radiators and oiling car springs.

Brookins portable drain tank

EDITORIAL

Now Slick Up the Used Car Lot

IN a recent issue of Motor Age a photographic feature was presented illustrating how the Burwell-Harris Company, Nash distributors in Charlotte, N. C., "slicked up" a used car lot. This company converted an ordinary vacant lot into an attractive automobile market place. There is little doubt that the lot's more inviting appearance will prove a stimulus to used car sales. In fact, it has.

The vacant lot is a good selling place for used cars but like any other market place it can be made inviting or unattractive. And like all market places the more attractive it can be made, within the limitations of profitable business, the greater will be its selling force.

Where the dealer expects to make use of the lot regularly it will pay him to "doll it up" a little and give thought to the orderly and attractive arrangement of cars. In many used car lots the arrangement of the cars suggests that they were shaken up in a box and dropped, to fall where they would. We noticed one a few days ago where small cars were displayed alongside large cars in a manner that might have helped the sale of the large cars but which by reason of the unfavorable contrast could only serve to check buying fever of persons interested in small cars.

Moreover, the cars in this lot were arranged in a most disorderly manner and there were two or three places where prospects had to walk in mud. Where many vehicles are shown on a used car lot they should be grouped according to class—and they should be "displayed."

Graveled walks for the prospect to walk on and graveled squares on which to display the cars, along with some possible fence painting and obliteration of rubbish piles and other eyesores—suggest some of the things that can be done to improve the setting.

Take the aerial artist in the circus for instance. He measures his profits altogether by the number of turnovers he can make.

Better Registration Laws

RECENT investigation has shown that in many states automobile registration is so inefficiently carried on that actual new car registrations fall far short of actual new car sales, and not only do the states lose from 10 to 40 per cent of the income that they ought to receive from this source, but their total car ownership figures are considerably below the actual number of owners within their various state boundaries.

As a result of this investigation a very determined effort is being made to bring about better registration laws in many states, so that registration figures shall be accurate, and the money that these states should receive from car owners shall be available for highway purposes.

New Mexico has shown what may be accomplished along this line. Up to this year there was such a large discrepancy between the cars registered and the cars actually operated that the secretary of state started a quiet investigation. He enlisted the aid of leading automobile dealers throughout the state, and they furnished him a list of cars actually sold. This list he compared with registrations of each make, and as a result drafted a law that went into effect January 1st this year that brings to his office each week records of new car sales by all dealers. Checking these against registrations enables the state to collect practically all registration fees it is entitled to, and as a result the state is getting thousands of dollars that had been lost in the past.

Dealers, too, are now enabled to get accurate new car registration statistics to help them in the conduct of their business, and their state is getting credit for its full number of cars in operation, which it never had before.

One of the quickest ways to down a competitor is by letting him have all the sales that involve wild trade-in allowances.

A Neighbor Does Better

SOMETHING has happened in the automotive trade down in Mexico. Trade conditions in numbers of Mexican cities, notably the national capital, are reported to be better than they have been for a number of years. Behind it all can be seen the effect of an improved financial situation and considerable progress in the improvement of streets and rural highways. Mexican tradesmen who fought for years to keep afloat are now flushed with the joy of profitable business.

Let us hope that their prosperity continues on the upgrade. It means to them not only what profitable business means to all of us, but improved conditions in Mexico will make for still better conditions in the United States. They will open wider markets for our automotive factories and they will bring other Mexican money into the hoppers of America's foreign commerce.

This automotive prosperity in Mexico is considerably spotty at present, but the trend is in a delightful direction.

If anyone should say that the man still wearing his summer straw hat in November is a long-time allowance automobile dealer we would understand, anyhow—why he continues to wear his straw hat in November.

Profits in the Crowd

A CALIFORNIA dealer counted noses of persons who came to his show room to view a display of new cars. The total number of visitors was 2,054 and 50 of this number bought automobiles. This means that one out of 41 of the visitors was a buyer and that approximately two and one-half out of each hundred were buyers. Taking the visitors who call day after day at the show room that would not be a high average, but for a one-day special event it was. Get the crowd at the psychological moment and a good part of it will be yours if your salesmen do their work.

High Production Level Is Maintained

Final Figures Show Output Of 300,000 for September

Light Closed Car Holds Sales to Unusual Fall Mark— Rural Demand Heavy

PHILADELPHIA, Oct. 14.—September production of cars and trucks was at a record rate for that month for many of the large factories, and the level has been fairly well maintained for the last two weeks. From now on, however, except in the case of Ford, the general tendency will be gradually downward, with probably a sharp drop next month or in December.

Preliminary estimates of the production total for September show a gain of about 8 per cent over August for the industry as a whole, with Ford again excepted. In the case of Ford, the month showed an enormous increase, so that the final figures should be well over the 300,000 mark, against approximately 260,000 for August. The October total will probably be slightly higher than September.

An important factor in holding up production and sales to an unusually high Fall level is the light closed car. The price cuts during the past few months have affected the all-season vehicles more than the open cars. The two closses are now virtually on the same price level, so the normal seasonal demand for closed cars has been greatly stimulated.

Farm demand continues to be the backbone of the automotive market and is offsetting any losses in the urban centers.

Comparatively high production will be maintained for some time even if sales fall off materially, since the manufacturers in most cases have no surplus stocks, and will want to build up inventories in preparation for the new year.

Parts and accessories sales are generally holding the better than normal position that they have maintained throughout the summer. There was an appreciable falling off in some sections at the close of the touring season, but aggressive merchandising of winter necessities and staples by wholesalers is showing results. Tire business remains good in practically all sections. Retail business made the best showing in September with many merchants still carrying comfortable stocks purchased during the first weeks of the rubber shortage scare and the succession of price advances.

BENDIX OFFICES MOVED

CHICAGO, Oct. 10.—J. L. Price, president and general manager, Bendix Brake Company, announces the removal of the general offices to the plant at South Bend, Indiana. The general offices of the Bendix Brake Company have been in the Illinois Merchants Bank Building, Chicago, along with those of the Bendix Corporation, but orders from large automobile manufacturers made it necessary for closer contact on the part of all officials of the company with the factory. General offices of the Bendix Corporation will remain in Chicago.

City Cannot Act as Carrier

ALBANY, N. Y. Oct. 10.—The Court of Appeals has ruled that the City of New York has not the right to carry on the business of a common carrier of passengers. This decision voids the four bus bills passed by the New York Municipal Assembly on the insistence of Controller Craig, who introduced the bills to prevent Mayor Hylan from issuing short term franchises to bus operators now operating lines without legal authority. It is believed that the Board of Estimate in New York City will now proceed with the award of these franchises, for which more than 80 applications have been made.

N. Y. MERCHANTS MEET

NEW YORK, Oct. 15.—More than 500 members of the Automobile Merchants Association of New York, Inc., sales managers, salesmen and dealers attended the sales congress held at Hotel Astor today under the auspices of the National Automobile Dealers Association. Sales, sales plans, salesmanship, management, maintenance, used cars, profits and market analyses were discussed by Charles E. Gambill, president of the N. A. D. A.; C. A. Vane, general manager, A. R. Kroh, sales promotion advisor, Edward Payton, market analyst, and others.

PLEAD FEDERAL AID

WASHINGTON, Oct. 10. — Declaring that no Federal function is giving the country more for the funds involved that highways, the American Association of State Highway Officials here this week made a plea to members of Congress for continuance of Federal aid in developing the highway system of the United States. "Curtailment of the program of construction as it is now moving forward would not be a real saving," the association told Director of the Budget Lord. "There is plenty of evidence to show that it would be an economic loss. The work is only about half completed and should therefore go forward with sound business alacrity."

Spaces Drawn for National Shows at N. Y. and Chicag

Annual Events to Be Held Januar 9-15 in East and Jan. 30-Feb. 6 in Mid-West

NEW YORK, Oct. 10.—Drawing t space by automobile manufacturers fo the 1926 New York and Chicago nationa shows was held here in connection wit the fall meeting of the National Auto mobile Chamber of Commerce. The Ne York show will be held January 9-15 a the Grand Central Palace and the Ch cago show will be held January 30-Feb ruary 6 at the Coliseum.

The following is the list of cars t which space was assigned:

Ajax	Lexington
Auburn	Lincoln
Buick	Locomobile
Cadillac	McFarlan
Case	Marmon
Chrysler	Moon
Chandler	Nash
Chevrolet	Oakland
Cleveland	Oldsmobile
Davis	Overland
Dodge Bros.	Packard
Dupont	Paige
Durant	Peerless
Elcar	Pierce Arrow
Essex	Pontiac
Flint	Reo
Franklin	Rickenbacker
Gardner	Roamer
Gray	Star
Hudson	Stearns
Hupmobile	Studebaker
Jewett	Stutz
Jordan	Velie
Junior Eight	Wills Ste. Claire
Kissel	Willys Knight

Taxicabs

Dodge Bros.	Willys Knight
H. C. S.	Yellow Cab
Oakland	Bauer
Reo	Luxor

Dupont will exhibit only at the Ne York show.

Buick Will Maintain High Output Through Novembe

FLINT, Oct. 10.—Buick will continu its present rate of output of 22,000 ca a month or 1,000 daily during Octobe and November, E. T. Strong, general sale manager, said today. From this state ment it is likely that if the present de mand continues, December productio also will near capacity.

In reaching the present output fo September, the factory experienced n spasmodic production days but a stead and even daily output.

Mr. Strong said that the demand sti exceeds the output and that orders whic many dealers have on their book secured since the introduction of th Better Buick, are more in some case than they have secured during the cours of an entire year.

A-C Co. Plans Manufacture Of Mufflers About Nov. 1

New Division of Company to Be Housed in Plant Bought From Dort

FLINT, Oct. 10.—Manufacture of automobile mufflers by the A-C Spark Plug Company will start around the first of November, B. W. de Guichard, vice-president of the company, said today. An output of several thousand mufflers daily is contemplated.

The new division will be housed in a factory recently purchased from the Dort Motor Car Company. The building is rapidly being equipped with the proper machinery and will be completely finished at the present rate by the end of the month.

In speaking of the muffler which the company will manufacture Mr. de Guichard said, "It is a patented pressed steel muffler, the patent and manufacturing rights which we recently purchased. It is reasonable in cost and efficient."

September, Mr. de Guichard said, was the largest production month of speedometers in the history of the company. The estimated daily rate of production for October of 6,000 exceeds that for the last month. The A-C cleaner which did not get into production until last May is now being turned out at the rate of 500 daily. From 90,000 to 100,000 A-C spark plugs are also being made at the plant here each day.

NEW PLANT OCCUPIED

DELPHOS, O., Oct. 10.—The Gramm & Kincaid Motors, Inc., announce that the company has just moved into its new plant here, located fourteen miles from its general offices at Lima, O. The company manufactures motor trucks and coaches. The main assembly, machine, paint and body departments and final assembly cover 70,00 sq. ft. of floor space.

TAKES COLLEGE CHAIR

LOUISVILLE, Oct. 10.—George T. Holmes, manager of the Leyman Motor Company and former secretary-treasurer of the Louisville Automobile Dealers' Association, has accepted a place in the faculty of the Louisville Institute of Technology as a teacher of salesmanship.

MOHAWK HOLDS MEETING

AKRON, O., Oct. 10.—More than 200 of the larger distributors of Mohawk tires and 60 members of the sales force and branch organizations attended the annual sales conference of the Mohawk Rubber Co. here Oct. 6 to 9. Speakers of national prominence on the program included W. O. Seeley, of the George Harrison Phelphs Co., Detroit; M. Parlin, of the commercial research department, Curtis Publishing Co., E. S. Babcox, publisher of the India Rubber Review, and M. Latowsky, of the National Cash Register Co.

He Practiced What He Preaches

MILWAUKEE, Oct. 10.—George J. Devine, manager of the used car department of the local branch of Willys-Overland Co. has received much commendation of late. He was married last week to Miss Julia Voss, the ceremony being performed at St. Ann's church. Because he had always held that the used cars he sells are good enough for any occasion, he bore out his sales argument by riding with his bride to church in a 1912 model taxicab from his own used car stock. The entire sales organization of the Willys-Overland branch came to the wedding in used automobiles, instead of luxurious limousines usually seen on such occasions. All the salesmen brought their own breakfast, it was reported. Anyway the wedding was a distinct social triumph as well as a mechanical one, for all of the used cars stood up very well under the strain of the special occasion.

September Car Titles in Illinois Show Decrease

CHICAGO, Oct. 10.—There was a drop of 21 per cent in the total registration of new passenger cars in Illinois during September, as compared with August. The greatest decrease was shown by Fords with a loss of 60 per cent. This, of course, is not surprising, as buyers are waiting for the new models which they have ordered.

Losses in other price divisions were comparatively small, being 2 per cent for low-priced vehicles (excluding Fords); 5 per cent in the medium-priced class and 8 per cent in the high-priced group.

Following are the detailed figures for the first nine months of 1925:

Month	Fords	Low, excl. Fords	Medium	High*	Total
Jan.	4,060	2,275	5,748	808	12,891
Feb.	3,424	1,718	4,977	612	10,731
March	5,714	2,729	6,416	784	15,643
April	9,010	3,755	8,801	861	22,427
May	8,751	3,644	8,014	899	21,308
June	6,473	3,400	6,383	828	17,084
July	8,499	4,305	8,787	1,035	22,626
August	4,686	3,218	6,646	720	15,270
Sept.	1,831	3,145	6,292	661	11,930
Total	52,448	28,189	62,064	7,208	149,910

*Includes miscellaneous cars not named.

The foregoing figures were compiled from statistics furnished to MOTOR AGE by Robinson's Advertising Service, Springfield, Ill.

LONGAN TO DETROIT

CHICAGO, Oct. 10.—Lou W. Longan, engineer for the Link-Belt Company of Chicago, has been placed in entire charge of the Silent Chain "Front-End Drive" division of the Link-Belt Co. in Detroit, it is announced here. Mr. Logan succeeds George L. McCain.

Fifth Tire Price Advance Since May Is Seen Nov. 1

Manufacturers Said to Have Entered Crude Market, Stiffening Price at $1

NEW YORK, Oct. 7.—Another advance in tire prices, the fifth since May 1, is expected to go into effect Nov. 1. Manufacturers late in October are expected to decide upon advances of from 10 to 15 per cent. This would leave prices from 40 to 50 per cent under pre-war levels.

The chief reason for an advance is said to be the reported entrance of some manufacturers into the crude rubber market, buying at prevailing prices, which have stiffened around $1 per pound.

Demand for high pressure and balloon casings continues unabated. Earnings of leading manufacturers for this year will probably be far in excess of those for any year since 1920.

HUDSON TO SPEAK

NEW YORK, Oct. 10.—Among the speakers at the annual convention of the National Tire Dealers' Association to be held in St. Louis, November 17 and 18, will be R. M. Hudson, chief of the division of simplified practice, Department of Commerce, and Paul L. Palmerton, chief of the rubber division.

BOCK OPENS EXPORT OFFICE

TOLEDO, Oct. 10.—Foreign business especially in Continental Europe being booked by the Bock Bearing Co., of this city, has necessitated establishment of export headquarters at New York. Robert J. Clingan, general manager of the company, has announced the appointment of W. B. Cameron, 44 Whitehall street, New York, as export manager for his company.

WHITE NAMES LETSINGER

SAN FRANCISCO, Oct. 10.—P. E. Letsinger has been appointed district manager for the San Francisco district of the White Company. He has been for four years retail manager of the Seattle territory for this corporation. The White Company also has opened a Los Angeles factory branch, with J. L. Snyder as district manager, according to announcement by G. A. Urquhart, vice-president of the White Company. Snyder goes to Los Angeles from San Francisco.

MARATHON TO EXPAND

AKRON, O., Oct. 10.—Officials of the Marathon Rubber Co. are preparing to install additional machinery, which will increase capacity of the plant to 25,000 automobile tires a month, compared with the present schedule of 15,000 tires monthly. Marathon plans to market a new set of tires to meet the public demand for a heavy duty cord of rugged type for extraordinarily heavy service, officials state.

Chicago's Seventh Used Car Exhibit Opens in Coliseum

Daily Auction Will Be One of Show's Biggest Features This Year

CHICAGO, Oct. 10.—The seventh annual Used Automobile Show, under the auspices of the Chicago Automobile Trade Association, opened here today in the Coliseum. It will continue to October 18. Every space in the Coliseum was occupied on the opening afternoon, and a number of concerns seeking allotments were unable to obtain space.

A number of new features have been added to the show this year, making it more interesting both to the public and the exhibitors. The principal one of these is the daily auction, which will be held each evening in the Coliseum Annex. All cars that were unable to make the "green tag" as tested and approved by the committee, will be sold in this manner and are not exhibited on the main floor of the show.

The used car show heretofore has been held in the spring and the fall exhibition is somewhat of a novelty. So confident are the dealers, however, that these exhibitions are a great aid in a sales medium that there has been much enthusiasm among the members of the association and the demand for space was unprecedented.

Rules and regulations governing the show this year are similar to those of past exhibitions. Each car placed for sale on the main floor of the show must bear the green tag of approval by the committee. The committee is representative of nearly every make of car exhibited and has thoroughly gone over every detail of condition of the machine offered for sale.

The first inspection was held September 28 and daily inspections followed until the day before the show opened. An advance sale of these tested and approved cars has been held in the various salesrooms of the exhibiting dealers preceding the show opening.

The spaces on the east and wast walls of the huge hall have been held in reserve for additional used cars, to replace those sold and taken from the floor. A portion of the annex was reserved for the same purpose and the other section of the annex has been held for the auction each evening. Cars that could not make the green tag will be lined up in this section during the afternoon for the inspection of the public.

The show committee, in full charge of the entire display consists of the following members of the Chicago association:

W. E. Butler, Franklin-Butler Motors, chairman; George C. Norwood, Thos. J. Hay, Inc.; Gordon Bird, Bird-Sykes Co.; Harry P. Branstetter, H. P. Branstetter, Inc.; H. A. Wehmeier, Community Motors, Inc.; and O. G. Heffinger, Chicago Motor Car Co.

MARMON PROMOTES BADGER

INDIANAPOLIS, Oct. 10.—E. C. Badger, for several years comptroller of Nordyke & Marmon Company, has been promoted to the position of assistant treasurer, according to announcement of G. M. Williams, president of the company. In his new work Mr. Badger will assist Treasurer C. J. Sherer.

Chicago Plans to Observe "Management Week" Soon

CHICAGO, Oct. 10.—The fourth national observance of Management Week will be held Octber 10-24, it is announced by Herbert Hoover, secretary of commerce, honorary chairman. The observance of the week in Chicago will be arranged under the joint direction of the following:

Illinois Manufacturers' Association, Chicago Association of Commerce Advertising Council, American Society of Mechanical Engineers, Western Society of Engineers, The Society of Industrial Engineers, National Association of Cost Accountants, Industrial Relations Association of Chicago, Chicago Sales Managers' Association, American Management Association, Taylor Society and Executives' Club.

One of the principal speakers during the observance here will be Edward S. Jordan, president of the Jordan Motor Car Co., Cleveland, who will speak at the banquet in the Hotel Sherman October 23, on "Who Gets the Money for Motor Cars?"

TAX BILL UP OCT. 19

WASHINGTON, Oct. 10.—The House Ways and Means Committee will take up the tax reduction bill with hearings beginning October 19, it is announced today. Automotive interests will be heard by the committee October 24 and 26 and any interests desiring to be heard on these two dates should file their applications immediately with Clayton F. Moore, clerk of the committee, in order that they may have time assigned them on the calendars.

STORAGE IS IMPORTANT

SAN FRANCISCO, Oct. 10.—Storage of passenger cars during their owners' absences from the city either on vacations or for other reasons has proved a profitable department of the Don Lee interests here. The experiment of devoting an entire floor in the Lee building on Van Ness avenue to this storage was started about a year ago, and has proved profitable not only from a financial point of view, but in obtaining prospects for Cadillac cars, which Lee distributes, and in getting repair and replacement work, as well as sales of parts and equipment. The automobiles are covered, the cars jacked up, batteries kept charged and tires deflated, while employes inspect each car at frequent intervals. Cost of these services is included in the storage charge, which is nominal.

Olds Will Add Equipment To Care for Big Deman

Production Expected Around 5 Cars Daily by First of January

LANSING, Oct. 15.—Growing dema for the different Olds models and t prospective production schedule for 19 has caused the Olds Motor Works he to order additional equipment which w enable the factory to greatly increase present production.

I. J. Reuter, president and gene manager of the company, said today th by the end of January the daily produ tion would be around 400 to 500. T present output is approximately 250 ca a day.

In addition to the new equipme orders for the Olds factory, more ove will be installed in the Fisher body pla adjoining the Olds plant to enable it increase its present output of bodies.

Mr. Reuter also said that 5,541 Old mobiles were manufactured and sold the factory during September. Prac cally all of these cars were sold dealers to consumers as soon as they h been received.

WASHINGTON PLANS SHOW

WASHINGTON, Oct. 10.—The Washi ton Automobile Show will be held on t floors of the new Washington Auditori Building from January 30 to February inclusive, it is announced by Rudol Jose, chairman of the show commit and trustee of the Washington Auton tive Trade Association, under wh auspices the show is to be held.

PERSONNEL CHANGES MADE

SEATTLE, Oct. 10.—A number of i portant changes have recently been ma in the personnel of the Seattle branch the Western Auto Supply Co. by H. Baker, general sales manager. W. Boling, formerly field superintendent the San Francisco district is made d trict manager of the Seattle territo succeeding O. H. Pound. H. E. McKnig formerly field superintendent of the L Angeles district, comes north as fi superintendent of the Seattle territo Extensive enlargements in the number stores now maintained by the company this district are contemplated. This co pany now maintains more than hundred stores in the Pacific Co region.

CHICAGO SERVICE EXPANDED

CHICAGO, Oct. 10.—As another s toward greater development, the Chic Wheel and Spring Company, Budd Wh service station in the Chicago distr has established a substation in Gr Bay, Wis., known as the Green Bay A Parts Company. This latest addition the Chicago Wheel and Spring gr gives this organization the distinction being the service station with the larg number of substations in the country

Weather Has Bad Effect On St. Louis Car Auction

Prices Received Believed Lower Than Will Be Case at Next Two Sales

ST. LOUIS, Oct. 10.—Pouring rain the past two Saturdays had a very detrimental effect upon the used car auction being conducted for six allied automobile dealers by the Selkirk Auction Co. It has been decided however to hold the sale for at least one more week and possibly move the location for another week.

Should these two sales prove profitable the auction may be continued indefinitely as a weekly feature. The sales have been held at Sarah street and Laclede avenue in the St. Louis County Farmers' Co-operative market.

A list of the cars sold, on the last two Saturdays, models and the prices they brought follows:

First Auction

Chevrolet coupe	$437.50
Studebaker touring, 1921	90.00
Ford, 1922 coupe	175.00
Dodge coupe	65.00
Nash roadster	170.00
Chevrolet sedan, 1923	315.00
Ford coupe, 1923	200.00
Oakland touring, 1918	50.00
Ford touring, 1923	100.00
Chevrolet coupe, 1922	75.00
Overland touring	50.00
Ford touring	50.00
Oldsmobile touring, 1919	39.00
Nash touring	105.00
Gardner touring, 1921	50.00
Ford	35.00
Ford touring	35.00

Second Auction

Reo, 1921	$ 77.50
Dort touring, 1921	37.50
Dodge	30.00
Nash coupe, 1921	205.00
Overland sedan, 1920	150.00
Ford coupe, 1923	167.50
Ford coupe	105.00

Spring Clutch Co. Absorbs Central Gear in Merger

INDIANAPOLIS, Oct. 10.—The American Spring Clutch Company, which a few months brought out the L. G. S. Spring Clutch Starter Gear, has bought the property of the Hunter Dry Kiln, a plant two stories with about 15,000 feet of space and will manufacture automobile starters, shock absorbers and other devices with the spring clutch basic idea and also will produce other metal products.

At the same time the company announced that the Spring Clutch Company has bought the property of the Central Gear and Manufacturing Company, owned and controlled by individuals interested in the newer company. This concern has been the manufacturing end of the spring clutch company and has also produced gears and gear blanks and automotive screw devices.

Another operating company is to be formed by the officers and owners of the American Spring Clutch Company to be called the L. G. S. Company and this concern will lease the patents controlled by the Clutch Company. The officers of the concerns are Albert Lieber, president; W. Carlton Starkey, vice-president and general manager; Frank Gritt, secretary; and Charles Rutherford, treasurer.

The reorganization is for expansion and to draw the concerns which have been organized separately into a unit. The officers own all the stock of the interests and no stock is to be offered for sale.

Daily Ride Given Overland Sedan in Denver Proves Effective Introduction Plan

This is the way the new Overland sedan was introduced to the people of Denver. The display toured the business section every day and according to reports brought many prospects to the various agencies for a closer inspection

New Motor Coach Body For Ford Truck Planned

LOUISVILLE, Oct. 10.—The Kentucky Wagon Manufacturing Company has entered the bus body field after a close study of the developments in the motor coach industry, and, according to R. V. Board, president of the concern, will build a body to be known as the Economy Motor Coach, mounted on the Ford one-ton chassis. Officials of the company have concluded that the big field is in a unit suitable for this model chassis.

The new coach, which is said to be a pronounced departure from conventional bus models, is designed in both a sedan and street car type. The feature that is particularly noticeable is that the body projects a short distance beyond the front wheels, while at the rear it ends just back of the rear wheels like that of an ordinary passenger sedan, there being no rear overhang.

The driver's seat and the control elements have been taken away from behind the engine and brought forward. This provides room for eight passengers in the space a driver ordinarily occupies in common bus design. It seats sixteen passengers altogether.

Southern Parts Dealers Look For Active Fall Business

ATLANTA, Oct. 10.—That retail dealers all over the Southeast are looking forward to a very active accessory demand this fall, is noted from reports of the larger jobbers of accessories in Atlanta, who advise that September business was unusually good, and that not in some years have the dealer trades purchased as heavily of accessories for their early fall business.

September sales this year, in fact, were 20 per cent better than they were during the same month last year, and even showed a greater increase than this over September, 1923. The same is true of parts business, which has continued very active since early spring, every one of the last six months, September included, showing a substantial gain over the same month in 1924.

Tire jobbers and factory branches in Atlanta also report a decided increase in tire buying the past month, dealers ordering in quantity again now that there seems no likelihood of tire prices declining in the very near future.

Mexico Pledges Aid in Stopping Theft of Cars

LOS ANGELES, Oct. 10.—Two nations combined in warfare against automobile thieves at a conference recently held in the governor's palace at Mexicali on the border between California and Mexico.

No longer will the automobile thief be able to dash across the international border line of the southwest with his plunder, safe from molestation. Under the agreement reached, the Mexican military and peace authorities will cooperate fully with the American officials.

The conference was presided over by General Abelardo L. Rodriguez, governor of Lower California, and included R. H. Colvin of the United States Department of Justice, Captain J. E. Ervin, of the Los Angeles police department, and Walter E. Wood, head of the theft bureau of the Automobile Club of Southern California. Mexican officials included A. Murua Martinez, secretary of state and Francisco Peralta, inspector general of police of Lower California.

Miller Rubber Co. Planning To Increase Working Capital

Reorganization Will Be Voted on By Stockholders at Meeting Oct. 19

AKRON, Oct. 10.—Common stock of the Miller Rubber Co. will be split up on the basis of five shares of new no par common stock, to be issued to holders of each $100 par value share, if the reorganization plan proposed by directors is adopted, president Jacob Pfeiffer has announced.

A special stockholders' meeting will be held Oct. 19 to act on the proposal.

The plan includes selling $4,000,000 par value of the unissued cumulative preferred stock at $103.50 a share. Stockholders will be offered the right to subscribe for four shares of preferred for every five shares of old common held.

Total authorized capitalization under terms of the reorganization will be 600,000 shares, of which 400,000 will be common without par value and 200,000 8 per cent cumulative preferred.

President Pfeiffer, in a letter to stockholders, states the company has a large and profitable business on its books, and in immediate prospect. "In order to accept the business aavilable, it is advisable to increase working capital, he says. "Directors deem it advisable also to modernize the company's capital structure, and provide a better market for your common stock."

Kelly-Springfield Decides To Abandon Akron Plant

AKRON, O., Oct. 10.—Officials of the Kelly-Springfield Tire Co. have definitely decided to abandon the East Akron factory, Louis Mueller, general superintendent, has announced. The company plans to concentrate its production at the new factory in Cumberland, Md., he said.

Operations here are to be discontinued, the factory dismantled, and the property placed on the market for sale. Capacity of the Akron plant is about 3,500 automobile tires a day, but recently it has been running on a considerably reduced schedule. Approximately 500 workers have been employed.

Kelly-Springfield discontinued manufacturing tires here when the Cumberland plant was completed five years ago. Two years ago the local factory was reopened. It was reported at that time that the scarcity of experienced rubber workers handicapped operations at the new plant. Another theory advanced for the change was that the company was working on large orders for Detroit motor car manufacturers, which made it advisable to have production as near that city as possible.

NORTH EAST PICKS KELLEHER

ROCHESTER, N. Y., Oct. 10.—R. J. Kelleher has been elected vice-president and general manager of North East Service, Inc., it was announced at the convention of branch managers held at the plant of the North East Electric Company here. Mr. Kelleher has been manager of the Paris branch of the organization since 1920. Previous to that he was manager of the Kansas City office and later of the Detroit office.

Railway Engine Saves Day at Plant

AKRON, O., Oct. 10.—A railway locomotive was pressed into service at the plant of the Pharis Tire & Rubber Co., Newark, O., when one of the boilers failed. Steam from the locomotive was forced through an improvised connection into the steam mains of the factory, so that production went on as usual while the disabled boiler was being replaced.

The breakdown occurred while the Pharis company was at its peak production, with many thousands of tires on unfilled orders. The boiler failure would have curtailed their output several hundred tires a day, entailing a heavy loss.

MACHIA SALES MANAGER

CHICAGO, Oct. 10.—The Automobile Equipment Manufacturing Corp., 1908-10-12 Indiana avenue, manufacturers of the Balloon Bumper, announces the appointment of L. L. Machia as sales manager. The product is sold direct to car dealers. Mr. Machia is not new in automobile circles. He was formerly of the sales promotion staff of the Goodyear Tire & Rubber Co. of Akron, Ohio, where he was concerned with dealers' resale activities.

HUDSON DEALERS MEET

ST. LOUIS, Oct. 10.—Members of the Hudson-Frampton sales organization in St. Louis, including all its metropolitan dealers and their salesmen, attended an interesting sales meeting recently at which H. D. Bullock, sales expert of N. A. D. A. was the chief speaker. The Hudson-Frampton Co. distributes Hudson and Essex cars here.

FAMOUS DRIVERS ENTER

WASHINGTON, Oct. 10.—Eight nationally known automobile drivers have entered to date in the 250-mile race which will be staged October 24 at Laurel, Md., by the Baltimore-Washington Speedway officials. They are Peter De Paolo, winner of the opening 250-mile race July 11, on the same track; Earl Cooper, Bennett Hill, Jerry Wonderlich, Ralph Hepburn, Bob McDonogh, Ralph De Palma and Tommy Milton.

REYNOLDS MADE TREASURER

RACINE, Wis., Oct. 10.—C. B. Reynolds, formerly general credit manager, B. F. Goodrich Rubber Company, has been elected treasurer of the Racine Horseshoe Tire Company. Mr. Reynolds was with the Goodrich organization 16 years.

M. & A. M. A. Holds 3-Day Convention in Montr

Noted Business Authorities A Principal Speakers Before 200 Delegates

MONTREAL, Oct. 10.—Two hund delegates from member companies of Motor and Accessory Manufacturers sociation discussed modern methods management at a three-day convent October 7-9 at Montreal. With nc business authorities as speakers, am them Francis H. Sisson, vice-presiden the Guaranty Trust Co., and Merle Thorpe, editor of the Nation's Busin the parts and accessory makers exchan ideas on general and financial mana ment, merchandising and credit granti

From Mr. Sisson the delegates lear of the steady improvement of busin conditions throughout the world. He alyzed American and foreign conditi showing that continued prosperity is prospect for businesses intelligently aggressively managed.

Mr. Thorpe said that business is gc but there is an undercurrent of dis pointment due to business men hark back to the "golden days of 191 September, said Mr. Thorpe, fo volume of trade larger, industry m active, failures and liabilities smaller some of the leading crops in better sh than a year ago. Speaking of comp tion, he said that more business is be done and more dollars are being g after but more people are going a both business and dollars. He ur business men not to expect Congress legislate them into prosperity.

E. P. Chalfant, of the Gill Manufact ing Company of Chicago, president of M. & A. M. A., presided over the open sessions. W. T. Morris of the Ameri Chain Co., President of the Automo Equipment Association, discussed pr lems of management in the parts and cessory industry.

Alabama Cars Increase By 80,000 During Last Ye

BIRMINGHAM, Oct. 10.—During fiscal year ending September 30, 1 the number of motor vehicles in A bama has increased by about 80,000, cording to the report of F. C. Marq associate member of the state tax c mission. The gain for this pe brings the total for the year up to 2 000 motor vehicles now being opera in the state of Alabama. Of the incre reported Mr. Marquis states that at l 75 per cent of them are private or p senger cars.

The state two cent per gallon gaso tax brought in a sum for the montl August which broke all monthly rec to date. Net receipts from the tax for month of August totalled $200,793.94 this is the first time since the tax levied that the net receipts have reac the $200,000 mark.

N. A. F. C. to Hold Session In Chicago November 16-17

Committee Appointed to Arrange Program Presenting All Financial Phases

CHICAGO, Oct. 10.—Two days, Nov. 16 and 17, were set as the dates for the annual convention of the National Association of Finance Companies at a meeting of the executive committee here this week. The convention will be held at the Sherman Hotel, Chicago.

A committee to arrange a program was appointed, as follows: A. H. Rosenberg, Motor Car Securities Co., B. A. McDonald, Commercial Credit Trust; F. A. McGary, Mercantile Acceptance Corp.; J. R. McNamara, Walter E. Heller Co.; E. L. Price, Manufacturers Finance Trust, and C. C. Hanch, general manager of the association.

This committee was instructed to arrange a program which is expected to be a complete discussion of the automobile financing problem from the various standpoints of manufacturer, distributor, dealer, banker, insurance company, and finance company. An effort will be made to get capable speakers to present these different viewpoints.

One feature of the program which is looked forward to with considerable interest will be a report of the investigation now being conducted by Mr. Hanch into the experience of the finance companies with credits based on varying down payments and terms of repayment, especially from the standpoint of repossessions and losses. To gather material for this report questionnaires were sent to all known finance companies whether members of the association or not, and already more than 100 returns have been filed. Mr. Hanch is hopeful that at least as many more companies will fill out and return the questionnaire so that the final analysis will more accurately represent the experience of the industry.

Invitations to attend the convention will be extended to all finance companies, bankers and representatives of the motor vehicle industry, whether or not members of the association.

A metter of business to come before the convention will be the election of eight directors.

OLDS PICKS CARTER

LANSING, Oct. 10.—I. J. Reuter, president and general manager of the Olds Motor Works, has announced the appointment of J. J. Carter to the position of factory manager. Mr. Carter joined the Oldsmobile staff last March as assistant factory manager, coming from the Remy Electric company, another General Motors unit, where during his thirteen years association with Remy he had been superintendent of the tool room, master mechanic, and manufacturing engineer. He succeeds John Scott who recently resigned as factory manager at the Olds plant.

8 to 9 P. M. Zero Hour For Jay Walkers

WASHINGTON, Oct. 10.—The largest number of pedestrians are struck by automobiles in an average American city with a population approximating that of the national capital between the hours of 8 and 9 at night, it is revealed here through the comprehensive traffic and transportation survey being made under the direction of Maj. William E. R. Covell of the Public Utilities Commission of the District of Columbia.

It is further disclosed that the largest number of collisions between automobiles occur between 5 and 6 in the evening.

The conclusions are reached after analyzing 6,742 accidents, including both serious and minor injuries to persons and to property.

"The menace of heavy traffic has been so dinned into the minds of the people that they are alive and alert to the danger during the rush hours, when one would naturally think most of them would be hurt," said Major Covell. "But after dinner, as they are hurrying to parties and theatres, their minds are not on traffic. This lack of alertness, combined probably with low visibility and the fact that their eyes have not accurately become adjusted to the change from daylight to dark, is what sends pedestrians to hospitals and morgues between 8 and 9 p. m."

Kissel Reduces Prices $100 On 5-Passenger Brougham

HARTFORD, Wis., Oct. 12.—Effective today, the Kissel Motor Car Co. announces a reduction in the price of the five-passenger brougham in the six and eight-cylinder series. New prices, compared with the old are given below:

	New Price	Old Price	Reduction
Five-Pass. Brougham Model 55 (six)	$1695	$1795	$100
Five-Pass. Brougham Model 75 (eight)	$2095	$2195	$100

TO INCREASE CAPITAL STOCK

NEW YORK, Oct. 10.—Directors of the American Bosch Magneto Co. have called a special meeting of stockholders for Oct. 13, at which they will be asked to approve an increase in the capital stock from 175,000 to 250,000 shares. The management intends to offer 69,133 shares of the new stock to shareholders on the basis of one share of new stock for every two shares held, at a price of $33. The company has made no arrangements for underwriting. The sale of stock, if accepted by stockholders, will provide the company with $2,200,000 cash, which will be used to retire $2,125,000 outstanding 8 per cent notes, which are callable at 105.

St. Louis Chevrolet Plant To Speed Up Production

New Assembly Line, Making Three in All, Is Added to Facilities

ST. LOUIS, Oct. 10.—Another assembly line, making three in all, has just been put into use in the St. Louis Chevrolet plant at Union Boulevard and Natural Bridge Road. The plant is working at full capacity and overtime and for some time the two assembly lines, one devoted to passenger cars of open models and the other to closed passenger car models and trucks, have been overcrowded. The new line will be used for commercial cars while the two old ones will be devoted to passenger cars.

The plant here is continually close to the assembly record and with the new assembly line in use is likely to set a new record any day. One day recently 750 Chevrolets were assembled, loaded and all were shipped the same night. From 4 p. m. Saturday, August 31 to 4 p. m. the following Monday 1374 cars were shipped.

Installation of the new line has made it possible to increase production of Chevrolet commercial cars from 38 to 50 to 55 per hour.

The St. Louis plant claims that it is assembling as many, if not more cars than any other Chevrolet plant in the country.

Nash September Business Is 83 Per Cent Ahead of 1924

KENOSHA, Wis., Oct. 10.—The Nash Motors Company, in closing its books for September, reports a volume of business greater by 83 per cent than that of September, 1924.

"The last month," says E. H. McCarty, general sales manager, "was the thirteenth consecutive month to show a substantially material gain over the corresponding period of the previous year.

"The number of cars shipped in September was 10,314. This is but 361 cars less than the August total of 10,675—and August rolled up the biggest monthly volume in all Nash history. September, however, having one less working day than August, actually established itself as the period of greatest daily production since our company was founded.

"During August and September there were produced and sold 20,989 Nash cars. This constituted more than 39 per cent of our entire business for the year 1924.

CHAMPION VISITS EUROPE

FLINT, Mich., Oct. 10.—Albert Champion, president of the AC Spark Plug Company sailed for Europe from New York October 7 on his annual trip in the interest of the company's European factories, located at Birmingham, England and Paris, France. While abroad he will also attend the Olympia Show in London.

Rickenbacker Sees Demand About Even Through Season

Motor Company Head Believes Fall and Winter Sales Comparable to Summer Business

DETROIT, Oct. 10.—"Now that enclosed models constitute about 85 per cent of the entire production in all but very small cars; and since all manufacturers have adopted the policy of making important changes in July and August instead of in January as we used to do, we do not look for any noticeable slackening off in demand for automobiles" says Captain E. V. Rickenbacker, vice president and director of sales, Rickenbacker Motor Company.

"On the contrary, everything indicates that the fall and winter demand will be fully equal to, and some of us believe will exceed, that of the summer months.

"It is too early yet to know the total figures of production for the entire industry in September but it looks as if that will probably prove to have been the biggest month the industry has ever known.

"Deliveries and specifications for October are now about all in and they indicate an increase rather than a reduction of demand.

"I am speaking now for Rickenbacker Motor Company but I see no reason why the same rule should not apply to all those other companies who have a modernized product and one which is in favor with the public."

TO HANDLE TURNER LINE

KOKOMO, Ind., Oct. 10.—The Turner Manufacturing Co., has appointed Matthew Konz, 2101 Midwick Drive, Monterey Park, Cal., distributor for the entire line of Turner automotive devices in California. The company states Konz will carry a complete stock of Turner products in Los Angeles, and will maintain a sales organization covering California

KENNEDY INVADES EUROPE

NEW YORK, Oct. 10.—J. A. Kennedy, known as the champion tire changer of the world, and a brother of James Kennedy, president of the Pacific Rim Tool Co., of Cleveland, has sailed for contests at the Olympic Show in London and for visits in Holland, Sweden and other points on the Continent.

VICTOR PLANT MOVED

ST. LOUIS, Oct. 10.—Victor Motors, Inc., manufacturers of trucks, has completed the removal of its plant from twenty-eighth and Locust streets to East St. Louis and will devote the Locust street location to sales in the future. Guy Wilson, president of Victor Motors says he expects the new plant to enable the company to catch up on back orders which its previous limited production did not make possible. The prices of Victor trucks are now quoted f.o.b. factory, E. St. Louis, Illinois.

VELIE PICKS HAMEY

MOLINE, Ill., Oct. 10.—B. F. Hamey has succeeded J. C. Helbert as district representative of the Velie Motors Corp. in the Minneapolis territory, C. W. Hadden, general sales manager, has announced. Mr. Hamey was prominent for a number of years in the farm implement business and later was distributor of the Dort car in the Twin Cities.

Bus and Parts Builders to Hold Joint Detroit Exhibit

DETROIT, Oct. 10.—Approximately 25 bus manufacturers and between 80 and 90 parts and accessories manufacturers and 12 bus body builders, are expected to exhibit at the National Motor Bus Show, to be held here from November 16 to 21. The exposition will be held in Trindley Hall under arrangements by a committee headed by C. E. Stone, chief engineer of the People's Motor Coach Company.

According to Mr. Stone the show will be larger and will not be a duplication of the recent bus show held by the American Electric Railway Association at Atlantic City.

It will be strictly for the independent bus operator and not as a sideline for any other means of transportation. Buses to be shown will include the latest in city, surburban, and interurban express models. Parts and accessories will be of newest design.

Plans for the show are rapidly taking form and Mr. Stone considers it likely that the number of exhibtors who will show will be greater than the number already signed.

DURANT PROMOTES RUPPRECHT

NEW YORK, Oct. 10.—Colin Campbell, vice-president, Durant Motors, Inc., announces the appointment of B. A. Rupprecht as regional sales manager of the southeast region, comprising Cincinnati, Greensboro and Atlanta and two new zones with headquarters at Louisville, Ky., and Jacksonville, Florida. Mr. Rupprecht was formerly sales manager of the Cincinnati zone. His headquarters will continue as heretofore at Cincinnati. Mr. Campbell also announces the appointment of E. D. Knowles as regional sales manager of the middle west region, comprising the Denver, Kansas City, St. Louis, Memphis, Dallas and Oklahoma City zones. R. C. Nisbit is the new zone sales manager at Denver.

WALLER MOVES PLANT

WATERLOO, Ia., Oct. 10.—The Waller Manufacturing Company of Dubuque is moving its plant here and has leased a portion of the Miller Products Company building for occupancy. The company is employing between 50 and 60 men in its automobile accessory manufacture, which is centered on an aluminum composition heater, being widely distributed by jobbers throughout the United States. Proximity to aluminum and brass casting plants in this city influenced the change. C. L. Waller is president and general manager of the plant.

Revenue Collections Show Big Advance in Augus

Total for Month Is $3,936,10 More Than for Same Period Year Ago

WASHINGTON, Oct. 10. — Interna revenue collections from the automotiv industry for the month of August, 192 showed an increase of $3,936,108.95 ove the month of August, 1924, according t computations just made public here b the Internal Revenue Bureau.

The total August, 1925, collections ar given as $13,213,295.28 as compared wit $9,277,186.33 for August, 1924. The sta tistics show that the aggregate receipt of the bureau for the month of Augus 1925, totaled $117,493,918.46 or $29,139 673.34 more than for August, 1924, whe the aggregate receipts were only $88,354 245.12.

The bulk of the August, 1925, collec tion increases was accounted for in th classification, "other automobiles an motorcycles" this group rolling u $10,197,896.15 for August, 1925, as com pared with $6,156,299.17 for August, 192

Collections from "automobile truck and automobile wagons" for August, 192 were $557,603.28 as compared with $701 899.87, being the only classification t show a loss while collections from "auto mobile parts and accessories" were prac tically the same in August, 1925, wit $2,457,795.85 as in August, 1924, whe they were $2,418,987.29.

It is further shown that the collec tions from the automotive industry fo the period from July 1, 1925, to Augus 31, 1925, were $28,050,904.47 or $7,300 298.91 greater than for the period fro July 1, 1924, to August 31, 1924, whe they were $20,750,605.96.

Gustin—Clearing

LUTHY BUYS MICH. CO.

JACKSON, Mich., Oct. 10.—The F. A Luthy Company, manufacturers of LU THE automotive tools and equipment ha purchased the assets of the Michigan Pi ton Ring Company, Hastings, Mich., an will manufacture and market a comple line of leak proof, oil grove and plain ste cut rings under the LU-THE trade mar The factory for the present will be l cated at Hastings under the manageme of R. D. Bourdon, who has a wi experience in the automotive equipme industry, having formerly been with th Piston Ring Company of Muskegon, Mich and the Michigan Piston Ring Compan of Hastings.

IOWA TAX COLLECTION

DES MOINES, Ia.—Iowa's gasoline ta bill for August was $531,409.64, the high est since the tax was inaugurated la spring, and bringing the total collectio in four and a half months to $2,012,878.1 The cost of collection in August wa $2,406.36 and refunds, allowed comme cial and agricultural users, $13,459.2 Thus 98.862 per cent of the revenue we direct into road funds for the state.

Pierce-Arrow Is Upheld by Board in Appeal on Taxes

Income Return Deductions for Depreciation in 1917 and 1918 Are Sustained

WASHINGTON, Oct. 10.—A decision of far reaching significance in the automotive industry was rendered here by the United States Board of Tax Appeals when the body declared reasonable deductions claimed by the Pierce-Arrow Motor Car Company for depreciation on special tools and patterns in the company's tax returns for 1917 and 1918.

The evidence showed that the taxpayer in its original return for 1917 claimed $176,940.76 for depreciation of special tools and patterns and in its original return for 1918, $849,462.72 for depreciation and amortization. A revenue agent having objected to the 1918 deduction, the taxpayer filed, in 1922, amended returns, claiming $489,438.74 for 1917 and $776,708.07 for 1918. The Commissioner cut down the allowances to $287,361.95 for 1917 and $488,145.53 for 1918, causing the Pierce-Arrow Motor Car Company to take an appeal.

Taking into consideration that the tools and patterns were of three classes, having a life of from less than a year to three and a half years, the Tax Board figured that the motor car company was entitled to deductions of $506,184.15 in 1917 and $722,858.98 in 1918 or within $37,103.68 of the deductions claimed in the company's amended returns.

Best Equipment Shop Is Basis of McCullough & Son Contest

PHILADELPHIA, Oct. 10.—The four-day exhibit of shop equipment, automotive accessories and radio put on by the wholesale firm of J. H. McCullough & Son brought out a good dealer attendance and a satisfactory volume of business is reported to have been done.

A prize contest for the best equipped shop in the territory was run in connection with the exhibit. Eleven prizes were offered consisting of various items of shop equipment. Prior to the show, questionnaires were mailed to the entire trade with the request that the dealer check off the items of equipment in his shop. Prizes will be awarded on the basis of the returns, consideration being given to the size of the town in which the individual is situated. Of course, from the McCullough standpoint, the contest gives a census of shop equipment and will be used in future sales efforts.

The show was also used as a means of training McCullough salesmen. Each exhibitor was furnished with a list of the salesmen. The salesmen were instructed to spend some time in each booth listening to the manufacturer's representative explain his products to dealers and the exhibitors were requested to check off the salesmen on the lists and report to the McCullough company.

Exhibitors at the show included Oakes & Dow; Central Brass & Fixture Co.; American Chain Co.; Berger Mfg. Co.; Manley Mfg. Co.; Weaver Mfg. Co.; Black & Decker Mfg. Co.; Hutto Grinding Co.; National Carbon Co.; Raybestos Co.; Bonney Forge & Tool Co.; Parker Mfg. Co.; Edison Lamp Works; Colin B. Kennedy Co.; Gates Mfg. Co.; Kellogg Mfg. Co.; Roth Bros. Co.; Imperial Brass Co.; Swift Lift Jack; Ernest Holmes; McQuay-Norris Mfg. Co.; and Hall-Thomas Co.

Attorney Ordered to Speed Bus

CINCINNATI, Oct. 10.—Something out of the ordinary in traffic court precedure took place when Prosecutor Joseph O'Connell was ordered by Traffic Judge George F. Eyrich, Jr., to drive a motor bus at the rate of 45 miles an hour on Hamilton avenue from North Bend road to the corporation line. The test was made to ascertain who was right in the testimony of policemen that Carl Achberger, bus driver was making 45 miles an hour when overhauled on the North Bend road. Both Achberger and an engineer of the bus company testified that the bus could not make more than 25 miles an hour because it was geared to restrict its speed to that figure. The test showed the bus driver was correct.

NASHVILLE HAS SHOW

NASHVILLE, Tenn., Oct. 10.—A number of car, truck and accessory dealers and jobbers in Nashville cooperated in the holding of an automobile show in connection with the annual Tennessee State Fair in Nashville, the show attracting the interest of thousands of visitors to the state fair during the week.

SHOW CARS AT KNOXVILLE

KNOXVILLE, Tenn., Oct. 10.—The annual Fall Automobile Show of the Knoxville Automobile Trade Association held in connection with the East Tennessee Division Fair, proved one of the largest automobile shows held anywhere in the southeast this year, with virtually all the members of the association having space for cars and accessories.

CAYWOOD PROMOTED

BOSTON, Oct. 10.—D. G. Caywood, who, for the last several years has been manager of the Boston branch of the Black & Decker Manufacturing Company, has been promoted and will now act as a special representative for the company on various types of special work. A. D. Geiger, formerly salesman in the Kansas City branch of the Black & Decker company, has been selected to take Mr. Caywood's place in the Boston branch and has taken over his new duties.

Dealers Win in Fight for Lower Coast Freight Rates

California Inland Towns Given Decision Against Roads by I. C. C.

WASHINGTON, Oct. 10.—The Interstate Commerce Commission this week held that freight rates on automobiles and parts, in carloads, from Detroit and South Bend to all points on the Northwestern Pacific Railroad north of Willits, California, were unjust and unreasonable to the extent that they exceed the rates to California coast group points. The railroads were ordered to equalize the rates on or before December 21, and awarded reparation to automobile dealers who have paid the unreasonable rates.

The complaint which won the favorable ruling of the Interstate Commerce Commission was filed by nine separate passenger and freight automobile firms engaged in business at Eureka, California. Two of the firms, the Studebaker Sales and Charles Green Company are corporations while the other seven are co-partnerships. Collectively they sell at Eureka practically all of the different styles of standard automobiles manufactured in the United States.

While the rates assailed were to all points on the Northwestern Pacific, north of Willits, the rates to Eureka were those of principal interest. Attorneys for the complainants showed that the rate to points south of Willits in California and in Oregon was $4.65 as compared with a rate of $5.49 charged to Eureka.

The names of the seven co-partnership complainants are: W. H. Jewett, G. A. Fulton, Jewett Rhodes-Motor Company; O. L. Knudson Company, E. J. Reed, Lundblade and Jewett, A. E. Hermanson, and Ferndale Iron Works Garage.

Pierre duPont Is Appointed Delaware Tax Commissioner

WILMINGTON, Del., Oct. 10.—Though his time is now fully occupied as chairman of the board of the General Motors Corporation, chairman of the board of E. I. duPont deNemours & Co., and many other similar business enterprises, Pierre S. duPont of Wilmington, one of the wealthiest men in Delaware, has accepted appointment by Governor Robinson to the office of state tax commissioner. He will have charge of the collection of income and school taxes.

According to the governor, Mr. duPont was selected because of his great interest in educational matters, having given about $4,000,000 to the cause of education in the state; also because of his well-known financial and executive ability; his great interest in state welfare generally and his belief that when a person is asked to serve the public it is his duty to do so.

He did not seek the office, which pays $4,000 a year and is for four years, but he willingly accepted when asked to do so.

Along Automobile Row

SHREVEPORT, La.—The building at Spring & Milam Streets, occupied by the S. B. Hicks Motors Company, has been purchased by George T. Bishop, Inc., Dodge Brothers distributors, from the Hicks Building Company for $80,000. Mr. Bishop announced that five additional stories will be added at a cost of from $130,000 to $175,000. With the Associations

Getting Full List for Tires

LOUISVILLE, Ky., Oct. 10.—In a recent resolution the Louisville Tire and Accessory Dealers Association requested all automobile dealers to refrain from selling tires and accessories to purchasers of automobiles unless the full list price was received for the merchandise. Response from the automobile dealers indicates that tires and accessories are rarely sold under list and that the dealers much prefer to have all tire purchases by automobile owners made from the tire dealer in order that the automobile dealers may avoid the demands for tire service which they are not equipped to supply.

The tire and accessory organization which was formed in June of this year, is making rapid strides. Many new members are being added each month. A credit exchange system, operated from headquarters, has saved the members thousands of dollars and is the outstanding accomplishment of the association. A novel system for arriving at the amount of dues each member will pay has been inaugurated since the dues were originally set at $30 a year. Each member is now asked if he can pay more than the stipulated amount and the majority of the dealers are now paying dues based on a percentage of their yearly turnover. This method has strengthened the association treasury materially.

Heads Automobile Branch

CHARLOTTE, N. C., Oct. 10.—Fred Anderson, dealer in Chevrolet cars, was elected chairman of the automobile dealers' division of the Charlotte Automotive Merchants' Association. The automobile service division will elect a chairman later. The association was divided by action of the executive committee with the view of increasing the value of the association to its membership.

Tendered Life Membership

DENVER, Colo., Oct. 10.—The Denver Automobile Dealers' Association has tendered an honorary life membership to F. L. MacFarland, recently retired Buick distributor for this territory. Mr. MacFarland is a veteran of 25 years' experience in this business.

Discuss Credit Problems

CHARLOTTE, N. C., Oct. 10.—Many credit problems were discussed at a special meeting here of the credit men's division of the Southern Automotive Jobbers' Association. The association's annual meeting will be held at Atlanta, Ga., next May.

Unlicensed Garages Hit

MOBILE, Ala., Oct. 10.—The automotive committee of the Mobile Chamber of Commerce has recently been conducting a concerted campaign to eliminate from that city what is known as the "back-alley" garage. Branding the garage of this type as "a menace to life through incompetent work on automobiles," the automotive committee, membership of which includes the leading dealers of the city, is doing all in its power to force incompetent workmen from the automobile repair field, doing so by the elimination of licenses to those mechanics who cannot pass a rigid examination. The aid of the police department has been sought in checking up on such firms, many of which it was learned had been operating without licenses, and also employing unlicensed and incompetent mechanics. Thus the service business of the legitimate dealer and distributor firms is being materially benefited, and the business generally placed on a higher plane throughout the city and suburban territory, while the effort also is resulting in giving the automobile owning public more confidence in the trade.

New Manager

Claude S. Klugh, newly appointed manager of Pennsylvania Automotive Association

Toledo Elects Van Dusen

TOLEDO, Oct. 10.—C. A. Van Dusen, head of the Van Dusen Auto Repair & Machine Co., was elected a member of the board of directors of the Toledo Automotive Trades Association at its annual election. He will represent the electrical supply and battery division. Van Dusen is the only new face on the board.

Other members are Charles Doan, passenger car division; John Hupman, trucks; George Bender, accessories; Burt Sage, garage and repairs; T. J. Cooper, secretary and trustee at large, all of whom were re-elected.

President Paul Jones presided at the meeting at which there were nearly 100

Parking Survey Made

LOS ANGELES, Oct. 10.—In order to obtain accurate data in support of their contention that there are adequate parking facilities near the downtown section of Los Angeles for shoppers, the Los Angeles Motor Car Dealers' Association recently completed an exhaustive survey that revealed some interesting figures. The survey showed that approximately 40,000 cars can be parked in or immediately adjacent to the downtown business district. About 10,000 cars can now be parked in curb space since the Motor Car Dealers' Association persuaded the authorities that more curb parking restrictions were being enforced than were necessary. Automobile parks provide room for 20,000 more cars, and garages have room to take care of another 10,000 cars. Of the garages, about 1,000 capacity is private, leaving room for about 9,000 cars, which space is divided among 103 garages, all located in or near the main business district. About 15 of the 103 garages have parking space for 100 cars or more.

Service Men to Meet

CHARLOTTE, N. C., Oct. 10.—Approximately 200 representatives of gasoline, tire, and battery and accessories concerns are expected to attend the first annual convention of the North Carolina Automotive Service Association, at Greensboro, Oct. 20-21, according to Keeley A. Grice of Charlotte, president of the association. Mr. Grice said every operator of a service station in this state, whether or not a member of the association, will receive a welcome at the meeting.

Extended addresses will be important by their absence as the directors have decided that the program will be made up largely of short, snappy talks, with discussions being led by group leaders.

This state association, formally launched here last May, is growing rapidly and already "it has exerted a tremendous influence for better business relations and conditions involving not only the members but also others interested in automotive service," said Mr. Grice.

Carolinas Plan Show

CHARLOTTE, N. C., Oct. 10.—The Charlotte Automotive Merchants' Association at its last meeting decided to hold a Carolinas auto show in 1926. The shows are usually held in February and although no date for the 1926 show was set at this meeting, it is expected that it will be held at the usual time.

No committees were appointed, members of the association saying that it would be at least 30 days before this stage is reached. The 1926 show will be the seventh annual show and is expected to be as elaborate as any previous show.

Fageol-Hall-Scott Merger Hits Snag in Legal Form

Bus Company's Stockholders Also Fail to Ratify Terms of Sale Agreement

OAKLAND, Cal., Oct. 10.—The corporation laws of California appear to be the snag on which the merger of the Fageol Motors Company, Hall-Scott Motors, Inc., the American Car and Foundry Company and the J. G. Brill interests are temporarily hung up, according to announcement issued here by officials of the Fageol concern. The two purchasing companies—the American Car and Foundry and the Brill Company—had planned to organize the Fageol and Hall-Scott interests into one California corporation, subsidiary to the two eastern firms.

Into this plan entered the issuance of non-voting preferred stock, which was to be taken by the American Car and Brill interests, and of no-par-value common stock to the amount of 150,000 shares with which the Fageol stockholders were to be paid for their present stock.

The state of California here stepped in, however, with the ruling that new corporations having non-voting preferred stock and no-par-value common stock should not be permitted to file their articles of incorporation in this state. This necessitated an entirely new plan for the merger-corporation, and this plan is now being worked out in the East.

Aside from this delay, Fageol stockholders have not yet voted the necessary two-thirds confirmation of the sale agreement between the Fageol directors and the representative of the American Car and Foundry Company and the J. G. Brill company. It is generally presumed, however, that the agreement will be confirmed by the stockholders. The San Francisco firm of industrial engineers which is now making an appraisal of the Fageol plant and assets, will make its report about October 1, and this report will be the basis of payment for the Fageol plant, patents, contracts, business and good will.

It is understood, from the same official source as the above, that, in the event that the stockholders do not approve the merger, the Fageol company will try to continue to purchase Hall-Scott motors. Officials of the Fageol company claim that the Fageol bus and truck motor is of their own design, and merely manufactured by the Hall-Scott Motors, Inc., of Berkeley. In case this plan to purchase motors falls through, the Fageol interests announce that they will float a bond issue and errect a manufacturing plant of their own, building the Fageol motor for themselves.

Automobile Display Biggest Attraction at County Fair

OSHKOSH, Wis., Oct. 12.—An exceptionally fine display of motor cars was on exhibit at the Winnebago county fair here with most of the active dealers in this territory participating. The Krueger Auto Co. had a showing of the Packard, Franklin, Nash and Ajax, Baranowski Auto Co., the Hudson-Essex line, Bogda Chevrolet Co., Chevrolets, Hollister Auto Co., Overland-Willys-Knight, Lorin H. Miller, Hupmobile, Uhlhorn Motor Co., Dodge Brothers line, Winnebago Auto Co., Fords, Lawrence Larson, Jewett and Reo, Schneider Motor Co., Oldsmobile, and Curry Motor Co., Chrysler. The Oshkosh Motor Truck Co., had an exhibit of four-wheel drive trucks at the fair. The display of automobiles was housed in special quarters this year and attracted more attention than any one other display at the fair.

Coming Motor Events

Automobile Shows

Jackson, Miss.—Oct. 19-24
Automobile Show by local trade in connection with State Fair. Dr. R. S. Curry, manager.

Shreveport, La.—Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

Chicago—Nov. 16-17
Annual convention, National Association of Finance Comanies, Hotel Sherman. C. C. Hanch, secretary-manager, 76 W. Monroe St., Chicago.

Chicago—Nov. 9-14
Seventh annual exhibit of the Automotive Equipment Association at Coliseum, in connection with annual convention.

New York—Nov. 15-21
Twenty-first Annual Automobile Salon.

Chicago—Nov. 16-18
Convention and exhibition of the National Standard Parts Association, Hotel Sherman, C. B. Fraser, secretary, 310 Hofman Bldg., Detroit.

New York—Jan. 9-15
National Automobile Show in Grand Central Palace.

Newark, N. J.—Jan. 16-23
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exhibition Co., Chamber of Commerce Building.

Chicago—Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Louisville, Ky.—Feb. 15-20
Louisville Automobile Show, Armory, under the auspices of the Louisville Automobile Dealers Association, J. Garland Lea, manager.

Races

Rockingham (Salem, N. H.)—Oct. 17
Baltimore—Oct. 24
Charlotte, N. C.—Nov. 11
Los Angeles, Cal.—Nov. 26

Conventions

Buenos Aires, Argentine—Oct. 8-13
Pan-American Road Congress.

Montreal, Que.—Oct. 7-16
Fall convention of the Motor and Accessory Manufacturers Association.

Pittsburgh, Pa.—Oct. 12-14
Pennsylvania Automotive Association Convention.

Montreal—Oct. 13-14
Convention of the National Association of Automobile Insurance Companies.

Des Moines, Ia.—Nov. 12-13
Automotive Merchants' Association Convention.

St. Louis—Nov. 17-19
Annual Convention of National Tire Dealers' Association.

New York—Jan. 11-13
Second World Motor Congress, under auspices of National Automobile Chamber of Commerce.

Foreign Shows

London, England—Oct. 8-17
Olympia Passenger Car Show.

London, England—Oct. 29-Nov. 7
Annual Truck Show.

Berlin, Germany—Nov. 26-Dec. 8
Annual Automobile Show in the Kaiserdamm.

FORD MAY SHOW ALONE

PHILADELPHIA, Oct. 10. — Sesqui-Centennial Exposition authorities say the Ford Motor Co., Detroit, intends to have a large exhibit, entirely independent of the other automobile manufacturers and may even erect an exposition building of its own on the grounds. This would be in the event that other automotive interests should take most or all the floor space in the Palace of Automobiles.

"If the other factories take only 75,000 square feet of floor space, as some have proposed," said an Exposition official, "we will place their exhibits at one end of the building and Henry Ford's at the other; but Ford will put up a building of his own for exhibit purposes if he thinks he will not have room enough to make his showing."

1926 Italian Grand Prix Will Admit Single Seaters

PARIS, Sept. 25.—(By Mail).—Single seater bodies will be admitted in next year's Italian Grand Prix 500 mile race for 91½ inch cars, irrespective of any decision taken by other European Clubs, according to a statement made by Arturo Mercanti, general manager of the Monza Track. This decision has been taken as the result of Duesenberg experience in Italy. It has been proved that under European conditions the narrow type American body does not give any speed advantage; on the other hand it allows the car to be better balanced, and it places the driver in a safer position.

The French club, while limiting the crew to one man, maintains that there must be two seats side by side, which of necessity puts the driver out of the centre line. This rule makes it difficult to secure interchange of cars and drives between Europe and America.

CONTINENTAL PAYS DIVIDEND

DETROIT, Oct. 10.—At the regular meeting of the board of directors of the Continental Motors Corp. the quarterly dividend at the rate of 80 cents per annum, was declared. The dividend is payable Oct. 30 to stockholders of record Oct. 15. With the payment of this dividend there will have been paid to stockholders this year $1,408,676, the corporation announces.

Letters Indicate Ford Has Banned Low Down Payment

Metropolitan Dealers Told Old Method of Third Paid is Best Policy

NEW YORK, Oct. 10.—Has the Ford Motor Co. definitely abandoned the plan whereby in some sections cars have been sold for as little as $12.60 down payment? Metropolitan dealers have been asking this question as the result of letters recived through the New York branch carrying the statement that 25 per cent down, with 12 months for the payment of the balance, are the minimum term that can wisely be accepted by dealers.

One thing seems certain, that there is little likelihood of the $12.60 plan being put into effect in the New York district. This plan is condemned, indirectly, in the letters, one of which says:

In line with good merchandising and our experience we do not believe it advisable to accept time payments on Ford cars for a less down payment than 25 per cent and we believe that 12 months should be sufficiently long to clean up the transaction. This letter is induced by the fact that many dealers are selling on plans of 20 per cent down and in some cases even less. We do not believe this necessary, nor do we believe that it serves our best interests.

Another letter, sent out when the new models began coming through, amplified this position:

At the outset and for the average business on deferred payments, we believe in a standardized system of handling, we believe in uniformity of financing plans and our reasons are very obvious.

With the delivery of the improved models we suggest that all dealers sell on the old plan of one-third down and 12 months for the balance. If it is necessary during the heavier winter months, the inducement of a quarter down and 12 months might be the other barrel to use at that time, but not now. Any other plans or idea for the transaction of the general run of time payment business leads to certain questionable results. When endorsement is required on notes, the endorser never expects to make good and if he is required to do so, he doesn't blame his friend, he damns the car and the dealer.

When a car is repossessed, what do the friends hear? They get anything but the truth and again you and the product suffer. Then greatest of all is the attitude of the general banking interests toward our business. We want to retain their present interest and willingness to assist in the financing of our future transactions.

Four-Cylinder Bentley Wins World's 24-Hour Record

PARIS, Sept. 25.—(By Mail).—An average of 95 miles an hour was maintained for 24 hours by John F. Duff and W. Barnato, driving a 183-inch four-cylinder Bentley, on Montlhéry track, in a successful attempt on the world's twenty-four hour record. The British car covered 2,280.64 miles, compared with the previous record of 2,103.19 miles set up by a six-cylinder Renault.

Duff and Barnato took three hour spells at the wheel. Two front tires were changed after nine hours running and two rears after running 21 hours. The hood was never lifted.

A sleeve valve four-cylinder Voisin set out immediately after the Bentley had put up the new twenty-four hour record, but had to be withdrawn after running a distance of 1,523.8 miles in 16 hrs. 5 min. The Voisin secured two world's records, six hours at an average of 100.404 miles an hour, and one thousand kilometres at an average of 100.3 miles an hour, both these records being taken from the Bentley driven by Duff.

NEW AUBURN DEALERS

AUBURN, Ind., Oct. 10.—New dealers who have recently been added to the Auburn organization follow:

Ralph C. Calkins, Lake Huntington, New York; Rex O. Windship, Warsaw, Ind.; Stow-Barron, Inc., Detroit; Wyandotte Auburn Sales, Wyandotte, Mich.; F. A. Robinson Sales, Clyde, O.; East Buffalo Motor Sales Co., Buffalo, N. Y.; A. H. Sengstock, Antigo, Wis.; Cook Auto Co., Terre Haute, Ind.; Braswell & Stanley, Jacksonville, Fla.; H. R. Wainwright, Winter Park, Fla.; Fred Sollberger, Kendallville, Ind.; James J. McGuiness, New Haven Garage, New Haven, Conn.

SQUEEKS and RATTLES

ILLUSTRATED

"Youth will have its fling," murmured the neighborhood terror's indulgent mamma, as he "got" the passing windshield with the very first rock.

One thing to remember while driving an automobile is some other driver may be as crazy as you are.
—Columbia Record.

We do wish they could invent a non-skid noodle for chicken noodle soup.
—Hartford, Wis., Times.

IT CAN'T BE DONE

Let poets sing their lilting songs
And gayly strum the lyre;
Give me the man who whistles while
He's putting on a tire.
—Hartford, Wis., Times.

One small jack can lift a car, but it takes a lot of jack to keep it up.
—Parkersburg Sentinel.

"What do you do when she is cold and refuses to get started?"
"Choker."
—Pitt Panther.

Ned: Did your car turn turtle?
Ted: No, jack rabbit or kangaroo.

Crash! Bang!

Tess: What is a bumper crop?
Les: Pedestrians, I think.

A disposition asserts itself to refer almost every problem to Henry Ford, except that of traffic congestion.
—Washington Star.

Another pathetic little feature of everyday life is an interurban railway company hopefully waiting for the reaction against automobiles to set in.
—Ohio State Journal.

Defined

A **dance** is a place where you go with your girl, pay five dollars for a good floor and the best music in town—and then sit outside all nite in a car.
—Johns Hopkins Black & Blue Jay.

WITH PLEASURE

She: "Can you drive with one hand?"
He: "Ah—yes."
She: "Then pick up my glove."
—Buffalo Bison.

Standard Parts Show Dates Advanced to Nov. 16-18

DETROIT, Oct. 10.—The board of directors of the National Standard Parts Association has decided to hold the annual exhibition of standard parts in Chicago, November 16, 17, and 18 instead of November 5, 6, and 7, C. B. Fraser, manager of the association, has announced here.

The change of date was made in order that the parts show would come after instead of before the Automotive Equipment Association's annual show in Chicago, November 9 to 14. Many of the firms which are members of the A. E. A. also are members of the National Standard Parts Association.

The N. S. P. A. show will be held in the new annex of the Sherman House where 91 spaces already have been contracted.

Enough requests are in the hands of Manager Fraser to assure every space being taken before opening day, he said. More elaborate plans than ever before are being made by the N. S. P. A. board and according to Mr. Fraser, the enthusiasm among the association members has never been greater.

Special "Yankee" construction prevents blade from turning in handle. Does away with the chief trouble usually found in screw-drivers.

You don't have to coddle a screw-driver that bears the name "YANKEE"

In a hurry. No time to look for a tool. "Hand me that screw-driver!"

Every day in your shop your screw-drivers are called on to do jobs for which they are not intended.

A "Yankee" Screw-driver will come through those rough jobs without chipping, bending, or turning.

Overstrength is built into it. Blade tempered for toughness and stiffness.

A "Yankee" device (found in no other screw-driver) makes blade and handle practically a one-piece tool.

"YANKEE" Plain Screw-drivers

Every individual blade is tested twice before leaving factory. That's why a "Yankee" Screw-driver is certain to last longer.

You can get giant sizes with blades up to 30 inches in length, with which you can reach in anywhere and drive the heaviest screws.

No. 90—Standard style, 15 sizes, 1½ to 30 in. blades.

No. 95—Cabinet style, 11 sizes, 2½ to 15½ in. blades.

Some other "YANKEE" Tools

Ratchet Bit Brace
Ratchet Screw-drivers
Ratchet Breast Drill
Ratchet Bench Drill

"Yankee" on the tool you buy means the utmost in quality, efficiency and durability.

Dealers everywhere sell "Yankee" Tools

NORTH BROS. MFG. CO., Philadelphia, U. S. A.

"YANKEE" TOOLS

Make Better Mechanics

FIGURE it this way—commission on gross sales, less sales expense, used car handling and overhead equals PROFIT—or LOSS.

Every man in an important executive position in this company has had long, actual dealer experience.

If YOU want to talk actual FIGURES and FACTS, we believe our understanding of YOUR problems and market should be of value. Every plan for Stutz development is based upon these figures.

In Next Week's Issue—Stopping the Leaks That Drain Profits

Strict Practice of Association Code *Brings Success*

Value of Practical Program Followed by Kansas City Organization Proved in Business of Its President—Yearly Leases of Garage Space Return Profits

By BEN S. BROWN

IN the October 8th issue of Motor Age an article was contributed by Ben S. Brown under the heading, "A Practical Trade Association Program." This article dealt with a number of the constructive accomplishments of the Automotive Trades Association of Kansas City, Mo., which, to a large extent, have resulted from application of principles applied in the private business of the association's president, George W. Arnold.

Mr. Arnold is so much a part of the Kansas City association and there is so close a relationship between his policies in his own business and his policies as head of the trade organization that Mr. Brown's first story naturally called for another—

A close-up of the business of George W. Arnold.

This is an intimate and graphic behind-the-scenes picture of an automotive business that has been exceptionally successful. Sit in on Mr. Brown's second installment.

ABOUT March 1, 1917, George W. Arnold opened a small garage on Oak Street, at Thirteenth, in Kansas City, Mo., and began to render a service which was different. It had not only honest work in it, but a thoroughness which was exceptional, and a courtesy which was quite refreshing. And people liked it—liked it so well that they told their friends about it, and they in turn told others. And thus his business grew.

There was plenty of room for growth, for he began with practically no cash capital, but plenty of "nerve," as he called it. His determination was to give good and satisfactory service. He would make sure that it was satisfactory, for he would check it up with the customer and make him say that everything was O. K. before he would allow him to go out of the shop. This check-up often resulted not only in a pleased customer, but also additional service, or the sale of additional equipment.

The man with the flag is Mr. Arnold—here as president of the trade association flagging down a car in a brake test

By the end of his fourth year, or in 1921, he was running to capacity in a garage with 100 feet front, and a floor space of 1300 square feet, and found that he would have to move to larger quarters if he continued to meet the demands of his growing business. When a man is compelled to turn business away because of a lack of room, he is apt to look around for larger quarters.

At 1124 Locust Street he found the location which he decided would place him in close touch with the business that he would like to develop, and would be suitable for the building he wished to erect.

Having found his location, he proceeded to erect a building after his own ideals.

Windows occupy the larger part of the outer walls, so that the garage is filled with light, and the working conditions are as nearly ideal as possible. The inside walls are painted white, and the legs of the work benches are repainted once a month to insure that they always look up to standard.

In keeping with the idea of cleanliness and beauty, the floors of the garage are gone over daily with sawdus and a chemical solution; the windows are washed regu larly, and the outside walks and approaches are kept clean The workmen wear uniforms, with "Keystone" displaye on the backs, and when there is occasion for one of th men to get into a car to drive it out for a customer, h slips into a white coat which is kept hanging conveniently for his use.

In the arrangement of the building, he has devoted th first floor to storage, bu has a small shop dow there and a tire and part department which entice the customers to spen their money with him. O the second floor, reache by a short ramp from th street, as well as by stairway from the inside is located the main office the accessory shop, th main work shop, and addi tional storage space. Alto gether, there is floor space to the amount of 30,00 square feet in the building.

One of the most profitable departments of his business is the storage of cars, and the care and service which is connected with it. It is his plan to develop 100 per cent customers—those who buy from him all the service which they may need on their cars.

To this end he makes yearly leases with his customers, he to furnish them 24 hour storage privileges the year around, and render such other service as may be agreed upon. Sometimes it takes months to get a man ready to sign up the annual lease, but that is the end to which he works with each one.

To the storage privileges, which places the customer in Class A, he adds other service, which is classified as to the amount. For Class B customers he adds the washing of the car, complete, twice a month, battery water service and the wiping off of the car as often as necessary. Class C customers receive all this and in addition have their cars thoroughly oiled and greased once a month. Motor oil, transmission and differential grease are charged for extra, according to the amount used.

All other services are extra, except of course water and air. All repairs and replacements are contracted for as they are needed, and it is the policy of the business to make the work done so satisfactory that the customer will gradually have everything he needs to have done attended to by the Keystone.

Lest there should be any misunderstanding as to the price of service in the storage and washing department, there is posted conspicuously a list of services offered and the rate charged for each. It contains the following items:

STORAGE

4 hours or less	35 cents
4 hours to 12 hours	50 cents
12 hours to 24 hours	75 cents
Per week, in advance	$ 3.50
Per Month, in advance, Class A	10.00
Per Month, in advance, Class B	15.00 and up
Per Month, in advance, Class C	17.50 and up

SERVICE CHARGES

Putting on Chains	25 cents
Putting on Curtains	25 cents
Wiping off car	25 cents

WASHING RATES

Body Wash, all open cars	$1.00
Two Passenger Coupes, Ford, Chevrolet, etc	1.00
Four Passenger Sedans, Coaches	1.50

COMPLETE WASH

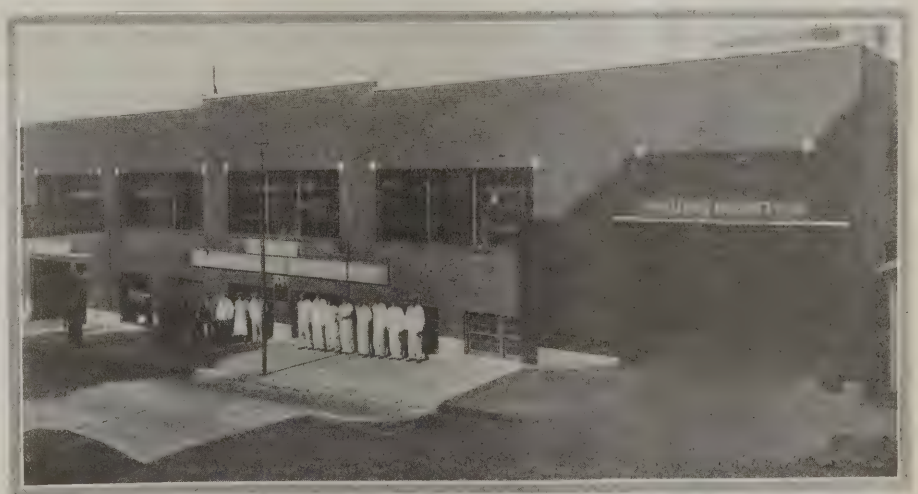
Open cars, average size	2.00
Extra large, Cadillacs, etc.	2.50
Two Passenger Coupe, Ford, Chevrolet, etc.	2.50
Four Passenger Coupe, Sedans or Coaches	2.50

EXTRAS

Nickel polish, pump, radiator, etc.	50 cents
Body polish, all cars	50 cents
Wire wheels, all cars	50 cents
Vacuum cleaner, 2 passenger coupe	50 cents
Vacuum cleaner, all other enclosed cars	$1.00
Cleaning Motor	1.00

While admitting that these prices are a little higher than many garages charge, he says that the better service rendered by him is such that customers are glad to pay the increase in order to secure the more efficient and reliable service.

In the service department also, great precaution is taken to prevent misunderstandings. All cars are tested and their troubles carefully diagnosed, and a list of the items required made. These include both material and labor, and the cost of each is carefully entered. When this is completed the customer signs the slip, which is an order, and thus there can be no question arise concerning these items. If there is indication that additional work may be necessary to put the car in complete repair, the matter is fully discussed, the cost estimated, and the order secured to make the repairs if necessary.



A flat rate price system is in use in the service department, but the mechanic is paid on the hour basis. Mr. Arnold finds this most satisfactory to himself and the men. Each order is numbered, dated, and the customer's name, address, the make of the car and the mileage recorded. The original sheet of this order is taken to the office. The duplicate is placed in a leather envelope which has a celluloid face, allowing the order to be easily read by the mechanic without taking it out and soiling it with his hands.

When one of the six mechanics takes a job, he punches his time slip, completes the work which is assigned him, times out, signs his name on the slip, writes the order number on it, and makes notations of the work he has done.

If another mechanic also works on the same car, he does the same thing. Every item on the order is timed, the mechanic writing his name opposite the time used, in the column provided on the duplicate sheet. From these records the flat rates are computed. Once every six months

George W. Arnold, president of the Automotive Trades Association, of Kansas City, and owner of Kansas City's Keystone Garage

Keystone Garage Building and Force. The grade from street makes possible the entrance of car to first floor (left) and second floor (right)

each operation is taken into consideration, all the data compiled, and the average actual cost is ascertained. Then the overhead cost is added, and the flat rate is fixed. When it is done Mr. Arnold knows he is not losing any money on the job, and that he is not overcharging his customers.

Mr. Arnold likes the plan of paying his mechanics by the hour rather than by the piece. He thinks that he is more likely to get the kind of service he insists on giving his customers by that plan for there is no temptation to the mechanic to rush the job at the expense of thoroughness.

Another reason why the hour plan is preferred is that in it there is no necessity to give a job to a certain man simply because it is his turn. The work in this shop is assigned to the man who is considered the best man to handle it, and this insures the best service it is possible to render.

Check Up Unproductive Time

There is always some non-productive time in every shop, and this is as systematically recorded as that spent on the jobs. This time is spent by the mechanic in keeping the tools of the shop in condition, and in cleaning up, etc.

A separate accounting is made for each department of the business—tires, oil and gas, accessories, shop and repairs, wash rack, storage, etc., and it is the determined policy of the management to make each one show a profit.

"The chief trouble with many garage men is that they do not know, and have no way of finding out just what it does cost them to do business in any department, and so they can go broke, and never know why," says Mr. Arnold.

To check up on the accounting system, and see that everything is absolutely O. K., a public accountant is employed to come once each month and verify what has been done.

Time-saving is one of the means by which the cost of service of all kinds is reduced. The front doors are opened by electricity. The accessories which workmen are likely to use are kept on both the first and second floors. The office, sales-room, work benches and everything else has been located so there will be the least time possible spent in going from one to the other.

There is no time lost in searching for tools. There is a white background against which they are hung up, and the outline of each tool is painted in black at the exact place where that particular tool is expected to be put away. Tools of the same kind are arranged according to size, thus making it easier to select the one needed. An assistant mechanic puts the tools in their places at regular intervals of the day, thus saving the time of the regular mechanics. These and other labor-saving and time-saving devices make it possible for this garage to handle nine hundred repair jobs per month—an average of thirty-three per day.

It is demonstrated in this garage that it pays to have plenty of good tools—those made especially for doing the work that is required to be done. Mr. Arnold has made every effort to install the latest and best in equipment. His work benches are bolted to the floors and the walls, and each is equipped with a five-inch jaw-vise and good drawers for mechanic's tools.

Money in Good Tow Truck

A dependable tow truck is another big asset. They use a truck chassis equipped with a two-ton crane, a dolly and tools for emergency roadside work. Quite a little revenue is derived from towing in work for other garages which are not as well equipped.

The shops are wide open for the inspection of customers, and they are invited to inspect the work on their own cars as it proceeds if they so desire. This results in confidence, which has been one of the deciding factors in the battle for success.

"Confidence," says Mr. Arnold, "is our biggest asset. We work with that in view all the time, and with all our customers. I have seen a man drive into our garage for storage for the first time, and insist on putting his own car away. Then he locked it up so tight that nothing short of dynamite could open it without the proper keys. Then he looked over every tire, and walked around the car several times so he would have every item in mind. Realizing the attitude which many men had toward garage men, we said nothing but gave him the most courteous treatment possible. In a few days, he would entrust our men to put his car away and get it out for him. Then he would bring it in, and turn it over without locking it up, and after a while, he would not even look over the equipment to see if it was all there. It is because our customers count us worthy of their fullest trust and confidence that they come back and bring others with them."

Looks like a man with things coming his way in that style would be satisfied, but not so with George W. Arnold. He is a close student of the trade magazines, he takes every opportunity to confer with others as to better methods of doing things, he listens closely to the messages of the experts who address the meetings of the Kansas City dealers association, and he gets all sorts of pointers from his employes. All these things he uses to increase his own efficiency, and then passes them on to the members of the association of which he is president.

Flat Rates for Electrical Work

A flat rate chart covering electrical operations on automobiles will be published in the Nov. 5 issue of MOTOR AGE.

This chart has been compiled, after extensive research, by A. H. Packer, associate editor of MOTOR AGE and specialist in automotive electricity. Practically every repair and maintenance operation that the tradesman is called upon to perform in connection with the electrical system of an automobile is listed and priced in this comprehensive chart. All the leading makes of passenger cars are covered.

A large proportion of the service work required on the average automobile has to do with the electrical system. This chart makes it easy to determine prices to be charged for this work.

In Motor Age Out November 5, 1925

What Is a SMALL CAR?

Judged by American Standards 90 Per Cent of European Production Would Fall in That Class

By W. F. BRADLEY
European Correspondent of Motor Age

JUDGED by American standards, 90 per cent of European built automobiles are small cars, for the average piston displacement in the Old World does not exceed 130 cubic inches. The small car, according to European ideas, however, is one having a piston displacement not exceeding 67 cubic inches a wheelbase varying from 85 to 100 inches, a narrower track than standard, and generally a two or three seater open or closed body.

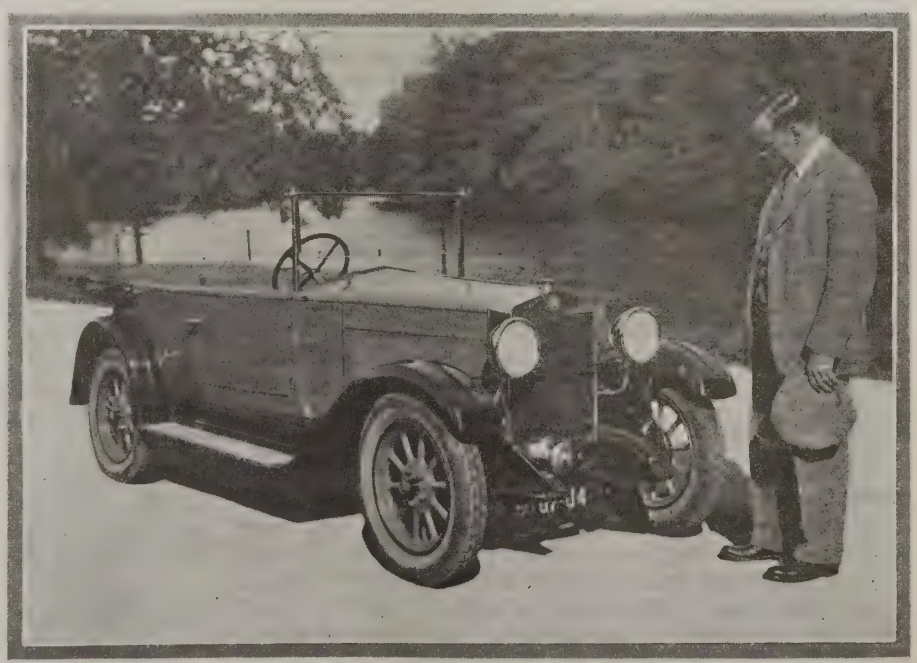
This type of automobile now has nothing in common with the so-called cycle car, which has failed to secure public favor. It is built up in accordance with standard automobile practice, the only technical difference, in certain cases, being the absence of a differential. Four cylinder water-cooled engines are used in every case, the transmission is generally of the three-speed variety, final drive is by standard type bevel or spiral gearing; and electric lighting and starting are included. Low pressure tires are invariably used, and in some cases the cars have four wheel brakes.

Unquestioned Commercial Success

The permanent commercial success of the small European car on its home market, and its growing importance abroad can no longer be doubted. It is responsible for the big increase in the number of cars in France, and several other Continental countries because it provides cheap individual transportation. In addition, in France 20 per cent of the sales are made to people who own a bigger automobile, but who find that a small car is more satisfactory for city service for the following reasons:

Higher average speed because of smaller overall dimensions; greater ease of parking; low gasoline, tire and taxation charges. With gasoline at 46 cents a gallon and state taxation at an increasing rate on a horsepower basis, it is advantageous, even when a big car is essential to supplement it with a small car which will run 40 miles to the gallon, and pays an annual tax of only $12, compared with $41 for an automobile having a piston displacement equivalent to that of the Ford.

Four makers, Citroen, Renault, Peugeot and Mathis are in big production of small two- and three-seater cars, and together are averaging about 250 cars per day. In addition to these firms, which figure prominently in both home and foreign business, there are at least one dozen in France producing on a small scale or specializing in a sporting type of small car. The above four are distinctive in producing a utility type of automobile.



As a proof of the permanency of this development, not only under European but under world conditions, the Fiat Company of Turin has also decided to produce a small car with an engine of 60.2 cubic inches piston displacement. A new six-story factory has been built and is now being equipped with modern machinery which will give the firm a capacity, from next January, on this model alone, of 200 cars per day. The problem of the small economical car has been under consideration for several years by the Fiat engineers, but their final decision has been in favor of a chassis capable of receiving a four seater body. By coming in after the commercial success of this type of automobile has been secured, Fiat has been able to secure a thoroughly up-to-date design which, with their big production methods will give them an advantage over other competitors and will make them dangerous against American cars on foreign markets.

Europe's Leading "Bantam" Makes

	Piston displacement Cu. Ins.	Track Ins.	Wheelbase Ins.	Tires	Brakes	Price
Citroen	52.2	46	88	715x115	T-R	$590
Renault	58.	46	96	715x115	F-R	750
Peugeot	40.7	38	89	715x115	R	600
Mathis	60.7	46	108	715x115	R	645
Fiat	60.2	47	100	715x115	F-R	?

Prices include French 12 per cent luxury tax.

The above table does not attempt to cover all makes of small foreign cars, but merely those which are serious competitors for world's markets. Where price is indicated it is that of the cheapest type of body. The Fiat prices are not given, for these have not been determined for any other than the Italian market. It is believed, however, that the car will sell in competition with the leading French makes.

Radio Set Trouble Shooting

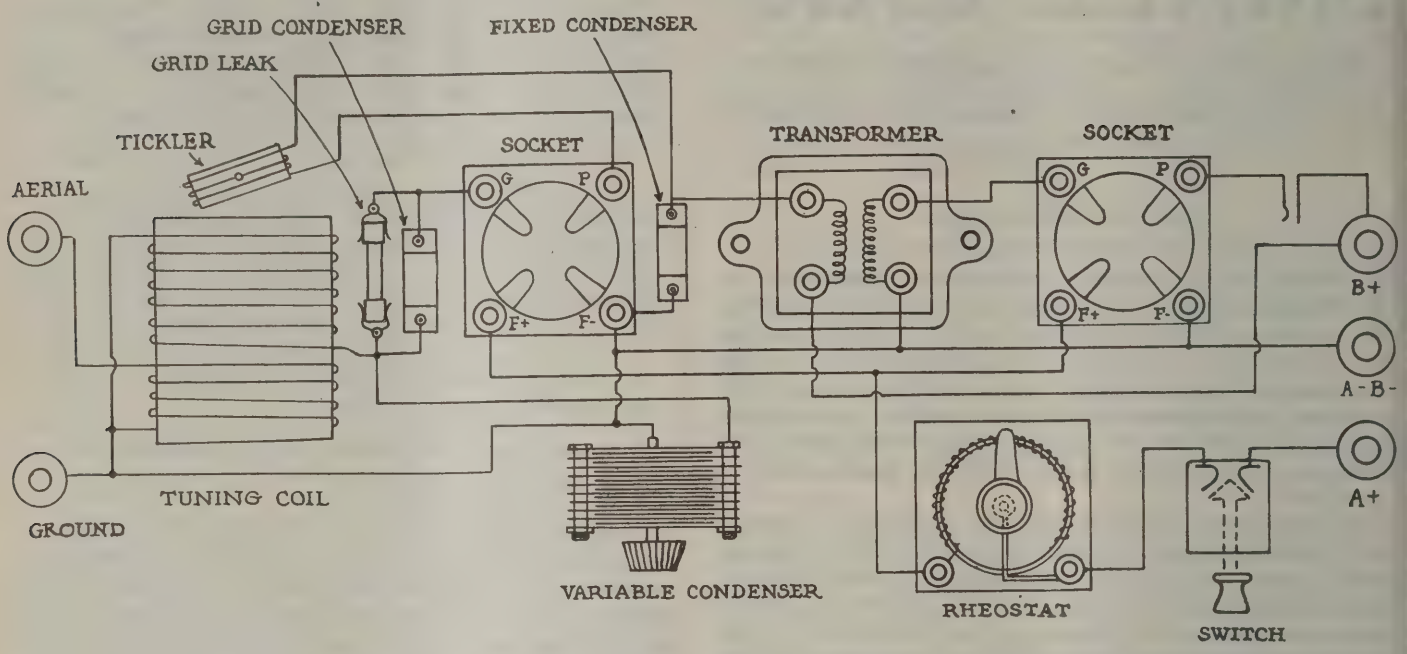

Fig. 1.—The radio diagram that Bill Fixit's men made from the set that Barney Oldfield Smith had discarded

The Red Head Shows How Some Electrical Tests Used on the Car Can Be Applied to the Circuits of a Receiving Set

By A. H. PACKER

FRIED frog legs and chicken the night before, feather beds to sleep on, pancakes with home made sausage and apple pie with real cream. What more could a couple of wandering trouble shooters want? And to make the Red Head and Valvy feel at home, Barney's mother spared no pains.

Valvy stretched and rose slowly from the breakfast table. "What time does the rural delivery fellow get here?" he wanted to know.

"Already gone by," said Barney, his manner showing his disappointment. "Guess we will have to wait another day for that condenser you ordered from Bill Fixit."

The Red Head was surprised. Of course something might have delayed the package in the mail, but as for Bill he entertained no doubts whatever, for promptness was Bill's first name. There was nothing to do about it, so the boys went out to the garage where Barney had his work shop. Barney showed Red and Valvy his equipment and tools and as they were about to go back to the house, Valvy's eye discovered a radio set, covered with dust and stowed away under the work bench.

"That looks like a good set; what's it doing there all covered with cobwebs?" he wanted to know.

"Looks—yes," said Barney, "but it's seen its best days. When I first got the thing I could get 'most any station. Then it went suddenly bad. New batteries would seem to fix it, then the set would be bad as ever. New tubes were tried and the same thing happened, so I gave it up in disgust."

Valvy was about to drag it out to take a look when there was a sound of wheels on the gravel drive at the side of the house. The boys looked to see who it might be. Valvy stared in astonishment while the Red Head gave a low whistle of surprise.

It was Bill Fixit himself driving a new Runwell straight line eight.

"It was this way," said Bill when he had greeted his two men and been introduced to Barney. "Your wire came a little too late to have a package make the afternoon train and I had for some time been figuring on a run down this way to see our folks. Then I wanted to try out this new car, so decided to start last night, drive until midnight and turn up here in the morning. And here I am."

"Some service," said Barney. "Can I always get special delivery orders taken care of that way?" And Bill laughed. "We go a long way to take care of our customers," he said. "But we let Uncle Sam do the work most of the time. And now that you have your magneto condenser I will be running along. Red can do a job like that as well as I can."

"Just a minute," said Valvy, "I want to show you something." And Valvy dragged Bill to the garage and showed him the radio set, once a wonder, now discarded, and told Bill Barney's story.

"You fellows better show Barney what's wrong, before you leave him," said Bill. "It's a shame to have a good set like that discarded because of some little thing."

"Radio's deep stuff," said Red. "You have showed us fellows how to shoot trouble on cars but we never had

ny dope on this. The Neutrodyne and Heterodyne and ll the other dyne family have my goat and I haven't the aintest idea why the coils are placed in the sets in certain ays or why they need condensers."

"Do you know why some cars have two pole generators, hy some armatures are wound one way and some another r why some commutators have 25 bars and others 33?" Bill wanted to know.

"Oh, that's different," said Red. "On the car you know he design is right and if you forget the details and just ee that there are no opens, shorts or grounds, you can igure on the generator and starter working.

"Then why," said Bill, "Can't you do the same with a adio set. Barney told you it worked once. That shows he design must be right and if it gives trouble now it nust be a case of shorts, opens or grounds, just as it is n the car."

"Well, I'll be," said Valvy, as he started to do a clog lance. "I'm a radio trouble shootin' expert and didn't now it."

"Better not hang out your shingle," advised Bill, "Until ou have tried out your luck on at least one case. This ne here seems to be a good one to start on, so I'll drive n now. We have started up a radio department back at Westville, so you fellows better make good now if you vant to keep up with the procession. Just now it's a case f making sales, but before long we will have to call on he service department, and that means you and Red."

And leaving his men with something to think about, Bill got into the big car and drove away.

"Now look what you went an' done," said Red, the seri- usness of the situation beginning to sink in. "Either we nake good on radio trouble shootin' or its good-bye job. If Barney has no objections we will see what we can find wrong with his radio set."

"That sounds like more fun than fixin' the magneto," said Barney. "I haven't any place in particular to go with he car now, so we can fix up the magneto tomorrow, and if you find the trouble I'll have my good set back again."

Valvy was dusting off the cabinet in which the units were mounted. "Where shall we start?" he wanted to know.

"Making a diagram," said Red. "It's the thing we do irst with an unknown car. We will take Bill's tip and work this job the same way."

It wasn't so hard after all, that diagram, after they made up their minds to tackle the problem. First the nits were laid out in their relative positions. The trans- former was shown in its position, then the two tubes, and the tuning coil, then the condensers, the grid leak and the variable condenser. After that the connections were traced and drawn and that much of the job was inished (Fig. 1).

Now Come the Tests

Next came the problem of tests to make.

"First the connections," said Red. "We will run from ive to ten amperes through each connection to see that here are no high resistances or corroded contacts. Radio circuits in a set like this will not carry much current, but a poor connection would cause trouble just the same be- cause its resistance is continually changing, which it would seem to me would cause funny noises."

"Funny noises is right," said Barney. "That's why I threw it out in disgust."

"Well, that's a clue," continued Red. "If you can scare up an old ammeter and some lamp bulbs we can start."

Barney thought a minute, then dug up a box of odds and ends and soon found enough bulbs to do for the test circuit. There didn't seem to be an ammeter lying around so Barney took the one from his Dad's car after Red and

BILL FIXIT STORY NO. 12

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18, July 30, August 13, September3 and September 24, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. Then stop at various places along the way and in a mining community are robbed of all their money. This necessitates getting a job with the local electrician, to whom they give some helpful information gained in working in Bill Fixit's garage. Directional radio is used by government agents in locating a gang of crooks and the boys' money is recovered. The trip is continued and the night after leaving the mining town they stop with Barney Oldfield Smith, an amateur race driver and help him with a magneto job, where a new condenser is needed.

Valvy had checked the wires to make sure they could quickly get them back on the right terminals.

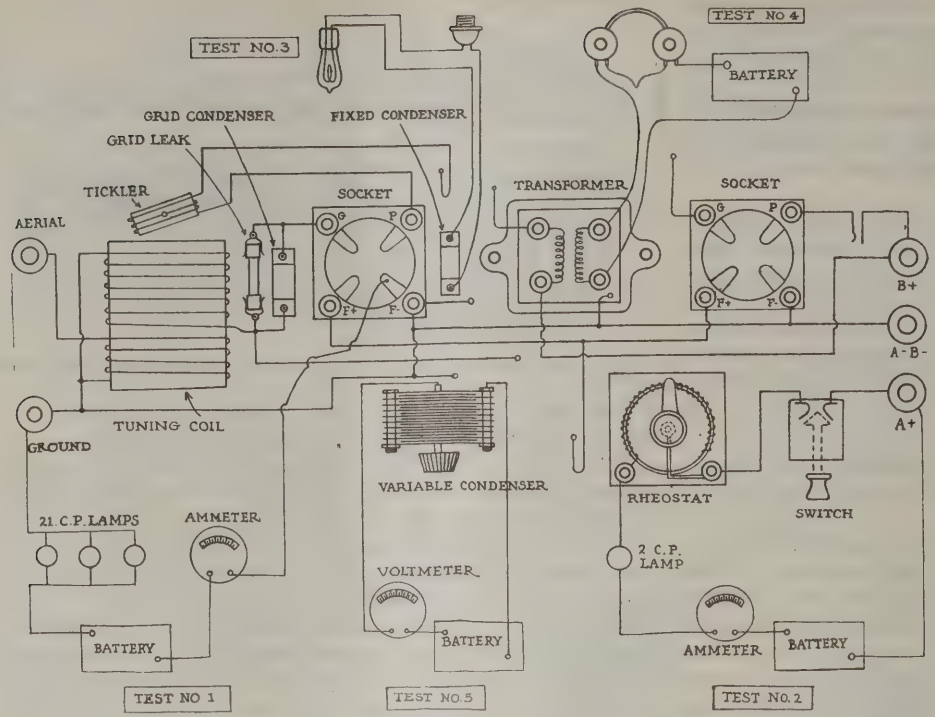
"Now," said Red, "We are ready to start. First we will connect the lamp bulbs in parallel and the string of lamps in series with our ammeter and battery. After that we will put the two spare ends of wire together and see how much current the lamps draw. That will be our par score and we will see if all the connections can make it."

When the test set was completed it was found that with three 21 c.p. bulbs the current was 7.3 amperes. The next step was to try the test on the radio set and the first circuit to be checked was the one from the ground terminal to the socket contact of the F— terminal of the detector tube (Test No. 1, Fig. 2).

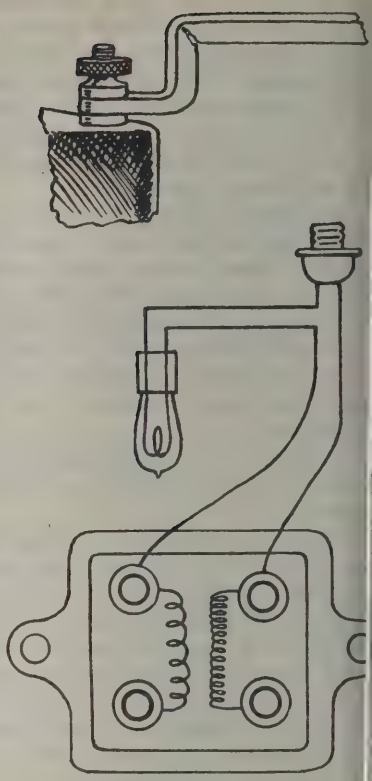
Barney and Valvy were all eyes as they anxiously watched the ammeter reading, but it showed 7.3 as nearly as they could tell and did not waver. Then Valvy had a bright idea.

"Why not check off each wire in the diagram as we test it," he said. "Then we will make sure we test them all and do not skip any." The plan was approved and the checking process started and all connections were checked up and with the lamp and ammeter test appeared to be all right.

"How shall we check the rheostat?" said Valvy.



"The same way," answered Red, "Except we do not need as much current so we will use a 2 c.p. bulb (Test No. 2, Fig. 2), instead of the three big ones, and we will test the circuits to and from the rheostat with the heavier current."



The ammeter test proved to be a failure in checking the rheostat, for with but little current going through it, it failed to show a reading that could be depended on, so the boys watched the light vary as the rheostat was turned and as it did not appear to flicker they concluded there were no poor connections in the rheostat.

"We go to the 110 volt test next," said Red, "To see how the condensers are. If a 110 volt test checks 'em on a car it should here, so we will take the condensers and disconnect them; then see if the lamp lights up through them. If it does it shows the condenser is shorted and if not it is probably O.K. (Test No. 3, Fig. 2).

"If we had a voltmeter we could check with a battery, using the voltmeter in series with it to check either the fixed condensers or the variable one used in tuning (Test No. 5, Fig. 2). With a test of this kind we would expect to get no reading on the voltmeter as the condenser does not have any metal connection from one terminal to the other. However, if the plates touch at some point when turning the knob, we will have a connection, and the voltmeter needle will suddenly jump up and show battery voltage. If it shows a slight reading at any time it indicates a leak due to defective insulation.

"Barney does not seem to have a voltmeter so we will use the same 110 volt test, and if the lamp lights when we

Above: Fig. 2.—Five different tests that can be applied to a radio set in checking the different units and connections; Right: Fig. 3.—The 110 volt test used to check for a transformer with primary shorted to the secondary; Above: The cracked wire that was found with the battery, lamp and ammeter test

turn the knob to any position we will know the condenser is shorted in certain positions. That test also seemed to indicate nothing wrong with the set.

"And now for the transformer," said Red. "It's Greek to me as far as construction is concerned, but I know there should be two windings that do not touch each other. Therefore we should have two circuits which are unbroken and neither of these circuits should show a connection to the other or to the frame of the transformer.

"Something tells me that they use fine wire in these transformers and if this is the case we can not get enough current through to show on an ammeter. We might use a voltmeter and battery test (Test No. 5, Fig. 2), and if we did not we would get a reading through each circuit, which might not be the full battery voltage reading on account of the high resistance of the transformer winding, but it would show a connection. We would also expect to get a different voltmeter reading on the primary from what we get on the secondary, the latter being the lower.

Head Phones Used in Test

"Without a voltmeter we will fall back on a pair of head phones and connect them in series with a battery, then disconnect the wires from the transformer and see if we can get a click in the phones when we touch the two terminals of the secondary winding (Test No. 4, Fig. 2). We should get a click when the circuit is made or broken and the click in testing the primary should be stronger than the click obtained when testing the secondary.

"Then we can make the final test on the transformer to see that neither winding is grounded. In this test we put one wire on the frame of the transformer and touch the other wire to each of the four terminals, one at a time."

This test gave a very faint click and Valvy thought at first that this meant a defect in the transformer, but Red explained that the transformer had some condenser action as the frame acted as one plate of a condenser and either winding as the other, so that a faint click could be accounted for by the slight battery current which would flow to charge the transformer. To make sure, however, Red decided to test the transformer with t 110 volt points. This was done and the lamp did not lig up, with one point on the frame and the other at varic terminals. The boys then concluded the transform was O.K.

"Well, what next," said Barney as Red completed t last test. "We have tested thoroughly and so far have found anything that would account for the trouble I ha

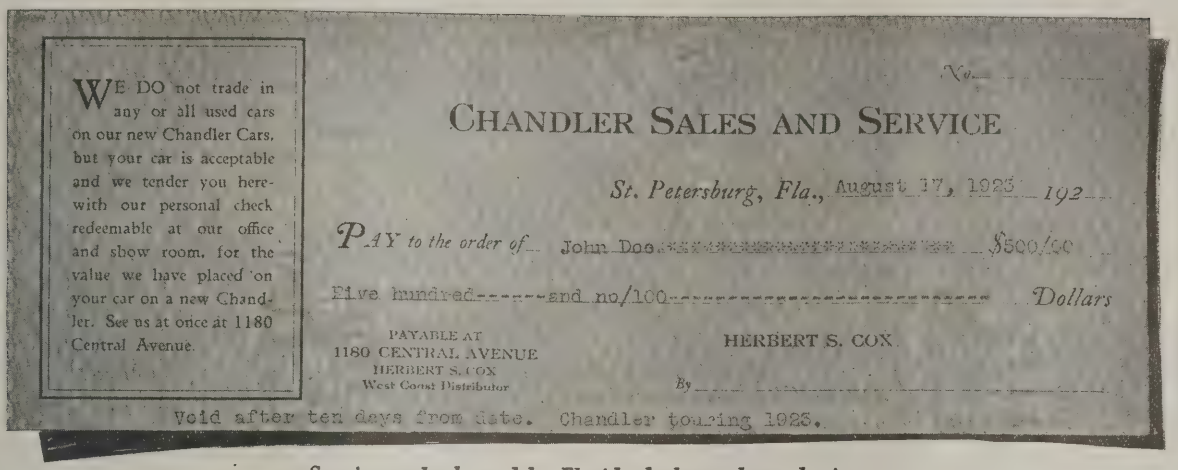
Red admitted he was stuck, but was interrupted Valvy.

"Looka here once. In checking off on that first test passed up one wire. It has no check mark on it."

"Oh, we checked it all right," said Red, beginning get disgusted with the job. "But test it again if want to."

Valvy said he would and hooked up the battery, la and ammeter test outfit. "We got it," he cried as the meter registered 7 amperes instead of the 7.3 value t had been checked as standard.

Red was skeptical. "Your battery's run down a while we were making the other tests," said Red, Valvy was vindicated, for even as they watched the me needle, it began to quiver. Down it jumped to 6.8 t up to 7 again, then down to 6.4 and back to over 7.



Problem Is Solved

Red began to get interested. "Let's take that wire and look at it." "Well, I'll be," said Barney when wire had been removed from the set. "A square bit bus bar, bent at a sharp angle and cracked at the be Notice, too, how the crack comes up from the bottom does not show at the top of the wire. You'd never in world find a thing like that without testing unless y tore the whole set apart and built it all over.

"It sure was a mystery why it went bad all of a sudd That wire must have been badly strained by too sh a bend when the set was built, and gradually the cr spread nearly through. But it isn't quite such a myste after you know the answer, is it?"

And Red and Valvy merely grinned.

Check System Aids Used Car Sales

Specimen check used by Florida dealer to boost business

HERBERT S. COX has devised a check system the use of which has been of aid to him in the handling of both used and new Chandler cars at St. Petersurg, Fla. Mr. Cox is Chandler distributor for Florida's vest coast.

The system used in distributing these forms is a simple ne, according to Mr. Cox. "Our salesmen upon seeing n old car make the appraisal, fill in the check and either vait for the owner or attach it to the steering wheel of he car in question," he said. "Besides this we have of ourse a list of all automobile owners in and around the ounty and we use the mails to transmit the checks.

"The result obtained from the use of these checks has een excellent. A number of inquiries have resulted from heir use and the writer knows of two new car sales made ecently which can be traced directly to the use of this orm of advertising.

"The used car problem here is, I presume, the same as it is all over the country. We are using the Blue Book as a standard for our used car values enabling us to show a prospective used car purchaser that he is getting full value for his money. Where the selling price of the car is not too high, that is not in excess of $500, we take as little as $100 in cash as a first payment for such balance as will not be handled by the finance companies.

"The efficiency of the method of merchandising our used cars is evidenced by the fact that we have been located here for less than two months yet every used car we have taken in, with the exception of three, have been sold. When we first started this system the results were remarkable. In nine days time we sold ten used cars; in the next succeeding five days we sold seven, which speaks for itself.

"Necessarily we use classified and display advertising for this department of our business, which no doubt is a contributing factor to the sale of used cars."

Taking Shop Equipment to the Buyer

AN extensive line of automotive shop equipment is carried direct to dealers, service stations and garages in the erritory of the Southern Hardware & Woodstock Co., of New Orleans, by a pecial truck equipped and operated by his company. This method of displayng and demonstrating shop equipment vas first tried by the Southern Hardware & Woodstock Co. last year and the results vere so satisfactory that the truck was ebuilt and re-equipped to go into the ield again this year.

The tools carried on the truck include:

Weaver 32 in. press with all attachments.

Weaver tire changer.

Curtis air compressor, complete.

Garco-Fleming brake lining machine.

Storm reboring outfit.

Black & Decker twist drill grinder.

Storm connecting rod aligner.

Sioux valve refacer.

Ames dial gage.

Black & Decker valve grinder and ¼ n. and ½ in. drills.

Storm hone.

Fleming flat rate kit.

National tools including all types of ullers for Chevrolets and Fords.

Shop equipment truck operated by Southern Hardware & Woodstock Co. L. M. Wolf, president of the company, and Richards Hinds are standing beside the truck

Rego welding outfit.
Greenfield screw plates.
Bethlehem sockets.
Micrometers.

The truck is in charge of Richard Hinds and each week he is accompanied by a factory man representing one of the lines of tools carried on the truck. The truck is expected to cover the territory in about 10 weeks.

HOW TO ADJUST BRAKES

Points That Must be Observed in Connection With the Maintenance of Mechanically Operated Four Wheel Brakes. In Which the Buick System Is Taken as an Example

By B. M. IKERT

(The second of a series of articles dealing with conventional rear wheel, mechanical four wheel and hydraulic fo wheel brakes)

THE proper adjustment of mechanically operated four wheel brakes offers no special difficulties, if the mechanic understands the fundamentals of adjusting the conventional rear wheel brakes.

In last week's issue of MOTOR AGE was given the methods that should be followed in the adjustment of the latter type brakes and much of what was said there applies equally well to mechanically operated four wheel brakes.

In order to make the matter more readily understood we have chosen in this article the four wheel brakes as applied to the Buick car. Different forms of mechanically operated brakes require different adjustments, naturally, but in the main, much of what follows here applies to all brakes of the external type. It is just as essential that levers and rods come to the stops provided when the brakes are in the off position in one car as in another of different make. Hence with certain modifications the following will apply in a great many cases.

Information pertaining to other forms of mechanically operated brakes, such as the internal type, three—shoe type, etc., will be published in a following issue.

There are four important things to observe in the adjusting of the Buick four wheel brakes and before a work is attempted they should be checked. They are ferred to in Fig. 1 and include,

1—The foot pedal being the unit which operates t system should be checked for clearance. There should 3/16 in. between it and the floor board and the pe should have a 5 in. travel.

2—The levers must come all the way back against th respective stops. In Fig. 1, the rear brake lever O m rest so the stop A is against the bracket on the bra camshaft in back of it. Also, lever E, in the middle the car frame on the right side must rest fully agai its stop.

3—The equalizer bar must at all times be parallel the brake cross shaft above it and this applies with t brakes in the on as well as off position.

4—There must be a uniform clearance of 1/32 around the brake band.

If a complete adjustment is required the following necessary:

First of all place the car on jacks so all four whe are off the ground.

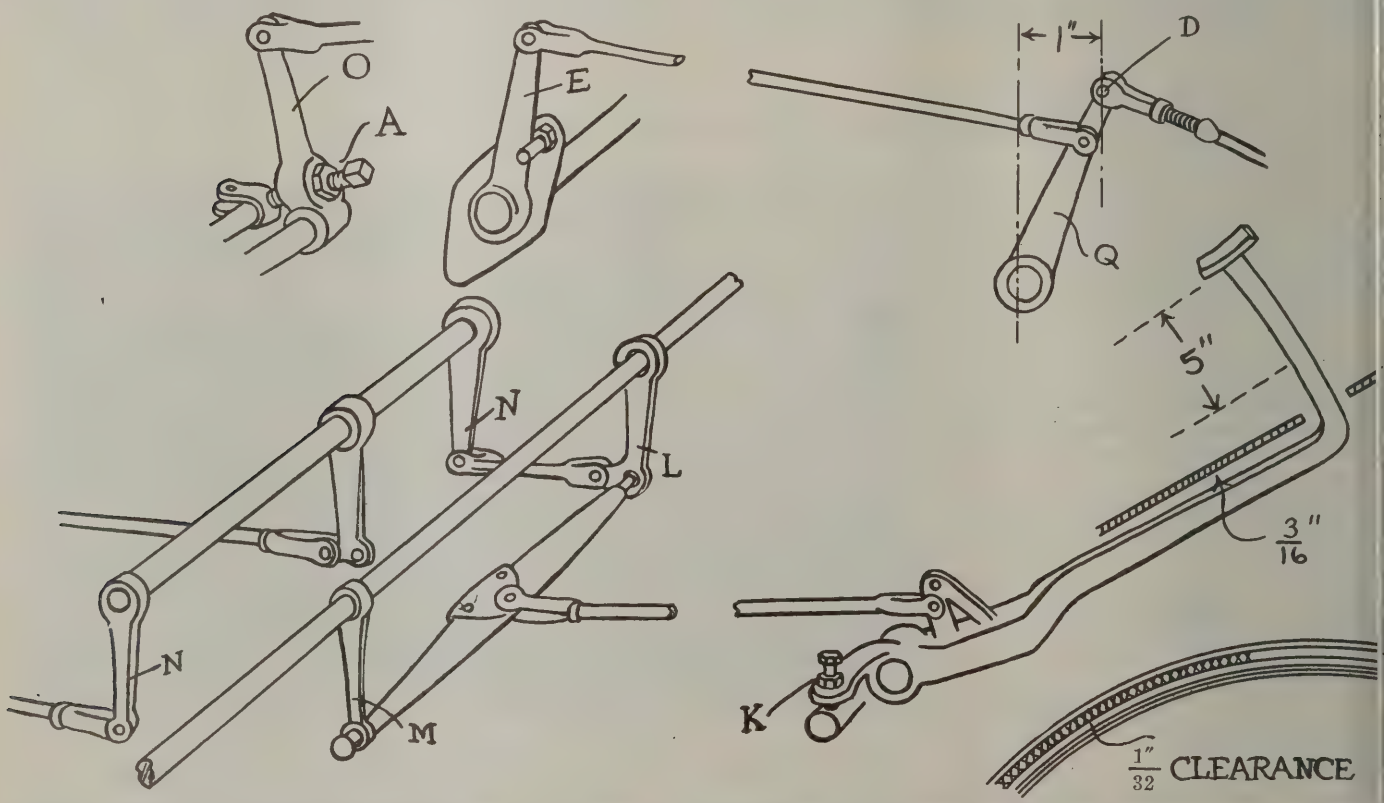


Fig. 1. Four of the chief things which must be observed in the adjusting of the brakes used on the Buick models. The levers must come all the way back to their stops when the brakes are released. The equalizer must be parallel to the cross shaft at all times and the pedal must have the required clearance, as shown. In addition the clearance between the lining and drum must be 1/32 in.

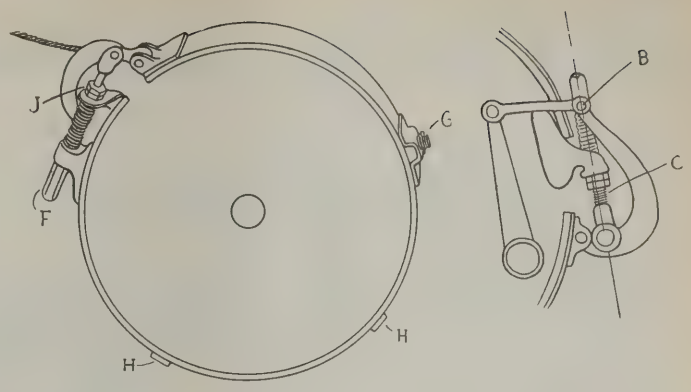
Next all of the working parts should be thoroughly lubricated. Then all of the working parts should be tested to see that the joints work freely and that the shafts operate properly. See that the foot pedal has the proper clearance.

Inspect the lever O in Fig. 1 to see that it comes back against the stop shown at A. The stop should bear against the clamp B on the hand brake camshaft and the correct setting will bring the pin B, Fig. 3, in line with the center line of the adjusting rod C, Fig. 3. The stops for the front brakes are located inside the drum and are non-adjustable. However, the front brakes can be tested to see if they return to the full release position by disconnecting the pin D, Fig. 1, and working the brakes by hand, letting them snap back into the release position. The lever E also should return to its stop.



In order to get the correct setting of the equalizer bar, that is, to have it parallel at all times to the supporting shaft when the brakes are in the On or Off position, release the right front and rear brakes by turning the adjusting nuts F, Fig. 2.

Then obtain the correct pedal travel, which should be about 5 in. and also a square pulling movement of the equalizer bar by turning the adjusting nuts F at the left front and rear brakes. Then adjust the right front and rear brakes by turning the adjusting nuts so the right and left brakes in each set hold alike. After this the adjusting nuts F should not be turned, as it will affect the holding of the brakes.

The next step is to get a clearance of approximately 1/32 of an inch between the brake band lining and drum. To do this, adjust the anchor pin G so that when the wheel is revolved the lining just clears the drum at this point. Then adjust the brake band guides H on the upper side of the rear brakes and lower side of the front brakes of each band. There are two small hexagon nuts for this, one being the adjusting nut and the other the lock nut. Next turn the adjusting nuts J, Fig. 2, after which the wheels should be revolved and the clearance of the bands tested with a feeler gage.

It is very essential, in doing this that the brake bands be round and if flat spots are found they should be removed by means of a brake band rounding tool in connection with the feeler gage. Do not use a screwdriver for this because being a wedge shaped instrument it will not round the band uniformly.

Incidentally it is a good thing to mention here that in all cases where adjustments are made by turning hexagon nuts to use proper wrenches instead of pliers. Adjustment of brakes is much like valve tappet adjustment since it is necessary to properly lock the adjustment once it has been made, and to do this a pair of wrenches are used.

Left: Fig. 2. Layout of the brake band mechanism of the Buick, showing where the adjustments for clearance are made. The anchor pin adjustment, G, is first made after which the brake band guides, H, are adjusted. Finally the adjusting nuts, J, are turned to secure uniform clearance around the band; right: Fig. 3—Diagram showing the position of the rear brake lever when the brakes are released. The pin, B, should coincide with a line drawn through the center of the adjusting rod, C

Sometimes the above adjustments cannot be had by adjusting at the bands only and when that condition exists it is a good thing to check the brake operating rods and cables for correct length. In order to do this proceed as follows:

Make sure that the lever E rests against its stop with the brakes in the off position.

Next, get the proper position for the brake pedal and to do this, remove the pin from the yoke at the rear end of the rod and adjust the pedal by turning in or out on the screw K. The proper clearance is 3/16 of an inch between the foot board and pedal.

The next step is to check the rear rods and levers. Lever L must be parallel to lever M. If it is not, remove the pins from the adjusting yoke ends of the levers N and with levers C and E against the stops turn the yoke ends so that the holes in the levers and yoke ends are in a line. This will insure the equalizer bar being parallel to the brake cross-shaft.

With lever E resting against its stop and lever L hanging straight downward, equalizer parallel to its supporting shaft, turn the adjusting yoke so that the holes in it and the center hole in the equalizer bar are in alignment. Then replace the pin. This will adjust the brake pedal rod and the rod should be just short enough to take up any looseness between the equalizer bar and levers L and M.

In order to check the front rods and levers see that the lever E rests against its stop. The front pull rod should be of such length that the center of the upper pin in the lever Q, Fig. 1 is 1 in. ahead of a vertical line drawn through the center of the bolt retaining the lever. This is also shown in Fig. 1.

Finally the cables should be checked for length. In order to do this, turn the front wheels to the extreme right position and adjust the cable on the right side so the pin D can be replaced with the fingers. This naturally must be done with the brakes released and the lever E and the front brake lever against their stop positions. The left cable should be adjusted in a like manner with the wheels, of course, turned in the extreme left position.

In testing a car after making this adjustment the usual procedure is to drive the car forward and locking the rear wheel brakes and running it backward to lock the front brakes.

Before Doing the Work

IN checking up some of the difficulties which mechanics have with the adjustment of mechanical four wheel brake mechanisms we find almost always these difficulties are due to not freeing up the system properly before any attempt is made at adjustment.

In mechanically operated brakes there are numerous yoke ends, clevis pins and levers which must work freely before the brakes can be adjusted.

Oftentimes owners are careless about the lubrication of these points and when a car comes in for brake adjustment the mechanic should always make sure that everything works as it should. To do this he should disconnect the rods or cables and allow the brakes to snap back to see if they release properly. It also allows him to check up on the operating rods and levers.

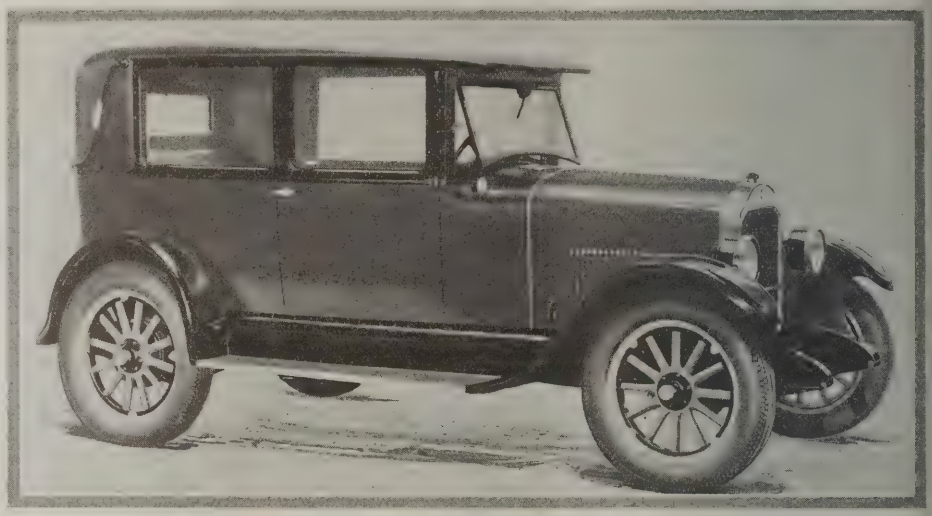
Star Six Furnished in Three Body Models

Some Features of the Four Cylinder Model Found in Six. Wheelbase Is 106 in. And Engine Is of L-Head Design. Car Has Low-Hung Appearance

By DONALD BLANCHARD

SHIPMENTS of the new Star Six are now being made to zone offices and deliveries to distributors and dealers will start shortly. For the present, only coach, coupe and coupster bodies are being offered on the new chassis and prices on these models have not been announced.

The wheelbase of the new chassis is 107 in. and its L-head engine has a bore of 2¾ in. and a stroke of 4¾ in. giving it a piston displacement of 169.3 cu. in. Although the rated horsepower is 18.15, the actual output is said to be 40 h. p. at 2400 r. p. m. and the torque at 800 r. p. m. is given as 100 lb. ft. In view of the fact that the weight of the coach model is but 2375 lbs. the performance of this new car should be unusually good.



Some of the features of the present Star Four are found in the Six but in a number of respects the new job is quite different. The "tubular backbone" construction is not employed and the frame side rails have a kick-up over the rear axle. The latter feature together with a drop-center front axle reduces the height of the chassis and contributes to the low-hung appearance of the cars.

The characteristic Star radiator is retained in the six but the appearance of the various models has been greatly improved by reductions in the overall height which give them the long, low appearance so popular at the present time. In addition, the stream lining is better and the integral sun visors furnished on the closed models add to their general appearance.

Bodies are built by the Hayes-Hunt Corp. and are finished in sage brush green lacquer with black tops and fenders. In the coach, which has nickel trimmed landau irons at the rear quarters, the folding seat has a hinged mounting which permits its being swung towards the driver thus providing ample space for entrance to or exit from the rear seat. An unusual amount of leg room, particularly for the rear seat passengers, is provided in this model. Standard equipment includes automatic windshield wipers, rear view mirror, cowl lights and usual instruments. Hayes wooden wheels with natural finish are used on all models, 29x4.40 tires are used on the coupe and coupster, while the coach is equipped with 30x4.95 tires.

The engine is a Continental model 14-L supported at four points by feet cast on the crankcase. The forward supports consist of malleable brackets which are secured to the frame side rails and to the frame cross member which carries the radiator. At the rear, the engine is supported by the second cross member.

The cylinder block and crankcase are cast integral and the latter is carried down 2½ in. below the center line of the crankshaft for stiffness. The Oil pan and timing cover are of pressed steel while the detachable cylinder head is of cast iron. The compression ratio is 4.95 to 1.

Star Six Coach one of the three body models of the latest car produced by Durant Motors, Inc. Rearrangement of the transmission affords more leg room than in the four

Four main bearings support the crankshaft, the upper halves being die-castings and the lower halves babbitted in the caps. They are all 2⅛ in. in diameter and have the following lengths from front to rear respectively: 1¼, 1$\frac{3}{16}$, 1$\frac{3}{16}$ and 1$\frac{9}{16}$ in. The connecting rods are 9 in. in length and have babbitted-in-place big end bearings, 2 in. in diameter and 1⅛ in. long. Laminated shims are used to fit the caps.

Pistons are cast iron with three $\frac{3}{16}$ in. rings all located above the pin. The lower ring is an oil scraper type and relief holes are drilled in the piston. The piston pin has its bearing in a bushing in the rod and is secured in the piston by a set screw and snap rings. Dimensions of this part are 47/64 in. diameter and 2 21/64 in. in length.

Front End Drive

Front end drive is by a Morse chain 1¼ in. wide with 81 links and a .40 in. pitch. It has a conventional triangular layout passing over sprockets on the crank, cam and generator shafts. Tension adjustment is effected by moving the generator which has slots in its supporting flange through which the mounting bolts pass.

Cooling water is circulated by a centrifugal pump which is driven through a rubber hose coupling from the rear end of the generator. The pump differs from that use on the Star Four in that it has two bearings, one on each side of the impellor, and each lubricated by a grease cup. A bracket, which also serves as the water inlet to the jacket, supports the pump from the side of the cylinder block near the rear on the left side.

The cooling fan is driven by a flat, endless belt from a pulley on the forward end of the crankshaft. Adjustment for belt tension is the same as on the Star Four except that the slot in which the rear end of the fanshaft clamps, is open at the top thus facilitating removal of the assembly. Lubrication of the fan bearing is provided for by a reservoir, the bearing at this point being the cast iron hub on the hardened steel shaft. The radiator is a Fedders honeycomb and the capacity of the cooling system is 3 gal.

The camshaft is carried in four bearings which have the following dimensions, diameters and lengths, from front to rear respectively: 1$\frac{7}{16}$x1⅜ in., 1$\frac{13}{16}$x1$\frac{15}{16}$, 1¾x1$\frac{15}{16}$ and 1$\frac{9}{16}$x1$\frac{13}{16}$ in. The valves are operated through round nose tappets which are mounted in blocks of four, each pair being restrained by a spring and plunger arrangement similar to that employed on the Four. Both inlet and exhaust valves have nickel steel heads, the nominal diameter of the former being 1⅜ and of the latter 1¼ in. The lift is $\frac{5}{16}$ in. and the valve spring pressure is 77½ lbs.

Engine lubrication is by pressure feed to main, connecting rod, camshaft bearings and to the timing chain. The oil pump is mounted on the left side of the crankcase with its shaft horizontal and is driven through helical gears from the camshaft. It has the pressure relief valve incorporated with it and as the

valve is readily accessible in this position, the oil pressure adjustment is changed by substituting a stronger or weaker spring as the case may require. The lubricant is distributed through tubing to each of the main bearings and thence through the drilled crankshaft to the crankpins. Ducts drilled in the crankcase webs provide for the camshaft bearings.

The fuel system comprises an 11½ gal. tank at the rear of the chassis, a Stewart vacuum system and a Tilletson 1-in. carbureter. Intake and exhaust manifolds are cast integrally and the former has a heating jacket.

Generator, starter, cutout, coil and distributor are all of Auto-Lite make and the battery is a USL. The generator is a third brush unit and carries the distributor, coil and cutout. The starter is strap mounted on the right side of the engine and has an outboard Bendix drive. The lighting and ignition switch is a Clum.

Durant practice is followed in the design of the single plate clutch. The facing material is compressed asbestos, the rings having inside and outside diameters of 6½ and 9½ in. respectively and a thickness of $\frac{5}{32}$ in.

Between the clutch and the amidships mounted transmission there is a Spicer universal of novel construction. In it, sixteen rubber balls are used to provide the necessary flexibility. There are two, four-pointed spiders, one a spline fit on the clutch shaft and the other on the transmission shaft. Between each of the points of these spiders there are two rubber balls which are held in position by triangular spacers which in turn are bolted to a channel section ring located between the two spiders. Pressed steel covers are provided for the assembly.

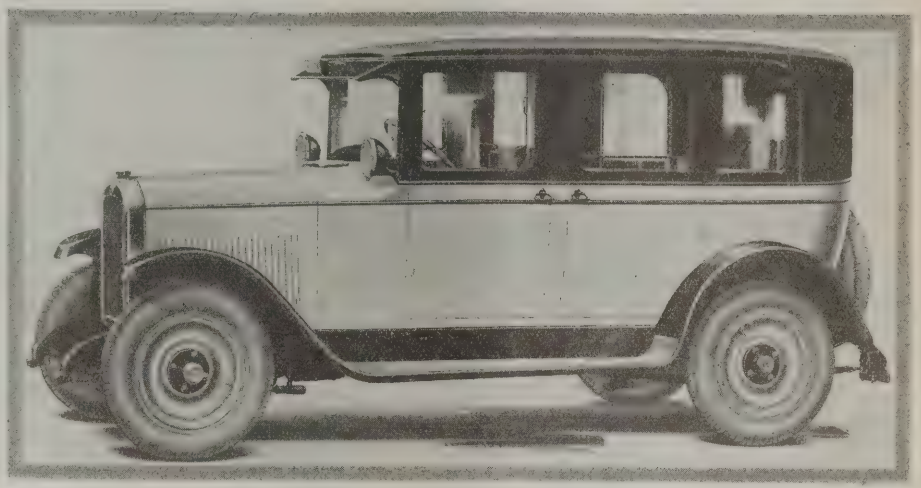
The transmission is a three-speed unit providing reductions of 3.32 to 1 in first, 1.77 to 1 in second, direct in third and 4.3 to 1 in reverse. Except for the fact the cover plate is designed so that the center of the ball on the gear shift lever is about 6 in. forward of the neutral position of the shifter forks, the transmission is conventional. By bringing the gearshifter forward in this way it has been placed in a more convenient position for the driver. The mainshaft is supported in ball bearings and the countershaft and reverse idler in bronze bushings.

Transmission Mounting Different

The mounting of the transmission differs greatly from that used in the Star Four. In the new six, it is supported in a sub-frame consisting of two longitudinal members between the second and third frame cross-members. Its forward end is carried by a cross-member connecting the two longitudinal members while at the rear, a bracket bolted to the third frame cross-member supports the load.

Power is transmitted to the rear axle through a tubular propellor shaft with Spicer universals at each end. While conventional practice is followed in the rear axle, it is an entirely new semi-floating unit and has the two-piece, built-up type of housing. The helical reduction gears, which have a 1-in. face width, provide a reduction of 4.87 to 1. Two Timken bearings support the pinion-shaft in a carrier which bolts to the differential housing, shims being provided at the joints for adjustment. The two-pinion differential is carried in ball bearings and the outer ends of the axle shafts in Timkens.

The service brakes act externally and the emergency internally on 11-in. drums at the rear wheels. On the external brake, the operating links are located above and behind the center of the axle, the brake hand lever extending downward and the rod which operates it, passing under the axle. Two pieces of Thermoid lining, each 14½ in. long by 2 in. wide with a $\frac{5}{32}$ in. thickness, the lining being cut away for a short distance on either side of the anchor which is located at the center of the band. The internal brake is cam operated and takes a single piece of lining 31 in. long, 1¾ in. wide and $\frac{5}{32}$ in. thick.



Links connect the brake pedal and hand brake lever respectively to short levers on two cross shafts. These shafts extend through the frame side rails and short levers on outer end are connected by rods to the operating levers at the rear wheels. Equalization of braking is obtained by clearance adjustment.

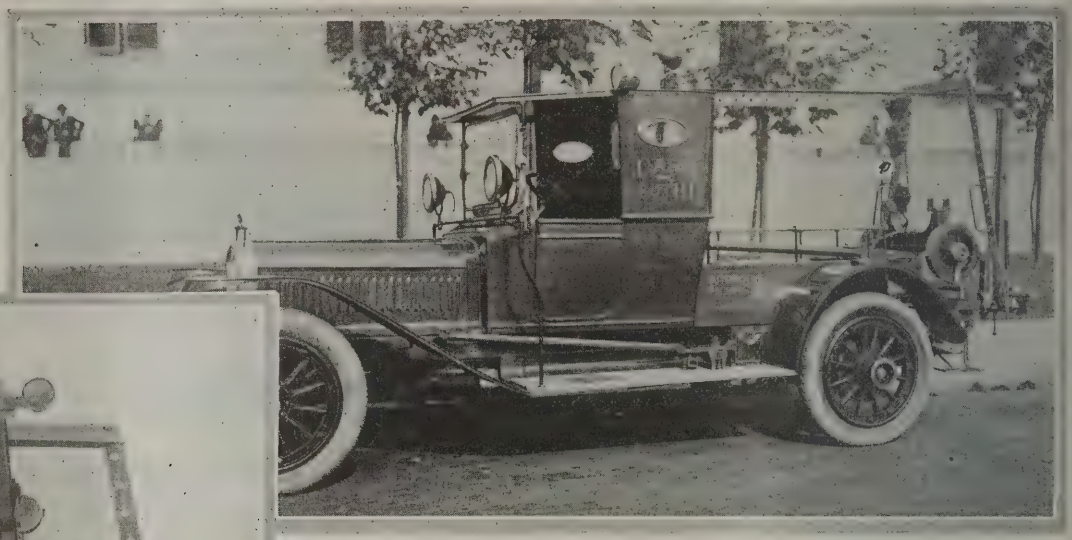
Semi-elliptic springs are used front and rear. The rear springs, which take the torque and propulsion reactions, are underslung, have nine leaves and lengths and widths of 53¾ and 1¾ in. respectively. The front springs also have nine leaves and are 1¾ in. in width, but the length is 35⅞ in. Spring eye bushings are hardened steel and the bolts are $\frac{9}{16}$ in. in diameter and 1¾ in. long.

The front axle is a reverse Elliot drop-forging of I-beam section with a drop center. The king pin and tie-rod bearings are bronze bushings and the thrust at the pivots is taken by steel washers. A worm and wheel steering gear, with a 8 to 1 reduction and similar in design to that used on the Four, is employed and it is supported by the left front engine mounting bracket.

In addition to the cross-members supporting the engine and the rear end of the transmission there is a cross-brace at the front rear spring hanger and another in the form of a wide plate over the gas tank at the rear. The frame side rails have a depth of 4½ in. a flange width and a thickness of $\frac{5}{32}$ in.

New Limousine Type Yellow Cab With Knight Engine

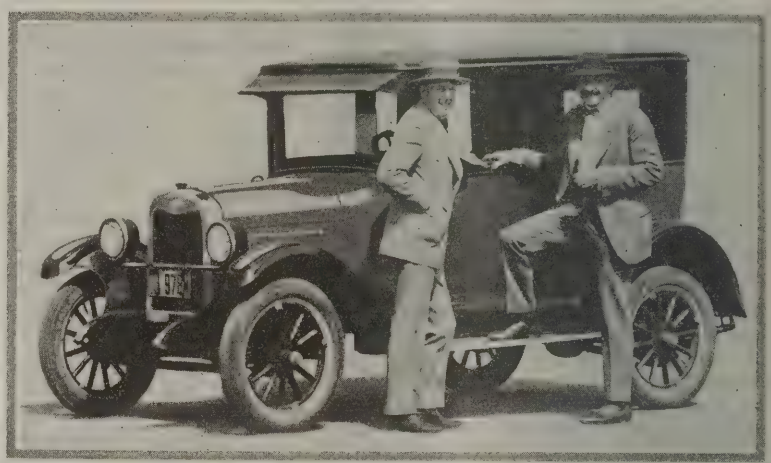
The Mile Merchant model Yellow cab powered with a 4 cylinder Yellow Knight sleeve valve engine



MAJOR changes incorporated in the new type O-5 Yellow cab, which is known as the "Mile Merchant" model, are a fully enclosed driver's compartment, giving the vehicle the appearance of a sedan; and a larger, roomier passenger compartment seating 6 persons. It is powered with a 4-cylinder Yellow Knight Sleeve Valve Engine, manufactured in the company's own plant at East Moline, Ill. The wheelbase has been increased from 109 in. to 114 in., although the turning radius remains the same. Rubber shock insulators, adopted more than two years ago, are retained in the O-5. Other improvements include balloon tires, air cleaner and throttle controlled oil pressure.

Hudson and Essex Prices On Closed Models Reduced

DETROIT, Oct. 19. — Announcement was made here today of the following price reductions on Hudson and Essex models:



Essex Coach	$30
Hudson Coach	30
Hudson Brougham and Sedan	45

MOTOR AGE'S PICTURE PAGES

TRUCK CARRIES COMPLETE WRECKING EQUIPMENT: It has two towing dollys, two wrecking jacks, and a universal one-man tow bar, all manufactured by Kimmerly Bros. of San Francisco, whose salesmen use it in calling on garages and other possible prospects. Wrecks can be raised without the use of jacks. When so used two rods extend from the rear of the car frame to the street, which take the strain off the wrecking car.

A PRODUCTION RECORD. Here is shown the two-millionth Chevrolet, built Sept. 8. The company is the first maker of selective gear shift cars to attain this production. The first "Baby Grand" touring model was turned out at the Flint plant in 1913.

TRANSPORTATION EVOLUTION. At the left is an ox team and Ezra Meeker, who blazed the Oregon trail in 1852. At the rear is an original stage coach of the "Deadwood Dick" era; in front and at the right we have an original curved dash Oldsmobile, the first automobile made commercially in the United States and at the extreme right Mr. and Mrs F. M. Richards who are driving a modern Oldsmobile around the world.

OF AUTOMOTIVE INTEREST

INCOGNITO. The Republic truck above, heavily camouflaged with beautiful flowers—and beautiful maidens—won first prize as the entry of Montgomery Ward & Co. in the Dons of Peralta parade at Oakland, Cal.

SAYING IT WITH MUSIC. To advertise the new Diana, Casperson & Snyder of Salt Lake City, Utah, organized an orchestra which holds forth at regular intervals to the enjoyment of its audience.

SPEEDY VEHICLE. Lieut. Cyrus Bettis, U. S. A., is shown beside the Curtis "bullet" plane which recently established a speed record of 302.8 miles an hour. The plane is only 20 ft. wide from tip to tip. A new model Mack parlor car is shown in the background.

The READERS' CLEARING HOUSE

Questions and Answers on Dealers' Problems

BUILDING ▲ ELECTRICAL ▲ FLAT RATES
SHOP ▲ LEGAL ▲ PAINT & TRIM ▲ ACCOUNTING

Let's Blame It on Kinetic Energy

Q.—We would appreciate your advising us of a curative to "shimmying" on a 1924 Chrysler six roadster. We have been servicing this car throughout its career and have been unable to overcome such action as above. This shimmy commences on slightly rough roads at 50 miles per hour increasing to its worst at 55, then leaving gradually within the next 3 mile per hour increase in speed. Suggestive cures by manufacturers have been unavailing. Wisconsin Shimmier.

About the only thing uniformly admitted regarding shimmying is that it is a form of kinetic energy producing periodic vibration in certain parts of the steering system at certain road speeds. Generally speaking it can be eliminated or at least alleviated by removing all lost motion in the steering system and spring layout. This includes tightening all spring shackle bolts or rebushing them if necessary, tightening all spring U bolts, axle king bolts, spindle arms and tie rod connections. In some cases balancing the front wheels so that each will remain stationary when jacked up and stopped will cure the trouble. In other cases wheel balance seems to have no effect whatsoever. The local maintenance organization handling Chrysler in this city advise that the tie rod assembly be removed and that the left hand end ball and cup assembly be removed. With this removed the spring should be cut off about ⅛ of an inch so as to give the tie rod floating bushing one-quarter of an inch overlap instead of the ⅛ which is regular when the car comes from the factory.

Above all things we would recommend a thorough tightening of all parts of the steering system, springs and front axle, as before stated including the spring clips, steering arm of the steering gear and the ball end of this same arm, also shock absorbers and spring clips. It might be that experiment with the inflation pressure in the tires will enable you to change the period so that it will occur higher up in the speed range. Off hand we would be inclined to believe that an increase in the pressure would tend to place the period farther along in the speed range. The factory recommendation is that the tires on the open models be inflated with not less than 35 pounds and it is our suggestion that you experiment with pressures from 35 down to 32 and up to 45 pounds.

We have known of some cases of wheel shimmy that have been cured by removing the spring from one end of the drag link and also from one end of the tie rod or connecting rod. As a last resort to be used only in case that other suggestions do not produce results, you might try changing the castor angle of the front axle. This of course, can be accomplished by inserting sheet metal wedges between the spring seats and bottom of springs on the axle.

LEAVE THE COUNTER-WEIGHTS

Q—Is it advisable to remove the counter-weights from Essex crankshaft in order to get the pistons out from below. —G. & J. Stromer, East Main Street, Gillett, Wis.

No, if the counter-weights are removed the balance will not be perfect when they are put back again. In the Clearing House section under date of October 1, 1925, there was published one item and in the July 9, 1925 issue there was another item on removing Essex pistons.

Q—Recent Essex instruction books advise the use of heavy oil instead of medium. Has the oil pump been changed in order to handle the heavy oil?

The oil pump has not been changed, but it has been found that the heavy oil works better. In winter it would be advisable to use medium oil.

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

Peculiar Knock After 7000 Miles

Q—I have been reading MOTOR AGE for ten years and have profited by same. I have been servicing an Oakland Sedan, car No. 3038654, 1925 model, which has developed a peculiar knock. It can be heard at idling speed and up to 15 miles an hour. At any speed over that it cannot be heard. Sounds like a piston pin knock, but is not quite heavy enough. By shorting out No. 1 plug the noise is stopped. Have taken out the pistons and examined the bearings, taken up the timing chain, adjusted the valve clearances and examined the oil pump, all to no advantage. By turning crank with pan off can hear compression leak pass the rings. Car has been driven 7,000 miles and has been well taken care of. The knock is almost the same at all speeds up to 15 miles an hour and after that it disappears. Have reached my limit and am calling for help.—C. B. Eagan, Alma, Ill.

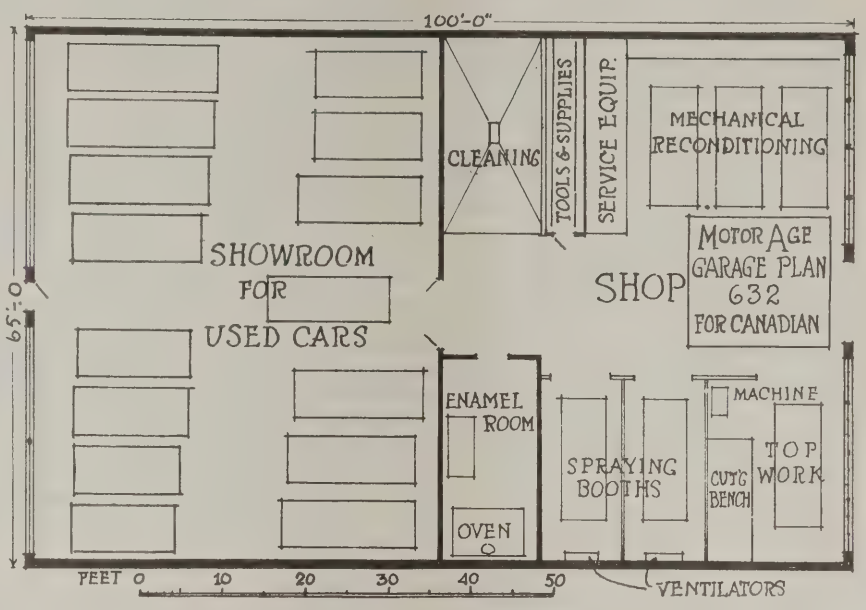
As shorting No. 1 plug eliminates the knock it appears that the trouble is in the No. 1 cylinder. We would suggest your removing the piston and rod assembly from the No. 1 cylinder and running the engine that way merely to check your previous test. A similar condition was encountered on another well known car and it was found that the cylinder bore was worn hour-glass shape. This condition meant that the piston in moving up and down passed over a sort of ridge and in doing so produced a slap which did not seem to have the characteristic sound of any of the well known knocks. The trouble was found by carefully measuring the cylinder bore at various places. A hone was then used to take the ridge out and after that the knock had disappeared. The fact that the compression is not good and that the gas blows by the piston rings also seems to indicate a condition of this sort. A half way method of testing for a condition of this sort is to put a small quantity of 600-W in the cylinder affected and run the engine. While the 600-W is acting as a cushion between the piston and cylinder wall, a knock of this kind will be temporarily eliminated.

"EASY WHEN YOU KNOW HOW," SAYS HE

Q—I just happened on a question by Edgar D. Best of Charleston, Illinois, on page 24 of the July 9, 1925, issue of MOTOR AGE where he says he is having trouble getting the Essex pistons out of the engine. I want to say there is not an Essex made that the pistons and rods will not come out the bottom and then very easily and any one who wants to know how can write to me and I will tell them the method I use. I remove spark plugs, take off pan and lay the six pistons on the floor in less than 30 minutes and they go back just as easy.—Roy Bowser, Gibson, City, Ill.

Planning Your New Building

By TOM WILDER



The READERS' CLEARING HOUSE

A Complete Small Used Car Plant

Q—As we are anticipating the building of a used car merchandising mart, in the center of our city, we would appreciate it very much if you had any plans or specifications which you might forward to us that would be valuable in the construction of this building. The size of the building will be 100 by 65. It is our wish to have the showroom covering the front part of the building, approximately 50 by 65 in size. In the balance of the building we wish to install a reconditioning department, a Duco refinishing department and a retopping department. Any suggestions which you might give us in reference to this will certainly be appreciated. —Canadian.

You have given us no data regarding the surroundings of your proposed building and we are assuming that it is an inside lot with an entrance on the alley.

The showroom may be arranged as we have indicated and the two rows of cars across the width of the building or if more show and less cars are desired the two rows may be across the end of the room, leaving an ample space in the center. The width and depth of the room in the rear, to be used for the reconditioning shop, led us to the arrangement we have shown. The mechanical work is done on one side and the finishing and upholstering on the other. We have shown a small enameling room with an oven, but no doubt you will have this work done outside as is usually the case.

Reconditioning in the back and selling in the front

If this is done the space could be used for another spraying room or the cleaning rack could be moved to this side leaving more room for mechanical operations.

The spraying booths are such as were described in MOTOR AGE recently, being just large enough for a car and the operator and having a ventilating duct at one end to exhaust the air which comes in through the open doorway at the other end and carrying with it all the fumes of the material which is objectionable.

The cleaning apparatus, of course, will include not only washing equipment, but painting removing and cleansing equipment which is absolutely necessary in this line of work.

Skylights should be provided in this room whether there is side light or not, as good work depends largely upon ample light.

Checked Everything and Engine Still Overheats

Q—I wish to thank you for the valuable information you have given me in the past and I am now coming to you for help again. We are having trouble with a type 61 Cadillac. This car suddenly developed a very bad case of over heating. It would boil after being driven a distance of five miles or less. We examined fan, radiator, pumps, hose connection, spark, ignition timing adjustment, also cleaned carbon and ground valves, but to no avail. The only way we could relieve this was to advance ignition timing until there is a very bad spark knock but now the car has very little power and acts as though brakes were dragging, but the wheels turn free. We also used two cylinder head gaskets but this did not help the heating any. If any of the readers have experienced this trouble, would be very glad to hear from them.—Motor Sales Co., 505 W. Main Street, Charlottesville, Va.

We believe the trouble is either in the pump or thermostat. You may have examined the rotation of the impellors and found that they were rotating. However, in some cases the pin which holds the impellor to the shaft is sheared off, although the impellor is still a tight fit on the shaft. Under these circumstances there will be rotation at slow speeds, but there will be slippage at medium and high speeds when the pump should be circulating the water. For this reason we would suggest your trying to slip the impellor blade on the shaft, using a lever of some sort such as a hammer handle. If there is no question but what the pumps are operating, then you should check the thermostat in accordance with an article which appeared in the Clearing House section of MOTOR AGE under date of September 17, 1925.

OWNER MAY RECOVER STOLEN CAR

Q—If a car is stolen property and is brought in here either by the thief or by the city officials who have picked it up from the streets, can same be removed without paying for storage charges?—Wabash Harrison Garage, Chicago, Ill.

The owner may recover his stolen property wherever found. The garagekeeper can only have a lien through orders to store or repair by the owner or his agent. The thief is no agent, neither are the police agents. But you can proceed against those who claim to be agents personally.

Test Data on Ford Generator and Starter

Q—Supply test data on the Ford generator and motor.—Ide Garage, Outlook, Wash.

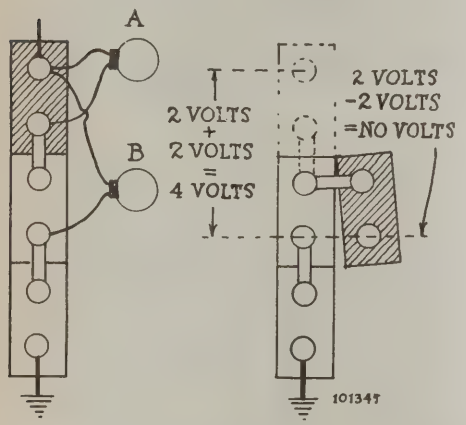
The generator field draws 2.4 amperes at 6 volts, while the generator when operating as a motor should draw from 4 to 5 amperes. This latter figure may vary slightly due to the brush tension. If the ammeter reading is steady when checking the motoring current it is a good indication. If the armature turns with a jerky motion and the ammeter hand fluctuates violently, it usually indicates armature trouble.

The starting motor should crank the engine at 150 r. p. m. drawing 160 amperes at 5 volts. The data of the starting motor is as follows:

Torque	R. P. M.	Volts	Amperes
1 lb. ft.	2500	5.5	125
5 lb. ft.	1050	4.4	330
9 lb. ft.	425	3.6	465
13 lb. ft.	Lock	3.0	580

The above information is taken from Reed's Service Manual.

Clearing Up Electrical



The READERS CLEARING HOUSE

EDITED BY A. H. PACKER

When One Cell Gives More Light Than Two

Q. We recently had a peculiar experience with a storage battery which had one cell shorted. We do not have a voltmeter in our shop, so we took the car to an electrical station and had it tested. The meter showed two volts on each cell when there was no current flowing and when the starter was operated the voltage would drop down slightly on two of the cells. On the third cell however, which has the cable on it going to the starting switch the voltage dropped down to 1 volt. The man then tested the cell again and the reading dropped down to zero and then the needle of the voltmeter went back against the stop pin.

After the car was brought back to our shop we tried a test light on each cell to see which cell was bad and what was the matter with it. We are showing a sketch showing the tests made. With the lamp connected to A, that is, across the cell which seemed to be defective, we found

Shorted cell in a battery acts as a drag on the other cells

that it would light up nearly as well as across either of the other cells. In stepping on the starter button, however, the lamp at A would first get very dim and then brighten up again. In fact, watching it carefully, we could see that the lamp would go out and then brighten up every time the starting pedal was operated. With the lamp connected across two cells, that is, the shorted one and the center cell it would light up brightly at first, but when the starter button was operated the lamp at B would go completely out and stay out as long as the starter button was held down. Could you tell why this happened and why two cells, even if one is shorted would give less current to the lamp than the one shorted cell? Chicago Mechanic.

When a cell is shorted, it changes from a battery to a resistance and the other two cells then work together in sending current through the shorted cell, just as they would in sending current through the rest of the wiring. We are showing an illustration which contains two sketches, the one at the left being the sketch you sent us and the one at the right being for the purpose of explaining the results you obtained. The 6 volts obtainable from a battery are obtained by adding up two volts at each cell and if we imagine the cells are stacked one on top of another, the more cells we have the higher the battery becomes and the more voltage we get.

In the sketch at the right we will assume, however, that the top cell is defective and has toppled over so that it is hanging down and the terminal which should be at the top of the battery is down about two-thirds of the way. The voltage of the middle and upper cell should act as indicated at the left of the right hand sketch. When the cell becomes shorted, however, it changes from a battery to a resistance and we know that in sending current through a resistance we lose instead of gaining voltage. Accordingly the effect of the center and upper cell, when the upper one is shorted is to subtract 2 volts from 2 volts and leave no voltage, which accounted for the lamp at B not lighting up, while the starter current was flowing.

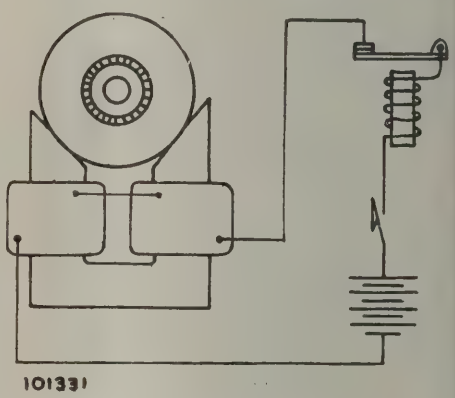
Cadmium and Millivolt Readings

Q. Is the Cadmium test reliable with a Constant Potential outfit. If not, explain why. J. L. Sottiaux, Chenoa Battery Service, Chenoa, Ill.

A. The Cadmium test is considered to be reliable when the Cadmium stick is kept in water when not in use and when readings are taken while the battery is being either charged or discharged. When a battery is charged with a Constant Potential system the current at first is comparatively heavy but when the charge nears completion the current flow will be about the same as the finish rate with a Constant current system. For this reason we feel that the Cadmium test would be just as reliable with one system as the other. If in doubt as to the amount of current flowing at the end of a charge run when a Cadmium reading is wanted a lead with ammeter could be used as one of the connections from the battery to the generator bus bar.

Q. Can I use the voltmeter used for Cadmium test as a millivoltmeter? Explain millivolt test.

A. No. The volt scale of the Cadmium meter is usually 3 volts. The volt scale of the millivoltmeter is usually 100 millivolts or .1 volts. From this you can see that the scale of one is 30 times that of the other.



Millivolt readings are not required to a great extent in the electrical shop, although occasionally a test might be helpful in locating a high resistance connection when the loss of voltage is not over .1 volt. In testing armatures this also may be used by sending current through the armature winding and measuring the millivolt drop from bar to bar.

Growler Difficult to Use With D. C.

Q. Would like to have a wiring diagram for a growler for testing starter and generator armatures. I have a 32-volt Delco lighting plant to supply the current. R. H. Baker, The Avilla Garage, Avilla, Mo.

A growler is designed to operate on alternating current, usually 110 volt, 60 cycle current. The reason for this is that the action of the growler depends on change of current and consequently change of magnetism, which will generate current in the armature being tested. We are showing a circuit which in some cases has been used successfully. It is not guaranteed, however, and depends on having a suitable vibrator to interrupt the direct current from the battery.

Thirty - two volts would probably

Vibrator and battery used to operate a growler

be too much to use. You could start with two cells or three and use any voltage necessary, depending upon the strength of the growler indications and on the sparking or lack of sparking obtained at the vibrator contracts. Several readers of Motor Age have from time to time reported successful results by using a Delco ignition relay, one of the old devices used in 1911 and 1912 on Hudson and Cadillac cars. These are sometimes available at auto wrecking concerns.

If you do not have a great deal of generator work it might be well to check each job carefully to make sure that brush holders are not grounded and that the field circuit is correct and then test each generator as a motor. A normal generator will rotate evenly and draw a steady current while one which has a defective armature will vibrate badly when motoring and will draw an uneven current as indicated on the ammeter. Under such circumstances the ammeter needle will fluctuate violently.

Trouble With Bill Fixit

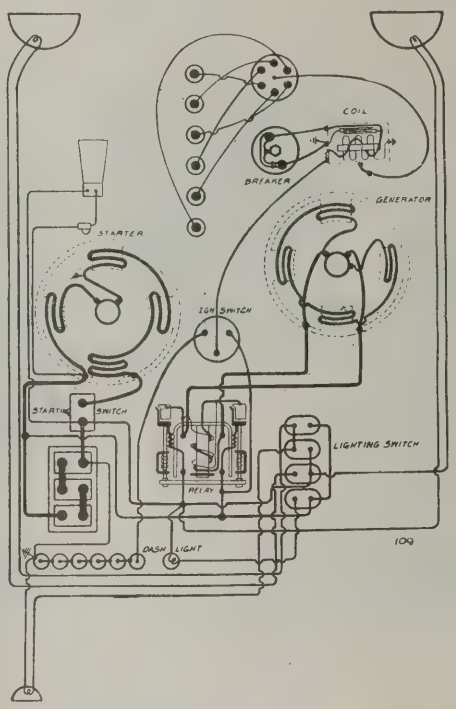
The READERS CLEARING HOUSE

ants to Replace Switch on a Haynes



.—Please send by return mail informa- regarding changing the lighting sys- on a model 34 Haynes touring car. wish to replace the lighting switch ammeter which are combined in one t, with two or more separate units hout changing the entire starting and ting system. If possible send wiring gram and information regarding re- cements. Howland Garage, Brandon,

Ve are showing a wiring diagram on model 34 Haynes car, but it does include an ammeter. Perhaps the car refer to is some other model, for we e investigated and cannot find that the del 34 used an ammeter. If you had replace one of the special switches d to give series parallel connection to head lights, you might find it easier re-wire the car for a grounded system such a system is comparatively simple. can hardly give you detailed infor- tion as to the connection of units en we do not know what units you going to use. If the ammeter is being laced any ammeter used on an auto- bile will be satisfactory and you would nect it in exactly the same way even t is a separate device instead of being lt as a unit with the switch. When come to replacing the switch the job not so simple and we believe the best ctice would be to use a new switch of same type, if one is available. You ld probably secure one from the kers of the equipment, Leece-Neville npany, Inc., Cleveland, Ohio.

DEFECTIVE AS A MOTOR BUT GENERATES

)—We have been confronted with two ctrical problems in the Delco and Wag- generator respectively. We replaced armature in a vertical type Wagner erator which came from a Studebaker and rigged it up on a Moon using a ap to hold it. This generator when ning as a motor draws a current of amperes and when driven generates 10 peres maximum. Explain the unusual tures to us.—Wilson Brothers, Union- n, Ala.

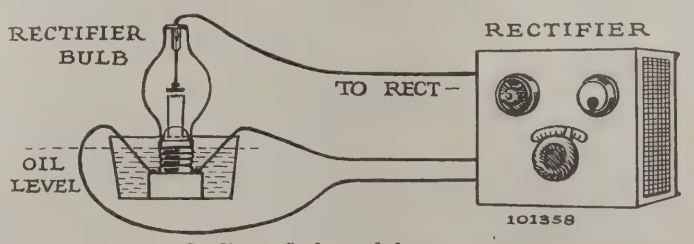
One possibility is that the armature is tially shorted or grounded which uld show on a growler test or in the e of a ground would show up by test- on 110 volts. Another possibility is t the 18 amperes to which you refer the current taken when the armature not allowed to rotate as would be case if the generator is on the car. other possibility is that there is a chanical bind in the bearings or that armature rubs on the pole pieces. u can check this with the generator of the car by sending current through field winding only and having all shes lifted. Then turn the armature hand to see if the current makes the nature turn with great difficulty. A ght increase in the difficulty with which the armature can be turned is natural. Another possibility is that the main brushes are not on neutral. Run the machine as a motor with the third brush lifted. There should be practically no tendency for the armature to rotate in either direction, although a slight tendency to turn in the normal direction is permissable.

Wiring of Model 34 Haynes

Charges at 4 Volts—How Come?

Q—The Delco generator is from an Essex car and has a rewound armature in it. It generates current at only 4 volts. The amerage, however, is 15 to 20.

The voltage of the generator is always the same as the battery with the exception of a few tenths of a volt difference due to the resistance of the wiring. For example, if the battery voltage is 6.5 the generator voltage might be 6.8. As you get only four volts at the generator we believe that there is one cell shorted in the battery, for it would be impossible for a generator at 4 volts to send current into a battery at 6 volts.



Brushes Last Only 100 Miles

Q—We have a 1918 Buick six that causes considerable trouble by burning off the carbon brushes on the generator. This generator will charge for a short while after new brushes are installed but after the car has made between 50 and 100 miles the generator will stop charging. Then if we look at the brushes we find they are burnt off except for that portion which the lock plate holds. We have never had the generator charging over 15 amperes.—Buick of Wisconsin.

If an armature is rewound and improperly connected it will cause excessive sparking at the brushes which will quickly burn them away. On the other hand if the brushes are improperly located even a correctly wound armature will cause trouble in this way. We believe that on the Buick, however, it is not possible to get the brushes appreciably out of the right position. Another condition which will give trouble, is using brushes made of the wrong material. Engineers at the factory spend a great deal of time experimenting with the various brush materials and finding one suitable for a machine which is being developed. For this reason it is essential to use the proper brush for any particular generator. Another condition that will cause this trouble is an open circuit in the armature, but this should also be noticed by a reduced output, by burning of one or two commutator bars and by flashing at the brushes when the machine is running.

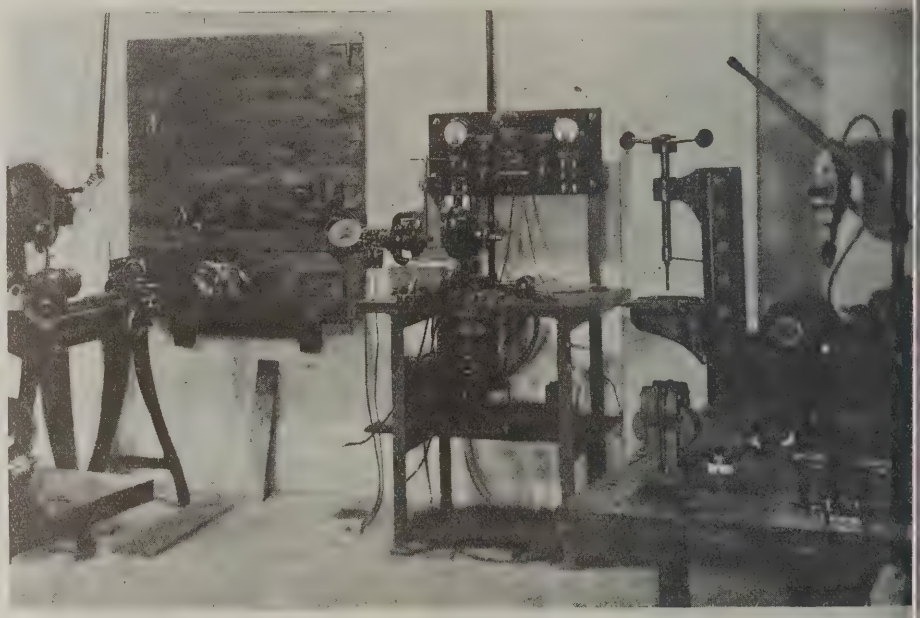
OIL COOLING SAVES THE BULB

As a reader of your MOTOR AGE I have seen a number of hints for the repairman and now will give you one of mine. A 10 battery Tungar rectifier that I have, burnt out so many bulbs for me that I decided to do something. The bulbs would get hot in the socket and the center of the bulb would melt. I put my socket in a can and put oil in the can up to the level of the bulb as shown in the enclosed sketch. I had connections from the socket to the rectifier so that the wiring was just the same. For the last six months I have had no trouble and the oil keeps the bulbs cool and keeps the connection from getting hot and corroding.—Joe Povich Garage, Zeigler, Ill.

Cooling off the red hot currents

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT



Some Do's and Don'ts to Observe With Flat Rate

Electrical Flat Rate Chart

A comprehensive schedule of suggested flat rate charges for automotive electrical service operations will be published in the Nov. 5, 1925, issue of MOTOR AGE. This chart has been compiled by A. H. Packer, associate editor of MOTOR AGE and specialist in automotive electricity.

Since a large proportion of the service work required on the average automobile has to do with the electrical system, this chart will be of interest to practically every automotive shop. Owing to its comprehensive character, covering all the leading makes of passenger cars, it is suggested that MOTOR AGE subscribers probably will want to preserve the issue containing it.

This advance notice of publication is given so that those who are interested will not overlook this important feature.—Editor.

THINGS THAT HELP FLAT RATE

Since so many maintenance and repair operations are confined to the electrical equipment of the motor car, it is a decided advantage to have on hand equipment for testing and repairing the electrical units. A broken rear axle shaft suggests an obvious repair, but a broken wire inside a generator armature cannot be found very readily without equipment

A CARPENTER was asked why it was he could apparently do more work in a day than his fellow workmen. He answered "I measure twice and saw once."

The automotive mechanic does not have to do very much measuring in the same sense as does the carpenter, but nevertheless he has to use his head and think twice before he does the work.

In line with this thought are several things which seem to suggest themselves and which if carefully observed help the mechanic to do a better job in less tim They are:

Use new cotter pins whenever you ha occasion to remove old ones.

Don't use too much energy in tryi to remove parts or units. Proper to and methods will prevent straining breaking parts.

Don't use shellac on gaskets or ho connections. You don't need it if t gaskets or hoses are in good shape a the surfaces are clean.

Use rags instead of waste. Cheesecl is as good as anything because it is f from lint.

Don't hammer off clutches, gears bearings. Use pullers for such work.

Use the right wrench for the job. Do use a big wrench on a small nut. Op end wrenches and socket wrenches of the right length usually to get correct amount of force for tighteni a nut. Additional force strains the and bolt.

Put clean oil on parts like pisto valve rockers, shackle bolts, etc., wh assembling them.

Use tools correctly. See that y screwdrivers have the right kind of e so they will not slip out of the slot the screw head.

Don't "choke" a hammer. Grasp near the end of the handle. You th have better control over the blows.

Study a job before tearing it do It will facilitate quick reassembly.

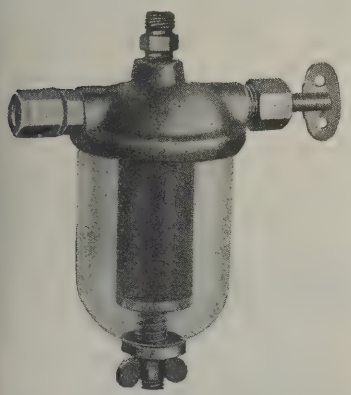
MOTOR AGE'S FLAT RATE FORUM

No. 36

FLAT RATES FOR CHRYSLER CLUTCH OPERATIONS

Continued From Oct. 15 Issue

Manufacturer's Official Designation		Time
5712	Remove and install clutch release bearing including removal and installation of clutch and transmission assembly	4½ hrs.
5713	Remove and install clutch release shaft including removal and installation of floor boards and cover plate	2 hrs.
5714	Remove and install clutch release shaft lever	¾ hr.
5715	Tighten lever on clutch release shaft	½ hr.
5716	Remove and install release yoke or link on rod from shifter shaft lever	½ hr.
5717	Remove and install pedal shaft lever	½ hr.
5718	Remove and install pedal shaft	¾ hr.
5719	Remove and install clutch pedal including removal and installation of floor boards	1 hr.
5720	Adjust clutch pedal stop screw and release yoke to give proper clearance between release bearing and throwout yoke and between clutch pedal and toe board	¾ hr.
5721	Remove and install pedal return spring	¼ hr.
5722	Grease clutch throwout bearing	½ hr.

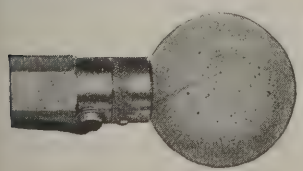


THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Rayfield Filter

Cut Shown Below

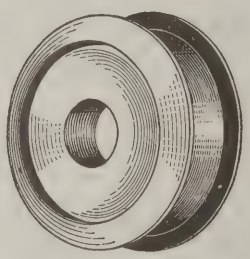


FFECTIVE gasoline filtering is claimed for the Rayfield Filter which being produced by the Beneke Manufacturing Company, 21st and Rockwell reets, Chicago. An unusual quantity fine brass wire gauze is employed in is device which will not corrode and hich is very durable. The filter is easy install and clean. It has a large glass owl for accumulations of dirt and ater. In cleaning it is only necessary remove the nut at the bottom which

olds the bowl to the filter head. This ermits all necessary accessibility. The ayfield Filter is packed in an attractive vo-color box and with every order of the company includes a display hanger three colors with easel back and the ecessary fittings to suspend a filter from . This is for counter or window dislay. The filter lists at $2; Pacific Coast, 2.50.

Illuminated Gear Shift Ball

KINGSLEY-MILLER Company, 600 W. Jackson Boulevard, Chicago, is on ie market with an onyx gear shift ball hich departs from the conventional in ie fact that it is illuminated. The ball ermits use of different colored bulbs anging in size from six to 16 volts. It crews on like the ordinary composition all, the cord being slip-knotted near the p and bottom and hooked up with the mmeter by leading the wire under the oor board. The light turns on or off ith a switch immediately under the ball nd the ball when illuminated gives a easant light in the driving compartment the car. The list price is $5.



Illuminated Gear Shift Ball

Why Not Let Her Have the Job?

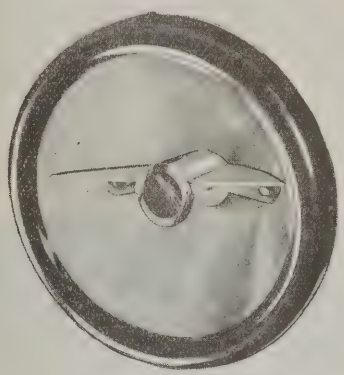
A large accessory merchant who has attractive window displays makes the confession that he has always left this job for the attention of a young lady who assists in the bookkeeping or one of the other two girls in his office. The strange thing is the job has not always been handled by the same girl and yet the windows have been consistently attractive.

The proprietor admits his own shortcoming on window trimming but has a notion that any young woman who has a knack for designing her own clothes and thinking in terms of art can beat the average man all to death on decorating a window. So he gives such a girl a chance to use her talents on the window display, and gets good results. This is a thought which some other dealers might be able to harness. As a rule women have much better taste than men. We don't dare deny it.

Bear Crankshaft Pulley

Bear Crank Shaft Pulley for Fords

THE Bear Manufacturing Company, Rock Island, Ill., is marketing a Flanged Crankshaft Pulley with a special oil retainer, for Fords. The flanges keep on the belt while the oil retainer catches oil and keeps the belt dry. The device is made of reinforced gray iron and is priced, complete, at $1.25.

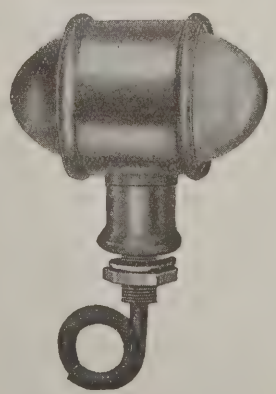


Parking Lamp

A NOVEL parking lamp with dash switch is being produced by Joseph Pollak Tool and Stamping Co., 81 Freeport Street, Boston. The lamp is provided with two leads instead of terminals and the bulb is removed by pulling on the cable. This company is also manufacturing a push and pull switch, made of brass throughout and is adapted for radio as well as automobile use. Price, without separate switch, $1.00.

Kantglare Deflectors

Cut Shown Below

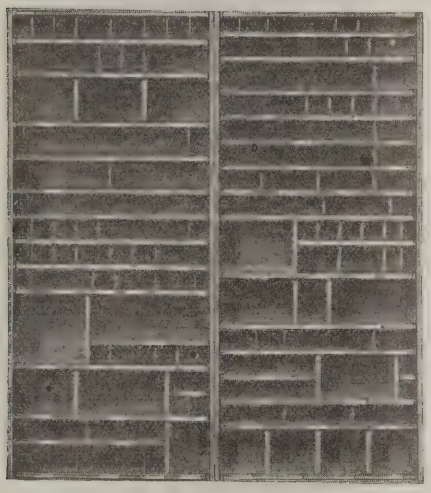


KANTGLARE Deflectors for Headlights, manufactured by the Fairchild Deflector Corp., Clinton, Iowa, are said to divert the rays of the headlight in such a manner as to eliminate danger of blinding or distracting drivers of approaching cars or similarly affecting pedestrians. At the same time it is said the Kantglare Deflectors make for a far-reaching, low-level driving light of high efficiency. The

device does not dim, its purpose being to deflect. The use of special lenses is not necessary. Made to fit any headlight each Kantglare Deflector consists of a single-plane double wing with a central barrel to fit over the bulb and a narrow reflector band with two small vacuum cups to hold the device in correct position. A distinctive blue bull's eye forms the front of the barrel. Installation can be accomplished by anyone without tools and the deflectors sell for $3 a pair.

Increase Shock Absorber Price

THE list price on the Houdaille Shock Absorber for Fords has been changed from the former figure of $25 a set, completely installed, to $30, according to an announcement by the manufacturers, the Houde Engineering Corporation, 177-237 Winchester Avenue, Buffalo, New York. The shock absorber is known as Model "F."



Pollak's Parking Lamp

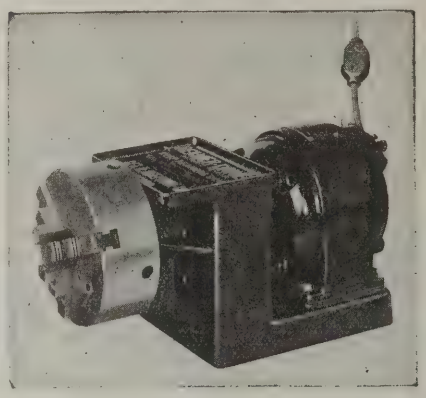
GETTING MORE OUT of the SHOP

Storage System for Parts of Improved Ford Cars

When the improved Ford made its appearance recently, Lyon Units were available for the parts dealer.

The two-section system illustrated provides a total of 115 bins or storage spaces. The section on the left provides parts storage for front and rear axle, wheels, frame, gas tank, motor, magneto and flywheel, transmission, and steering gear parts. The right section takes care of the springs, radiator thermosyphon, fan and hood, carbureter, fenders, running boards and shields, coils, switches, ammeter, starter drive, horn and headlamps. Each bin is labelled with the part number for which it was designed. Capacity of the bins is based on the recommended amount of stock that should be carried, and makes possible a

Two section Lyon unit made for parts of the new Ford model



perpetual inventory. A glance into the bin tells when and how much to reorder.

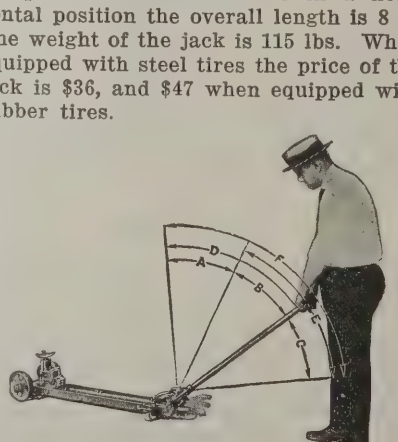
These storage units are 36 in. wide, 12 in. deep, and 84 in. high. They are finished in durable olive green enamel, baked on. They are made by the Lyon Metallic Mfg. Co., Aurora, Ill.

Power Operated Reamer Drive for Bench Work

Designed to grip firmly and to electrically operate reamers when reaming such parts as bushings, spring shackles, connecting rods, pistons and the like, is the new power machine manufactured by the Geo. H. Blettner Co., Chicago, Ill. This machine is powerful enough to remove .020 in. stock with each pass of the reamer from bronze bushings up to 1½ in. and babbitt up to 2½ in. in diameter. The spindle is provided with a geared scroll chuck which accommodates reamer shanks up to 1¼ in. in diameter.

The adaptability of this electrical device to bench work is the outstanding

Power operated reamer drive for bench work



feature. It is easily and quickly mounted on the bench and occupies a space of only 7 by 15 in.

This machine is operated by means of a Westinghouse ¼ h.p. motor mounted on a base provided for it. A regular running speed of 38 rpm. is accomplished by means of a balanced gear reduction running in oil. All gears are totally enclosed in suitable casing to protect the operator at all times.

This machine weighs only 80 pounds prepared for shipment. It is finished in black enamel to give it a pleasing outward appearance.

Manley High Speed Jack

The Manley Manufacturing Co. of York, Pa., has recently added the "Manley Hi-Speed Jack to its line of garage and shop equipment. This is a geared jack mounted on broad faced wheels with roller bearings. It is so constructed that it can easily raise cars having small road clearance and also allows the wheel of the car to pass over the frame of the jack. There are six positions for the operating handle, this permits the free use of the jack in cramped places and on cars having overhanging bodies and bumpers. With the handle in a horizontal position the overall length is 8 ft. The weight of the jack is 115 lbs. When equipped with steel tires the price of the jack is $36, and $47 when equipped with rubber tires.

Manley high speed jack showing the range of the operating lever

A New Portable Crane for Light Tru

The International Motor Truck Co pany, New York, has designed a porta crane for mounting on Mack Trucks 1½, 2 and 2½ tons capacity. While signed primarily for the purpose of loading 1000 gallon fuel oil tanks fr gondola cars, the crane is also adap for other uses and according to manufacturers, will lift up to 2500

The equipment consists of a m braced and anchored to the cha frame; a special drum-winch and booms. Power is applied to the wi from a power take-off through a o speed forward and reverse gear an chain drive to the winch-worm sproc

Portable crane for mounting on M Trucks of 1½, 2 and 3 tons capacity. I said that it will lift up to 2,500 lbs.

The controls, consisting of a motor clu and gear shift are on the left side of mast, directly behind the cab. Attac to the back side of the cab is an auxili gas control which permits the opera to regulate the speed of the engine wi out leaving his position at the con levers. While the crane is being op ated rigidity of the chassis is obtai by two jack screws which support mast from the ground. These scre are attached to the cross-members means of a swivel arrangement, so t when not in use, the free ends may fastened to brackets on the sides of frame.

The International Motor Compa states that the entire assembly may mounted on any standard Mack tr with but little alteration of the body.

EDITORIAL

How Some Dealers Lose Sales

A DISTRIBUTOR'S service manager complained the other day about how hard it is to get some dealers to install equipment and give adequate service on the cars they sell. He said that practically all the dealers for that make of car in his metroplitan area sent some of their owners to the distributor's service station and some sent nearly all.

"But I guess we ought to be satisfied," he said. "In many cases these owners become so well satisfied with our service that they never go back to the dealer they bought the car from and when they get ready to buy a new car they come to us."

Under existing conditions the best market for any widely distributed car should be among present owners of that make. These owners are constantly coming into the replacement market and if the dealer who sold them before is not able to sell them again he is losing about the widest market that is open to him. Failure to sell them again is too often due to having failed to give satisfactory service.

A large Chicago dealer takes pride in his service and goes to almost any length to satisfy his customers sold something more than 500 new cars in a recent month and almost 200 of these sales were to former owners of the same make. A known group of prospects representing approximately 40 per cent of a dealer's new car buyers certainly is worth cultivating. And it is possible, by modern methods, to make a profit while cultivating this field. It is worth thinking about and doing something about.

There is a county in Illinois which, according to its assessor, has more automobiles than it has watches. One reason for this is that the taxpayer can't also hide his car in his vest pocket.

Safety Sense Needed

A NUMBER of constructive thoughts came out of the recent National Safety Congress at Cleveland. One was that in order to reduce the number of motor vehicle accidents it will be necessary to build up in people an instinct for safety. It was said that dogs, chickens, pigs and other animals that wander into roads and streets are not nearly so likely to be hit by automobiles as they were in the early days of motor transportation. They have developed a safety instinct and are more alert to dangers of the highway.

The great majority of persons appear to have well developed safety instincts, but still there are far too many men, women and children killed and injured on the highways. The number of fatalities in 1924 was nearly 20,000. A large number of these were children and elderly persons. It seems that the safety instinct of the active adult population should be extended to take in a definite responsibility for keeping young children and feeble old people away from points of danger. That would be real safety sense.

"Work," an expert told a group of automobile salesmen, is the big word in successful selling. After that comes another big word. You spell it just like the first one.

A Promising Autumn

WHEN you see big posters on the side of the barn along the rural highway announcing a state or community fair—you know that the automobile show season is on. These displays are always the first of the long succession which begins in September and continues well into the following year. Reports from automotive displays at fairs this year are very cheerful and optimistic. The farm dollar is rolling toward the automotive market. More of this farm money will be spent later in the year after the corn is husked, after the cotton crop is turned into money and after wheat, now being held, is marketed. Technically the Fall season begins with the first of September but actually we are just now entering upon the Fall—and it is promising.

Don't be afraid to stand behind the car on your floor. When one of last week's buyers is coming through the door—even the gyp will do that.

Sell Him His Winter Needs

MAIL campaigners should be busy now lining up automobile owners on their winter needs. "Are you prepared for the winter?" Automotively speaking, that generalizes the question which should be asked. Then the specific suggestions,—winter overhaul (to render driving in this especially hazardous season more safe), heaters, chains, illuminating devices for bad nights, etc. Give the owner a message on the importance of "preparedness." This campaign can be pushed until time to take up one for the promotion of Christmas buying.

Knocking a competitor's make does not sell the prospect on yours so often as it makes him think he'd better go back to the horse and buggy.

Automobile Stocks Kept at Low Level

Although Production Points Down, No Slump Expected

Year to Date Shows Wisdom in Keeping Output in Line With Sales

PHILADELPHIA, Oct. 21.—The tendency in automotive production and sales is now definitely downward, but there is no indication of an abrupt slump. In a few instances the factories are still behind in meeting orders, a condition that is being rapidly overcome. On the other hand, there is virtually no overstocking of new cars anywhere, either at the factories or in the hands of dealers and distributors, and this is the strongest point in the whole automotive situation.

The year to date has definitely established the wisdom of keeping production closely in line with sales; the earnings of the manufacturers have been high, labor has been regularly employed, and retailers have not had to take losses to reduce accumulations of cars. Some already large factories are being expanded, however, and the temptation to overproduce perhaps will be stronger this winter than ever before. It remains to be seen whether the cumulative weight of experience will be sufficient to overcome the desire to maintain production and distribution at a uniformly high level.

The used car situation is unfavorable. Stocks normally increase about this time, but the seasonal trend has been accentuated by the price cuts on closed cars and the exceptionally liberal time sales terms on which new vehicles can be obtained. A rigorous policy on trade-ins, coupled with careful reconditioning of the used cars, are the measures being taken by the better merchants among the dealers to keep their stocks moving and avoid losses. But even the soundest policies cannot be depended upon in the present situation to entirely discount the reaction that the price cuts on the new closed cars has caused.

Foreign sales of American cars are booming, and there is now no doubt that the earlier optimistic predictions of the automobile men as to the volume that the export trade would attain will be fulfilled. The total for cars and trucks this year will be about 550,000 vehicles. Next year, judged by the programs under way, it will be about 40 per cent greater, and in 1927 will go over the 1,000,000 mark.

WANAMAKER ENTERS AVIATION

NEW YORK, Oct. 17.—Rodman Wanamaker announces that an airplane freight and passenger service from New York to Miami, Fla., is to be operated jointly by the John Wanamaker store and the Stout Metal Airplane Co. Ford engineers are now seeking suitable landing places along the proposed route. Air shipment of freight is expected to prove popular because of the railroad embargo on all Florida bound merchandise except food and other necessities.

County Votes Own Road Bonds

SAN FRANCISCO, Oct. 17.—Marin County, one of the smaller and less populated divisions of California, has just voted by heavy majority, a bond issue of $1,250,000 for the construction and improvement of its own roads, exclusive of state or federal roads within its boundaries. This sum will build and pave 96 miles of highway, 18 feet wide and seven inches thick. This is believed to be the heaviest bond issue for highway purposes ever voted by a county of the size and population of Marin.

Tire Prices Climb Again As Result of Big Demand

AKRON, O., Oct. 17.—Another general increase in automobile tire prices was put into effect Oct. 16 by the Goodyear Tire & Rubber Co. Price of casings, with the exception of certain small size types, was raised 15 per cent, and inner tubes and solid truck tires, 20 per cent. The smaller size tires are 5 to 10 per cent higher.

Other major manufacturers, including Firestone, Goodrich, Fisk, United States and Miller, met the Goodyear advance.

Although it was generally realized in the industry that a tire price increase was inevitable before the first of the year, most observers believed it would not occur until Nov. 1 or later. Demand for tires is generally less at this time of year than in any other period, and manufacturers were trying to avoid such action, fearing it would disturb the market.

Sales of tires have held up better than was expected, however, with a consequent larger consumption of rubber. The demands of manufacturers have prevented the dwindling supply of crude rubber from being replenished, and the shortage has grown more apparent.

NEW AUBURN DEALERS

AUBURN, Ind., Oct. 17.—New dealers who have recently been added to the Auburn organization are listed below:

Breeck Sales Co., Anderson, Ind., Gerwin Garage, Fremont, O.; Charles W. Myers, Peru, Ind; Middletown Auburn Co., Middletown, Conn.; Duckworth Garage, Shelton, Conn.; Ed. Reinking, Lakewood, O.; Ridenour Auto Sales, Richmond, Ind.; L. O. Geisler, Gloversville, N. Y.; F. H. Kenney, Worcester, Mass.; Kellogg & Widdifield, Columbia City, Ind.; Auburn Newark Motor Co., Newark, N. J.

Fall Used Car Show Proves Great Success in Chicago

Dealers Receive Higher Prices for Their Products Than in Spring Exhibits

CHICAGO, Oct. 19.—The experiment of holding a used car show in the fall instead of the spring was entirely successful, according to officials of the Chicago Automobile Trade Association at the close of the nine-day exhibit which ended here last night.

More than 50,000 persons attended the display, preliminary estimates show, and about 225 cars were sold off the floor, bringing an aggregate sum of approximately $225,000, or an average of between $900 and $1000 per car.

In the spring shows, the average price was about $800. Holding the show in the fall gave the exhibiting dealers the advantage of clearing their floors of the higher-priced models before the winter season dulls the used car market.

In reality, the show succeeded beyond the expectations of the exhibitors. They had reached the conclusion that it would be better to take a slightly less figure for their used cars than to carry them over to the spring. Instead of being forced to take lower prices, the cars brought more money than they had in the spring shows, thus giving the dealer more money for his product, and obviating the storage and depreciation losses which would have been necessary, had he held them over until spring.

Nearly every car which was unable to make the green tag of approval by the association committee, and which was then placed on the auction block, was sold. Prices for these cars were low, but the exhibitors again were saved the cost of holding them through the dull season.

OIL JACK PICKS SWEET

CHICAGO, Oct. 17.—The Oil Jack Co., Inc., New York City, announces the appointment of Fred D. Sweet as manager of the middle western territory with headquarters in the Wrigley Building, Chicago. Mr. Sweet formerly was connected with the U. S. Rubber Company, Chicago, in charge of automotive equipment sales and also was sales supervisor for the Biflex Products Corp. He has had broad experience in merchandising automotive equipment and a wide acquaintance in distributive channels for such products.

FORD SHIPS TO OREGON

PORTLAND, Ore., Oct. 17.—On her first trip up the Columbia River to this city the Onandaga, Henry Ford's ship, was loaded with "knocked down" Fords. This is the first water shipment to this city of Ford cars.

'ennsylvania A. A. Elects Hoeveler Its New President

'hree-day Convention Is Featured by Addresses of Motor Authorities

Pittsburgh, Oct. 17.—In spite of the ounter attraction of the World's Series indup which transformed Pittsburgh nto a temporary madhouse, 300 dele- ates to the fifth annual convention of ne Pennsylvania Automotive Association eld in the Smoky City Oct. 12-14 list- ned to a three-days program replete ith constructive addresses and launched progressive program for another big ear in the organization's history.

George A. Hoeveler, Stutz-Chandler- leveland distributor in Pittsburgh, was amed president for the ensuing year ithout opposition, and Philadelphia was hosen as the convention city for 1926.

High spots in the three day meeting ere the addresses by F. E. Moskovics, resident of the Stutz Motor Car Co. of merica, Inc., C. C. Hanch, general man- ger of the National Association of Fi- ance Companies, Arthur Mogge, mer- handising director of the Automotive Equipment Association, and the sales ongress staged by the National Automo- ile Dealers' Association.

Mr. Moskovics, who spoke both at the anquet held Tuesday evening and at the ast morning's session, inspired the deal- rs with his predictions of great things hat are ahead for the industry and for hose dealers who can vision the future nd build their organizations to fit into he expanding needs of individual trans- portation.

Other officers elected at the convention were:

Vice presidents, George McFarland, Harrisburg, George Gray, Wilkes Barre, John Leppert, Johnstown, E. T. Satchell, Allentown; secretary, Charles Schwab, Allentown; treasurer, Roy Shreiner, Harrisburg; directors, Floyd Bortree, Scranton, Roy McIntyre, Butler, E. R. Williams, Clearfield, Jo. G. Roberts, Phil- adelphia, W. U. Massina, Williamsport, and D. W. Ranck, Lancaster.

The Pennsylvania association is now he strongest state association in the industry, with 794 paid in advance mem- bers. It has showed a steady, healthy growth each year, and its treasury is in excellent shape.

The membership is made up of 545 mo- tor car dealers, 75 motor car distributors, 56 accessory dealers, 26 garage and serv- ice station owners, 14 associate mem- bers, 13 battery shops, 6 jobbers and 2 motor marts.

Several cities in the state have 100 per cent motor car dealer memberships.

NEW MARTIN-PARRY PLANT

JACKSON, Miss., Oct. 17.—Location of the southern plant of the Martin-Parry Corporation in Jackson was announced recently by J. A. Callahan, general man- ager, and Henry Kawn, manager of the local plant. Construction is to start at once, and the officials expect to have the plant in operation by the middle of the winter. The Martin-Parry corporation is one of the largest builders of auto truck bodies in the United States. The initial plant of the corporation will cover 150,000 square feet and employ 400 or more workmen.

Keep Your Shop Doors Open

MILWAUKEE, Oct. 17.—Milwaukee's first victim of carbon monoxide poisoning this season was Martin Johnson, 25, member of the firm of Johnson Tire & Radiator Co., South Bay and Allis streets. Johnson was found in his garage, lying beside his automobile, the motor of which was running. The door of the garage was closed.

Chevrolet Sponsors Bus Body for 1-Ton Chassis

Detroit, Oct. 17.—Production of a bus on the regular one-ton Chevrolet truck chassis is being sponsored by the Chevrolet Motor Car Company and the Detroit retail store of the company. The bus sells for around $1,200.

According to A. H. Goodman, manager of the Detroit retail store of the Company, the bus which will seat 28 persons, uses bodies manufactured either by the Martin-Parry Corporation or by Wayne. It is planned to sell the buses to schools in rural districts and also bus lines serving as feeders to electric railways.

The annual production is estimated to be around 20,000 with the daily output being evenly divided. Thirty by five tires are used throughout with other specifications being the same as the regular Chevrolet one-ton truck.

UNIFORM TRAFFIC PLANNED

GRAND RAPIDS, Mich., Oct. 17.—Adoption of a uniform traffic ordinance for the entire state of Michigan will take place here October 22 when representatives from various communities throughout the state will gather for that purpose. Col. A. T. Barber, director of the National Conference of Street and Highway Safety, also known as the Hoover Conference, will be among those present. The recommendations made by the Hoover Conference last winter at Washington, D. C., were largely used as a basis upon which to formulate the new ordinance.

SPARTON PARTY NOV. 7

JACKSON, Mich., Oct. 17.—The Fifth Annual Sparton Party given by The Sparks-Withington Co. will be held here November 7. On that day guests of The Sparks-Withington Co. will be taken for a brief trip through the Sparton factory and immediately afterward they will be taken in special buses to Lansing to attend a football game between Michigan State College and Toledo

Ford Reaches Production Of 8,135 Cars Per Day

Two Records Broken by Company in Attaining Such Output in 60 Days

DETROIT, Oct. 17.—The Ford Motor Company reached a domestic daily production of 8,135 passenger cars and trucks Friday, October 16, and established two new records for the automotive industry. One was that the number of cars turned out was the largest in its history and second that no other company has been able to turn out new models and establish new output records for the entire industry inside of two months.

Before the end of the month, the company hopes to establish a daily output of 8,500 passenger cars and trucks. This does not include the output of the foreign plants and Australia. The foreign plants are turning out the improved models at the rate of 350 a day. By the end of the present month, it is possible that Ford branches throughout the world will be turning out more than 9,000 cars each day.

During the past few weeks, the company has been shipping through its branches to dealers upwards of 7,000 cars and trucks a day, this number increasing daily until the record production was reached last Friday. Production for this month, it was said by executives of the company will be approximately 200,000 and may help to establish a new high record for the industry.

While figures regarding the exact number of orders were not available, it is known that the high daily output was made necessary because of the tremendous number of orders that have flooded the company offices since the improved models were announced.

KEATON TOURS COAST

SAN FRANCISCO, Oct. 17.—R. H. Keaton, president of the Keaton Tire and Rubber Company, which recently established its factory in San Francisco, is making a tour of the Pacific Northwest, in company with C. C. Jack, manager of the Seattle and Portland branches, who recently was promoted as a reward for his work as manager of the Portland branch.

SERVICE SCHOOL HELD

PORTLAND, Ore., Oct. 17.—About 75 fleet service mechanics and Dodge service station men have just completed a two-day course on repair and service work at a school held at the plant of Braley & Graham, local dealers. Robert Word, representing the Dodge factory, and Tim Baldwin, of Graham brothers, went into the details of this work on Dodge cars and Graham brothers' trucks. C. A. Lennon, district representative of the factory, and H. M. Russell, field representative, were here for the school.

McFarlan Produces Eight Series in Eleven Models

Prices and Body Types Same as SV Line Except for Addition of Town Car

CONNERSVILLE, Ind., Oct. 17.—McFarlan Motors Corp. is now producing a stright eight model which is offered in eleven body models ranging in price from $2,650 to $4,600. The chassis has a 131 in. wheelbase and the engine is a Lycoming H with a bore of 3-3-16 in. and a stroke of 4 1-2 in. The body types making up the new line are identical in prices and equipment with those sold on the single valve, six-cylinder McFarlan chassis except that a town car at $4,600 has been added.

The fuel system on the new eight includes a vacuum tank which feeds from the 18 gal. capacity main tank to a 1 1-2 in. Schebler carbureter with vertical outlet. The starting, lighting and ignition units are of Delco make and the storage battery has a rating of 120 amp. hr.

The clutch is a Borg & Back and together with the Warner transmission, is assembled with the engine in a unit power plant. Universals are of the metallic type made by the Universal Machine Co. and the axles are Timkens. The rear axle is a semi-floating unit with a final reduction of 5.1 to 1 and, as in the six-cylinder models, its torque is taken by an arm. Chassis lubrication also is similar to that used on the sixes, all important bearings being lubricated by oil-cups with wick feed. Springs are semi-elliptic, those in the rear being 58½ in long. The stearing gear is a Ross.

The braking system consists of four-wheel, hydraulic service brakes with the emergency on the transmission, and is identical with that used on the single valve model. Balloon tires, 32x6.20 in., mounted on natural finish artillery wheels are standard. All body models have front bumpers, snubbers, automatic windshield wipers, sun-visors, cowl ventilators, rear vision mirrors, heat indicators, rear traffic signal, clock and ignition and transmission locks.

Following is a list of models furnished on the eight-cylinder chassis:

2-pass. roadster	$2,650
4-pass. roadster	2,900
5-pass. touring	2,650
7-pass. touring	2,750
5-pass. sedan	3,180
4-pass. coupe	3,180
5-pass. coach brougham	3,180
7-pass sedan	3,280
5-pass. suburban sedan	3,380
7-pass. suburban sedan	3,480
Town car	4,600

Several changes also have been made in the two six-cylinder chassis. The SV models now have Delco electrical equipment and a larger battery which is interchangeable with that used on the new eight. The rear axle reduction on this chassis has been reduced from 4.90 to 1 to 4.27 to 1 and its exhaust pipe diameter has been increased to 2¼ in. The capacity of the fuel tank has been decreased to 18 gal. and is interchangeable with the tank on the eight. On the TV chassis, a Borg & Beck clutch has replaced the former multiple disk unit, De-Jon electrical equipment has been adopted and the battery capacity has been increased.

Wills Ste. Claire Names Moorman Vice President

MARYSVILLE, Mich., Oct. 17.—At a meeting of the board of directors of Wills Sainte Claire, Inc., A. H. Moorman was elected to the office of the vice-president in charge, according to an announcement by C. Harold Wills, president of the company.

Mr. Moorman has been with Wills Sainte Claire, Inc., since 1923 in the capacity of treasurer and controller and prior to this he was associated with the Security Trust Company of Detroit.

In a statement made by Mr. Moorman, the company is in a very strong financial position with a large cash reserve and unfilled orders on hand in such quantities as to insure an unusually large production during the fall and winter months.

ELEVATED AIDS PARKING

PHILADELPHIA, Oct. 17.—An unusual expedient to relieve city traffic congestion has been taken by the Philadelphia Rapid Transit Co. in establishing parking areas at convenient points on its lines. Parking tickets are issued at 25 cents, which includes round trip fare on the lines of the company, reducing the parking charge to 10 cents. The two areas are at points convenient to motorists from outlying communities, who will be enabled to leave their cars all day and continue their trips to the central part of the city by elevated train. In the downtown section of Philadelphia congestion is so bad that parking is virtually impossible and the movement of motor vehicles and street cars are seriously impeded.

Auburn Plans Note Issue to Allow 4-Cylinder Line

Stockholders to Meet for Decision on Increase of Capitalization Nov. 14

AUBURN, Ind., Oct. 17.—At a meeting of directors of Auburn Automobile Company it was decided to call a meeting of the stockholders for Nov. 14, to vote on proposal to authorize increase of capital stock of the company from 60,000 to 120,000 shares.

It was also decided that the selling organization was not broad enough and could be materially strengthened by the addition of a four-cylinder car to the company's present line of sixes and eights and in order to provide additional working capital for this program it was decided to ask the stockholders to ratify the directors' action in the issuance and sale of a short term note issue.

Net earnings for the third quarter of 1925 after deduction for taxes and depreciation were $305,949.94, equal to $5.10 per share on the 60,000 shares outstanding.

For the nine months of this year earnings have amounted to $10.92 per share. September 30, the total current assets amounted to $1,993,639 against total current liabilities of $533,718, leaving a working capital of $1,459,921.

DENVER PLANS SHOW

DENVER, Colo., Oct. 17.—Secretary Tom Braden, of the Denver Automobile Dealers' Association has announced the appointment of Myron L. Smith, president of the Sherman Auto Company of this city, as chairman of the committee to have charge of the annual automobile show. February 2 to 6 inclusive have been chosen as the dates, and the show will be held as usual in the Municipal Auditorium.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE of Oct. 25, 1900)

Tagged in Philadelphia

Every self-propelled vehicle in Philadelphia is now tagged, the carrying of the number being compulsory in the park. The majority of the vehicles, however, are decorated with their numbers at all times, the tag being comparatively small, and interfering little, if at all, with their appearance.

Progress in Buenos Aires

Mail advices from Buenos Aires state that the use of electric and oil power motor cars in the Argentine capital is developing rapidly. Not only heavy delivery wagons, but also luxurious carriages driven by oil and electricity are frequently to be met with on the streets of that city.

The Industry in Italy

The motor car industry in Italy is still in its infancy. The concerns of importance have started works in Milan viz.: Prinetti Stucchi, having a very large plant in connection with their carriage and bicycle works, and C. Bianchi. There is also one automobile establishment in Rome, but it is of recent creation and has not reached any importance. A certain number of automobiles of foreign make have been introduced into Italy and have met with public favor, which should be encouraging for the future development of that industry in Italy.

Automobile Makers Planning to Operate Their Own Ships

May Buy Vessels From Shipping Board to Cut European Transport Costs

WASHINGTON, Oct. 17.—Negotiations looking to the purchase of a fleet of fifteen or twenty Government ships for use in exporting automobiles from Detroit to European and other foreign ports have been initiated here by representatives of four important Detroit automobile concerns, it is admitted at the shipping board. Hudson, Dodge, Chrysler and Hupp are understood to be the interests behind the plan.

While the shipping board describes the deal as only "in the making," it is learned the automotive men involved have already gone so far as to consult the Department of Commerce as to trade routes and foreign markets. It is further understood that the advice of J. Walter Drake, assistant secretary of commerce and a Detroit automobile man has been sought.

Consummation of the plans would involve upward of $1,000,000 in outlay for government tonnage. The vessels under consderation are the 4,200-dead-weight-ton, lake type, oil-burning steamers. The shipping board price for this type of vessel when sold for operation is about $50,000 each.

The tentative plan of the automobile companies is to put into service a fleet of steamers to carry automobiles and accessories direct from Detroit to foreign ports. The route of the ships would be through the Great Lakes to Montreal and then to European ports, southward to South America, or through the Panama Canal to the Far East.

NEW PARTS FACTORY

CHICAGO, Oct. 17.—The Imperial Molded Products Corp. has been formed in Chicago with a factory at 2925 W. Harrison Street, controlled and financed by the Imperial Brass Manufacturing Co. The new company will begin immediately the production of molded Bakelite parts by high pressure steam. Among the products which will be turned out will be parts for the automotive, electrical, building, musical instrument, radio, plumbing, phonograph and many other industries. Officers are Paul Tietz, president; James T. Greenlee, secretary; and Frank McNellis, treasurer.

ATLANTA HOLDS SHOW

ATLANTA, Oct. 17.—The annual fall automobile show in Atlanta was held the ten days of the Southeastern Fair, Oct. 8 to 17 inclusive, with nearly all the members of the Atlanta Automobile Association taking part, making the show the largest held here in recent years, equally as large as the regular spring show held annually during the five years prior to 1925. There was no spring show in Atlanta this year. The show was held in the Automobile Building on the Southeastern Fair grounds, and attracted thousands of visitors, the various new models shown attracting the primary interest.

HEATER PRODUCTION UNHURT

MONROE, Mich., Oct. 17.—Production in the heater division of the Monroe Auto Equipment Manufacturing Company, part of whose plant was completely gutted by fire early last Saturday, has not been affected, C. S. McIntyre, president of the company, said today. The fire destroyed the pump plant of the company, making it necessary for the company to re-build. Plans have been made by President McIntyre which call for a larger plant and one which will be able to exceed the output of the plant burned down.

HYDRAULIC BRAKE MOVES

DETROIT, Oct. 17.—The Hydraulic Brake Co., announces the removal of its general offices and experimental division in Detroit, from 5833 Russell street, at Medbury, to 2843 Grand boulevard, East, at Oakland.

DEALERS GREET PHILLIPS

SAN FRANCISCO, Oct. 17.—Direct dealers in the Dodge car in this section of the Pacific Coast, to the number of 25, were hosts at a luncheon to Ned B. Phillips, newly appointed Dodge Brothers district representative for the San Francisco territory. Phillips returns to California after an absence of about two years, directly from the Detroit office. He formerly was connected with the district office in San Francisco.

Clymer Forms New Company to Make Patent Air Gage

Inventor of Windshield Spotlight to Put Latest Product on National Market

DENVER, Colo., Oct. 17.—Floyd Clymer, well known Denver inventor and driver, is the head of the newly organized Clymer Motors Products Company, 1526 Lincoln street, where it manufactures and distributes the recently patented Clymer Automatic Air Gage.

This is a device to be attached between the tire valve and the air hose, in such a manner that the air must pass through it before entering the tire. The user adjusts a thumb screw indicator to the amount of pressure desired in the tire, pushes the gage onto the valve stem, and applies the hose. When the proper pressure is attained, the gage automatically shuts off the flow of air, and a whistle blows to notify the user. There can be no danger of over-inflation for the hose might be left attached for hours without additional air getting into the tire, and the whistle would continue to sound till the hose was disconnected. This gage eliminates the numerouss readings required by other types.

Clymer is the inventor of the Clymer Windshield Spotlight, which scored an immediate success upon its appearance some five years ago. The new company has started on intensive sales campaign, and is already shipping to eastern points, and rapidly arranging for national distribution.

Grey Goose Traveler Latest in Wills Sainte Claire Line

Side view of the Grey Goose Traveler added to the Wills Sainte Claire line

MARYSVILLE, Mich., Oct. 17.—Wills Sainte Claire, Inc., has added cabriolet roadster and Grey Goose Traveler models, listing at $3,785 and $3,300 respectively to its eight-cylinder, de luxe line. In addition, list prices on standard roadster and the Grey Goose Traveler models of the six-cylinder line have been increased $315 to $2,800 and the eight-cylinder de luxe roadster has been increased from $3,185 to $3,300.

The three models affected by the price increases now are furnished with front and rear bumpers, and spare tire in addition to the equipment formerly carried by them.

Cabriolet roadster and Grey Goose Traveler models have been eliminated from the standard eight-cylinder line.

Besides the equipment supplied on the cabriolet roadster and Grey Goose Traveler when these models were included in the eight-cylinder standard line, the former now has sun visor and door lock and the latter front and rear bumpers and sun visor.

Industry Given But 1 Hour to Make Tax Repeal Plea

House Committee to Hear Representatives of Many National Bodies Oct. 24

WASHINGTON, Oct. 17.—The brief space of one hour will be allotted representatives of the National Automobile Chamber of Commerce and the American Automobile Association on the afternoon of Saturday, October 24, to convince the House Ways and Means Committee that war excise tax on automobiles, accessories and parts should be repealed. Each of the two organizations will be given half an hour.

While it is admitted this is a ridiculously short period to present arguments involving an assessment on the industry of approximately $141,000,000, members of the House committee point out that so many interests are to be heard it is necessary to severely limit the time each is to consume.

It is expected that all of the automotive leaders representing every branch of the industry who met here several weeks ago in anticipation of the tax hearings will be present on October 24 and ready to testify. While H. H. Rice and Pyke Johnson, chairman and secretary respectively of the taxation committee of the N. A. C. C. are in South America, assurances are given that the other members of the taxation committee will be in attendance.

Following are the names of those expected to represent the automotive industry's abbreviated session before the committee:

George M. Graham, director, N. A. C. C.; Ernest N. Smith, general manager, the American Automobile Association; S. M. Jett, Rubber Asssociation of America, Inc.; Walter B. Guy, National Automobile Dealers' Association; C. E. Quinn, Automobile Body Builders' Association; M. L. Heminway, Motor and Accessory Manufacturers' Association; W. W. Cloud, National Association of Taxicab Owners; B. W. Ruark, Automotive Equipment Association and Automotive Manufacturers' Association; David S. Ludlum, C. C. Hanch and F. J. Haynes. The last three named are members of the taxation committee of the National Automobile Chamber of Commerce.

MORRIS ENTERS CANADA

TORONTO, Oct. 17.—The Morris Crowley and Morris Oxford English motor cars recently displayed at the Canadian National Exhibition are now on the Canadian market. Sales offices have been opened at 1262 Yonge Street, Toronto, under the direction of J. W. Pickavant, sole Canadian distributor.

PYROXYLIN GAIN LARGE

WASHINGTON, Oct. 17.—A gain of 125.9 per cent in the production of pyroxylin varnishes or lacquers was registered in the first six months of 1925 as compared with the last half of 1924, the Department of Commerce announces in publishing the results of its semi-annual survey of the paint and varnish industry. Other comparisons for the same periods show a gain of 3.1 per cent for paste paints; 31.5 per cent for ready-mixed and semi-paste paints, and 13.6 per cent for varnishes, japans and lacquers, other than pyroxylin. The increase noted for pyroxylin products was apparently the result of the greater use of these finishes in the automotive industry. The statistics are based upon returns from 502 establishments, of which 67 produce pyroxylin varnishes or lacquers.

BIFLEX HOLDS SESSION

WAUKEGAN, Ill., Oct. 17.—The fifth annual sales convention of the Biflex Corp., manufacturers of Biflex Spring Bumpers, was held recently at the general offices of the company here. Additional members of the sales force, who have been added during the last year, made the convention the largest ever held by the company. F. B. Caswell, vice-president and director of sales for the Champion Spark Plug Co., was the principal speaker at the banquet which closed the convention.

W. D. Patterson Resigns In Corporation Reorganization

OAKLAND, Cal., Oct. 17.—W. D. Patterson, originator and organizer of Patterson Parts, Inc., has resigned. The Fresno branch has been closed and the Portland branch sold in a complete reorganization of the corporation, in the course of which Mr. Patterson lost control.

J. B. McKay, sales manager, also is out of the corporation, and William Tenant, former comptroller and leader of the stockholder opposition to Patterson, is directing the operation of the company.

Three reasons are assigned for the reorganization of Patterson Parts which had branches in every large city on the Pacific Coast. First, that sales volume of about $525,000 a year was too limited for the number of branches; second, that the overhead was too great for the gross margin; and third, that there was no reserve capital, the concern having expended on the net earnings.

Mr. Patterson established the corporation in Oakland about 15 years ago and is now in the east endeavoring to connect with lines to represent on the Pacific Coast.

CARPENTER GOES TO EUROPE

NEW YORK, Oct. 17.—R. E. Carpenter, vice-president of the Spicer Manufacturing Corporation of South Plainfield, N. J., has sailed for a six weeks' business trip to England and the Continent. Mr. Carpenter will be present at the Olympic Auto Show in London and will later spend several weeks in travel on matters pertaining to the corporation's foreign sales.

MOVES CANADIAN OFFICE

MONTREAL, Oct. 17.—The sales department of the Black & Decker Manufacturing Co., Ltd., now located at Montreal, will shortly be moved to Toronto. The factory will remain at Montreal. The Canadian manager of the company, A. J. Hopkins, has tendered his resignation and leaves for the South.

G. M. Sales to Consumers Gain 35,047 Over 1924

Total Dealer Volume Is 83,612 Cars for September—Trucks Set Record

DETROIT, Oct. 17.—The sale of General Motors cars by dealers to users in September totaled 83,612 passenger cars and trucks, a gain of 35,047 over September, 1924. The number sold in September, 1924, was 48,565.

The sales of cars and trucks by the various manufacturing divisions of the corporation to dealers throughout the country for September totaled 88,379, which is the largest sale in any month in the history of the corporation.

The sales by dealers to the ultimate consumer is the second largest since April, May being the other month to exceed it.

	Dealers Sales to Users 1924	Divisions Sales to Dealers 1925
January	25,593	30,642
February	39,579	49,146
March	70,594	75,527
April	97,242	85,583
May	87,488	77,223
June	75,864	71,088
July	65,872	57,358
August	78,638	76,462
September	*83,612	*88,379

**These preliminary figures include passenger car and truck sales in the United States, Canada and overseas by the Chevrolet, Oldsmobile, Oakland, Buick and Cadillac manufacturing divisions of the General Motors.*

Bert Dingley Is Selected Service Manager of Stutz

INDIANAPOLIS, Oct. 17.—Fredrick E. Moskovics, president of the Stutz Motor Car Company of America, has announced the appointment of Bert Dingley as service manager for the Stutz organization. Mr. Dingley was internationally known as a racing driver from 1904 to 1914, when he held championships in Europe and America, and he was one of the leading drivers in the old days of the Gordon-Bennett and Vanderbilt races. In commenting on the appointment Mr. Moskovics said:

"It was considerably over twenty years ago when Bert Dingley started giving service on automobiles and his entrance into the ranks of racing drivers came only after he knew intimately every part of a car from taking care of it. His success in racing was largely due to this intimate knowledge of a car's construction and operation.

"He has sold automobiles and has a practical knowledge of dealers' problems, but above all, he is an authority on motoring service.

"Mr. Dingley's experience in building racing cars from the days of the old Pope-Toledo, Chalmers, Simplex and Thomas-Detroit, was supplemented by production experience during the war in the Bureau of Aircraft during the production of the famous Liberty engines. He has had charge of inspection work on body and chassis building, painting and testing in some of the leading automobile plants in the country."

Rating Committee of Motor Truck Industries Will Meet

Study Will Be Made of Reports From Members in Standardization Plans

BUFFALO, N. Y., Oct. 17.—J. R. Spraker, general manager of the Atterbury Motor Car Company and chairman of the rating committee of Motor Truck Industries, Inc., states that he will call a meeting of the rating committee for one day during the last week of October, probably to be held in Detroit, to study the reports made by the various members on the blue-print questionnaire which Mr. Spraker recently sent to members of the committee.

This questionnaire contains blank for filling in size data on 22 different points involving the standardization in each one of the four classes of trucks under study of the seat, frame, steering gear, dash openings, tires, front spring and rear spring.

It is expected that this meeting will serve to produce out of the mass of suggestions and recommendations, material for a practical codification of standards which can be submitted at the Washington meeting of the organization during the week of November 8.

NEW HUPP DEALERS

DETROIT, Oct. 17.—New dealers appointed by the Hupp Motor Car Corp. include:

Portage Garage, Portage la Prairie, Manitoba; Motors Limited, Brandon, Manitoba; W. W. Robertson, Jr., North Tonawanda, N. Y.; Jerwin Motor Co., Lima, O.; R. L. Kohn, Leipsic, O.; A. I. Mathews, Ortonville, Minn.; Minot Motor Co., Minot, N. D.; Williams Bros., Riverside, Cal.; Streeter Motor Co., Great Falls, Mont.; Beauchamp M. Garage, Penstang, Ont.; Geo. H. Ferguson, Collingwood, Ont.; C. L. Robins, Niagara Falls, Ont.; Motor Sales & Service Co., East Ely, Nev.; Bayers Auto Sales, Inc., Long Island City, N. Y.; E. L. Carpenter, Tekonsha, Mich.; C. E. Minnick, Rexford, Kan.; Bingham Motor Co., Troy, O.; E. R. Jackson & Co., Osceola, Ark.; Carroll Motor Sales, Pt. Huron, Mich.; Morrison Motor Sales, Wyandotte, Mich.; A. M. Powell, New London, Conn.; Raulerson & Boon, Okeechobee City, Fla.; Shenandoah Motor Co., Winchester, Va.; Carroll Sanders, Gillett, Ark.; Phil Smith, Cumberland, Md.; Alva E. Hatch Auto Agency, Chico & Oroville, Cal.; T. H. Tupman, Pasadena, Cal.; Carbondale Welding Co., Carbondale, Pa.; Horn & Boyd, Bicknell, Ind.; S. W. Jones, Priest River, Idaho; A. A. Monnett, Walla Walla, Wash.; Miesner's Garage, Cape Girardeau, Mo.; E. H. Robinson Auto Sales, Chicago; Crawford-North Motor Sales, Chicago; H. F. Butterfield & Son, Ottawa, Ill.; O. F. Bielke, New Auburn, Minn.; Robert F. Wells, Inc., Stony Brook, N. Y.; Kruger Motor Car Co., Inc., Rosebank, S. I., N. Y.; Banks Motor Corp., Ardmore, Okla.; F. J. McHugh, Stamford, Conn.

SHOW DATES ANNOUNCED

LOUISVILLE, Oct. 10.—February 15-20 has been announced as the dates of the Louisville Automobile Show. The eighteenth annual exhibition will be staged under the auspices of the Louisville Automobile Dealers' Association.

Voisin "Equips" Cars With Paint Kit

PARIS, Oct. 3.—(By Mail).—To encourage clients to maintain their paint work in good condition, the Voisin Company of Paris furnishes a pot of pyroxylin paint and a small sprayer with every car sold. The sprayer is no bigger than a fountain pen and the pressure is obtained by blowing through a tube. This enables any damaged parts to be touched up almost instantly with perfect results. Voisin is the first French manufacturer to adopt pyroxylin painting for the whole of his output. Practically all his bodies are fabric leather construction, and the painting is thus limited to the hood, fenders and running gear, which usually are in black. In certain cases Voisin is using pyroxylin paint on fabric leathers. This is particularly advantageous in the case of repair work, for when a fabric panel is changed it need not be the same color as the original. The grain of the leather shows up perfectly under the paint.

French Racing Board Plans To Make Competition Safer

PARIS, Oct. 3.—(By Mail).—Alarmed by the long list of fatal accidents which have marked the past racing season, the Racing Board of the Automobile Club of France is studying ways and means to make competitions safer. Their suggestions will be brought before the International Racing Board, at its general meeting to be held in Paris on October 28, with a view to international adoption.

Among the proposed changes is that an elimination race or races shall be held for the French Grand Prix, and that the final shall be reduced to about 250 miles. No accident, however, has ever happened in Europe owing to the high number of competitors on the track or road.

The average number of starters in the leading events during the last five years is 15, on tracks or road circuits having an average length of 15 miles. Experience has shown that races of more than 500 miles unnecessarily fatigue the driver and weary the public.

COLUMBUS SALES GAIN

COLUMBUS, O., Oct. 17.—Sales of new automobiles in Franklin County in September totaled 1,131, which was an increase of 184 over September of 1924 when 947 new cars were sold. This is the gist of a report made by County Clerk Harold Gockenbach, who is charged with the duty of filing duplicate bills of sale on all motor car sales. New models, improvements and price cuts, many of them dating from August 1 are given as the causes for the increased sales.

Many Changes Recorded in Trade Personnel of Boston

Apperson Discontinues Branch in New England City—Studebaker Promotes Two

BOSTON, Oct. 17.—Changes continue to take place in the motor trade in this city the latest being the discontinuance of the Boston branch by the Apperson Motor Company, of Kokomo, Ind. Charles A. Perry, who has been manager, has started on a month's vacation.

Joseph S. Donovan, owner of the Donovan Motor Car Company, Studebaker distributor for Boston, has made Henry J. Kelley, his sales manager, vice-president of the company, and W. E. Dermody, general manager. Mr. Kelley has been with Mr. Donovan 12 years, entering the motor industry with this company and for the last six years has been sales manager. Mr. Dermody had been a branch manager for Goodyear Tire & Rubber Company at Boston and other places, and was later with the Boston Autocar Company, and recently had a Ford agency here. He takes the position left vacant by the death of Mr. Benson.

John J. Mahoney, formerly part owner of John & Arthur, has joined the Malton Specialty Company, 173 Massachusetts avenue, where he is managing its sales.

The Stewart Truck Corporation, of Buffalo, N. Y., has opened its own sales branch for the Boston territory at 195 Massachusetts avenue, Cambridge.

Arthur J. Dorley has joined the Utterback-Gleason Company, Kissel distributors, and also sub-dealers for the Hudson-Essex, as used car manager; he had been with the Willys-Overland forces until he assumed his new position.

NEW LOCOMOBILE DEALERS

BRIDGEPORT, Conn., Oct. 17.—The Locomobile Company of America, Inc., announces the appointment of the following companies as dealers to handle the new Junior Eight car, deliveries of which are now being made by the factory at the rate of 25 daily:

Leo G. Lob, New Orleans; Lewis S. Heinen, Milton, Pa.; Locomobile Company of America, Inc., and Locomobile Company of West Carolina, Charlotte, N. C.; Darden Motor Company, Richmond, Va.; Stearns Akron Company, Akron, Ohio; Orange Locomobile Company, East Orange, N. J.; MacDonald Auto Company, Salem, Ore.. O. T. McCoon and C. C. Dunbar, Yuma, Ariz.; Locomobile Company of Waltham, Waltham, Mass.; Kendall Auto Company, Pasadena, Cal.; Cornwall Motor Company, Elgin, Ill.; Locomobile Company of Trenton, Trenton, N. J.; Montclair Locomobile Company, Montclair, N. J.; C. A. Owens, Marion, Ohio; Arney Motor Company, Alliance, Ohio; Wisconsin Locomobile Sales, York, York, Pa.; Gilbert Katz, Long Branch, N. J.; California Motor Company, California, Pa.; Latrobe Locomobile Company, Latrobe, Pa.; Locomobile McKeesport Company, McKeesport, Pa.; Superior Garage Co., Perth Amboy, N. J.; Roberts Motors, Long Beach, Cal.; James Schlemmer, Canton, Ohio; Connecticut Locomobile Company, New Haven, Conn.; Jackson Diggs, Sacramento, Cal.; Jackson Diggs, Marysville, Cal.; Locomobile Company of Oakland, Oakland, Cal.

Safety Lessons in Schools Help Reduce Car Mishaps

Five Per Cent Less Fatalities This Year Expected by Committee

NEW YORK, Oct. 17.—That the number of fatal accidents throughout the United States this year may be less than last year and that a nation-wide 5 per cent reduction in child traffic fatalities is being accomplished by safety and traffic instruction in public schools, was declared by John C. Long, secretary of traffic planning and safety committee, in making public results of this committee's survey among 1,800 city and rural schools.

The total August fatalities as reported by city health departments was 390 or five-tenths of 1 per cent under August, 1924, and five-tenths of 1 per cent under July, 1925, but the total for the first eight months of this year is 6 per cent larger than for the same period last year.

The survey shows that 62 per cent of city schools reporting and 38 per cent of country schools are giving traffic and safety instructions, mostly in connection with courses in civics. The survey results are highly encouraging, according to George M. Graham, chairman of the committee, who says that whenever every school includes regularly in its curriculum teaching that helps the child to adjust itself to this new age, still further reduction of child fatalities will be realized.

The recent survey also shows that 50 per cent of the city schools and 48 per cent of country schools give safety and traffic instruction as a regular part of their curriculum.

FRANCIS GOES TO BOSTON

CINCINNATI, Oct. 17.—W. A. Francis, manager of the Ford Motor Company branch at Cincinnati for the last three years, has received orders to proceed to Boston to assume charge of the Ford plant in that city. He is to be succeeded here by W. D. McTaggart, who has held an executive position with Ford at the Philadelphia branch. Mr. Francis came to Cincinnati from New York and was formerly with Ford at the Detroit factory.

Delage Wins Europe's Last 122-inch Event of Season

PARIS, Sept 29.—(By Mail).—Albert Divo, driving a supercharged twelve-cylinder 122-inch Delage, won the San Sebastian Grand Prix 439.6 mile road-race, Sunday, at an average speed of 76.6 miles an hour. Robert Benoist finished second, also on a Delage, 10 min. 42 sec. behind the winner, and Rene Thomas, the captain of the Delage team was third, 11 min. 25 sec. in the rear of the leader.

This race, which is the last 122-inch event to be held in Europe, united 13 starters, comprising four Delages, six non-supercharged Bugattis, a Sunbeam, an Eldridge, and a Soriano. The King of Spain made a preliminary lap of the 11-mile course and gave the start of the race. The Delage cars lead throughout and appeared to be the fastest on the course, although Constantini, on a straight eight Bugatti, made the record lap in 7 min. 57 sec., compared with 8 min. 6 sec., the fastest lap by Divo. Constantini had to withdraw when he lost a rear wheel off his car.

In trying to pass Count Masetti's Sunbeam on a bend, Torchy, one of the Delage drivers, ran off the road, and was killed instantly. This driver was a new member of the Delage team, selected from the firm's test department.

NEW CLEVELAND DEALERS

CLEVELAND, O., Oct. 17.—New dealers added by the Cleveland Automobile Co. include:

Quality Service Garage, Bay City, Mich.; Pekerik's Garage, Lorain, O.; The L and W Motor Sales, Elyria, O.; Henry Berlitz, Hazleton, Pa.; Phinney Motor Company, Fond du Lac, Wis.; Goodfellow Garage, St. Louis, Mo.; Scranton Chandler-Cleveland Co., Scranton, Pa.; Motor Sales Co., S. Boston, Mass.; Spaceks Motor Sales, Cicero, Ill.; Atlas Sales and Garage, W. Philadelphia, Pa.; Keeling Auto Sales Co., Toledo, O.; H and L Motor Sales Co., Shenandoah, Pa.

Indiana Car Titles Show Gain of 75,334 in Year

INDIANAPOLIS, Oct. 17.—Registration of Indiana motor vehicles for the fiscal year ending September 30 shows that the state made a gain of 75,334 motor vehicles and that now there are 711,065 motor vehicles bearing Indiana license tags as against 635,731 for a year ago. The average gain for all sorts of vehicles was about 12 per cent, while trucks gained 14 per cent and buses jumped from 394, registered as in operation in the year ending September 30, 1924, to 3,281 now shown as registered up to the first of October.

This last comparison is not accurate as during part of 1924 there was no hard and fixed separation of buses from trucks and the 1924 bus figures were therefore in part estimates by the state. Trucks made by far the biggest gain from 81,882 in 1924 to 91,247 this year.

Passenger cars jumped from 551,123 a year ago to 615,731 for the current year. Motor vehicle license fees, including the certificate of title fees totalled $4,885,000.25, a gain of $533,373,62 in state revenue from this source with no increase in the general license fee rates.

PORTER JOINS FIRESTONE

QUINCY, Ill., Oct. 17.—J. Irvin Porter, for several years manager of the Jenks Motor Sales Company here, distributor of the Paige and Jewett lines, has resigned to become assistant general manager of the Firestone Tire Company of the St. Louis district. Mr. Porter was formerly a distributor of cars at Monmouth, Ill. His successor with the Jenks company is Enos Hoover, formerly with the Bowman Motor Company, and also the Quincy-Cadillac Company.

Nash Net Income for Three Months Totals $3,840,268

Amount Is More Than Double That for Period Year Ago. Dividend Declared

KENOSHA, Wis., Oct. 17.—At a meeting of the directors of the Nash Motors Company, President C. W. Nash reported that for the three months ending August 31, 1925, after deducting expenses of manufacturing (including depreciation) selling and administrative, and providing for local taxes, and state and federal income taxes, the net income amounted to $3,840,268.25, as compared with $1,205,766.09 for the same period a year ago.

A quarterly dividend on preferred stock of $1.75 was declared payable November 1 to stockholders of record October 20.

The value of sales for the above three months showed an increase of 124.7 per cent over the same period a year ago.

Commenting on the condition of the company and the business outlook, President Nash said:

"Our company has experienced a greatly oversold condition since July 1924. In order to place ourselves in a position whereby we might more nearly give our dealers the goods they require when they require them, we have built additions to our plant and have purchased a large quantity of new machinery so that output may be increased to conform with demand."

NEW DURANT ZONE

NEW YORK, Oct. 17.—Colin Campbell, vice-president, Durant Motors, Inc., announces the establishment of a new zone office for the sale of Star and Durant cars at 1312 Starks building, Louisville, Ky., in charge of C. J. Beeching, sales manager. N. B. Reisinger has been appointed sales manager of the Cincinnati zone, replacing B. A. Rupprecht, recently made regional sales manager of the southeast region.

MULCH TOURS WEST

FLINT, Oct. 17.—R. H. Mulch, vice-president and general manager of the Flint Motor Company, has left for a trip to the Pacific Coast. He will visit Los Angeles, Oakland, Seattle and Denver for the purpose of studying business conditions, and after his return from the West, will cover the eastern territory in the same fashion.

UTAH TITLES INCREASE

SALT LAKE CITY, Oct. 17.—Approximately 10,000 more motor vehicles were in Utah at the end of the first nine months of the present year than on the same date last year. The number of cars in the state on September 30 were 86,002 as compared with 76,066 on Sept 30 last year. The fees received during the first nine months of the year amounted to $536,197.93 compared with $478,734.67 for the same period last year.

French Engineer Advises One Model Built in Quantity

Believes European Makers Spend Too Much Time and Money on Varied Lines

PARIS, Oct. 3.—(By Mail).—An immediate sale of 500 cars per day is possible to any French automobile manufacturer who will concentrate on a single model designed and produced on economical lines, declares Engineer Salomon, chief engineering of the Citröen Company from its inauguration to within a few weeks ago.

"Immediately after the Armistice the French industry appeared to have realized the necessity of quantity production on economical lines and plans were laid with a view to working up to 500 cars per day from a single factory. These plans have not materialized and at the present time there is not a single automobile manufacturer concentrating on one model.

"The most popular type of car in France at the present time is a four-passenger with a four-cylinder engine having a European rating of 8 to 10 h.p. The biggest producers of this type are Citröen, Renault, and Peugeot; these three, together with various small makers are building about 350 cars of this type per day, while Ford, who is handicapped by an American type car not entirely suited to French conditions, is alone averaging 100 cars per day.

"If, instead of three big firms and a dozen small factories, there was one well-organized establishment concentrating on the 8-10 h.p. European type of car, cost could be cut to such an extent that production would immediately jump to 400 or 500 cars per day."

According to M. Salomon, who has made a close study of the possibilities of automobile expansion in France, there is an immediate market for 800,000 cars.

HANDY PLANTS MOVE

DETROIT, Oct. 17.—The Handy Governor Corp. and its subsidiary, the Handy Cleaner Corp., increased manufacturing facilities and have moved their main plant at 3925 West Fort Street, adding 12,000 feet of space to their present factory at 3021 Wabash avenue. The addition is necessary to care for increasing business in governor equipment, principally on Fordson tractors and increased production on Handy air cleaners, which have been adopted as standard by several of the important car manufacturers.

FORBES TO CLEVELAND

SALT LAKE CITY, Oct. 17.—H. S. Forbes, manager of the Salt Lake City, Utah, branch of the Kelly-Springfield has been appointed manager of the company's Cleveland, Ohio, branch. He is succeeded by W. P. Morton who has been a salesman for the company in southern California with headquarters in Los Angeles.

Department Store Sells Airplanes

NEW YORK, Oct. 17.—Airplanes as part of a department store stock have been introduced by the John Wanamaker store here. In 1909 the Wanamaker store sold planes, a replica of the plane in which Bleriot first crossed the English channel. The store now is exhibiting in its new airplane department on the ground floor, the J. W. I., first Ford of the air, manufactured by the Stout Metal Airplane Co. and just flown to Mitchell Field, L. I., by Leroy Manning. This is the first of a consignment of ten Ford planes to the Wanamaker store, to which was also delivered the first Ford automobile in the New York district. The planes retail for $25,000.

CHEVROLET PLAN EXPLAINED

ST. LOUIS, Oct. 17.—W. A. Blees of Detroit, Chevrolet official in charge of the company's relations with the General Motors Acceptance Corporation, General Motors financial agency, was in St. Louis to attend a meeting of St. Louis Chevrolet dealers and explain the new time payment plan for purchasing automobiles recently announced by General Motors Acceptance Corporation. All of the metropolitan Chevrolet dealers in the district attended the meeting which was held at the St. Louis Chevrolet plant.

MOVE AND SLICK UP

NEW ORLEANS, La., Oct. 17.—The fall season that opened October 1 in New Orleans saw many changes of address of automotive places and many improvements in buildings. The summer has been embraced by many distributors and jobbers as a time to "slick up" generally.

In the list below the new address is given as effective Oct. 1: Maloney Motor Car Co., distributors of Hudsons and Essex, 721 St. Charles Street, Goodrich Rubber Co., 208-210 South Peters Street, Adams Motor Co., distributors of Cleveland and Chandler, 620 Howard Avenue, United Motor Car Co., distributor of Peerless and Hupmobile, Go-Ro Building, Carrolton Avenue, United States Rubber Co., 201 South Front Street, Motor Sales & Service, Inc., Chrysler distributors, 1742 St. Charles Avenue.

TOLEDO EMPLOYMENT UP

TOLEDO, Oct. 17.—Employment in Toledo automotive plants is still increasing, showing a gain of 325 workers in 51 plants last week, to bring the total up to 27,361 as compared with 16,529 at this time last year. Payrolls are now approaching the maximum point reached in April and May.

Coast Business Volume Is Cause of Staff Expansion

Many Promotions and Additions to Forces Are Announced in San Francisco

OAKLAND, Cal., Oct. 17.—Steadily improving sales throughout July, August and September compelled manufacturers, distributors and dealers in Oakland to make a number of promotions and to increase materially their sales forces beginning early in October.

Heading the list of changes was the appointment of Del Harder as factory manager of the Durant Motor Company of California, succeeding George R. Scott, recently made assistant general manager in charge of production at the Flint Motor Company plant, Flint, Mich.

Another promotion announced at the same time is that of Miles Fox to be superintendent of the Oakland plant of the Durant organization. In the same announcement from Norman De Vaux, active head of the Durant organization here, came the statement that James P. Cory has been appointed as another Star dealer for Oakland. He will operate as the Cory-Star Company. Cory has been an executive of the Star branch in San Francisco.

C. E. Root, vice-president of the Forman Motor Company, Peerless and Oldsmobile distributors in Oakland, has taken personal charge of the sales of the Peerless car.

The Locomobile Company of Oakland has been organized to handle sales of the Locomobile for the mainland side of San Francisco Bay, according to announcement by C. A. Boyer, manager of the Locomobile Company of California, Inc., of San Francisco. New models of the Locomobile are being shown by the Oakland company at its new showrooms, 2317-21 Broadway.

Frank Wishart, manager of the East Oakland branch, has been appointed sales manager of the main store, according to announcement by Harold D. Knudsen, Chrysler distributor for Oakland. At the same time, Frank Bell has been promoted to be manager of the East Oakland Branch at 4028 East 14th street.

Auto-Lite Concentrates All Production in Ohio Plants

TOLEDO, Oct. 17.—Concentration of all manufacturing departments of the Electric Auto-Lite Co., at Toledo and Fostoria, means the virtual abandonment of activities of the company at Poughkeepsie, N. Y.

Enlargement of the main plant at Toledo may be required to accommodate the new business brought here. At Fostoria the harness department has been moved to an up-town building owned by the company and formerly used as a warehouse for Allen cars.

DeJon products will be manufactured in the Toledo plant in the future.

Along Automobile Row

DENVER, Colo.—A new Hudson-Essex agency has been started at 676 Santa Fe Drive. The firm is Gordon-White, Inc.

DETROIT.—A new sales and service building on Gratiot and Leland streets is being built by the motor truck division of the Gotfredson Corporation to take care of Gotfredson owners in greater Detroit and Wayne county.

LITTLE ROCK, Ark.—The Jennings-Matt Motors, a new concern here, has taken over the agency for Chrysler automobiles, succeeding the Ray Robinson Motors.

BUFFALO, N. Y.—Kane Motors, Inc., has been appointed city dealer by the Buffalo Oakland Motor Co. Kane Motors was formerly a Ford dealer here.

COLUMBUS, O.—The Charles Zimmerman Sons Co., central Ohio distributors for Dodge Brothers, has taken over the High-Fifth Motor Co., and the Main Street Motor Co., as direct branches.

VANCOUVER, B. C.—Among British Columbia dealers recently appointed are Eve Brothers, Ltd., which will handle the Paige-Jewett line at Victoria, B. C., and Begg Motors Company, Ltd., distributors for Nash and Ajax cars in Victoria.

SALT LAKE CITY.—A. E. Tourssen, Utah distributor for the Oldsmobile, is opening a branch house at Provo.

MILWAUKEE.—The Bauer Cab Co., has been incorporated here with capital at $25,000, to carry on a taxicab business.

LOS ANGELES.—The Packer Motor Company, Inc., Studebaker dealer, recently entered its new $60,000 home built especially for its use.

DALLAS, Tex.—The employees of the Brigg-Brown Motor Company, Willys-Knight-Overland distributors and dealers, were guests of the heads of the company at a dinner in celebration of the conclusion of the first year of the company's business recently.

MOBERLY, Mo.—Louis Hunt, agent for the Chevrolet motor car in Moberly, recently remodeled the building at 510 West Reed street formerly occupied by the Towles Motor Co., and has moved his agency to the new location. The change was made in order to provide more room for the business.

PENDLETON, Ore.—Robert Simpson & Son are the new proprietors of the Chevrolet agency in Umatilla and part of Morrow county, with headquarters at Pendleton.

WHEATON, Ill.—The Wheaton Auto Sales, Inc., will open a Ford sales and service station in the Parker Building which it recently purchased.

PHILADELPHIA.—Budd Wheel Company, announces the appointment of the Joseph Woodwell Company as official service station in Pittsburgh.

ST. LOUIS.—Arthur G. Rahnberg has been appointed manager of the used car department of the Flint Motor Car Co., Chevrolet dealer.

ASHLAND, Wis.—George W. White, who had the Dodge motor car agency here for many years, has sold out to the Wallie Motor Car Co., which will continue the Dodge representation as well as its general garage and service station business. Mr. White recently took over the Hudson-Essex line and will continue that agency.

PORTLAND, Ore.—A new and improved used car department has been installed by Packard Sales & Service, Inc., here, under the direction of H. C. Berg, president. The additional used car sales facilities are divorced from the main sales.

MONROE CITY, Mo.—Messrs. Burnett and Yoeman of Clarence, Mo., have opened the Monroe City Chevrolet Co., operating a garage and Chevrolet agency.

SEATTLE.—The appointment of Rowland & Clark, well known used car merchandisers, as Westlake Avenue district dealers for Ajax cars has been announced by the distributors.

BLYTHEVILLE, Ark.—J. W. Shouse has obtained the Chevrolet automobile agency here.

LOS ANGELES.—Continuing its policy of establishing community sales and service stations, the Albertson Motor Car Company, Southern California Dodge distributor, recently opened a new establishment in the Beverly Hills district, with Chester R. Ploeser in charge.

MINNEAPOLIS.—B. L. Eckes Co., Inc., has opened a retail store at 41 Ninth street S., ground floor, featuring Bosch radio products, and handling also Bosch automotive products, with service station.

BARBERTON, O.—The Wheeler Reo Sales Co., has been chartered with an authorized capital of $20,000 to deal in autos, trucks, parts and accessories.

DES MOINES, Ia.—The C. E. Cochran Motor company has opened an authorized Ford dealers' station at 1737-39 East Grand avenue and will maintain sales and service plant.

BARRINGTON, Ill.—The Barrington Garage, owned by G. N. Schauble, has taken the Nash agency for this district. Mr. Schauble will continue his Oakland agency which he has held several years.

SAN FRANCISCO.—Close & Clark has been appointed Pacific coast representative for the U. S. Electrical Tool Company. The local firm now carries Piel cut-outs, Gilmer fan-belts, Smith and Hemingway tools, and the products of the King Manufacturing Company.

ST. LOUIS.—Ray Blades, outfielder of the St. Louis Cardinals has been made vice-president of the A. J. Brock Motor Sales Co., Hudson and Essex dealer at 4360 Manchester avenue. A. J. Brock is president of the company and James J. Barrett is general manager.

OAKLAND.—R. C. Williams has been appointed head of the service department of the Lawrence-Rand Motor Company, Lincoln dealers in Oakland.

LOS ANGELES—Fred C. Wood, formerly distributor of Oakland cars in Cincinnati, has been named general manager of Mutual Motors, Roamer distributors and Paige and Jewett dealers, here.

DETROIT.—Hugh J. Gaulty has been made retail store and sales manager for Willys-Overland, Inc., at the branch at 4400 Woodward Avenue. Charles Stead has been named as his assistant.

NASHVILLE, Tenn.—The Eisemann Corporation, of New York City, announces the recent appointment of the Thomas & Polk Co., 1209 Broadway, Nashville, as distributor for the Eisemann company in the Nashville and adjacent East Tennessee territory.

OAKLAND.—A. H. Bollong has been appointed head of the service department of the Forman Motor Company, Oldsmobile and Peerless dealers in Oakland. He formerly was with J. W. Leavitt & Co., of San Francisco.

BALTIMORE.—The Piedmont Motor Co., 891 Park avenue, Baltimore, has been incorporated with $25,000 capital stock to operate a public garage and repair shop and a filling station.

MILWAUKEE.—Hupmobile has been added to the line of Art Lusty of Milwaukee, who has handled Stearns cars for the past eight years and latest models of both cars are now on display at the remodeled show rooms, 156 Farwell avenue. Associated with Mr. Lusty are Erwin Tank, formerly of the Allis-Chalmers Manufacturing Co., Sam Walls and E. L. Hospins.

OAKLAND.—W. V. Kearns, manager of the Howard Automobile Company, Buick distributors, has been elected a director of the Motor Car Dealers of Oakland, the local association of retailers.

UTICA, N. Y.—Announcement has been made by the Robischon Motors Co., Utica, Chrysler distributors, of the appointment of the B. F. M. Motor Sales Co., as Herkimer dealers.

JACKSON, Miss.—The Hines Motor Co., Chrysler distributors in Jackson, Miss., has opened a branch in Vicksburg under the charge of Keith Williams, formerly a member of the Hines sales staff.

FAYETTEVILLE, Ark.—The Charles B. Casey Motor Co., is the style of a new automobile establishment recently opened in Fayetteville, for the sale of Chrysler cars.

BALTIMORE.—The Baltimore Ruggles Truck Co., 1429 Maryland avenue, Baltimore, has been incorporated with $15,000 capital to deal in Ruggles trucks.

WAYCROSS, Ga.—Ben Wilson, formerly manager of the Waycross Nash Motor Company, has opened a new sales establishment, to be known as the Wilson Motor Co. He will handle Chrysler cars.

SALEM, O.—The Steam Vehicle Distributors, Inc., has been chartered with an authorized capital of $25,000 to deal in MacDonald steam automobiles and trucks.

MINNEAPOLIS.—B. L. Eckes Co. has opened a store at 41 Ninth street S. to retail automobile radiators, in addition to Bosch radio equipment.

SALT LAKE CITY.—T. T. Harmon has opened a tire and vulcanizing shop at East Fourth South Street near the Chamber of Commerce Bldg. Cupples tires will be featured.

TOLEDO, O.—The State Automobile Accessory Co., has been chartered with an authorized capital of $10,000 to manufacture and deal in parts and accessories.

ROCHESTER, N. Y.—William W. MacConnell, formerly connected with L Motors, Lincoln agency here, has organized the MacConnell Motor Corporation to take over the Ford agency formerly conducted here by the Malcolm Motor Corporation.

DES MOINES, Ia.—E. G. Matthews, for many years identified with automobile activities in this city, has opened his own agency, as an authorized Ford dealer, operating under the name of the Matthews Motor Company.

LOS ANGELES.—O. S. Van Keuren has been appointed used car manager of the Willys-Overland Pacific Company, Los Angeles. He replaces R. E. Starkey who has been advanced to the post of sales manager.

BUFFALO, N. Y.—The Buffalo Oakland Motor Company has appointed Paragon Motor Service, Inc., 2960 Delaware avenue, dealer in the suburb of Kenmore.

SPOKANE, Wash.—William L. Duffy, for 12 years with Riegel Brothers, Dodge Brothers dealers at Spokane, has joined the Eldridge Buick Company as sales manager. Mr. Duffy will be succeeded at Riegel Brothers by Glen Riner, who has been with the concern five years.

SAN FRANCISCO.—Don Hupp, of San Francisco, has been appointed Pacific coast representative for the Perfection Gear Company, according to announcement by S. R. Wolff of that corporation.

WALTHAM, Mass.—An agency for the Chrysler line has been opened here by the Suburban Motors Company, that has taken over the business formerly operated by the Hartley Motor Company.

PROVIDENCE, R. I.—The Kelly-Springfield Tire Company has opened a branch here for the Rhode Island trade and has placed Howard E. Limric, for years identified with the Boston branch, in charge.

With the Associations

Big Sales Congress Planned

WASHINGTON, Oct. 17.—Between 500 and 1,000 automobile dealers are expected to convene here October 22, when the Virginia-Maryland-District of Columbia section of the National Sales Congress meets under the auspices and as guest of the Washington Automotive Trade Association. Primary purpose of the Congress is to discuss improvements in sales methods that will not only benefit the public, but advance the interests of the dealers as well.

Invitations to all dealers in passenger cars and trucks in the three states have been sent out, and returns indicate that probably 1,000 dealers will participate. The general session will be held from 1 to 5 o'clock in the afternoon. Preceding the afternoon session there will be a series of group meetings of dealers from outside communities.

Automobile merchandising methods will be discussed by speakers supplied by the National Automobile Dealers' Association. These talks will cover the three phases of management, market analysis, and handling of used cars. Particular stress is laid in the announcement of the meeting by the dealers' association on the advantages it will offer to the automobile buying public. This point is emphasized in a statement accompanying the announcement of the conference.

Would License Shops

ST. LOUIS, Oct. 17.—An ordinance to place a license tax on all automobile repair shops in the city is being planned by the Associated Automobile Service Companies of St. Louis. Such an ordinance, the association hopes, will limit the number of shops and insure better profits and better service.

Less than a dozen of the 500 repair shops in the city are making a fair prolt and are adequately equipped to give first class service, according to J. C. Thorpe manager of the association.

A license tax would eliminate so-called alley shops, benefit both the industry and the automobile owner and cause mechanics to retain employment until they had sufficient capital to go into business for themselves on a proper scale, Thorpe says.

Syracuse Elects Directors

SYRACUSE, N. Y., Oct. 17.—Syracuse Automobile Dealers' Association has just elected these directors: S. J. Silverman, Charles G. Hanna, C. W. Bull, B. W. Moyer, Fred J. O'Neil, H. W. Maclellan and W. B. Cherry. The directors will meet soon to elect officers for the year. During the last year Mr. Silverman was president, Mr. Hanna, vice-president, Mr. Bull secretary-treasurer and C. H. Hayes executive manager.

Oppose Gasoline Tax

NEW YORK, Oct. 17.—The Motor Truck Association, the New York State Automobile Association, the Brooklyn Vehicle Association and other organizations in the automotive industry are opposing the movement to impose a tax on gasoline in this state. The legislative committee in charge of such legislation recently held a meeting here, at which Theodore D. Pratt of the truck association said that this state had anticipated the development of the automobile by a $100,000,000 road construction bond issue. He held that revenue from license plates was more than adequate for repair and maintenance of state roads.

Fort Worth Plans Congress

FORT WORTH, Oct. 17.—The Fort Worth Automotive Trades Association will sponsor an automotive sales congress for all west Texas on November 11, it is announced. The sales congress will be held here and more than 650 dealers, salesmen, maintenance men and accountants are expected to attend. The local association has named Ellis H. Boyd, Clarence Kraft and Ewald Keller to complete the arrangements and send out the invitations. Every automotive man in west Texas will be invited to the congress.

Mortgage Notation Insufficient

RALEIGH, N. C., Oct. 17.—The supreme court of this state held that notation of a mortgage on an automobile sold on deferred payment plan is not sufficient notice of encumbrance. The effect of the decision is to require recording of the mortgage, in all cases, in the county in which the sale was made. Officials of the North Carolina Automotive Trade Association announced that an effort will be made at the next meeting of the general assembly to have the law amended to make notation of the mortgage sufficient notice of encumbrance.

Pilliod Leaves N. S. P. A. Board

DETROIT, Oct. 17.—C. J. Pilliod of the Celeveland Piston Pin & Bolt Co., has resigned as a manufacturing member of the board of directors of the National Standard Parts Association, and his place has been taken by W. M. Albaugh of the Thompson Products, Inc., it is announced by C. B. Fraser, secretary of the association.

Join War Tax Fight

PEORIA, Ill., Oct. 17.—The Illinois Automotive Trade Association is actively participating in the campaign to bring about abolishment of war excise taxes on automotive products. Form letters have been sent to all dealers in Illinois to be sent to their senators and congressmen urging cooperation.

Philadelphia Meetings Begin

PHILADELPHIA, Oct. 17.—The first Fall meeting of the Automotive Service Association was held in the rooms of the Philadelphia Automobile Trade Association with 56 service managers present and the attendance 78 per cent of total membership. Harry Tipper, sales manager, General Motors Export department, A. V. Comings, editor of the Automobile Trade Journal, and James Collins, head of the commercial survey department of the Chilton Class Journal Company, were the speakers.

Tipper broadly outlined the philosophy of the service endeavor and cited the mental attitude developed by the average owner through contact with the service organization. The buyer of automobile service suspects everything he doesn't understand and unless he can justify the bill rendered his attitude will be unfavorable towards that organization.

Collins, speaking on the subject of the "Business Side of Service," gave the maintenance volume picture with figures showing that the money value of new car output for this year would be considerably less than would be spent in the maintenance division of the industry. Service and maintenance are entering the era of profit and since there is no used car factor, greater earnings through maintenance sales will be made with less effort than in selling new vehicles.

"More money for Service Managers," was the theme of Comings' talk. It is difficult to realize a profit on service sales unless the service manager is of a caliber comparable with the best managers in the car sales department. To obtain this type of manager, dealers must raise the standard of remuneration.

Springfield Dealers Elect

SPRINGFIELD, Mass., Oct. 17.—At the annual meeting of the Springfield Automotive Dealers' Association these officers were elected: President, R. M. Sauers, Marmon and Hupmobile; vice-president, H. Raymond Auger; Dodge; treasurer, George E. Adams, Ford; secretary, Harry W. Stacy; directors, George C. Byrnes, Ford; A. G. Medlicott, Packard; A. N. Center, Jordan; H. Raymond Auger, A. V. Reopell, Chevrolet; George E. Adams.

Show Director Named

FORT WORTH, Oct. 17.—J. N. Whitehurst will be general chairman of the annual automobile show of the Fort Worth Automobile Trades Association, to be held in connection with the Fat Stock Show. He was named chairman of the exhibition by President A. G. Fisher. On the general committee with Mr. Whitehurst are Cecil Cooke, Charles Harris, President Fisher and S. F. Webb.

St. Louis Dealers Pleased With Fall Sales Volume

October and November Seen as Big Months by Authorities in Whole Industry

ST. LOUIS, Oct. 17.—Manufacturers, distributors and dealers in St. Louis are all very much pleased wtih the automobile business these days. Factories are working at capacity production, while distributors and dealers state that they are selling all the cars they can get and could sell more if they had them. It is expected by all members of the automotive industry that this condition will obtain through October and November at least. Also they expect the winter business this year to be as good or better than recent years.

It had been predicted all through the last part of last winter, the spring and the summer that if crop conditions were good in this vicinity the replacement business in rural districts would be good. The crops were good and sales of automobiles, trucks and tractors to the farming communities have been good.

It is believed that Ford cars will go quickly as soon as the Ford dealers are able to deliver. So certain are Ford dealers themselves of this that they are holding down on used car allowances to the minimum and are taking only those which they can reasonably expect to resell.

Higher priced cars also usually go better here during the fall than at any other time of the year. This is because people who buy high priced cars spend their summers away from St. Louis and buy on their return after vacations.

Cars in the middle price class have been going very well and it is expected by those handling them that they will continue to sell in volume.

Paris Automobile Dealers Enter "Slick-Up" Campaign

PARIS, Oct. 3.—(By Mail).—Paris automobile dealers are slicking up. There will be no automobile show in the French capital this year, for the trade delayed getting an option on the handsome Grand Palais and then sulked so long over the other available buildings that it became too late to make a united effort.

Having realized that an annual show helps to boost sales, individual dealers are now preparing their showrooms for a display and a general appeal to the buying public during the month of October. There will be no new models, for engineering departments have taken advantage of the absence of the Salon to hold back their new types.

Practically every showroom on the Avenue des Champs Elysees has been cleaned up inside and outside, special decorations are being added and a publicity campaign is being engineered which is expected to bring the buying public and attract dealers from the provinces.

Several French manufacturers are arranging to throw their works open to visitors during a fortnight in October, and in some cases they are offering to pay country dealers' expenses to Paris.

Coming Motor Events

Automobile Shows

Annual Truck Show.

Berlin, Germany—Nov. 26-Dec.
Annual Automobile Show in the Kaiserdamm.

OREGON SHOW HELD

SALEM, Ore., Oct. 17.—The annual fair at Salem attracted 175,000 from all parts of Western Oregon and a number of automobile dealers from both Salem and Portland who contributed to make the automobile exhibit a success expressed themselves as being well repaid with both a new and large list of prospects and a number of actual sales during the progress of the fair. From a mere section of one building a few years ago the automobile department has grown to an institution which occupies an entire building and several were forced to house their exhibits in tents nearby.

WOODS JOINS MACK

DECATUR, Ill., Oct. 17.—Charles G. Woods, who has been master mechanic for the Decatur street railway lines and associated with that traction service 22 years, has resigned to become affiliated with the Mack International Motor Truck Co., directing its sales in 41 northern Illinois counties. He will make his headquarters in Decatur and retain his interests in the Woods Fare Box Company, makers of street car, bus and other fare box devices, which is rapidly expanding in its field.

Hupp Building More Than 100 of New Sixes Daily

DETROIT, Oct. 17.—Upwards of 100 o the new Hupp six passenger cars are be ing turned out daily at the factory here Charles D. Hastings, president and gen eral manager of the Hupp Motor Ca Corporation has announced.

Including October 5, Mr. Hastings sai that more than 5,000 orders for the nev car had been received at the factory fron Hupp dealers throughout the country Deliveries are expected to be mad throughout the country within the im mediate future. Shipments to dealer have been going on for the past fev weeks.

"Output of both the Eight and Six," Mr Hastings said, "will be the largest in th history of the company. New machinery rearranging of the buildings and addi tional productive space will enable u to raise our production for 1926 to nev records."

MISSOURI GAS RECEIPTS

ST. LOUIS, Oct. 17.—The state tax o 2 cents per gallon on gasoline used fo motor vehicle fuel produced $3,026,871.3 for the Missouri state road fund in th first eight months of its operation. Th tax became effective on January 1 last It is estimated by the State Oil Inspec tion Department that approximatel $4,500,000 will be collected for the fun for the whole year.

Thirty-nine Makes Shown at Coast Closed Car Salon

Four-day Show Is Visited by About 27,000 Persons, Officials Estimate

LOS ANGELES, Oct. 17.—Thirty-nine distributors presented as many different makes of cars to a total attendance estimated at nearly 27,000 at the Second Annual Closed Car Salon which was held recently at the Biltmore Hotel. The show lasted four days and the attendance, the actual sales made at the show, and the stimulus to business immediately following more than satisfied all expectations, according to Burt Roberts, secretary of the Los Angeles Motor Car Dealers' Association, manager of the show.

This year's salon was held in an exceptionally dignified setting. There were no signs or placards, not even in the display booths in front of the cars, and no general circulation of literature was permitted. At night all salesmen in attendance in the various booths were required to wear formal evening dress. An elaborate musical and general entertainment program was provided during the afternoon and evening.

Lynn C. Buxton, Stearns-Knight distributor, as chairman, J. S. Woollacott, assistant general manager of Harold L. Arnold, Inc., Lincoln dealer, and H. E. Woodward, president of the Reo Motor Car Company of Southern California, with Secretary Roberts, comprised the show committee.

LIGHTING MEN TO MEET

CHICAGO, Oct. 17.—The general fall meeting of the Automotive Lighting Association will be held November 5, beginning at 10 A. M. at the Drake Hotel in Chicago.

Victor Rubber President Is Appointed Receiver

SPRINGFIELD, O., Oct. 17.—H. H. Durr, president of the Victor Rubber Co., has been appointed receiver of the company on application of Ernst & Ernst of Cleveland and other creditors, who state that they hold claims totaling $435,390.02. The action was brought against the Victor company and Trustees H. McGraw of Cleveland, H. J. Robbins of Cincinnati, and Harlen C. West, cashier of the First National Bank of this city.

Mr. Durr was authorized to conduct the mat and mechanical rubber departments of the company as going concerns, the Victor tire business having been sold by the trustees to an eastern concern in July.

He also was empowered to dispose of such parts of the business as he may see fit in the liquidation of the company, also to endeavor to dispose of the property as a going concern, if possible. The company, Mr. Durr says, is insolvent, that the claims cannot be paid and that the stockholders will receive nothing.

SQUEEKS and RATTLES

Homeward Bound

"Ah, we must be on the right road. There is the man we ran over this morning!"

—Le Rire (Paris).

Our idea of a hard job would be to sell buggy whips in Detroit.

—Cougar's Paw.

A great many traffic jams are due to encounters between a chap who points with pride and one who views with alarm.

—The Safety Valve.

One thing you can say about a flivver. It rattles before it strikes.

—Arkansas Gazette

Moe: So that was a hot baby you had in your car?

Joe: I'll say. She was just burnin' up.

Moe: Well, why didn't you put her out?

—Johns Hopins Black & Blue Jay.

Aviator: Hooray! I've discovered it at last!

Passenger: Discovered what?

Aviator: Perpetual motion. I can't stop this blamed thing.

—Harvard Lampoon.

Irrelevant Evidence

A married couple were knocked down by a motor. The car dashed away. The police arrived and found the couple bursting with indignation, especially the wife.

"Do you know the number of the car?" asked the policeman.

"Yes," replied the husband, "by a strange coincidence the first two numbers formed my age and the second two the age of my wife."

"John," said the wife, we will let the matter drop at once!"

—Dorfzarbier, Berlin.

That man who drove 550 miles in a day probably was looking for a place to park his car.

—Council Bluffs Nonpareil.

Woman in Auto—"Good heavens, son; we've just run over a poor man! Stop! Stop!"

Driver—"Keep still, mother; you'll make every one think this is the first time we were ever out in an auto."

—Le Rire (Paris).

"Bet I can make fifty tonight, in my Ford."

"I could have just as good a time with one."

Colin A. Campbell Takes Marmon Sales Promotion

INDIANAPOLIS, Oct. 15.—Announcement of the appointment of Colin Alfred Campbell of Indianapolis, as sales promotion manager of the Nordyke & Marmon Company, in charge of sales extension activities, has just been made by H. H. Brooks, general director of sales. Mr. Campbell has served for the last year as Marmon district manager in the Southwestern territory of the United States.

Mr. Campbell joined the Marmon organization in July, 1920, upon his graduation from Ohio State University. His first duties largely centered upon territorial analysis and he worked out the system of territorial analysis now used by the company. Later he was placed in a position of administrative responsibility in the factory sales department and, following the announcement of the new Marmon, he was appointed to the position of district sales manager in the South.

During his college career and prior to his connection with the Nordyke & Marmon Company, Mr. Campbell was connected, in engineering capacities with the United States Geological Survey, the Pennsylvania Railroad and the Buckeye Steel Castings Company. During the war, he served in the Air Service and was discharged with the grade of captain. He now is a major in the Air Service Reserve.

MacLEAN QUEBEC MANAGER

MONTREAL, Oct. 17.—The appointment of W. A. MacLean as manager of the Chevrolet Motor Co. of Canada, Ltd., for the province of Quebec is announced. Mr. MacLean joined the Chevrolet organization last spring. Previous to that he was manager of Montreal Motor Sales, Ltd., following an experience of some years as assistant district organizer of the Ford Motor Company of Canada, Ltd.

Kelly-Springfield Motor Truck Co. Ordered Sold

SPRINGFIELD, O., Oct. 17.—Order of sale was granted by Judge F. M. Krapp in the case of the Bankers' Trust Company of New York against the Kelly-Springfield Motor Truck Co., this week in common pleas court. Receiver Pearl A. Lewis was directed to offer the property for sale at 2 p. m., November 23, at the factory.

This step is incident to the sale and reorganization of the company upon a sound basis by eastern men. It is stated that the company has three prospective buyers.

The claims total $1,500,000 while the plant and equipment is appraised at $10,800,000. The Kelly company makes heavy duty motor trucks and is said by officials to have very good prospects.

Has Ford Lost His Big "Sales Punch" in the Low-Priced Field?

Conditions Are Changing. Price Will Be a Much Less Powerful Sales Weapon in the Future Than It Has Been Thus Far. Design and Service Chief Factors in New Era

By NORMAN G. SHIDLE

COMPETITIVE conditions in the low priced car field are in a process of rapid change. New situations have not developed overnight, to be sure, but economic trends which have been going on since the beginning of the industry just now are beginning to have striking effects in this particular part of the automobile field. Some of these changes in competitive conditions already have begun; others are to be expected in the future. They have been caused by a multitude of factors chief among which are:

1. The limit as regards price reduction is getting near. Lower price levels may be established in the future, but the influence of such cuts never will be as powerful in the future as it has been in the past because the magnitude of the cuts can't be as great.

2. The limit as regards acceleration of sales is getting near. Increased sales in this price class will continue, but the rate of increase in sales will be relatively slow as compared with past.

3. Increases in car life will affect materially the slope of the future sales curve.

4. Extensive advertising and often extravagant claims about comfort, convenience, power and endurance gradually have brought the public to expect and demand these qualities to a high degree. The cars are being expected to live up to the advertising. Consequently design and engineering competition will be even keener in the future than in the past.

These considerations affect cars in every price class, of course, to a greater or a lesser extent, but their influence on the group of vehicles selling for less than $600 is particularly strong; in that field often are fought today the merchandising battles which the higher priced cars are to have tomorrow. So it is particularly interesting to speculate about what these changing conditions will mean to competition in this lowest price class.

In the first place, it will mean competition for all concerned on more even terms than ever before. With the sharp edge of the weapon of price considerably dulled, any individual producr can expand his present market materially only by outstripping his rivals in quality, service, and comfort.

Despite the general lowering of passenger car prices in the last year or so, examination of price trends in the under $600 field shows a relatively small downward movement in that group. While Ford made a $10 reduction on his Tudor sedan and a $25 cut on his Fordor on December 2, 1924, the price of the Ford touring car came down only $5to $290 at that time after having remained at $295 for more than a year previously. Since that time Chevrolet has changed its product and increased its price about $15. Overland after raising its phaeton price from $495 to $530 in September, 1924, dropped back again to $495 in January of this year.

The level of coach prices, of course, has been lowered to a greater extent than that of phaetons in the last year or so, but it is generally true that price changes in this low priced group no longer are great enough to be of major merchandising importance.

Particularly is this true because most cars today are bought on the installment plan and on quite liberal terms. When a man has to pay down only 25 to 33 1/3 per cent of the purchase price and can pay off the balance in 12 to 18 months, a difference of $10 or $20 isn't going to be of great practical importance to him one way or the other.

Thus it appears that in the future price alone will not be the potent merchandising factor within the low-priced group that it has been in years gone by. The manufacturer who finds sales lagging no longer will be able to whip demand to its feet again with a sweeping price reduction. Once price was a potent weapon in this group. Every body realized that sometime a limit would be reached past which price reductions couldn't go, but until that limit was approached the strength of the weapon was undiminished.

Improved production methods, increased quantity production and decreased overhead costs, standardization and numerous other activities helped push farther away the point at which price no longer could be the Excaliber of automotive merchandising in the low priced field. But steadily that point drew nearer, nevertheless.

Probably it has not yet been reached. No one will be able to say exactly when we are abreast of it. But every sign indicates that we are reasonably close to it today. Close enough to make reliance on price alone for future success a fairly hazardous procedure.

So it appears that the marketing battle in this price class will be fought chiefly with other weapons during the next quarter of a century. That victory could be possible with price as the chief weapon between 1900 and 1925 is no sign that new arms will not be necessary to replace the old if success is to be won between 1925 and 1950.

Importance of Service and Maintenance

Design and Service—these will be the big guns of the next decade. It has become common to say that the automobile industry passed through the period of engineering domination to that of production domination and that it is going into the period of service domination. Probably that conception is only partly correct. Along with the importance of service, it should be recognized that the industry has nearly completed its cycle; that, with the result of production domination before us, engineering again is coming into the ascendancy.

The American public today knows what to expect of an automobile. And they expect it.

As the importance of price continues to decrease, the importance of performance, appearance, operating economy, comfort, durability and all those other factors involved in the broad meaning of design will continue to increase.

To point out to automobile executives the importance

maintenance and service in a competitive era with the aracteristics of the one predicted would be fatuous. e song of service has been sung so consistently for the t few years that it would seem everybody must know e tune by this time. But they don't. And in the low iced field, effectiveness and distribution of service may ll determine the success or failure of particular organi-ions in the era just ahead. Failure may be produced any one of a number of factors, whether service is good not; but all the other factors together will not produce ccess without adequate service facilities and operations.

In view of these changing conditions, speculation about e position of Ford, thus far the largest producer by ny millions, is of particular interest.

One fact stands out clearly:

Ford in the last few years has begun to feel the wind of mpetition for the first time.

This is indicated by a number of the moves made by e Ford Motor Co. within comparatively recent times. In the last few years, Ford has, for the first time:

1. **Begun to spend millions of dollars a year in advertising.**
2. **Experimented with extremely liberal time sales plans.**
3. **Increased dealer discounts.**
4. **Changed the body lines of car.**
5. **Started to use colors in painting bodies.**

The economic forces which have brought about these ncessions to the necessities of competition will be fairly vious to most automotive executives.

Ford got hold of the idea of andardization and quantity oduction before anybody else ought about it. It was a od idea. He had faith in it d he put it into operation—*fore anybody else.*

He got away to a flying art and consequently was le to answer all competition r many years with a single argument—prices much wer than anybody else could possibly approach. He ed other means, of course, to achieve his end. Stand-dized, readily available service was provided for Ford vners in nearly every part of the country before service r other cars was anything like adequate. Parts were ade easy to get, dealers were closely supervised and structed by the factory and uniform methods over despread areas resulted. Other means also were used.

But Ford's one outstanding weapon against the threat competition up to about two years ago was price duction.

Obviously there is a point at which the returns from antity production and standardization begin to diminish and another point at which further returns cease.

As the market grows more and more saturated difficulty selling grows.

As quantity production gets into the higher scales the crease in overhead obtained from further production creases grows smaller.

But with a tremendous investment in plants, machinery d sources of supply, quantity of sales must be kept up all costs. But standardization and permanency of odel must continue, otherwise the benefits of quantity oduction fail to accrue.

These are fundamental economic laws which affect Ford st as they affect everybody else. Because of Ford's sion, however, their influence on his efforts was rela-vely slight for many years, while others were laboring der their burdens. But the trend is inevitable.

Thus came a time when even Ford found it necessary stimulate sales. Because of his very low price and consequently larger market, the point at which stimulation was necessary was a long time in being reached; but the progress toward it, although very slow, was steady. It has been accelerated recently by competition with used cars of the Chevrolet, Overland type. That Ford did reach it a year or two ago is indicated by the actions cited.

Progress of Other Manufacturers

And the trend continues, in Ford's case as in all other cases.

That manufacturers other than Ford have been making relatively faster progress in recent years is strikingly shown by the percentage of total production each year from 1918 to 1925.

From 1918 to 1921, Ford's proportion of total production climbed upwards every year, reaching a peak of nearly 60 per cent in the latter year. In 1921 business conditions were bad and car buyers all tended either to run their old cars for a year longer or to buy cars of a lower price class than those which they would have purchased in normal times. Consequently, Ford probably got a good bit of business which in normal years would have gone to makers of higher priced cars.

Since 1921, however, Ford's proportion of total passenger car output has declined steadily, indicating the growing of forces of competition all along the line which are beginning to affect materially even the lowest price vehicle.

An interesting speculation as to the future was given to us about three years ago by one of the keenest thinking automotive executives we have had the pleasure of meeting. A year ago, he amplified his theories and about a month ago he went further in his speculations. His ideas are worth thinking about. His argument, assuming the background already given, runs something like this:

Electrical Flat Rate Chart in Next Week's Motor Age

"Some time Ford will have to change his design. No material changes have been made in the Ford car for about 15 years. It is not conceivable, in the light of past and certain future engineering advance, that Ford would be able to sell his present Model T 25 years from now.

"A new Ford car, designed along up-to-date lines, incorporating the engineering knowledge of the last two decades, must be brought out sometime.

"But the entire Ford organization—production, engineering, sales, and service has been developed on the basis of standardization—lack of change.

"Before the Ford idea can be considered as more than an economic experiment, Ford must bring out this new car, produce it and sell it at the same price as that which he receives for his present model.

"If he sells the new car for a higher price, he comes into the same area of competition as any other maker whose price is higher; his potential market is just that much smaller and he would be affected by the same economic factors *in the same degree* as every other maker in that price group."

No other company in the low priced field has been built over since its inception on a single, permanent, clear-cut policy as has the Ford organization. It is for that reason that the relation between Ford and economic trends can be discussed with greater directness than otherwise possible.

Study of current trends, however, indicates clearly that competition among makers whose open models sell for less than $600 will be based less on purely price considerations than ever before and the design and service will be the activities most potent in producing success.

HOW TO ADJUST BRAKES

Some Things to Observe in Regard to the Front Internal Expanding Shoe Type on the Nash Advanced Six Model—Proper Pedal Travel Important Point to Watch Out For—Joints Must Be Free And Lubricated

By B. M. IKERT

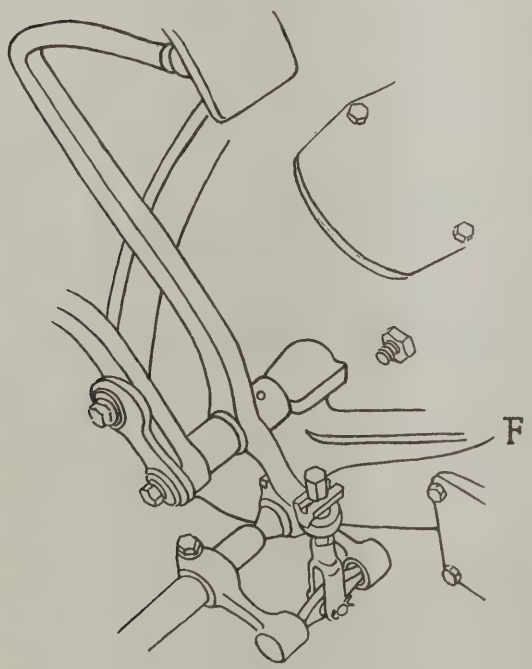
(This is the third of a series of articles dealing with conventional rear wheel, mechanical four wheel and hydraulic four wheel brakes)

IN last week's issue of MOTOR AGE the method of adjusting the four-wheel brakes on the Buick was discussed. These brakes are of the external contracting type on the front wheels and while much that pertains to the method of adjusting these brakes applies to other models, it obviously does not apply to front wheel brakes of the internal expanding type.

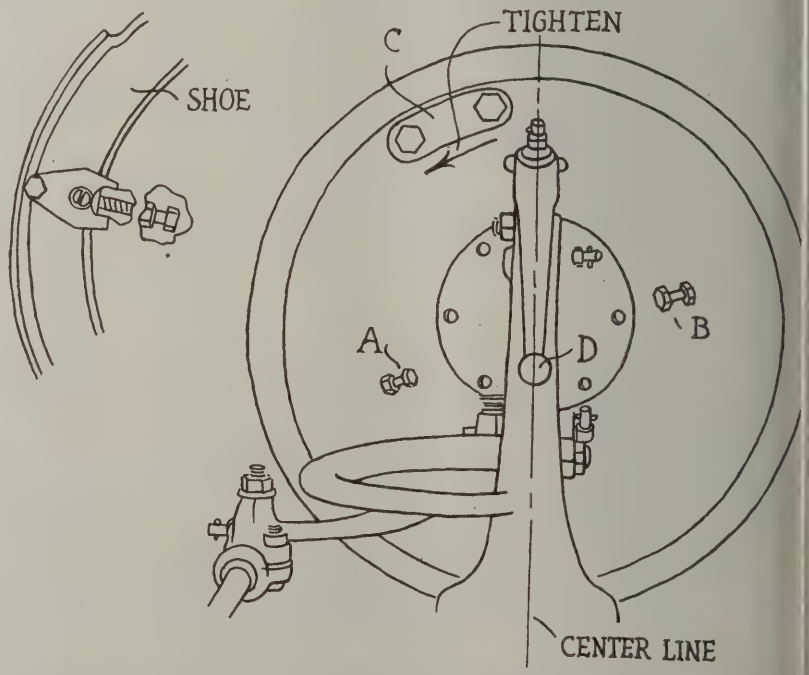
Consequently in this article we have taken as an example of the internal expanding type front wheel brake, the Nash layout as it applies to the Series 161 Advanced Six.

The rear wheel brakes of this model are of the external contracting type and adjustment is made in precisely the same way as most brakes of this type. That is, the anchor adjusting screw is turned to the right or left to get a clearance of 1/32 in. between the lining and drum. Then the band guides are adjusted for the same clearance. Finally the lower and upper adjusting nuts on the adjusting rod are turned to get the right clearance.

In proceeding with brake adjustment on the Nash Advanced Six there are three things to do.



First of all adjustment is made at the pedal connection.



Second, the rear wheel brake bands are adjusted a mentioned in a preceding paragraph.

Third, the front brake shoes are given the righ adjustment.

It is well at this point to again mention the grea importance of having all the joints free so they wor properly. For that reason go all over the braking syste clean and lubricate the parts. Make sure the whee bearings have the correct adjustment and that the wheel are in line. If any yoke end clevis pins or the yoke themselves are worn replace them with new ones.

Jack up the front end of the car so that both wheel are off the ground. Then inspect the brake pedal. Th normal position of this pedal is against the end of th slot in the toe board. The action of the pedal is such tha a slight depression of it takes up the clearances betwee the shoes and drum in the front brakes and between th bands and drums of the rear brakes. Additional trave of the pedal gradually applies the brakes at first and a the pedal is further depressed the brakes are mor forcibly applied.

Left: Fig. 1—Pedal and equalizer layout on the Nash Advanced Six. Adjustment for the proper pedal position is made by turning the clip bolt F. The pedal should never be limited in its movement by striking the toe boards; right: Fig. 2—Exterior view of Nash front wheel brake showing the rear clearance adjusting screw A, front clearance adjusting screw B, and the anchor bracket C. The ball D on the end of the brake operating lever must be in line with center line of the axle when the brakes are applied. The details of the clearance adjusting screws are shown at the upper left, a portion of the metal being cut away to make the matter clearer

There should always be a reserve of braking ability n the pedal and under no circumstances should the pedal ad strike the toe board.

In order to adjust the foot pedal turn the adjusting lip bolt, F, Fig. 1, to the right until the pedal is correctly located.

If this adjustment has been correctly made proceed to ne front brakes.

Disconnect the front brake rod from the brake operating ever and loosen the clearance adjusting screws A and B, 'ig. 2. Revolve the wheel and turn the rear clearance djusting screw A until you hear the slight noise produced by the lining on the internal shoe rubbing against he drum. Then back off slightly on the screw until the oise ceases. The brake shoe is then free at this point nd the lock nut should be tightened.

Proceed in exactly the same manner with the front learance adjusting screw. This adjusts the secondary hoe. The brakes are adjusted now so far as clearance s concerned and this clearance varies only as the linings n the primary and secondary shoes become thinner from vear.

To further check the adjustment see that the ball D on the end of the brake operating lever is in the center line of the axle forging, as shown in Fig 2, when the brakes are applied.

If the ball does not coincide with this center line loosen the two cap screws in the anchor bracket C, and tap the bracket slightly in the direction of the arrow, which is toward the rear. About 1/16 in. is usually enough, but the bracket should be moved sufficiently until the conditions are as in Fig. 2. Then tighten the cap screws in the anchor bracket making sure that they are firmly set.

Then the ball joint on the end of the front brake rod should be adjusted to the ball end of the brake operating lever. Each front brake is adjusted in this manner.

When the front brakes are properly adjusted, the rear brakes are taken up in the manner already explained. If after the front and rear brakes are adjusted the pedal seems to have considerable movement before the brakes take hold, the brake rod adjustment should be taken up until the brakes begin to act with a pedal depression of 1 to 2 in. and are fully applied with all possible pressure without interference form the toe boards.

Flat Rates for Electrical Work

A flat rate chart covering electrical operations on automobiles will be published in the Nov. 5 issue of MOTOR AGE.

This chart has been compiled, after extensive research, by A. H. Packer, associate editor of MOTOR AGE and specialist in automotive electricity. Practically every repair and maintenance operation that the tradesman is called upon to perform in connection with the electrical system of an automobile is listed and priced in this comprehensive chart. All the leading makes of passenger cars are covered.

A large proportion of the service work required on the average automobile has to do with the electrical system. This chart makes it easy to determine prices to be charged for this work.

In Motor Age Out November 5, 1925

New Edition of Dyke's Encyclopedia

A new edition, the fourteenth, of Dyke's Automobile and Gasoline Engine Encyclopedia has just come from the press of Goodheart-Wilcox Co., Inc., of 2009 S. Michigan avenue, Chicago. This volume which is retailed at $6, has been brought uptodate through thousands of additions and revisions by its editor and compiler, A. L. Dyke of St. Louis, who is one of the veterans of the automotive industry.

The most noticeable additions are several colored charts. In the section of the book where troubles are treated, a sixteen-page form has been added with four large colored trouble-shooting charts, one being that of a complete ignition system.

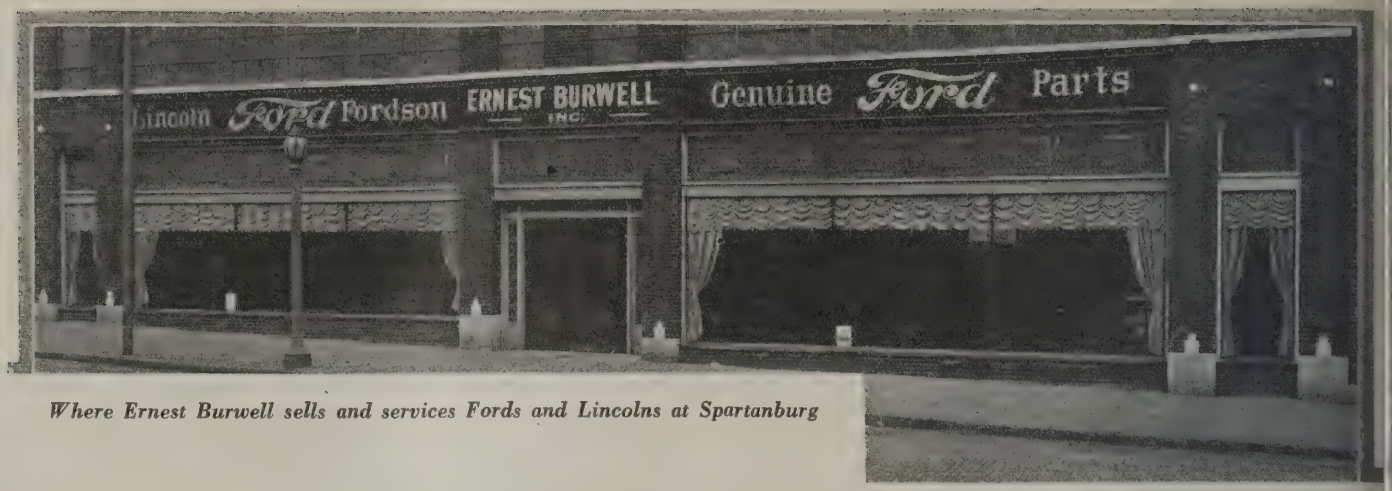
Another colored chart shows a complete fuel-feed and carburetion system which starts with the air vent-hole in the main gasoline tank and shows how and why the gasoline is forced from the main gasoline tank to the vacuum tank which is at a higher level, thence to the carbureter, and then to the combustion chambers of the various cylinders.

The operation of the vacuum tank is clearly explained. Very few realize the importance of the small vent-hole in the gasoline filler cap on the main gasoline tank. This chart points out that air at atmospheric pressure enters here, and if it should be clogged, the entire fuel system would fail.

Another colored chart is that of the generator and its circuits, including the cut-out, and another on the starting-motor and its circuit, treated in the same manner as the ignition chart and the fuel-feed chart.

Some of the new major subjects added to this trouble-chart section of the book are Ignition, Fuel-Feed, Carburetion, Generator, Battery, Cut-out and Starting-Motor Troubles.

A very interesting, new, and revised wiring diagram of the internal parts of the Ford Electric system is also shown in colors, thus simplifying the different circuits so that one can easily trace any part of the electric system at a glance. There is also another new Ford wiring diagram in one color.



New Model Cletrac Tractor Announced

A new model, known as the Model K Cletrac, has been introduced by the Cleveland Tractor Co., Cleveland, O., listing at $1875 f. o. b.

The new machine will handle an 8-foot grader with full bite and easily pulls a three-bottom 14-inch plow. Its turning radius is its own length. Rocking motion has been eliminated by the use of seven closely assembled lower track wheels, which assembly also insures a maximum of track gripping the ground.

The new model has an instantaneous oiling system, by which a single push of the hand lever oils the track wheels without stopping the tractor.

Adjustment of the crawler tracks is quickly allowed by the use of a regulating screw. The transmission case contains all driving and reduction gears, leaving a single sprocket wheel outside to drive the trucks.

Stopping Leaks That Drain Profits

Ford Dealer at Spartanburg Tells of the Simple Methods He Uses to Check Up Repairs, Prevent Losses and Keep Customers Satisfied

By ERNEST BURWELL
Ford Dealer at Spartanburg, S. C.

ARE you one of the many dealers who looks at the monthly balance sheet exclaiming, "I'll be d—d if we didn't lose money in the shop again last month"? Admit it like a man if you did, because you have plenty of company. This article does not propose to give you a magic wand to wave over the shop and make you a millionaire from shop profits, but from long experience we have found the more common leaks are the little ones which, leaking day by day, wear the shop's profits away.

Labor Leaks.—You will probably find by checking the daily activities of all of the men in the shop that you have two or three would-be mechanics who are "talking their way through," who show plenty of activity, use up plenty of time hunting for tools and "testing out cars" in the neighborhood of their "sweetie," but when it comes to making money for your shop they are not there with the goods.

A simple, accurate method for discovering the good men that you are possibly underpaying and will soon lose, and at the same time discovering the drones, is the chart pictured with this article, which is handled in the following manner. Everything done in the shop is put on a regular repair order form which is standard the country over, and the name of the mechanic who did the job is written on the repair order. If more than one, then all of the mechanics' names, and the shop foreman properly apportions the pro-rata of each man's work on that certain job, so that all the bookkeeper has to do is to credit each man's account with the amount of money taken in on him that day. At the top of the column you could post the mechanic's daily wage, which can be compared daily with the amount taken in on him.

How Much Should a Mechanic Take in?—A mechanic should double his pay; in other words, if he does not take in at least twice the amount of money paid him, there will be no profits for your investment, no dividends for your stockholders because the general overhead of doing business will surely get you if you fall below this figure and your expenses approach the average city or small town garage.

Daily Shop Report.—Many shops are struggling against the hopeless odds of a large mechanical organization designed to make a flourish and a show by giving instantaneous service to new car customers when there really is no sufficient volume of repair work coming in. This daily report made at the close of each day's work shows the number of jobs left over from the day before, the number of jobs taken in today, which added, give the total number of jobs to be completed, etc. If, for instance, there was only one job left over and there are only one or two jobs carried over to the day following, then obviously the entire amount of work brought to the shop was completed now, by referring to the bottom of the daily report where on is noted the amount of money taken in by each mechanic for that day's work, you will probably find that although every job in the shop was turned out, yet some of the men actually failed to take in enough to pay their wages that day. There is only one answer. You did not have enough repair work for the number of men you are

DAILY SHOP REPORT Date 8-15 1925

No. Jobs left over from yesterday	No. Jobs Received Yesterday	Total Jobs To Complete	No. Jobs Completed Today.	No. Jobs left over for tomorrow.	Free Jobs Today	Pay Jobs Today	No. New cars assembled Today.	Total Amount Pay Labor	Total Amount Free Labor

MECHANIC'S REPORT

NAME OF WORKMAN	JOBS	AMOUNT	NAME OF WORKMAN	JOBS	AMOUNT
Hubbell	6	14.50	Lee	1	1.50
Brewer	7	11.75	Cooper	1	16.50
Rice	3	4.00	Addy	1	1.50
Bannister	8	8.75	Bulick	10	12.50
Jennings	2	22.00	Duncan	9	23.40
B. White	1	5.00			
C. Shields	2	1.75			

Daily shop report which shows at a glance the number of jobs completed and on hand and the amount earned for the shop by each mechanic. If on the average the mechanic does not bring in at least twice his wages he is considered to be losing money for the shop. This may be due to the mechanic's incompetence or to the lack of sufficient work for the number of mechanics employed

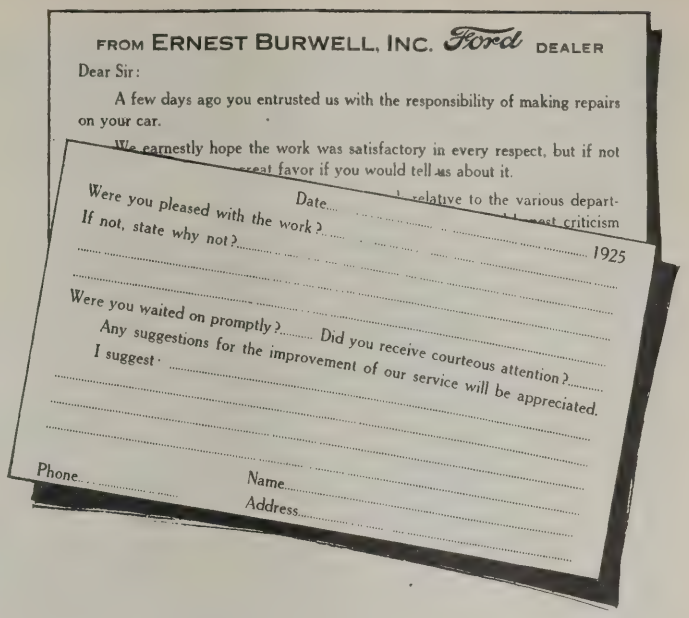
nploying. You cannot afford to take snap judgment and scharge half of the force simply because you had one at day. That day's report would then suggest that you ke the surplus men and send them out to call on a desigated list of owners with cars more than a year old and licit a repair job from them. A good approach would to carry a few tools in the pocket, and offer to adjust e spark plugs, timer, or examine the man's car in the terest of "how's the old bus going" which can lead up the subject of an overhaul job or whatever else the car in need of. Possibly it will sell a set of tires, a set of nders, etc.

This idea will carry you over one or two "flat" days, it several of them means that you should either cut wn your force by discharging your force or laying off me of your men, or keep the right ones out as service lesmen as above outlined until your volume is sufficient keep the shop busy.

Service Salesman.—We maintain the constant services a live, good mechanic of long experience who can talk iplomatically. It is a hard combination to find, but the ght one will be the goose that lays your golden egg. rovide him with a list of all of your owners, which can e had from car registration lists, obtainable for any mmunity, and from your own files and service records. his service salesman should follow up every complete verhaul job to make any final adjustments necessary, nd solicit the owner's good will, recommendations and rospects in the names of his friends who would probably e interested to have the same good thing done for their ar. He should have a service approach, inquiring of the ar's welfare, and if the proper service card record is aintained, your service salesman will know exactly what ate it was that Mr. Jones was last in the job, what the odel of his car is, how old it is, etc., which information ill certainly impress Mr. Jones that you are on the job nd will win his confidence to the extent of his patronage.

The service salesman carries a pair of pliers and small ols with him for cleaning plugs, etc., for the pleasure f the owner, which one thing often brings a car for motor verhaul by reason of foul plugs, oil leaks, etc., caused rom worn pistons.

Fixing the Responsibility



The service salesman turns in a daily call sheet with he name and address and telephone number of the perons he has called on and those who promised to bring he car down are noted. The garage foreman calls these eople on the phone reminding them that they are to ring the car in at a certain time and offering to send for , or advising that the shop is now ready to take care of by reason of our service salesman's appointment for im.

The above will not work wonders in two weeks, but onstantly followed, will begin to show real results in hirty days, and in sixty days the right man or men can eep your shop crowded.

Come-backs.—As before mentioned, the name of the echanic or mechanics doing any certain job is careully recorded on the repair order and in case of a comeack or complaint on the job, this mechanic is given the pportunity of doing the job over on his own time. The hop management loses the parts, if any be necessary rom a bad job, and the mechanic loses the labor in every nstance, which is a very good precaution against his careessness.

A return post card is sent out a few days after every epair job leaves the shop, suggesting the owner's comnents or criticisms.

Sub-Stock Room.—The average mechanic loses more han 10 per cent of his time in getting parts and supplies

Every customer must be satisfied. A return postal card goes to every owner who has had a repair job done and the printed form makes it easy for him to say whether or not he was satisfied with the work

from the stock room and if, indeed, you have no stock room organization you are losing parts and supplies that are never charged to the jobs, if you are not losing them. When a mechanic goes to the stock room for supplies, it generally means throwing his tools down, casually strolling down to the stock room on the floor below and jollying with friends or customers, smoking a couple of cigarettes, while the stock room man is finishing up with the previous customer or getting up the parts desired by the said mechanic. By the time the parts are carried back to the shop, the tools picked up and work begun again, you will find considerable time has elapsed. Now multiply this by the several trips per day every mechanic makes to the stock room.

To overcome this, we installed a sub-stock room in the shop, which carries bolts and nuts and small parts, in charge of a helper, at half the pay of a mechanic, who knows parts. When a repair job reaches the shop it goes to the combination sub-stock room and tool crib where the sub-stock keeper assembles the parts necessary to complete the said job, and keeps them in readiness for the mechanic. By the time the mechanic gets the job torn down the keeper is there handing him the parts in person and soliciting his further needs, which means that it is unnecessary for the mechanic to leave the job until it is finished. This is a big time-saver.

The sub-stock man also handles all the company's tools by the well known tool check system, and if a mechanic breaks a file for instance, or hack saw blade, he must bring up the broken pieces to get a new one. This prevents leaving tools on the running board of a car and losing them about the shop, for where there is no check on tools there is a steady loss of tools. I have personally gone to the garage entrance with a customer to accept delivery of a repair job, and found wrenches, pliers, files and the like, left on the running board and in the car, which except for the tool system would be a dead loss to the shop instead of to the mechanic whose carelessness was responsible.

In addition to carelessness and breakage, broken windshield glasses, door glasses, etc., are charged to the man whose carelessness was responsible. When a bottle of polish is handed out, no more can be obtained until the empty bottle is brought back, not necessarily to check the

man's honesty, but to prevent the bottle being left in somebody's car or in some out of the way place and wasted. A barrel of soap dispensed by the sub-stock man lasts more than twice as long as a barrel with the head knocked out that was open to all, in spite of the fact that we wash more cars. Nobody took it. It was simply wasted. There was no check on it.

Parts Leaks.—I know of shops where parts are drawn for certain jobs but are never used on the job. If you operate a large shop you do not ordinarily investigate a man's entire history, and it is poor business to trust to luck. The shop foreman should check up and see that parts gotten for a car are installed in it. Not a direct loss, perhaps, but the loss of a good customer later.

Account for Repair Orders.—All repair orders should be numbered numerically, and each order accounted for. None missing. I know of one instance where one of the mechanics was keeping up the car of a woman, and but for checking up and accounting for each repair order, it is a mighty easy matter to tear one up and throw it in the trash can, which in this case would have carried a complete set of balloon tire equipment with it.

Free Jobs.—New car service, free jobs or free service is properly credited to the man who performs the service and duly charged to the new car guarantee account. We do not "ride" the shop for anything. The same applies to work on company cars and demonstrators. Proper rent is charged the shop in a flat amount, based on the amount of floor space consumed and the relative value of such floor space considering its location.

Build Up New Cars.—We have also found that where a dealer sells a large number of new cars that a continuous unloading and setting up crew is much more economical and satisfactory than building up the new cars in the regular service station. We handle this in a separate warehouse with a crew of men that draw about half of a good mechanic's pay, but who from long practice are much more efficient and satisfactory in building up new cars than our best mechanics, and this is a money-making department. As a result of this system, we are delivering our customers the best built up jobs in this section and the difference in our build up job has been noticeable to the point that it has brought us new car sales.

It is the little things that count, and Mr. John R. Crawford, who manages our Service Department, and myself, have found that stopping these little leaks represent a dealer's best chance for a shop profit.

Reconditioning Engines an Engineering Job

"It is highly reprehensible, if it does not border on actual criminalty, for any man unschooled in the most elementary principles of mechanical engineering and possessed of no micrometer experience or equipment, to pull down and attempt to reassemble a machine built of parts finished to such exact sizes as those making up an automobile engine," says Robert C. McWane, of the National Motor Regrinders' and Rebuilders' Association, in a paper describing in detail the methods of engine reconditioning, published in full in the October number of the Journal of the Society of Automotive Engineers.

"Too little engineering attention has been given to the problem of reconditioning such engines when this becomes necessary. Cylinder wear is not the only condition with which we have to deal in an automobile engine that has given thousands of miles of service and, unless all the bad conditions have been corrected, it cannot properly be said that the engine has been reconditioned. Any operation that goes no farther than the resizing, or refinishing, of worn cylinders should not be recognized as engine refinishing.

"Regrinding of the cylinders should be done with the utmost care. The condition of each cylinder should be ascertained and the one showing the most wear should be ground first. This determines the size to which the other cylinders are to be ground, all of one block or set of blocks being ground to uniform size within limits of 5/10,000ths of an inch plus or minus, with not more than 1/1,000th of an inch taper. Pistons should be fitted with a clearance of 75/100,000ths to 1/1,000th of an inch per inch of diameter for cast iron. Piston rings should fit accurately in the grooves, and the best practice seems to call for a clearance of not less than 4/1,000ths of an inch per inch of diameter.

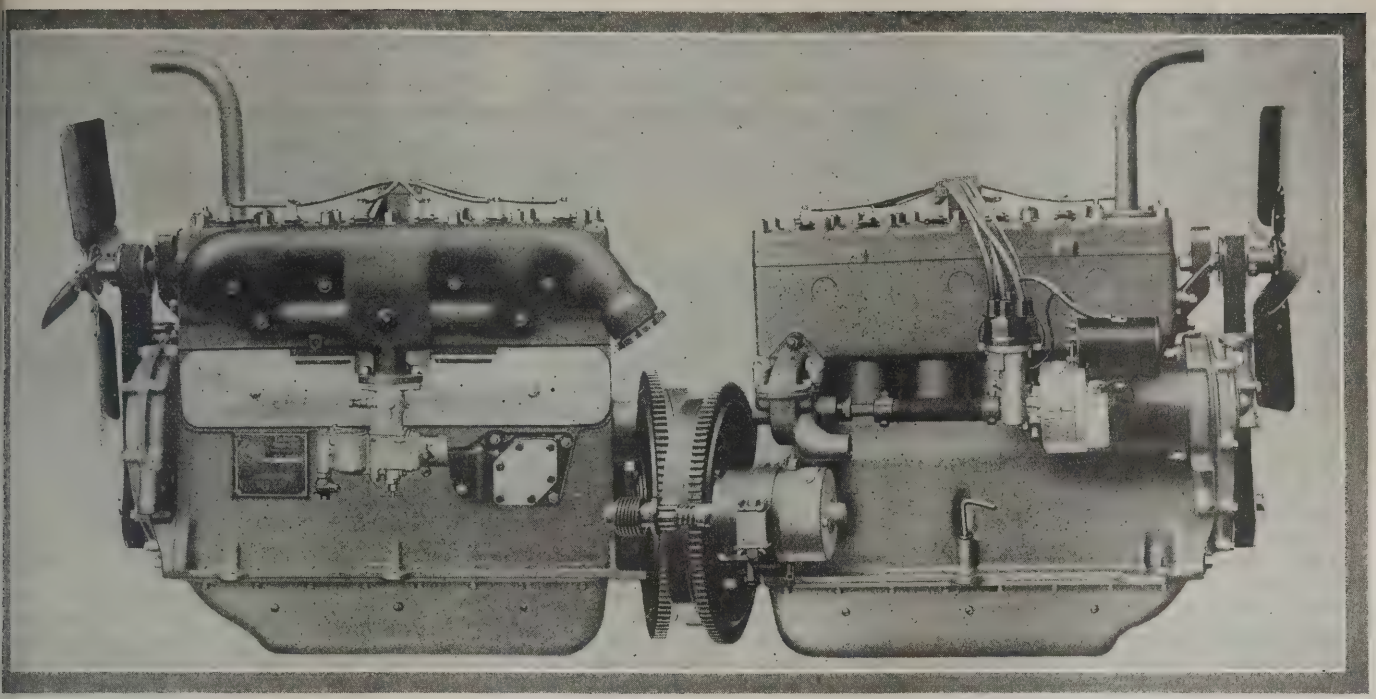
"Alignment is the secret of success and must be complete with all parts of the engine. Beginning at the cylinder base, we must have absolute squareness of the cylinder bores with this line and perfect parallelism of the crankshaft with the same line. Connecting-rod pins must be parallel with the main bearings. Connecting-rod pins must be straight and square and the piston-pins parallel with the crankshaft connecting-rod pins and also square with the sides of the pistons. If there is lack of alignment or of squareness at any of these points, trouble will soon develop and the life of the engine will be appreciably shortened.

"It is useless to attempt to compensate at one point for error at another. All of these points must be given the very closest attention if trouble is to be avoided."

Red Cross Helps in Accident Prevention

How are most accidental deaths caused?

The average pedestrian perhaps will promptly answer "Automobiles." If he does, he's wrong.



Official statistics disclose the surprising fact that falls, just plain accidental tumbles, most of them about the home, cause nearly as many deaths as automobiles. Nearly as many people lost their lives last year through accidental burns as were killed in railroad accidents.

However the automobile is not innocent. Secretary of Commerce Hoover is authority for the statement that traffic accidents alone are annually responsible for 23,000 deaths and 680,000 serious personal injuries, representing an annual economic loss of $600,000,000.

A modern battleship costs very roughly, $40,000,000. Thus the economic loss involved in these accidents would annually pay for 15 such ships; a force each year nearly equal to the present American battle fleet, which maneouvered in Hawaii this year.

The American Red Cross is doing its part. This organization during the year has trained 18,000 persons in First Aid to the Injured. In addition, to combat the accidental deaths from drowning, which annually reach into the thousands, the Red Cross this year trained 21,000 men, women, and youths in water rescue and resusciatation.

The most effective way one can begin to do his part to check this appalling loss, is to join the American Red Cross, and help broaden this already great work. The Ninth Annual Roll Call is for membership for 1926. The Roll Call begins Armistice Day, and lasts until Thanksgiving. Annual membership costs one dollar.

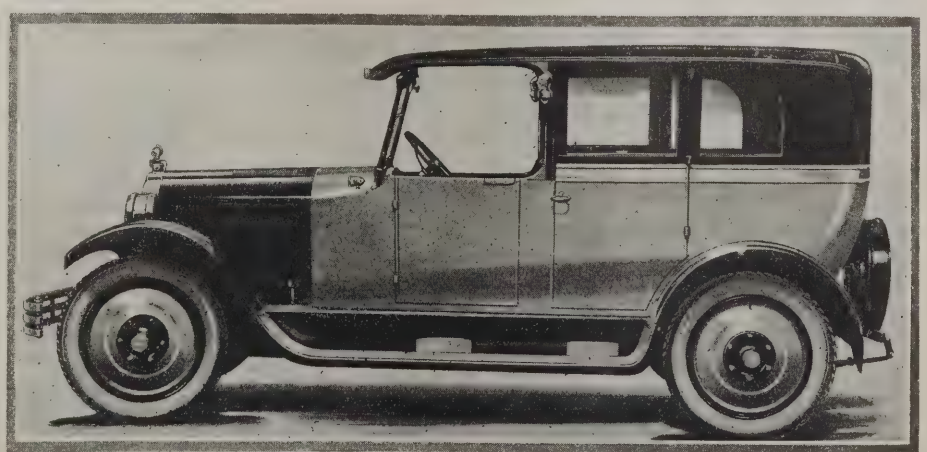
City Planning Only Solution to Traffic Problem

The only real solution to the problems f traffic congestion is city planning, declares Alvan Macauley, President of the Packard Motor Car Company after a survey of first-hand information from hundreds of cities in all sections of the ountry. The majority of over 230 cities f over 10,000 population which have een studied in detail have traffic probems which are steadily growing worse nder present methods of control. The omplete data and a comprehensive anlysis have been issued by Mr. Macauley n a brochure entitled "City Plannings nd Automobile Traffic Problems."



"The outstanding fact revealed," says Ir. Macauley, "is that the important raffic streets of a large proportion of the 33 cities studied are inadequate for ither the moving traffic or stationary ehicles which must use them. There s no logical relation between the width f important streets and traffic use of nem in the majority of the two hundredd cities and this situation is particularly true of the older and smaller cities. n less than quarter of the cities are the usiness streets wider than the main noroughfares; in three-eights the business streets are equal in width to the nain thoroughfares and in the remaining three-eights the business streets are arrower. In most of the cities the treets are utterly inadequate to provide arking space where it is most needed. lready a third of the cities have widend some of their streets in order to accommodate traffic, and in fully a half, raffic has become congested to such a egree that widening of streets involving normous expenditures is now urgent.

"What these conditions mean in accients, transportation, cost of living, inonvenience, extra policing and many other economic and social burdens, cannot be estimated. These burdens comprise a congestion tax, which is borne by every citizen and which increases rapidly each year until it is further augmented by the cost of street widening.

"While about half the cities report planning commissions, very few have taken these commissions and their plans with any degree of seriousness. While about a third of the cities have made some study of traffic conditions, very few have used traffic studies in planning street layout, and only about a fifth have any kind of plan for future street development.

"The smaller cities can still prevent the conditions which must otherwise be inevitable, by making full use of the experience gained by the larger cities. It is cheaper and easier to plan than replan, to build than to rebulid. The police officials and their advisors in many of the large cities have used commendable ingenuity and patience in untying traffic tangles and inventing schemes for preventing them. But the end of such measures is near—what is now needed is engineering ability and not police power. When the cities and their traffic commissions begin to find that the traffic problem cannot be solved by putting drivers in jail, they will turn their attention to the streets."

Improvements Made in Willys-Knight Taxicab

Willys-Knight taxicab which seats six passengers is completely equipped and with 32 by 4½ cord tires, lists at $2250. Among the improvements are included a lower and better braced body, curved windows at the rear which replace the former shutters and nickeled radiator bar cap which is monogrammed and illuminated

Cost of Spray and Hand Cleaning Compared

A COMPARISON of the cost of cleaning motor truck chassis by hand and by the spray method in the service station in prepartation for repairing is afforded by a survey made by an engineering firm at the White Comany service station in Philadelphia. The survey showed an average cost of $3.96 per chassis by the spray method as against $8.90 per chassis by the hand method, an average saving of $4.94 per chassis cleaned.

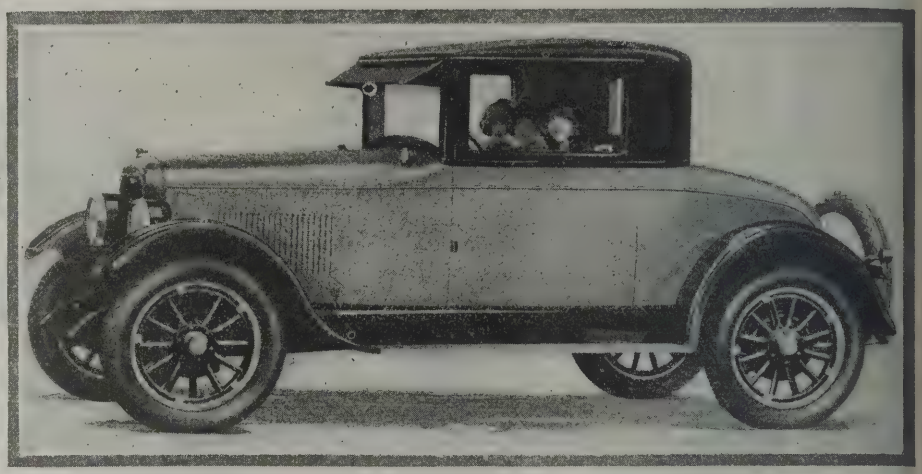
The survey was made for the International Chemical Co.

The equipment used for spray cleaning in this service station is comparatively inexpensive. It includes a small tank or boiler having a capacity of about 90 gallons in which steam is generated by means of a gas flame. The steam pressure, which operates the spray, varies from 60 to 85 pounds. New water is fed to the boiler by a steam injector.

The cleaning solution is mixed in a tank of about 22-gallon capacity. Five pounds of a standard commercial cleaning compound are used to 20 gallons of water. The cleaning solution is heated by discharging live steam from the boiler into it. A flexible hose is connected to the boiler and another one to the mixing tank, and both lead to a spray nozzle which the operator holds in his hand. The mixing tank is several feet above the level of the nozzle so that the solution flows to the nozzle by gravity, assisted by the suction caused by steam discharging from the nozzle. This method is said to clean the chassis so well that it can be painted if desired without further cleansing. After the dirt is all off a stream of cold water from a separate hose is played on the chassis for a short time. It is then ready to go to the repair department where its clean condition greatly facilitates the work of the mechanics.

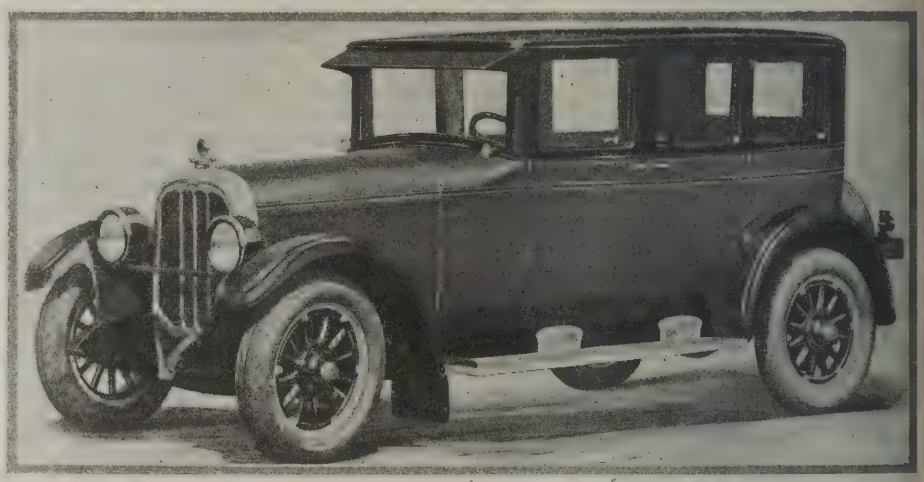
In this survey the hand and spray methods of cleaning were compared in detail as to cost, as follows:

Spray System



Fixed cost of spray system per truck (4 hours at 9 cents)	.36
5 pounds cleaning compound at 16 cents	.80
Gas for heating	.60
Labor (4 hours at 55 cents an hour)	2.20
Total	$3.96

Hand Method



Cleaning materials (coal, oil and gasoline)	$0.35
Brooms, rags, etc	.30
Labor (2 men—7½ hours at 55 cents an hour)	8.25
Total	$8.90

In addition to the saving in actual cost of cleaning there was a saving of 3½ hours in the average time required to clean a chassis by the spray method as compared with the hand method.

New Body Models Added to Dealers' Lines

Cleveland Coupe a three-passenger model listing at $975 on the standard chassis and $1175 on the special six chassis. The bodies are completely in metal and finished Cleveland blue Duco. Upholstery is leather but gray corduroy is optional at no extra cost. Balloon tires are standard equipment but four wheel brakes are optional at slight extra cost

New Twentieth Century Chandler Sedan—a four-door five-passenger model listing at $1,490

25 Years Ago In the Automobile Industry

As Recorded In MOTOR AGE

(From MOTOR AGE of November 1, 1900)

The Automobile Show Season

On Saturday of the present week the first of a series of automobile shows will be opened at Madison Square Garden, in New York. After a brief interval will occur the second New York show at the Grand Central Palace, beginning November 17. Following this will come the exhibit at Washington, beginning Dec. 10.

An exhibition is being projected for Boston later on, and in the spring comes the big Chicago trade exhibition and the Pan-American exhibition at Buffalo, the managers of which are making diligent efforts to obtain a large representation from the automobile manufacturers.

Interest in Kaiser's Offer

Kaiser Wilhelm's offer of $10,000 in prizes for an automobile race or rather test next June from Paris to Berlin, 719 miles, is causing no little comment in trade circles. The fact that it will be more of a test than a race, the factors of speed, price, endurance and fuel consumption being considered, appeals to the consideration of American makers; for the contest will be open to the world and to the victor will probably go adoption of its vehicle by the German government for war purposes. The practicability of the automobile as proved in the recent German war maneuvers appealed strongly to Emperor William.

New Locomobile Agency

The Locomobile Co. of America is to open another salesroom and storage station in the heart of the fashionable district of West Forty-third street near Fifth avenue, New York City.

Tire Retailers to Urge Classification at St. Louis Convention

George J. Burger, President of National Association, Declares Better Definition of Dealer by Manufacturer Is Need of Industry

MORE progress toward an understanding of the term "tire dealer" and further impetus toward impressing upon tire manufacturers the necessity of using greater care in their selection and classification of tire dealers are expected to mark the convention of the National Tire Dealers' Association, to be held in St. Louis Nov. 17-19.

The whole subject of the relations between tire manufacturers and dealers has been discussed widely ever since the Association was organized. George J. Burger, president of the Association, admitting that the tire dealer's methods are not beyond criticism, but insisting that the dealer is willing that his methods should be corrected wherever necessary for the good of the industry as a whole, lays emphasis upon the fact that in other successful lines of business the specialist is the successful merchant.

"We believe," said Mr. Burger at the offices of the Association in New York City, "that eventually the tire manufacturer will realize the wisdom of cooperating heartily in the movement to classify tire dealers as specialized merchants. Our industry is one of the largest in the United States. The number of tire dealers lies somewhere between 100,000 and 150,000. Analysis of the Department of Commerce survey as of April 1, 1925, shows that 51 per cent of these dealers carry very few tires in stock. At that date they should carry larger stocks than they would ordinarily later in the season. What I am trying to drive at is that the manufacturer should be more particular in his selection and classification of tire dealers. We shall try to settle this point at the convention.

Solicitation of Commercial Accounts

"Another important topic will be the question of commercial accounts. For years the dealer has met with this form of competition. The manufacturer has advised the dealer that there was one class of business that the manufacturer felt was his own, namely, the solicitation of so-called national and commercial accounts. The reason given by manufacturers as to why they classify these accounts, as to prices, just as they classify tire dealers, is that these larger users of tires would not buy from the average dealer.

"We regard this as a weak reason. The same accounts, in buying other lines, in a great many cases must buy either through an agent, dealer or jobber. Why should there be an exception in the tire business?

"This year the majority of rubber manufacturers have sent out into the field special representatives to solicit such accounts. They say that if one manufacturer stops this practice, others will also stop it, but they are waiting for a leader to make the move first. Meanwhile the dealer loses business that rightfully belongs to him.

"In years gone by we have been more or less advised as to who these accounts were, but today, in view of the special

George J. Burger, president National Tire Dealers' Association

sales efforts by manufacturers, the average small retail commercial account owning one vehicle or more is put in e same class as the national and commercial accounts. This form of competition by the manufacturers receives serious consideration at our convention.

"In addition to this competition a new form has cropped up, a very important one which may or may not have a bearing on the future of tire dealer business. This will also be studied at the convention and I expect definite action concerning it will be taken.

"Dealers handling truck tires are fewer than those handling pneumatic tires. To a certain extent they have a fixed investment in their business in the way of equipment and national and commercial account solicitation by the manufacturers cuts into that business very seriously. A truck tire dealer, more or less, must give 24 hours service and must be in a position to give immediate service in order to maintain his account. The effort to settle some of the serious problems confronting truck tire dealers will be made at the convention.

"We may also adopt plans as to future qualifications of tire dealers desiring to join the Association. It is encouraging that so far this year many rubber manufacturers have shown much interest in the Association and some have encouraged their dealers to attend our convention.

"As to tire dealers' stocks, inventories on July 1 showed a considerable increase over the same period of 1924, but on Sept. 1 these high inventories had begun to show a gradual reduction.

"There is no question but that dealers have taken advantage of the various increases in tire prices and protected themselves accordingly."

Views on Rubber Exchange

Asked for his opinion as to the plans of F. R. Henderson and others to organize a rubber exchange in New York City, Mr. Burger said:

"As dealers we are interested in seeing that some settled plans are made by which we may know what prices of crude rubber will be for some set time in order that we may be in a position to carry adequate stock and take the gambling element out of this business. The fact that the majority of manufacturers protect their dealers 30 days from date of shipment means that the dealer must be very conservative as to his stock and sometimes this is a handicap, especially for those dealers who are many miles from the source of supply. In their cases the 30-day price protection means that a dealer must make every effort to turn over his stock within 30 or 40 days.

"But if there were some set price for a period of some months, it might have a beneficial effect in enabling dealers to carry adequate stocks in normal times. If a rubber exchange could obtain such results, I believe it would be a help to the whole industry. But if the exchange instead should further increase the gambling element in the situation as it exists now, I do not see how any good could come from it, at least for the industry as a whole."

Letters to the Editor

What Is a Cutout?

Chicago Ill.

To the Editor of MOTOR AGE:

Some folks have the wrong impression concerning a muffler cutout (engine tester and carbon outlet valve), so we ask, "Does Mr. Motorist pay from one to seven dollars, according to his pocketbook, just for an appliance to make noise while he is driving?" We hardly think so, especially in these days of quiet motors, when he prides himself so much on the silent running qualities of his car. Then, just what is a cutout, and why does he put it on?

First of all, the muffler cutout, or tuning-up valve, as it is sometimes called, was never intended by the manufacturers to be a noise maker, and in all of their advertising and merchandising, they have sought to educate the motoring public to the many advantages of an engine tester and carbon outlet valve and to discourage the improper use of their product.

To the motorist, a cutout is invaluable for many reasons. With such a valve on his car, he can tune up his engine at will; by regular test he can tell whether his fuel mixture is too rich or too lean, whether all of his spark plugs are firing properly and whether compression is right in all cylinders. It enables him to locate trouble before it has developed to a serious extent, and ofttimes saves the necessity of a complete overhauling. There is no other way to "listen in" or check up on the motor, except the troublesome, expensive one of removing the muffler.

Increases Motor Efficiency

The use of a good muffler cutout increases the efficiency of the motor. A thorough test made by disinterested parties at the Engineering Department of Ames College, Ames, Iowa, with three of the leading makes of cutouts proved this conclusively. For example, who ever saw a racing car with a muffler attachment, or an airplane so equipped? Nobody, because these require every ounce of power they can generate and the muffler, because it causes back pressure on the motor, cuts down its power or efficiency. A good muffler cutout, however, will relieve this situation, and while we do not advocate its continuous use on the road, there are times when opening the cutout will give just that extra power needed to top a hill on high, or to pull through a mud hole. In such cases, the necessity of such a device cannot be denied.

Again, instead of blowing it into the muffler, a good carbon outlet valve (cutout) affords an easy means of discharging accumulations of carbon, soot, burned grease, dirt, etc., which have been previously loosened by carbon remover. The observation of any muffler after it has been in use any length of time will show it thickly coated on the inside with soot and carbon, which, of course, is detrimental to the motor.

Every state got its share of the million or more cutouts sold last year in the United States and the recent tendency toward enactment of legislation in a few of them, prohibiting the installation or use of the cutout, not only works injury to the motorist, but involves an economic situation as well. It discriminates against certain legitimate lines of goods and such laws will injure every jobber and dealer in automotive equipment. They will not only lose the investment which they already have in this merchandise, but the profits that would ordinarily accrue from the sale and servicing of this line, as well.

Because of the number of cutouts sold each year, it is logical to conclude that motorists buy the cutout, not as a noise maker, but because of fuel value received. They install it because they know, from experience that it will pay for itself many times over in fewer and lower repair bills and in increased efficiency, which, of course, means more miles per gallon of gas.

We believe that state legislation is unnecessary, because nearly every municipality has suitable regulations for the use of the cutout. These laws, properly enforced, would soon do away with the few offenders, who, likewise, are flagrant violators of the speed ordinances, head light laws, etc. Might just as well do away with sun visors because some unthinking motorist turns his down too far, causing an accident due to restricted vision. By all means punish the offenders, but do not make it unlawful to have a cutout on the car, for the thousands and thousands of others who obey the existing laws and appreciate the proper use of this necessary appliance.

J. J. HARTIGAN.

Southern Illinois Prospers

Harrisburg, Ill.

To the Editor of MOTOR AGE:

Glad to inform you of the automotive improvement in Southern Illinois, especially in Harrisburg.

Recently the Rogers Auto Supply Company moved to their new location, 24 E. Jackson Street, with their $15,000 worth of parts and accessories. This is the most complete and largest accessory house south of Danville and St. Louis, in Southern Illinois.

The Harrisburg Motor Sales Corporation moved into their new modern two story building on East Poplar Street, on Route 13 in Harrisburg. This company handles the Hudson and Essex, and Willys-Overland, and maintains the most equipped shop and service station in this part of the state. The building is fireproof and modern in every way. It cost $35,000 to build it.

Tourists returning from Florida are complaining that they are charged exhorbitant prices for tires in Florida. In one case a reliable man says he paid $50 for a 31x4.25 Kelly-Springfield balloon tire.

Let's go to Florida to sell accessories and tires!

Automobile sales are progressing very nicely in Southern Illinois. Last half of August more automobiles sold than any month since April this year. Month of September was one of our best months this year. Prospects hvae been holding back waiting for changes in verified models, and price changes. The coal mines are starting to operate all over this part of state, on which our selling greatly depends.

Yours truly,

AUGUST ZVARA.

Favors War Tax Repeal

COMMITTEE ON WAYS AND MEANS
HOUSE OF REPRESENTATIVES

Washington, October 17, 1925.

Mr. Sam J. Shelton,

My Dear Mr. Shelton:

I am just in receipt of your letter of the 15th and copy of MOTOR AGE.

I favor repealing all the so called war sales taxes, which include automobiles, parts, etc. The question of their repeal will depend largely upon the amount of reduction in the income and estate taxes.

I am very glad to have had your views.

Very truly yours,

JNO. N. GARNER,
15th Dist. Texas.

Hoover Calls Radio Conference for Nov. 9 at Washington

Whole Field of the Industry Will Be Studied at Fourth National Meeting

WASHINGTON, Oct. 26.—Practically the whole field of radio problems will be delved into at the Fourth National Radio Conference, details of which were announced by Secretary Hoover. The conference is scheduled to begin at 10 a. m., Monday, Nov. 9, in the conference room of the U. S. Department of Commerce. Secretary Hoover will personally greet the delegates and outline the program to them.

The conference will include representatives of all radio activities, viz.: (1) Broadcasting stations; (2) Radio magazines; (3) Newspapers having radio departments; (4) manufacturers of complete radio receiving sets; (5) Organizations of broadcast listeners; (6) Amateur organizations; (7) Commercial and radio stations; (8) Radio trade associations; (9) Press associations, and (10) the government itself will be represented.

Six national groups of organizations have been invited to have representatives present, to-wit: Institute of radio engineers; American Institute of Electrical Engineers; American Steamship Owners Association; U. S. Shipping Board; Farm Organizations and the National Electric Light Association.

Master Control Thermiodyne

THIS instrument is the product of the Thermiodyne Radio Corporation, 1819 Broadway, New York. It is a six tube receiver having three stages of thermionic frequency, detector, and two stages of audio frequency amplification. The set was designed to operate on 201A type tubes and on either indoor or outdoor aerials. A compartment is provided in the cabinet for housing the "B" batteries. Price without accessories, Eastern and Central states, $150; Rocky Mountain and Pacific Coast states, $160.

Radio Advertisers' Book

THE 1925-1926 Radio Advertisers' Data Book, a volume of rates and other information for national advertisers, has just been issued by its publishers, Arthur Rosenberg Co., Inc., New York.

Several features which were not in the 1924 issue have been included in the current edition. The contents include advertising rates, circulation and other data regarding Radio Consumer and Trade publications, as well as of all the periodicals of the allied trades, including Automotive, Electrical, Hardware, Music, Talking Machine and Sporting Goods.

The Radio dealer and jobber sales situation, and the Radio manufacturer's merchandising and advertising problems are treated both editorially and graphically.

Several of the more thorough Radio trade surveys are summarized, and a complete picture of the industry's present development and estimated future growth is presented. The United States, Canada and the foreign markets are covered. In the newspaper section, over three hundred papers are listed, giving the circulation and Radio news features. the different states.

Traffic Officer Listens To World's Series Reports

Traffic Officer Tommy O'Connor was on duty at Fifteenth and Welton Sts., Denver, but that didn't keep him from being in touch with the World's Series games. Officer O'Connor is a fan for both radio and baseball, and a first rate traffic cop as well. He rigged up a portable set, with antennae under the foot rest, and battery box inside it on the pavement. Holding a receiver to one ear, he kept track of the games, and directed traffic with his free hand.

The papers cover the leading American jobbing centers.

A full-page map of the United States shows the relative "Radio strength" of the different states.

New Book on Radio

"ECONOMICS of the Radio Industry," is the title of a new book by Hiram L. Jome, Professor of Economics at Denison University. The aim of this book is to show how the radio industry is working out its individual problems with the business organization, marketing, financing and relation with the public. One of the sections of the book is devoted to the problems facing the organizations rendering radio service. It discusses the problems of efficiency in radio service connected with broadcasting, copyright, patents, public policy and control. An interesting feature is the appendix, which contains the views of prominent experts as to the place and future of radio, and also a list of important events since 1827, furnishing a chronological compendium of the outstanding happenings in radio since the first crude experiments. The book is published by A. W. Shaw Company, Chicago, at $5.00.

Radio Instruction Book

A NEW 48-page instruction book (volume 2, Part No. 7852) covering every important phase of installing and operating Atwater-Kent receiving sets and radio speakers is now ready for distribution. One of these instruction books is included in each receiving set or may be purchased for 50 cents. One section of the book shows recommended method of installing fuses between the batteries and battery cable going to the set.

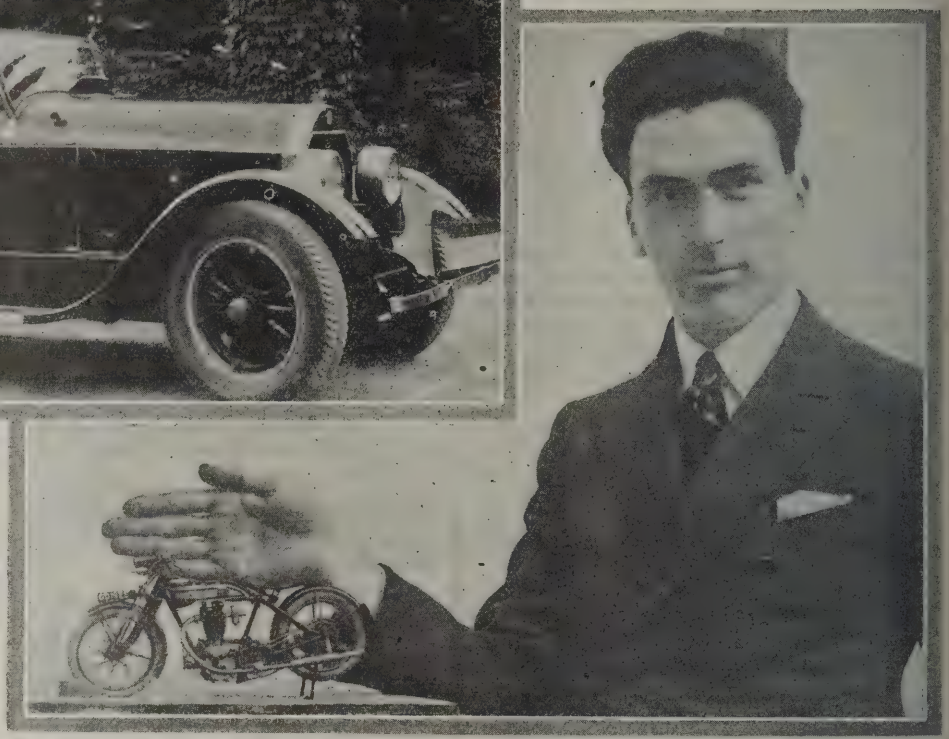
300 Attend Convention

THE recent convention of Atwater Kent radio dealers, held at the Hotel Whitcomb in San Francisco, was attended by more than 300 radio men.

The meeting was conducted by Ernest Ingold, Inc., radio and automotive wholesalers of San Francisco. The Ingold Corp., wholesales Atwater Kent products in the Metropolitan area of San Francisco.

Erla Circloid Five

THE Electrical Research Laboratories, 2500 Cottage Grove Ave., Chicago, is the manufacturer of this five tube radio instrument which employs radio frequency amplification. A special feature of this set is the circloid or balloon inductances which are used. Three tuning dials are provided. The standard cabinet which is of mahogany, lists at $69.50. The instrument is also made with a De Luxe cabinet of two-toned French walnut, list price, $77.50.

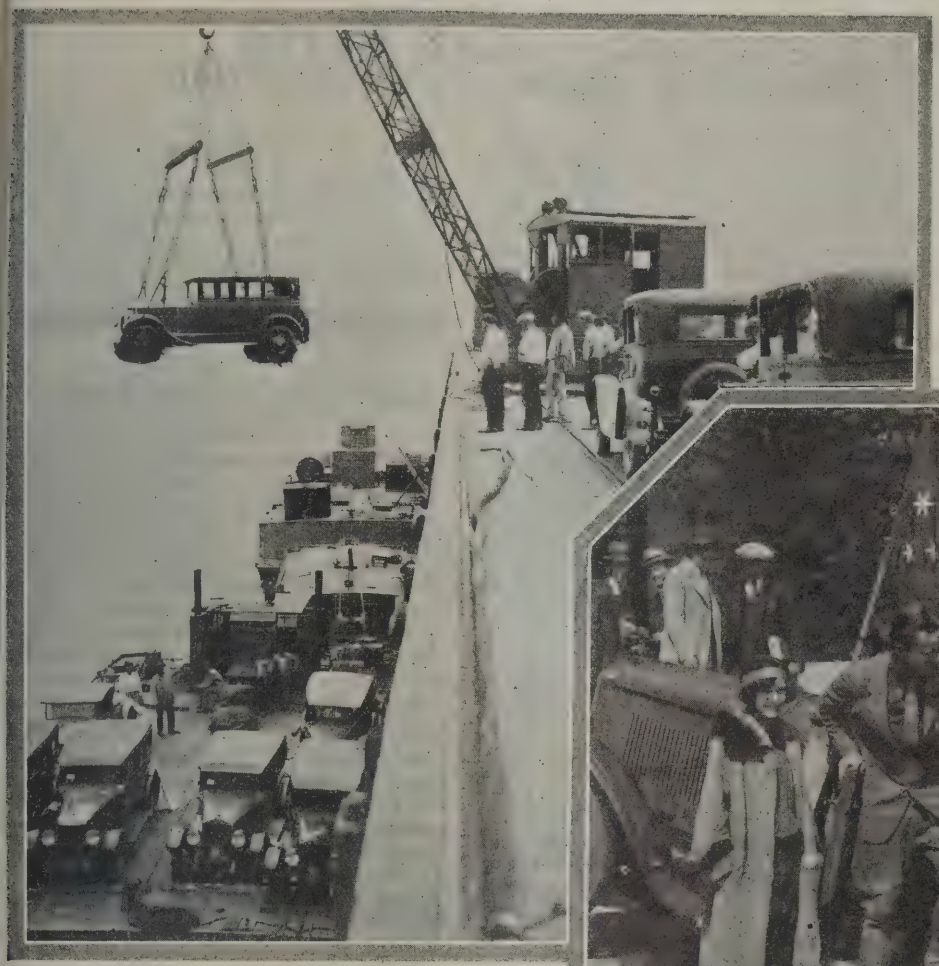


Heads Radio Association

A. J. RAETZ has been re-elected vice-president and general manager of the Radio Corporation of Wisconsin, an organization composed mainly of automotive electrical firms in Milwaukee, banded together for the purpose of jobbing and wholesaling radio equipment. Harry W. Bolens of Port Washington, Wis., was made president of the association and George I. Seltzer, secretary-treasurer. Mr. Raetz has been manager of the corporation since its organization about three years ago, and has announced the organization will continue on a strictly wholesale basis.

MOTOR AGE'S PICTURE PAGES

AN AUTOMOTIVE SETTING. Charles M. Schwab, well-known steel man, with Mrs. Schwab and their niece, who are sitting in a Stutz 6-95 roadster with custom-built body. Mr. Schwab is the principal stockholder and a member of the board of directors of the Stutz Motor Car Co. of America, Inc.



SMALLEST MOTORCYCLE IN WORLD. It was made by G. W. Dicker, entirely by hand, and all the working parts are moveable.

SERVICING SET TO MUSIC. On the second floor of this service station, opened at Coral Gables, Florida, motorists may dance, dine, or procure refreshments while waiting for their cars.

OF AUTOMOTIVE INTEREST

ON THE FATHER OF WATERS. At the left is shown a Moon car being lowered to barge at St. Louis for shipment to Minneapolis via the Mississippi.

IN WILD WEST FASHION. D. M. Tomlinson, who piloted a Velie from Philadelphia to San Francisco in behalf of the Sesquicentennial Exposition in 1926, drove the car up the courthouse steps and extended an invitation to all Californians to attend the big doings. Mrs. Tomlinson accompanied her husband on the long drive. Mr. Tomlinson reports that during the entire trip, a distance of 5,503 miles, only two minutes were spent on adjustments, which were on the timing. The Tomlinsons were en route 30 days.

HERALDING THE NEWCOMER. This unique method was adopted to introduce the Ajax car to the residents of San Diego and proved to be an effective means of advertising the advent of the new member of the automotive family.

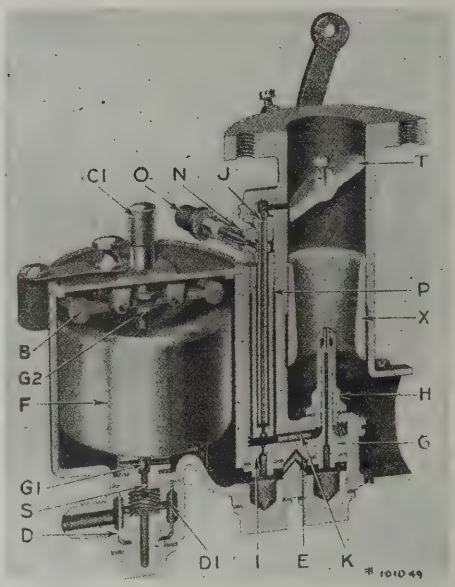
How the Idling Device Works

Q. Explain the action of idling jet on Zenith carbureter for 490 Chevrolet. This seems to be a plunger that works up and down into vacuum but I cannot quite comprehend its action.—Anaheim Reader.

The specifications of the idling device used on all models of Zenith carbureters with slight modification is as follows:

At low speed when the butterfly throttle valve (see Fig. 101049) is nearly closed, the main jet gives but little or no gasoline, but there is considerable suction on the edge of the butterfly and gasoline is drawn through the idling device. This device is shown at Fig. 230 and consists of the idling tube "J" within the secondary well "P" inserted in the first well, at the bottom of which the compensator "I" is located. "I" is opened to the atmosphere through hole "A". Gasoline from the compensator "I" flows through the calibrated hole in the bottom of the secondary well "P", which in turn is adjustably opened. The idling tube "J" leads to a hole located at the edge of the butterfly throttle valve where the suction is most strongly felt. This suction lifts the gasoline through the idling tube and in combination with the air passing the butterfly valve forms idling mixture.



Q. In two piece rings it is my understanding that the inner or cone shaped ring should not bear against cylinder wall

Low speed air adjustment of Zenith carbureter on Chevrolet

but should bear against beveled surface of outer ring, this making the complete ring fill the ring groove in piston and should ring groove be faced out too wide so that inner ring bears against cylinder wall it would destroy its usefulness as a preventive of oil pumping. Am I right about this?

The correctness of your theory depends entirely on the construction of the ring. Where the ring is a two-piece construction, the amount of expansion secured in

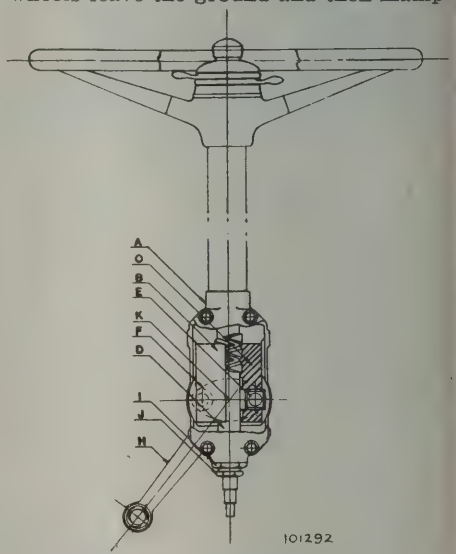
Sectional view of Zenith Chevrolet carbureter

the ring groove will depend on the size of the ring as regards its diameter. Theoretically the inner ring element used as a wedge should not touch the cylinder wall but should exert its full effort against the beveled surface of the outer ring. The rings with which we are familliar, operating on the principle of filling the ring groove, are generally of the three piece type in which it is impossible for the inner ring to communicate or contact with the cylinder wall.

Q. Please give valve timing for 1916 and 1918 Oakland.

On the Oakland 6-cylinder cars, 1916 to 1919 inclusive, the exhaust valve closes 7½ degrees after upper dead center. 7½ degrees on the regular Oakland flywheel is the equivalent of $\frac{28}{32}$ of an inch measured on the rim or face of the flywheel. The inlet should open 7½ degrees after upper dead center or measured on the flywheel $2\frac{5}{32}$ in. past top dead center mark.

CAN THE ENGINE RUN FROM THE SPARK



Q.—Why does oil burn in the combustion chamber at the time of explosion and why does it not burn from the cylinder walls at the same time?

The oil will burn whenever the temperature is above the flash point of the oil. Of course when the piston is in the up position and the spark occurs the cylinder walls are protected for the time being. As the combustion is not instantaneous there is, however, some flame in the cylinder as the piston goes down, so that the cylinder walls are exposed to this heat. It must be remembered, however, that the water jacket around the cylinders tends to keep them cool. On the other hand the piston working up and down is constantly working fresh oil up on the cylinder walls, so that even if a slight amount of carbon tends to form it will be rubbed off by the polishing action of the piston moving up and down.

Adjusting Lavine Gear on Courier

Q. Please give me the following information concerning 1923 Courier: How is the Lavine steering gear on this car lubricated and adjusted for wear? Give photograph if possible.—New Zealand.

To remove lost play from steering wheel loosen adjusting lock nut "I" by turning anti-clockwise, then turning adjusting screw "J" clockwise a small fraction of an inch. Then tighten adjusting screw nut "I" but be sure to hold adjusting screw "J" as you have previously set it. The adjusting screw should never be tightened up so much as to bind the gear. The adjustment is best made by jacking up the front of the car until the wheels leave the ground and then manip-

Sectional view of Courier steering gear

ulating the adjusting screw until excess play is taken up and the steering wheel is easy to turn.

See that all axle arms, king pins and drag link connections are properly lubricated and adjusted, for very often lost play develops in these connections as well as in the steering gear itself.

The steering gear is lubricated by removing the plug in the lower portion of the gear and forcing in 600-W. It is not necessary to entirely fill the housing, for it is better to have some room so that the lubricant can travel and float around in the housing.

Planning Your New Building

By TOM WILDER

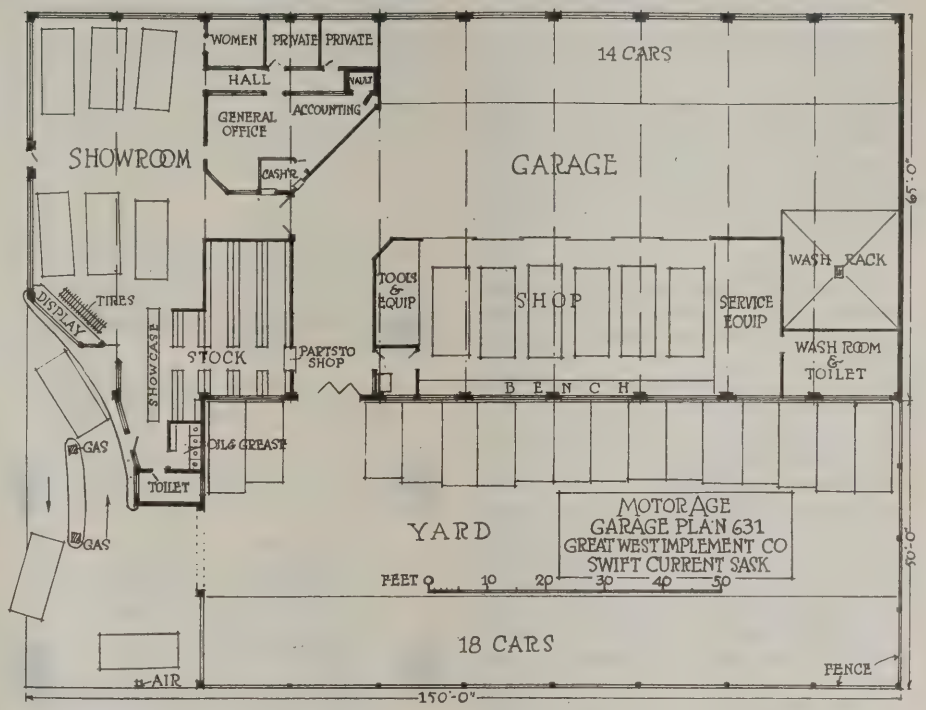
The READERS CLEARING HOUSE

This Is Unusual—No Side Street Entrance

Q. We contemplate building a garage in the very near future and are enclosing a rough sketch of the floor plan. Any information you can give us will be appreciated. Our plot of ground is 115x150 and we want to build full length and only one story but only about 66 ft. wide and not over 70. This will allow us considerable yard space which is important. Would prefer to have shop in line with stockroom but would probably be too noisy for office and would put the entrance to storage too far back. If we do not have enough storage space we could purchase 50 ft. at back facing the side street.—Great West Implement Co. Ltd., Swift Current, Sask.

The only cause we have to fear this plan will be unsatisfactory is on account of the limited amount of storage space. There seems to be no way to better this condition, however, except at the expense of the shop or office.

You have not indicated exactly how large the shop should be but we have followed instructions on the office and showroom. The washrack is available for storage of three cars and they could be stored two deep or six altogether. The shop could be shortened and room made for four or six more. The best plan, however, would be to add the 50-foot strip at the back that you say you can get, then with two rows on one side of the aisle and one on the other you could store 21 additional cars; but that again would be adding to the cost of your building.



The office could be put upon a balcony between the second and third trusses and the garage extended out to where the front of the office now is shown but this would increase the storage only by four cars and would not be so good when there is more space available.

Some provision should be made for skylight to illuminate the interior of this building, the back part of the shop and the garage aisle would be rather dark otherwise. The washrack also needs more light than has been provided and a little light in both stock room and office would make work easier and the employees consequently more efficient.

We have provided one toilet for filling station customers, but the space could be made into two small ones if that seems preferable. A small stock room for oil and grease keeps this messy material out of sight, though handily located.

We presume you will use the yard for the assembly and storage of new and used farm implements but we have shown it in terms of car storage, merely for convenience, it seems a very good proportion for either purpose.

Your sketch shows a small elevator to basement but we would discourage the use of a basement for anything but live storage, heating plant or possibly used car display room, but the latter is excusable only where main floor space is not available. Parts should not be stored in a basement as they rust rapidly in the summer months when they are coated almost constantly with moisture condensed from the air.

The yard idea is a good one and is popular in the South and West. If this firm is obliged to expand and use the yard for building it may find the side street more suitable for car entrances.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

SELLING UNCLAIMED CAR

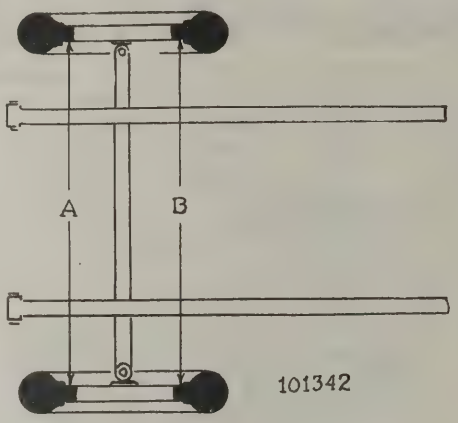
Q. We are located about two blocks from the Summerdale Police Station. On June 6 of this year the police towed a Buick touring car into our garage and asked us to park this car here for a few days and to notify them immediately if anyone should call for same and not to let the car out without their consent. This car is still here.

We have the former address that the police gave us but there is no such place. They advise us to advertise same in the paper several times and then dispose of same. We would appreciate if you would advise us how we are to proceed in disposing of this car and what must be done with any money over and above our charges. This is a 1923 touring and is in pretty good shape and should be worth considerably more than our charges.—C. R. Schwarz, Summerdale Garage, Chicago, Ill.

You may trace the license number, etc., by writing the Secretary of State, Springfield, Ill.

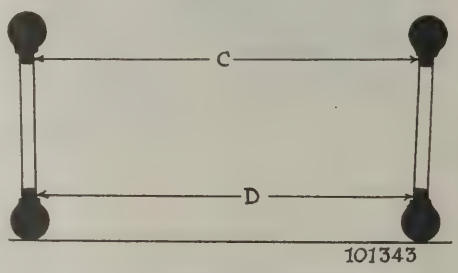
As for disposal of the car in question, Chapter 141, Section 3, of the Illinois statute dealing with unclaimed property reads: "All persons . . . having a lien on personal property, by virtue of an Act entitled . . . may enforce said lien by a sale of the said property on giving to the owner thereof, if he and his residence be known to the person having such lien, ten (10) days notice in writing of the time and place of such sale, and if said owner or his place of residence be unknown to the person having such lien, then upon his filing his affidavit to that effect with the clerk of the county court in the county where said property is situated, notice of said sale may be given by publishing the same once a week for three (3) successive weeks in some newspaper of general circulation published in said county, and out of the proceeds of said sale all costs and charges for advertising and making the same and the amount of said lien shall be paid, and the surplus, if any, shall be paid to the owner of said property."

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear



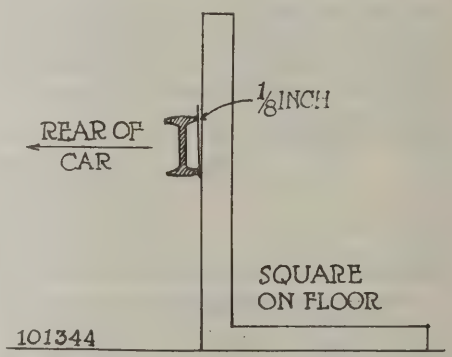
Three Dimensions to Check on Ford Front Axle

Q—I am having trouble regarding the alignment of the front wheels of Ford coupes. The balloon tire jobs are the worst. They wear one tire off as if it was skidding sideways all the time. We align wheels and do everything, but cannot stop it. Would like all the dope you have on it, also the measurements of everything to remedy this difficulty. The wheels also get to shimmying right away.—O. F. Marquid, Aledo, Ill.



We are showing three illustrations which indicate the way measurements should be taken. In the first illustration where we are looking down on the top of the car the dimension A should be from ⅛ to ¼ in. less than the dimension B, these measurements being taken from the felloe of one wheel to the felloe of the other measured at a point the same height as the center of the wheel.

In the next illustration we are in front of the car and looking at the front wheels. In this case the dimension D should be 3 in. less than the dimension C. Here again we are measuring from the felloe, this time back far enough so as to be in line with the center of the wheel.



In the third illustration we have the car on a perfectly level surface and use a two foot square setting on the floor, to check the axle at the center. The upper portion of the axle should be back ⅛ in. as compared with the lower edge of the I beam.

Checking the toe-in of front wheels on a Ford

Measurements which determine the camber of the front wheels

CORRECTION ON GARDNER OIL PRESSURE

We notice in the October 8 issue of Motor Age on page 26, an answer which you gave on the proper oil pressure for a 1924 Gardner stating that the oil pressure at average speed is 2 to 7 pounds. This statement is incorrect. The proper oil pressure at idle is 2 to 10 pounds, depending upon whether the oil is hot or cold. Lycoming Mfg. Co., W. H. Beal, Sales Mgr., Williamsport, Pa.

We are very grateful for having this inaccuracy brought to our attention by the Lycoming company.

MAKING AN OAKLAND RACER

Q. We are building an Oakland 6-44 into a race car. So far we have shortened the wheelbase to 104 in., set the motor down 4 in. in the frame, installed Boyle valves and have three carbureters. We used 29 by 4½ wire wheels, 4½ to 1 gear ratio and have cut the flywheel to 40 lbs. Would like to have your suggestions on this car.—James D. Smith, Quick Service Auto Laundry, Clarksburg, W. Va.

In any race car high compression is essential. This means that a fuel compound of some sort must be used in order to prevent detonation which would occur with ordinary gasoline. In some cases benzol or a mixture of benzol and gasoline is used. Apparently the compression can be increased in this motor by planing from $\frac{1}{16}$ to ⅛ in. from the top of the cylinder block. You should study the construction carefully, however, to see what effect this will have and whether it will cause any interference with the spark plugs.

It would also be well to check the clearance between the valves and the top of the piston when the piston is in the up position. For racing it is desirable to have a camshaft on which the intake cams have a longer dwell than is customary. This means that the intake valve should stay open till approximately 80 degrees past bottom dead center. This is a matter of experiment, however, and we do not know that this has been worked out on Oakland cars. Names of concerns which specialize on racing equipment will be given by separate letter. Another desirable feature in a race car is to have the weight on all four wheels the same, also to have the weight above and below the axles the same, so that the car if turned on its side, would theoretically balance on the hub caps.

All Engines Overheat in This 1917 Car

Q. We have a 1917 Ford touring car that overheats. We have tried two new engines in this car, one from a 1920 Ford and the other from a 1918, but did not change the magneto and transmission. In the last one we also installed new pistons. An extra oil pipe on the outside did not improve the condition. We have used a device for recharging Ford magnets in the car and find it makes the magnets so strong that the lights burn out. We believe this also accounts for the overheating, as it makes too hot a spark.—Charles Skellenger, Western Trail Garage, Plevna, Kansas.

We would recommend your checking the ignition timing. Turn the engine over by hand until the piston has been to its top position and has barely started down. At this instant the coil which supplies spark to the No. 1 cylinder should start to buzz if you have the key turned to the battery position. This will give you enough spark advance so that if heating does occur it will not be due to a condition of this sort.

We do not know what kind of water you have in Kansas but if the radiator has not been replaced or a new one tried it is possible that this is the trouble and that the radiator pipes are coated with lime or some other deposit. The high voltage of the magneto should not cause the engine to overheat, for the heat of the spark is infinitesimal as compared to the heat liberated by the burning fuel. If the carbureter is set too lean, however, this will tend to cause overheating. Incorrect setting of the camshaft, or valves which stick will cause heating. If you have the magneto so strong that it continually burns out lights, it is possible that you can weaken it slightly by taking a piece of wire and flashing from the magneto post to the frame of the engine for an instant while the engine is running. This will allow the magneto to deliver a heavy short circuit current which should have some demagnetizing action on the magnets. If this does not work you can try the use of a 6-volt battery connected the wrong way as compared to the connection made when recharging the magnets. Another means of protecting the lights from burning out is to use the resistance units which are wound on a magnetic frame. These may be obtained from authorized Ford dealers and if one is not in use on the car in question it may account for the trouble in the lights.

Clearing Up Electrical Trouble

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Weak Coil Steals Engine Power

Q.—In your February 5th issue I noiced that Mr. Simon Banaszak of Beaver, Vis., writes regarding faulty performnce or poor acceleration above 38 m.p.h. have had two cases very similar and in oth it was due to a faulty ignition coil.)ne of these cars would not go over 32 n.p.h. and after replacing the coil it ?ould do better than 50.

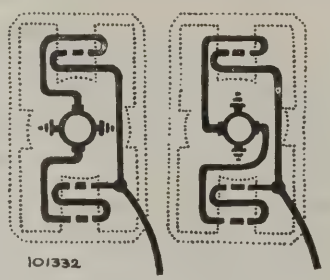
Your experience should be helpful to IOTOR AGE readers, but we wish to)oint out that there is a test which will etermine whether the ignition is at fault t high speed or not. The test requires roll of heavy paper or a mailing tube uch as blue prints are mailed in. To nake the test remove one of the wires rom the spark plug and have someone old it about $\frac{5}{32}$ in. from the engine. Then un the engine and increase the speed by pening the throttle so as to imitate the ngine speed that would be obtained at 0 m. p. h.

While this is being done the paper tube s used with one end near the spark ?hich is jumping to the engine and with he other end of the tube held at your ar. The ear is much quicker than the ye and will detect a miss which will ccur at high speeds. Such a miss being ifficult to determine by looking at the park. If the spark is missing at high peed you cannot expect the engine to perate properly.

Q.—I would like to inquire if you have n file test data for generators and startng motors used on the most popular cars? Would like the motoring current for varius generators, also the current taking y a starting motor when running free, nd when cranking, also the lock torque n foot pounds. If you have this data vailable I am sure other MOTOR AGE eaders would also like to have it.—Clyde E. Foster, San Antonio, Texas.

We have this data available but it ?ould take a great deal of space to print t all at once. Wiring manuals on the narket usually include information of his sort and we will gladly furnish any articular information along this line ?hich may be required. There are a few eneral facts which help the shop elecrician to determine whether a machine s approximately normal or not. The mall simple third brush generator about ne size of a Ford will usually draw four r five amperes when in good condition nd when running as a motor. This curent is somewhat affected by brush pres-ure and in plain bearing machines the ghtness of the bearings will affect the urrent drawn from the batteries.

Current taken by the armature when here is no field current usually varies rom 15 to 20 amperes. Abnormal condiions when motoring are usually indiated in a jerking rotation, also in a erking action of the ammeter used in ne battery circuit from generator to batery. Starting motors running free will draw from 35 to 50 or 60 amperes, the current usually increasing with the size of the machine so that you can make a rough estimate after having some experience. It is also a good indication when a starting motor connected to a battery and running free will rapidly speed up to a high number of r. p. m., the current drawn rapidly dropping off to the figures above given.



MEASURING AND COMPARING CONDENSERS

Q.—What is the microfarad capacity of a condenser used in a Ford coil? Joe Brown & Sons, 604 N. Elm street, Henderson, Ky.

About one-half microfarad.

Q.—How can I find the capacity of a condenser?

This is a difficult measurement to make electrically. One electrical equipment concern at one time had a device for measuring condensers and we will give you the name of this concern by separate letter. We believe that they still are able to furnish such a device. Ordinarily the capacity of a condenser does not change very much and if it is open circuited or shorted, it is easy to tell that trouble exists. If it is suspected that the capacity is low the best method, under ordinary circumstances is to have the ignition operating on a test bench and substitute one condenser for another, observing the action of the spark and also the flashing at the interrupter contacts. This does not apply to a Ford coil for it is not feasible to change condensers in this coil. It applies however, to other type battery ignition systems.

Changing connections at the brushes to reverse the rotation of a Westinghouse starter

Q.—How can I change the direction of a Westinghouse starting motor, style No. 240190, type B, frame No. 318—6 volts?

We are showing an illustration of the internal connections for the two methods of rotation. At the left you will see that the circuit after going through the field winding goes to the two insulated brushes, one being at the top and the other at the bottom of the commutator. At the right and left of the commutator are two brushes which are grounded. To change the rotation, it is necesary to have the insulated brushes at the side and the grounded brushes at the top and bottom, as shown in the right hand sketch. You will have to study the construction of the end bracket and brush holder to find out the way this can be most easily accomplished. You will probably find that the whole brush holder assembly can be turned 90 degrees. If the field connections do not readily connect to the insulated brush holders when they are located at the left and right, it will be necessary to make heavy copper extensions, to complete the proper connection.

Q.—Is it possible to change a direct current voltmeter or ammeter to an A. C. voltmeter?

No.

A Rare Bird—This Electrical Trouble

Q.—We have a Buick 6-cylinder car, model 21-45, that when it makes a long trip the battery runs down and we have to crank it for a while. When it runs around town and makes lot of stops the battery stays up in good shape. It is a new battery and the battery shows 10 to 12 amperes charge all the time. Where is the trouble? I would sure like to know.—Broadway Motor Car Co., 920 Broadway, Ft. Wayne, Ind.

When batteries discharge in service the opposite conditions are usually true and the battery runs down when the car is used on short runs and becomes well charged when long trips are taken. This is accordingly a peculiar condition. One possibility is that the third brush does not operate freely or that it is short and does not make very good contact with the commutator. If the commutator is slightly eccentric it may throw the third brush off at high speeds so that the machine does not generate.

Then as the armature circuit is connected through the switch and ammeter to the battery, it would be possible for the battery to discharge through the armature. However, if this occurs you would notice it for the ammeter would show discharge at high speed instead of charge. Poor undercutting which leaves mica at the sides of the commutator bars would also cause this condition. When the ignition switch is turned on the battery is connected to both the armature and field circuit of the generator as well as to the ignition coil.

If there is trouble in the ignition and lighting switch it might be found that at high speeds where there would be an appreciable vibration the contact to the armature circuit would be broken and the ignition coil and the generator field would be drawing from the battery. If you are not experienced in electrical work it might be advisable to get in touch with the nearest authorized electrical service station.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Fixed Prices for Rebuilding Wrecked Cars

Electrical Flat Rate Chart

A comprehensive schedule of suggested flat rate charges for automotive electrical service operations will be published in the Nov. 5, 1925, issue of MOTOR AGE. This chart has been compiled by A. H. Packer, associate editor of MOTOR AGE and specialist in automotive electricity.

Since a large proportion of the service work required on the average automobile has to do with the electrical system, this chart will be of interest to practically every automotive shop. Owing to its comprehensive character, covering all the leading makes of passenger cars, it is suggested that MOTOR AGE subscribers probably will want to preserve the issue containing it.

This advance notice of publication is given so that those who are interested will not overlook this important feature.—Editor.

EVERY now and then someone raises the point that flat rate is all right for some operations but that you cannot apply it to all work.

For insance, some service men or shop operators state no flat rate can be given for a job of rebuilding a wrecked car, The usual reason given is that such a job often calls for repair operations not readily discernable on the face of things.

In spite of this there are plenty of shops which today quote prices on reconditioning wrecked cars. Sometimes such figures run well over several hundreds of dollars.

These shops are able to quote prices because they take a wrecked car and after checking it over split the work into various groups of operations. Very seldom is it possible to quote an immediate price on a wrecked car rebuilding job, but it is possible to do so after the shop has had a chance to check the car over and make the necessary notations for the work needed.

After all, rebuilding a wrecked car is but many repair operations crowded into one job and with a price for each operation it means only adding up these prices.

How Prices Were Obtained

Denver, Colo.

To the Editor of Motor Age:—

I have noticed that the prices in your flat rate forum are about 20 per cent higher than here in Denver, especially the Ford scale.

Can you tell me from where you get the prices. How much higher are they than the suggested price by the factory for our locality?—Frank C. Klein.

The prices listed are not guaranteed as official factory data and especially is this so in the prices given in Motor Age's Flat Rate Manual. In most instances these prices were derived from multiplying the average hours required by $1.50.

THINGS THAT HELP FLAT RATE

In meeting the time schedule set down f various operations on a car and especial where a car has to go from one departme to another, a system of ramps is a gre help. Where space is available the servi station making use of the ground floor on is, of course, working to the best advanta

Should a different hour rate seem advi able you can convert the prices to co form to any desired hour rate as follow

To sell at $1 per hour multiply t prices by .67 To sell at $1.25 per ho multiply the prices listed by .87.

For example, if you find an operatio calling for a price of $6.60 under t $1.50 per hour rate and want to find t corresponding price at $1 per hour, mu tiply 6.60 by .67 and the result is $4.4

You can readily understand that pric naturally will vary in different parts the country, especially since labor co ditions are not the same and the cost doing business fluctuates with the size town, location, etc. It is possible t prices given in our manual may be t high for your community and that is w we have made provision to change the at the dealer's discretion. Some car ma ers, however, insist that their dealers u the same prices regardless of where the are located. This is to get uniform ser ice prices.

Flat Rate a Boon to This Man

To the Editor of Motor Age:

Ingram, Ark.

As a reader of Motor Age I have bee able to increase my business almost percent in the last year. It is due most to the flat rate charges for all wor especially on Fords and Dodge Brothe cars. My shop is located 12 miles fro a railroad, in a farming country and keep busy most every day in the yea I service a number of tractors and st tionary engines.—W. E. Throgmorton.

MOTOR AGE'S FLAT RATE FORUM

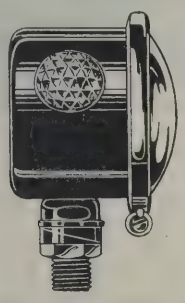
9	Install rear axle grease plug	¼ hr.	¼ hr.	¼ hr.	¼ hr.
10	Overhaul rear axle, including universal propeller shaft, differential and brakes	8 hrs.	7 hrs.	7 hrs.	7 hrs.



THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Tiffany Cowl Lamps

(Cut shown below)

'IFFANY Manufacturing Company, 42 Spring Street, Newark, N. J., offers e trade a new illuminating device in e form of the Model KL-2 Cowl Lamp. iis lamp is furnished with red and een jewels in the side and a milk white ont lens. The lamp body is of steel, ck enamel finished, with the bezel of lished aluminum. Packed one pair of mps to carton. Weight, 10 ounces. st price per pair, $2.75.

"Ivo"

A PREPARED glycerine solution called "Ivo" for use in automobile radiators s an anti-freeze compound has been put n the market by the Procter & Gamble o. In preparing this solution the rocter & Gamble Co. was guided by the ecommendations of the Bureau of Standrds at Washington as to the correct pecifications for a glycerine anti-freeze ompound. Owing to the non-evaporatng qualities of glycerine, it is said that nce placed in the radiator it will remain roughout the winter, requiring only the ddition of water from time to time.

"Boon"

A PREPARATION for keeping the hands clean when working around a ar or doing other grimy work is being ut out by the Boon Manufacturing Co., 35 Front Street, New York City. It is alled "Boon," being a solvent cream, oming in a convenient tube, which is to e spread over the hands before the work s begun. The preparation forms a film ver the hand and under the nails and hen the task is finished the film is emoved with soap and water.

Davis Never Freeze

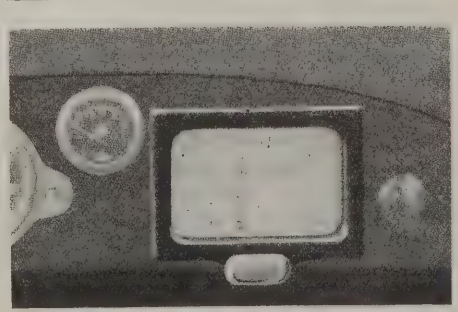
AN anti-freeze solution for automobile radiators known as "Davis Never Freeze" is being marketed by the Davis Mfg. Co., 311 Burgess Street, Pittsburgh, Pa. It is claimed that this solution may be drained off and used year after year without deterioration. The solution is used to completely fill the radiator which should be proof against leakage and if evaporation occurs, water is added. The price of this solution is $2.00 a gallon.

New Sparton SOS Jr.

New Sparton SOS Jr.

THE new Sparton SOS Jr. motor horn signal is described as being of the high frequency magnetic type having strong signal power and the same harmonious note as the large Sparton SOS model which has been on the market for some time. It is said the SOS Jr. requires no oiling or adjusting It is finished in satin black enamel and fitted with adjustable bracket. Length, 13 inches; weight, including bracket, four pounds. List price, $13.50. It is made by Sparks-Withington Co., Jackson, Mich.

Do Not Neglect Your Clerk's Schooling



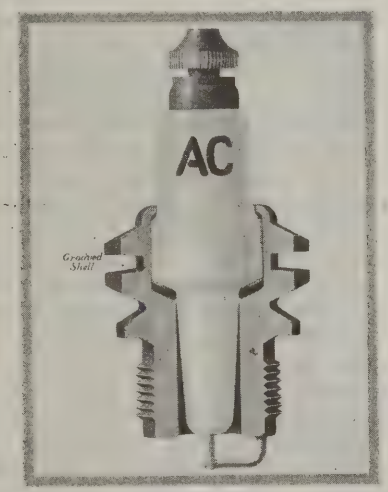
What does your sales force know about your stock, Mr. Accessory retailer?

The clerk in any store, regardless of the line, is seriously handicapped as a merchandising force if his knowledge of the stock is limited.

On the other hand if he knows the stock well he will be able to receive the trade and sell with an efficiency permitting full sway to his native selling ability.

Too little attention often is given the schooling of the clerk. Too often he is permitted to shift more or less for himself. And the clerk selling mechanical devices, more than nearly all others, should know well not only where to find an article in question but how to demonstrate it and explain its merits to a customer.

Don't neglect your clerk's education. He needs it as well as the automobile salesman.



Ullrich's Auto Clamp and Pad

New AC Spark Plug

(Cut shown below)

AN advanced design of spark plug is announced by B. de Guichard, general manager of the AC Spark Plug Company of Flint, Michigan. "The main feature of the new AC Spark Plug," says B. de Guichard, general manager of the Flint company, "is a 'hot assembly' which is accompanied by a grooved steel shell being brought to a red heat by electrical current. Pressure is applied while the shell is red, and being plastic the shell is firmly and evenly drawn against the insulator core. Perfect alignment is insured. And because the plug is assembled at a heat much higher than it will ever be subjected to in service, subsequent expansion of the metal shell cannot loosen its tense grip on the core. Compression leakage is eliminated. Along with this grooved shell and 'hot assembly' we have developed a new alloy for sparking points. This alloy gives low resistance to the flow of current, insuring full, hot spark at the gap. Third, our newly developed electrically fused Kyanite insulator retains its insulation properties at elevated temperature. A new glaze, too, has been perfected so that the insulator core is hard and smooth to minimize the accumulation of soot."

Auto Clamp and Pad

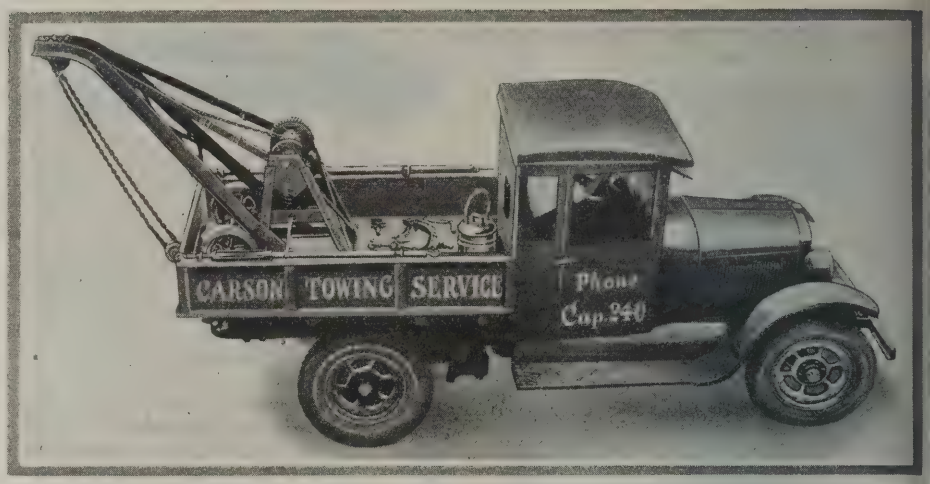
ULLRICH'S Auto Clamp and Pad is urged by the Olmsted Stylus Company, Cedar Falls, Ia., distributors, as a necessity for automobilists in those states where statutes require a registration card placed conspicuously in the driver's compartment. This device is a celluloid covered aluminum frame which clamps to the instrument board in such a way that the fastening arrangement is not noticeable. Its padded under surface prevents marring of the instrument board. A thumb screw to the fastening makes it possible to take down the frame at will for changing cars, etc. The price is $1.

GETTING MORE OUT of the SHOP

Weaver Wrecking and Service Car

Shop owners who are on the lookout for new ways to keep the shop busy and increase profits will be interested in the Weaver wrecking car.

The truck is a standard Ford 1-ton job. The inside dimensions of the body are 40 in. wide by 76 in. long, affording ample room for a wrecking crane, ambulance, towing pole and gasoline can. A shorter body, 52 in. long and of the same width is also available for ¾-ton trucks. These detachable bodies can be purchased separately from Ford dealers and can easily be applied to Ford or other cars of similar dimensions.



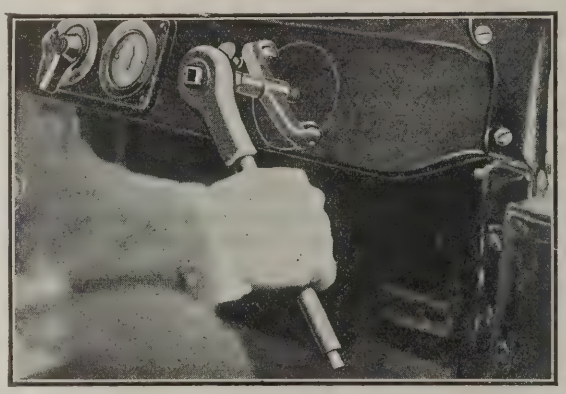
The crane is indispensable for handling general towing work and has ample strength and leverage to lift loads up to 6,000 lbs. The height of the boom can easily be adjusted by one man, using the crane's own power, and the load can be lifted by the operator while standing either on the ground or in the service car.

The ambulance is handy for minor front or rear end wrecks and can easily be run under either the front or rear axle of the disabled car. It can also be used to advantage with the crane when both wheels on the same side are out of commission.

The towing pole is used with or without the crane to prevent the wrecked car from jamming into the service car on down grades and sudden stops. Its length is adjustable and the heavy coil spring lessens shocks when stopping or starting.

The service can offers a convenient means for refueling standard cars on the road, the flexible hose readily reaching the opening of any gas tank, no matter how obstructed by tires. The can is made in two sizes: 5 gallon and 2 gallon capacity.

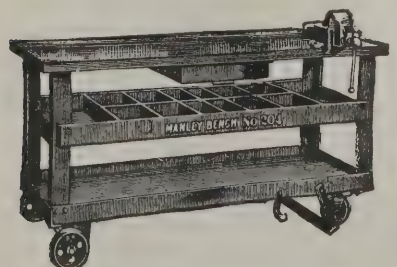
The crane, ambulance, towing pole and service can are made by the Weaver Manufacturing Co., Springfield, Illinois.



Weaver service car which is mounted on a standard one ton Ford Truck chassis

---

AC Hole Cutter



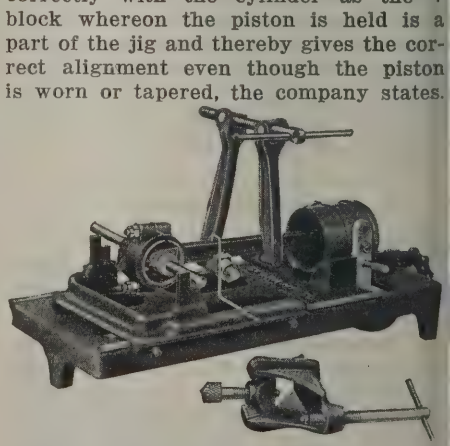
A tool has been announced by AC Spark Plug Company, Flint, Mich., for quickly and easily cutting a round hole in the instrument board for Ford cars for a speedometer installation. The tool is known as the AC Hole Cutter and lists at $1.

AC hole cutter for cutting instrument boards

Manley Portable Bench

A portable work bench for use in repair shops has been developed by the Manley Manufacturing Co. of York, Pa. The bench is substantially made with a hard wood top, partitioned shelf, and a steel drawer and it is mounted on roller bearing casters. Provision is made for locking the wheels so that the bench can not move when heavy work is being done. A saving of time is claimed when the portable bench is used as it can be brought close to the job. The Manley Portable Bench is made in two sizes, 44 in. by 16 in. and 64 in. by 20 in., prices $33 and $48 respectively.

Manley portable bench



Storm Riteway Connecting Rod and Piston Aligner

The new Storm Riteway aligning jig made by the Storm Mfg. Co., Minneapolis, Minn., provides a means of checking both for twist or bend in a connecting rod in one operation either with piston on or removed. It is universal to take all sizes and makes. It is neat in design and performs all the operations necessary to correct the error on the connecting rod without disassembling same from the piston.

One adjustable tool steel bar displaces the usual set of mandrels or bushings. Is almost instantly adjusted to all size bearings, including all under or oversizes, and it makes it unnecessary to adjust the connecting rod bolts or remove the shims.

Other important features of this device are that it shows all the inaccuracies of the connecting rod. A gage attached to the aligning part of this fixture shows where the corrections are to be made. Special tools are provided to quickly and easily bend or twist rod into perfect alignment while assembly is attached to jig.

As all pistons are relieved for expansion at the top and have a tendency to wear tapered, and some makes are cut away entirely down the side, it is almost impossible to align them with a surface plate or any one-sided device. In this new Storm Fixture the piston is aligned correctly with the cylinder as the V block whereon the piston is held is a part of the jig and thereby gives the correct alignment even though the piston is worn or tapered, the company states.

EDITORIAL

Highways of Commerce

OPPOSING the repeal of the war tax of 5 per cent on passenger automobiles, Mr. Mellon, the capable secretary of the treasury, says that the passenger cars should continue to pay this tax because the Government, through Federal Aid, expends a sum comparable to the yield of the tax each year in the construction of improved highways. The Secretary adds significantly that automobiles "should pay their own way," as if that settled it.

We have always looked upon the Government's road building program as a broad undertaking for the good of the whole country and not for the benefit of any particular class of citizen. A good system of national highways was intended to aid the flow of commerce, promote the social welfare of the people, assist agriculture, facilitate the postal service and provide communication lines for the defense of the nation in case of war. And through all these means to build up and preserve the prosperity of the country.

We readily grant that the motor vehicle is the means through which improved highways bring about the desired ends, but we maintain that the highways are built for the purposes enumerated and not merely as boulevards upon which automobile drivers may speed for the pleasure of it.

The principle of public roads is well established in this country. For generations we have held to the theory that highways should be constructed out of public funds and free for all to travel. If any other theory were put in practice it would seriously limit the country's commerce and development.

If, as Mr. Mellon appears to believe, the highways were built for automobiles and should be paid for by them, then the logical thing to do would be to go back to the archaic system whereby he who traveled paid at the toll gate.

The automotive war tax is like scattered tacks in the highway. A clean-up job for Congress.

Equipment Business Is Good

ENTRIES and preparations for the Automotive Equipment Association's annual show at Chicago indicate that this exhibition will be one of the most successful ever staged by the association. The list of exhibitors is large and many are taking more than the usual amount of space. Manufacturers will exhibit what without doubt will be the largest and most varied assortment of automotive accessories, supplies and equipment ever assembled in one place. At the same time a considerable number of new products will be announced to a waiting trade. There is lots of life in the accessory and equipment business these days and plenty of prosperity in sight for those who connect wisely and well with this business. The week of Nov. 9 will be a great market time in Chicago for the automotive equipment trade.

Service given with a smile that makes the customer smile brings him back with a friend or two.

The European Small Car

THERE is a lot of talk about the proposed production in this country of small cars of the type very popular in Europe. A good many persons in and out of the automotive industry are clamoring for a try at the "bugs" in this country.

The smallest of the European cars are rated at seven horsepower and are said to make 40 miles to the gallon of gasoline. They have four-cylinder engines. Naturally the vehicles are very light and they do not have the power in high gear that we are accustomed to expect from American motor cars.

The trade, of course, is interested in whether or not cars of this type are likely to supplant the present American design. The answer is largely to be found in the export record of American made cars. England, where a number of the small cars are produced in quantity, is a great buyer of American cars. Australia shows a decided preference for the heavier and more powerful American product. Canada, of course, uses cars of American make or American design almost exclusively. Mexico, South America and South Africa are good markets for American automobiles. In fact, the whole world, with the exception of a small section encompassed in highly congested Europe, has shown a decided preference for automobiles of the power and stamina of those developed in the United States.

Design in this country undoubtedly will trend toward vehicles of lighter weight and more economical operation, but at present there is no indication of general acceptance of the European type of vehicle.

The car owner who hates to part with his "good old bus" should be encouraged to keep it—and buy another

---

THE time to prepare for the holiday trade is now. Within a few weeks Christmas buying will be under way and then it will be too late for the dealer to reap the benefit if he has not already made preparation. A clean store well stocked with appropriate merchandise is the first requisite.

Financing Steadily Being Stabilized

Sales Show Slight Decline In Southwestern Sections

New Record for Car Production Is Indicated in September Figures

PHILADELPHIA, Oct. 28.—The West and Southwest are the weak sections so far as automotive sales are concerned, and used car conditions there are also well below par. In other parts of the country the market is in good condition, considering the season. Only a slight decline in production has been registered so far, and at most factories output is running ahead of sales. This situation is expected to continue for some time.

New companies are being added to the list of those that have concluded arrangements with financing companies to handle the instalment sales of the cars. These arrangements have the twofold purpose of bringing down financing and insurance costs to the purchaser and stabilizing the terms of down payments and the period for settling the unpaid balance. They are strengthening the automobile credit situation where support is most needed, and should help to silence the critics of the somewhat loose manner in which time sales have occasionally been handled.

Publication of the September production figures, showing that 332,759 cars and trucks were turned out at the factories that month, has inspired the prediction that a new production record will be set this year. To better the mark of 4,094,601 set in 1923, about 300,000 cars a month will have to be turned out during the remainder of the year, and from all signs this will be done.

Good business is being done by the parts and accessories firms, the original equipment manufacturers operating at a particularly high level for the season. Accessories business has shown an actual increase during the last two months, but replacement parts have fallen off, reflecting the end of the touring season.

Peerless to Bring Out New Light Six on November 1

CLEVELAND, O., Oct. 24.—A new light six model will be placed in production November 1 and will be shown on dealers' floors throughout the nation about November 21, it was announced here today by officials of the Peerless Motor Car Company, following a quarterly meeting of company directors.

Reports made at the meeting showed, among other things, continuation of financial progress which the company has been making in past months." While no figures were made public, it is understood that the operations of the last quarter were satisfactory. Sales for the quarter were reported 70 per cent greater than sales for the corresponding period in 1924.

It also was announced following the session that listing of the company's stock on the New York stock exchange is under official consideration.

MISSOURI PUSHING ROADS

JEFFERSON CITY, Mo., Oct. 24.—Missouri has completed 5,405 miles of its 7,600-mile good roads program at an expenditure of $67,997,685, according to figures of the highway department to October 1. The Missouri system is claimed by the highway engineers to be the largest in the nation and is being pushed rapidly to completion. During the last year 739 miles of concrete paving; 1,397 miles of graveling; 2,176 miles of grading preparatory to surfacing; 98 miles of combination concrete and gravel; and 93 miles of penetrating macadam roads were finished.

Studebaker Announces 3 New Models of "Big Six"

SOUTH BEND, Ind., Oct. 26.—New body models of the Studebaker "Big Six" are now being produced on a 120-in. wheel base chassis, the company announced today. Each of these three models seats five passengers and the models are:

Duplex Phaeton	$1575
Club Coupe	1750
Sedan	1995

All Studebaker models on the 127-in. wheel base "Big Six" chassis are continued.

Studebaker has announced that all its models are now fitted with oil and gasoline filters and air cleaners as regular equipment.

The bodies on the 120- in. wheel base "Big Six" are finished in lacquer. The closed models are upholstered in wool fabric and the open models in leather. All these models have artillery wheels, shock absorbers, automatic windshield wipers, sun visors, cowl ventilators, rear view mirrors, rear traffic signals, dash gasoline gages, cowl lamps, clocks and ignition locks.

CHAMBERLAIN MARMON SALES MANAGER

INDIANAPOLIS, Oct. 27.—The appointment of Percy E. Chamberlain as sales manager of the Nordyke and Marmon Co., makers of the Marmon car, has been announced by H. H. Brooks, general sales director of the company. Mr. Chamberlain is widely known among automobile dealers throughout the country because of his advocacy of flat rate and pioneer work in behalf of that system of service. Several years ago he was general manager of the R. R. Hall Cadillac Co. of Denver.

General Motors Scouts View That Durant Wants Control

Purchase of 51 Per Cent of Voting Stock in Open Market Is Held Impossible

NEW YORK, Oct. 24.—Out of the recent advance in General Motors stock on the New York Exchange from a low for the year of 64⅝ to a high on Oct. 17 of 137 has risen the report that William C. Durant is struggling with the Morgan-duPont interests to regain control of the General Motors Corp.

In the Street it is said that Durant and some other wealthy operators, believed to be associated with him, have been steady buyers of General Motors for at least six months, with the single purpose of winning back the control which he lost in 1920.

At the General Motor offices the idea that Durant could possibly accomplish his alleged purpose in the open market was scouted as absurd, and two points were emphasized—that there were at least 60,000 stockholders who could not be persuaded to relinquish their holdings unless the price was pushed far above even the high of last Saturday, and that it was Durant himself who made the agreements with the interests which succeeded to his control of the corporation five years ago.

In the Street the conservative view is that Durant could not amass sufficient power to win a battle for control against the Morgan and duPont interests. To accomplish his alleged purpose Durant would have to acquire control of 51 per cent of the common stock, in which the sole voting power lies.

PARTS PRODUCTION SOON

FULTON, Ill., Oct. 24.—The Illinois Metal Products Company, recently organized with $15,000 capital through the merger of the Clinton Kelly Manufacturing Company of Erie and the Fulton Manufacturing Company, expects to begin production about mid-November of a line of automobile accessory items that have had wide sale in retail circles. Clinton Kelly will be in charge of production and others interested in the plant are George H. Reimer, F. W. Dana, A. D. Cowan and E. C. Parker.

NEW HUDSON DEALERS

COLUMBUS, Oct. 24.—According to an announcement just received from the Walter B. Zimmerman Co., central Ohio distributor for Hudson and Essex motor cars, the following are dealers in Columbus:

George Byers & Sons Co., Hornbeck-Yates Motor Co., The Henry Motor Co., Johnson Bros., Kaiser Motor Co., Lindimore Motor Sales, Curtin-Frye Motor Co., Van Dorn Motor Co., and the E. H. Huffman & Sons Co.

Dealers Advised to Prepare for Keen Used Car Market

Detroit Manufacturers Warn That Trade Analysis Must Be Followed Closely

DETROIT, Oct. 24.—Manufacturers ere are advising their dealers and distributors throughout the country that ney can expect keener competition in he used car field and that the best anner to meet such competition is to tudy their market thoroughly, then buy nd sell accordingly.

Reports here which have been received om different sections of the country how that the Southwest and West are ot enjoying the best of sales, and that e used car business as a whole is not good. In the remaining sections it holding its own and in many cases oing quite well.

Until spring, the competition will be ost keen and those engaged in the used ar business are being advised to buy nly those makes and models of cars at are in demand. There have been ases in sections where the closed car as the most popular that dealers have ught open models, equipped them with de curtains and found ready buyers. ut at the bottom, the dealer is told study his market from all angles.

Used car men, too, are becoming bet- r merchandise. Since 1922 there has en a gradual improvement. This year e number of sales have increased conderably over those of two years ago hile the losses have shown decreases. ailures also are on the down path and e situation is taking on a rosy hue.

Nash Demand Causes More Additions in Factory Space

KENOSHA, Wis., Oct. 24.—The persistent increase in demand for Nash cars as necessitated further factory extenons at the Kenosha plant of the Nash otors Company. Five new buildings ith a total floor area of 94,428 square et are now being erected and will be ady for occupancy early in November. hey will house the pattern shops, the ol room, the motor parts departments, nd the superintendent's quarters, and ditional heat treating equipment.

These additional manufacturing facilies, together with the new Nash forge hich has been enlarged 50 per cent, will able Nash Motors to increase producon at least 100 more automobiles per y over the present production capacity, cording to C. W. Nash, president of the mpany.

"This building program," said Mr. ash, "has been going on for more than year. We have added $1,500,000 worth machinery and equipment, and more an 300,000 square feet of floor space, t it looks as if we will have to keep ght on building if we expect to keep with the constant increasing demand r Nash cars. For thirteen consecutive onths our sales have shown an average monthly increase of more than 82 per cent over the corresponding months of the previous year."

Paige-Detroit Has Developed New Car

DETROIT, Oct. 26—Development work on the new addition to the Paige and Jewett lines, which is to be announced about the time of the New York Automobile Show, has been completed and at present revisions are being made in the facilities at the West Warren plant to accommodate the production of the new job. Although all machine shop equipment and assembly are concentrated at this plant, no new buildings are required for the increased production schedule which will be brought about by the addition of the third member to the lines already established.

According to officials of the Paige-Detroit Motor Car Co., the new smaller six-cylinder car, as yet unnamed, will incorporate features of acceleration and braking ability which conform to the driving practice growing out of the increased congestion of traffic on hard highways and the block system of traffic control. In addition to these and a number of other mechanical refinements, closed bodies which are to comprise the entire production will be extremely roomy with an unusual freedom of vision.

NEW LOCOMOBILE MODEL

BRIDGEPORT, Conn., Oct. 26.—The Locomobile Co. of America, Inc., has announced a new car known as the Model 90, equipped with custom bodies and selling from $5500 to $7500 according to type. The company announces that the new model 90 is an important part of a complete line which comprises the Model 48, Series 10, and the Junior Eight, the light straight eight built by Locomobile.

STEWART HAS NEW TRUCK

BUFFALO, N. Y., Oct. 26.—A six cylinder, 1½ to 2 ton truck is now being produced by the Stewart Motor Corp. It is made in two wheel bases, 145 in. and 160 in., which lists at $1695 and $1735 respectively. The weight of the shorter chassis is 3350 lbs. The power plant has a 3¼ in. bore and a 4½ stroke, L head engine with a removable block and cylinder head. Generators, starters, and ignition are all of Remy make, and the carbureter is made by Zenith. The clutch is a dry plate, multiple disc type and is assembled with the three-speed transmission and the engine to form a unit power plant. The drive to the semi-floating, helical bevel rear axle is through a 2 in. two piece tubular shaft with three metal universal joints. The service brakes are of the internal expanding type and are on the rear wheels, while the hand brake is of the contracting type and is mounted on the rear of the transmission shaft.

Miller Rubber Stockholders Approve of Reorganization

Common Stock to Be Split to Five New Shares for One of $100 Par Value

AKRON, Oct. 24.—Stockholders of the Miller Rubber Co. at a special meeting, unanimously approved the reorganization plan recently proposed by directors, providing for a split up in the common stock on the basis of five new no par common shares for one of the $100 par value shares.

Sale of $4,000,000 par value of the unissued 8 per cent cumulative preferred stock of the company at $103.50 also was authorized. This brings the total outstanding preferred stock to $12,500,000, leaving $7,500,000 unissued.

Under the new plan Miller now has a total authorized issue of 600,000 shares of capital stock, 400,000 of which are common without par value and 200,000 8 per cent cumulative preferred. Terms and provisions of the old preferred stock are not changed.

A good demand for the new issue was reported from investors, and practically all the shares have been sold, it is announced.

STAR PRICES SOON

NEW YORK, Oct. 24.—Announcement of the prices at which the new Star line will be sold will be made next week. At the Durant offices here it was said today that the first 250 of the new models will be shipped to zone offices soon. Every effort is being made to supply dealers with the cars before the announcement of the new models is made to the public. This announcement will be made about Nov. 19 so that dealers probably will not receive their cars before Nov. 1.

Schwab Inspects Chicago Branch of Stutz Company

CHICAGO, Oct. 24.—Charles M. Schwab, chairman of the board of the Bethlehem Steel Corp. and principal stockholder and member of the board of the Stutz Motor Car Co. of America, Inc., was one of the principal speakers at the conference on education and industry at the University of Chicago this week. Following his address at the university, Mr. Schwab made a tour of inspection of the Stutz Chicago Factory Branch, Inc., under the personal guidance of Floyd D. Cerf, president of the branch. Fredrick E. Moskovics, president of the Stutz company, also was a visitor at the branch during the week.

NASH DEALERS MEET

DECATUR, Ill., Oct. 24.—Six counties were represented at the Nash salesmen's gathering here and 15 salesmen participated in the discussions. G. A. Hall, of the Chicago office of the Nash, spoke and dealers entered a roundtable discussion of their problems.

Fifteen Companies Sign for Space at Motorbus Show

Three Conventions Will Be Held in Detroit at Same Time as Big Exhibition

DETROIT, Oct. 24.—Fifteen automotive firms whose business takes them into the motorbus field have signed for 14,000 square feet of exhibition space at the First National Motorbus Show to be held in Grindley Hall November 16-21, inclusive, in this city.

Among those who have signed up for space at the show are: Denby Motor Truck Company, Continental Motors Corporation, Detroit Street Railways, Auto Body Corporation, Gotfredson Corporation, Graham Brothers, American National Omnibus Corporation, Studebaker Corporation, Reo Motor Truck Company, Commerce Motor Truck Company, Mack Motor Truck Corporation, Yellow Truck & Coach Manufacturing Co., Beens & Crenther, English & Mersick, Bragg-Kleisrath Corporation.

During the time the show is being held, the Michigan Bus Owners Association, the American Association of State Highway officials and the Society of Motor Transportation Engineers will hold conventions in the city. Invitations have been sent to members of the National Bus Owners' Association urging them to visit the city during the period of the show.

At a meeting of the executive committee held recently, Charles E. Stone chief engineer of the People's Motor Coach, was named chairman of the committee and George D. Wilcox, automotive engineer of the Detroit Street Railways, vice-chairman and R. B. Gotfredson, vice-president of the Gotfredson Corporation, treasurer.

L. H. Saunders, vice-president of the D. A. D. A. is chairman of the finance committee. He will be assisted by C. L. Grainger, general manager of the Commerce Motor Truck Company and W. D. Edenburn, secretary of the Michigan Automotive Trades Association.

Cleveland-Chandler Retail Financing Plan Is Changed

CLEVELAND, O., Oct. 24.—A new plan for financing retail time sales of Cleveland and Chandler automobiles was announced here by officials of the two companies.

The new plan, sponsored by the Commercial Investment Trust, Inc., of New York, is similar in many respects to the plan recently established by Dodge Brothers with the aid of the same New York financial institution.

Briefly, the new policy provides for the purchaser paying 8 per cent interest on deferred payments, plus 80 per cent of the local fire and theft insurance rates to cover 90 per cent of the retail sales price. Twelve months is allowed for payments.

Heretofore the Cleveland company's plan has been to allow a lump sum for interest and insurance over a period of one year while payments were being made. A plan almost identical to this had been in operation by the Chandler Company.

Here's a Horse on Barnum

DANVILLE, Ill., Oct. 24.—H. W. Orr of the Orr Battery & Electric Company, placed a number of $1 bills in his window, attached to a huge placard, announcing that they would be sold at 75 cents each. Scores of persons stopped, read the sign, smiled and went on; a city detective examined the bills and announced them highly clever imitations; one Chicago printer invested in one. "I'll try anything once," he said. The bills were genuine and Mr. Orr is convinced that the public is suspicious of bargains if the price is apparently too low.

NEW REO CHAIR BUS

LANSING, Mich., Oct. 26.—The Reo Motor Car Co., has announced a new 21 passenger chair coach to sell for $6250, at the factory. This coach is mounted on the model W chassis, having 176 in. wheel base, which permits a body length from the dash of 215 in. The outside width of the body is 87½ in. and the inside height is 62 in. A 3⅞ in. bore and 5 in. stroke, 6 cylinder valve-in-head motor is used which has a rated horsepower of 24.3. The rear axle is of the semi-floating type with a reduction ratio of 5.71 to 1. Three universal joints are provided between the transmission and the rear axle. The coach has a turning radius of 31 ft. and is mounted on 32x6 steel disc wheels, dual type tires being used on the rear.

NASH TO CHANGE FINANCING

KENOSHA, Wis., Oct. 24.—Nash Motors Co. has concluded a new arrangement with the Commercial Investment Trust Co. of New York for the financing of Nash sales. The plan is said to mean lower rates than were formerly available. It is understood that the terms are approximately the same as under the Dodge Brothers agreement with the trust company, calling for 8 per cent on the unpaid balance with fire and theft insurance at about 80 per cent of the local conference insurance rates.

FORD PLANT EXPANDS

DES MOINES, Oct. 24.—The local Ford assembly plant has increased its force 200 men, according to O. H. Perkins, manager, bringing the total force to 1,600, producing 286 cars a day to meet the dealers' demand for the new models. The Des Moines plant is not only filling the Iowa territory but shipping to St. Louis, Oklahoma City, Los Angeles and Denver. Before the last increase in the force the plant was operating at 1,000 hours overtime a day as the result of the rush order. At the present the 1,600 man force is divided into two shifts.

Reeves Sees New High Mark in 1925 Automobile Output

Head of N. A. C. C. Believes 4,200,000 Cars Will Be Produced by End of Year

NEW YORK, Oct. 24.—Automobile production will reach a new high mark this year, probably 4,200,000 passenger cars, trucks, busses and taxicabs, according to Alfred Reeves, general manager of the National Automobile Chamber of Commerce. The highest previous yearly total was 4,094,601 in 1923.

Production in the United States and Canada during the first nine months of 1925 was 3,165,942, or 928,659 less than the total for 1923. In order to reach 4,200,000 for 1925 the production will have to average 309,553 per month during the final quarter.

Government figures show that September production in the United States and Canada was 332,759, or 272,396 passenger cars and 60,363 trucks, of which 262,036 passenger cars and 57,883 trucks were produced in the United States and 10,360 passenger cars and 2,480 trucks in Canada.

Total truck production in both countries show a September gain of 26 per cent over April, the previous high month this year, and a 60 per cent increase over August, while total passenger car production rose from 221,756 in August and decreased from the high of 391,302 in April. The total of 332,759 passenger cars and trucks produced in both countries in September was a decrease of 24 per cent from the high month of April, when the output was 439,124, and a decrease of 73,360 from the output of 259,399 in August.

G. M. A. C. Business Volume More than Billion Dollars

NEW YORK, Oct. 27.—General Motors Acceptance Corporation, the financing organization of General Motors, announced today that on October 8 its volume reached the billion-dollar class—a total of $1,000,105,782, having been financed from inception, January 27, 1919, up to the close of business on the date mentioned.

The figures for the various years follow:

1919	$ 20,880,088
1920	104,102,634
1921	77,457,029
1922	135,256,702
1923	218,616,114
1924	253,649,315
1925—Oct. 8	*190,143,000
	$1,000,105,782

*Preliminary figures for foreign business.

Even more significant, however, than the huge total of business is the fact that it has been transacted on such a plane of good credits, that the losses incurred have been extremely small. The loss experience on all classes of paper to August 31st, amounted to only $1,299,207 or .135 per cent of the volume transacted.

Details of Tire Dealers' Convention Are Arranged

National Association Announces Tentative Program for St. Louis Session, Nov. 17-19

ST. LOUIS, Oct. 24.—Announcement of the details of the tentative program for the National Tire Dealers' Association convention in St. Louis, November 17-19, has been made in New York by George J. Burger, president of the association.

The program as announced by Mr. Burger follows:

TUESDAY, NOV. 17

10 a. m.—Registration at Headquarters—Hotel Chase. Validation of railroad certificates and distribution of receipts for same.

11 a. m.—Combined meeting at Hotel headquarters—board of directors. National Tire Dealers' Association and convention committee, Associated Tire Dealers of St. Louis.

2 p. m.—Opening of convention, George J. Burger, president National Tire Dealers' Association, presiding. Prayer—Reverend Ivan Lee Holt, pastor St. John's Methodist Episcopal Church, St. Louis. Greetings—Mayor Victor J. Miller. Address of Welcome—A. P. Woehrle, president Associated Tire Dealers of St. Louis. Announcement of entertainment—C. V. Quinn, chairman convention committee. Response, George J. Burger. Address—Speaker to be selected. Address—R. M. Hudson, chief, division of simplified practice, Department of Commerce, Washington.

4 p. m.—Business meeting. Reading of 1924 convention minutes. Appointment of committee.

WEDNESDAY, NOV. 18

9 a. m.—Address—Paul L. Palmerton, chief, rubber division, Department of Commerce, Washington. Executive Business meeting. Report of president. Report of board of directors. Financial report. Report of district deputies. Report of truck tire dealers' committee. General discussion of business and new business.

2 p. m.—Trip through Cupples Company tire factory and sight seeing trip.

7:30 p. m.—Banquet and entertainment.

THURSDAY, NOV. 19

9 a. m.—Business meeting. Unfinished business. Nomination of officers and directors.

2 p. m.—Business meeting. Election of officers. Designation of 1926 convention city. Closing of business meeting followed by special meeting of newly elected officers and directors.

7:30 p. m.—Banquet and entertainment. Address by George J. Burger, president presiding. Address by newly elected president. Address speaker to be selected. Address—Robert E. Lee, manager St. Louis Automobile Dealers' Association.

Texas Dealers Spend Day Planning Sales Campaigns

DALLAS, Tex., Oct. 24.—Automobile distributors had their dealers in Dallas last week to discuss campaigns for business for the remainder of the year. Dealers from 119 counties spent the day discussing the outlook for Chryslers with William Morris, distributor.

Dodge Brothers dealers from a large territory were here conferring with E. Gordon Perry, distributor. These dealers reported brisk business with outlook brighter for the remainder of the year.

Hudson-Essex dealers from a large number of counties were in conference with Adam Ferguson, distributor. The Hudson-Essex business is said to be the best in the history of auto merchandising in Texas.

The Peerless, Studebaker, Nash and Buick dealers were also in the city conferring with their distributors. In every instance the dealers declared the sale of new cars is increasing and business should be brisk for the remainder of the year.

Delegates Will Hear Addresses in Own Tongue

NEW YORK, Oct. 24.—Nearly a score of languages are expected to be represented by the delegates to the second World Motor Transport Congress to be held at Grand Central Palace Jan. 9-16. At the first Congress in Detroit many foreign delegates were at a distinct disadvantage because English was the language of the sessions. This difficulty will be obviated here. Translators in booths adjoining the assembly room will receive the speeches in English through microphones and relay them in various languages through ear phones provided for all delegates not speaking English. Each delegate may choose the phones delivering the translation in his own language. This is expected to do away with the delays caused by translation in the usual manner at the first Congress.

PIERCE SALES INCREASE

BUFFALO, N. Y., Oct. 24.—President Myron E. Forbes of the Pierce Arrow Motor Car Company issued a report today on the sales of the company for the first nine months of 1925. For the first nine months of 1925 the total increase in passenger car shipments is 146 per cent. The third quarter of the year marked the shipment of passenger car units representing an increase of 91 per cent over shipments during the same period in 1924.

CAMERON HEADS BRANCH

DALLAS, Tex., Oct. 24.—G. B. Gillespie, branch manager for the Peerless Motor Company at Dallas, announces the appointment of Walter C. Cameron as retail sales manager for the branch. Mr. Cameron comes to Dallas from Memphis, where he was connected with distribution of Dodge cars.

OREGON FEES INCREASE

SALEM, Ore., Oct. 24.—Fees collected by the secretary of state for the registration of motor vehicles of all kinds, chauffeurs and operators for the period Jan. 1 to Sept. 15, 1925, inclusive, amounted to $5,234.034.67, an increase of $562,830.07 over the collections for the same period of 1924.

Car Makers to Cut Delivery Price if Tax Is Repealed

Every Automobile and Truck Builder Guarantees Public Full Benefit of Action

COLUMBUS, O. Oct. 24.—Lower delivered prices on all makes of automobiles and commercial vehicles are guaranteed by the car and truck manufacturers of the country as soon as the federal war excise taxes on motor products are repealed, according to a letter from the National Automobile Chamber of Commerce to the farm organizations, made public today.

The automobile makers have been campaigning for the removal of the Federal war taxes on motor products, stating that they are a burden on the consumer.

The question of whether the consumer would benefit from such tax repeal or whether the saving would go into the pocket of the manufacturer was raised by L. J. Taber of the National Grange, the American Farm Bureau Federation and other groups whom the automobile makers have been addressing.

A unanimous reply that the cost of vehicles will be lowered to the consumer to the full extent of the tax revision came from every plant in resounse to a query by H. H. Rice, chairman of the Taxation committee of the National Automobile Chamber of Commerce who took a poll of the motor manufacturers of the country.

PLAN TRADE EXCURSIONS

PORTLAND, Ore., Oct. 24.—Portland automobile dealers have announced a trade excursion once each month hereafter to communities within a radius of 100 miles of Portland. The first such trade excursion will be to Hood River and The Dalles on Oct. 28.

Dyer Motor Theft Act Is Upheld by U. S. High Court

WASHINGTON, Oct. 24.—The validity of the Dyer national motor vehicle theft act, was upheld by the United States Supreme Court this week. Norman T. Whitaker, a lawyer, of Washington, was convicted and sentenced to Leavenworth penitentiary for two years on a charge of violation of the act. He appealed on the ground of illegal imprisonment.

Counsel for Whitaker insisted the law provided specifically that any violator "may be punished in any district in or through which such motor vehicle has been transported or removed by such offender."

The stolen vehicle in the case was driven from New Jersey to California and Whitaker denied that he went through Kansas on the trip and his imprisonment at Leavenworth was therefore unlawful. The Supreme Court held, however, that his place of servitude was immaterial in-so-far as the application of the act is concerned.

General Motors Offers New Capital for Vauxhall Control

Negotiations for Purchase Completed and Stockholders Will Now Decide Plan

PHILADELPHIA, Oct. 24.—According to cable reports from London, negotiations by the General Motors Corp. of Detroit for control of Vauxhall Motors, Ltd., a British concern, were said to be completed. Under the agreement, the American company would obtain control of the English concern, and furnish it £300,000 new capital.

If the agreement is approved by Vauxhall shareholders, each will receive 6 per cent preference shares and fourteen shillings cash for each two existing shares of nominal value of ten shillings. Thus, £300,000 of existing Vauxhall capital would become 6 per cent preference, and new ordinary capital for an equal amount would be created to rank behind it.

Ordinary shares of Vauxhall rose sharply in London on the report. Net profits for the last two years were £50,000. The company was formed in 1914 with an issued capital of £600,000. In incurred heavy losses in 1921 and 1922, and in June last year the capital was reduced to £300,000 by writing off as loss ten shillings from each original pound sterling. Last week, the company issued £155,990 of 7 per cent debenture stock to pay a bank draft. The announcement of the negotiations was made to stockholders in a circular signed by Thomas Mackenzie, secretary of the company.

Like most British companies, Vauxhall, Ltd., turns out a rather extensive line of cars. It comprises a 14 hp. 4-cylinder model, with L-head engine; a 22 hp. 4-cylinder model, with valve-in-head engine; a 23 hp. 4-clinder model, with valve-in-head engine; and a 24 hp. 6-cylinder model, with single sleeve valve engine, the last-mentioned being a recent addition.

Farm Buying Power Gains 7.7 Per Cent This Season

WASHINGTON, Oct. 24.—Farm buying power this year, 1925-26, and consequently the ability of farmers to more completely motorize their equipment is 7.7 per cent higher than the 1909-13 period and 10.5 per cent higher than the average from 1922 to 1925, according to announcement just made by the Agricultural Publishers' Association.

Another reason why the farm field offers an exceptional sales opportunity, it is stated, is the complete national spread of farm prosperity.

Farm cash income is now estimated, says this same authority, to be several million dollars higher than last year's mark of $10,335,000,000 and farm buying is predicated on an enormous scale. Farmers are replacing their operating equipment, modernizing their homes and carrying out necessary building programs.

NEW MARMON DEALERS

INDIANAPOLIS, Ind., Oct. 24.—A large number of new distributors, dealers and associate dealers, representative of various sections of the country, have been signed by the Nordyke & Marmon Company in the last few weeks.

New dealers are as follows:

Carver-Coon Motor Sales, Wyandotte, Mich.; Leach Bros., Castine, Me.; Nash-Miller Motor Co., Englewood, N. J.; Passaic Motor Sales, Passaic, N. J., Bester-Long Co., Hagerstown, Md.; Dortchester Motor Co., Inc., Yonkers, N. Y.; Osage Overland Co., Pawhuska, Okla.; Paige-Jewett Sales, Hillsdale, Mich.; Ross C. Scupholm, Port Huron, Mich., The McElravy Bros. Motor Co., East Liverpool, O.; Evans & Gifford, Vero, Fla.; Green Motor Co., Ft. Lauderdale, Fla.; Willard McAllister Co., Chicago, Ill.; Nevada Marmon Co., Reno, Nev.; J. C. Madigan, Houlton, Me.; Red Dowell, Yuba City, Cal.; Lostro Auto Sales Co., Athens, O.; Becker Bros., Marietta, O.; Tatum & Hoylman, Clifton Forge, Va.; Payne & Dillon, Lynchburg, Va.; Colorado Motor Car Co., Pueblo, Colo.; and E. D. Baker, Zanesville, O.

Charlotte Ford Plant Is Operating at Capacity

CHARLOTTE, N. C., Oct. 24.—The Charlotte assembly plant of the Ford Motor Company increased its operations to capacity, employing 1,200 men and assembling slightly more than 300 cars per day, according to an announcement by branch officials. It was explained that almost no reduction is being made in the number of cars sold and undelivered. Within a week after the new models were announced in August, the branch received orders for more than 10,000 cars.

At least 20,000 cars would be needed to meet the existing demand and provide the dealers of North Carolina and South Carolina, who are served by this branch, with a satisfactory reserve stock, according to the announcement. Approximately 7,000 cars would be needed to provide that reserve, which has been completely exhausted by the recent demand, following the announcement of the new models.

The branch plant is working day and night, and general business conditions, according to official reports, are the best in the history of the branch.

JANESVILLE HAS BRANCH

MILWAUKEE, Oct. 24.—A branch of the Martin-Parry Co., commercial body manufacturers, has begun operations at Janesville, Wis., in the building formerly used by the Robert Buggs Motor Sales Co. The Janesville branch is the forty-ninth opened by the company in various parts of the country. J. T. Frost, who has been with the Martin-Parry branch at Flint, Mich., will be supervisor of the Janesville branch, and James Hanson, formerly of the Milwaukee unit of the company is shop foreman. R. A. Weber, also of Milwaukee, will be sales representative in Janesville territory.

Chevrolet Engineer Predicts Small Car for Future U. S.

Chandler Official Also Tells S.A.E. That America Demands Comfort With Compactness

CLEVELAND, Oct. 24.—O. E. Hunt, chief engineer of the Chevrolet Motor Co., of Detroit, told members of the Cleveland section of the Society of Automotive Engineers at their October meeting that a 1,000 pound three-passenger automobile may be the future American small car.

He also informed his auditors that in his judgment, the future small car will be a six cylinder one, if the engineers can not take the vibration out of the four cylinder car.

The speaker asserted this would be the development in the industry in the next few years, because the American public is demanding a small car with the facilities for comfort of a big car. The small car, in placing an automobile at the disposal of every family, has become the most important problem in the automobile industry, says Hunt. It is no longer a question of cheaper price, but a better car for the same price.

There were persons in the audience of engineers, who have been wondering how the American car owners would take to the small popular priced cars that are so popular in Europe. To these Mr. Hunt made the statement that there never would be a market in America for the European, small and low priced car, because our people expect better performance in a car than the European cars give.

A. H. Frauenthal, chief inspector for the Chandler Motor Car Co., was asked to discuss the address given by Mr. Hunt. He agreed with the speaker of the evening about the development of a small car, and stated that he was looking forward to the time when there would be a tremendous demand for a small car for persons to ride to and from their occupations, and to use for errands that must be performed quickly.

HELM RESIGNS AS MANAGER

DETROIT, Oct. 24.—C. J. Helm, for the last two years secretary and general manager of the Acme Motor Truck Company, has resigned although remaining a member of the board of directors. Mr. Helm joined the company when it was first organized and was secretary, sales and advertising manager for eight years before taking over the duties of general manager and secretary.

HOOD BACK AT DESK

DETROIT, Oct. 24.—P. W. Hood, vice-president in charge of sales for the Timken-Detroit Axle Company has returned to his desk after a four months vacation due to ill health. Mr. Hood joined the company in 1911 and was made sales manager in 1919. He was appointed vice-president in charge of sales the first part of 1923.

Rubber Stocks Are Larger Oct. 1 This Year Than Last

Survey of Department of Commerce Accompanies Fifth Rise in Prices

NEW YORK, Oct. 24.—Announcement of the fifth advance in tire prices this year, with crude rubber having returned from a drop of about 25 per cent to a spot price of $1.02, is accompanied by the report of the third semi-annual survey by the Department of Commerce, showing that stocks of casings, tubes and solid and cushion tires held by dealers in the United States on Oct. 1 were much larger than the figures for Oct. 1 last year.

This report shows that 82,432 dealers on Oct. 1 this year had on hand 1,857,862 casings, 3,210,384 inner tubes and 45,176 solid and cushion tires, compared with 63,395 dealers reporting 1,402,879 casings, 2,197,553 inner tubes and 30,538 solid and cushion tires on hand Oct. 1 last year.

An interesting feature of the survey is that 88.67 per cent of dealers reporting on Oct. 1 last had less than 100 casings on hand compared with 91.65 per cent on Oct. 1 the previous year.

Production of high pressure inner tubes in August, according to the October report of the Rubber Association of America, Inc., was 4,436,578, an increase of 139,083 over the July total, while shipments decreased from 5,357,295 to 4,102,160. Production of balloon inner tubes decreased from 1,360,719 to 1,276,717 and shipments fell from 1,497,747 to 1,089,752. Cord casings production rose from 2,181,645 to 2,409,070 and shipments decreased from 2,497,160 to 1,999,548.

NEW MOON DEALERS

ST. LOUIS, Oct. 24.—Moon Motor Car Co. has expanded its sales organization by adding 14 distributors and seventy-one dealers. A list of the dealers added follows:

Alexopulos Ellis, El Monte, Cal.; Fowler & Abbott, Los Angeles; Kemble Bros., Los Angeles; Lehigh Motor Co., Los Angeles; Girola Bros., Oakland, Cal.; Tower & Leveridge, Santa Anna, Cal.; W. J. Booth, Ventura, Cal.; Diana-Moon Motor Co., Pueblo, Colo.; Nichols Auto Sales Co., Dayton, Fla.; H. H. Scribner, Eustis, Fla.; Robert Hutchinson & Son, Carpron, Ill.; H. J. Egger, Centralia, Ill.; Auditorium Motors, Chicago; Capitol Motor Sales, Chicago; G. Goode Motor Sales Co., Chicago; Logan Square Auto Sales Co., Chicago; Leghley Motor Sales Co., Chicago; Peak Motor Sales Co., Chicago; Werner Bros., Chicago; Wood Motor Sales, Chicago; Fred Fehrkon, Creta, Ill.; Mitchell Motor Co., Le Porte, Ill.; Harry Kipnis, Savanna, Ill.; Modern Service Co., Streator, Ill.; Charles J. Nissen, Utica, Ill.; Parker Motor Sales Co., Wheaton, Ill.; Phillip Pheiffer, Huntington, Ind.; James Crook, Chanute, Kans.; H. H. Breschinski, Goodland, Kans.; Leonard Motor Co., Leavenworth, Kans.; Geo. O. Swiercinsky, Belleville, Kans.; Morgan-Rarick, Lawrence, Kans.; Ironwood Storage Garage, Ironwood, Mich.; J. W. Schmidt, Anoka, Minn.; A. N. Company, Shelby, Miss.; F. C. Welliver, Corder, Mo.; C. A. Welling, Webster Groves, Mo.; J. Jay Vandergrift, W. Atlantic City, N. J.; Sowder Motor Co., Roswell, N. M.; Chas. L. Sipperley, Albany, N. Y.; International Garage, Niagera Falls, N. Y.; Geraghty & Haynes, White Palins, N. Y.; E. C. Reineke & J. W. Johnson, Fargo, N. D.; Summit Auto Co., Akron, O.; Haulk-Leatherman Co., Canton, O.; Klinker Motor Sales Co., Springfield, O.; The Brier Hill Motor Sales Co., Youngstown, O.; Robin Reed, Corvalis, Ore.; Howard Ackerman, Eugene, Ore.; Terminal Auto Co., Eugene, Ore.; McKenzie & Howton, Freewater, Ore.; Bowman Auto Co., Marshfield, Ore.; Mohn Bros., Akron, Pa.; R. H. Koch Garage, Allentown, Pa.; Carlisle-Keystone Motor Co., Carlisle, Pa.; Peerless Harrisburg Co., Harrisburg, Pa.; Wright Motor Sales Co., Hazelton, Pa.; Eureka Sales Co., Kingston, Pa.; Fisk's Garage, Lancaster, Pa.; W. E. Dentler & Son, Milton, Pa.; E. A. Slape, Philadelphia; Berks Auto Sales & Service, Inc., Reading, Pa.; Dewey L. White, Scranton, Pa.; Frank H. Graeber, Peerless Garage, Shamokin, Pa.; J. K. Shafer, Stoudsburg, Pa.; T. R. Atkinson, Upland, Delaware County, Pa.; Culver's Garage, Williamsport, Pa.; C. A. Wolf, York, Pa.; F. S. Plaeten, Aberdeen, S. D.; McKenzie & Howton, Walla Walla, Wash.; Wikstrom & Widner, Yakima, Wash.; Reo Motor Sales Co., Welch, West Va.; Rinden Garage, Madison, Wis.; Joseph E. Engels, Mineral Point, Wis.; W. H. Moon, Rosendale, Wis.

Wins First Prize

Here is Mitchell Gaucher, salesman for the Detroit branch of the Federal Motor Truck Company, who won first prize in a recent national sales contest conducted by the company. He sold $110,069.82 worth of Federal products during June and July, the months of the contest. This is the best individual selling record in the history of the company

CHADBOURNE SUCCEEDS KILBURN

NEW YORK, Oct. 24.—Dean K. Chadbourne has been appointed general manager of the Westinghouse Electric International Co. to succeed E. D. Kilburn, recently elected president of Westinghouse Electric and Manufacturing Co.

CORRECTION

In a recent description of the new Diana Eight, built by the Moon Motor Car Co., St. Louis, Mo., the diameter of the piston pins was incorrectly given as 5/64 in. The correct diameter is 55/64 in.

Michigan Car Titles Gain 3,215 Over Last September

New Trucks Also Show Increase of 635 as Compared to Same Month Year Ago

DETROIT, Oct. 24.—Three thousand two hundred and fifteen more new passenger cars were titled in Michigan during September than for the same month in 1924, figures just released here show.

September 1925 saw 15,560 new cars titled as compared to 12,345 titled for the corresponding period a year ago. New trucks also showed a gain of 635 as compared to the same period for last year.

Practically all makes of cars showed an increase, Buick, Hudson-Essex, Nash, Chrevolet, Chrysler being among those who registered the largest gains, Buick, Essex and Chevrolet showed gains of over 1,000. Ford showed the largest loss but this is attributed to changing over to the new models and not as a loss that results from prospects declining to buy. The Ford loss was around 2,837.

The miscellaneous makes of cars dropped off 252 for the period, showing that the buyers are concentrating on the better known and standard makes of cars.

Of the 1,796 new trucks titled, 1,057 gains, six losses and one was even.

Of the 1,796 new trucks titled, 1,057 were Fords. Dodge, Federal, Reo, and Graham Brothers were the companies that showed the largest gains. Trucks listed as miscellaneous gained 45.

BRITISH INDUSTRY PLEASED

WASHINGTON, Oct. 24.—British automobile manufacturers are enjoying an unprecedented wave of prosperity, according to cable from the commercial attache in London. As evidence, he quotes the speech of Sir William Joynson-Hicks, home secretary, before the Society of Motor Manufacturers and Traders, to the effect that British automobile exports for 1925 will amount to 50 per cent more than for last year. The speech of Sir William was made before the manufacturers in connection with the Ninth annual motor show at Olympia, which opened on October 8. There are more cars being shown at the present show than any British automobile show since before the war, the cable states. The small British car is decidedly the feature of the show, it is stated.

CHANDLER DEALERS MEET

SAN FRANCISCO, Oct. 24.—Chandler and Cleveland dealers to the number of 63 held their annual meeting for northern California in the showrooms of the Chandler-Cleveland Motor Car Company here October 14. Roy B. Alexander, president of the local company, and other executives, addressed the dealers on merchandising plans for the year to come. New models, new low prices and the advertising program also came in for discussion at the meeting over which Alexander presided.

Fageol-American Car Merger Plans Put to Stockholders

Hall-Scott Business and Plant Already Purchased at Reported Price of $5,000,000

OAKLAND, Cal., Oct. 24.—Announcement is made by officials of the American Car and Foundry Company of New York, and the Fageol Motors Company, of Oakland, that plans for the organization of the subsidiary company which is to operate the Fageol Motors Company and Hall-Scott Motors, Inc., of Berkeley, California, have been revamped so as to avoid conflict with the state corporation laws of California. The set-up originally proposed by the American Car and Foundry Company was found to be impossible under these laws, and Frank Fageol, vice-president of the local concern, has been in the East for some time, in conferences with officials of the American Car to rearrange this plan.

According to the same statement, the new proposition, which accomplishes the merger of Fageol Motors Company, will be presented to the stockholders of the Fageol concern between the 20th and 30th of October. The Hall-Scot business and plant already has been purchased by the American Car and Foundry Company, at a price which, while not made public, is reliably reported to have been about $5,000,000, but the Fageol sale has to be confirmed by a 70 per cent vote of the stockholders.

The Fageol company claims to have orders which will carry it at capacity operation for the next 10 months, with contracts now being negotiated calling for approximately $1,000,000 in new work. The corporation is engaged in the construction of motor stages, known as "Fageol Safety Coaches," and five capacities of motor trucks. It is generally conceded in automotive and financial circles on the coast that Fageol is earning sufficient to pay dividends on the common stock, and probably would declare them if this merger were not pending.

Fageol has obtained a contract to build 50 buses for the Orange Belt Motor Line of Florida at a gross cost of $400,000. The company also is bidding on 100 more buses for the same concern involving $800,000. All these buses are to be narrow tread and must be finished by November 15. The working force at the Fageol plant has been increased 50 per cent to complete the contract by that date.

CHEVROLET DEALERS MEET

MEMPHIS, Oct. 24.—Chevrolet dealers from the Memphis territory met here recently to hear talks by L. F. Garlock, service representative promotion manager of the Chevrolet Motor Co.; E. W. Fuller, regional sales manager, from St. Louis; C. E. O'Meara of the Dallas office and others. Following a luncheon a train load of Chevrolets was distributed among the dealers.

DALLMANN CO. EXPANDS

MILWAUKEE, Oct. 24.—The entire gear manufacturing division of the Western Rawhide Co. of this city has been taken over by the Dallmann Machine & Manufacturing Co., doubling the gear output of the latter concern. To accommodate the new division, more space has been taken in the Pabst Corporation building on Winnebago street, bringing the ground area of the company to more than a half block.

WHARTON SELLS INTEREST

PHILADELPHIA, Oct. 24.—A. W. Wharton, president of the Churchville Manufacturing and Laboratories Co., manufacturers of the Wharton Cushion Guard Rail, has disposed of his entire interest to the corporation, it is announced. Mr. Wharton's resignation has already taken effect but he will continue with the company for a short time. His future activity has not been announced but it is understood he will enter some phase of the radio business. V. S. Fry, who has been vice-president of the company, has been elected the new president. Charles H. Davis, a director of the corporation for the last three years, has been elected vice-president; Joseph T. Pfister is the new director of finances, a newly created position; C. J. Stover remains as secretary and treasurer.

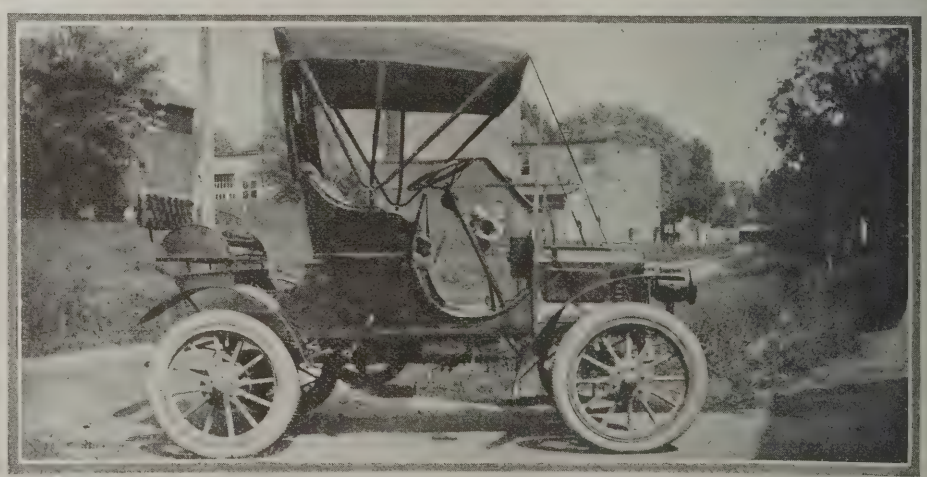
CHAPMAN TAKES SOUTH

EL PASO, Tex., Oct. 24.—R. C. Chapman, factory representative for the Willys-Overland company has been assigned to the district covered by the Bannell Overland company here. This district covers most of West Texas and New Mexico and Arizona as well as a large part of Old Mexico. He succeeds C. M. Hutson who has been transferred to the Dallas branch of the Willys-Overland company.

Overland Sponsors National Sales Race for $50,000

Willys Derby Entered by 20,000 Contestants in Entire Field Organization

TOLEDO, Oct. 24.—More than 20,000 members of Willys-Overland's national field organization are in the throes of a great sales contest known to the automobile industry in the Willys Derby.



Titled "The Willys Derby," this huge sales contest commemorates the twenty-fifth anniversary of President John N. Willys' entry into the automobile business.

More than 740 individual prizes totaling $50,000 are offered in the Willys Derby, so distributed among the classifications of the retail organization that no one man can compete for more than one prize. Four main classifications are provided, including dealers, retail salesmen, retail sales managers, and district representatives, car order clerks and wholesale managers, with subdivisions for various types of contestants in these classes.

Prizes in the contest vary from engraved gold pencil and pen sets to an Overland Six DeLuxe sedan, together with silver chests, watches and cash awards.

The opening of the Willys Derby has already reflected its pressure in an extended volume of future orders at the Willys-Overland factory. With special prizes held out for members of the $100,000 Club, Willys-Overland's prize retail salesmen's organization, every member of the field organization is extending himself to the limit according to the dealer, branch and distributor reports flooding the office of the contest manager at the Willys-Overland factory.

Aged Reo Still Performing

Above is pictured the 1904 model one-cylinder Reo which is owned and still used as a "pleasure" car by John O. Schwartz of Hope, Ind. The rear seat folds down, making the car either a two or four-passenger roadster. It has wooden fenders.

Fiat Places New 7 H. P. Model on French Market

Company Plans Big Export Business with 60 Cubic inch Car Selling at $1,043

PARIS, Oct. 8.—(By mail)—Fiat this week placed on the French market the new 7 h.p. model, the appearance of which has been expected for a year. This is the smallest chassis ever built by the Fiat Company, and has a four cylinder engine of 57 by 97 mm. bore and stroke, giving a piston displacement of 60 cubic inches. Wheelbase is 100 inches, track 47 inches and body length 83 inches.

Selling price in France, which includes the government 12 per cent luxury tax, is $766 for chassis with tires; $940 for runabout; $1043 for four passenger phaeton, and $1,278 for two-passenger cabriolet or four passenger sedan. These prices are caluclated with exchange at 21 francs to the dollar.

The Fiat Company at Turin is planning for a big export business with this model for it is admittedly one of the most successful and modern cars of this type on the market at the present time. The four cylinder engine has a detachable head with overhead camshaft driven by two short chains at the rear, the first chain going to the magneto drive pinion and the second from the magneto shaft to the camshaft.

The crankshaft has a diameter of 45 mm. and is carried in two white metal bearings. Lubrication is forced feed throughout. Unlike other Fiat models, cooling is by thermo-syphon, there is a combined electric generator and starting motor on the front end of the crankshaft and transmission gives three speds ahead and reverse. Brakes are fitted on front and rear wheels, with a semi-servo mechanism which operates in both ahead and rearward directions.

The immediate Fiat program is for an output of 200 cars per day of this model. To provide for this production additional factory buildings, having a covered floor space of 770,000 square feet, have been erected.

DRIVURSELF ORGANIZED

SAN FRANCISCO, Oct. 24.—P. L. Emerson, vice-president of the Hertz Drivurself System and one of the executives of the Yellow Truck & Coach Manufacturing Company, has completed the organization of a Northern California Drivurself Association, composed of operators licensed under the Hertz system, and a branch of a national organization known as the American Drivurself Association. Charles J. Evans, of San Francisco, is chairman of the branch, with S. J. Newcomer of Oakland, and James N. Sewall, of San Jose, assistant chairmen. Emerson, who is best known here as former president of the Reo Motor Company of California, has gone to the southern end of the state to organize another section of the association.

FINANCE TERMS HELP

CHARLOTTE, N. C., Oct. 24.—The full effect of the revision of the terms of companies financing automobile installment paper is now being felt in this territory, and distributors of automobiles report the more favorable basis is enabling their dealers to close numerous sales which otherwise probably would be lost. No important need for a longer period for payment exists at this time in this territory though some wholesalers indicate their opinion that conditions expected to develop next spring might make such a concession advisable. An unusually large percentage of automobile sales are cash sales, according to dealers in the low and medium priced lines.

J. J. Plath Dies

J. J. Plath, former director of sales for the Chrysler Corp. and recently Chrysler distributor at Miami, who died there last week. He was extremely popular with the Chrysler organization

DURANT PROMOTES NISBET

DENVER, Colo., Oct. 24.—Announcement has been made of the appointment of R. C. Nisbet of this city as sales manager of the Denver office of the Durant Motor Company, succeeding E. D. Knowles. The latter has been promoted to regional sales manager, supervising factory branches. Mr. Nisbet has been working under Mr. Knowles for 13 months, and is well acquainted with the dealers of his line in Colorado, Wyoming and New Mexico. In addition to these states his new duties will take him to Utah and Idaho.

TAKES FLORIDA BRANCH

AKRON, Oct. 24.—The Indian Tire & Rubber Co. announces the appointment of B. B. Wright as manager of the Jacksonville, Fla., branch, which has just been established. Wright was formerly assistant manager of the Dallas branch of India Tire & Rubber Co. Previous to that he held various executive positions with the Gates Rubber Co.

Southwestern Car Show in Dallas Is Emphatic Success

Dealers from Eight States Help Swell Attendance of 700,000 in Sixteen Days

DALLAS, Tex., Oct. 24.—Combining a complete display of the very latest models and makes of motor vehicles with a varied program of social events the Dallas Automotive Trades Association made the annual Southwestern Automobile Show this year one of the most interesting and attractive events at the State Fair of Texas. While the number of cars displayed was no greater than at previous shows, the manner in which they were displayed and the social events the Dallas dealers pulled in connection with the show made the exhibition the most successful they have yet staged.

Coming months ahead of the annual shows at Chicago and New York the big show, extending over a period of sixteen days, offered an opporunity for dealers and the public in the Southwest to see just what is being put on the market by the manufacturers in 1926. The dealers were here from eight different states to see and study the exhibition of passenger and commercial cars, the displays of newest accessories and the showing of various makes and kinds of tires.

The enclosed cars featured the display at the show. Here the bodies were found about the same in appearance as last year, but they were roomier. Beading or moulding around most of them added to the beauty of the designs. The gay and bright colors of a year ago were not so much in evidence. Blues, browns and grays predominated in the color schemes.

The only radical departure from old body lines shown was the Ford. Many of those attending the show lamented the passing of the old "flivver" type.

Dealers and distributors said more than 700,000 persons visited the automobile show during the sixteen days operation. The interest stimulated in new cars was immense local and visiting dealers declared.

SOUTHERN SALES GOOD

NEW ORLEANS, Oct. 24.—Despite the continued hot weather in New Orleans and other parts of Louisiana and Mississippi, car dealers and automotive merchants report satisfactory sales for October. A general "slicking-up" activity has been in progress in New Orleans in particular and the fall season finds several new and remodelled distributor and dealer establishments.

WILLS STE. CLAIRE DEALERS

MARYSVILLE, Mich., Oct. 24.—Dealers who have recently taken on the Wills Sainte Claire line include:

Stover Motor Company, Baldwin, Long Island; Wills Sainte Claire Company of Bergen County, Hackensack, N. J.; Franklin A. Loomis, Binghamton, N. Y.; S. A. Calder, Fort Lauderdale, Fla.; Coyle & Weichner, Brooklyn, N. Y.

Along Automobile Row

LOUISVILLE.—Third Avenue Motors Company, Oldsmobile dealer has opened a new showroom at 653 South Third Street. The old location, 1529 South Third Street, will be utlized as a service station.

DECATUR, Ill.—J. D. Keiner, former works manager for the Streator Car company, has purchased the Midway Garage, 152 East Packard Street, and taken the local Auburn agency.

CINCINNATI.—Charles Kelsey, well known locally as an automobile salesman, has joined the sales staff of the Southern Ohio Motors Company, to sell Pierce-Arrow trucks and omnibuses.

LAYTON, Utah.—Lucius Laudie of the Layton Auto Co., has sold his interests in the company to Murray and Wallace Cowley of Layton, who will continue to conduct the business as a Ford agency.

DUBUQUE, Ia.—The Dubuque Nash company has filed its articles of incorporation, listing $10,000 capital. W. H. Klauer is president; H. A. Engel, vice president, and W. E. Klauer, secretary and treasurer.

MILWAUKEE.—Joseph Doering, formerly a member of the firm of McFadzen-Doering, Chrysler dealers of West Allis, Wis., has established a Chrysler sales and service business at 4329 North Avenue in Milwaukee, under the name of Doering Motor Co. Thomas McGurn is manager of the service department with John Bleeser as office manager.

JOLIET, Ill.—The Hudson Motor Car Company will maintain two agencies here, the H. & B. Garage being named a new distributor with the Ehler Motor Sales, which has been Hudson-Essex dealer for many years.

BOSTON.—James F. Marr, for many years used car sales manager for the J. W. Maguire Company, has taken the agency for the Pierce-Arrow line for Malden and vicinity.

WATERLOO, Ia.—The Dumond Motor Company, Inc., has completed its organization and will handle the Packard lines.

ST. LOUIS, Mo.—H. F. Fahrenkrog, member of the firm of Steiner and Fahrenkrog, Reo dealers, has been elected to the presidency of the St. Louis Board of Education. He is a member of the board of directors of the St. Louis Automobile Dealers' Association and is a former president of that body.

EDMONTON, Alta.—W. G. Parsons, for two and a half years manager of McLaughlin Motor Car Co., Ltd., Buick representative, has removed to Vancouver, B. C., to take charge of the McLaughlin factory branch. His successor in the Edmonton office will be Elmer Brink, who has been manager in Saskatoon, Sask., for the last three years. George A. Carnes will remain here in the position of sales manager of the company.

DENVER, Colo.—H. C. Drum, factory superintendent for the Sampson Tire & Rubber Company has placed an agency for his products with Ralph Campbell, local tire dealer.

MINNEAPOLIS.—The Pence Automobile Co., Buick distributor, has arranged to use half of a building which is being erected by the Butte Buick Co., Butte Mont., to be ready Jan. 1, 1926.

NEWTON, Ia.—The Jensen Motor Company of Des Moines has secured the Ford agency for Newton and vicinity, succeeding the Newton Motor Company, which cancelled its contract.

DETROIT. — Eighty-five Paige and Jewett dealers and service managers in Michigan and Ohio were guests of their distributor, Paige Sales and Service Company, for a service convention. The meeting was arranged by S. D. Bolton, manager and Frank Dorbandt, service manager, to demonstrate the latest service methods, tools and equipment to the dealer organization.

ROCHESTER, N. Y.—The Leader Garage, Inc., has been appointed distributor for the Detroit Electric. This makes the third electric which the garage is distributing in this territory, the other two being the Rauch and Lang and the Milburn. The garage is also sub-agent for Chrysler.

CHICAGO.—F. G. Peabody has been appointed Chicago retail store manager for the Chicago Durant Co., the local branch for Durant and Star.

SPRINGFIELD, Mass.—Jack Stone, used car dealer and associate dealer for the Hudson and Essex, has opened a large show room at 631 Main Street and is adding accessories designed to strengthen his merchandising of the Hudson and Essex lines.

SEATTLE.—A. S. Eldridge, president of the Eldridge Buick Company, is in Spokane, Wash., supervising the construction of the new Eldridge Buick building, which will be opened early in December.

LOUISVILLE.—Franklin Motors, Inc., distributor of the Franklin and Junior 8, has opened a used car department at 904-6 South Third Street. This location was occupied until recently by the David-Kummert Motor Company, Overland and Willys-Knight dealer. The latter firm has been dissolved.

MILWAUKEE. — Stebbins-Dentz Company of Milwaukee has been appointed Case dealers for the city.

DULUTH, Minn.—J. T. Connery, who has sold his local franchise for sale of Paige and Jewett cars for the Payne Motor Co., Minneapolis, has taken active charge of his own company in Winona, Minn., which he established some time ago. He has also a Paige-Jewett agency in LaCrosse, Wis.

CHICAGO.—The Gabriel Snubber Co., has been appointed exclusive distributors of Perfection Heaters for nothern Illinois and Indiana, it is announced by the Perfection Heater Manufacturing Co., Cleveland.

DETROIT.—Names of four managers of as many new retail stores together with several new department heads have been announced by the Willys-Overland Co., of this city. Associated with A. C. Tiedermann, assistant branch manager, are H. J. Gauley, manager of the Woodward and Canfield store; H. Perkins, of the recently opened Jefferson Avenue store; E. H. Chase, of the Hamtramack store, and W. P. Hammond of the Grand River store. Other appointments announced are Harry O'Brien as manager of the Detroit used car department and F. S. Bird who will have charge of the wholesale distribution of cars to the retail store system.

ST. LOUIS.—Foster Motor Car Co., 2914 Washington avenue, has been authorized as an Oldsmobile dealer by the De Luxe Automobile Co., Oldsmobile distributors here.

ROCHESTER, N. Y.—Louis Barlow, who has been connected with several Ford agencies in Rochester has joined the sales staff of the MacConnell Motor Corporation, Ford dealers here.

MONTREAL.—Adolphe Mogenais, for seven and a half years manager of the Chevrolet Motor Company of Canada, Ltd., for the province of Quebec with headquarters in Montreal, has resigned to take charge of the newly opened radio department of Legare, Regd. Montreal.

PENDLETON, Ore.—Glenn C. Sater and Ralph C. Parker are the new owners of the Ford agency. The business will be conducted as the East Oregon Motor Company.

SPRINGFIELD, O.—The secretary of state has granted the Springfield Buick Company permission to change its name to the Stevens Buick Company.

DETROIT.—Harry M. Robbins, formerly with Continental Motors, Dodge Brothers and the Oakland Motor Car Company, has opened offices in this city, preparatory to distributing American cars abroad for his own company.

MANKATO, Minn.—The Oakland-Perrin Co. has added the Cadillac line and will sell this car in the city.

DULUTH, Minn. — Martin Rosendahl, Oakland distributor for the city and adjacent territory, has moved into the former Zenith Motor Co. building at 316 East Superior street, where he will sell new and used cars. He has just taken the Marmon agency.

LOS ANGELES.—The Locomobile Company of California announces the appointment of the Kendall Auto Company of Pasadena to handle the Locomobile line in that city.

SIOUX CITY, Ia.—The Overland-Willys Knight Motor Co. of which Charles T. Mauller is president, has changed its name to the C. T. Mauller Motor Company, coincident with its occupancy of the new location at 219 West Seventh street.

NEW ORLEANS.—Leo G. Lob, 623 North Rampart Street, New Orleans, has been named distributor and dealer for the Locomobile line in New Orleans and surrounding territory.

CHICAGO.—The Seggebruch-Buick Co., Chicago Heights, announces the removal of its sales and service headquarters to 1646 Vincennes Avenue.

SPRINGFIELD, Mass.—Springfield Auto Livery Co. has added a truck-renting department to its "drive yourself" passenger car service. One-ton trucks are being put in commission for rental on a mileage basis.

OAKLAND.—The Berkeley Star Motor Company has been organized to retail Stars at 2210 San Pablo Avenue, Berkeley, according to announcement by N. T. Tuller, sales manager of the Durant Motors Company of California. Marvin H. Brown and Peter Jensen make up the new firm.

SAN ANTONIO, Tex. — The Charles George Motor Company of San Antonio, one of the authorized Ford, Lincoln and Fordson dealers of the city, has been sold to Ed Harpel and Frank Gillespie.

DES MOINES, Ia.—The Stewart-Warner Speedometer corporation has established one of its 62 exclusive radio offices in the country, at 1433 Locust street, Des Moines. It will direct the distribution of the Stewart-Warner matched radio units and Mortimer Zucher, manager, is making arrangements for broadcasting programs under its name from station WHO.

CARTHAGE, Ill.—Oliver Kirchner has purchased the battery business here, conducted for several years by Robert Compton, who retires to engage exclusively in handling of radio sets and equipment.

TOLEDO.—F. O. Tanner, formerly with the Martin-Parry Co., here has joined the sales staff of the Francis-Raitz Auto Sales Co., Hudson-Essex dealers.

HOLYOKE, Mass.—K. R. Charlton, Inc., Ford dealer, is adding a second story to its sales and service establishment, to be ready for use in January.

SAN ANTONIO, Tex.—The Travis Automobile Company has been organized and accepted a franchise from the Crockett Automobile Company, Hudson-Essex distributors, for retailing those cars in San Antonio.

CHICAGO.—The Velie-Bell Co. has disposed of its retail business to W. P. Sawyer and E. P. McGough, who wil establish sales rooms at 2618 South Michigan ave. Velie-Bell will handle only the wholesale distribution of the Velie hereafter.

With the Associations

Northern Cal. S. A. E. Formed

SAN FRANCISCO, Oct. 24.—As a result of the visit to this city of H. L. Horning, president of the Society of Automotive Engineers, a Northern California Section of the S. A. E., with a membership of 130, has been organized. E. C. Wood, superintendent of the motor vehicle division of the Pacific Gas and Electric Company, was elected chairman of the branch; G. B. Ridley, vice-chairman; W. S. Crowell, secretary, and F. Gerhart, treasurer. More than 200 men of the industry attended the organization meeting.

The northern California section of the S. A. E. differs from the eastern sections, which are largely composed of men in the automotive manufacturing industry, in that it will pay more attention to maintenance and operation problems, only recommending changed processes of manufacturing to the national body, based on actual field conditions of automotive vehicle operation in the hands of owners. It is hoped that the reports from this section on these subjects eventually will have an influence on the manufacture of automobiles, trucks, tractors, stages and trailers, through suggestions of improvements demonstrated as needful by actual operations in the field.

Organization of the branch was preceded by a year's work of a membership committee under W. W. MacDonald, of the MacDonald Truck Company and past president of the S. A. E., as chairman, and A. A. MacCullum as secretary. Monthly meetings, with entertaining and instructive programs were held for some seven months before the actual formation of the Northern California chapter, and then President Horning was invited to San Francisco to perfect the organization. He made a special trip across the continent for the purpose. Frank Fageol, of Fageol Motors Company, and Stanley Holt, of the Holt Tractor Company, were among the engineers prominent in the organization work.

Brooklyn Show Dates Set

NEW YORK, Oct. 24.—Brooklyn Motor Vehicle Dealers' Association has decided to hold the fifteenth annual Brooklyn automobile show from January 23 to 30 in the Twenty-third Regiment Armory, Bedford and Atlantic Avenues. L. C. Brown, president, and Ralph Ebbert, manager, with other members of the committee are working out diagrams and laying plans for the drawings of exhibition space, which will take place soon.

Black Hawk Bureau Elects

WATERLOO, Ia., Oct. 24.—C. A. West of the West Motor Sales Company was elected president of the Black Hawk County Motor Trades Bureau at the annual meeting, succeeding A. B. Chambers of the Repass Auto Company. Other officers are W. F. Marshall, of the H. & M. Chevrolet Company, vice president; Frank Collord of the Collord-Hull Dodge Bros. agency, secretary, succeeding William Keefe of the Hudson-Essex agency. The bureau went on record as endorsing the civic slogan "Trade in Waterloo" and participating fully in the campaign expressed in that slogan.

Mississippi Boosters Organize

ST. LOUIS, Oct. 24. — Mississippi Valley Boosters' Club No. 15 has been organized here with nineteen charter members. The officers of the new club are William F. Wedler, Tiffany Manufacturing Co., Newark, N. J., president; R. F. Herold, American Hammered Piston Ring Co., Baltimore, vice president; F. F. Weir, Thermoid Rubber Co., Trenton, N. J., secretary; and James K. Courim, Black & Decker Mfg. Co., Baltimore, treasurer.

New President

George A. Hoeveler, new president of Pennsylvania Automotive Association

Baltimore Plans Show

BALTIMORE, Md., Oct. 24.—The Baltimore Automobile Trade Association, Inc., under whose auspices the annual automobile show is staged at the Fifth Regiment Armory in January, has started plans for the event and hopes to make it the greatest in the history of the local trade. John E. Raine, secretary of the association, has been appointed show manager, a position he has held for a number of years. The board of directors also has named the show committee. This consists of A. H. Bishop, W. F. Kneip, E. R. Myers, Raymond Thompson, Louis Fox, Harry Reeves, Thomas G. Young and E. T. Backus.

Price-Cutting Scored

LOS ANGELES, Oct. 24.—An energetic campaign to check the price-cutting war which is rampant in the service station field throughout Southern California has been launched by the Los Angeles Automobile Trade Association. In a bulletin to its membership, the executive office of the association declares that "if the fool killer were turned loose at this date it is our prediction that about seven-eighths of the service stations would be without operators in a very short time."

Continuing, the bulletin says:

"Without a doubt the most foolhardy thing that can be attempted by the business man today is to sell his merchandise at a cut price. Volumes have been written on this subject, speeches of hours' duration have been delivered on it, and we still have with us the man who not only destroys his own business but that of his competitor and leaves his source of supply, the jobber, with a lot of unpaid bills on his hands, when he has proved, as thousands before him have already proved, that you can't cut prices and exist.

"The sooner the operator learns that a legitimate profit is service and that a first class service is absolutely imperative to a satisfied clientele which is willing to pay a legitimate profit, just so soon will your business be on the foundation it should occupy."

Legislative Board Formed

SEATTLE, Oct. 24.—At a recent meeting of automotive interests of the Pacific Northwest eight groups have gone together and formed the Washington legislative conference, each group being allowed three representatives in the conference. The co-operative agencies include the Washington branch of the American Automobile Association, Truck Owners' Association, Passenger Bus Association, Freight Bus Association, gasoline companies, insurance companies and good roads associations. Under the scheme this conference refuses to recommend anything to the legislature unless a unanimous vote is secured. Committees will keep in close touch with the various state departments.

Service Managers Meet

ST. LOUIS, Oct. 24.—Edward Weber, president of the Weber Motor Car Co., Studebaker distributor and director of the St. Louis Automobile Dealers' Association was the principal speaker at a recent meeting of the Service Managers' Bureau of the Association.

Weber gave his version of what the duties of a service manager should be and stated the chief of these is to keep the customer satisfied as "more sales are made through the back door than through the front, as it is the back door that keeps the customer satisfied."

Overseas Club to Entertain Foreign Jobbers in Chicago

Boosters to Hold Banquet During A. E. A. Show and Convention in November

CHICAGO, Oct. 24.—Automotive accessory wholesalers from many foreign countries will be the guests of the Overseas Club, Boosters No. 9, at a dinner and smoker during the Automotive Equipment Association show and convention at Chicago next month. The date and place for the meeting, which will be attended by members of the club and sales executives of American factories, has been announced by officers as Wednesday, November 11, Congress Hotel. More than 100 are expected in attendance.

Each year the show has been attended by many overseas wholesalers and, this year, as a result of special invitation by Commissioner William E. Webster, of the A. E. A., a larger attendance than at any other meeting is anticipated. Jobbers from Denmark, Holland, Great Britain, Germany, Sweden, Mexico, Cuba, Chile and Australia have already announced their acceptance of the invitation and the attendance of these overseas visitors will undoubtedly total several scores.

The Overseas Club, which will hold the dinner in co-operation with the A. E. A., is the export section of the Automotive Boosters International. It comprises in its membership more than 40 export managers of representative accessory and equipment lines, which this year are selling their products in more than 100 different countries of Africa, America, Asia, Europe and Oceania.

New officers of the club, elected this month are, F. J. Werner, Shaler Export Corp., New York, president; P. A. Karl, export manager, Brunner Mfg. Co., Utica, N. Y., vice-president; George E. Quisenberry, editor, The American Automobile (Overseas Edition) and El Automovil Americano, New York, secretary; and P. F. Baillet, export manager, Sparton, Mossberg and Multibestos companies, New York, treasurer. The directors in addition to the officers, are H. L. Kraus, export manager, Apeo, Biflex, Halliday, Blackhawk and Thompson companies; E. C. Steinacher, export manager, Moto Meter Co., Inc., Long Island City; James P. Kane, Kane Bros., New York City; Walter Rinck, Stevens & Co., New York City; and George Tiffany, sales manager, Overseas Motor Service Corp., New York City.

NEW VELIE DEALERS

MOLINE, Ill., Oct. 24.—New dealers added to the organization of the Velie Motors Corp. include the following:

Overland Motor Company, Estherville, Ia., R. D. Lawrence, Miami, Fla., Alfred Matson, Algonia, Ia., Linden Garage Corporation, Hackensack, N. J., Hubbard-Velie Co., Tacoma, Wash., James D. Barber, Evanston, Ill., Carl J. Simon, Van Wert, O., Velie Sales Company, Waukegan, Ill., Calumet Garage, Harvey, Ill., Yakima Motor Company, Yakima, Wash., Holt Motor Co., Arkansas City, Kas., A. C. Ennis, Bueis Creek, N. C., Hester Motor Service, Henderson, N. C., Wide-A-Wake Garage, Eau Galle, Fla., C. L. Harris, Franklin, Mass., A. K. Lewis, Westerly, R. I., Lane's Garage, Stuart, Fla.,

Five of Eight Air Lines Get U. S. Mail Contracts

WASHINGTON, Oct. 24.—Postmaster General New this week awarded contracts to private corporations to operate air mail service on five of the eight commercial routes for which bids were recently opened at the Post Office Department.

Names of the successful bidders on the five routes follow: Boston to New York via Hartford, Colonial Air Lines, Inc., Naugatuck, Conn.; Chicago to St. Louis via Springfield, Robertson Aircraft Corporation, St. Louis; Chicago to Dallas and Ft. Worth, the National Air Transport, Inc., Chicago; Salt Lake City to Los Angeles, the Western Air Express, Inc., of Los Angeles; Elko to Pasco, Walter T. Varney of San Francisco.

It is announced on the route from Seattle, Wash., to Los Angeles that the bid for Vern C. Corst is now under consideration. The bids previously received from the Chicago to Minneapolis and St. Paul route and over the Chicago to Birmingham route were rejected and additional proposals will be received up to December 8, and contracts will then be awarded if satisfactory bids are received.

NEW CADILLAC DEALERS

DEROIT, Oct. 24.—New dealers announced by the Cadillac Motor Car Co. include the following:

E. R. Taylor Auto Company, LaGrange, Ga., Charles Mancuso & Son, Batavia, N. Y., George W. Brokhausen Auto Company, Freeport, Ill., Kickels Motor Sales Company, Gary Ind., R. J. Harris, Pontiac, Ill., A. Vincent Sons Company, Roseland, Ill., Fulwiler Motor Company, Breckenridge, Tex., Ft. Pierce Cadillac Company, Ft. Pierce, Fla., Ventura County Cadillac Company, Santa Paula, Cal., Escanaba Motor Company, Escanaba, Mich., Universal Auto Company, Ironwood, Mich., Lowry Motor Sales Company, Kenosha, Wis., Putrow & Voelker, Menominee, Mich., J. M. Bannach, Stevens Point, Wis., Klinger Buick Company, Watertown, Wis., Central Auto Company, West Bend, Wis., F. F. Harrison, Minot, N. D., Blackwell Buick Company, Blackwell, Okla., W. O. Harlow, Kalamazoo, Mich., J. O. McCauley, Sturgis, Ky., Park Motor Car Company, Rutherford, N. J., Standard Automobile Company, Cleveland, Miss., Wm. Hamacheck Buick Company, Sheboygan, Wis., C. E. Cleaves, Biddeford, Me., Superior Motor Company, Redwood City, Cal., Allen Motor Company, Tacoma, Wash.

The Year's Development in New De-es for Improving Car Operation—nald Blanchard, Technical Editor, otor World Wholesale.

WEAR DEDUCTION FIXED

WASHINGTON, Oct. 24.—An allowance 12½ per cent per year for the ex-austion, wear and tear of trucks and tomobiles used for business purposes s been ruled reasonable in figuring come taxes by the United States Board Tax Appeals in a decision just made blic here. The ruling was made in e case of Yost and Herrell, local lum-r merchants, who had made deduc-ns for depreciation of trucks and tomobiles which had been challenged r the commissioner of internal revenue.

CORCORAN LEAVES FIRM

CINCINNATI, Oct. 24.—Thomas J. rcoran has sold the controlling inter-t in the Thomas J. Corcoran Lamp Co. d has retired from the presidency. he stock was secured by G. P. Doll, cretary and treasurer of the company r several years, who now becomes esident. Mr. Corcoran will retire from tive business, but after an extended ip abroad he will continue with the mpany in an advisory capacity. The mpany was formed in 1919 and ab-rbed the Corcoran-Victor Co. in 1923, us becoming one of the largest con-rns of its kind in the world, with an-al sales of about $2,000,000.

NEW KELLY TIRE BRANCH

SYRACUSE, Oct. 24.—The Kelly ringfield Tire Co. is to open a whole-le branch in this city. The district ill embrace the territory from Bingham-n to Watertown to Utica and Syracuse. T. Hoag has been made manager of e office which has been established t 356 W. Fayette Street.

SQUEEKS and RATTLES

HE EARNED IT

Nurse: "Are you the young lady who was with him when the car went into the ditch?"

Visitor: "Yes. I thought it would only be fair to come and give him the kiss he was trying for."

—Automotive News.

A Nightmare

Ma: "Did you dream that you were out riding with Bill last night?"

Sis: "Yes. How did you guess it?"

Ma: "I saw you walking in your sleep."

—Pitt Panther.

Afraid

First Pedestrain: Gosh, that taxi nearly got you.

Second O'Sullivanite: I knew it wouldn't hit me.

First: How's that?

Second: It was yellow.

—Stevens Stone Mill.

Here lies what's left
Of Henry Glenn;
Match in gas tank—
Up went Hen.

—San Francisco Chronicle.

Accommodating

It was just after the big game. Automobiles jammed the street and taxis were scarce. An extremely agitated man jumped on the running-board of a passing cab and shouted:—

"Let me ride as far as the station, will you? I can hang on out here."

Eventually, they reached his destination. The man alighted and paid his fare. Then, turning to the occupants of the car—

"Thanks a lot!" he said.

But the cab was empty.

—Princeton Tiger.

GRAVITY OF THE CELL

Testing times for the rental battery thief.

Overland Six Orders Are Ahead of Output Schedule

TOLEDO, Oct. 24.—Despite the fact that throughout the summer and early fall months production on the new Overland Sixes has been greatly increased, orders from the Willys-Overland national dealer organization continue to pile up in advance of the production schedule, the factory announces.

Production on the Overland Sixes during the first nine months of 1925 totalled approximately 40,000 cars, and the Willys-Overland factory during the month of October entered into a production schedule of more than 200 cars per day of this model.

SPECIFICATIONS TO BE TOPIC

WASHINGTON, Oct. 24.—Conferences with representatives of automotive manufacturers, distributors and consumers will be held here in the near future by the division of simplified practice of the Department of Commerce to consider recommendations now being framed by automotive engineers regarding specifications for brake lining, oversize piston rings, spark plugs and taper rolling bearings. Officials of the simplified practice division hope to obtain the same acceptance of revised standards which has been accorded by other industries.

VALVE SHOP OPENS

OAKLAND, Cal., Oct. 17.—The first flat-rate valve specialty shop on the mainland side of San Francisco Bay has been opened here by George E. Reed. Nothing but valve work will be handled and all will be done on the flat-rate system, with guaranteed statement of cost before the job is started.

New York Sales for Nine Months Gain Over 1924

NEW YORK, Oct. 24.—September sales of 41 makes of passenger vehicles in the Metropolitan district were 7485, a decrease of 1035 from the August total and sales for the first nine months of 1925 were 73,877 against 73,264 in the same period last year and 66,612 and 54,023 in the corresponding months of 1923 and 1922 respectively, according to an analysis by Sherlock & Arnold.

The peak of the nine months this year was the 11,301 sales in April and the totals have been declining since July, when 11,151 cars were sold.

Sales of 1925 passenger models totaling 910 in September have been increasing since June and during the first nine months of this year 7206 new models were sold compared with 5318 in the same period of 1924, 6548 in the 1923 and 5581 in the 1922 period.

BACKED BY 35 YEARS OF "KNOW-HOW"

Back in Dobbin's Day

Miller history goes back into the 90's, before the age of motor cars, when Dobbin was king of the highway. Through the years we have helped to bring the fine art of vehicle building to its present day perfection.

Miller BUILT "Since 1890"

Character

NEITHER men nor institutions are *born* with character. It is a gift the gods bestow, in return for strife and struggle. Years of experience and experiments must go into the moulding and testing of any character of enduring worth.

For three decades and more the character of the House of Miller has been in the making. This is a time-tested institution, builded upon a firm foundation. Into this creation this pioneer bus-building organization puts above all else, that priceless element—Character.

Write today for detailed specifications, and some mighty interesting facts and figures.

Great Show of *Automotive Merchandise* Opens Nov. 9

Accessories, Parts, Supplies and Equipment Make Up Seventh Annual A. E. A. Exhibition at Chicago — Association's Tenth Convention Also Scheduled

The great market for automotive equipment. View down the main aisle of Coliseum at last year's A. E. A. Show

A WIDE variety of accessories, replacement parts and other automotive equipment will be spread out for inspection before the jobbing trade at the annual show to be held Nov. 9-14 in conjunction with the A. E. A. convention.

The show will be held, as usual, at the Chicago Coliseum, exhibits occupying the entire main floors of the Coliseum proper, the South Hall and the new North Hall. Last year the show made use of the new North Hall for the first time, this division of the big Chicago exhibition place answering the need for space but not being slicked up ideally at that time. Now, however, the North Hall presents an entirely finished appearance and displays in that part of the building will be shown to full advantage.

While this will not be a dealer's show it is to play an important role in the dealer's merchandising program of the next few months. Jobbers will be on hand to see what there is new and to stock items that will be passed along to dealers at a later time. New articles announced for the first time at the show will be listed and described, as soon after the show as printers can work, in jobbers' catalogs and literature.

Dealers will be watching for these listings and they will want to get as much early information about the new products as possible.

Realizing this and desiring to be of assistance to the dealer in speeding up this information MOTOR AGE in post-show numbers will publish a comprehensive list of new product descriptions, while in the present issue it presents an enumeration of new products covering a majority of the A. E. A. exhibit booths. In connection with this latter list, appearing on other pages, are given the general lines of products handled by many of the exhibiting companies. The dealer can use this list as a preliminary reference, making note of any products in which he is interested and then watch for the descriptions of these and other items that will appear in a later number of the magazine. The detail descriptions will appear in the issues of Nov. 12 and 19.

The number of individual exhibitors in this year's show will exceed last year's by 15, the official list showing that space for the 1925 show was alloted to 235 applicants as against 220 in 1924. The number in 1924 was 17 less than the number alloted space in 1923, so it would seem that interest this year among A. E. A. manufacturers is on the upgrade.

Utility the Keynote

It is not the number of exhibitors which makes a good show, however, nor is it the number of items on display. What constitutes a good automotive equipment show is its coverage of the field. It is doubtful if the A. E. A. has ever staged an exhibition before in which the coverage of the field has been more satisfactory and complete than that of the show to be held this year. These exhibitions year after year have been getting down to a show of the more necessary articles, where those of doubtful utility and merchandising value have been growing fewer and fewer.

The standard lines already known to the trade will be displayed more comprehensively than ever with double emphasis on coverage. It will be seen that many companies formerly making equipment for a limited number of car makes are now prepared to supply their wares for numbers of additional makes, if not the entire list.

New products for the most part will be of a practical character, many of them suggesting strong merchandising possibilities. There will be numbers of new things for car owner as well as for the shop and service station. Influence of the balloon tire will be found in a number of booths, balloons being responsible for a steadily increasing total of automotive developments. Strenuous campaigning over the country against automotive thefts will show the imprint of its influence in the numbers of locking devices. This list is a long one and locking products continue to improve. Companies making winter appliances will not overlook this seasonal opportunity, for they will be on hand with many such items, new and previously introduced, as radiator shutters, windshield wipers, radiator solutions and compounds, heaters, etc. The new

fferings will present interesting models in the shape of ools of various kinds as well as quite a list of electrical nits, radio sets and radio parts, and many other items of articular interest to the automotive world.

It would be difficult to say which group of new products ominates. The display, however, will stand as a fine tribute to inventive genius and an evidence of progress.

Concurrently with the show, which is the seventh annual automotive equipment exhibition, the tenth annual convention of the A. E. A. will be held in Chicago, the general sessions being held at the Coliseum Annex and divisional sessions at the Congress Hotel and the Coliseum

Good Business Ahead in Automotive Equipment Field

Next Year to Be Best Yet as Enlarged Car Production and Keener Competition Result in New Vehicles Being Listed With Less Equipment

By W. T. MORRIS

President Automotive Equipment Association, Vice President American Chain Co.

W. T. Morris, President A. E. A.

AS we watch the progress of the plans for 1926 automotive production, we cannot but be impressed by the fact that especially the larger units of production are working to very ambitious plans. With a potential capacity, according to some reports, of six million automobiles, two things are assured to the industry: first, that the greatest selling effort ever put forth in the industry will go into the development of 1926 business; and, second, that the condition will be highly competitive, more especially in the medium and lower price fields.

This effort will undoubtedly produce results never equalled before in the industry. And inasmuch as new car sales are a large controlling factor in accessory sales, the industry can be assured of a volume of business unequalled in previous years.

With conditions as highly competitive as they will undoubtedly be during 1926, it is quite likely that car factories generally will lean rather toward the elimination of accessories as standard equipment rather than increasing the quantities used, in order that they may compete at a lower price basis, and this of course will enable the automobile dealer to sell the accessories to car owners at a substantially greater profit to himself than would accrue to him were they sold as a part of the car, and the result of this can only be a very much better financial condition upon the part of dealers generally.

The replacement parts and equipment business is more dependent on the cars in operation than on new car sales. We believe we can see a growing tendency upon the part of car users to come more nearly to using up the car miles that the car was designed for, and this is having two decidedly good effects on the industry as a whole. First, it has tended to lessen the used car problem. Second, it has increased the market for shop equipment and replacement parts. Both of which are evidences of a more healthy condition in the trade.

At this writing the question of excise tax is still to be settled—with strong possibilities, however, of its being removed. And inasmuch as the car manufacturers are on record to pass this saving on to the consumer, an increased market will be the result in every price class.

The farm market for automobiles is very nearly, if not entirely, back now to normal. Employment conditions generally throughout the country are better than they have been since 1920, which must be reflected in urban business. And coupled with these general conditions, we have the development of the fastest growing unit of transportation in the industry—the passenger bus—which must not be overlooked in its effect on the industry as a whole.

Serving the Retail Trade

N. F. Ozburn, vice-president, A. E. A.

How the Automotive Equipment Jobber Acts as a Great Reservoir for Merchandise on the Way to the Consumer by Way of the Retail Dealer

By N. F. OZBURN,
Ozburn-Abston & Co., Vice President Automotive Equipment Association

THE Automotive Equipment Jobber has a distinct and important part to play, and a duty to perform in properly servicing and distributing replacement parts, accessories and shop equipment to the retail dealer in the territory which he serves. If the jobber is to properly do his part in servicing the retail dealer, and be successful, his first must be a house that is adequately financed —have a trained efficient sales force and a house organization that appreciates all the words SERVICE and CO-OPERATION mean. Last but not least, he must have adequate warehouse facilities where orders can be filled correctly and with a minimum delay.

The retail dealer should look upon his jobber as his buying department, and the jobber's buyer should ever have in mind that he is not only buying for his individual house, but for the thousands of Dealers whom the jobber serves. The lines he purchases for resale should first be of proven quality, rightly priced, made by a manufacturer with a policy, and merchandise that will meet ready demand upon the part of the consuming public and show a legitimate profit to both the dealer and the jobber.

Prices from all legitimate jobbers, quality of merchandise being considered, are practically the same. The jobber who, therefore, expects to properly serve the retail trade to advantage, must necessarily sell more than merchandise. He must sell his SERVICE to the dealer in more ways than one. First—his ability to cut down the Dealer's investment in stock by pointing out advantages to be derived by carrying an adequate, but small stock of the quick and profitable selling items, using the enormous stock of his jobber as a surplus stock and ordering frequently, resting assured that the jobber will be in a position to fill his orders on the day received. The dealer who follows this policy will find that he will have additional capital free to use in the further upbuilding of his business.

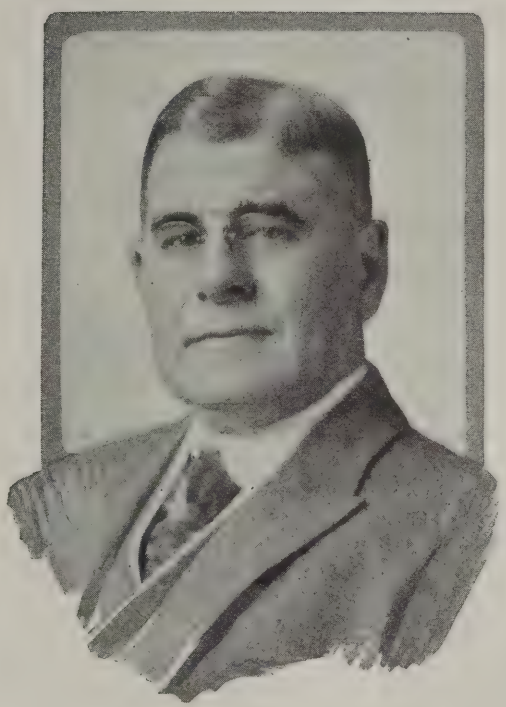
The dealer will find it to his distinct benefit to confine his purchases, as far as possible, to one or two good jobbers. For by so doing, the account will be a worthwhile one and in times of stress he will find that the credit departments of these jobbers will be more than willing to co-operate by extending him special terms or carrying his account until his finances are once more on a sound basis. The writer knows personally dozens of successful retail automotive dealers today who owe their success to the co-operation, help and assistance rendered by their jobbing connections. Dealers who started in business with nothing more than a will to do, and a high sense of moral obligation, were assisted up the ladder of success and prosperity by the guidance of a good jobber.

Salesmen Can Help

The properly trained jobber salesman can and should be of immense benefit to the dealer trade. In traveling over his territory, he is constantly coming in contact with successful dealers, who in their business have established tried and proved sales methods, which he in turn can pass on to the benefit of his other customers. Having a broader and better knowledge of the automotive line which he sells, he can assist the dealer in educating his men to be real "Ask 'Em To Buy" merchants. He should demonstrate labor saving devices for the shop men and offer suggestions for dressing show windows and the proper display of merchandise, thus making his sales efforts something more than simply the exchange of MERCHANDISE for DOLLARS.

It is doubtful whether the car manufacturer or the dealer fully appreciate the distinct service that the automotive equipment jobber is performing in the replacement parts field. With the 18,000,000 passenger cars now on the American highways, it would be an impossibility for the car manufacturers or their authorized dealers to supply parts for and service this enormous number of cars. To carry in stock the different oversize pistons, pins, and rings, together with such items as gears, springs and articles of a like nature for the different and numerous models which have been brought out during the past few years, would place a financial burden on the car dealer which very few would be in position to carry.

The jobber in most instances is carrying standard replacement parts of proven merit, rendering prompt and efficient service to the retail trade and keeping the cars on the American highways moving, and at less cost and more efficiently than could be accomplished in any other manner.



ars that normally would be out of commission for anyhere from a week to ten days, awaiting the arrival of arts from factories, are being supplied parts from the obber's stock and put back in running condition within a w hours.

If the dealer will but realize that discount is not everything in business, and that his interests and the jobber's are one and the same, he will find the jobber his best friend, and ever willing to lend all co-operation and aid in helping to build permanent and profitable business—thereby overcoming the efforts and work of their greatest common enemy the "gyp."

A Good Jobber Is the Retailer's Best Friend

Dealer Who Makes Himself Worthwhile Customer of Dependable Wholesaler Has Business Advantage

By WILLIAM M. WEBSTER
Commissioner of the Automotive Equipment Association

William M. Webster, commissioner, Automotive Equipment Association

THERE is no more important thing for the retail merchant to consider than that of securing and maintaining an adequate and dependable source of upply. Profits in business result from selling. Goods ust be bought before they can be sold, and good buying , therefore, a mighty important factor and it is impossible without the right kind of a supply source, which ften means the difference between a profit or loss in perating a business.

Too many merchants buy on price only. One must ecure his merchandise at fair prices, else he cannot meet ompetition, but price is not the only and all-important onsideration. In times now gone, when rentals were heap, warehousing cost low, transportation difficult, and hen merchants bought supplies for six months or more, oney could be made by price-haggling and bargaining, ut money in a business today is made in the selling—y the quick turnover and many small profits rather than few large ones. Successful merchants recognize this nd act accordingly.

If I were a retailer, I would expect to pay my jobber a air price, that is, his cost plus a profit that would enable im to pay his operating expenses and then some—which his just and reasonable due. I would then carefully nalyze his ability to supply my needs of quality merhandise in an efficient and dependable way in order to ring to my business the advantages of a jobbing conection on which I could rely.

The public today more and more demands well-known and randed merchandise. A dependable wholesaler will have the confidence of manufacturers and will be enabled to furnish merchandise that is in demand on reasonably short notice, thereby enabling the retailer to serve his customers with a minimum of expense.

The great problem in business today is that of efficient distribution. As a rule, anything that can be sold can be made, but it does not work the other way around, for many things made might not be capable of being sold, so leaders in the industry now emphasize the necessity of efficient distribution. A dependable wholesaler understands the problems of his dealers, gives thought to their merchandising needs and co-operates with them in stimulating the sale of merchandise that he supplies them.

The wise retailer will tie closely to a wholesaler of established reputation, give him a volume of business that will justify his having a real interest in the well being of the retailer's business, and he will work with the dealer in helping him build a greater business by every possible and legitimate means of increasing sales.

When a wholesaler has a real interest in his dealer he is willing to give him all aid consistent with good business to help him place and keep his business on a sound basis.

The writer recalls a grocery merchant in Eastern Carolina, who, in the depressing days of 1892, found the going mighty hard. He had always worked closely with his

jobber, had taken care of his obligations at the appointed time or had made satisfactory arrangements. He had avoided the practice of giving many wholesalers a little dab of business, but gave a limited number a volume that made his business worth while to them. As a result, when he was hard-pushed, those wholesalers with whom he had been doing business came to his rescue, helped him over the hard period and thereby kept him and his business from going on the rocks; and there are thousands upon thousands of like instances. Your wholesaler is your friend—cultivate and develop close relations with him. It will pay both him and you.

I think it well, in closing to re-state the thought expressed in the beginning—There is no more important thing for a merchant to consider than that of securing and maintaining a dependable source of supply.

Christmas Profit in Automotive Merchandise

Alive to the Christmas Opportunity

The following manufacturers, members of the Automotive Equipment Association, had notified the A. E. A. Merchandising Department of their plans to feature their products as Christmas gifts, up to the time the accompanying article was written:

How A. E. A. Manufacturers and Jobbers Are Campaigning to Help Dealers Sell Accessories and Equipment as Holiday Gifts.

Arthur R. Mogge, Merchandising Director A. E. A.

By ARTHUR R. MOGGE

Merchandising Director Automotive Equipment Association

THE idea of merchandising automotive equipment as Christmas gifts has been growing more popular every year, and all advance reports indicate that this season will be the most successful on record.

Following a general program outlined by the Merchandising Department of the Automotive Equipment Association, many manufacturers started several months ago to make preparations for the Christmas business. To assist dealers to sell more accessories this season, manufacturers have put their products up in holly boxes or holly wrappers, special display material has been prepared, direct-mail campaigns have been arranged, and extensive advertising campaigns released in trade papers, consumer publications, and newspapers.

In addition to the sales helps provided by the manufacturers, representative jobbers in the United States and

anada have gone further and through the A. E. A. have rranged to supply very attractive window display ma- rial, gift suggestion booklets, Christmas tape, string, ickers, holly wrapping paper, and even cuts and copy for ewspaper ads.

To further stimulate interest in the Christmas program, ie A. E. A. Merchandising Department, for the third iccessive year, has announced a Christmas Window isplay Contest for Dealers. Fifteen prizes totalling 500 will be awarded for pictures of the best trimmed indows featuring the idea "Give Something for the Car his Christmas." The contest does not close until ecember 24, and entry blanks are available through . E. A. jobbers and their representatives.

The real success of the whole undertaking, however, epends upon the volume of sales made by dealers. The est of plans are of little value if merchandise is moved rom manufacturers to jobbers to dealers and then emains on dealers' shelves. Early reports received from ealers, however, indicate that they are putting in stocks, ill display, advertise and "Ask 'Em to Buy." The result ill be that they will get consumer interest and will sell ccessories as Christmas gifts.

The most enthusiastic dealers are those who have gone fter the Christmas business in former years and found : paid. One dealer in Oregon recently stated that his usiness last Christmas was 400 per cent better than the ear before. An Illinois dealer got busy last year and ut in a Christmas window, advertised and sent out everal hundred gift suggestion letters. The result was hat his sales were three times those of the previous)ecember.

Any dealer who will put the necessary effort behind he Christmas campaign will find it pays. In case a sales- nan finds a dealer who may be skeptical, the following oints outline the dealer's opportunity:

1—The owners of the nineteen million automobiles in the United States and Canada represent the group of people who have money to spend.

2—Interest in automobiles is not limited to the car owners, but has spread out to include the interests of whole families and circles of friends. Thus, while there are nineteen million cars, each car offers the basis for at least five automotive gifts or a total of 100,000,000 gifts.

3—The purchasing public in the past has wandered from store to store, looking for gifts which would be practical and appreciated. Automotive accessories solve the problem in most cases.

4—Women do most of the Christmas shopping and if automotive dealers want their patronage they must go after the business in the same way that leading merchants in other lines have found successful in former years. Many women drive cars and have occasion to patronize car dealers and garagemen for service and supplies. They offer every automotive merchant an excellent opportunity to "Ask 'Em to Buy Something for the Car This Christmas."

It is easy to get the Christmas business, and the following points may help those who want to cash-in on the Christmas trade, but do not know just how to begin:

1—Put in a stock of accessories suitable to be sold as Christmas gifts.

2—Sell entire organization on Christmas possibilities if they "Ask 'Em to Buy."

3—Put in an attractive Christmas window display. Ask your jobber about special display materials.

4—Put up a large card or streamer with the caption: "Give Something for the Car This Christmas."

5—Procure holly paper and wrap up some of the stock on hand that should sell during the holiday season.

6—Run newspaper ads. Send letters to everybody in the community, and remember telephone calls often help sell goods.

7—Solicit the help of school children. They can get the "grown-ups" interested when others can't.

Use of Benzol as Motor Fuel

'N a paper recently read before the industrial division of the American hemical Society, Mr. E. L. Hall, gen- ral superintendent of the Portland Gas : Coke Company, brought out the salient eatures of benzol as an engine fuel. n abstract of Mr. Hall's paper follows:

Benzol can be used successfully by tself as a motor fuel provided car- uretors are adjusted specially for it. 'or complete combustion 1 lb. of benzol equires theoretically 13.33 lbs. of air nd 1 lb. of gasoline 15.01 lbs. of air. 'he weight of benzol is 7.35 lbs. per allon and gasoline 6.37 lbs. per gallon. t follows then that 1 gallon of benzol equires 98 lbs. of air and 1 gallon of asoline 95.6 lbs.

For several months after the Portland lant was started all the motor equip- nent of the Portland Gas & Coke Co., ogether with several other local truck leets were operated on straight benzol.)uring this period careful records of nileage, etc., were kept. Increases of .5 per cent to 30 per cent in miles per allon of fuel were obtained and after 00 miles running the dilution of crank- ase oil was found to be 7 per cent with asoline and only .3 per cent with benzol. 'he absolute viscosity of oil after use with gasoline decreased 62 per cent at 75 deg. F., with benzol it increased 71 per cent at 75 deg. F.

This shows practically no dilution of the lubricating oil with unburned portions of fuel when using benzol. The dilution of crankcase oil has been recognized by automobile manufacturers as one of the most vital factors affecting the wear and tear on engines.

The disadvantage of requiring carburetor adjustment, and also the fact that the benzol froze at 27 deg. F. led to the decision to blend the benzol with gasoline before placing it on sale to the general public. Blending reduces slightly the increased mileage obtainable with straight benzol, but experience has shown that the gasoline benzol blend increases mileage from 10 per cent to 20 per cent. More power is developed particularly on hills and in most cases the spark can be carried fully advanced without any tendency to "knocking." This is due to the slower flame propagation of benzol the explosion taking place less suddenly than with gasoline, and exerting the driving force for a greater portion of the piston stroke. The great volatility of benzol produces greater ease of starting, particularly in cold weather.

Benzol is a powerful solvent, and it has been found that when using benzol mixtures in a car that has been running up on gasoline the accumulation of dirt in the tank and fuel pipe is sometimes loosened up and carried forward into the carburetor.

It has also been found on certain low priced cars with cork floats in the carburetors, that the benzol would dissolve the varnish off the cork, and the float would become soaked which causes flooding of the carburetor. On the more recent models this trouble has been obviated by the use of a pure shellac varnish which resists the solvent action of the benzol.

Some work has been done, particularly in the European countries, on benzol-alcohol mixtures for motor fuel, but apparently they do not give the satisfaction that a benzol-gasoline mixture gives. To develop the power from alcohol, higher compression engines are needed, and it has been found that alcohol causes corrosion of tanks and fuel piping on automobiles. Unless the combustion is carefully regulated acids are formed in the motor which corrode valves, etc.

Electrical Flat Rates *Are* Practicable

Motor Age Chart Points the Way to Standardized Prices by Service Stations

By A. H. PACKER

"HOW much will it cost," is still the cry of the car owner, no matter whether he is shopping around for a new tire or is hunting for a shop which is capable of replacing a few thousandths of an inch, lost in some unaccountable way from his generator bearings.

Many shops are giving him the answer as far as labor is concerned, some even including material. Electrical operations are more simple than mechanical jobs done on the engine. Is there any reason then why they too can not be done on a flat rate basis? The chart in this issue is the answer of MOTOR AGE to this question.

In this chart the prices are given in dollars, and while some variation from the figures may seem advisable in certain localities it is felt that conditions in various places balance one another to a great extent. A city shop may have high overhead expense, which may raise the cost of doing the work, while on the other hand its men are so experienced that they do each job very quickly. The country shop, however, may have low overhead but will take more time to do the same operation. In like manner the expense of equipment in one shop will be more than offset by the length of time required when little equipment is available, while a continuous run of work in the city shop will be offset by more lost time in the country shop.

Another great advantage of a fixed and standardized price is that it is accepted as fair by the car owner and goes a long way toward eliminating from his mind the idea that he is being stung in one shop but is slipping something over or getting a bargain in another.

In looking over the chart it may be felt by some who are accustomed to work on a close margin that a few of the prices are too high. It should be remembered, however, that flat rates imply guaranteed work, making good on the job in the first place and doing it over if it comes back, so that a margin to cover such contingencies is necessary.

Some flat rate systems assume that when the car comes to the service station, that it is known what is wrong. In many cases this is true while in others it is not. Where the ammeter does not register charging current, a wire may be broken and a fuse blown or the generator may need overhauling. A test of some sort is needed to find the nature of the trouble. That is the reason for operation No. 1 on the chart, but the charge must be applied with discretion.

If the service salesman can close the cutout points by hand and from the ammeter indication know that the generator is at fault it might be inadvisable to add the testing charge, for the price of overhauling the generator would cover the time spent in this simple test. On the other hand if considerable time is spent in locating the nature of the trouble, and especially if the car owner drives out and says he will come in some other time, then it would be advisable to apply the testing charge.

In the generator work, operation No. 2 covers taking the machine off, replacing it and making the necessary final adjustment of the charging rate on the car.

Electrical maintenance and repair operations on the automobile are as readily standardized in price as any other operations. In the accompanying article Mr. Packer shows how the flat rate method can be applied in pricing electrical service jobs and in the chart that follows he presents a complete schedule of suggested prices that will be found useful in arriving at fair prices in any service shop.

No. 3 covers repairing the generator, that is, the bench work, but does not include a charge for changing field coils or under-cutting the commutator. In this way there is an approximate division of expense in proportion to the work required.

Some Examples

A generator is brought in, armature shorted. This requires replacement of the armature only and the labor charge is found under operation No. 3. Taking the first car given, which is an Ajax, this would be $4.00.

Anderson car driven in. Commutator burnt, brushes worn down, field coil open. The labor prices to use would be

No 2	$1.50
No. 3	4.25
No. 4	1.00
No. 5	1.00
Total	$7.75

Item No. 7 is not recommended, but is put in the chart to cover emergency jobs where a tourist, for example, can not wait to have the generator properly taken care of. Sanding the commutator is usually required on account of oily brushes or some such condition, which means the job can not be permanent.

Item No. 8 in most cases covers construction where adjustment of the generator position also adjusts the tension of the front end timing chain.

Operations No. 11, 12 and 13 appear to be similar, but the difference arises in the variation in the starter drive mechanism on various cars. No. 11 is intended to take care of the removal of this mechanism, the starter being taken off if necessary. In a Dodge Brothers car this would be the chain, in a Cadillac or Buick previous to 1926 it would be the gears which transmit the drive to the flywheel. On a Ford it would be the Bendix. In Operation No. 11 the starter is not removed unless necessary.

Operation No. 12 means removal and replacement of both the starter and the drive mechanism, while No. 13 is designed to take care of removing and replacing the starter only, the mechanism being left on the car. For example, it would cover the Dodge Brothers motor generator, when the chain is held up in place with wire, but is not removed. It would also cover the older Buicks where the motor generator only is taken off and the gear and clutch mechanism remain on the car.

Operation No. 14 covers the bench work on the starter including change of field coils if needed, but does not include turning the commutator which is an extra charge as given in operation No. 15.

Operations from No. 17 to No. 24 cover work on the ignition system. Where there are two coils, two sets of contacts or two distributer caps to be worked on, the price given should be twice that in the table, which is the unit price in each case.

Operations No. 25 and No. 27 cover work on the old spark plugs, while operations No. 26 and No. 28 cover the installation of new ones. In the later jobs, the question of policy may affect the charge made. If a customer orders new plugs installed, some shops make a practice of putting them in without charge.

The nature of the work covered by the remaining operations should be evident from the description given in the chart. The last item, covering carbureter adjustment, is given because, when the engine misses, the first thing the owner is likely to do is to play with the adjustments. The consequence is that when the car gets to the electrical department to have the ignition taken care of, it is also necessary to have the carbureter adjusted. The prices given in operation No. 46 do not, however, cover any repair work on the carbureter.

his chart has been prepared after obtaining all possible in-
rmation from factories, service stations and specialized
ectrical stations. It is not represented as official and
ould not be indiscriminately applied. It should serve as a
arting point, however, for service station managers who
sh to extend the flat rate principle to the electrical de-
rtment.

MOTOR AGE ELEC

Suggested Prices for 46 Automo

OPERATIONS

TROUBLE ANALYSIS

1. Testing electrical system to locate units or wires affected. (Does not include unit repair or wire replacement.)

GENERATOR OR MOTOR GEN.

2. Remove and replace, including test. (All necessary work such as retiming ign. or removing and replacing carbureter included.)
3. Repair generator after (2) or when brought in
4. Turn and undercut commutator after (3) Includes turning motor commutator on motor generators
5. Change one or more field coils after (3)
6. Adjust charging rate only, on car
7. Sand commutator only, on car
8. Adjust driving chain

CUTOUT

9. Remove and replace
10. Clean and adjust points

STARTER OR MOTOR GEN.

11. Remove and replace starter mechanical drive (Bendix, chain or gears and clutch)
12. Remove starter, replace and test (11 included)
13. Remove starter, replace and test (11 not included)
14. Repair starter after (12) or (13) or when brought in
15. Turn commutator after (14)

STARTER SWITCH

16. Remove and replace

IGNITION

17. Retime ignition (battery system)
18. Remove and replace distributer unit (Retiming included)
19. Resurface and adjust contacts (per pair)
20. Replace and adjust contacts (per pair)
21. Replace condenser (each)
22. Replace coil (time basis if screws must be drilled out)
23. Replace ballast resistance
24. Replace distributer cap

SPARK PLUGS

25. Clean and adjust one
26. Clean and adjust all
27. Install one new plug
28. Install all new plugs

WIRES AND CABLES

29. Replace one spark plug wire
30. Replace all high tension wiring
31. Replace any one starter cable

AMMETER AND SWITCH

32. Replace ammeter
33. Replace ignition and lighting switch

LAMPS

34. Replace head lamp glass
35. Replace tail lamp glass
36. Replace one bulb
37. Additional bulbs, each
38. Focus head lamp bulbs and aim lamps (time basis if focusing device is rusty or stuck with paint)

FUSES

39. Replace one
40. Replace all

HORN

41. Oil and tune horn
42. Remove and replace horn

BATTERY

43. Fill with water and take hydrometer readings
44. Clean terminals after test (43)
45. Tighten hold down

CARBURETER

46. Adjust in connection with ign. work

Many New Products Will Feature A. E. A. Show

Great Exhibition Also Includes Standard Lines of Well Known Automotive Merchandise

On this and following pages MOTOR AGE publishes a list of the exhibitors at the Automotive Equipment Association Show, opening Nov. 9, and the best available forecast of the products, new and old, that will be shown. In the preparation of this list MOTOR AGE sent questionnaires to the entire list of exhibitors. From the returns received the detailed list giving the name of exhibitor, space—complete line of products and new articles was prepared. Exhibitors from whom no returns were received, or received too late, are listed more briefly showing only name and address of company and space to be occupied at the show. Information about new products illustrated and described in this issue was furnished in the returns to questionnaires. More new products will be illustrated and described in the next and subsequent issues.

AJAX AUTO PARTS CO.
Racine, Wis.
Space 188. PRODUCTS: jacks. NEW PRODUCTS: No. 5 light truck jacks.

ALLEN ELECTRIC MFG CO.
Detroit, Mich.
Space 300. PRODUCTS: automotive electric testing equipment and tools such as gap gage for Ford magneto mounting, coil tester, coil adjusting tool set, magneto tester, magneto charger; general tools for repairing Ford generator and starting motor; pullers of different types, test stand, growler, armature test meter, rheostat, etc. NEW PRODUCTS: Special Test Stands for Bus Generator Testing; Magnetizer.

AMERICAN AUTOPARTS CO.
French Road Near Gratiot, Detroit, Mich.
Space 364. PRODUCTS: springs for Ford cars and models; rubber cushion rings for Fords. NEW PRODUCT: American Spring Brake.

AMERICAN CHAIN CO., INC.
Bridgeport, Conn.
Spaces 42-3-4-5. PRODUCTS: tire chains; chain-type jacks; bumpers; tow chains; tire lock chains; hammerlok cotter pins.

AMERICAN HAMMERED PISTON RING CO.
Wash and Hamburg Sts., Baltimore, Md.
Spaces 39-40-41. PRODUCTS: piston rings, both oil and compression.

AU-TO COMPRESSOR CO.
Wilmington, O.
Spaces 269-70. PRODUCTS: air compressors.

AUTOMOTIVE MAINTENANCE MCHY. CO.
9 West Washington St., Chicago, Ill.
Space 163. PRODUCTS: cylinder reconditioning tool; crank pin re-turning tool.

BADGER MFG. CORP.
156 Clinton St. Milwaukee, Wis.
Spaces 335-6-7-8. PRODUCTS: bumpers; creepers.

BASTIAN BLESSING CO.
240 E. Ontario St., Chicago
Space 133-4-5. PRODUCTS: welding, cutting, lead burning, carbon burning, brazing and soldering equipment; air pressure regulators.

BIFLEX CORP.
Waukegan, Ill.
Space 71-2-3-4. PRODUCTS: bumpers. NEW PRODUCTS: New Biflex Superb Junior Front & Rear Bumpers.

BIMEL SPOKE & AUTO WHEEL CO.
Portland, Ind.
Space 109. PRODUCTS: full line of replacement wood wheels.

BLACK & BECKER MFG. CO.
Towson, Md.
Spaces 113-14-15-16-17. PRODUCTS: electrically driven tools for shop equipment. NEW PRODUCTS: Heavy Duty 1/4 in. Portable Electric Drill.

BLACKHAWK MFG. CO.
Milwaukee, Wis.
Spaces 281-82. PRODUCTS: wrenches; water pumps; hand tool grinders; throttles for Fords. Some NEW PRODUCTS will be shown.

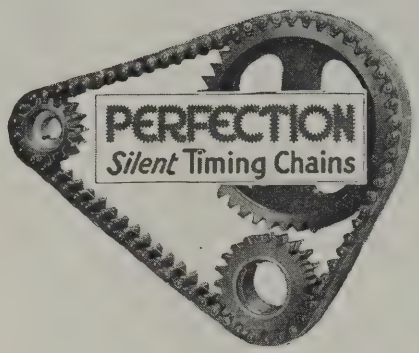
BONNEY FORGE & TOOL WORKS
Allentown, Pa.
Spaces 363-363½. PRODUCTS: wrenches; rim tools; garage vises. NEW PRODUCTS: Bonney "CV" Chrome Vanadium Socket Wrenches; Bonney "CV" Chrome Vanadium Sample Kits.

BRUNNER MFG. CO.
Utica, N. Y.
Spaces 359-62 inc. PRODUCTS: compressors, paint spraying equipment. NEW PRODUCTS. Brunner Pneumatic Valve Grinder and paint spraying outfits No. 811 and No. 828.

BUCKEYE BRASS & MFG. CO.
Cleveland, O.
Space 225. PRODUCTS: motor bearings; bronze bars; bronze bushings.

BURGESS-NORTON MFG. CO.
Geneva, Ill.
Space 169. PRODUCTS: piston pins, piston pin bushings; NEW PRODUCTS: Piston Reamers.

CANEDY-OTTO MFG. CO.
Chicago Heights, Ill.
Space 229-30. PRODUCTS: drill presses; arbor presses; straightening presses; automotive equipment; grinders; motor stands.

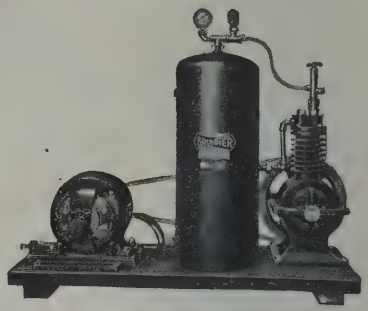


CENTRAL BRASS & FIXTURE CO.
Springfield, O.
Spaces 367-68. PRODUCTS: bumpers. NEW PRODUCTS: Buckeye Bumpers, Round and Spring Types, finished in colors to match the different automobiles.

CHAMPION SPARK PLUG CO.
Toledo, Ohio.
Spaces 46-7-8. PRODUCTS: spark plugs.

CLIFTON MFG. CO.
Waco, Texas.
Space 203. PRODUCTS: seat covers; seat top recovers; side curtains; cushion cover upholstering; automobile tents; complete line of fabric equipment.

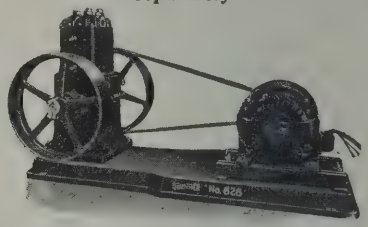
CONTINENTAL PISTON RING CO.
Memphis, Tenn.
Space 189. Piston rings.



Some New Products at A. E. A. Show

Perfection Silent Timing Chain. Made by Perfection Gear Co., Chicago. Makers claim many improved features contributing to service, durability and continuous silence

Brunner Pneumatic Valve Grinder. Brunner Mfg. Co., Utica, N. Y. A power driven grinder which eliminates hand finishing. Weight, 4 lbs. Controlled speed 10 to 1,000 oscillations per minute. Also adapted for grinding valve cages. Price, with bit stock, 3 different size bits and retrieving spring, $25. Air hose with needle valve for air line and special tools extra



Brunner Spray Painting Outfit No. 811. Brunner Mfg. Co., Utica, N. Y. Has 3 by 4 in. single cyl. compressor and 1½ h. p. motor. Will operate one Brunner Fan Spray continuously or three Round Spray guns. Price $310 to $355, depending on motor. Special motors listed separately

Ajax Jack for Light Trucks. Model No. 5. Made by Ajax Auto Parts Co., Racine, Wis. Height 10¼ in., lift, 7 in., handle 18 in. Designed for use of owner to meet any severe load condition and with no working parts to get out of order

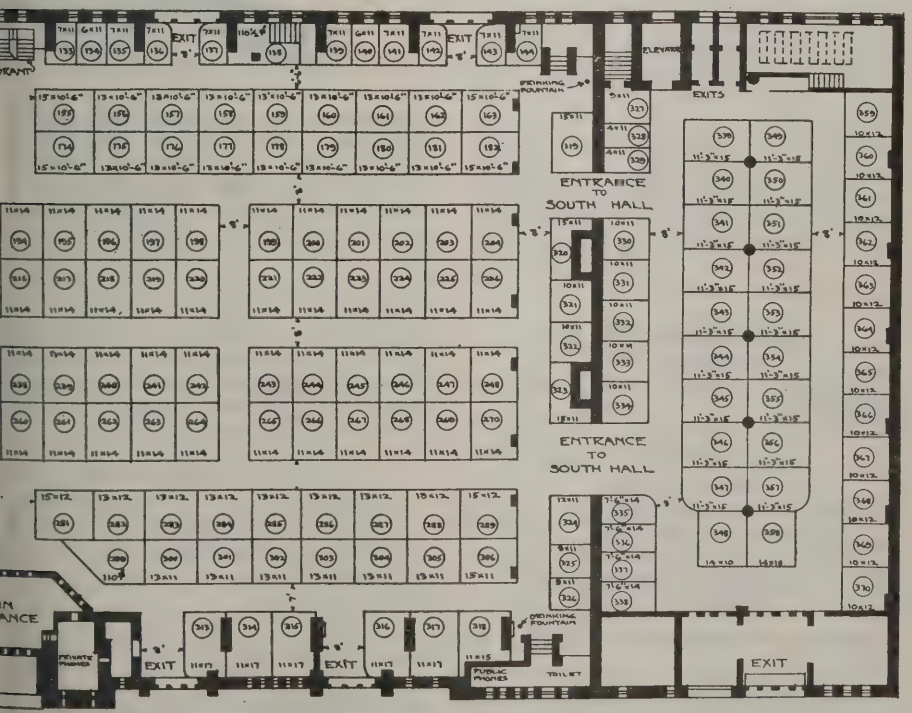
250 W. 57th St., New York, N. Y.

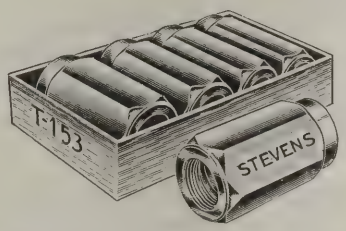


Space 236. PRODUCTS: clocks and watches.

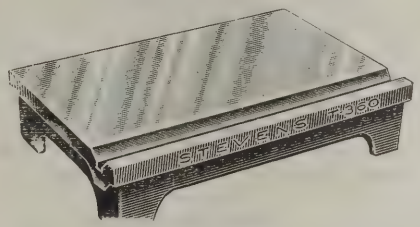
POLSON RUBBER CO.
1783 East 11th St., Cleveland, O.

Space 298. PRODUCTS: blow-out patches; tire flaps; reliners; puncture sealing tubes; tube repair kits. NEW PRODUCT: Stick-On Tire Patch.

PYRENE MFG. CO.
560 Belmont Ave., Newark, N. J.

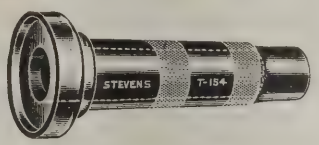


Space 286. PRODUCTS: tire chains; fire extinguishers. NEW PRODUCTS:

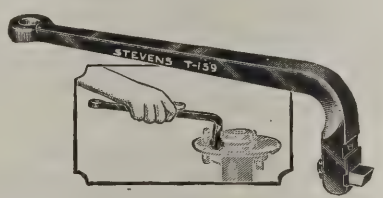


rs for A. E. A. Show Nov. 9 to 14

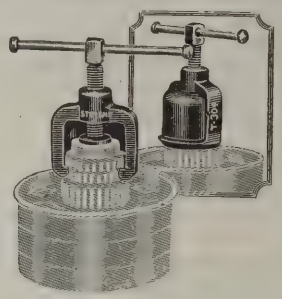
Some New Products at A. E. A. Show



ELEVEN new items are found among the "speed-up" tools in the catalog of Stevens & Company, 375 Broadway, New York. Illustrations and brief descriptive matter relating to them will be found in the display below.

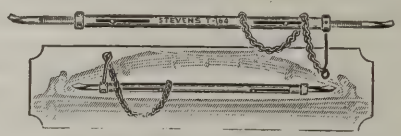


Wheel Pullers. Built of one piece. Nothing to loosen. Flat bottom of hole butts against shaft so impact does not come on axle threads. Set of four in box, $4.25. Other listings.

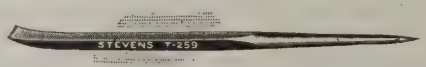


Surface Plate. For general testing of piston pins, bearing caps, piston rings, gears, etc. Medium size. V-Channel along side makes it possible to hold round or cylindrical objects. Weight, 7½ lbs., 8 by 12 in., price, $7.50.

Dust Cap Driver. Replaces rear axle dust cap on Ford car and truck. Working end shaped to drive cap firmly in place without damage. Slips over axle. Weight 3¾ lbs. Price, $3

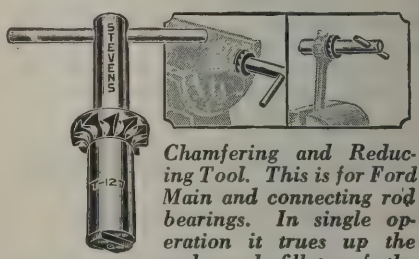


←*Dust Cap Pry Bar. Removes dust cap on rear axle of Ford car or truck quickly without damage. Illustration shows two positions for the bit—lower one for car, upper for truck. Weight, 1 lb. 5 oz. Price, $1.50*

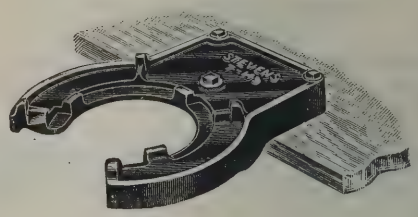


Puller for Ford Transmission Drive Gear. Quick action puller for removing Ford part No. 3317. Quickly set in place without adjustment. Can't flop over. Price $3

Rivet Set. This device forms a rivet head with the cup-shaped end. Takes all sizes. Made of tough chrome alloy steel; knurled handle; length is 6 in.; diam., 1 in. Weight, 1¼ lbs. Price, $1.25



Spring Spreaders. Turning the capstans lines up the spring with the perches so that the shackle bolts can be inserted. Weight 5¼ lbs. Price, $3.50



Pry Bar and Punch. A general utility tool for prying, forcing, lining up holes, etc. Round end may be used as a drift. Weight, 14 oz. Price, 65 cents

Exhaust Pipe Pack Nut Wrench. This tool is for the troublesome job on the Ford exhaust pipe pack nut. Works well in the little clearance that there is and will pull badly rusted or burned out nuts. Wrench is drop forged steel and will stand hard hammering. Weight, 2½ lbs. Price, $1

Chamfering and Reducing Tool. This is for Ford Main and connecting rod bearings. In single operation it trues up the ends and fillets of the main and connecting rod bearings after rebabbitting, for proper clearance curve and fit. Price, $3.50

Differential Holding Chuck. Holds Ford differential properly on either side without tightening any clamp or screw. Malleable iron plate has two sets of lugs that won't chip or break. No holes to be ct in bench. Easily installed. Weight 8½ lbs. Price, $3

Phomene Extinguishers and Engines; Chromine—Radiator Freeze-Proof Solution.

RAYBESTOS COMPANY
Bridgeport, Conn.

Space 315. PRODUCTS: brake and transmission linings; brake for Ford cars; transmission bands. NEW PRODUCTS: 1926 Model Raybestos (without wire); 1926 Model Chatterless; Royal Transmission Lining; Improved Royal Brake.

REESE MFG. CO.
Pittsburgh, Pa.

Spaces 93-4-5. PRODUCTS: Ford brakes; mirrors; jacks. NEW PRODUCTS: Bus Jacks.

FRANK ROSE MFG. CO.
Hastings, Neb.

Space 199. PRODUCTS: tire pumps; grease guns.

G. A. ROTH MFG. CO.
Hastings, Neb.

Spaces 97-8. PRODUCTS: luggage carrier; heaters; valve lifters, etc.

RUSSELL MFG. CO.
Middletown, Conn.

Space 215. PRODUCTS: Brake lining; clutch facings; fan belts; transmission linings for Fords; transmission bands for Fords; emergency brakes; hood and radiator lacing; waterproof web straps; top webbing.

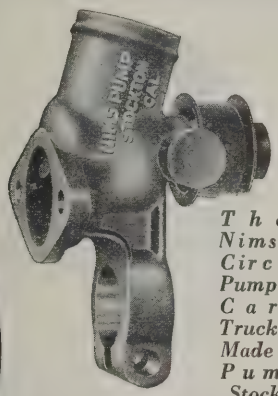
Additional descriptions of new products at A. E. A. show in next week's MOTOR AGE.

S. & M. LAMP CO.
118 W. 36th St., Los Angeles, Cal.

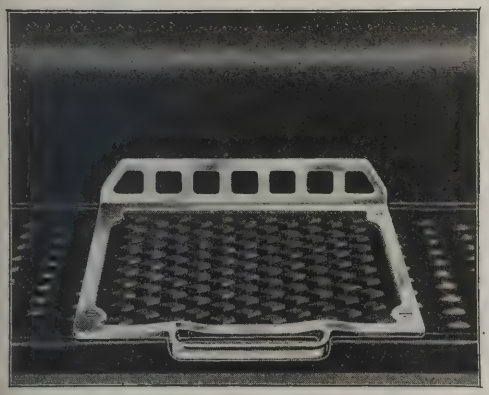
Space 318. PRODUCTS: illuminating equipment. NEW PRODUCTS: No. 85 S. & M. Road-Lite; No. 95 S. & M. Road-Lite.

C. A. SHALER CO.
Waupun, Wis.

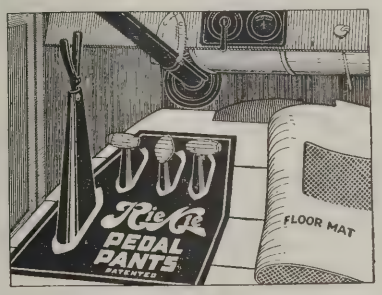
Space 227-28. PRODUCTS: electric and steam vulcanizers; vulcanizing tools. NEW PRODUCTS: Balloon Tire Vulcanizers.



Some New Products at A. E. A. Show



Push-Pull Switches for Automobiles or Radio. Made by Tiffany Manufacturing Co., Newark, N. J. List price is 50 cents each. Said to be ruggedly constructed and an efficient unit. Installation easily accomplished



New Hub Cap for Chevrolet Cars. This is another new product of the M. L. Oberdorfer Company, of Syracuse, N. Y. The cap illustrated above is stamped with the Chevrolet emblem with a bold "C" in the center. It is finished in silver, red and blue and offered to the Chevrolet owner as an ornamental addition to his car

The New Nims" Water Circulating Pump for Ford Cars and Trucks. List $5. Made by Nims Pump Co., Stockton, Cal.

New Style Step Plate for Ford cars made by M. L. Oberdorfer Brass Co., Syracuse, N. Y.

Rie Nie Pedal Pants. Rubberized protectors that fit snugly around the pedals and brake lever of Ford to keep cold drafts, dirt and hot air from engine from coming through openings. List price, $1.25. Made by Durkee-Atwood Co., Minneapolis, Minn.

THE SIMONIZ CO.
Chicago, Ill.

Space 82-3. PRODUCTS: Simoniz; Simoniz Kleener; brake lubricant; penetrating oil; top dressing; tar remover; enamel; rust preventive.

SPARKS-WITHINGTON CO.
Jackson, Mich.

Spaces 197-8. PRODUCTS: automobile horns.

SPLITDORF ELECTRICAL CO.
392 High St., Newark, N. J.

Space 232. PRODUCTS: spark plugs; ignition cables; generator cutouts; ammeters; socket wrenches; radiator caps; radio sets; radio speakers; radio parts.

SPENCER-SMITH MACHINE CO.
Howell, Mich.

Space 36-7. Products: pistons; piston pins; piston pin set screws.

F. W. STEWART MFG. CO.
Chicago, Ill.

Space 126-7. PRODUCTS: speedometer replacement parts; steering wheels; locks for Fords; automatic windshield cleaners; bearings; stop lights; fender braces for Fords. NEW PRODUCTS: Swivel Joint With Alemite Nipple Attachment; Steering Wheels for Ford, Chevrolet and Star cars.

STEVENS & CO.
375 Broadway, New York City

Spaces 275-76. PRODUCTS: valve grinders; engine stands; axle stands, piston aligners; piston vises; timing testers; piston ring compressors; and a variety of other tools and equipment for the shop. NEW PRODUCTS: Stevens Chamfering and Refacing Tool; Stevens Rivet Set; Stevens Pry Bar and Punch; Stevens Puller for Ford Transmission Gear; Stevens Exhaust Pipe Pack Nut Wrench; Stevens Differential Holding Chuck; Stevens Dust Cap Pry Bar; Stevens Wheel Pullers; Stevens Surface Plate; Stevens Piston Oil Groove Tool for Ford and Fordson.

STILES MFG. CO.
125 E. Quincy St., St. Louis, Mo.

Space 358. PRODUCTS: reamer stoning tool; automobile whistles and sirens; step plates; toe bumpers. NEW PRODUCT: Radio Receiving Set.

STORM MFG. CO.
Minneapolis, Minn.

Space 237. PRODUCTS: cylinder reconditioning tools; cylinder hones; connecting rod aligner. NEW PRODUCT: Riteway Aligner.

Additional descriptions of new products at A. E. A. show in next week's MOTOR AGE.

W. H. THOMAS MFG. CO.
Spencer, Iowa.

Space 160. PRODUCT: foot accelerator for Fords; heaters.

THOMPSON PRODUCTS, INC.
Cleveland, O.

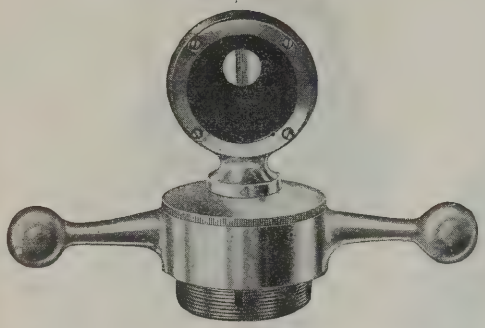
Spaces: 295-6. PRODUCTS: valves; bolts; bushings; starting cranks.

TIFFANY MFG. CO.
42 Spring St., Newark, N. J.

Spaces 140-141. PRODUCTS: starter switches; push-pull switches; generator cut-outs; timers; illumination equipments; horn buttons; windshield cleaners; ammeters; voltmeters. NEW PRODUCTS: Push-Pull Switches.

TOLEDO STEEL PRODUCTS CO.
3300 Summit Street, Toledo, O.

Space 176. PRODUCTS: valves.

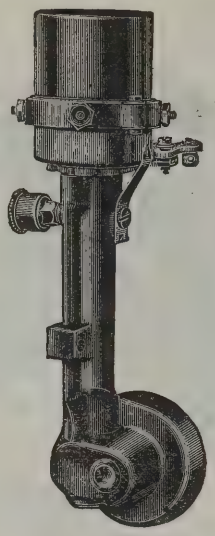


TRAINOR NATIONAL SPRING CO.
New Castle, Ind.

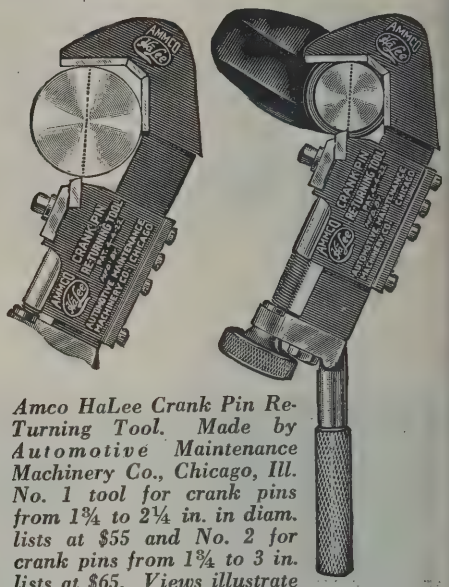
Space 344. PRODUCTS: Replacement springs. NEW PRODUCTS: Eight-Leaf Ford Front Spring, for new models.

TUTHILL SPRING CO.
760 Polk St., Chicago, Ill.

Space 306: PRODUCTS: springs. NEW PRODUCT: spring for 1926 Ford.



Some New Products at A. E. A. Show



The Oberlock Cap. A new type locking cap for Fords and Chevrolets made by the M. L. Oberdorfer Brass Company of Syracuse, N. Y. Cap carries six-months' written guarantee against theft

Eight-leaf Ford Front Spring for New Models. Made by Trainor National Spring Co., New Castle, Ind. Said to give proper fender clearance so fenders will not hit tires on bumpy roads

K-W Spark Battery Ignition System, manufactured by the K-W Ignition Corporation, 2811 Chester Avenue, Cleveland, Ohio

Amco HaLee Crank Pin Re-Turning Tool. Made by Automotive Maintenance Machinery Co., Chicago, Ill. No. 1 tool for crank pins from 1¾ to 2¼ in. in diam. lists at $55 and No. 2 for crank pins from 1¾ to 3 in. lists at $65. Views illustrate angle at which sliding carriage operates with respect to jaw, thereby maintaining cutting blade in correct radial position for all sizes of crank pins

UNITED STATES ELECTRICAL TOOL CO.
Cincinnati, O.

Space 49-53. PRODUCTS: electric drills; nut setters; twist drill with grinding attachment; bench and post bracket stand; grinders and buffers, etc.

VAN CLEEF BROTHERS
Chicago, Ill.

Spaces 247-8. PRODUCTS: friction tape; rubber insulating tape; soldering paste; rubber cement; cut filler; tire repair kits; radiator sealing compounds; gasket shellac; valve grinding compound; Hi-Light Bearing Blue; penetrating oil; Neatsfoot oil solution; flake and ground graphite; automobile top and cushion coating; black enamel; aluminum paint; gold paint; automobile top cement.

VAN DORN ELECTRIC TOOL CO.
300 Woodhill Rd., Cleveland, O.

Spaces 330-1-2-3-4. PRODUCTS: electri drills; electric grinders; electric glue pot. NEW PRODUCTS: Twist Drill Grinding Attachment; Eight-Inch Grinder (bench and floor); Electric Screw Driver; 5/16 Electric Drill; Electric Valve Grinder; Low-Speed, High Torque Cylinder Regrinding Drill; Cylinder Regrinding Stand.

VAN NORMAN MACHINE TOOL CO.
160 Wilbrahm Ave., Springfield, Mass.

Spaces 165-6-7. PRODUCTS: cutters; turning and grinding machines. NEW PRODUCTS: Van Norman Auto Service Machine; Van Norman No. 96 Turning & Grinding Machine; Van Norman Model B Universal Valve Grinder; Van Norman Super Valve Grinder.

VELLUMOID COMPANY
Boston, Mass.

Spaces 1-2-3. PRODUCTS: packing; gaskets.

VICTOR MFG. & GASKET CO.
5750 Roosevelt Rd., Chicago

Spaces 253-4. PRODUCTS: copper asbestos gaskets; fibre gaskets; cork gaskets; gaskets made from various packings.

WALDEN-WORCESTER INC.
Worcester, Mass.

Spaces 245-6. PRODUCTS: wrenches.

WALKER MFG. CO.
Racine, Wis.

Space 33-4-5. PRODUCTS: jacks for car owners, jacks for garages; combination device for jacking and moving cars in the garage; counter display of Walker products; tire changer. NEW PRODUCTS will be shown.

WEAVER MFG. CO
Springfield, Ill.

Spaces 287-8-9. PRODUCTS: jacks; brake servicing machines; motor service presses and attachments; Ford transmission band reliner; safety stands; service rack; automobile and truck hoists; axle stand; assembling stand for Ford engines; rim anvil; automobile crane; automobile and truck ambulances; towing pole; safety service can; valveless bucket pump; tire changing tools; wheel alignment indicator. NEW PRODUCTS will be shown.

Additional descriptions of new products at A. E. A. show in next week's MOTOR AGE.

JOSEPH WEIDENHOFF
4352 W. Roosevelt Road, Chicago, Ill.

Spaces 213-14. PRODUCTS: test benches for ignition, starting and lighting; storage battery discharge sets; individual cell testers; bearing and gear pullers; commutator mica undercutters; lathes; armature testers. NEW PRODUCTS: Model 24 Super-Service Test Bench; 5B battery tester.

WHITE & BAGLEY CO.
100 Foster St., Worcester, Mass.

Space 262. PRODUCTS: motor and lubricating oils; oil soap; hand soap.

J. H. WILLIAMS & CO.
400 Vulcan St., Buffalo, N. Y.

Space 234-5. PRODUCTS: wrenches; wrench sets. NEW PRODUCTS: New Williams "Superrench" line in five patterns, i. e., Engineers', General Service "S," Tappet, Construction and Structural.

WOLVERINE BUMPER & SPEC. CO.
Grand Rapids, Mich.

Spaces 9-10. PRODUCTS. Bumpers.

WRIGHT MFG. CO.
Lisbon, O.

Spaces 14-15. PRODUCTS: chain hoists.

"X" LABORATORIES
25 W. 45th St., New York, N. Y.

Space 314. PRODUCTS: radiator liquid.

104	Warner-Patterson Co.	Chicago, Ill.
233	Wells Mfg. Co.	Fond du Lac, Wis.
320	Yale Electric Corp.	Brooklyn, N. Y.

GRANT SELLS INTERESTS

ATLANTA, Oct. 31.—B. M. Grant, for many years one of the principal owners of the J. W. Goldsmith, Jr.,-Grant Co., of Atlanta, Georgia, distributors of the Hudson and Essex line, has sold his interests in the business to C. H. Becker, and retired from the vice presidency to be succeeded by Mr. Becker. This is one of the pioneer distributing concerns in the South, founded by J. W. Goldsmith, Jr., seventeen years ago, who remains as active head of the business. It is also one of the three original Hudson distributors still handling the line in the United States who took on the franchise when the Hudson first started manufacturing motor cars.

STAR SIX PRICES

NEW YORK, Oct. 31.—Prices on the new Star six model are as follows:

Coupster	$745
Coupe	$820
Coach	$880

Questions and Answers on Dealers' Problems

BUILDING ^ ELECTRICAL ^ FLAT RATES
SHOP ^ LEGAL ^ PAINT & TRIM ^ ACCOUNTING

A Timing Tip From an Old Timer

We have noted the answer to the question asked by Mr. G. C. Munroe, 450 W. Main Street, Compton, Calif., which appeared on page 24 of the September 10, 1925 issue of MOTOR AGE. Your advice as to the valve timing as far as I have ever learned is correct. I will say that Mr. Munroe will succeed in getting top speed and smoother running motor if he will time the ignition as follows:

Forty-one degrees before top dead center (compression stroke) with magneto fully advanced. This position may be ascertained by either of two methods. One of which is—remove elliptical hand hole cover plate, marked for cleaning of commutator of the U. S. L. starter generator, and going by marking to be found there. The other is—remove a spark plug and set magneto, fully advanced and with distributer brush on proper segment, when piston is one inch before top dead center (compression stroke).

The above applies when Bosch DU-4 magneto (factory equipment on 22-72 Mercer) or a magneto of like timing range is used. On a Dixie (Splitdorf) magneto or any other magneto having same timing range (40 degrees) the setting of full retard at top dear center will be good and the motor will idle more smoothly than with a shorter timing range magneto set 41 degrees before dead center at full advance. The following models of the Dixie magneto have the 40 degree timing range—44—46—441—447—448 and 449.

Hoping the above, learned in the school of experience, will be of benefit to those desiring information on the ignition timing of Mercer cars of the 22-72 model.—Milton Young, Hampton Court, Lexington, Ky.

The answer seems to be that with a magneto of limited timing range it may be necessary to have the spark advanced somewhat in the retard position to insure enough advance in the advance position.

A CAR THAT OVERHEATS

Q.—We are having trouble due to overheating in a Winton 6 cylinder hearse. We burned off the carbon and refaced valves, overhauled magneto but after running a mile the engine overheats. The timing chain jumped and we replaced it, but we are not sure of the correct position. We also had the radiator and cylinder block cleaned out.—L. Bass, Aberdeen, Miss.

The valves should be timed so that the exhaust valve closes 12 degrees after top dead center. You can check this with the position of the front piston. Get the piston on top dead center and then move the crank handle about one inch. This will make the piston come down about 1/64 or 1/32 inch and at this instant the exhaust valve should close. In some cases where a radiator has been used for several years it may become coated with a deposit of lime which is not readily dissolved. This may necessitate a new core for the radiator.

MOTOR AGE'S READERS' CLEARING HOUSE INDEX

Meaning of numerals 10-15-25-p25 means the article is in the October 15, 1925, issue of Motor Age on page 25.

Putting Oil Gage On a Dort

Q.—Advise as to the possibility of putting an oil gage on the dash to show if pump is working on a 1922 or 1923 Dort using Lycoming motor. There is a test lead that extends out from the pump to check pressure and we wish to extend pipe from this to the dash gage if practicable. What size gage (in pounds) would be needed and should it be connected up with one quarter inch copper tubing or smaller?—Car Hospital, F. G. Stevenson, Mgr., Afton, Iowa.

A gage can be used and the range will depend on whether you have splash or pressure lubrication. As you are not sure of the year of the car this point must be determined first. A gage which will read a maximum of five pounds is sufficient for the splash system and if it indicates anything at all it shows that the pump is working and that the system is O. K. With the pressure lubrication system a 50-pound gage should be used and the pressure will vary considerably depending on circumstances. If, for example, the pump by-pass is controlled in accordance with the operation of the accelerator, then the pressure which would normally be 20 or 30 pounds may come up to 40 or 50 pounds when the throttle is opened as when climbing a hill. The size of copper tubing is immaterial. However, if it is found that the pressure gage fluctuates and the reading is unsteady it might be possible to put an obstruction in the oil tube which connects to the gage so that changes in pressure will not be quite so accurately registered.

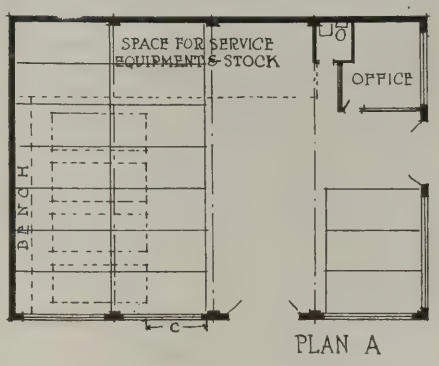
GEAR SHIFT LEVER WILL NOT STAY IN HIGH SPEED POSITION

Q—We have in our shop for repair a Buick truck model E-35-1918 which continually gives trouble due to the high speed coming out of mesh. The last time we had this car in the shop we put in new shifter forks and selector pins although we could see nothing wrong with the old ones. We also replaced the cut-out gears—22477, 22225. In about 500 miles it began kicking out and now at about 1,000 miles it can hardly be held in. The bearings are O. K.—E. E. Neeley, Watson, Ohio.

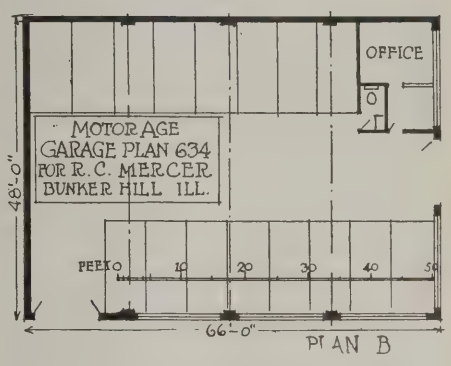
The chief trouble is doubtless in the front bearing, a roller bearing, which having worn allows the gear at the front of the transmission to wobble around. For this reason when the shift is made into high the loose bearing permits enough motion so that the high speed drive acts like a universal joint, and the gear is forced out of mesh and the transmission slips into neutral. The parts to be replaced, which, by the way, should all be replaced at the same time, are the high speed gear, intermediate gear, front bearing together with sleeve and the clutch gear.

Planning Your New Building

By TOM WILDER



The READERS CLEARING HOUSE



Two Layouts for a Small Garage

Q.—I am thinking of building a garage on a lot 48 by 66 feet and would appreciate any suggestions that you might be able to give me on same. Although this lot is small I think that it would be large enough on account of having a building 24 by 66 ft. just one door removed from this lot which I am now using for sales room, tire service station, battery service, accessories, etc., and would continue to use this building for this purpose and use the new building for garage purposes only, except for an office and waiting room about 15 by 15 ft.

Lot is on corner so can have front and side entrance. This is a town of about 1,000 population in a farming community and will soon be on a hard road. The lot is on one of the main streets one half block from the center of town. I am enclosing diagram of the location.—R. S. Mercer, Bunker Hill, Ill.

Your letter does not make it clear whether you want to do repairing in this building or just storage. Ordinarily we would consider using a building for garage purposes to mean that you wished to use it for a storage building, but since you have not mentioned a repair shop in your other building we judge that perhaps you want to use this for repair shop and such storage as there is room for.

It makes a difference whether this is a storage garage or a shop with space for storage

We show two possible layouts for storage purposes, one having the cars arranged along the sides of the building with a center aisle and one having two rows in the rear facing forward and one in front facing back. Plan A takes care of one more car than plan B, but for a storage garage we would favor plan B. Plan A would be more serviceable for a mixed shop and storage building, but there would not be a great amount of room for storage unless the doorway at the side were moved. By placing the doorway at C there would be space for five cars along the side of the building, or if you prefer you could close up the front entrance and storage five cars along the front of the building leaving the side entrance as it is. If you use the building for shop purposes, as shown by the dotted arrangement, windows would be desirable along the back end, but if this is not possible, skylights would do as well.

Legal Questions Answered—

By WELLINGTON GUSTIN
of the Chicago Bar

Q—We have one car here at the present time that was driven in from Canada and the parties had evidently borrowed some $600 on same before leaving that country. The Canadian authorities have served me with a "Warrant Under Lien Note," prohibiting me from delivering same to anyone but themselves. Am I forced to deliver car without collecting my charges?

There is another car that was driven in here from Indiana. The man ordered some forty odd dollars of repair work and has left the car here for over a month and a half. Can this car be taken from me without paying charges?—Ill. Reader.

The question presented in the above paragraphs is not of uniform decision in the various states. By both state laws and court decision the repairman's lien is given priority over a prior recorded lien of a chattel mortgage in many states.

But apparently on this same proportion the Supreme Court of Illinois in 1924 reversed the Appellate Court in the case of Ehrlich vs. Chapple, 311 Ill. 467, wherein it was contended "that where the mortgaged property is retained by the mortgagor with the consent of the mortgagee, to be used in the usual course of the mortgagor's business, an artisan's lien takes priority over a chattel mortgage." Instead the court herein said: "To hold that the mortgagor may, without notice or consent of the mortgagee, cause an artisan's lien to be placed on a mortgaged chattel which would be a lien prior to the mortgage, would be to make it possible to entirely defeat the lien of the mortgage. Such a holding is repugnant to our whole law relating to the priority of liens." And again this same court says: "Courts should not, therefore, indulge in the presumption that an agreement existed between the mortgagee and the mortgagor that the mortgage lien should give way to a subsequent artisan's lien, but such should be shown by clear and cogent evidence."

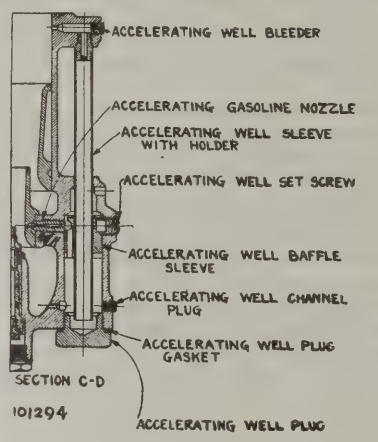
In the above matter the "artisan's lien" is but another name for our lien for repairs on automobiles. So according to this decision of your highest state court you repair a car at your peril if you do not first look up the records to see if there is not then a chattel mortgage or other lien upon the car. For such a lien, if good and valid, is given priority to your lien of storage and repairs. Now this prior lien does not invalidate your lien. It simply is given first right in proceeds of the sale of the car. As a practical proposition you should retain the car until it is taken from you legally. And if the car is of sufficient value you can pay the prior lien claimant and add his to your own claim.

By holding the property you can force the prior claimant to foreclose and sell the car at public sale, and you can assert your claim to any amount remaining from the proceeds of the sale after the mortgage is satisfied. Another point to remember in these cases is that the prior lien may not be valid through lack of proper acknowledgment, recording, etc., of the mortgage or other lien. For instance Illinois requires a mortgage to be recorded within 10 days of its execution in the proper county to be good against creditors of the mortgagor. There are involved in both (1) and (2) the possible conflict of laws between the various states named. While one state will, where possible, give effect to the laws of another state governing her citizens where same are involved, still it is its policy to first protect its own citizens and uphold its own laws where there is a conflict in the law. So if the Canadian and Indiana laws give priority to the liens mentioned, mortgage or conditional sale on installment or otherwise over the repairman's lien then Illinois would uphold such law. Another question presents itself. It is an almost invariable rule that where a mortgagee permits the property to be removed to another state the mortgage must be recorded in that county where the property is situated to be valid against creditors of the mortgagor.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Lean on the Get-Away

Q. We have a Studebaker special six 1922 model in the shop, this car being equipped with a Stromberg carbureter. We can get a perfect idling adjustment and the car operates all right at high speed, but on a quick getaway will often pop in the carbureter even after it is thoroughly warmed up.—P. J. Conley, 1956 Belt avenue, St. Louis, Mo.



On the model Ls-2 Stromberg carbureter used on this car there is an accelerating well which contains a reserve supply of gasoline. This well is a tube running from the lower to the upper portion of the carbureter and connecting with the air passages above the throttle. When the throttle is suddenly opened a supply of gasoline diluted with air is added to the regular air flow coming past the throttle and this rich mixture gives a fuel which is suitable for rapid acceleration.

If you take the carbureter apart, we would suggest your examining the small opening between the float chamber and the accelerating well, as if this is stopped up it will prevent the proper operation of this accelerating device. The high speed adjustment is obtained by means of the high speed screw and it is possible that you would get better all around operation by backing this screw out by turning to the left or counter-clockwise a slight amount. The use of a hot spot manifold, if one is not already in use, would also improve the operation. With this carbureter it is necessary when warming up the engine to use the dash adjustment and not to return the adjustment to the running position until the engine is thoroughly warmed up. It is possible that you are not making sufficient allowance for the heavy nature of present day motor fuel and expect the engine to warm up too rapidly. A hot spot manifold will very much reduce the time that the dash adjustment must be used.

Some Pistons Slap—Others Are O. K.

Q. We have been fitting 1919 Dodge Brothers cars with Lynite pistons. In some of them the operation is all right and in others the pistons are noisy and make a clanking sound until the engine gets warmed up. Can you explain this condition?—Alex J. Mathiowet, 226 W. Arch street, Ironwood, Mich.

You can test for piston slap by pouring about a tablespoon of 600-W in one or two cylinders at a time and then running the engine. The theory is that this heavy oil will cushion the piston and prevent it from slapping. For example, if you put it in No. 1 and No. 2 and it eliminates the noise it shows that the trouble is in either one of these cylinders. The reason that we suggest this test is that at times ridges will be worn in the cylinder walls and these will not be sufficiently prominent to be noticed when the new pistons are installed. However, if it is determined that one particular cylinder is causing the trouble you can then take a dial gage and measure up that cylinder and you may find that at some point in the stroke there is a place where the diameter is small, in other words, a ridge in the cylinder wall. When the piston ring goes over this ridge and goes past it, it will then expand and make a noise as it springs out against the cylinder wall. It is also possible that due to wear, there is some difference in the diameter of the cylinder and the upper portion of the piston which is undercut and smaller than the skirt, slaps back and forth against the cylinder wall. In some cases inner rings have been used in the upper and lower ring groove so as to prevent this condition. This has been done in another make of engine which uses an aluminum alloy piston.

Sectional view of model Ls-2 Stromberg Carbureter

ENGINE MAY MISS AT HIGH SPEED

2.—Can an engine be run fast enough to make it miss fire; in other words can an engine run fast enough to make the piston pass the firing position before the spark can fire the gas?—Sylvester Klaas, Box No. 34, Silver Grove, Kentucky.

Engines sometime miss at high speed but not for the reason you mention. Electricity travels with speed of light which is 186,000 miles a second. The engine would have to move at a fairly high rate of speed according to this data to be able to run away from the spark. One thing which does happen at high speed relates to the magnetizing of the ignition coil, for this does not occur instantly. Accordingly it is possible for the engine to go fast enough so that the ignition coil core will be only partially magnetized. Then when the interrupter contacts break the circuit and a spark is produced it may be a very weak spark which may be unable to jump the spark plug gap under compression.

What Makes This Bang?

Q—There is a Ford touring car, 1924 model that has a queer knock. All the mechanics here have had a crack at it. It is not a steady knock like a connecting rod or wrist pin, but when the plug in No. 1 cylinder is shorted quick there is a distinct "bang." If it is shorted and held steady then there is no knock, but if short is applied intermittently there is a distinct "bang" as though there was short in timer wires and cylinder was firing off time. Everything has been checked, crankshaft, pistons, connecting rods, timing gears and in fact everything that would be liable to cause this "bang."—Alec Leonard, 719 Pabst Street, Ironwood, Mich.

Here's another chance for MOTOR AGE readers to render assistance. On the standard Ford ignition system we do not know of any condition that would give results of this nature when shorting a spark plug. If the car is equipped with a distributer of the replacement type where a single coil is used and the rotating distributer arm carries sparks to the various plugs, then there is a possible explanation. If the distributer arm is not correctly timed with the distributer shaft, then it might be in between segments when the interrupter points open. Then if a screw driver is held near one of the spark plugs a spark may jump to this cylinder at the wrong time and cause a knock such as you describe. We hope other MOTOR AGE readers will submit their ideas as to what is causing this trouble.

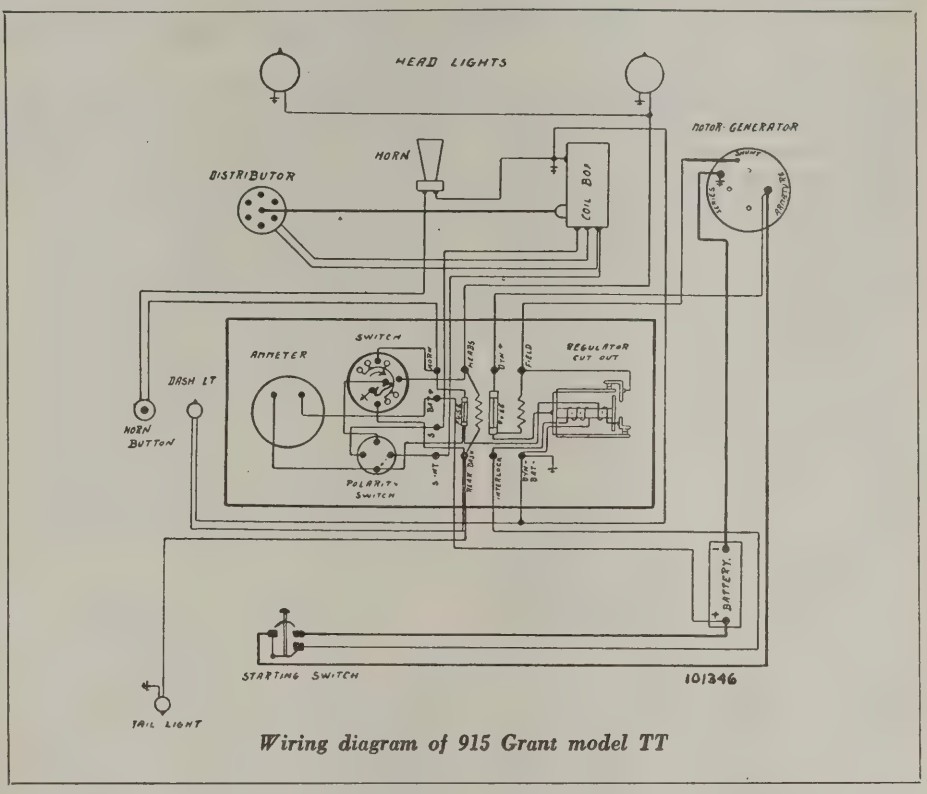
STAR AXLE ADJUSTMENT AND TIMING CHAIN INSTALLATION

Q—Give instructions for adjusting differential on Star cars.—Oklahoma Reader.

On the first Star cars, using Timken axles there was an inspection cover on the differential housing which could be removed when differential adjustment was necessary. On all later models the Adams axle is used, this being the same kind as is used in the Durant and Flint. In this axle adjustment is made by jacking up the rear axle and removing both wheels. The differential is located by means of the drive shafts.

The first step is to back off the adjustment at the right wheel for several turns. Then tighten the left hand adjustment, until the ring gear is tightly meshed with the pinion. Then turn the pinion by hand grasping the drive flange and it should be possible to feel that the pinion teeth and ring gear teeth are tightly meshed. Then back off the left hand adjustment seven notches. The right hand adjustment should now be tightened which will force the differential to the left just enough to give it the proper clearance. Then the right hand adjustment should be backed off two notches. This should give a free adjustment for the pinion and the two shafts. If any tightness is noticed the right hand adjustment should be backed off one more notch.

Clearing Up Electrical Trouble



EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

gnition Current Lights the Dash Lamp

Q. We have a Grant six car model TT, ar 1915. It seems that the ignition is eak and the trouble is noticed mostly hen the lights are on or when the car driven so slowly that the generator is t out. The dash lamp burns when the gine runs or when the breaker points e held together. I do not know if it as that way from the factory as I have ly had the car a short time. It has e Atwater-Kent K2 ignition system. Can e correct this or should another ignition stem be installed?— Knute Grahn, Rau, Minn.

We are publishing wiring diagram of is car and also sending you one by parate letter. We believe that the dash mp is incorrectly connected. You will otice that one side of the dash lamp ould be connected to the same terminal hich operates the tail light. The other ash lamp connection should go to the yn. minus terminal on the instrument anel, which is supposed to be grounded. This is also the Bat. minus terminal. he wire from the dash lamp which goes this terminal also goes to the upper rminal on the coil box so as to supply ground connection for the horn and or the secondary winding in the ignition coil. We suspect that the connection on the coil box is not right and that some way the wiring is mixed p so that the ignition current has o go through the dash lamp in order o get to the coil and interrupter. We ould accordingly suggest your checking oth the ignition and the dash lamp circuits very carefully with this diagram to ake sure they are right. The two conitions you encounter, of the ignition being weak and the lamp lighting when the gnition is working, seems to indicate hat this is ignition current in the lamp nd this would account for the weakened park of which you complain. This ignition system is normally satisfactory and ve do not believe it is necessary to make ny change. If service is needed on the gnition unit itself it should be obtained rom an authorized electrical service station handling Atwater-Kent parts.

Wiring diagram of 915 Grant model TT

CONDENSATION IN THE DISTRIBUTER CAP

Q. We have in our possession a Stutz model H. After this car stands still for four or five hours, the two distributers become so damp on the inside that they have to be wiped out before the engine can be started. What would you recommend to stop this?—W. E. Compton, Central Motor Company, Somerset, Ky.

This condition is due to the changes of temperature which take place in the distributer assembly when the engine runs and stops. When the engine operates, heat is generated and when the engine stops the lowering of the temperature permits moisture to condense. We feel that this can be overcome by drilling in each distributer cap a ⅛ in hole through the Bakelite at a point slightly above the casting. Do not drill the hole high enough to interfere with the action of the distributer arm, or so as to have it very near any of the high tension segments. The ⅛ in. hole will permit air to enter and leave the inside of the distributer cap and the rotation of the distributer arm will further the tendency for this ventilating action to take place. It would also be well to use cup grease instead of 600-W or other light oil in the base of the ignition unit. The unit should be about half full of cup grease.

Grounding a Generator— When and Why

Q.—Why is it necessary to ground the Ford generator when the battery is removed from the car?

When operating normally the generator becomes connected to the battery due to the action of the cutout when the voltage is about 6 or 7. Any tendency for the generator voltage to increase then results in increased current going to the battery instead of increasing the voltage. When the generator is not connected to the battery however, and the speed rises the voltage will also increase as there is no current taken from the generator to hold down the voltage.

An increase in the generator voltage will send more current to its field winding, which makes the magnetism stronger. This in turn makes the voltage greater which again makes the field current stronger. This gives rise to a pyramiding effect and what we call a 6 volt generator may produce 35 or 40 volts.

The heating which results, due to the abnormal current in the shunt field winding makes the whole machine abnormally hot, throws out the solder from the commutator bars and burns up the winding unless something is done to prevent it. On the other hand if the generator is grounded when the battery is disconnected there is no chance for the voltage to rise.

2.—Does this same condition apply to all automobile generators?

Yes with the exception of voltage regulated machines which have regulators usually of the vibrating contact type.

3.—I am told that no harmful results are caused by reversing the storage battery leads. In this case it appears that the polarity of the generator is changed. How about the cutout action?—H. W. Daw, Box No. 206, Moosemm, Saskatchewan, Canada.

If the cutout points are once closed by hand the battery current which flows to the generator will automatically magnetize the field poles in the proper direction so that the generator when it builds up will send charging current to the battery. If this is done the cutout action will be all right. If it is not done the cutout points may stick together long enough to allow the generator to reverse or in other cases they may flutter which will cause the points to burn, the opening and closing of the points being too fast to permit of the generator reversing its field magnetism.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Flat Rate and the Small Town Dealer

NOT so long ago the proprietor of a small automotive establishment told us that flat rate was all right for the dealers and service stations in large cities, but does not work out so well for the garage or shop in the smaller towns.

His criticism was that you cannot keep the car owner out of the shop in the small town. The result is the car owner sees you do the work and then when you have finished the job he jumps all over you because he feels he has been robbed.

He feels robbed because in his mind the amount of time it took to do the work is not commensurate with the cost for the job. It is true that perhaps many hundreds of dollars worth of good equipment was used on this particular job, but the car owner does not see it that way. Hence he feels that it is wrong to set a flat price on a job that can be rather quickly performed by means of modern equipment and methods and which in his mind is far above what it ought to be.

For example, if a car owner burns out a connecting rod bearing and has to be towed into the service station or shop, he unconsciously pictures a rather high repair job. Upon talking with the mechanic, shop foreman or dealer, as the case might be, he may be given a flat price for the labor and for the parts required and may give his entire consent to do the work feeling that the flat price is perfectly all right.

If it happens to be in a small town he may remain around the shop while the work is being done. Here he sees the car quickly elevated by means of a hoist, the mechanic taking off the oil pan with speed wrenches and so on before he knows it his engine is fitted up with a new rod and ready to run. Then he begins to think that the mechanic or mechanics didn't work very long on the job and thinks that $8 or $10 or whatever the price may be, is a pretty high figure for such a job. He knows the work has been well done and all that, but still he thinks if it had been done on a purely so much per hour charge the cost would have been very much less.

Had this same car owner left the car, let us say for a day or so and the work had been done meanwhile, he would have paid the repair bill without a murmur. The trouble is largely due to the fact that such car owners do not appreciate the investment in machinery and tools that makes possible quick work of this kind.

Many shop owners do not allow the customer in the shop, but it obviously is quite a difficult matter to do this in a small town where everybody knows everybody else.

Consult Flat Rate Manual

Seattle, Wash.

To The Editor of MOTOR AGE:

I think a loose leaf book on flat rates alphabetically arranged by cars giving your suggested prices and with one or two columns left blank for our own notations would be a fine thing. I think every shop owner would purchase such a book for their own make of car serviced and the general shops the complete list.—J. B. Ridley.

The nearest thing we have to such a book is MOTOR AGE'S Flat Rate Manual, which gives suggested contract prices for 277 repair operations on practically all makes of American passenger cars. In this list the cars are arranged alphabetically.

Again Equipment Helps

Many automotive establishments have installed what is commonly called a drain plug service wherein the old oil in the crankcase of a customer's car is drained and fresh lubricant put in. Crankcase service is another name for it.

THINGS THAT HELP FLAT RATE

It is well to equip the shop for quickly performing lubrication operations on the engine and chassis. Here is shown a rack and electrically driven grease gun which quickly takes care of lubricating the chassis

Although many of the newer model cars are fitted with draining devices which do not require a mechanic's crawling under the car to remove and replace the plug in the crankcase, there still are plenty of motor vehicles whose engines are not so fitted and the job is still one of taking out and removing the plug.

An advertisement which recently impressed us favorably related to a set of speed wrenches designed especially to facilitate drain plug service and the maker of these wrenches said in this advertisement that the wrenches fitted 90 per cent of the cars, trucks and tractors and not only took in the engine, but the transmission case, differential housing, etc.

The shops making a specialty of lubricating service certainly should come under the wire easily on their flat rate time schedules with such equipment at hand.

THE CASH AND CARRY IDEA

The history of merchandising shows that people buy more readily when they see a price attached to an article and when the thing they buy is something more or less tangible.

That's why flat rate has worked out so well for dealers and service stations. When you sell a customer a group of maintenance operations listed on a card and for which a definite sum is specified you literally hand him a package of merchandise as the furniture man or grocer does. He sees what he is buying, the price thereof and all is well.

MOTOR AGE'S FLAT RATE FORUM

No. 38

FLAT RATES FOR MAXWELL CRANKSHAFT MAIN BEARINGS

Manufacturers Official Designation		Time
2010	Remove and install full set of new main bearings. Requires same labor as operation No. 2000	24 hrs.
2011	Remove and install new rear main bearing. Requires same labor as operation No. 2000	24 hrs.
2012	Remove and install new front main bearing, including removal and installation of radiator, generator, distributer, fan pulley, front motor support, timing gear cover and bearing cap	5 hrs.
2013	Remove and install center main bearing, requires same labor operation No. 2000	24 hrs.
2014	Tighten center main bearing, including removal and installation of oil pan and oil pump	2½ hrs.
2015	Tighten center main bearing after oil pan has been removed	1¾ hrs.
2016	Install new felt at rear main bearing, including removal and installation of oil pan	1½ hrs.
2017	Install in support and ream one front or rear main bearing. Customer brings parts in each	1 hr.
2000	Remove and install crankshaft, including removal and installation of power plant assembly, remove cylinder head and oil pan, timing gear cover, timing gears, front bearing cap, flywheel and rear bearing cap. Remove pistons and rods, fit bearings to new shaft, assemble and install	24 hrs.

EDITORIAL

Time Payments

THE clothing industry, which for a time complained of the competition of automobiles, has ecided to try to hold its own by adopting the weapon f the automotive industry. It has decided to dignify he installment plan of selling clothing to the consumer. One of the largest and best known exclusive nen's clothing stores in Chicago has announced a budget plan of selling men's suits for a reasonable lown payment and the remainder in 10 equal weekly payments. Prices are the same as when cash is paid nd no interest is charged.

This interesting adaptation of the time payment plan s said to have been taken up rather extensively in the clothing trade. It no doubt will serve as an important sales stimulus and if the plan of extending the payments over only 10 weeks is adhered to it should take ts place as a sound merchandising method. Although longer time for payment is naturally justified in the case of automobiles this industry can well afford to be proportionately conservative in limiting the period over which the extension of credit runs. Automobiles and clothing both wear out.

Famous last words: "We will give you a still larger allowance."

Rebuilding Used Cars

THE extremely low prices now prevailing for used automobiles have tempted a number of persons to consider going into the business of rebuilding old cars on a large scale. MOTOR AGE has had letters recently from men who sought advice on such projects. These believed they could buy up old vehicles practically for the price of the raw material in them and with a reasonable expenditure produce a rebuilt car that could be sold at a profit.

There is certainly a great future for the rebuilding of automobiles, but we doubt if the road to profit lies along the line of concentrating upon that work as an individual and exclusive business. Rather it lies in the service stations and shops of the car dealers of the country where used cars taken in trade will be reconditioned or rebuilt to make them more salable. Here the rebuilt or reconditioned car will be a by-product of an established institution and will not itself have to shoulder the enormous capital investment and overhead that would be necessary in the conduct of an exclusive rebuilding business.

The rebuilder of used cars must realize that he is in competition with low priced new cars which are sold on extremely liberal terms and that price reductions over which he has no control are likely at a moment's notice to sweepingly depreciate his product. To rebuild used cars from the ground up in order to compete with new cars at or near the price the used cars can be sold at, requires an extensive remanufacturing process that is costly. It requires a great investment not only in equipment but also in vehicles that are in process of being worked upon or being offered for sale. In addition to these factors the man who rebuilds used cars for competition with the new car field is likely to spend too much on the process, giving him a product so costly that he cannot sell it low enough to successfully compete.

On the other hand the dealer and the service station can afford to do much more reconditioning and rebuilding than they have been accustomed to do. The right sort of work done on used cars that are not too old adds more to the selling price than the cost of the work. It is necessary, however, to use discretion in determining what cars to recondition and how much work to put on them. The test is what the car can be sold for after it has been fixed up and repainted. If it is four or five years old it is not likely to be salable except on the basis of very low price and therefore cannot stand a great deal of expense.

Cars of newer models usually can be given the appearance and practically the mechanical condition of a new car and then can be sold at good advantage. It is necessary, however, to establish public confidence in this product, and to do this the dealer must guarantee it and stand behind it.

Private garages are a good thing but they can be overused. Boost good roads.

The Automotive Equipment Show

CHICAGO will be the scene next week of what probably will be the greatest display of automotive accessories and equipment ever assembled in the world. The great coliseum, together with the new north hall and the annex will be filled with the product of more than 200 manufacturers, many of whom will use greater space than ever before.

Advance information indicates that hundreds of new articles will be offered to the trade, and thousands of articles of standard automotive merchandise will be exhibited.

The business of supplying the country's motor vehicles and their owners with needed merchandise has developed into a tremendous one and holds promise of still greater growth. As a market place the Automotive Equipment Association's show is a world's fair of automotive merchandise.

A. E. A. Program Details Announced

Five General Sessions Are Listed in 1925 Convention

Addresses and Discussions and Election of Officers Included in Business of Meeting

CHICAGO, Nov. 5.—Details of the program for the annual convention and show of the Automotive Equipment Association in Chicago from November 9 to 14, have been announced by officials of the association.

On Monday, November 9, the morning session will be opened at the Coliseum Annex with a musical program by Ford's A. E. A. orchestra. Following the invocation will be the election of new members, initiation ceremonies, address by President W. T. Morris, address by Commissioner William M. Webster, reading of the minutes of the last meeting, formation of the house and the report of Commissioner Webster. There will be no afternoon session Monday.

The program for Tuesday morning will be divided into two sections The manufacturers' divisional meeting will be held in the Coliseum Annex, beginning at 10 a. m., with President Morris presiding. The jobbers' divisional meeting will open at the same hour in the Gold Room of the Congress Hotel with Commissioner Webster in charge. The programs of both sessions will include the following discussions:

What is a policy?—Interpretation and application in this line of business?; Is the handbook of any practical value; Is giving gratuities by manufacturers to jobber salesmen, even with the consent of the jobber, the proper or best method of merchandising or sales distribution?; Returned merchandise — A reasonable service charge is fair, and if so, why should it not be paid?;Method of issuing invitations to annual convention and show as recommended by mid-convention meeting that only non-member jobbers who have filed applications with the association or who have expressed interest be invited; discussions and addresses on other current topics of interest to the trade; Shall we issue the official catalog "D" next year?

Tuesday afternoon the official program is the attendance of the show under the coupon system from 2:30 to 5:30 p. m.

Wednesday will inaugurate the second general session when the car manufacturers, service men and Society of Automotive Engineers will be guests of the Automotive Equipment Association at the convention. Installation of officers, regular order of business and a general business session will conclude the morning's program. In the afternoon show attendance will be the rule.

Thursday morning, the regular order of business will be carried out at the Coliseum Annex, in the afternoon the delegates will attend the show and in the evening will be held the annual banquet of the association.

The banquet wil be held in the Gold Room of the Congress Hotel beginning at 6:30. It will be followed by an unusual entertainment and dancing. Tickets will be obtainable at the commissioner's office in the Coliseum only.

The fourth general session will open Friday at the Coliseum, featured by a merchandising department program and an address by William J. Woolley, former general manager of the National Trade Extension Bureau. If time permits such matters as were assigned to Saturday morning's session will be taken up Friday morning for disposition.

Friday afternoon will again be featured by show attendance, and the fifth and last general session will open Saturday morning at the Coliseum Annex. Following the regular order of business will be the reports of committees, open discussion pertaining to the welfare and interest of members, consideration of communications, remarks by international chairman of Automotive Boosters' Club, unfinished business, new business, and adjournment of the convention. The show continues through Saturday afternoon.

At the same time as the A. E. A. show and convention, will be held various other meetings by branches of the automotive industry.

Among these will be the service engineering meeting of the National Automobile Chamber of Commerce and the Society of Automotive Engineers. The programs will be given on Monday and Tuesday, November 9 and 10, at the Hotel La Salle.

The N. A. C. C. will open its session Monday morning with addresses by G. F. Lord, Durant Motor Car Co., and D. C. Hinckley of the Hinckley, Myers Co. In the afternoon the S. A. E. will hear Frank Jardine of the Aluminum Company of America speak on corrosion in internal combustion engines, and M. A. Thorne of Tidewater Oil Co., on new data on engine corrosion.

Tuesday morning the S. A. E. will discuss trouble diagnosis with addresses by C. L. Sheppy, J. C. Talcott and Charles Pleuthner, Pierce-Arrow Motor Car Co. and Carl Breer and John Squires, Chrysler Corp. In the afternoon the N. A. C. C. will have charge of the closing session and addresses will be given by Dr. T. A. Boyd of the General Motors Corp., research department, and Donald Blanchard, technical editor of Motor World Wholesale.

MONTZ GOES TO WISCONSIN

MILWAUKEE, Nov. 2.—C. M. Montz, for the last six years mid-west service manager at Chicago for the Eiseman Magneto Corporation, has been made general manager of the Wisconsin Magneto Co., succeeding Matt Kissinger, resigned.

Production of Cars Shows Slight Decline in October

Ford Output Jumps Ahead to Meet Some of Holdover Demand

PHILADELPHIA, Nov. 4—Production of passenger cars in October for all companies except Ford averaged 10 to 15 per cent lower than in September, although several of the large factories maintained output at capacity. Ford, during the month just past, made a large gain, so it is likely that the final figures for the industry as a whole will be well above the September total. Except for Ford, however, and two or three other producers, there is now no surplus of orders on the books.

During the early part of October production was running considerably ahead of sales, taking the industry as a whole. The declines registered later, however, are evidence that the brakes were being applied at the factories. It is likely that a fairly even course will be continued during the remainder of the year, with only a gradual decline in production. Dealers will go into the new year with substantial stocks on hand, but not with excessive surpluses unless there is a big drop in demand during the next two months which is not compensated by corresponding curtailment at the factories.

Third quarter earnings statements now being made public are revealing some astonishing facts. Despite the price cuts made by the companies during the summer, and effective on most of the cars produced during the third quarter, earnings were substantially as high as during the second quarter, and in one or two outstanding instances, profits per unit of output were actually higher. These represent production economies that were made apparently without damaging the appearance of the cars or weakening them mechanically. Costs of closed bodies have been brought down as a consequence of the much larger volume of demand for closed cars.

G. C. Davis, Indianapolis Stutz Factory Branch Manager Dies

INDIANAPOLIS, Oct. 31.—Grover C. Davis, manager of the Indianapolis factory branch of the Stutz Motor Car Company died here this week following an illness of several months. In his early work Mr. Davis was engaged in the real estate business and later in newspaper work. He entered the marine corps when war was declared and served overseas. While in France Mr. Davis was editor of the Marine Gazette, the official publication of the marine corps.

Tire Makers Plan Greatest Output in History in 1926

Building and Facility Expansion Being Pushed Forward Rapidly to Handle Volume

AKRON, O., Oct. 31.—With total world registration of motor cars now in excess of 20,000,000, tire manufacturers are preparing for the biggest in their history next year. Tire demand in 1926 is expected to eclipse that of any previous year.

All of the leading tire manufacturers, showing marked gains in sales totals and earnings this year, have drafted extensive plans to handle further increases in the future.

While production is now running between 75 and 80 per cent of capacity, an encouraging aspect of the present situation is the fact that stocks in the hands of both manufacturers and dealers are below normal, in most cases. Although some dealers have purchased more than their current requirements, as a result of the advancing tire prices, the repeated warnings of tire manufacturers not to overstock have been effective in checking this trend.

Building construction in the rubber industry this year will amount to something like $6,000,000. In the Akron district, alone, the rubber companies are spending nearly $5,000,000 on plant additions and other improvements.

Studebaker Net Profits Are $5,035,177 For Quarter

SOUTH BEND, Oct. 31.—The total net sales of the Studebaker Corporation and subsidiary companies for the quarter ending September 30 amounted to $46,430,492.32, an increase of 108 per cent over the same quarter last year.

Net profits derived from sales with other net income, after all charges, increased depreciation, and reserve for taxes, amounted to $5,035,177.28, an increase of 136 per cent over last year. These profits were at the rate of $2.61 per share on the outstanding common stock, as compared with $1.06 last year.

The book value of the common stock as of September 30, 1925, was $50.40 per share, excluding good will. Export sales for the first nine months this year exceeded last year by 87 per cent.

HOFF OPENS IN CHICAGO

CHICAGO, Nov. 2.—During A. E. A. show week the Hoff Metal Products Co., manufacturers of Hoff tire chains, will maintain headquarters at the Blackstone Hotel. In attendance will be Howard Wilcox, vice president; E. E. Arnold, sales manager, Fred W. Kohl, B. R. Englmann, Ashley H. Kilburn, E. L. Thompson and A. E. Joyce. Western sales offices, in charge of Fred W. Kohl, have been opened in the McCormick Bldg., 332 South Michigan Avenue.

Horse Is Forced Out Again

MILWAUKEE, Oct. 31.—One of the last strongholds of the horse in Milwaukee has finally yielded to the automobile when plans were announced for the dismantling and wrecking of the old Mock Livery Stable at 558-560 Jackson Street, which is to be replaced by a new modern garage and salesroom building for the Osmond-Jordan Co., Wisconsin distributor for Jordan cars.

The old stable, an unusually large one, is said to have been one of the first large stables in Milwaukee. In addition it is one of the very last of the old commercial livery company strongholds.

The new building will be a three-story brick and concrete structure, 60x120 feet, costing about $60,000. The showroom will be on the first floor with service room and other facilities above.

Nash Announces Reduced Prices in Both Series

KENOSHA, Wis., Nov. 2.—Reductions ranging from $20 to $300 on all Nash models in both the Advanced and Special Six series, with the exception of the Advanced roadster and the Special touring have been announced by officials of the Nash Motors Co. here. The reductions, as announced, are:

Advanced Six Series

Model	New Price	Old Price	Reduction
5-Pass. Touring	$1340	$1375	$35
7-Pass. Touring	1490	1525	35
5-Pass. Sedan	1425	1485	60
7-Pass. Sedan	2090	2290	200
Victoria	1790	2090	300
4-Door Coupe	1990	2190	200
Roadster	1375	1375	000

Special Six Series

5-Pass. Touring	$1135	$1135	000
Roadster	1115	1135	20
5-Pass. 2-door Sedan	1215	1265	50
5-Pass. 4-door Sedan	1445	1545	100

FORD RING REDUCED

BALTIMORE, Md., Nov. 2.—The American Hammered Piston Ring Co. has reduced the list price of its special ring for Fords to 25 cents. Large production has enabled this reduction to be made without change in the high grade quality of the product, officials said. Dealers are being protected by rebates on any rings still in stock.

STROMBERG WINS DECISION

CHICAGO, Oct. 26.—The appeal of the Stromberg Motor Devices Co. in their suit against the Beneke Manufacturing Co., makers of the Rayfield Carbureter, involving the Anderson and Goldberg patents, was denied by the United States Court of Appeals for the 7th District, sitting in Chicago. This decision sustained a previous decision made by Judge Wilkerson in the United States District Court in 1923.

Colorado Business Shows Improvement in October

Dealers Report Decreased Loss in Used Cars Through More Careful Selections

DENVER, Oct. 31.—The last six weeks has been marked by a decided improvement in new car business in Colorado. October shows a heavy increase in sales over the corresponding period in 1924. The pronounced cut made in prices of all new cars has reacted unfavorably on the used car market, as a matter of course, and open cars in particular have been affected, but dealers are more cautious in trade values and report less loss than usual through this source.

In north central Colorado, in the district known as the Horn, and embracing the cities of Boulder, Loveland, Longmont, Greeley and Fort Collins, the beet crop in particular has been short, but an exceptionally fine potato crop has done a great deal to hold this section up to its usual prosperous standard.

Conditions as reported by dealers in the above cities are a little below that of last year, but northeastern Colorado cities, such as Sterling, Fort Morgan and Julesburg are much above normal. The Arkansas and San Luis Valleys have the best crops in five years, and the automobile trade is reflecting this prosperity.

Southeastern Colorado is the best it has been for perhaps eight years. Dealers throughout the state anticipate a business much above normal between now and the holidays. Motor banks and acceptance corporations show considerable improvement in October collections.

Victor Rubber Sold by Receiver For $50,000

SPRINGFIELD, O., Oct. 31.—The preferred creditors of The Victor Rubber Company will get between 65 and 70 per cent on their claims. The plant as a result of its sale Wednesday to Springfield capitalists will continue operating the works upon a sound basis and mechanical rubber products will be added.

J. B. Cartmell, president of the First National Bank; Arthur R. Hill and George Cugley, officers of the Buckeye Incubator Company, purchased the Victor plant and equipment from Receiver H. H. Durr for $50,000 upon authority of Judge Frank M. Krapp, of common pleas court. The material on hand will be taken over by the purchasers at the inventory price.

PORTER LEAVES PEERLESS

CLEVELAND, O., Nov. 2.—John F. Porter, for the last three and a half years treasurer and director of the Peerless Motor Car Company here, has resigned effective yesterday. Porter goes to Wilmington, Del., to be associated with John J. Raskob, chairman of the finance committee of the General Motors Company and vice-president of the duPont Company.

Cincinnati Business Forges Ahead During Early Fall

Actual Deliveries Held Up Because of Inability to Obtain Shipments From Factories

CINCINNATI, Oct. 31.—Fall business in automobile and accessories lines appears to have taken a decided spurt, according to the reports from distributors in the Cincinnati territory for the month of October. Up to October 15 the new car sales actually recorded, that is, with cars delivered and licenses issued as recorded at the Hamilton County clerk's office, amounted to 989 cars.

Sales of used cars amounted to 1940 machines up to the same date. Dealers say that this record does not do justice to the business of the month, because practically all distributors were having difficulty in getting deliveries within 30 days of the close of the sale. Here and there a dealer could take a car out of stock and give immediate delivery but three weeks to 45 days was the average on practically all agencies.

Reports on deliveries made in September showed 1818 new cars and 4,016 used cars, which was a gain of 700 cars in new model sales over September, 1924. The sales of used cars in September, 1924, were 2,704 or a little less than 70 per cent of the sales of used cars in September, 1925. Sales of tires, parts and accessories in this territory also showed a good average increase in October over October, 1924, and dealers reports indicated that the month would go 40 per cent ahead of October, 1924, when all returns were received.

Chrysler Profits Reported $8,078,186 for Quarter

DETROIT, Oct. 31.—Chrysler Corp. and subsidiaries for the third quarter of 1925 report net profit of $8,078,186 after interest and depreciation but before federal taxes, equal after estimated federal taxes and 8 per cent preferred Series A dividends to $9.86 per share on 677,910 outstanding common no par. This compares with $4,689,000 in the preceding quarter or $5.40 per share on the present share basis.

In the third quarter last year Maxwell Corp., the predecessor company, reported net profit of $1,831,658 or $1.72 per share. Chrysler Corp. net income for the first nine months this year was $16,275,286 or $19.07 per share against $2,296,094 or $1.06 on the same share basis in the corresponding period last year.

Sales for the first nine months of 1925 were 180 per cent of the sales for the same period of 1924. Net current assets are $29,408,276 compared with $14,647,740 last year and surplus as of Sept. 30 was $11,389,185 against $6,070,667 as of June 25, 1925. The corporation has declared regular quarterly dividend of $2 on preferred payable Jan. 2 to stock of record Dec. 15.

ELDRIDGE IS PROMOTED

LANSING, Mich., Nov. 2.—After an absence of five years spent in Chicago during which time he was manager of the Chicago branch of the Reo Motor Car Company, Clarence E. Eldridge is returning to the home plant of the company here in the capacity of assistant manager of the company's sales division. Mr. Eldridge succeeds C. A. Triphagen who became sales manager following the resignation of R. E. Rueschaw. L. B. McEwing who has been actively associated with the Chicago branch for the last five years has been named to succeed Mr. Eldridge.

N. Y. Jobbers Meet to Push Winter Business Campaign

CHICAGO, Nov. 2.—More than 250 representatives of automotive jobbers and manufacturers participated in the three meetings held in New York State last week in behalf of the winter business campaign being sponsored by the jobbers outside the metropolitan district of New York City.

The speakers at all three meetings were Arthur R. Mogge, merchandising director of the Automotive Equipment Association, on keeping busy this winter; Ray Sherman, on Christmas merchandising; R. W. Proctor of Black & Decker Mfg. Co., on reconditioning and rebuilding, and George Fleming on winter necessities.

The first meeting at Albany Thursday night was under the auspices of Albany Hardware & Iron Co. and H. A. McCrae Co., Troy, jobbers.

The jobbers participating in the second meeting Friday night at Syracuse were: Onondaga Auto Supply Co., Olmsted Co., Perry & Sherman Co., Utica Cycle & Supply Co., Whipples', Barker, Rose & Clinton Co., Treman, King & Co. The attendance was 138.

The following jobbers took part in the meeting at Buffalo Saturday: United Accessories Corporation, Joseph Strauss Co., H. D. Taylor Co., Chapin, Owen Co., Rappole & Robbins, Inc., and Sidney B. Roby Co.

A special feature of the meeting at Syracuse was the talk by L. E. Patcheet, service manager of Over-Knight Motors, Inc., of Syracuse, who told how last year he succeeded in selling an average of $32.90 worth of accessories with each new car sold by his company.

MERGER RUMOR DENIED
